Chamber of Deputies (Haz'a-i mev'ârîhânî); the first is to consist of members nominated directly by the Sultan and its numbers must not exceed a third of the second (art. 60), which is elected by the people on a ratio of one deputy for every 50,000 Turkish subjects (art. 65). It establishes the permanency of the magistracy (art. 81). No tax can be levied if it is not passed by a law, kânîn (art. 86). The administration of the provinces is based on the principles of decentralisation (tevest-i ne'mâhîye-ye) and the separation of powers (tevest-i nevecâfî-ye); it is based on elected municipal councils (art. 108–112). In case of trouble, the state has the right to proclaim an autocratic government, idârî purfî; it is the state of siege which is meant by this name (art. 113); banishment on the Sultan's decision is provided for those who stir up trouble. The principle of compulsory elementary education is laid down (art. 114). In spite of the formal terms in art. 115, according to which no single article of the constitution could be suppressed or not put into operation for any reason or under any pretext, the fundamental law of the empire, although continuing to figure at the head of the Sâlimâmê (official annals), was actually suspended after the fall of Mahat Pasha and only re-established by the military revolution which marked the close of the reign of 'Abd al-Hamid II.

The same name was given to the Persian constitution proclaimed by a firman (royal proclamation) dated Djam II 14, 1324 (Aug. 5, 1906) and promulgated on Dhu-l-K'sda 14, 1324 (Dec. 30, 1906) in the reign of Muaffar al-Din Shah. It deals only with the formation and activities of the national assembly; it was granted in reply to the demand of the refugees in the English legation. A supplementary constitution, promulgated by Muhammad 'Ali, successor to Muaffar al-Din, on Shâban 29, 1325 (Oct. 7, 1907), laid the foundation for constitutional law in Persia. It laid down more especially that Shi'i Islam is the official religion of the State, that Tîhrân is the capital, that the national flag is green, white and red (in three horizontal stripes) with the emblem of the Lion and Sun. It provided for the equality of citizens of Persia before the law, the protection of life and property; arrests could not take place without a written order from the President of the Tribunal of Justice. It recognises the freedom of the press, except for heretical publications or those hurtful to religion, as well as the right of association and assembly. Legislative power is divided between two chambers. The ministers must be Muslims, they are responsible to the two chambers; lastly it provides for the establishment of provincial and departmental councils (andaman).

(Z. C. Harut)

Sultân Sulaimân completed these ordinances by issuing several Kânûn-nâmê's. The one reorganised the administration of the military fiefs (zâmî, timâr) established by Murâd I; the second codified the administration of the farms in Egypt; the third laid down the rights and duties of the râfirî, "subjects" Muslim and non-Muslim in respect of feudalities; the fourth dealt solely with the police regulations and the penal laws.

(Z. C. Harut)

KÂPLAN GÎRÂY, the name of two Khân of the Crimean in the eighteenth century.

1. KÂPLAN GÎRÂY I reigned three times: 1110–1120 (1707–1708), 1125–1128 (1713–1716) and 1143–1149 (1730–1736). He died on the island of Chios in Shabîbân, 1151 (Nov.-Dec., 1738). Immediately after the death of his father Sâmilîî, in Shabîbân, 1147 (Nov.-Dec., 1704), he set up as a claimant to the throne but was not proclaimed Khân till after the death of his brother Ghâzî II. His own three depictions were on each occasion the result of the unfortunate course of military operations; the first (according to Sâmilîî, 9 months before the battle of Poltawa, i.e. Oct., 1708) after an unsuccessful campaign against the (then not yet wholly islamised) Circassians, the second as a result of his arriving too late on the scene of operations on the Danube, the third (when he was now enfeebled by old age and illness) after his campaign to Persia, by which without even reaching the frontiers of Persia he exposed his own country to the invasion of the Russians. He was generally regarded as a skilful politician but an unfortunate general.

2. KÂPLAN GÎRÂY II, grandson of Kâplan Gîrây I and son of Khân Sâmilîî, in Shabîbân, 1158 (Jan.-Mar., 1770). He fought unsuccessfully against the Russians in the Dobrudja, was falsely accused of having had dealings with the enemy and deposed on Shabîbân 4, 1184 (Nov. 23, 1770). He died in Rabî II, 1185 (July-Aug., 1771) of the plague at the age of 32.

KÂPLAN MUSTÂFÄ PASHA, a native of Merzifon, an Ottoman general and statesman of the time of Sultan Mehmed IV (1648–87), one of the ablest and most successful collaborators of the Grand Vizier Köprülü Ahmed Fâşîl Pasha and therefore closely involved in Turkey's struggle under the Köprülü's to regain her old position of power.

He was brought up in the court service, was Şiihâr of the Sultan and in 1650 was appointed Wâzîr and Wâli of Baghdad. He spent a number of years as Wâli of important provinces, in Wân, Konya and Damascus, until the Hungarian campaign gave him an opportunity to distinguish
himself, notably before Neuthald in 1663, at Kaśnica and elsewhere. The Grand Vizier gave him his sister in marriage in order to ally him closely to him. Aḥmad Fāzīl Pasha cleverly managed to transfer the most important affairs to his brothers-in-law. In 1660 Kapuci was appointed Grand Admiral (Kapudani Derya) (*a tiger on land and a crocodile at sea*, as Kapudan Derya describes a proposition of his appointment in allusion to his name (Kapul = panther). He filled this important post for six years, commanded the Ottoman fleet with vigour and caution during the heavy fighting of the time and cooperated with special distinction in the conquest of Crete. He then took part in the campaigns against Poland and conquered Lemberg along with the Khan of the Crimea. He then became Wali of Aleppo in 1672, of Diyarbakir in 1675, of Bagdad for a second time in 1676 and in 1677 of Diyarbakir again. After the death of the Grand Vizier Aḥmad Fāzīl Pasha his frank nature still enabled him to maintain his position against the new Grand Vizier Kāra Muṣṭafā, who was not inclined in his favour. Even the severe defeat which he suffered in 1678 in the Ukraine in the swamp between the fortresses of Tscherchin and Romodanowski, where he lost the whole of his army and equipment, brought him only temporary dismissal and disgrace. Soon afterwards he became Grand Admiral for a second time. He died in November, 1680, in Smyrna, which he happened to have entered with the fleet, and was buried there. In Bagdad he had restored the mosque and türbe of Shaikh Muhammad ʿĀbudīr.R.

**KAPU, gate, the Ottoman Porte, properly the palace of the Sultan or of the Grand Vizier. The name (by synecdoche, cf. "court") may be of Central Asian origin; it recalls names like the Japanese miko, for example, literally "exalted gate", etc. (cf. J. Six in Acta Orientalia, ii. 205 sq.) Among the Ottomans Kapu has been long in use in the above sense and used alternately with the Arabic bāb or the Persian dar. The name may have passed from Turkish into Arabic about the Mamluk period, as, for example, the passage i. 469, 2 from below, in Ibn Khaldūn, His-taire des Berberes, transl. of Slane, Algiers 1847, where bāb = palace, shows. — Kapu Kuli "gate-slaughters" (the meaning of this expression is explained and a list of the troops concerned given in Ahmed Djemda, Rawdat xil., Stambol 1301, p. 214, 7 from below; cf. in the other hand, J. von Hammer-Purgstall, Gesch. der Osm. Nation, i. 566). — The name "lofty gate" for the office of the Grand Vizier (Pasha Kapu, İkbâl Sâli, "Sublime Porte, Fulgida Porta") probably did not come into use before 1654, when the Grand Vizier Derviş Mehmend Pasha was given a building near the Serai for an office by Sultan Mehemd IV.

**KAPUCI, gate keeper, porter (Ar. bawwāb, Pers. darbān), formerly the lowest grade and outermost guard of the Imperial Serai chosen from the Yanikars, who guarded its gates, 50 at each gate. By day they carried a rod of bamboo, by night they were armed with sword and dagger. They were used as messengers to carry to the grandees of the Empire and foreign princes invitations to court festivities or documents of state. Some performed the duties of eunuchs. They wore white helmet-like caps (tukif, scuffia). Their number and pay varied. While they numbered 300 at the beginning of the sixteenth century (cf. T. Spandugino, Commentari dell' origine de' principi Turchi (Florence 1551, p. 330; in Schefer's edition, Paris 1896, p. 116 sqq.) and each Kapucu received up to 7 aspers a day, their pay had risen to 20—50 aspers daily about 1511 (cf. the Ballo Andrea Foscolo report of March 6, 1511, quoting Marino Sanuto, in J. v. Hammer, Gesch. der Osm. Reiches, i. 627; cf. ii. 234 as well as Spandugino, ed. Schefer, p. 155); under Sultan Murad III in 982 (1574) their number was 300; they were under Sultan Mehmed IV (1648—1687), according to Husein Hanferren's (d. 1103 = 1601) Kānûnîne (written in 1080 = 1669; cf. F. Péris de la Croix, État général de l'Empire Ottoman, par un solitaire turc, Paris 1695, and J. von Hammer, Staatsverfassung des Osm. Reiches, ii. 44 sq.), they had risen to 162, who received 5,785,004 aspers a year. The Kapucu were divided into 45 companies, each of which was under its own company-commander (baluk bâghi), who held a field in place of salary. The commander of the gatekeepers was the Kapucu bâghi, a kind of chamberlain. According to the evidences of Menavino, Navgengo and Spandugino, the number of kapucu bâghis in the first half of the xviii century was only four. Above them was the kapucu kâvâr, head-chamberlain. (Franz Babinger)

**KAPUDAN PASHA, formerly the title of the supreme commander of all the Ottoman fleets, who had also unlimited control of the imperial arsenal. The origin of this rank dates back to the beginnings of Ottoman sea power under Sultan Mehemd II. The first naval captain (Ka-pudan-i Derya); the word Kapudan comes from the Greek KAIUOCT (Bata-Ogullu Suleiman Beg, probably of Bulgarian origin, the Pataklo or Pataklo; or Pataklo of the Byzantine chroniclers (Chalcocondylas, p. 390, 519; Kritoboulos, i. 22, 28, 33, 37, 39, 41; Dukas, p. 270, 5; cf. Ali, Khan ul-Abdar, v. 108, 174). Till 1553 the Sandjakbeg of Gallipoli was at the same time Kapudan Pasha (cf. Ramberti, Carte de Turquie, Venice 1543, p. 142; T. Spandugino, Commentari dell' origine de' principi Turchi, Firenze 1551, 146, 164; Nic. de Nicolai, Navigations et péri-griations orientales, Lyon 1567, p. 77; N. Barozzi and G. Berchet, Le relations degli ambasciatori Venez., p. 356; capitanu dell' armata di Gallipoli; cf. Feridun Bey, Mina'dil-Sethina (1, 404: Gelibolu Kapudan). With the increasing sea power of the Ottomans and the foundation of an arsenal of their own, especially under Sultan Selim, the Great when the dreaded Khair al-Din Barbarossa.
for so long commanded the fleet, the headquarters of the High Admiral was removed from Gallipoli to Constantinople. While the office of Kapudan Pasha, who had the 19th wiltayet of the Empire as well as 13 sandiaks under him and disposed of an income of 885,000 aspers (cf. Sir P. Ricaut, The Present State of the Ottoman Empire, London 1687, p. 102 sq.), was already one of prestige, with the increasing size of the Ottoman navy it soon became one of the first in the Empire. As long as the Sandjak-beg of Gallipoli was at the head of naval affairs, his jurisdiction was limited to Nicosia, and in larger naval enterprises a special Pasha was appointed beside him, who acted in supreme command as admiral (Spandrungino, Commentario, Fitenze 1551, p. 165). Later, especially from the time of Barbarossa, the Kapudan Pasha was one of the regular and active members of the Divân and was not only one of the most powerful but also one of the best paid dignitaries in Turkey. In rank he was equal to the Ser Asker, directly below the Grand Vizier and the Vâlâddîn-ı Ilâhî. On account of the revenues attaching to the post it was always an object of ambition in the Turkish official world and was granted by the Sultan as a mark of special favour without regard to practical or theoretical training and fitness. Down to about 1780 the Kapudan Pasha was also given the governorship of the islands subject to the Porte in the Aegean Sea, some of the sea-provinces of Asia Minor and the controllership of the arsenals on the north shore of the Golden Horn in Galata, where he had his residence among the wharves. In the sixth century the title was abolished under Sultan Abd al-Aziz and replaced by that of Bâbîr-ı Âsîrî, Director of the Arsenal. All naval establishments were under him, the Minister of Marine; a naval council (Şârâ-i Bâbîrî) assisted him and advised on technical matters and affairs of administration. In June, 1876, under Murad V, the title was revived but only for a short time; it was again definitely replaced by that of Minister of Marine.

A list of all Kapudânânegi Derya is given in J. v. Hammer-Purgstall's Geschichte d. Osmanischen Reiches (at the end of each volume) and in the work — which first appeared as a facsimile of the newspaper Dârâ-i Hâwâlid — by Râmiz Pasha-Zade Melmed Efendi, Kârâ-i Kapudânânî Derya (of 761—1265 [= Chronogram of the title]; 220 pp. 12°, Stambul 1285 = 1869/90) and in Melmed Râîî, Mirât-i İslamî, Stambul 1314, p. 481—497.

KARA, the Turkish word for black or dark colour in general. It is commonly used with this meaning as the first component of geographical names, for example Kâra Âmîd (an account of the black basilat of which this fortress is built), Kâra Dagh (on account of its dark forest), etc. Beside Kâra we find in place-names the form Karâda. In personal names it refers to the black or dark brown colour of hair or to a dark complexion. It has, however, at the same time also the meaning "strong, powerful" and has to be interpreted in this sense in the name Kâra Osman or in names like Kâra Arslan. In this connection also we have the name Kâra Khân, which was assumed by the Karâkhanîs in Eastern Turkestan.

KARA ARSLAN, the third Amir of the line of the Oktûkîs (q. v.) of Hîsîn Kaîîf and grand-grandson of the first of this dynasty.

Statement differing regarding the year in which he succeeded his father Dâ'ud b. Sulîmân. According to Abu 'l-Farajî Barhebraeus (Chronicon, ed. Bedjan, Paris 1819, p. 305), Dâ'ud died in the Greek year 1455 (1143—44). The Arabic sources do not give the year; in any case Stanley Lane-Poole, who bases his view that Dâ'ud did not die till about 543 (1148) on a mistaken interpretation of Ibn al-Athîr (Kâmî, xi. 733 (as Cînîs the Urtûkîs Turkmans in Namumata Orientalia, Part ii., London 1886, p. 8), puts the date too late. Münnedjîd Dînî (q. v.) gives 548 (1154). Even before his father's death we find Kâra Arslân at war with the Crusaders. When in Ramadân, 532 (May, 1138) the Byzantine Emperor John, in alliance with the Franks against the Atabek Zangi of Mawuíl, besieged the fortress of Shâizar near Antioch, he retired when he heard that Kâra Arslân had crossed the Euphrates with 50,000 men to come to the help of the town (Kamal al-Din al-'Adîn, Ta'rîkî Hîlîhî, in the Recueil des Historiens des Croisades, Documents Orientaux, iii. 677). Kâra Arslân does not, however, seem to have had at all a friendly reception from Zangi on his arrival; the Atabek, indeed, ordered him to go back to his father. His relations with Zangi continued to be strained, as is shown in the account in Kamal al-Din (p. 684) that a battle was fought between the two in 536 (1141—42) at Dhamarad, in which Kâra Arslân was defeated. Peace was restored next year again. According to Abu 'l-Farajî's account of his accession (see above), Zangi went south as to attempt to secure the succession of Kâra Arslân's elder brother Poghmân, who had escaped to Mawuíl, in Mîrîl. At this news of Konya, however, gave help to Kâra Arslân and Zangi had to abandon his plan.

However strained may have been Kâra Arslân's relations with Zangi, his alliance with the latter's son Nûr al-Dîn of Aleppo was a most faithful one. In 544 (1149—50) he accompanied the latter on an expedition against the town of Sindjar, which, however, was later again restored to Nûr al-Dîn's brother Qûlib al-Dîn. In 559 (1164) he again assisted him, along with Qâdim al-Dîn of Mardin and other princes, at the capture of the fortress of Hîrâm, where many Frankish knights were taken prisoner (Ibn al-Athîr, xi. 92, 185). For the rest Kâra Arslân does not seem to have been of a particularly warlike disposition. He would have preferred to keep out of the last named expedition, if the fear of his own subjects, whose fanaticism had been aroused by Nûr al-Dîn (and apparently also the fear of Nûr al-Dîn himself), had not compelled him to take part. Very little else is chronicled of his activities; for example, the capture of the Kurdish stronghold of Şûtân (Ibn al-Athîr, xi. 185) in 546 A. H. and the unsuccessful

Karabah of [see Karabahin].

Kara Tagh (Turkish-Persian: “black garden”, because of the black and fertile soil of its high valleys), the present-day name of the mountainous province of Arran [q.v.] forming a province of Transcaucasia bounded by the Kurr, the Aras and the district of Erivan; area about 6,750 sq. miles and 250,000 inhabitants (half Aderlak-djan and half Armenians); capital Shusha; mountains: Kambish (12,480 feet) and Kapudjik (12,360 feet). Its horses are famous for their swiftness, and reptiles, scorpions and tarantulas are found there. It is in this province that Fath ‘Ali Akhondzadeh [q.v.] lays the scene of his comedy: Monseur Jourdan, botaniste perisan.

At the beginning of the reign of Shah ‘Abbas I, in 1611 (1602), the Ottoman general Farhad Pasha, in alliance with the governor of Shirwan, Djan Pasha, invaded Karah-bagh and seized Ganzja (v. Hammer, Hist. de l’Empire Ottoman, vii. 221; Sykes, History of Persia, ii. 257–258). This province was at that time the hereditary fief of the Turkish clan of Djewansh, the family of Sariafu, a descendant of Aghar or Afsar, eldest son of Yuldad, third son of Oguz (Abu l-Ghaur, ed. Desnaisons, St. Petersburg 1871–74, p. 27). This clan emigrated from Turkestan with Hulagu and was brought back from Asia Minor by Timur and scattered over Turkestan, Persia and Afghanistan, especially around Kamb and Kandahar. Its chiefs were called from father to son alternately Panah and Ibrahim Khalil; it was Panah II who built Shemshah in 1613 (1612) and gave it the name of Panah-abad, whence the name Panah-abad given to the coins which he struck there. His son Ibrahim Khalil Khan, having succeeded him, found himself attacked by the Persians; after two fruitless sieges, Agha Muhammad Khan (later Shah) Kadjar captured Shemshah but was assassinated there on the morning of Dhu ‘l-Ka‘da 21, 1211 (June 18, 1797), five days after entering the town, by three of his servants who feared his vengeance. Ibrahim, who had fled, came back two months later; he submitted to the Russian general, a Georgian by origin, Prince Sisianoff (Zitznabl), after the capture of Ganzja in 1219 (1804) and agreed to pay a tribute of 6,000 ducats; he received the rank of lieutenant-general and a Russian garrison occupied his capital. His eldest son, Abu l-Fait Khan, was the brother-in-law of Fath ‘Ali Shah and had remained faithful to the Persian alliance; he brought his father back to the Kadjar party and the latter attempted to liberate his capital, but Djan Faru Khalan, son of Muhammad Hassan Khan and grandson of Ibrahim, warned the Russians of the Persian advance. 660 Russian soldiers left the citadel and in the middle of the night of Kabir 23, 1211 (June 10, 1806) attacked the camp of Ibrahim Kulli, who was killed with his family in the fighting. The Russian major commanding the garrison installed another of his sons in place, Mahdi Kull Khan, who reigned till 1238 (1822) when he fled to Persia. The Kadjars had, however, renounced all claim to Karah-bagh by the treaty of Gulistan (Oct. 12, 1813).

(C. Huart)

Al-Karabisi, the cloth-merchant, the nisha of several Arab authors; viz.: 1. the mathematician Ahmad b. ‘Umar, the date of whose death is not known and among whose works, a commentary on the translation of Euclid is specially celebrated; see Fihrist, p. 265, 265; 252, 31; Ibn al-Kifl, Tarikh al-Fukl, Cairo 1326, p. 57–58; 3. Only one of his works has come down to us, viz., his Kitab Misbat al-balsh (Oxford and Cairo; ed. Bibl. Bodl., Cod. Mus. Or., i. No. 193; and Fihrist al-Kutub al-arabiya fi ’l-Kutubkhana al-Medelikaya, v. 204); 4. the traditionist and faqih Abu ‘Ali al-
HUŞAIN B. 'ALİ B. YAZĪD AL-MUḤÂLĪBĪ, who had at first belonged to the Aḥl al-Ra’y, but after the arrival of al-Ŝāfi’ī at Baghdād attached himself to him; at the same time he remained an absolute supporter of the belief in predestination (ištibráh); nothing has survived of his writings on criticism of traditions and ši‘ah. He died in 245 (859), according to others in 248 (862).

3. the Ḥanafi ṣāḥīḥ b. ṬA‘ĀD b. MUḤAMMAD (d. 570 = 1174), whose Kitâb al-Furū’ī fi l-Furū‘, which Ḥājjī Khālid Khâlif, Khālif al-Zunūn, ed. Flügel, iv. 419, N°. 904 confuses with the Taḥfīz al-‘Uqūl al-Mahbūbū (Broekelmann, G.A.I., i. 380, N°. 34), is preserved in Cairo; see Führer al-Kutub al-‘Arabīyya fi l-Kutub al-Muslimīyya, i. 96. 962 (C. Broekelmann).

KÂRA-CELEBI-ZÂDE, epithet of the Ottoman historian, jurist and Šaikh al-İslām. ‘ABB AL-‘AZĪZ EFE NDİ. Born in the year 1500 = 1591/92 at Stambul, the son of the then military judge of Rumelia, Ḥusān al-Dīn Husain b. Muḥam mad b. Ḥusān al-Dīn Efendi (d. in Mu harram, 1007 = Aug., 1598 at Brussa and buried there; cf. al-Sayyid Isma‘īl Behīr Brūsī, Tūrīk-i Brūsī, Brussa 1302, p. 314—315; Ewliya, Siyāhat-nāme, Constantiopolis 1334—1338, ii. 118; he bore the maḥkmat Kâra-Celebi-Zâde which passed to all his descendants and caused frequent confusion), he enjoyed the tuition of his older brother, the chief district judge Muhammed Efendi (cf. M. Thuriyā, Siyīl-i Othmānī, i. 155; Ewliya, ed. cit., i. 407; J. von Hammer, Constantinopolis, ii. 25; M. died Ibn l-Hidjâda, 6. 1042 = June 1633 and is buried at Ayytub in Stambul) and studied also under the Mutul Šan‘ Allah Efendi. He then filled a series of offices: in August, 1612 he became Mu‘āli at the medresê of Khair al-Dīn Pasha, in April, 1615 at the new medresê of ‘Ali Pasha, in April, 1616 at the medresê of Piri Paşa, in April, 1617 at the medresê of Ka lender Kâhîne, in December, 1619 so-called ‘eighth’ (zâhîn-i ğâmin) at the mosque of Muhammed the Conqueror; in Jan., 1621 he was transferred to the Sulaimânîyya at Brussa, but by October of the same year appointed to the Sulaimânîyya in Adrianopole and in May, 1623 summoned to the same institution in Stambul. In June, 1623 he was involved in a mûnâ at the ‘Ulamâ at the mosque of the Conqueror and sent as a punishment to Brussa to the medresê of Molla Khusraw but pardoned on the accession of Murad IV and in Jan., 1624 recalled to Stambul to the Sulaimânîyya. In March of the same year he became judge of Yeni Şehir, was dismissed in December, appointed judge of Mekka in February, 1626 and dismissed once more in December, 1627; returning to Stambul, after a short stay in Adrianopole, he was appointed city-judge of Stambul in Jan., 1634. In this capacity he had to take measures for the security of the city during the preparations for the Polish campaign; cf. J. v. Hammer, Gesch. des Osm. Reiches, v. 178. But when in July of the same year the shortage of grease-provoked discontent among the people of Stambul and brought down the wrath of Murad IV upon the judge responsible for the regulation of the market (cf. Z.D.M.G., xvii. 722) he was dismissed from his office and sentenced to death by drowning. A letter in the Sultan’s hand ordered the Superintendent of the Imperial Gardens (Vasitātim Manṣūrî), Džej Efendi, afterwards governor of Bosnia, to take the disgraced magistrate in a boat and to supervise the execution of the sentence on one of the Prince’s Islands. The boat was just reaching Prinkipo, where the sentence was to be carried out, when fortunately for Kara-Celebi-Zâde, a second letter, procured by his patron, the Grand Vizier Bâirâm Pasha (d. 1628), brother-in-law of the Sultan, arrived which altered the drowning to banishment to Cyprus and at the last moment prevented the execution of the death sentence (cf. Na‘im, Tūrīk Stambul 1147, i. 577). Pardoned by December, 1634, he was appointed military judge of Rumelia. During the rebellion which cost Sultan Ibrahim his throne and life in the summer of 1648 Kara-Celebi-Zâde distinguished himself by such shamelessness that even the frank Na‘im (ii. 166; J. v. Hammer, op. cit., v. 449) has not the courage to repeat his utterances. After Ibrahim had been disposed of, he gained the favour of the youthful Muhammed IV, who again appointed him military judge in Aug., 1648. The real object of his ambition, which he pursued by every means in his power, was the office of Šaikh al-İslām. After he had first been granted the title of a Šaikh al-İslâm (Na‘im, ii. 231), a case unique in Ottoman history, he was removed in October, 1649 from his position as military judge and appointed Šaikh al-İslâm in place of Behâr Muhammed Efendi, dismissed on May 2, 1651 (‘Balīs Mūfīsî; cf. von Hammer, op. cit., v. 534—555). On the fatal Sept. 2, 1651 he once more fell into the imperial disfavour and was banished to Chios. Four years later he was given permission to go to Brussa and in 1655 for the barley-money (arpašt; see i. 460) which he had so far enjoyed he received the revenues of Chios and the office of judge of Mudania, which he exchanged in March, 1657 for that of Gallipoli. On the evening of Jan. 11, 1658, death finally ended Kara-Celebi-Zâde’s eventful career. He was buried at Brussa in the cemetery of Šaikh Muhammed Dewdewi; his tomb may still be seen there.

Kara-Celebi-Zâde is not a very pleasing figure in Ottoman history, as he was a ruthless, selfish and intriguing man. His prestige as a scholar is therefore all the more marked. He was the author of a series of historical works, of which two have so far been printed. With the Mirzâ al-Šefâ his chief production is the Rawāt al-Abrâr, a historical work in four parts dedicated to Sultan Ibrahim I, which covers the period from Adam down to 1056 (1646/47). The book, of which there are several good manuscripts in Europe (cf. G. Flügel, Diet arab., pers. u. türk. Hist. ..., zu Wiesbaden, 1865; Tornberg, Codices ... Bibl. Reg. Un. Upsalenses, p. 193, N°. 277 and p. 197, N°. 304, which appears not to be complete), was printed in Muhamarr, 1248 (1832/33) at Bulâq.
KARA-CELEBI-ZADE — KARAĆI

(large 4°, six parts, 637 pp.; on p. 637 full title). His Sulamán-nâma has also been printed (Bâlak 1248, large 12°, 256 pp.) and it is the epic of the legislator Sulamán in which he describes his glorious reign to his death (1520—1566) in a pleasing flowery style (a MS. in Vienna; cf. Flügel, op. cit., ii. 230). He extended his historical work from 1056 to 1068 (1646—58) by a supplement (Zâbêt) of which there are copies in the Vienna National Library (cf. Flügel, op. cit., ii. 262), in the Johannaeum of Graz and in the possession of Dr. J. H. Mordtmann. Several other smaller historical works from his pen exist in manuscript, e. g. an account of the conquest of Erivan (1635) and Baghdad (1638) entitled Taş-

Bibliography: cf. besides the already mentioned sources the biography in Na’mâni under the year 1668; Hâddîjî Khâlîfa, Fedâhî, ii. 152 (biography); the best sketch of his life with all details is given by Ismâ’il Belîgh Brûisê, Gutkist-i Ziyâd-i Erfin, Brussa 1308, p. 317—329; Siyâh-i Ugdâmî, iii. 329; Mustâmî, D arrived al-Makhidî al-Kirî, Vienna MS., Mst. 153 (Flügel, ii. 409 sq.); Râyîet Efendi, Dârshat al-Madâyyik, Stamboul n.d., p. 58—62; Siyâye Salmânesi, Stamboul 1334, p. 461 sqq. (with reproduction of K.’s signature); J. v. Hammer, Gesch. der Osm. Dichtkunst, iii. 426 sqq.; do., Gesch. des Osm. Reiches, v. 178, 184. — K.’s collection of manuscripts is still preserved in the library of the Şahzâde mosque in Stamboul. A catalogue of the books (16 pp., 4°, Stamboul n.d.) has been printed. — On the family, of which several members achieved fame, cf. especially Hâddîjî Khâlîfa, Taşcim al-Tawârîh, p. 191; also Ismâ’il Belîgh, op. cit., p. 315, where the ancestors of Kara-Celebi-Zâde are dealt with; cf. also Wüstenfeld, Die Gelehrtenfamilie Mullik, p. 48. (FRANZ BAINGER)

KARAĆI (KURRAČIKE). I. An important city and seaport on the coast of Sindh situated 24° 51’ N. 67° 4’. E. Population (1901) 116, 663. The administrative centrest the province of Sindh at the present day, and gives its name to a district.

The name does not appear to be of great antiquity, and is probably due to the settlement of a Dodâî Balû tribe called Kaluçâ, originally Râdîpût (see Glossary of Panjâb Castes, Lahore 1911), from whom the town of Kullcî (in the Dera Ismâ’il Khân District of the N. W. Frontier) also took its name. Following a common practice in the Sindhi language the i has become r. (Cf. Kothi in the Panjâb and Kotî in Sindh).

The harbour of Karaći was naturally a good one, although when first surveyed by English sailors it was impeded, as Pottinger tells us (1808), by a bar, which prevented vessels drawing more than 16 ft. from entering. The population was at that time only 9000, but it had already become the principal port of Sindh. The Imperial Gazetteer of India (Bombay, Vol. II) asserts that Karaći began to be known as a port about 1779, and that its rise was due first to the sitting up of Khârâk and afterwards of Şahûdbandar, a statement which is not easy to understand. Khârâk (an island in the Persian Gulf occupied by the Dutch from 1748 to 1765) could have had no influence on Karaći, and Şahûdbandar is too far to the Eastern side of the Indus Delta to have affected it. The real cause was the gradual deterioration of the two ports of Dëwâl and Sindî (often spoken of jointly as Dîul-Sindî) which were situated on the two sides of the west mouth of the Indus. These were still in use in Thévenot’s time (Travels in India, published 1687) and Manucci visited Sindî on his way to India in 1655. During the 18th century the advance of the land cut off these ports from the sea, but Karaći, lying outside the Delta to the west, was not liable to such rapid silting. It also took the place of Tatta as the principal city of S. W. Sindh. Under the Kâlhorâ rulers of Sindî it was made over to the Khan of Khilât, and under his suzerainty was held for a time by the Dîâm of Laos, but after the fall of the Kâlhorâs the Tâlpur Amîr, Fath ‘Ali Khân, took Karaći in 1795 and erected a fort on Manora point to protect the harbour. Henceforward the trade grew considerably. Pottinger’s account in 1808 has been alluded to above. Burns found the population in 1851 to be 15,000.

Sir Charles Napier made it his landing place in 1841 and after the annexation of Sindh in 1843 he undertook its development with the object of making it the military and civil centre of the administration and also an important port equipped to deal with the trade of the Panjâb as well as of Sindî. Through his judgment and foresight he was able to lay the foundations of the progress made in more recent times. Sir Bartle Frere improved the harbour in 1854 by the construction of the Napier Mole which connects Kiâmârí Island with the mainland. The Manora breakwater was constructed in 1869—73, and the harbour has gradually been restricted in area, and at the same time deepened and otherwise improved. In 1883, a good supply of water from the Malir R. was brought in. General Haig in his work on the Indus Delta identifies the harbour of Karaći with Alexander’s Haven which Neuchâtel reached by sailing westwards from the western mouth of the Indus. As the coast here has not changed so much as in the actual Delta, it is possible to identify some of the places mentioned. The Island of Bibâkta appears to be Manârâ point, and Eiros seems to be the high ground east of the harbour now known as Clifton. In spite of this identification, however, Karaći as a town has no ancient or mediaval history, although the harbour must always have been of use as a haven of refuge. Its enormous development in modern times is due to the opening up of the trade of N. W. India by railways. It is the outlet for the wheat, cotton, oilseeds and hides of the Indus valley.

2. Karaći District. A modern administrative district taking its name from the town of Karaći, lying between 23° 35’ and 26° 21’ N. and 66° 42’ and 68° 48’ E. with an area of 11,970 sq. m., and a population in 1901 of 607,
It only refers to the Black Sea (e.g. Gardin in Maquart, op. cit., p. 161; al-Dinmashki, op. cit., p. 138, 15, 259, 4 sq.) Bohr al-Rim should be emended to Bohr al-Rim. The name Bohr al-
Khasar, which originally meant the Caspian Sea, was, on the other hand, transferred to the Black Sea (Ibn Khordadbeh, B. G. A., vi. passim; Kuđana, B. G. A., vi. passim; al-Mas'udi, Kit. al-Tanbih, B. G. A., viii. passim), as al-Mas'udi (p. 67) thinks, because a connection was errone-
ously thought to exist between the two seas; as at the same time the name Mu'ūtis (Mu'ūtis) was extended to the Black Sea (al-Mas'udī, Kit. al-Tanbih, p. 138, 140; Murodī, i. 272 sq.; al-
Dimashki, op. cit., p. 138, 15, 143, 13, 228, 17), the name Sird and the Khazars may have been at first limited to the Sea of Azov and only by a mistaken use have come to include the Black Sea.
All these names were driven out of use by the name Kāra Deniz, evidence of which is first found in the xiith century and which is no doubt the name given to the Black Sea by the Turco-Tatar inhabitants of its shores in Southern Russia; it was understood by the western authors of the time to mean "Great Sea" (focuss classicus, Rubrūqīs, ed. Bergeron, p. 2: in la mer du Pont que les Bulgares appellent la grande mer; Mare Majus in Haythain, Vincentius Bellovaccensis, Marco Polo, chap. i; Mar Majour in Gillherib de Lannoy, and Bertrand de la Broquière; mer mayor in Clavijo; the Grete Sea in Chaucer, Prologue, l. 59), more rarely as Black Sea (Schiltberger, who, however, also writes "Grosses Meer"; mare nigrum, quoted for the year 1335 in Yule, Cathay etc., new ed. by H. Cordier, iii, London, 1914, p. 81; il mar nero in a document of 175 in Berchet, La Repubblica di Venezia e la Persia, Venezia 1865, p. 11); by the Arabs as "Black Sea", al-Bahr al-
Arad (Abu 'l-Fida', Ṭūkīm al-Bulūg, p. 31, 34; al-Dinmashki, op. cit., p. 139, 143, 145, 229; al-
Bahr al-Aṣam in Ibn Khordadbeh, p. 110 is to be explained otherwise); among the Greeks we find only mali thalassa and this only for the first time in the treaty with Venice concluded 7265 (Pontes Rosses Austr., part II, xiv. 62); in literature from the xvith century (see Lenuvius, Fundes Hist. Turc., Ch. 148). The Italians and French used Mare Maggiore, Mer Majour down to the first half of the xvith century: henceforth we find the name Black Sea throughout geographical literature. The older re-
production of Kāra Deniz by "Great Sea" shows that Kāra in this connection does not refer to the colour but means, as often in proper names, "great, powerful, terrible" (cf. Kāra), in keeping with the dangers of the voyage, particularly in bad weather, upon this sea so liable to storms and of such extent. All other attempts to explain the meaning, especially those which seek to find the name "Black Sea" among the Greeks and Byz-

Kāra Deniz, the Turkish name for the Black Sea, the Pontus Euxinus (abbreviated to Pontus) of ancient and Byzantine geography. The Arab geographers took over the Greek names Pontus and Maeotis (Sea of Azov) in the forms Bnūntus and Māntūt, which early become Nūntuq and Māntūt in Arabic writing and language (Juynholl on Murājī al-Ilīf, iv. 194) and in these corrupt forms have survived down to the latest works of Oriental geography. Other names were also used, for example Sea of Trebizond (Bahr Tarāzānūdī), Sea of the Crimean (Bahr-īrīm), Russian Sea (Bahr-al-Rim; cf. mer de Rosia in Villehardouin, ed. Wailly, i. 226), which are explained by the commerce of the Muslim East with Trebizond and the coast lands of South Russia (Nūntuq, Midjan, ed. Westenfeld, i. 499; al-Dinmashki, Nakhibat al-Dahr, ed. Mehran, passim; Abu 'l-Fida', Ṭūkīm al-Bulūg, ed. Reinaud, passim; al-Mas'udi, Murūq al-Dhahāb, ed. Paris, i. 260 sq.; cf. Maquart, Osteuropäische u. ost-
aviatische Schriften, p. 162, 333); on the other hand, in the passages where Bahr al-Rim — which otherwise means the Mediterranean Sea —
of the Khazars" has survived into modern times in corrupt form Babri Hazes (the result of transposition of the diacritical points) as a name of the Sea of Azov.

After the Black Sea had been treated as a mare clausum during the centuries under Byzantine rulers, in the latter half of the Middle Ages it was opened up under the Komnenoi and Palaiologoi to the Genoese and Venetians and thus to European trade with the Near and Far East; in Kaffa [see Kafa], Tana, Amara and Samsun there arose autonomous Frankish colonies and smaller settlements in Sinope and Trebizond. After the fall of Constantinople Mehmed the Conqueror closed the Black Sea to foreign shipping by barring the Straits; the destruction of Amara (1459), Sinope and Trebizond (1461) and Kaffa (1475) completed the ruin of Frankish commerce and the Black Sea became a Turkish inland sea, a ประตู "Ağça", on which only the Turkish flag was allowed to wave. It was only with the advance of the Russian empire to the north coast of the Black Sea that the latter was opened first to Russian commercial navigation by art. X of the treaty of Kăşik Kaimardja in 1774, and ten years later, in 1784, to Austrian and in 1799 to British commerce; in the eighteenth century the other European powers obtained liberty of access to the Black Sea: France in 1802 and following her the smaller seafaring nations; the last treaties on this matter were concluded in 1837. Down to quite recently foreign warships were not allowed to pass through the Straits and into the Black Sea.

Bibliography: The history of the various apppellations of the Black Sea has not yet been written. The main work on commerce at the close of the Middle Ages is W. Heyd, Geschichte des Osmantischen Reiches, Pest 1829, i. 127, 600; de la Jonquièire, Histoire de l'Empire Ottoman, Paris 1914, ii. 404; Händel Khâlla, Rumili ve Bosna, Vienna 1812, p. 86; Fauly-Wissowa, Realencyklopädie der klassischen Altertumswissenschaft, iii. col. 304 sqq.

( H. Krämers)

KARAGOZ, principal character in the Turkish shadow-play. The shadow-play has been known to the Muhammadan peoples since about the sixteenth century of our era. Its origin is perhaps to be sought, as Jacob suggests, in Eastern Asia, but, as regards the matter of the plays, there seem to be connections with the Hellenistic mime (Horovitz, Reich). The modern Turkish shadow-players attribute the invention of their art to the patron saint of their gild, Shaikh Kûshârî (i.e. Tustar, the man from Tustar [Şıștir] in Persia), after whom they call their shadow-stage Shaikh Kûshârî Mâdâni "Shaikh Kûshârî place". According to the Turkish biographers a certain Shaikh Mehemmed Kûshârtar migrated from Persia to Asia Minor in the sixteenth century and was buried in Brussa. On the various legendary accounts of the origin of the shadow-play see Kiter, Karagóz, i. 5. The shadow-players talk among themselves a kind of professional language, in which gipsy elements predominate. Another circumstance in favour of a connection with the wandering gipsies is the fact that the principal figure, Karagóz, is represented as a gipsy. The shadow-play is a favourite image of the transitoriness and weightlessness of all that is mortal with poets, especially those who are fond of mysticism. The idea often expressed by the mystics that all things in the world have only a shadow-existence and only owe their being to the light permeating things from the Primeval One, who alone possesses reality and substance, found in the shadow-play a symbolical application. The shadow-players are fond of calling attention to this edifying aspect of their performance in the so-called stage-gazels (perde gazels). The external apparatus of the shadow-play consists of a stand like that of the European marionette theatre, only that in place of the open stage a canvas is stretched across and illuminated by an oil-lamp. Against this canvas (perde) the
shadow-player presses coloured figures about a foot high made of dried skin; this is done by means of guiding rods which are put into the figures through holes provided with links. All the figures that appear are controlled by one player. Two musicians are his only assistants. The performances usually take place in the early hours of the nights of Ramaḍān but are also given as entertainments at domestic festivals, such as circumcisions.

The following is the course of the typical performance of the Turkish shadow-play: an introductory picture (gösterme) is shown on the canvas before the beginning of the performance. This is removed during introductory music on a reed-pipe and one of the two principal characters, ʿAbd al-Jawād, comes on the scene singing a song. At the end of the song Hādjiwād calls out Hābi Ḥabīb, "O God," as the introductory religious formula of the play, recites the stage-ghost, praises God and curses Satan and then proceeds to pay a tribute of homage to the Sultan. After a conventional introduction he begins to express in rhymed prose his longing for his companion Karagöz and to sing to him before the door of his house — where the scene is supposed to be laid — in languishing tones. Karagöz rushes out in anger and a fight ensues between the two at the end of which Hādjiwād usually disappears to return after an interval. The prologue proper then begins, consisting of a dialogue (mukārār) between Hādjiwād and Karagöz, and this is followed after a stereotyped transition-formula by the piece proper, the dramatic part (faṣil). The piece again concludes with unvarying turns: Karagöz gives Hādjiwād a box on the ear and the latter goes to tell the "master of the curtain" that Karagöz has torn the curtain down and destroyed it. Karagöz then asks for indulgence to the defects of the play and goes off after threatening to punch Hādjiwād still harder the next time — here the piece is announced for the next evening.

The principal characters are always Hādjiwād and Karagöz. The former is a cultivated elderly gentleman somewhat given to opium eating who is well-known to all the characters who appear and often acts as their confidant. Karagöz is an uneducated, rough gipsy, the type of simple, natural vivacity contrasted with the decrepit representative of prudence and deliberation. Like his relatives in the European marionette theatre he is the real favourite with the public. He is bald and sometimes still appears with the phallic features which indicate a certain connection with the ancient mine. Both characters wear special caps, peculiar to the shadow-play.

The humour of the dialogue between Hādjiwād and Karagöz depends on the most part on countless puns and plays on words which are always brought about by Karagöz misunderstanding the learned words of his friend and giving them humorous interpretations. The preludes are not limited to any particular piece (faṣil) but are chosen for presentation at will according to the length of the following play. The substance of the dialogue has almost always the same object, to attain humorous effects by the contrast between Hādjiwād's learning and Karagöz's stupidity. ʿAbd al-Jawād, for example, gives Karagöz lessons in spelling, proposes games which he does not understand, goes with him as a singing Ramaḍān-night watchman round the streets, when Karagöz sings all the songs out of tune and misunderstands them, or gives him sentences to he said rapidly, or plays games with him which necessarily end in a fight, etc.

The production of the dramatic part (faṣil) which follows the preludes shows certain peculiarities in scenic technique which are the natural result of the paraphernalia of the shadow-stage. The white surface of the canvas, only rarely relieved by a few figures in the wings, always represents the Küşhərī square in front of Karagöz's house, which latter is, as it were, represented by the frame of the canvas. As Karagöz has continually to accompany the action with comments from the window of his house, there are often several scenes of action in one, one quite remote, the real scene of action, and the square before Karagöz's house. The possibility of mixing up the characters into crowds with the conducting-rod is used to present remarkable scenes of recognition. The players are often fuddled with fire stock of pieces, which is practically the same with all companies and, except for a few modern pieces, is considered to have "been handed down from olden times." The pieces are sometimes dramatic versions of popular books (Ferkād and ʿArīf, ʿArīf and Zuhir, Meşalim and Laila etc.), in which case Hādjiwād appears as trusted adviser and Karagöz as servant of the heroes concerned, or suchlike; sometimes they are pictures of everyday life in Stamboul. In the latter we are given a series of Stamboul types, among which one recognises pathological (the drowsy opium-eater, the pugnacious drunkard, the lame beggar, the dwarf, the crazy man) and racial types (the young Stamboul Efendi, the Persian, the Armenian, the Jew, the rough woodcutter from Kastamunī, the Kaiffır, the Lase, etc.). The effect is very often attained by the formation of a series of incidents. A whole series of characters, differing as much as possible from one another, is brought successively into the same comical embarrasing situation with Karagöz, around whom the action then usually develops, into some such situation so that the tension increases with each successive character until it is finally relieved by a character superior to the situation.

Pieces of this kind are, for example: Yalova Şafezzi, "The pleasure-exursion to Jalow." A young Efendi, usually called Celebi, wishes to take a trip with his sweetheart to the seaside resort of Yalova and buys a bag and a jug in which to put provisions for the journey. While he is away to make the final preparations, Karagöz appears and teases the young woman, who has remained behind with the sack and jug, with stupid stories about a fatal accident that has overtaken her lover, that he has set the sea on fire with a match he had thrown away and has been burnt or that he has been swallowed by an eater of lobana, and so on. Then a series of typical characters appear all of whom wish to go to Yalova with the young woman and are hidden one after the other by the obliging girl in the sack and jug, in which a new fight begins for the little room available with every new-comer. After 5 or 6 people have disappeared in the narrow jug, Celebi returns and pulls out all the stowaways again. — Another piece of the same kind is Kanlı Nigar, "Bloody Nigar." The young Efendi is stopped in the street by two
ladies of his acquaintance, each of whom assert they have a good right to him and try to pull him with her. As neither will abandon him, women-neighbours are called in to decide which is worthy of the pretty young man. But when the neighbours decide in their own favour, the two women (one is called *Bloody Nigar*) drag the young man into their house, undress him, thresh him and throw him out on to the street to punish him for his infidelity. A series of characters then come up who see the young man sitting naked and volunteer in turn to fetch his clothes out of the women's house; first comes Karagöz, then Hâdişêmî, then the drunkard, then a negro and next a dwarf. In the attempt to get the young man's clothes, they all meet in turn with the same fate. They are likewise undressed and thrown naked upon the street so that naked figures keep accumulating round the door of the house. In the end the problem is solved by the robber captain Şafit Efe from Brussa, whom the women respect, and the naked forms receive their clothes again. — Another is Mandra: — Karagöz finds himself violently abandoned by his wife and enters into relations with a lady who meets him on the street and takes her to his house. To his question whether she also has no lover Mandra replies: "Apart from him who comes afterwards, no one else."

Then various lovers of the woman come in turn, ask for Karagöz's new house-mate and send all kinds of love-verses to her through which he last delivers to her in quite a distorted fashion, and ask her to take a trip with them to Mandra. But they are always driven away by Karagöz and to his repeated question whether there is still any one coming the woman only answers with the above phrase. This goes on for a considerable time until finally Karagöz is turned out of his own house by the drunkard and then collects the admirers he has driven away in order to recapture his own house. In the mêlée which follows all take to their heels. — In the "singer's competition" (Karagöz ve Şehîdî) Karagöz, as a swirling singer (çâlî), dispossession of a number of droll singers who have assembled for a competition. In the "writer's play" (yazık yoinu) he appears as a public letter-writer who writes letters which are absolute nonsense for his clients. — In the "Boat-play" (kâşû yoinu) he acts in his particular way as a ferry-man assisted by Hâdişêmî. In the "Swing-play" (talîndijs yoinu) he lets a swing to the most varied customers, lastly to a Jew who apparently dies on it and is buried by his co-religionists in the most ludicrous fashion and is then brought to life again. Another time we find Karagöz as a rich gentleman (Karagözî-âgâdî) and in this capacity he has to deal with a series of people who wish to get positions in his service and with a beggar. The series of incidents is often made up of vain attempts by Karagöz to gain admittance to a house or a garden, for example in the "Garden-play" (Bâghte Yoinu), in the "Bath" (Hamam), the "Surprise" (Bâşlu), or of his unsuccessful attempts to ascertain something about his wife's doings by questioning the neighbours, who in turn misunderstand his questions and give the stupidest answers ("The Well ğêmemê").

Piecies in which we do not have this succession of incidents are, for example, "The Poplar" (Kantî Kanû), in which an amusing act is spun round a brief touching episode: the singer Hasan's son is stolen by the spirit of the poplar but restored on the poetic appeal of his father. Karagöz is first of all bewitched by the spirit of the poplar, then released by Hâdişêmî and, when he wants to cut down the poplar as a punishment, he is seized by two Albanian foresters and punished with the bastinado, which is made more severe in a comical way as the foresters continually go wrong in counting the blows and have to begin all over again. — In the "Circumcision" (sûmet) Karagöz is circumcised when a full grown man and the usual games are played which are used to distract a boy from the pain. A shadow-player appears, for example, so that we have here a play within a play, also an oya-yinu-player, two jugglers, etc. — A kind of competition in magic between two witches, in which the young Efendi and his sweetheart and then Karagöz and Hâdişêmî are turned into animals, is the "Witch-play" (Džinîlasî). — In the "Lunatic asylum" (hünkârâyên) Karagöz is infected by some lunatics escaped from an institution and chained by Hâdişêmî in an asylum and treated by a Frank doctor. — In the "Wrong Bride" (Sûmîgh Gala) Karagöz is brought as bride to the drunkard, in order to cure him of his craving. — Lastly the play the "Hat" (Mûltûnû) shows the doings of a famous sat named Bekri in the air. The pieces so far mentioned substantiate form with several other less important and less well-known pieces (Tâbûxûklîjler, "The broken ones", Kûşîlîlar, "The coffee-crushers", Bâlîk Yoinu, "The fish-play", Džinîlalaşîlar, "The rope-dancers", Edîlîkîhên, "The chemist's shop") the usual repertoire of the shadow-players.

Very few of these plays have so far been published and translated and those usually in an abbreviated form. The texts printed in the est are almost all bad and defective. For further particulars see the Bibliography.

(HE. RITTER)

KARAGÖZLÜ ("Black-eyed") a Turkish people around Hamadan, to which they pay their tribute (Curzon, Persia and the Persian Question, London 1892, ii. 270 and 472). The Karagözli are several times mentioned in the history of the domestic troubles in Persia in the second half of the xviiith century; cf. J. v. Hammer, Geschichte der Osmanischen Reichs, 2. Pest 1836, iv. 475; Türk-i Zindasya, ed. Beer, Leiden 1888, P. 32, 42 and 93. In the first half of the xviith century the Karagözli are said to have numbered some 12,000 souls (C. Ritter, Erdkunde, viii. 404 and ix. 78). Karagözli is also the name of a small Turkish clan in Fars, which belongs to the "İnönü group of the tribal confederation İli-i Khamas (Tumansky, O Karpzyjskiego kraju, polski o bramach i obronach. St. Petersburg 1896, p. 78). A Tatar village in what was formerly the government of Yezdawetpol in the district of Djevanshir is also called Karagözli.

(W. BARTHOLOMI)

KARA HİSAR, "Black Castle", the name of several places in Asia Minor, which, although distinguished by epithets, are often confused with one another; lists of them, none of which is complete, are given in a later addition to Yakut's Mağdat, ed. Wiesbäld, iv. 44, then by Ewliya, Siyahçınname, Constantinople 1314—15, ii. 384 = Narrative of Travels by Ewliya Efendi, O.T.F., London 1850, ii. 205 (cf. J. v. Hammer, Gesch. d. Osman. Reiches, Pest 1837—35, iv. 619), in Ahmad Wafik's Lekhāşı̄-i Ottomanı̄, Constantinople 1203, p. 911, and in Ali Djawād, Tāriḵ-i Djuhaštābād-i Mūhaddis-i Ahwāz, Constantinople 1353, i. 599. They are alike in being situated on heights, sometimes difficult of access and fortified; the majority date probably from the middle ages only and were mainly built as places of refuge for the inhabitants of the surrounding country during inroads which were continually made in the wars of the Byzantines with the Arabs and Saljuks and later in the wars between the small states that arose in Asia Minor; many were later abandoned under the peaceful rule of the Ottomans and disappeared from our maps.

The most important places of this name are:
1. Kara Hisār-ı Şahīb (in Nashri, Z.D.M.G., xiii. 193 = Lenclovius, Hist. Musulm., Frankfort 1591, col. 140). Şahīb-ı Kara Hisārī; Saibcarascar in Caterino Zeno, Commentarii del Viaggio in Persia, Venice 1558, fol. 149), also called Afūn Kara Hisārī ("the opium K. H."). The former name is derived from a notable man of the last period of the Saljuqs of Konya, Şahīb-ı Fakhr al-Din Ali Beg (d. 687 = 1288/9), who had retired there with his treasures before the Karamanids and Mongols and whose successors ruled the town and district until the protection of the Germiyan-Oghlu of Kutahya (Houtsmuller, Recueil de textes relat. à l'histoire des Seldjoukides, iv. 208, 327, 334, where K. Dewe means this K.; ibn Feisıl Allah, Maqālī al-Aghār, transl. by Quatremère in the M.W., xlix. 359, 357; Ahmad Tawḥīd in the Recueil Historique publié par l'Institut d'Histoire Ottomanie, first series, p. 563 sq.). The popular name Afūn Kara Hisār later became generally used in place of K. H. Şahīb, which is still the official name. Afūn K. takes its name from the extensive cultivation of opium in the neighbourhood which is mentioned as early as Belon, Les observations de plusieurs singularitez et choses vulnerables, Paris 1555, fol. 1829; cf. Blau in the Z.D.M.G., xxii. 280. Kara Hisār-ı Şahīb is now identified with the Byzantine fortress Akromais, Akroñois, in the vicinity of which the legendary Saiyid Bâšîl in 739 perished, and with his followers on a campaign against the Byzantines (Theophanes, Chronogr., ed. de Boor, i. 390, 411) and where the Comnenus Alexios I negotiated with the Seljuqs Sulṭān in 796 (Anna Comnena, Alexiad, ed. Reifferscheid, ii. 285); in the course of the xiiith century it must have been taken by the Byzantines by the Germiyan-Oghlu. Khwār Pasha (d. 750 = 1349), son of Sulaimānshāh of Germiyan, and other members of this dynasty are mentioned as presidents (Cebeli) of the Mewlewī settlements in K. (cf. Ghālī Dedde, Tadhkarā-ı Şirvānī-i Mewlewī, MS. No. 1577 of the Vienna Nat. Libr., fol. 54a and 509 = "Ali Enwer, Simā'-hāne-ı Edebi, Stambol 1309, p. 48 sq. and 102.

During the invasion of Asia Minor by Timūr after the battle of Angora (1401) K. also was visited by the victor's raiding parties (Şaraf al-Din 'Ali Yazdi, Zafarnāme, Bild. Ind., Calcutta 1887—88, ii. 446, 457, 484, 492 = Histoire de Timur-Ber etc., Fr. transl. by Prés de la Croix, Delhi (1) 1723, iv. 21, 31, 60, 68; Dukkara, ed. Bonn, p. 77). In 832 (1428/9) the kingdom of the Germiyan-Oghlu passed to the Ottomans and K. with its lands became incorporated in a sandjak of the eyalet of Anadolu (cf. Dijânnuma, 1341), p. 641). As a stronghold near the Karamanian frontier it remained of military importance so long as Karaman was still independent; at the beginning of the war with Uzbek Hasan in 877 (1472/3) prince Mustafa fell back on its defences and made raids from it upon the Karaman-Oghlu who were allied to the Persians (Ashīk Pascha Zade, Tāriḵ-i Isfahān, Stambol 1332, p. 177; Sa'd al-Din, Tāriḵ-i Isfahān, i. 534; Caterino Zeno, op. cit.) and in 895 (1489/90) K. formed the base of the operations of the Hersek-Oghlu against the Egyptians who had invaded Karamanian territory (al-Din, op. cit., ii. 65). But K. became still more important as a junction of the caravan-routes leading from Smyrna to trading centres of the interior, like Angora, Kaisaria, Tokat, etc. In recent years the Smyrna-Cassaba railway there joins the Anatolian railway system which starts in Stambol. On the dissolution of the old eyalet of Anadolu the sandjak of K. was attached to the
province of Brassa; the town of K. is the residence of the munificents; its population was estimated at 25,000 in 5,000 houses (20,000 Muslims, 5,000 Armenians, some 300 Greeks), but later figures are not available.

Of the few relics of classical antiquity the monastery must have been brought here from ruined sites in the neighbourhood, like Schiller (Vrymnesus), Idâ: Karâhisâr (Dociacena) and Cifat Kâşânâ (Synnada); the monuments of the time of the Germiyân-Oghülî, e.g. the Ulu Lîşî of Khiyâga Beg and the tomb of Sultan Dîwanî, and the older buildings of the Ottomans have not yet been thoroughly investigated.

The feature of the town, the steep cone of thrachyte which rises 650 feet above the level of the town which lies around it, with the late Byzantine defences renovated by the Germiyân-Oghülî, still bore in Niebuhr’s time the name Lek Baran Kâfesi, “the fortress which affords shelter to the Beg”-this citadel was probably never really a permanent settlement and is now left to fall to pieces, although it has been from time to time used for the internment of partisan prisoners (“Aşik Pasha Zade, Târîx r. p. 243-4”), the last occasion being in 1802 when French prisoners of war from Egypt were kept there. The “Arabic” foundation inscription at the entrance, which Niebuhr and Oberhammer saw, has not yet been copied.

Some 15 miles or 5 hours north of Kara Hisâr Sâhîb lies:

3. Kara Hisâr-i Shârî, also called Shâlîn (or Shalîn, Shalî) Kara Hisâr, or Karâhisâr-i Shâhînhâmî, from the alum-mines in the neighbourhood which were worked in ancient times and still more in the middle ages and produced a particularly esteemed kind of this mineral.

As was first pointed out by Blau in 1865 on the authority of a Byzantine inscription the town is the ancient and mediæval Colonia and bore this name down into modern times. After the reforms of Justinian it belonged to Armenia Prima, in the Notitiae Episcopatuum it appears as the see of the bishop of Armenia Secunda. In 162 (778) the town was captured by Yezid I., Usâid al-Sulami in a raid on the Pontus (Ghévond, Hist. des Guerres des Arabes en Arminie, p. 106, quoted by Blau; cf. al-Tabari, ed. de Goeje, iii. 493; cf. Ibn Khojddâbiheh, B.G.A., vi. 108). On the other hand the Kalâniya which, according to Eutychius, ed. Selden and Pococke, p. 383, was taken by the Sâsînâ Shâpur with Cappadocia and the Kalâniya, which the Hamândân Saîf al-Dawla captured in 335 (947/8) (Z.D.M.G., x. 467; Yahyâ, Mi’âjam, it. 105) are almost undoubtedly identical with Colonia Capпадoicae, which, according to Niketas (p. 72 and 689), is the later Aş-karâşî. This strong fortress must have been lost to the Byzantines after the battle of Manzikert. The Danishmand-Oghülî first established themselves there (Anna Commena, Alciat, ed. Reifferscheid, ii. 164); later we find the Saltûkâda of Erzurûm in possession (Niketas Chron., Anv., ed. Bonn, p. 185, 294) who were disposed in 598 (1201/2) by the Saltûkîs of Konya; they in turn were succeeded by the Mangûddids, vassals of Konya. After the fall of the Saltûkân of Konya, the descendants of Eretân ruled there and various princes of the house of the Aş-Koyunlu and Kara-Koyunlu (cf. Sa’d al-Din, i. 287 = Ali, Kwhâl al-Akhbâr, v. 178 = Leunclavuis, Hist. Musul., coll. 474, 189 sqq.) in 1473 after the battle of Terdjîn the town was taken by Mehemmed the Conqueror and incorporated into the Ottoman empire (Aşîk Pasha Zade, Târîx, p. 378 and 181, we describes the town as the Kara Hisâr of Kamâk and Sa’d al-Din, i. 541 and 542; Leunclavuis, Hist. Musul., coll. 589, 45 sqq.). Kara Hisâr-i Shârî formed a sandjak of the eyâlet Erzurûm (Ewliya, Travels, ii. 205; Häджджî Khâlîfa, Dhîlânâmûnî, p. 422, 424); this district now belongs to the wilayet of Swâs and the seat of government is in the town of the same name.

The old name Colonia was taken over by the Saltûkîs in the Armenian form Kughûnîya, which we find in Ibn Bâbî’s chronicle (Toutoumi, Recueil, iii. 291-295, iv. 151, 152, 319) and on the coins of Erzân (Ahmad Tawhid, Meslêk-i Kânîne-i İslamî, iv. 439). If, as seems almost certain, the Mavro-Kastran mentioned by Michael Astallota, ed. Bonn, p. 125, and Skylites, p. 679, on a high hill difficult of access in Armenia", is the form in which the town is recorded in the viiiith century we again find the form Garasarins, corrupted out of Kara Hisâr, in use as well as Coönia.

The imaginative description of the town in Ewliya’s Celebi and scanty references in the Dhîlânâmûnî, both of the second half of the viiiith century, are correctly copied and supplemented by the descriptions of modern travellers. The town, built on
the slopes of a hill below the ancient fortifications possessed—according to Cuinet, with whom travellers agree—12,13,000 inhabitants (7500 Muslims, 3000 Armenians and over 1500 Greeks) and was the residence of the mutasarrif and of an Armenian Bishop and of the Greek Metropol of Nicopolis; there is no more modern information available. The citadel surrounded by a ring of walls, in which old well-shafts suggest a pre-Hellenic settlement, is no longer inhabited; within this fortress on the summit of the hill lies a small fortified redoubt with an octagonal watch-tower. The dinners date from the 17th centuries and were further developed by the Muslim rulers.

Sichtberger (Reisebuch, ed. Langmantel, p. 57) calls Karasere “ein fruchtarbès lant an Weinwuchs” (a land rich in vine-yards); more famous than the vine-yards which still exist were the rich alum-mines in the adjoining village of Shakh‘ane, in which were obtained the valued “alume de roce de Colonna” (i.e. Colonia) (Pegolotti in Heyd, Histoire du Commerce du Levant, i. 565); these alum-ware was known in Roman times as “ supplying a vast unam argentarium of Vincentius Bel- lowacensis, xxxi. col. 143; they were also mentioned by Rubruquis (ed. Bergeron, p. 147). Mehemmed the Conqueror took possession of them for the state treasury (Sa‘d al-Din, i. 542) and from the rent they yielded when farmed out the garrison of the fortress was later paid (Djihânamûn, p. 424).

4. Kâra Hijâsr Bahrâm shâh (Bairamshâh) is first mentioned by Hamdullah Muftiawfi, Nushâh at-Kulâh, p. 97; Sidi Re’s (xviiith century) visited the place on his journey from Siwas to Bozaq and Kirâshir (Mir‘at al-Manâlik, Stambul 1312, p. 96). In Kâthib Celebi’s time (xvith century) it was a kâzî of the eyalet Siwas (Djihânamûn, p. 622); it is now the residence of the Mudir of the nahiyye of the same name of the kâzî of Maidan in the sanjak Yozgâd in the vilayet of Angora, of day’s journey east of Yozgâd. The place is not marked on our maps.

5. Kâra Hijâsr De mirdîj, a village in the Kârêm Corum of the vilayet of Angora, a few hours north of the famous ruined site of Üyûk, given in the Djihânamûn, p. 625, among the Kâzî’s of the sanjak of Corum. W. Hamilton in 1839 was the first European to visit and describe it (Researches etc., i. 279, 281, 403; following him Ritter, Kleinasien, i. 147, 149 sqq.; next came in 1859 H. Barth (Reise von Travancore nach Scutari, p. 42) and A. D. Moritmann (in Ausland, 1863, p. 785; Sitzungsber. Bayr. Ak., 1861, p. 191 sqq.). The ruined site of Kâzî Saryï which belongs to it is mentioned under this name in the Djihânamûn also. On our maps this Kâra Hijâsr appears without an epithet; it may be identical with the Kâra Hijâsr which the older Ottoman chroniclers mention in connection with the fightings of prince Muhammed with the Yürük chief Goleroglu about 805 A.H. (Leun- clavius, Hist. Musulmar., col. 386; Sa‘d al-Din, i. 200).

6. Kâra Hijâsr Tekke (Djihânamûn, p. 638; Ahmad Wafik, ‘Ali Djäwa, loc. cit.) also called Kâra Hijâsr-Adalia (Elwiyya, Travels etc., ii. 705), is mentioned by Vâküt, Mi‘lijan, iv. 44 as a village a day’s journey from Angâkia (or rather Angâla). In the time of Ibn Fa‘l Allah a certain Zakariyyâ, a former Manilk of the lord of Adalia, had made himself independent there and ruled a small territory which included 3 towns and 12 strongholds (N.E., xili. 372 sqq.). The place is still mentioned in the surveys of Mehemmed the Conqueror (Recue Historique publ. par l’institut d’historie Turque, part ii. 76) and as a kâzî of the sanjak of Adalia in the Djihânamûn, loc. cit. According to Ahmad Wafik, K. is the capital of a nahiyye of the kâzî of Sirik in Adalia, in the vilayet of Angora; the Sânîme of this vilayet, however, only knows the place under the name of Sirik nor is the older name found on our maps. Sirik, a miserable village on a tributary of the Köprü Su (Eurymeldon), is the ancient Selje (Ritter, Kleinasien, ii. 515 sqq., 653; G. Hirschfeld, Reise im südwestlichen Kleinasien in the S.B. Pr. Ak. W., 1875, p. 134). The similarity of names is accidental because Sirik is originally the name of a Yürük clan.

Besides these towns of the name Kâra Hijâsr and Dewe D. dealt with separately (see above, i. 952) the following are also given: Kâra Hijâsr in the land of Osman (Vâküt, op. cit.); this may refer to Karadja Hijâsr, also called Karadja Shehir near İnöba in the ancestral lands of the Ottoman Sultans for which even in the older historians Kâra Hijâsr is often written. Kâra Hijâsr in the land of Ibn Torgihut (Ibn Fa‘l Allah, op. cit., p. 350); no other reference is known, unless it is an older name for Torgihutu Kâşabasi near Mânsa. Kâra Hijâsr, capital of the Kâzî of Na‘îlukhân, vilayet of Angora (Ahmad Wafik, op. cit.), not given in the Sânîme nor marked on our maps.

Hamâm Kâra Hijâsr, village of the nahiyye of Gümüyni, Kâzî of Siwri Hijâsr, vilayet of Angora (Sânîme); also on the maps. Wân Kâra Hijâsr (Elwiyya, op. cit.); no other reference known. (J. H. MORITMANN).

KâRâKALPAK. [See KERAK].

KâRâKALPAK (‘black caps’), a Turkish people in Central Asia. In the Russian annals a people of this name (Cernyi Klobutz) is mentioned as early as the twelfth century; whether these ‘black caps’ are identical with the modern Kârâkâlpak cannot be definitely ascertained. It is not till the end of the xvith century that we find records of the Kârâkâlpak in Central Asia. According to the embassy report of Skibin and Troghin (1694), they then lived on the Sir Darya, 10 days’ journey below the town of Turkstâan. There they are again mentioned in the xvith century as neighbours of the land of the Khans of Khiwa; about 1722 a treaty was concluded by the ambassador Verugini between Peter the Great and the Khan of the Kârâkâlpak, Abu l-Muaffar Sâ’dat ‘Iyâfat Muhammed
Babādur (Pohnype Sobunuiye Zakonew, 1722, Nö. 4101). The eastern part of the lands of the Volga Kalmucks between the Ural mountains and the Volga used to be raided by the Karakalpaq. Even then the Karakalpaq lived not only by their herds and by their raids but also by agriculture with artificial irrigation of their fields and by fishing on Lake Aral. They are said to have migrated to Central Asia from the Volga region. About the middle of the nineteenth century the winter quarters of a body of the Karakalpaq were on the central course of the Sir at Khwāna (north of Ur-Teb); the prince (tuwa) of these Karakalpaq entered into an alliance in 1755 with the Atash of Bukhara, Muhammad Rahim; 3000 families of the Karakalpaq were settled at Samarqand and received from there 400 ass-loads (ʔawwar) of corn; the son of the tur was joined the army of the Atash (Muḥ. Wafā Karminx, MS of the Asiatic Museum, c. 581 b, f. 148d). Radloff (Jus Siberiæ, Leipzig 1893, i. 228) visited in 1868 north-east of Samarqand some settlements of the Karakalpaq, who had immigrated "from the Amū Daryā not long ago". A considerable number (about 20,000) still live in Farghāna at the present day. The Karakalpaq are said to have been driven out of the lower valley of the Sir Daryā by the Kazaks towards the end of the eighteenth century; they are still mentioned in the sixteenth century a little farther south on the (now dried up) Venī Daryā à propos of the campaigns of Muhammad Rahim, Khān of Khiwa, against the land of Kungrat (1807—1811). The Karakalpaq were then subject to the Khán of Kungrat and lived, in part, on the lower course of the Amū Daryā, especially on the arm of the river known as the "Kazak"; there they succeeded in holding their own even at a later date against the Kazaks. After the union of Kungrat with Khiwa (1811) the Karakalpaq also had to submit to the Khán of Khiwa, but made frequent attempts to throw off this yoke; in 1827 the town of Kungrat was even captured by them for a time; after the suppression of this rising a part of the Karakalpaq migrated to Farghāna (History of Khiwa, MS of the Asiatic Museum, 500 b, from 1836—1856). In 1856 the leader of the Karakalpaq, İbrāhīm, appointed the title of Khán (μιδ, f. 516d); the fortress built by him near where the Kaza flows into Lake Aral, the ruins of which still bear his name, did not fall till the following year, and then through treachery, into the hands of the Khiwans. After the Russian conquest of Khiwa in 1873, when the Khán had to cede to Russia all his possessions east of the main arm of the Amū and the most north-western arm of its delta (Tallīk or Tallīk), the land of the Karakalpaq also became Russian. The area, then separated from Khiwa, was first administered as a separate circle (otdely), later as part of the government of Sir Daryā; after the revolution it was constituted a separate territory (oblast). The Karakalpaq form about half the population there, according to the latest census over 110,000 souls. In addition there are about 20,000 Karakalpaq in Khiwa and as many in Farghāna.

The dialect of the Karakalpaq was first investigated in 1903 by S. Byelyayew; some of the texts then written down were later published (1917) in the Protokol Zakaspiyskago Krūska lyubitelii Arkeologii etc., parts 3 and 4. Information on the Karakalpaq is given in all books on Turkestān and its population; e. g. Fr. v. Schwartz, Turkestān, p. 17; Kostenko, Turkestānskiy Kray, St. Petersburg 1880, i. 329 sq.; Mašal’ški, Turkestānskiy Kray, St. Petersburg 1913, p. 390 sq.; Asiatikaса Rossii, St. Petersburg 1914, an official publication, i. 163 sq.; Vanden, Das Turkvenkol in seinen ethnologischen und ethnographischen Beziehungen, Leipzig 1885, p. 373 sq. No special monograph has so far been devoted to the study of the Karakalpaq people. (W. Barthold)

KARA KHĀLĪL. [See ĖNDERELI]

KARA KHĪTĀI (or KARA KHĪTAY), the usual name since the viiith (seventh) century in Muhammadan sources for the Khitai people, mentioned by the Chinese from the eighth century A. D. onwards, who were probably Türk (according to another view Mongol). In the Turkish Orkhon inscriptions the Khitai are several times mentioned as enemies of the Turks in the extreme east of the area visited by the Turks in their campaigns; according to Chinese sources, they lived in the southern part of Manchuria. From the beginning of the tenth century the Khitai carried on a policy of conquest, conquered the northern part of China, and founded a dynasty which at a Chinese ruling house was called Liaoch (916). Even the founder of the Tang dynasty, Apoaksi, was able to subdue Northern Mongolia, which had been conquered by the Kirghiz about 840; Apoaksi himself visited Karakorum in 924 and is said to have received an Arab, i.e. Muhammadan, embassy there (Breitgut, Mediaeval Researches from Eastern Asiatic Sources, London 1910, i. 265), the first record of the appearance of Muslims in this region; it was probably only a trading caravan (Mongolia, of course, lay outside the usual range of Arabic geographical literature, for which the Kirghiz were the extreme north-eastern people). The house of Liao succeeded in holding its ground against the national Sung dynasty which had arisen in South China since 960; not till about 1125 were the Khitai driven from China and Eastern Asia by another Türk people, the Djürden.

Even before settling in China the Khitai had adopted Chinese civilization to a greater extent than other nomadic peoples; in contrast to the cult of the rising sun predominant among the other nomads of the East, they had borrowed from the Chinese the cult of the South; with this fact is no doubt connected the spread of this cult among the Mongols, and throughout, the Mongol Empire in Central Asia generally (see W. Barthold’s essay in the Zapiski vost. otd. akad. obšč., xxx, 55 sq.). As the Djürden did later, the Khitai formed a system of writing of their own based on the Chinese hieroglyphic system (about 920 A. D. with some 1000 characters). A statement in the official "History of the Liao" (Liao-shi) where, according to de Groot’s translation, there is mentioned an alphabet prepared for the Khitai (small characters, few in number and all arranged in rows") by the foreign wise man, Tiet-ts’i (according to F. W. K. Müller, perhaps tarū = Christian), is explained by Marquart to mean that about this time (the statement refers to the reign of Apoaksi) the sounds of the language were reproduced in an alphabet of western origin (perhaps modelled on the Uighur) (Sitzunsgber. d. Preuss. Akad., 1912, p. 500 sq.) documents or inscriptions in the alphabet have so far not been found. On the other hand we have specimens of Khitai writing in the alphabet

THE ENCYCLOPEDIA OF ISLĀM, II.
of Iml. From there as a base they occupied without opposition the town of Balasagün [q.v.], wither the Muslim ruler of this region of the Ilk Khan dynasty had summoned them against his enemies; it was only from here, i.e. from the North, that they conquered Kaghchar and Köhtan and later Mā-warā-n al Nahr and Khwārizm; the king of this land, Atfūs (1128–1156), had to bind himself to pay a yearly tribute of 30,000 dinars. On the fighting in Mā-warā-n al Nahr and Khwārizm we are particularly well informed by Ibn al-Athir as well as by a few earlier sources like iMād al-Dīn (Houtsma, Recueil de textes relat à l'histoire des Seljoucides, vol. ii.) and Rāwandi (Kāhāt al-Sādir, ed. Muḥ. ʿIlbāl, esp. p. 172 sq.); the material is utilised in Barthold's Turkestān etc. and in Marquart's Osthirdische Dialektstudien. In Mārān, 531 (May–June, 1137) the Khān of Samarkand, Māhmūd, was defeated at Ḵoḏand and on ʿṢafār 5, 536 (Sept. 9, 1141) his powerful overlord, Sulṭān Ṣandjār, in the desert of Ḵaḏwān north of Samarkand. After this the kingdom of the Khān of Khātān stretched from the land of the Kirghiz (on the Yenisei) in the north for a time as far as Balkh in the south, from Khwārizm in the west to the land of the Uyghurs (see Bīṣābālīk) in the east, with its ruler's residence on the Cū [q.v.] at Balasagūn. The ruler bore the title Gūrkhan, which is explained by Dwiwain (ii. 86 below) as Khān of Khātān (Khān-i Khātān); the word Gūr is perhaps reproduced by the Chinese Ye-lu (family name of the Liao emperors). Unlike the other nomad empires no tithes were granted either to the relatives of the Gūrkhan or to other persons of high rank; the first Gūrkhan is said to have allowed no one command of more than 100 men. On the other hand almost everywhere (Balasagūn perhaps formed the only exception) the native dynasties continued to exist as vassals of the Gūrkhan; these vassal states probably formed the greater part of the empire. The level of taxation was, as in China, fixed by the number of houses; a dinar was levied on every house. The language of the government seems to have been Chinese. The son-in-law of the Gūrkhan is called fascā (Chinese "son-in-law") in Dwiwain (thence Usūfāmī in his note on Mālkhōd, Hist. des Sultans du Khurasan, Paris 1863, p. 124; in the edition by Muḥ. Ḵawzānī, ii. 17, 18 and 20, fascā); in the account of the Khātān in ʿAwīl (Lūḥbī al-ʿAlībī, ed. Browne, ii. 385) we appear to find the well-known Chinese word pāiz (so to be read for bā nasrā), later also adopted by the Mongols. Even under the rule of the pagan Khātān the Muslims appear, however, to have retained their leading positions; the wealthy merchant prince, Māhmūd Bāy, is mentioned by Dwiwain (ii. 89) as vizier of the last Gūrkhan. In Kaghchar about this time we find a Christian bishop (Assemani, Bibl. Orient., ill. part ii. 503); to the same period also belong the oldest Christian inscriptions on the Ču (Zápliški vost. ed. archb. obhč, viii. 26; W. Barthold, Zvět (Christentum etc., Tübingen, 1901, p. 58)); but also Islam seems to have made progress during this period. In the story of the conquests of the Khātān, the country of the princes of Balasagūn appears as the frontier land of the Muslim world; in the beginning of the xiiith century two Muslim dominions are mentioned north of the Ilī [q.v.] (one in the northern part of the
modern Semireche and one at Kulja). After the destruction of the kingdom of the Kara Khitai and that of the Naiman prince Külük, which succeeded it although over a much smaller area, the last Kara Khitai, as is apparent from the account of the journey of the Chinese envoy Wu-ku-sun (1220–1221), had to adopt Muslim customs and Muslim garments (Breternicher, Mediaeval Researches etc., i. 29). All this says little in favour of Marquart’s (Osttürkische Dialektstudien, p. 209) idea of the civilization of the Kara Khitai, which, according to him, stood “brilliantly out from its miserable surroundings”. In the first place, the text does not support this idea. In the second, the first Karashan of the text as translated by Ibn Al-Athir, xi. 57, in Raddj, 457 (Jan. 20–Feb. 18, 1142); he was followed by his widow “and his son Muhammed”. Marquart wants to read ibnātu ‘annāni for ibnānu Muhammed (Osttürk. Dialektst., p. 237); but it is nowhere stated that the wife of the Gürkhan was also his cousin; moreover, according to Chinese sources, she was only regent for her son who was still a minor. The latter, of course, cannot have been called Muhammed; but how the text is to be emended must remain unsettled (the reading wa-ibnu Muhammed is also found in the Bulaq edition, xi. 56). In the Muslim sources we find no complete list of the Gürkhan’s princes; Marquart here makes a guess in which only references to these are scanty and contradictory. Djuwaini in his chapter on the Kara Khitai (ii. 85 sq.) only mentions the widow and the brother of the first Gürkhan; in another passage (ii. 17) he also mentions, as do the Chinese annals, the rule of the daughter of the first Gürkhan; the same queen is mentioned by Râwandi (Râhât al-Sûfîr, p. 174), but he makes her reign down to his time, i.e. to the beginning of the thirteenth century, which cannot be correct. A more accurate list of the Gürkhan’s is given by the Chinese annals, but their tradition also is obviously inaccurate, especially in its chronological data. Marquart’s endeavour (loc. cit.) to bring the Muhammadan and Chinese sources into agreement and thus to date the reigns of the different rulers seems in general to be successful. According to him, the widow of the Gürkhan reigned till 1150, his son till 1163, his daughter till 1178 and his grandson till 1211. The latter is mentioned in the Chinese annals and, according to the usual pronunciation of the characters concerned, was called Chi-lu-ku; Marquart (following De Groot) reads Tirgu.

Under this ruler took place the fall of the Kara Khitai kingdom, brought about partly by the activities of the Muslim rulers in the west and partly by the Mongol power, then just breaking out (cf. the accounts thereon in Barthold’s Marquart, and also the articles Bûrân, Bûhârî, Cîngiz Khân and Muhammed B. Takâsh). As happened elsewhere also, it was here not always the conflict of religions that was the deciding factor. The Kara Khitai Muhammad, afterwards leader of the Muhammadan movement, relied in the early years of his reign for assistance against his Muslim enemies on the pagan Kara Khitai, as well as the spiritual rulers (imâr) of Bûhârî. The rising of ‘Uqman, prince of Samarkand, against the Kara Khitai is explained by Djuwaini (ii. 91) as due to the refusal of the Gürkhan to give his daughter in marriage to this prince. Later, under the influence of the estrangement between ‘Uqman and his Muhammadan liberator and father-in-law Muhammad, this matrimonial alliance nevertheless took place (ibid., ii. 124); the rising of the Muhammadan population of Muwarez-al-Nahr against their liberator had to be put down with ruthless vigour and bloodshed (609 = 1212). In contradiction to the view of these happenings given by Djuwaini, the Gürkhan was in reality deprived of his power a year earlier, in 1211, by Külük, prince of the Naiman. The attitude of this originally Christian, later pagan (probably Buddhist) ruler to the Muslim population did not always remain uniform; he appears as an ally of the Muslim enemies of the Gürkhan and as an ally of the prince of Kâhsârî (cf. the text of Djamal al-Kurashî in Barthold’s Turkistan etc., i. 133). He afterwards became a most bitter enemy of Islam. In his reign took place the first and only persecution of Islam in Central Asia; public Muslim worship was suppressed, the Muslims forced either to adopt Christianity or the religion of the pagans or at least to adopt the clothing of the Kara Khitai. Those who resisted were, like the Protestant feudal lords under Louis XIV, punished by having soldiers billeted on them. The only source on this point is Djuwaini (i. 49 sq.). By Cîngiz Khân’s victory over Külük the religious persecution was ended; the free subjects of the Karashan, subjects of the Kara Khitai, who had had as early as 1211 been in negotiation with Cîngiz Khân, received complete freedom of religion under Mongol rule. The Muslim dress was now adopted (cf. above) by the remaining Kara Khitai, which was the very reverse of Külük’s law. Neither inscriptions nor buildings nor any other trace of the rule of the Kara Khitai have survived in Central Asia.

On the rule of a former “Amir” of the Gürkhan and his descendants in Kirmân see Bûrân, Hâdib and Kirmân. (W. Barthold)

KARA KIRGIZ. [See Kirghiz.]

KARA KOL, KARAGHUL. [See Karaul].

KARAKORUM (karaqorom), a chain of mountains in the centre of Asia lying north and almost parallel to the Himalayas. The range extends westwards as far as 75° of Long.; it has not yet been definitely ascertained how far it runs eastwards. At one time the eastern limit was thought to be the pass of the Karakorum, but, according to the views of several famous geographers, the range runs much farther into Tibet and the Tang-la should, they think, be regarded as a part of the Karakorum. This idea was first put forward by Klaproth in 1836 and is now held by Burrard, von Hedin and others who further regard the Trans-Himalaya as belonging to the Karakorum system. If this is accurate, the whole system would be about 1250 miles long.

The highest elevations are found in the part west of the pass of Karakorum. There we find several peaks over 26,500 feet high and countless summits over 23,000 feet. The highest peak — probably the second highest in the world — is Mount Godwin Austen, indicated on the Survey of India maps as K.2, but which seems to have been long known as Chogo-ri among the natives. This giant attains a height of 28,245 feet.

This western part of the Karakorum possesses a wild and imposing natural beauty; it is covered with eternal snows over a considerable extent. The snow line runs from 15,500 feet north of the principal chain to 17,000 in the south.
If we exclude the polar regions the largest glaciers in the world are found in this part of the Karakorum. The Siachen glacier is 45 miles long and covers a surface of about 1,000 square miles. The Baltoro, Hispara and Bimbo glaciers are only a little less than the Siachen. The plateau out of which rises the Karakorum has an average height of 10,000 feet. The whole region is excessively dry because the rain (snow, hail) falls almost exclusively on the high mountains. The vegetation in the valleys is very slight and is confined to the vicinity of torrents and streams. At the terminations of the glaciers we find — very often on a little plain — a very beautiful alpine flora.

The Karakorum is the most important watershed in Central Asia, dividing the rivers which run northwards empty their waters into the deserts of this part of the world, and running southwards into the Indian Ocean.

The principal pass is the col of Karakorum (18,550 feet), through which runs the important trade route between Chinese Turkestan and Kashmir. It is difficult and dangerous. In their long journey countless beasts of burden perish of exhaustion or in the avalanches. The mountaineers take their "black debris," the name is not very appropriate. It is found for the first time in a map by Elphinstone published in 1815. On this map the range in question is indicated by the name Moor Taugh or Karakooroom Mountains.

The first traveller to write on the mountains now called Karakoram was Mirzâ Haidar, a prince of Chinese Turkestan, a propos of his journey from Yarkand to Leh, capital of Ladak, in 1533. The exploration proper of the Karakoram only began in 1808 when Elphinstone visited those regions. The more systematic and detailed exploration of the high mountains proper was only begun in 1892 by Sir Martin Conway's expedition, which has been followed by several others.

(Ph. C. Visser)

**Karakorum, a town in Mongolia on the Orkhon, in the thirteenth century for a short time (about 1230—1260) the capital of the Mongol Emperors, now in ruins. The fullest accounts of the town are given among European travellers by Rubrak (Latin edition in *Itinerari de Viaggio* et *de Viaggio*, 1539, iv. 345 sq.; transl. by W. W. Rockhill, *Hakuyt Society, 2nd series*, especially p. 220 with the translator's notes) and among Muslim historians by Djuwaini [q. v.]. *Tarikhi-i Dzihan Gubzlu*, ed. Mirzâ Muhammad Kazwini, especially i. 169 sq. and 192. The fullest account of the ruins (by the members of the expedition of 1891) is in *Sbornik Trudov Orkhoonskoy Evpedsii*, part i. (1892); in Radloff's *Atlas der Alterthümer der Mongolei* is a plan of the ruins (Pl. xxxvi.) and a squeeze of a large (not completely preserved) Persian inscription (Pl. xliii.); on the other see E. Blochet in *T'oung Pao*, 1897, vii. 309 sq. As Djuwaini freely remarks, a little below Karakorum there were the ruins of the old (8th—9th century) Uighur capital Ordu balfik ("court town") which, from being in ruins, was then called Mo-balfik ("black town") and is now known as Khara-Balgasun ("black town"). The city built by the Mongol Emperor Udegee (1229—1241) was also at first officially known as Ords-balfik; the name Karakorum was a popular one. On linguistic grounds Karakorum cannot, as Rockhill supposes, be a corruption of *Kara Kuren* ("black camp") but means "black debris" (cf. Radloff, *Versuch einer Wörterbuch*, etc., s. v. *Korum*), a name still frequently found in mountainous regions. As Djuwaini expressly remarks, this was the original name of the mountain region round the sources of the Orkhon. The statement ascribed by Rockhill (following d'Ohsson) to Djuwaini that the town was half a farsak long does not seem to be found in the printed text of the *Tarikhi-i Dzihan Gubzlu* nor in manuscripts. Rubrak describes Karakorum as a small town not larger than the faubourg St. Denys in Paris; the monastery of St. Denys far surpassed in size the palace of the Mongol emperor. The ruins of the Mongol Karakorum indeed indicate a town of very moderate size; the Uighur Ordu-balfik was considerably larger. On the other hand there was much building in Karakorum during the city's brief period of splendour; Rubrak as well as Djuwaini give full descriptions of the imperial palaces built in the city and around it, some by Chinese and others by Muhammadan architects, according to Rubrak, Russian and Western European architects also shared in the building operations at a later date. Two farsaks east of Karakorum lay, according to Djuwaini, the palace of Tarshih-balfik ("city of precious stuffs, brought as presents").

After the Mongol Emperors had removed their residence to China, Karakorum was only the seat of the governor of Mongolia; according to Marco Polo (transl. Yule-Cordier, London 1903, i 226), who was not himself in Karakorum, the palace of the governor was in the citadel. After the Mongol dynasty was driven out of China (1368) the Emperors returned to Karakorum; after the dissolution of the dynasty in the xvth century the city lost all importance; at the present day the great Buddhist monastery of Erdeni-Tuu is there.

(W. Barthold)
KARA-KOVUN-LU (Turkish "those of the Black Sheep"), a Turkoman dynasty which reigned in Persia and Mesopotamia from 777 (1375) to 873 (1468). In the reign of the Emir Dji-dash, Sulthan Uwaiss, Bandur Khvadjia, chief of the family of the Behrul, had obtained an important position at the court of the Sulthan through his valor; at the latter’s death he seized al-Mawyi, Sindjar and Ardjasj. When he died in 782 (=1380), his son Kara Muhammed Tarumsh, who was in the service of Sulthan Ahmad, son of Uwaiss, came back to succeed him and fell in a battle in Syria (792 = 1390). The son of this Kara Muhammed, Kara Yusuf, proclaimed himself independent and chose Tabriz as his capital. He made war on Timur, took refuge with Bâyazid Yildirim and took advantage of the conqueror’s campaign in Asia Minor to seize Irak Arabi, but he could not defend Baghadad against Mirza Abû Bakr, sent against him by Timur, and retired to Egypt to the Mamluk Sulthan, who kept him prisoner for some time. On Timur’s death he was released, collected the thousand men who had accompanied him, took Dyâr Bakr after overcoming a thousand difficulties, defeated Mirza Abû Bakr in the vicinity of Nakhkewwan (809 = 1406), recaptured Tabriz and settled himself there. The following year he again defeated this prince, accompanied by his father Mirzan Shâh, who fell on the field of battle. He took as a hostage on the throne his son Pir Budaq, who had been adopted by Sulthan Ahmad. He took Dyâr Bakr from Kara Oghman Bayendi, put Sulthan Ahmad to death after his defeat and capture not far from Tabriz, seized Irak Arabi (813 = 1410) and made peace with Kara Oghman after defeating him. He destroyed the army sent against him by Shaikh Ibrahim, king of Shirwân and Kustendil, king of Georgia. In 822 (1419) he captured al-Sulţaniya, Kazwin and Sâwâ, towns of Irak Adjami, Shaikh Rukh, son and successor of Timur, was leading a vast army against him when he fell ill and died in Dhu ‘l-Hiijjâ of the same year (December) in the town of Dûjân, at the age of 65, after reigning 14 years. His body was despoiled by the Turkomans and lay for two days without burial, then it was buried at Ardjân beside his grandfather Bahar Khvadjia.

His eldest son Amir Iscandar, having reunited the scattered members of his tribe, took the field against Shâh Rukh and was defeated after a battle lasting two days (824 = 1421); but he seized the opportunity of his opponent’s return to Khorasân to regain Ardhabâdjan. He defeated and slew Shams al-Din, Sulthan of Akhlat (828), Sulthan Ahmad, chief of the Kurds, and Izz al-Din Shir (830 = 1426). He recaptured Shirwân and al-Sulţaniya. He fought again with Shâh Rukh in 832 (1429) and, despite the bravery of his brother Dji-dash Shâh, he lost the battle and fled into Asia Minor; then, taking advantage of the fact that the Timurid sovereign had placed on his throne the other brother Abû Sa’d, he returned to the charge, captured his brother and put him to death. On the complaint of the people of Shirwân, who had been ruined by the plundering, Shâh Rukh sent a new army in 838 (1434) with which Dji-dash Shâh and Shâh ‘Ali, his nephew, joined forces. Not being able to make a stand, Iscandar fled and came back again when Dji-dash Shâh had been installed by the Timurid, but he was de-feated and shut himself up in the castle of Alendjâk, where he was murdered by his son Khozâd at the instigation of one of his wives, who had fallen in love with the young man (841 = 1437). He had reigned for sixteen years. Mirza Djâd-dash Shâh, appointed by Shaikh Rukh (839 = 1435), engaged in the reorganisation of Ardhabâdjan and added to it new provinces, Irak Adjami (856 = 1452). Isfâbân, in which the inhabitants were massacred, Fâr, Kirmân and Khorasân (862 = 1458), where he established his capital in the town of Herât. He was obliged to make peace with the Timurid Sulthan Abû Sa’id, who took the field against him, by giving up the latter province to him because his son Hasan had escaped from his prison and had succeeded in taking Ardhabâdjan. After an exceedingly swift march, on which he laid the country passed through waste and many beasts of burden perished, he captured his son and banished him from the country. Another of his sons, Pir Budaq, whom he had deposed of his office as governor of Far because of his evil conduct and relegated to Baghadad, rebelled in 869 (1465) and sustained a siege for a year. He then obtained by a ruse the submission of Pir Budaq, put him to death and replaced him by his other son Muhammed Mirza. He reigned undisputed over the whole of Ardhabâdjan, the two Idrâks and Kirmân as well as over the coast of Oman. Winter prevented him from putting into operation his plans against Dyâr Bakr (871 = 1467). On his return, while out hunting, he was surprised by his enemy Usân Hasan Bayendi and killed while trying to escape, at the age of 70 after a reign of 32 years (on the 12th of Rabî’ II = Nov. 21).

Hasan ‘Ali, his exiled son, whom Usân Hasan had welcomed, and whose brain was affected by his 25 years in prison, gathered together a body of bad characters and marched on Tabriz where his brother Hussân ‘Ali, the dervish, who had been crowned king in spite of himself, had just been murdered as a result of feminine intrigues. He ascended the throne, distributed his wealth to the mob and avenged his brother. Abandoned by the army leaders who went over to the camp of Usân Hasan, he tried to raise the people of Hamshân but was captured and put to death in 873 (1468). This was the end of the main branch of the family.

The branch which reigned at Baghadad consists of the following succession of princes: 1. Shâh Muhammed, son of Kara Yusuf (died 837 = 1433), had been entrusted by his father with the administration of this province, but he was deprived of it after 23 years by 2. his brother Espân, who reigned 12 years and died in 848 (1444). 3. His son Fûlç succeeded him; it was in his reign that Djâhân Shâh took Baghadad and thus put an end to this line.

KAŠAKM (Turkish "black sand"), a desert in Russian Turkestân, between the Amû Darya, the Ust Urt and the ranges of hills on the Caspian, contrasted with Kižl-Kum ("red sand"),
the desert between the Sir Darya and the Amu Darya. The Karakum (area 148,000 sq. miles) is a still more dreary waste and possesses even fewer fertile areas than the Kizil-kum. The sandy stretches north of the Sir as far as Lake Calkar are called "little Karakum"; cf. Franz Mahatschek, Landeskunde von Russisch-Turkestän, Stuttgart 1921, p. 15 sq., 285 and Index. The Karakum mentioned by Djuwaini in the Tarikh-i Dju'fani Khudai is, in the opinion of the editor, probably identical with the little Karakum (the readings of the MSS. are not certain; cf. edition by Mirza Muḥ. Karawini, Gibb Mem. Series, vol. xvi., part ii. 101 sq.).

(W. BARTHOLO)

**KARAKUSH, BAHK-E AL-DIN IBN 'ABD ALLAH (i.e. son of an unknown father) AL-ASADI (maniluk of Asad-e Al-Din Shirkhul) AL-RUMI (born in Asia Minor) AL-MASIRI AL-MAŠIRI, officer of Malik al-Nāṣir Yusuf (i.e. Saladin), a eunuch, received his liberties from Shirkhul and was appointed an Amir. By the time of Shirkhul's death (564 = 1169) he was already playing an influential part; it is said that he was to him and the Kādi 'Isa al-Hajjāri that the Caliph al-Salih appointed Saladin vizier. After the suppression of the rebellion fomented after al-Salih's death by his Chamberlain, the eunuch Mu'taman al-Khiłāfī, Karakush was appointed Chamberlain. In this capacity he had the surveillance of the family of the late Caliph and is said to have administered his office with great strictness. To prevent the family of the Caliph increasing, he separated men and women. Saladin gave him the task of building the citadel of Cairo and extending the city walls to include Cairo and Fustat; later he was asked to fortify and defend 'Akkā. When the town fell in 587 (1191) after eighteen months' fighting he was taken prisoner; Saladin ransomed him a few months later for the high sum of 20,000 dinārs. After the death of Saladin in 589 (1193) he entered the service of his son al-Malik al-'Aziz 'Uthmān and was trusted to represent the Sultan when the latter was out of Egypt. When the Sultan felt his end approaching (595 = 1199) he designated his son al-Malik al-Mansūr his successor and Karakush his regent. In keeping with this wish, the young ruler appointed him Atabeg although Karakush was now very old. He only held his post for a very short time as most of the Amir and the head of the chancellery, Ibn Mammāt, declared him incapable of ruling, presumably on account of his great age. His supporters, who considered him the most worthy, consulted Saladin's adviser, al-Kādi al-Faḍil [q.v.], but the latter, who had retired from political life, would not be drawn into the question. Finally the Amir asked al-Mansūr's uncle, al-Malik al-Afḍal, to take over the regency. After this we find only one mention of Karakush, when Sultan al-Adil, who had seized the throne in 596 (1200), had two of his nephews taken to the house of Karakush as prisoners. He died a year later. Contemporary historians, like Imād al-Din al-Kāmil al-Isfahānī, bestow the highest praise upon him, as do later writers, like al-Maḵrīzī and Ibn Taghribirdi, and describe him as the ablest man of his day. They give him particular credit for his activity as a builder. Besides the buildings already mentioned, his house, his hippodrome and the br dge at Gizeh, which he built out of stones from the Pyramids at Memphis, are mentioned.

In the same period a "Karakush" became notorious as a type of stupidity. A series of aburd verdicts are related in a work entitled Kitāb al-Faḍḥū fi Aḵkām Karakush, "the book of the stupidity in the judgments of Karakush". According to Ḥājjādī Khalīfā, the above mentioned Ibn Mammāt was the author of this book. Casanova (see Bibl.) in his elaborate study on Karakush quotes three manuscripts: 1) a Cairo manuscript which contains a brief selection from the Kitāb al-Faḍḥū; the author is there given as Ibn Mammāt; 2) a Paris manuscript the author of which is given as al-Sūṭī; it is wrongly as in the introduction Ibn Taghribirdi is quoted wrongly and given a wrong praenomen, which one can hardly credit of al-Sūṭī; 3) a Cairo manuscript which is a later version, in which Karakush is called a Sultan and the number of his "verdicts" is increased, by 'Abd al-Salām al-Łakānī of the year 1200 (1786). These "verdicts" have nothing to do with statecraft but are court verdicts; they are typical, well known anecdotes, current among other nations also. A special investigation has not yet been made of the problem. Casanova endeavours to show that the work is a pamphlet against Karakush, whom, he says, Ibn Mammāt had written an exceedingly severe man. It is not known whether Ibn Mammāt collected and published these anecdotes in the life-time of Karakush. Ibn Khallīkān rightly points out that it is impossible that a man such as is described in the anecdotes could have held high offices of state. Nor is anything known of a particular feud between Ibn Mammāt and Karakush except that Ibn Mammāt had protested in 595 (1199) against the appointment of this then very old man; Karakush is described by the Frankish chroniclers as advanced in years even in 585 (1189) at the siege of 'Akkā; he is said even to have known Godfrey de Bouillon. One thing is clear from Ibn Khallīkān's observation: the anecdotes given by Ibn Mammāt were referred to our Karakush.

**KARAKAM (Banu 'L'), a dynasty of 'Aden, from 476—533 (1083—1138) conducted an ismā'īlī condominium — in Branches of the Banū Saḥl's clan of the tribe of Yam in the Ḥamādan group and were closely related to the Banū Saḥlids [q.v.]. They were therefore the principal supporters of...**
the founder of this dynasty, the Ismā'īlī Fāṭimī da'i 'Ali b. Muḥammad and of his son and successor al-Mukarram. When the Banū Ma'n, whom the Dā'ī had allowed to remain as vassals after the conquest of 'Aden in 439 (1047), rebelled, al-Mukarram and his wife, the Sultāna Saiyida Ḥurra, to whom 'Aden belonged as her dowry, transferred the governorship to the two brothers Mas'ūd and 'Abbās, sons of al-Karam, in 476 (1083); the former received the castle of al-Khadrā' and the revenues of the coast-lands while the latter got the revenues of the landward part of the country and the castle of al-Ta'kīr at the gateway to the interior (not to be confused with the stronghold of the same name above Djabla, not far from the road from Djanad to Yārim). Their joint annual tribute amounted to 100,000 dinārs. Mas'ūd and al-Zūrā'ī, son and successor of 'Abbās, fell before the gates of Zabid, performing their feudal duty under the command of the major-domo of the Saiyida, al-Mufaadżal Abī l-Barakāt. The division of the territory into two parts was for the time being maintained. Mas'ūd was followed in succession by his son b. 'Abu l-Ghārāt and the latter's sons Muḥammad and 'Ali; al-Zurā'ī's heir was his son Abu Su'ūd and the latter's son Sa'bā. But the manner of division of the country afforded the latter line an advantage from the first in view of greater facilities for expansion into the interior and the easier defence of the strongholds won by the two families there. It was the mountains in the north of the al-Ma'āris district that were specially concerned. It proved to be of importance that al-Zurā'ī had taken possession of Dumlawa in 480 (1097). a fortress in the Djabal al-Silw above the bend where the road from Djanad has to curve round the mountain and is at its farthest east point. Under their vigorous Sa'bā, if not earlier, not only had their lands there been considerably increased but even Dhubbān about 100 miles W. N.W. of 'Aden on the road to Mokhā and Zabid had been occupied. Sa'bā's father, along with Abu l-Ghārāt, had succeeded in getting the tribute reduced to half and then to a quarter by successfully refusing to pay more to the Saiyida. Sa'bā was able to stop and altogether with the difficulties of the widow increased. The changed conditions attracted attention in Cairo: the eleven Fāṭimid, al-Hā配备了 Abī al-Ma'djad, soon after his accession received Sa'bā into the Ismā'īlī hierarchy as dā'ī in 525 (1131). Dumlawa remained the royal residence. A two years' war in the Wādī Laḥd brought about a decision between the families of the two brothers. 'Ali b. Wādī l-Ghārāt began by purchasing the support of numerous warriors. When he had shot his bolt, Sa'bā gained the upper hand by throwing his great wealth into the conflict and 300,000 borrowed dinārs in addition. He was finally victorious on the same day, it is said, as his ally in 'Aden, Bilāl b. Dja'īrī, stormed the castle of al-Khadrā'. Henceforth 'Abd al-Dżud b. Shāhīd ruled alone. But Sa'bā died six months after his entry into 'Aden in 533 (1138). He is buried there at the foot of al-Ta'kīr. By the next year his son and successor 'Ali al-A'azz had died of consumption. He had designated as his successors his infant sons, who were in Dumlawa under the guardianship of their tutor Anīs and the minister Yahyā b. 'Ali. But Bilāl, whom he had dismissed and menaced, was now in 'Aden and gave the crown to another son of his former patron Sa'bā, namely Muḥammad who had taken refuge from 'Ali al-A'azz on his father's death with Maṣūr, son of the above mentioned major-domo al-Mufaadżal. The reign of this Muḥammad b. Sa'bā from 534 to 548 or 550 (1139 to 1153 or 1155) marks the zenith of Za'rā'īl power. He put to death the last prince of the line of Mas'ūd in 545 (1150/1), 'Ali b. Abī l-Ghārāt, who had still held out after his defeat with some members of his family and a few faithful followers in a few mountain strongholds, for example in the Djabal Munif, north of Lālājī. In 547 (1152/3) he was purchased from his chief protector Maṣūr, the heir of Saiyida, 28 towns and strongholds including al-Ta'kīr with Djabla and Idb in the north-east and Dhubbā in the south-east. He had received the rank of dā'ī immediately after his accession, for the Kādi sent from Cairo to invest 'Ali al-A'azz found Muḥammad already in actual power. It is to this ruler that we are mainly indebted for our knowledge of the history of the Za'rā'īs. For, with some men not so fully interviewed, like Anīs and Bilāl already mentioned, he is the main authority for the section on the dynasty in the Tārikh al-Yaman of Umāra, who visited him personally and on Umāra are based e.g. al-Dja'īrī, al-Khadrā'ī and Ibn Khallān. Umāra praises Muḥammad very highly, notably as a Maceenas. But one cannot help thinking that he — himself an enthusiastic Ismā'īlī — was biased in favour of his royal co-religionists. Whether Muḥammad for the rest interpreted his duties as dā'ī in a religious sense, we do not know nor can we tell whether the request of the founder of the Mahdi dynasty, 'Ali b. al-Mahdi, who had asked Muḥammad in the presence of Umāra in an audience shortly before his death for help against Zabid, was rejected for purely political and military reasons or for religious reasons as well. In his son and successor Imrān the religious interest predominated. The real power passed into the hands of the vizier family of Bilāl. The latter himself, who had already had the share in the government in the reign of Muḥammad, which was due him for his help in securing the throne, had died not long before — or very shortly after — the change in the throne, leaving a vast estate. He was succeeded in office first by his son Mu'dāf and after the latter's early death by his other son Yāsir who ruled quite independently. When Imrān died in 560 (1164/5) and in keeping with his wishes was buried in Mekka, Yāsir had his 3 sons, who were still minors, imprisoned in Dumlawa in charge of the eunuch Abu l-Dja'īrī. The Za'rā'īs were to be spared the fate of being definitely dethroned by their own people. The last blow came from without: in 569 (1173/4) Saladin's brother Tārā'naskh conquered 'Aden along with the rest of Yemen. In the following year Djawhar surrendered him Dumlawa by treaty and a year later Tārā'naskh had Yāsir, whose holding-place was betrayed, beheaded.

KARĀMĀ is strictly the infinitive of karūna (to be karim “generous” in the widest sense); but in usage it is a noun of similar meaning to ḫrāṣm and takrīm, to show one’s self karim to any one (Lisān, xv 456, 3 sqq.). It does not occur in the Kūr’ān although karim is very frequently used of Allāh and his workings (al-Rāghib al-Isfahānī, al-Mufradāt, sub nec). It has come, therefore, in the devotional language of Islam, to mean the efficaciation by Allāh of his generosity, favour, protection, help towards any one, e.g. al-Baydāwī on Kur. x. 63 (ed. Fischnler, i. 419, 411), a locus classicus on the wali; and karāmāt mean individual cases of this generosity. In a special sense, the karāmāt then come to mean the miraculous gifts and graces with which Allāh surrounds, protects and aids his Saints (al-wala‘yīn). A Kur’ānic basis for these was sought in the story (Kur. iii. 32) of the food which came miraculously to Maryam in the locked hirāh; and in the transporting in a moment from Yemen of the throne of Bilkis by a unnamed companion of Solomon (Kur. xxviii. 40). As neither Maryam nor the unnamed companion was a prophet these could not be evidentiary miracles (mu‘ījdāt). See the whole discussion in al-Taftazānī on al-Nasā‘ī’s Aḥādīth, Cairo 1321, pp. 134 sqq. But the real basis lay in the innumerable narratives of karāmāt in the lives of the walis, exaggerated and distorted reflections of indubitable facts in the ecstatic religious life. The fact of these all orthodox Islam admits, even so philosophically an historian as Ibn Khaldūn (ed. Quatremère, i. 169, 199; transl. de Slane, i. 190, 227) and a peripatetic philosopher like Ibn Sīnā (Iqātār, ed. Forget, pp. 209, 219, 221 sqq.). These were evidently driven by the pressure of facts to fall back on the hypothesis of still unsolved mysteries in nature; cf. Goldziher, Die Richtungen der islamischen Karāmāt, Leipzig 1916, p. 130, note 3. Only the Mu‘tazilites, who were certain that nature held no mysteries for them and that they need only apply reason to their theological positions, protested and found, even in the Kur’ān, basis for their protest. See al-Zamakhshāri on Kur. lxxi. 26, 27 (al-Kazakib, ed. Nassau Lee, ii. 1539) and on the whole development Goldziher, op. cit., pp. 144 sqq. The coincidence in sound, in derivation and in meaning between these karāmāt and the ḥizāqa‘at of the early Christian Church (1 Cor. xii.) is most striking and can hardly be accidental. The religious phenomena behind both are the same; but the verbal link is not clear; the Syriac Church called the ḥizāqa‘at simply “gifts”, naukhāhā, in Arabic, naqshib, which indeed occurs in this sense; it is possible that the Greek word taken over into Syriac may have suggested to users of Arabic their own karāmāt. Technically, such a karāmā is one of the ḥuz wa‘l gūn, “the breakers of usage”; for there is no Nature in orthodox Islam, only, and at best, a custom which Allāh has established (Goldziher, Vorlesungen, p. 130). It differs from the mu‘ījdāt or “evidentiary miracle” in that it is not worked by Allāh for a prophet in proof of his mission and is not accompanied by a ḥirā‘a or a taḥnādī, a claim of prophethood or a challenge to the unbeliever. It differs from the ma‘ūna, “help”, in that while the recipient of the mu‘ījdāt is a Muslim he has had very special religious experience; and from the ḫrā‘ā, an amicable miracle worked for a prophet before his call. It differs from the isti‘rādāt and ikhāna as these are wrought at the instance of unbelievers to lead them astray and bring them to shame (Dict. of Techn. Terms, i. 444 sqq.; al-Nasā‘ī, Aḥādīth, loc. cit. with accomp. commentaries). A wali should conceal his wonders, while a prophet must display them; a wali may not know about them, while a prophet cannot help knowing. Yet the karāmāt of a wali may be regarded as a mu‘ījdāt for the prophet whose follower he is. Finally, a wali should disregard them as much as possible and should look on them as tests rather than as privileges.

KARAMAN — KARAMAN is the name — derived from the Turkoman dynasty of the Karaman-Oghlu [q.v.] — 1) of a district in Asia Minor, 2) of a town in Turkey, capital of a kaza of the same name. The boundaries of the district of Karaman (Karaman-III, Caramania) have varied. All the lands which were permanently under the Karamanids are occasionally so called, that is Lycania, the Cilician Taurus and the whole southern Anatolian coast territory as far as Adalia. When the Karamanids were finally overthrown, their lands became one Ottoman province (wilâyet) with Konya as the residence of the Pasha. The sandjak of Ef-ili [q.v.] was afterwards separated from the Pashaik; the northern larger portion was called Khatrā, probably in contrast to Ef-ili (Hadjidjī, al-Qalafa, Džahan-namā, p. 615 sqq.; cf. also Ewīyā Celebi, Siyāsāt-namā, Constantinople 1314—18, iii. 20), and comprised in the xvith century the sandjaks of Aḵsarā, Aẖ-Sehir, Konya, Kır-Sehir, Kaşar, Nigde. After the administrative reforms of 1861, the name of the province was changed to Konya [q.v.]. The population of Caramania is overwhelmingly Turkish (picture of a Muslim of Caramania in d’Ohsson, Tableau de l’Empire Othom. Paris 1786—1820, ii, opposite p. 137); even the Greeks, or at least those inhabitants who belong to the orthodox Greek Church, speak Turkish. They are known as Karamanlis and write Turkish in Greek letters; in Constantinople they have their newspaper Nicos Amatoli printed in this way. During the nationalist fighting in 1919 and 1920, the Karamanlis under the protection of the nationalist government east of the Oeconomian Patriarch and for a time chose a patriarch of their own. They are very probably not Greeks at all by origin but descendants of the ancient Lycianians. In the mountains of Caramania live Yörükis and Turkomans. The name Caramania for the coastslands from Mersina to Adalia seems to have become

2. The town of Karamán is the ancient Lâranda (Τὰ Ἀγάβαι; cf. Pauly-Wissowa, Realent, d. class. Altertumswiss., xii, col. 793). It lies 35 miles S.E. of Konya in the plain at the foot of the Taurus, on one of the great roads which lead from the coast (Seleuke) across the Taurus into the interior of Anatolia. It is not known when it fell into the hands of the Seljûks for the first time; as was the case in the rest of Anatolia, the process of islamisation probably was rapidly completed here. Lâranda also belonged to the Dînârmandâks from whom Kiliç Arslân retook it in 1165 (Michael Syrus in the Rec. des Hist. des Crois., Dec. Arm., i, 360). In 1190 Frederick I Barbarossa entered Lâranda on his way to Cilicia and in 1210 it again fell into the hands of the Christians when Leon II, King of Armenia, conquered it for the Knights-Hospitalier. In 1216 it had, however, again to be surrendered to Sultan 'izz al-Dîn Kaïkûs (Rec. etc., Dec. Arm., 1, 644).

 Shortly afterwards (about 1230) Lâranda was among the towns which were abandoned to the invading Kâhîjîmîs (Ibn Bâli in Houtsma, Recueil de Textes relatifs aux Selçouks, iv, 193). In connexion with this event Bûhâ al-Dîn Walad, father of Dîjlâl al-Dîn al-Rûmî, migrated about this time from Khorasân to Lâranda where Dîjlâl al-Dîn al-Rûmî married in 623 (1226) and where Sultan Walad was born (Les Saintes des Derviches Tourneurs, transl. by Huart, i, Paris, 1918, p. 19, 26, 268).

The town attained great importance through the dynasty of the Karamân-Oghlu [q. v.] who made it their capital in the beginning of the xivth century, when they did not yet feel secure in Konya. Several princes of this dynasty lived there even at a later period. They embellished the town with fine buildings and fortified the citadel. During this period the town was often under Egyptian suzerainty (Ibn Ishaq, ed. Paris, ii, 284; Ibn Faâl Allâh, Maqallât al-Hâkîmîn, in the N. E., xii, 342 sq.). In the wars with the Ottomans, Lâranda was repeatedly occupied by the latter and the Karamânîd ruler was forced to take refuge in the mountains. Finally in 1467 it was captured under Mehmed II and totally incorporated in the Ottoman Empire in 1486 by Bayazid II. Henceforth Lâranda was known as Karamân, although the old name has always been retained in official language.

The modern Karamân is a town of about 5,000 inhabitants (according to Banse, p. 106; Kâmaüs al-Flâm gives 7,500; 'All Djawâd 10,000). It lies on a low hill on the southern edge of the Lycaonian plain about 4,000 feet above sea-level. The highest part of the hill (about 300 feet higher) has on it the citadel now falling to pieces; it consisted of round and square towers linked by walls; the outer wall is built from stones from older buildings with Arabic inscriptions. Among the most important buildings of the Karamânîd period is the Emir Mûsa Medresesi where several princes of the dynasty are buried. The dome has fallen in; pillars of it are still standing which once belonged to Roman buildings. There is also the Kâhîjîmî Medresesi, one of the finest buildings of the Karamânîd period (pictures in van Berchem, op. cit., p. 118 and 126, and Weermann, Gesch. d. Kûst, ii, 446). According to the inscription (Tarih-i 'Ogânî Medresesi Medînî'î, also entitled Recueil historique publ. par l'Institut d'histoire ottomane, 11, 1, 714), it was built in 783 (1381) by the daughter of Murâd I, who married the Karamânî-Oghlu 'Alî al-Dîn (or 'Ali); there now very little left of it.

Mention may also be made of the sâvâjî built by the same 'Alî al-Dîn in 772 (1370), where Dîjlâl al-Dîn al-Rûmî's mother is reputed to be buried (now called Agha Tekke; cf. van Berchem, op. cit., p. 110), and of the 'Urûb where the Karamânîl Ibrahim Beg and two of his sons are buried. The inscriptions in it are now destroyed (Z.O.E.M., 11, 13, p. 831). The 'Urûb is situated near the Karamânî-Oghlu mosque or 'Umarî Dîjmî which was founded by this same Ibrahim Beg in 836 (1432) (picture in van Berchem, op. cit., p. 127) and has a finely ornamented gateway and is richly adorned with tiles in the interior.

The houses of the town are built of clay (tepêkâb); the inhabitants are reputed to be very dirty and the climate with its great variations in temperature here is said to be very unhealthy. There are a number of looms (kelînîs and sulfûjîdanîs) in Karamân and tanneries. The town is on the Anatolian Railway between Konya and Ereğli; it has always been an important station on the trade route to Cilicia.

The Kadjî of the same name, the capital of which is Karamân, belongs to the sandjak of Konya. It has about 30,000 inhabitants (according to Cunet 21, 417) of whom the great majority are Muhammadans. The Taurus in the south is here called Alî Dagh and in the north rises there the Kara Dagh. As the chalk soil is as a rule well watered by the streams from the Taurus there are good crops. Most of the farmers in the plains are Muhâjdîrs (settlers from Rumelia). The mountain valleys are tilled by Turkomans who have settled there. The produce of the soil consists of different cereals, vegetables, fruit (raisins), cotton and opium. Salt is also produced. The wool for the carpet factories is yielded by the many sheep reared there.

(J. H. Kramers)

KARAMÂN MEHMED PASHA, an Ottoman Grand Vizier and historian. He first saw the light, probably in Caramania, as son of a certain 'Arif Celebi and was a descendant of the great mystic Djâlî al-Dîn al-Rûmî [q. v.]. He seems to have come when quite young to Stambul where he made the acquaintance of the celebrated
Grand Vizier Mahmud Pasha-i Welt [q.v., executed 1474] and through his influence was educated in the medrese founded by him (cf. J. v. Hammer, Gesch. des Osman. Reiches, ii. 1431, 1474). He was secretary of state to the signet (nâhîname) with the rank of vizier. But in 862 (1454—5) he soon after the capture of Constantinople he must already have been in high office, as is shown by the epigraphs al-âmîr al-khalîf wa l-wasir al-kâhir in his Arabic grant of foundation (wäfîâya), dated Dhu l-Ka'dâ 4, 862 (= Sept. 13, 1458), in the Pruss. Nat. Library in Berlin (cf. W. Ahlwardt, Katalog der ar. Hs., iv. 227, No. 4765, fol. 74 sqq.).

He attr. in the attention of Mehmed II, the Conqueror, more and more, became his adviser in the organisation of the offices of state and in the making of new laws. The celebrated Kanun-nâme (cf. Mitt. zur orn. Gesch., i. 151 sqq., Vienna 1921) is probably* for the most part his work. When in May, 1475 the Grand Vizier Ahmad Gedik Pasha was dismissed, Mehmed II summoned the unwarlike but intellectually distinguished Mehmed Pasha to be Grand Vizier. As such he achieved fame by composing a dispatch to Uzun Hâsan, prince of the alkûls and hierarch (cf. Ferdinân Bey, Münchenat al-Saltanât, Stambul 1745—50). On Rabî' I 5, 866 = May 4, 1478, on the death of Sinârevâli, he was most cruelly murdered by mutinous janissaries in Stambul in the Tahtâ al-Kâla (Cam Kapan) quarter (cf. M. Guazzo, Storia d'èt secc. del Mosekito, Venice 1545, p. 285; cf. also Andrea Navagero in Muratori, Rerum italic. script., xxvii. 1167, Milan 1733). He is buried in Stambul near the Küm Kapu in the new Nâhîname mosque called after him (cf. Hâfiz Hüsain, Resatât al-İmamîn, Stambul 1821, i. 209; J. v. Hammer, Gesch. des osman. Reiches, i. 90, No. 449; do., Constantiopolis, Pest 1822, i. 430; Sehl's statement, op. cit., p. 23, 10, is incorrect). Mehmed Pasha also dabbled in poetry and published his verses under the masâzâr Nâshâlî. He is more important as a historian. He wrote a treatise (risâla) in two parts (sâfet) on the history of the Ottoman Empire; the first part covers the period from 0thumân to Mehmed II (1451), the second from 1451 to 1480 (885) i.e. shortly after the deaths of Mehmed II and himself. Specimen of the work, which is written in Arabic, were published in English, by Turkish by Mukrimin Khalil in the Recl. Historiques, vol. xiv., Stambul 1924, part 2 and 3, from the MS. in the Aya Sofia, No. 3204 (Defter, p. 192). The historian Rûbûl Edrânewî [q.v.] follows him.

K. M. F. had two wives, through whom he became connected with famous and wealthy families viz. Shâh Khatun, daughter of the celebrated author, Ali al-Din Ali al-Bistani (called Musînîfez, cf. i. 734 sqq.; he was also a politician, cf. Kâtibulbouz, ed. C. Müller, p. 140: 5 imâm hâvâl Collector and chalkokondylas, ed. L. Bekker, p. 526, 17) and Sitti Sulân Khatun, daughter of the well-known chief of Aliyâa, Lutfî Beg, cf. Miklosh-Müller, Acta et Diplomata, iii. 284 sqq. and L. de Mac Latrice, Historien de l'île de Chypre, ii. 64—68, Paris 1861, and 5 Asikpasha Žade, Türlük, Stambul 1332, p. 174 and 192). By his first marriage he had a son, Zin al-Abîidin Ali Celebi, from the second a daughter, Ruşâyîn Khatun. His marriage with the daughter of the Beg Aliyâa (q. v. in-corporated in the Ottoman Empire in 1471) apparently brought him considerable wealth, which he used for splendid endowments in Constantinople and Adrianople. This explains, the hitherto obscure spurious passage in the history of Asikpasha Zhade, Türkîc, p. 192, where all sorts of wicked things are said about the "nâhîname pasha," which must be due to personal quarrels (probably the withdrawal of krafft-states in Iwân Celebi).

Hammer, Gesch. des Osm. Reiches, ii. 246 sq. (the statement there made that Hâşîh Baha [i.e. Ibrahim b. 'Abd al-Karim al-Tâbi, cf. Taşköprüzade, Şahîch al-Nâmûnîa, Stambul 1269, p. 220] was Mehmed P.'s father is due to a mistake; J. v. Hammer, Gesch. des oms. Reiches, i. 281 (Nîshânî), 40 (error regarding Hâşîh Baha repeated).

KâRAMANLI, a family who ruled Triopolitania in almost complete independence from 1711 to 1835. The founder of the dynasty, Ahmad Kâramanî, seems to have been a Kûltûghi. In 1123 (1711) he took advantage of the absence of the Pasha Muhammad Abû Anmis to have himself proclaimed by the people, conquered and killed at Zuwağa Khalîl Pasha who was sent to overthrow him, bribed Muhammad Pasha who commanded a new expedition (1124 = 1712) and purchased from Sultan Ahmad III a firman confirming him in authority with the title of beylerbey. He put down insurrections at Tadjîs and Maslata and that of 'Ali al-Šahbûn, gave the government of Bahirî and of Bengazî to his brother al-Hâşîh Shâbûn Bey, who was killed ten years later in a rebellion suppressed by the Pasha. He also rebuilt the fortifications of Triopol, notably the Burdi al-Mandirik, and built near the gate of Manzîya the mosque which bears his name and the madrasa adjoining it. In his reign a French squadron bombarded Triopol in 1728 (1141—1142) and a treaty was concluded which lasted till 1766 (1180—1181).

He was succeeded in 1158 (1745—46) by his son Muhammad Pasha under whom piracy developed and who concluded a treaty with England. He died in 1167 (1753—1754) leaving the power to his son 'Ali Pasha. In his reign the reins of authority became more and more loose and thefts and murders made life in Triopol miserable; the troops were no longer paid regularly, the people
thought of appealing to the Porte. Matters were made worse by divisions in the family of the Pasha. His third son, Yüsuf, had his eldest brother Hasan assassinated on his authority in the arms of his mother (1790 = 1205—1206), then, supported by the Şahîd Khalifa b. Mahmüd, chief of the Djibal Nafis, he rallied under his flag the Arab and Berber population hostile to the Turks, openly raised the standard of revolt against his father and besieged Tripoli. On these events, an adventurer named 'Ali Pasha Burghûl, a former official of the Oulâ of Algiers, succeeded in obtaining a fermân from the Porte and seized Tripoli. In face of a common enemy, the Karamanli were reconciled and asked help from the Bey of Tunis, Hammûd Pasha, who was also threatened by the return offensive of the Turks against their former Barbary possessions. With a Turkish army they retook Djerba commanded by an ally of the usurper, Kara Muhammad al-Turkî, and Tripoli in which 'Ali Burghûl had made himself detested by both Arab and Jew (Djumâld II 25, 1209 = Jan. 16, 1795). The latter fled to the East and in 1803 he succeeded in getting himself appointed Pasha of Egypt but was assassinated by a Mamlûk as soon as he arrived.

'Ali Pasha's rule was transitory; his son Aḩmad II Bey was next proclaimed. But taking advantage of his absence in Tâdûrâ, his brother Yüsuf Bey had himself proclaimed (1210 = 1795—1796) and received a fermân from Sultan Selim confirming him in his dignity. Aḩmad resided at Derneh with the title of Bey.

Yüsuf was the most important ruler of the Karamanli dynasty. He completed the fortifications of Tripoli, built a navy with which he forced Sweden to pay tribute to him (1213 = 1798—1799) and in secret agreement with Napoleon restored Portugal whose fleet commanded by the English captain Campbell bombarded Tripoli. This expedition was celebrated in a Latin poem (Carmen heroicum de rebus a Lusitanis ad Tripolinam gestis, Lisbon 1800; 2nd edition with French transl., Paris 1864, La guerre de Tripoli). Yüsuf had to sustain a very serious fight with the United States (1217 = 1801—3). An expedition commanded by Commodore Massina arrived in Tripoli, trading his terms, the Djibal Nafis, recognised 'Ali, the rest of the country remained faithful to Muhammad. The Ottoman Porte took advantage of the occasion with the secret support of England; after having sent a fermân to 'Ali, Turkey sent out under the command of Nadjib Pasha a fleet which took Tripoli without striking a blow (Muḥarram, 1215 = May, 1835) and re-established the authority of the Porte in Tripolitania. Yüsuf remained till his death a prisoner in his own house, 'Ali was deported to Constantinople, Muhammad committed suicide and his brother Aḩmad fled to Malta.

**KARAMÂN-OGHULU**, the most important of the various Turkoman dynasties, which arose in Asia Minor after the break up of the Saljuk empire at the end of the viii\(^{th}\) century. They were for a time the most serious rivals of the Ottomans. The name goes back in the first place to the Turkoman chief Karaman, who attained a certain degree of independence during the Mongol troubles in the middle of the viii\(^{th}\) century and was granted by the Sultan Rukan al-Din a territory, from which he himself had come, in Cilicia. His native district was then known as Kamar al-Din-Ili (now Içli-Ili) after the Amir Kamar al-Din, who had been appointed commander of the conquered Armenian fortresses after the war between 'Ali al-Din Kaikobad I and Lesser Armenia (625 = 1223; Ibn Bibi in Houtsma, *Receuil*, iii. 329). Munadjidim Bashî (iii. 24) derives the name Karaman from Kamar al-Din, following Ibn Bibi's statement. This explanation of the name is hardly more than a popular etymology. The derivation from a geographical or ethnic name is nevertheless very probable, as similar derivations are found among other Asia Minor dynasties and elsewhere (cf. Izmir-Oghlu, Germiyân-Oghlu [q. v.]). It is most probable, that the Karâmanids originated in the subdivision of the Turkoman tribe of Siür [q. v.] called Karâman. That the town of Lâranda and the surrounding country later became called Karâman [q. v.] and that even the whole southern coast territory of Anatolia is called Karâmania, is however due to the name of the dynasty itself. Among the older Ottoman chroniclers the general name Karâman-Oghlu is used almost regularly for every reigning Beg of the dynasty and the European authors of the xvth century also speak of the "Grand Karaman". The Byzantine authors have never had a clear idea of the identity of the Karâman-Oghlu. They confuse them with the Germiyân-Oghlu and sometimes call the princes of Konya ʾAleldros ʾAleldros etc. which goes back to the Germiyân-Oghlu ʾAli Shir.

There are two kinds of sources for the earliest history of the Karâmanids. The one is hostile to them; it belongs to the school of Saljuk historians and is represented by Ibn Bibi and the later Ottoman chroniclers; the other group is only represented by Shikârî, whose *Karaman Târîhî* is a Turkoman prose translation of a Persian poem in the style of the *Shâhânama*. Shikârî sings the praises of the Karâmanids, but unfortunately gives no facts (on the *MS.* of Shikârî cf. Khalil Edhem in the *T. O. E. M.*, N°. 11, p. 597; Munadjidim Bashî also used Shikârî). Al-Djânnâbî occupies a position midway between the two traditions. An extremely important addition to our knowledge is formed by the inscriptions of the Karâmanids edited by Khalil Edhem.

The ancestral home and the later regular place of refuge of the Karâman-Oghlu is the almost inaccessible mountainous country in the northwestern Taurus on the frontier between Cilicia and Lycaonia, where the town of Ermenek [q. v.], the ancient Germanicopolis, lies. Karâman, according to Ibn Bibi (Houtsma, *Receuil*, iv. 321), was a Turkoman charcoal-burner, who used to sell his charcoal in Lâranda, but this statement is biased; in Djânnâbî (p. 213) and Shikârî, Karâman's father, is called Nûrû Şûfî (son of Sa'd al-Din in Shikârî), who was a mystic Shârif held in great esteem by the Sultan of Konya. Djânnâbî calls this Nûrû Şûfî an Armenian but this statement is probably suggested by the name Ermenek. Besides it is improbable that Ermenek had anything at all to do with Armenia; it never belonged to Lesser Armenia (*Rev. Hist. des Crois. DC. Arm.*, i. p. xxii), and there is no obstacle to the derivation of the name from Germanicopolis. The name Nûr [nûr] for the father of Karâman is further guaranteed by an inscription given by Khalil Edhem from the "türke of Karâman (Karim al-Din Karâman b. Nûr) in Bâltkân in the sandjak of Ermenek; Nûr Şûfî's türke is said to be at Deýirmenlik in the kağât of Mût [one of the sons of Ibrâhim Beg (see below) was also called Nûrû Şûfî]. The Karâman-Oghlu thus have their beginnings in Şûfî circles, just as now seems to be probable for the Ottomans (Giese, *Zuchtr. f. Semitskï*, 1924, p. 240 sq.) and for the Şafawids (cf. Babinger, *Z. D. M. G.*, 1922, p. 132). Djânnâbî's statement that Nûrû Şûfî was a follower of Bâbâ ʾIlyâs needs only the correction that the latter was not the instigator of the Bâbâ'i rising in Amasia (this was Bâbâ ʾIlyâs) but a Khorânsâh Şûfî who strongly influenced the whole religious development of Asia Minor (cf. Koprunlu Zede Ferhad, *Ib Mûsâsawanfer*, p. 232, 233). It is in any case significant that Ibn Bibi calls the Karâmanids Kâhwarîid, which name was also given to the Bâbâ'is, cf. also Kâhir Allâh, Tûrâkî, Constantinople 1292, ii. 58, where it is said that Nûr al-Din Şûfî (sic) was ʾAlîhâfa of Bâbâ ʾIlyâs for İc-II.

Nûrû Şûfî is said (according to Djânnâbî) to have taken the fortress of Seuleke by treachery and his son Karim al-Din Karâman was granted this fortress as a fief by the Sultan; according to other sources, he received the beglîk of Ermenek (Munadjidîm Bashî) and the Sultan Rukan al-Din al-Djânnâbî therefore to regain the fealty of himself and his brother Ongûz, who had been made Mirâkhor of the Sultan, after they had begun to stir up unrest in this region. After Karâman's death, which is placed in 666 (1261) (by Munadjidîm Bashî; Shikârî makes him be poisoned by the Sultan), his sons and his brother were imprisoned in the fortress of Kawâla (şâkî; Ibn Bibi, *Recueil*, ix. 322; After the death of the Sultan (666 = 1267) they were released by the vizier Mûn al-Din Parwânâ.

Soon afterwards Karâman's son Muḥammad began his activity. He came to an arrangement with the rulers of Syria, who where then at war with the Saljûkûcs, and the vizier Parwânâ found it impossible to bring him to obedience again, among his mountains. Then, when the Saljûkûcs and their overlords, the Mongols, were engaged in Mesopotâmia with the wars against the Milmûks, the Ermenek Turkomans began to covet the plain of Konya. Muḥammad Beg made use of Djamîr, the false claimant to the throne, who gave himself out to be a son of the Saljûk ʾIzr al-Din who escaped to the Crimea. In the name of this false Sultan, Muḥammad seized Konya which was poorly defended and Djamîr entered its citadel as Sultan (Thursday, June 7, 1275 = Dhū l-Ḥijđja...

This genealogical list is reconstructed and somewhat different from that of Khalil Edhem Bey (T.O.E.M., No. 14, p. 880). The table in v. Hammer, 1. 682, is obsolete. The names written in capitals are found on coins and inscriptions, those in italics only in Shikârî. — 4. in Ibn Bibi, Recueil, iv. 322, is called Bûnûz. — 7. The Badr al-Dîn of Shikârî and Ibn Batûta is here tentatively identified with the İbrâhîm mentioned in the epigraphs of 10 and 11 as called Bûnûz. — 8. This Khalîl would be the Yakhshî Beg of Munadjudîm Başhî. According to Shikârî, he reigned for 17 years. — 9. Inscription of the year 740 at their father. — 13. Tomb inscription of the year 813 at Ermenek. — 14. is the Abu 'l-Fath 'Alî al-Dîn Khalîl of the inscriptions (see the text), identified with Ermenek. — 15. is buried in the Khâtûniya Medrese at Lâranda; according to the inscription Shikârî's 'Alî al-Dîn Ibn Khalîl and with 'Alî, the husband of Nafise. — 16. is buried in the Khâtûniya Medrese at Lâranda; according to Shikârî, he was appointed by his brother (14) regent of Lâranda and poisoned at the instigation of Artena-Oghlu. — 19. and 21 of 772. — 20. to Shikârî, he was the son of a Sâlûk princess. — 22. is buried in the battle of Kâsariya (822) against the Mamlûk. — 29. Epitaph at Adrianople 876. — 30. coin of 880. — 32. Epitaph at Lâranda of 888 26. who married İbrâhîm. Shikârî in part has other names. — 37. Epitaph of 924 at Lâranda.

(J. H. KRAMERS)
followed on his abdication by Khalil, then came Badr al-Din for a second time, Fakhr al-Din, his son succeeded him after his death; he was killed through the intrigues of Artana, Beg of Kaiafarta, and succeeded by Shams al-Din’s second son, also called Shams al-Din, who was poisoned by his brother Karāmān after reigning 14 months. The above mentioned Mustāb b. Maḥmūd then ascended the throne to be replaced four years later by Khalil’s son ‘Alī al-Din, passing over the brief reign of Badr al-Din’s third son Karāmān. According to Shikārī, this ‘Alī al-Din was one of the greatest of the Karāmānids and is called by him Abu l-Faṭāḥ. In agreement with the statements of Shikārī is Ibn Baṭṭā‘a (ii. 281, 284), who visited a Sulṭān Badr al-Din in Lāranda in 732 (1332), to whose territory Konya also belonged. But his brother Mustāb had, it is said, already reigned in Lāranda before him but had ceded the town to the Marinids from whom it later had been reconquered by the Muslims; this ‘Alī al-Din had very close relations with Egypt, is confirmed by Ibn Fadl Allāh also (Ma‘ālik al-Aḥšā‘, in N.E., xi. 347). We must therefore assume that the brothers reigned in different parts of Karāmān at the same time. Two epitaphs in the Emir Mūsā Medresē in Lāranda prove that Fakhr al-Din Aḥmad b. Ibrahim b. Maḥmūd died in 750 (1349/50) and Shams al-Din b. Ibrahim b. Maḥmūd in 753 (1352). They must certainly be the two sons of Badr al-Din (who, in that case, may perhaps have borne the name Ibrahim) mentioned by Shikārī.

It is more difficult to ascertain the identity of ‘Alī al-Din. An inscription of 772 (1370/1) on the gate of the zāwiya in Lāranda, where Djalil al-Din Rūmī’s mother is said to be buried, records that the zāwiya was built by Sulṭān ‘Uṯmān ‘Alī al-Din Khalil b. Maḥmūd b. Karāmān and that Saff al-Din Sulāmān b. Khalil (who, according to Shikārī, was a brother of ‘Alī al-Din) was buried there. Munadhdjim Bāshī (iii. 26) also knows an ‘Alī al-Din, son of Yakhshi Beg, son of Maḥmūd; as there is no documentary evidence for the existence of this Yakhshi Beg, he may perhaps be identified with Shikārī’s Khalil as Khalil Edhem Bey in the T.O. E.M. has already done; Yakhshi is probably not a proper name at all here; cf. Ibn Baṭṭā‘a, ii. 316). Shikārī makes his ‘Alī al-Din marry the daughter of the Ottoman Sulṭān Murād II, while according to Munadhdjim Bāshī it was ‘Alī al-Din’s son ‘Ali Beg who made this marriage. The contract of marriage between Murād II’s daughter Nefīse and Karāmān-Oghlu ‘Alī Beg is, indeed, still preserved in Ferādīn’s Munjizi “i, i. 105 sq.” (in the printed text, p. 107, the date is 788 = 1386, but Khalil Edhem Bey has shown that 783 = 1382 is more probably correct). There is an inscription of this Ottoman princess in the Khātunīye Medresē at Lāranda of the year 783, in which the reigning prince is called Amir ‘Alī al-Din Khalil b. Maḥmūd, the same name as in the above mentioned inscription of 772, but without the title of Sulṭān. The difficulty now is whether the ‘Alī al-Din Khalil of the inscriptions is identical with Shikārī’s ‘Alī al-Din Ibn Khalil and with ‘Ali, the husband of the princess Nefīse. Very strongly in favour of this identity is a wakfname of ‘Alī al-Din’s grandson Ibrahim of the year 859 = 1454/5 (given by Khalil Edhem Bey in the T.O. E.M., Np. 13, p. 831), where this Ibrahim is called: b. Maḥmūd b. ‘Alī al-Din b. Khalil b. Maḥmūd b. Karāmān
In 824 (1421) he received permission to return and again ascended the throne. He met his death at the siege of the Ottoman fortress of Adalia, which is fully described by the chronicler probably 826 or 827. His son 'Ali went over to the Ottomans, who gave him the sandjak of Soğan, while his son and successor İbrahim returned to his native mountains with his father's body. Of the second Muḥammad various inscriptions exist in Konya. There are also inscriptions of his brother 'Ali in Nigde, where he held sway before and after the Egyptian period. After his brother's death he endeavoured to make himself independent again, but when Murad II deposed his nephew İbrahim he did not succeed. In this period, the power of the Karaman-Oghlu was considerable; Sanudo estimates the size of his army at 30,000 men on a war footing and 60,000 on a peace footing (Murat, _Inschr. Ital.,_ xxii. col. 962).

İbrahim b. Muḥammad Tādji al-Din received from about 827 (1425) to 868 (1463) (coins of the years 827 onwards) and is the last great member of the dynasty, which after the extinction of the Germiyan-Oghlu was now the only dangerous rival of the Ottomans. İbrahim had married the sister of Murad II and was at peace and war alternately with the Ottomans. The fact that he crushed the revolt of the Sultan's brother-in-law Ilyas in 834 (1430) was of great importance, for his brother-in-law had also an alliance with the Emperor Sigismund; the early Ottoman chroniclers bitterly reproach him for his dealings with the unbelievers as well as for his repeatedly breaking faith after solemnly concluded treaties (Aron, ed. Giese, p. 63, 64, 68). Murad II had made up his mind to exterminate the Karamanids and for this purpose he made an alliance with the Turkomans of the Dhu 'l-Kadr dynasty. The latter about 840 (1436/7) took Kajariya and the surrounding country from the Karamanids; İbrahim lost Akshehir and Beyşehir among other possessions to Murad II. An attempt to regain the lost territory after Murad's death (855 = 1451) failed. Mehməd II is said to have accepted a truce as a friend and protector of the Christians (Ducas, p. 233). İbrahim was more successful in the south; in 1443 he took the fortress of Gorgos in Cilicia from the Cypriotes (Rec. Hist. des Crois., Doc. Arm., i. 638). Before his death İbrahim wished to abdicate in favour of his son Ishak. But Ishak was the son of a slave and the other six sons whose mother was Murad's sister besieged İbrahim and Ishak in Konya; both had to take to flight and İbrahim died in the fortress of Kâwala (or Guwâle; 868 = 1453).

His successor was his son Pîr Aḥmad whose side Mehməd II had taken. Ishak fled to Üzun Hasan, prince of the Aḵ-Ḵoyunlu. The confusion that followed in the struggle for the throne finally brought about the end of the dynasty. With the help of the Ottomans Pîr Aḥmad defeated his brother in the battle of Ermenek (869 = 1465) and henceforth regarded himself as the vassal of Mehməd II (inscription of 870 = 1466 at Kajariye). But he soon came into conflict with his overlords because he had come to an arrangement with the Venetians. In 872 (1467) the Ottomans permanently occupied Konya where the Ottoman prince Muṣṭafā became with a part of the Karamanid population transferred to Stamul. Pîr Aḥmad retired to Lâranda and Nigde, where he fought the Ottomans and his brothers alternately. He made
an alliance with his brother Kâsim for a time
(inscription of the two at Nigde of the year 874 = 1469/70). But they could not stand against Gedik Ahmad Pasha and lost Lâranda. After Ermenek and Minan had also been taken by the Ottomans, where Pir Ahmad's family and treasures fell into their hands, the latter threw himself from a cliff but did not kill himself. He was still able to go to Tarsus where he died about 879 (1474), according to the Tâdji al-Tawwârîkh. Ishâkh had withdrawn to Selefshe, where his widow continued to hold out for some time after his death.

Kâsim b. Ibrâhim then maintained himself till his death (Muâram, 887 = Febr.-March, 1482), according to Anonymus, ed. Giese, p. 117: his epitaph at Lâranda is dated 888). He also sought the assistance of Uzun Hasan but could not recapture Lâranda. Then in 887 (1482) he joined the pretender Sultan Djem [q.v.] who had at one time governed Konya in succession to his brother Muşafa and on other occasions also had been served by Kâramânî troops. Kâsim was afterwards pardoned by Bayazid II but with his death the rule of the Kâramânîs ended. His other brothers had already gone over to the Ottomans.

After Kâsim's death his generals placed Torghut-Oghlu Muhammed, who belonged to the Kâramân nobility, on the throne, but he also came into conflict with the Ottomans and had to flee to Aleppo in 892 (1487). It was then to their geographical situation that the Kâramânîs owed the great power they held for a time. Their mountains formed a refuge which it was almost impossible to capture, from which they could make successful descents into the plains of Konya and Cilicia again and again. The possession of the various Cilician passes and other routes over the Taurus brought them a considerable revenue from the tolls which they levied on the Genoese and Cypriote merchants, who carried on a busy trade by these routes with Asia Minor, while their revenue from the customs in the coast towns ruled by them (Scandolari, Manavgat, Anemur, Selefke, Lamos) must have been considerable. Their wealth and influence in a still stronger position: their buildings in Lâranda, Konya and Nigde are evidence of this wealth, especially the ruins of the Khâtuniye Medrese in Lâranda or Kâramân [q.v.]. Kâramânî art is a continuation of Seldjûk art in contrast to Ottoman art which rather follows Byzantine models (Woermann, Gesch. d. Kunst, Leipzig and Vienna 1915, ii. 445). Of importance in the history of civilization is their encouraging the use of Turkish instead of Persian, as has been already mentioned. The contrast between the Kâramânîs and the Ottomans seems, however, to have been very marked (Ducas, p. 195, says: ἵω ὁδὲ ἐὰν ἐβδομάς δαμακεὶν ἀρτι τὸν Καραμάν μετὰ τοῦ Ὑμᾶν).

Kâramât ʿAli, born (date uncertain, early in the 16th century?) at Dâwânmâr [q.v.], of a Seldjûk family, which had held the office of ʿâfhî in Muhammadan rule; his father was varîqeddâr in the Dâwânmâr Collectorate. He studied theology and other Muslim sciences under various celebrated teachers of the time, esp. Shâh ʿAbd al-ʿAzîz, muhaddith of Dîlî, who was also the teacher and afterwards follower of Saiyid Ahmad of Baréli. Between 1820 and 1824, Saiyid Ahmad made a tour through Bengal and Northern India, collecting a band of disciples, and Kâramât ʿAli was one of the most devoted of the younger men who followed him, but he does not appear to have taken part in the ġîkâd, which Saiyid Ahmad waged against the Sîhs [q.v.], or to have ever been in the Afghan borderland, where Saiyid Ahmad was slain in battle in 1831. The Sîhs's old master, Shâh ʿAbd al-ʿAzîz, now became his khâlîfa, and an active propagandist for the revival of Islam was organised in Bûrâg and Bengal. With this peaceful propagandist Karamât ʿAli was identified, and he may be regarded as its most successful apostle, as he was certainly its most brilliant exponent. During the early decades of the 19th cent., there were several minor reform movements in Eastern Bengal, led by men with more zeal than learning, notably by ʿAbd al-Rashîd Allâh [v. Fârâbî, ii. 57], who in 1252 (= 1836-7) met Karamât ʿAli in Calcutta. By 1855 the two schools had made some progress towards a rapprochement, and in the meeting then held at Barisal, Karamât ʿAli was able to agree on several points with the representative of the other movement, Mawlâwî ʿAbd al-Djâbbâr, though on the question of the laws of Ḥuṣna and Ḥd prayers in British India, he could not overcome the opposition of ʿAbd al-Djâbbâr, and he had to appeal to the humour of ʿAbd al-Djâbbâr's followers by pointing out that their leader mistook grasshoppers (which were unlawful food) for locusts (which were lawful) (Fârâbî-i-kâtîb, p. 29-32).

Kâramât ʿAli's life was a double struggle; first, he combated the Hindu customs and superstitions
which had crept into the practice of Islam in Eastern Bengal, against which he wrote a book, entitled Ra'id al-Firdaws, besides inveighing against them throughout his writings; and secondly, he tried to bring back into the fold of orthodoxy the new heterodox schools against which he waged a successful war; to this subject, also, he devoted a special book, Manzilat al-Hurairi, besides constant references to "the ignorant" in his voluminous writings. He kept in touch with the Musalmans of Bengal, and distributed to the needy all the presents that he received. He was a trained kari' and an expert calligraphist.

Garcin de Tassy (op. cit., ii. 162) says that he competed for the prize offered by Sir Charles Trevelyan for the best Hindustani essay on the influence of the Greeks and Arabs on the Renaissance in Europe, but that his essay was not accepted for want of an English translation, which according to the rules should have accompanied the essay. He was thus interested, unlike the majority of contemporary Indian Mawlavs, in the relation of Islam to the wider questions of the world at large. He died in 1879 (23rd May), and was buried at Kandarpur (Tadjadji-i-Nur, ii. 136), in the province in which he had laboured for the regeneration of Islam all his life. He was succeeded in his work by his son, Mawlawi Hajji Ahmad (ib. 1898), and his nephew, Muhammed Muhsin. His following was so large that there was hardly a Bengal village without his disciples and he still exerts a living influence in certain districts of that province.

He wrote chiefly in Urdu. Rahmán 'Ali (op. cit., p. 174—2) gives a list of 46 of his works, without claiming that it is exhaustive. One of his works, Misfah al-Djinnat, has run through numerous editions and is accepted in India as a correct statement of Islamic principles. His writings may be divided into four classes: 1) general works, like Misfah al-Djinnat; 2) works on the reading and verbal interpretation of the Korâ'n, and formal prayers and ablutions; 3) works on the doctrine of spiritual preceptorship (Firi Murid), the cornerstone of orthodox Islam in India; in accepting this doctrine, Karâmat 'Ali stands in sharp opposition to the Wahhâbî sect and merges insensibly in the Taqawwuf schools, which he brings into relation with the traditional religious orders; 4) polemics against Shari'ât Allâh, Dîdu Miyan, the Wahhâbîs, etc.

The common conception that Karâmat 'Ali was a Wahhâbî is refuted by the detailed exposition of his own views as set forth in his Muhâsâbat-i-Rahmat; he had seen no Wahhâbî books, but had made verbal enquiries and found that they were so fanatical (qiâdí) that they called all who did not agree with them mustâbik (p. 38—9); he and his school carefully distinguished between shirk, which was the negation of Islam, and bid'a, which was only an error in doctrine (p. 39). In his Hudžâbat-i-Kâfî'â he draws a clear distinction between a faâshî (sinner) and a kâfîr (infidel) and inveighs against those who would deny funeral prayers to those who did not pray but repeated the kalima (p. 21); if non-Muslims conquer Muslim lands, the Djinna prayer and the two ûd [q. v.] prayers were not only lawful but obligatory (p. 13 ibid). He laid great stress on authority, successively handed down by living teachers, and based his doctrine on the orthodox Sunni books of the Hanafi school (Mukâkhkha'ât-i-Rahmat, p. 37). He accepted the six orthodox books of tradition (Suûh qita), the commentaries (ta'âsîr), the principles of ceremonial law as interpreted by the masters (qi'îlî firdaws), and the doctrines of taqawwuf and firi muridî (pp. 38, 39), even basing the mission of Saiyid Ahmad on a hadith from Abu Hurairâ (p. 20). In every community a teacher is born to revivify the faith; Saiyid Ahmad was such a teacher for the xiiith cent. and should be followed until another teacher arise for the xivth cent. (p. 34). All this was in direct antithesis to Wahhâbî teaching and the "reform" amounted merely to the abolition of Hindu rites and ceremonies or those introduced through ignorance (p. 36), or to a revival of Islam according to the accepted orthodox schools (p. 59). The political effects of Saiyid Ahmad's life brought his followers into conflict with the authorities, but the writings of the school show that there was no connection, political or doctrinal, with the sect founded by Muhammed b. 'Abd al-Wahhâb in Arabia.

Bibliography: The European accounts of Karâmat 'Ali are unsatisfactory, being based on secondary information and failing to distinguish between this school of reform and Wahhâbism, and in some places there is confusion between the subject of this article and Mawlawi Saiyid Karâmat 'Ali of Dijawnpûr (1796—1876), who represented the British Government at the court of Dost Muhammed Khân at Kâbul, 1832—1835, and was superintendent (muhtawallî) of the Hughli Imâmsâba (1837—1845, 1857—1865, 1865—1875; Nine- teenth Century, May, 1905, p. 780—782; Sir W. W. Hunter, The Indian Musalmans, p. 114; C. E. Buckland, Dictionary of Indian Biography, p. 229; Nûr al-Dîn Zaidî, Tadjadji-i-Nûr, ii. 139); Census of India, 1901, vol. vi. part i. (Bengal, p. 174 (Calcutta, 1902); Journ. As. Soc. of Bengal, vol. xiii., part ii., pp. 54—6 (Calcutta, 1894); Garcin de Tassy, Hist. de la Littérature Hindoue et Hindoustanie, ii. 162 (Paris, 1870). It is doubtful whether the Muqaddisa-i-Rashid-i-Muftâb Dîhli, 1868, mentioned there, was a work by the subject of this article); Saiyid Nûr al-Dîn Zaidî, Tadjadji-i-Nûr (biographies of the famous men of Dijawnpûr), pp. 135—6 (Dijawnpûr, 1900).

A correct appreciation of Karâmat 'Ali's doctrines can only be gained by a study of his own writings, the most important of which are the following: Misfah al-Djinnat (Calcutta, 1843) (frequently reprinted); Kawâbî durri (Calcutta 1853) (translates passages from the Korâ'n for the benefit of those who know only a little Arabic); Ba'âfati Twâbâ (Calcutta, 1854) (defends the legality of repentance at the hands of a ûd, and other practices of the religious orders); Zübt al-Kârî (Calcutta, 1264), (on the correct principles for the reading aloud of the Korâ'n); Faid-e-Smith (Calcutta, 1282), (on speculative theology, expounding the doctrines of Shaikh Ahmad Sarhindî); Hudzâbat-i-Kâfî'â (Calcutta, 1282), (a polemical tract against the school of Shari'ât Allâh and his son ûd Miyan, whose name (common solle Dûdhu Mûsâ) Karâmat 'Ali always writes in this way); Nûr al-Hudâ (Calcutta, 1286), on the doctrines of taqawwuf, of the mudîlîディiya school, apparently the new school of Saiyid Ahmad of

THE ENCYCLOPAEDIA OF ISLAM, II.
KARA MUŞTAFA PASHA, the name of two Ottoman Grand Viziers.

I. Kara Kemâneşî (i.e. archer) Muşafî Paşa, an Arnaut by origin, taken from the Janissaries became first kayıa and was then dismissed; in 1043 (began July 8, 1633) he was appointed Seyhban başlı (general of the Janissaries) and became successively Ağa of the Janissaries in Shawwal, 1044 (began March 9, 1635), Grand Admiral (Kaşpudaan Derya) on İmamâdâ 1 5, 1045 (= Oct. 17, 1635), Grand Vizier in Şaban, 1047 (began Dec. 15, 1637). During his period of office which lasted till his execution by order of Sultan İbrahim I on Muḥarrâm 1, 1053 (= March 22, 1643) (cf. J. v. Hammer, Gesch. d. Osman. Reiches, v. 326 sqq.) he distinguished himself by economy and a talent for administration, which all the historians recognise with admiration. Hüseîn Wâdîji, the author of a history of the Ottoman Empire covering the period between 1048 (1638) and 1070 (1669), was K. K. Mustafâ Paşa’s keeper of seals. A number of buildings owe their origin or restoration to him; he founded mosques, built bridges and planned settlements (for example Ortaktheid near Siwâs). The best verdict on him is that of the contemporary Em. Buttâlî in Duae Historia Byzantina, Paris 1649, p. 263 infra: vir, quemenis ineruditissimus, ut qui nec legere, nec scibere sivebat, in rebus gerendis sagaxissimus, expetidivis recitassimus ac pronuntissimus. Kara Muşafî Paşa is buried in Stambul at Parmak Kapu on the Divân Yolu in the madresa built by him (Na’mî, Ta’rîkh-i, ii. 30 sqq.).

II. Kara Muṣṭafa Paşa, the haseki of Vienna. He belonged to Merzifûn where he was born in 1044 (began July 27, 1634), according to other stories about 1620 (cf. Barozzi–Berchet, Relazioni degli ambasciatar e belli veneti a Constantinopoli, Venice 1879, ii. 207, according to whom he was 53 about 1677), the son of a Sîphî captain named Çulî (according to other sources Haşan Ağa) who fell before Baghdad. His father was a friend of Kaprûlî Mehmed Paşa who had the boy educated. His first rank was Sillîdar, next Taşkîhidî (master of oratory), in Dhu ’l-Hijja, 1068 (began Aug. 30, 1658) Mirâşâh (chief marshall) and in Muḥarrâm, 1070 (began Sept. 18, 1659) he became Beylerbey of Silistria with the rank of vizier (cf. Barozzi–Berchet, ii. 134 sq. and Voyages du Sieur A. de la Motraye, the Hague 1727, i. 439); in Râmayân, 1073 (began May 11, 1660) he was appointed governor of D yawrâb, in Râdayân, 1072 (began April 15, 1662) Grand Admiral (Kaşpudaan Derya) in Râmayân, 1073 (began March 9, 1663) Râkîb Kaşimâcî (deputy for the Grand Vizier a latero) and two years later dismissed from the office of Grand Admiral; in 1672 he was Kaşimâcî at Adrianoûl (d’Arvieux, o. c., Knolles–Rycart, o. e., ii. 263, 277). In 1086 (began March 28, 1675) he was betrothed to the Sultan’s daughter Kuçuk Sultanê. In Şaban, 1087 (began Oct. 9, 1676) he was appointed Grand Vizier. His policy as Grand Vizier was that of his great predecessors and may be summed up in the one word, war: — war, for the sake of domestic peace, war, to please the Sultan, war, for the glory of the Ottoman Empire, and more particularly for his own prestige. Ambition and avarice are said to have been the motives of his actions (cf. Barozzi, op. cit., ii. 207; Rycart, op. cit., i. 89 sqq. and contemporary western chroniclers) generally described by him as inusit, cruel and avaricious (cf. Barozzi, op. cit., ii. 207: venale, crudele ed ingiusto). In his boundless ambition and avarice he allowed himself to be tempted in the late summer and autumn of 1683 to a campaign against Austria and the siege of Vienna, although he had no ability as a general. He had already conducted an unsuccessful war against Russia in the spring of 1677 and had been forced to consent to an armistice (at Radźin on Feb. 11, 1681) disadvantageous to the Porte and the campaign which he began in 1683 against the Emperor Leopold V brought about his ruin. After he had given Tokóy, the chief rebel in Hungary, the Hungarian crown, he advanced into Austria laying the country waste as he went along. On July 14, he began the siege of Vienna with 200,000 men; the city was finally defended by Count Starhemberg with 10,000 men. The city was near its fall when the German–Polish army of relief appeared and on Sept. 12, 1683, completely defeated the arrogant foe. Mustafâ Paşa escaped with the remnants of his force to Hungary. On Dec. 25, 1683, he was executed by the Sultan’s orders. His body was buried in Belgrade in the mosque erected by him before setting out for Vienna and his skull brought to Adrianoûl to Sultan Mehmed IV and buried in the mosque of Saridja Paşa (epitaph in J. v. Hammer, Gesch. des Osm. Reiches, vol. ix., p. xxxiv.). The statement, made by J. v. Hammer, Gesch. vi. 519 and 740 and in Wiens erste ausgehobene türkische Belagerung, Vienna 1829, p. 119 sqq., supported with documents of Cardinal Leopold von Collowich (of Sept. 17, 1666) and adopted by V. v. Renner, Wien im Jahre 1683, Vienna 1883, p. 465, that the Turk’s skull was used in the sale of the Historical Museum of the City of Vienna, the former arsenal, is Kara Muşafî’s is wrong. The question of the talismanic shirt (şâbûzâ) also preserved there and of the skin of silk is more uncertain. Cf. A. Camesina in the Berichte und Mitteilungen des Altertumsvereines zu Wien, viii., Vienna 1865, Appendix, p. xlix. sqq. and also J. v. Karabaček in the Katalog der Historischen Ausstellung der Stadt Wien 1883, Vienna 1883, No. 541. —
Kara Mustafa Pasha was exceedingly rich and left a vast estate. According to Sieur A. de la Motraye (op. cit. p. 349), he possessed over 1500 odalises, the same number of slave-girls, 600–700 black eunuchs and fabulous treasures, all of which passed to the state. He is said to have left 12,000,000 ducats (cf. Franz Wagner, Historia Leopoldi Magni, Augsburg 1719, i. 631). Besides several madrasas (cf. J. v. Hammer, Gesch, ix. 158, 189) he founded a number of mosques, in Stamboul, at Galata, at Adrianople, Belgrade, Djidja and in his native place. His palace (Timâkâni Yalâ at Kuru Çeşme near Constantinople) was sumptuously furnished (cf. J. v. Hammer, Gesch, vii. 362); his splendid tomb in Stamboul was destroyed by the mob (Barozzi, op. cit., p. 334).

His son was Kânîkâ Mustafa Pasha; on his descendants see Sîgîdîlî 'Othmânî, iv. 402, 2 sqg. from below. A sister was married to Kaplan Pasha (d. 1091 = 1680 at Smyrna; Magni, Viaggi per la Turchia, Parmo 1679, p. 348).

Kara Mustafa Pasha has been repeatedly made the hero of dramas and romances; cf., for example, 'Omer Bey, Drama zu the Reise der Konstantinopel, Histoire contenant son eclusage, ses anciens dans le soidal, ses diverses exploits, le vrai sujet qui lui a fait entrerprendre le vojo de Vienne et les particularités de sa dort. Paris 1684, 24, and Pierre Martino, L'Orient dans la littérature française au XVIIe et au XVIIIe siècle, Paris 1906.

Kara Osmân Oğlu. [See Derebeyis.]

Karakapak ("Black-caps", so called from their head-dress of black lamb-skin), a Turkish people formerly living on the river Borçala or Debeda in the eastern part of the government of Tiflis, who migrated about 1828 partly to Turkish territory (to the vicinity of Kars) and partly to Persian territory (district of Sulduz, south of Lake Urmia). In the district of Kars they form about 15% of the population; about 1853 they numbered 21,652 of whom 11,721 were Sunnis and 9,931 Shi'is (K. Sadovskij, Kariškâyi zamanetâk hâr Karskàyi oblastiâ in the Sur Mattier, etc. Karakasa, iii. 315–359); about 1893, 28,266 (N. Arslan, Zarafshân: Íro oclâsımka sostaste tyurkîskî plênin etc., St. Petersburg 1897, p. 139 sq. quoting Prav. Viestnik, 1896, No. 74); according to the census of 1897, 29,579. In the "Caucasus Calendar" (Kâr-bâazhî Calendar) for 1910, 99 villages of the territory of Kars are given as inhabited by the Karakapak, of which 63 are in the district of Kars, in that of Arzhan (Russ. Ardagon) and 7 in that of Kafgzan; the number of the Karakapak is given as 39,000 (ibid., p. 546, article by A. Dirr).

A small village of Karakapak, inhabited by Tartars, is also mentioned in the government of Yelesawetpol, in the district of Karsâ (which bounds on the government of Tiflis). On the Karakapak in the district of Sulduz cf. C. Ritter, Erdkunde, i. 939, 1018 and 1032, following Fraser and Rawlinson (up to 1838), and more recently V. Minorsky (member of the Commission for the Rectification of the Turco-Persian frontier, 1911–1914) in Matarîlî pa incinetiynî Vertoba, vi, 2, Petrograd 1915 (see Index).

These Karakapak, who are all Shi'is, were at one time in Russian service and still preserve the certificates given to their ancestors by Russian generals in recognition of their services. After their transfer (it is said there were only 800 families under the leadership of Mahdi Kân affected to Persian service the district of Sulduz was allotted to them as Ĥalî (fief) by Ābbâs Mîrzâ [† v., i. 13] in return for which they were to furnish 400 horsemen. As landowners the chiefs (Kân, Āghâ) of the Karakapak attained considerable prosperity under Persian rule. After the occupation of the district by the Turks (1905) the situation became much less pleasant, because their situation was not given them the opportunity of migrating to the interior of Persia. Sulduz was thereupon adjudicated to Persia (protocol of Nov. 4/17, 1913). The Turkish troops had already been withdrawn during the Balkan war (1912). How the situation has developed since the world-war we do not know.

(K. R. W. BARTHOLOM))

Karsâ, 1) the name of the founder of a Turkoman dynasty in Asia Minor in the 13th century A.D. (thirteenth a.d.), the dynasty which was the first to succumb to the Ottomans; 2) the name of the territory ruled by this dynasty, now a sandjak of Turkey.
1. Karasi is said to be a contraction of Kara ˙Ia or Kara Ese, the name of a Turkoman chief, a vassal of the Saldjuk Sultan Ghiyath al-Din Mas’ud, who conquered the province of Myria for him from the Byzantines in the reign of Andronicus II Palaiologos (Duca, p. 13). The name of the father of Karasi is also given by the Byzantine historians (Nicephorus Gregora, i, 214) as Kalahia, which Mordtmann identifies with the Marqun or Marqun of Pachymeres (ii, 316, 359), which name perhaps conceals Alamshah or Kalamshah (cf. Ibn Battuta, i, 281).

Although Karasi did not conquer the whole of Myria at once (Edremid and Assos remained Greek down to the xiv century) he must have had considerable power not least on account of the fleet which he created and with which he conducted raids on Rumelia. His territory became a refuge for the inhabitants of Eastern Anatolia, fleeing before the Mongols, as well as for the Turks when they were driven back after conquering the Dobrudja under S¸yri S¨uly¨uk Ghazi [q. v.]. How long Karasi reigned is not known. About 1330 we find two other rulers in the land, namely Yakhsı Khan in Bergama and Demir Khan in Balikesi. They are mentioned by Ibn Battuta (ii, 316, 317) and in the Mavsık al-Abdar (Notes et Extraites, xii, 339, 366; the

mentioned on p. 339 is probably a cor-

ruption for Demir Khan), with which authorities the Byzantine writers agree, except that they (Kantaezenos, i, 339) make gazi the father of Tawmukh, while the Mavsık al-Abdar makes the two brothers and sons of Karasi.

The account given by the Ottoman historians, who all follow Aşıkpaşazade (p. 43–45 of the Stambul edition of 1332), is different. They only deal with the dynasty in connection with the annexation of its land by Orkhan. According to them, Ili ˙Adiljan Beg ruled in Karasi and maintained friendly relations with Orkhan; he even sent his youngest son Tursun to be educated at Orkhan’s court. After ˙Adiljan’s death his eldest son (whose name the chronicles do not give) succeeded him. He made himself so hated by his subjects that his vizier Haddjej Ilbeki went to Orkhan to seek help against the tyrant. The younger brother Tursun therupon promised Orkhan the towns of Bergama, Balikesi and Edremid, if he would in return leave him in possession of Kizildja Tuzla and Maharım (Assos). In keeping with this arrangement Orkhan conquered from the Greeks Ulubad (Lopasdon) and several other for-

tresses which still lay as Greek enclaves between the Ottoman lands and Karasi. He then advanced on Balikesi whence ˙Adiljan’s son fled to Bergama. At Orkhan’s instigation, negotiations for peace were opened between the two brothers; Tursun, however, was killed by his brother on the walls of Bergama during the discussion of terms. The latter was then completely overthrown by Orkhan. He had also to leave Bergama and died two years later in Brusa of the plague. Haddjej Ilbeki was given the administration of Karasi Ii and the Timariots were left in their fiefs. These events are put by the Ottoman historians to 735 or 737 (1434 or 1436). If we compare this with the statements first given, we could equate the elder son of ˙Adiljan with Ibn Battuta’s Demir Khan (as Ahsad Tawhıd dies); for the latter traveller gives a very unfavourable account of Demir Khan. Yakhsı Khan would then be the same as ˙Adiljan; Ibn Battuta himself says that Yakhsı Khan only means the “good Khan” (ii, 316) so that his real name might have been ˙Adiljan. It is more important that, as Mordtmann makes probable, the Karasi dynasty existed somewhat longer than the Otto-

mans say. The Byzantines as late as 1343 still mention a Sultanian, a descendant of Karasi (Nik. Gregor, p. 741; Kantaezenos, i, 476, 507), who was married to a daughter of Ventizas. This is in keeping with the fact that in Orkhan’s letter of 714 (June 27, 1340) in which he tells the prince of Djänik of the conquest of Ulubad nothing is said about the land of Karasi (Ferdiun, Mawha`, i, 76). Mordtmann therefore supposes that the country did not finally pass to the Ottomans till a few years later (about 1345) and that the chroniclers have mixed up two events. In any case the Karasi-oglu dynasty did not arise again later under Timur, as was the case with most other Turkoman dynasties.

There are neither imitations nor coins of the Karasi princes; a small mosque at Balikesi is presumably of the pre-Ottoman period.

With the conquest of Karasi Ii a number of able statesmen and soldiers passed into the Ottoman service, such as Ahsad Khalil, who had led the Muhadjirs out of the Dobrudja, Haddjej Ilbeki already mentioned, ˙Adiljan Beg and the celebrated Chasi Ewrens Beg [q. v.].

The lands ruled by the Karasi Ogligi are given in detail by Munezdetjamin Bashj, iii, 36.

2. The sandjak of Karasi belongs to the wilayet of Khudawendiyyar; towards the end of last century it formed for a short time a separate wilayet along with the sandjak of Bighat [q. v.].

Karasi coincides with the ancient Mysia. The rivers Simaw and Shigirli divide the land into a western and eastern half. The eastern half is very inaccessible owing to the irregular form of its thickly wooded mountains and it has no towns of any size; the mountainous centre of the west, also thickly wooded, gives place to flat country as it approaches the coast. The most populous and easily accessible parts are in the region along the railway from Banderma to Smyrna; the capital Balikesi [q. v.] is here. In the south-west is
an equilateral triangle is placed below in the centre of the beam, the altitude h of which is marked; from the centre of the beam hangs a pointer (şahîl); if the pointer coincides with the line h, the beam is horizontal. Sometimes, as in our balances, a scissors-shaped fork (şayvârân) is used above the balance and one watches when the tongue (tusân) standard or, in one style of the beam lies between the arms of the fork, or sometimes a pointer is attached to the fork above pointing downwards and one watches when the end of this pointer is exactly opposite the tongue below. Finally the tongue may be placed below and the fork hung downwards, turning on the fulcrum of the balance. If there is not equilibrium the tongue falls outside the fork which is always perpendicular. Of technical expressions we might further mention al-wazn, the weight as measure of heaviness (al-thikîl) and lightness (al-khasîf), the scale (al-kaflâ), the threads to which the scales are attached (al-kârlî), the hook on which the scales or the weights are hung (al-krâfî), the arrangement for suspension (al-šâfâ).

Almost the only weights used in scientific works are the dirham and the mithkâl (1 mithkâl = 10 dirham and one mithkāl = 4—4.5 grammes). The absolute value is usually of no importance in the cases we are concerned with, as it is only a question of relations of the weights. Further, 1 mithkâl = 6 dānak = 24 tâqâf = 96 aţâ. The normal weight, the standard, with which the other weights are to be compared, is called sanjî or sanîjî. Weights etc. have been discussed and studied by H. Sauvage (see the Bibl.).

In the theoretical discussion of the balance the first point to be considered is the definition of heavy and light body, the establishment of the centre of gravity, that of stable and unstable equilibrium, which is given by the relative positions of centre of gravity and centre of balance, the investigation of the question if it matters whether the weights are attached directly to the beam or to rods attached to it which are perpendicular or inclining to it.

By a fortunate chance there has been preserved to us the very important work “The Balance of Wisdom”, Miťa al-Ibâna, by Abû Maṣûr Abû l-Pâth ʿAbd al-Râjmân al-Khâzinî (c. 1100 A.D.). That he was really the author is certain from a passage in al-Bâhaqî (see Reitcr., xx. 73). All the above questions as well as the theory of the definition of specific gravities and some special applications of the balance for measuring time and for levelling are fully discussed by him.

In the general part he carefully considers the achievements of earlier workers in this field, for example the classical writers like Archimedes, Aristotle, Euclid, Menelus and Pappus. He used the pseudographic work of Aristotle — without, however, mentioning his name — the μηνεικτης προβάλλατα (cf. Th. Bel., op. cit., p. 123). M. Stein- schneider’s statement that there is a translation of the work in the British Museum is wrong, as Mr. E. Edwards informs me. The work is, however, mentioned among those of Aristotle by Ibn al-Khâîf, p. 43, 13. Among Muslim writers Thâbit b. Qurra, Ibn al-Haithâm and Abû Saḥîr al-Kâhî were specially used by al-Khâzinî. He also deals with a series of balances which have been made by different students (see below). For specific gravities he relied mainly on al-Bûrîn’s work Maḥâli fi
As the two arms of the beam were of different lengths the superior weight of the longer had to be balanced either by a suitable form of the beam or by a special weight attached to the shorter arm. Thabit b. Qurra’s work on the karastın, which is preserved in Arabic and in Latin translations (cf. Buchner, op. cit.), is devoted to this problem. To increase the steadiness of the lever for weighing, several large running-weights are used (fig. 1); but attachments can also be fixed to the shorter arm of the lever at two distances from the fulcrum, but in this case compensatory weights must be used. If the spaces are in the relation of 1:2, the weights of the articles on it are as 2:1, when the position of the running poise is the same; two divisions are marked on the longer arm. It is the same when different running-weights are used; a corresponding number of these divisions is called bāb.

In order to be able to weigh the dirham and the mithkāl with the same divisions, ‘Omar al-Khayyāmi puts the scale for the dirham (silver) at a greater distance from the fulcrum than for the mithkāl (gold). If the lever is in equilibrium for the dirham, a compensatory weight (mīyār al-fālād) must be added to the shorter arm for the mithkāl.

The beam of the balance may also have divisions marked on the upper and on the lower side and be so arranged that either side may be turned upwards, so that one can weigh with two quite different systems of weights.

In many steelyards, for example those in use in Egypt at the present day, the scale hangs on to the lūbma (the “bit”), a piece of metal shaped like W. The running poise is a cylinder of brass without the interior (kalb) of which is filled with lead. Attached to it is the hook; the pointed part that moves along the divisions is called mīrāy (index). The whole apparatus, about five feet long, rests on a wooden support, chabla; the rod itself is called badalan.

In the work by Eliyā (mentioned below) methods are given for ascertaining and correcting errors. Two errors may arise from the balance and its attachments having false weights, from the poise being wrong, the beam bent or crooked or the divisions being wrongly marked.

Al-Khāzīnī gives two pictures of older standards, one of the generally known mahārkhābān (fig. 2) and another (fig. 1) of the kastūs al-muṣṭafīn of the great mathematician ‘Omar b. Ibrāhīm al-Khayyāmi, author of the celebrated quatrains. The illustration shows the different divisions, the running poises, the different places for the attachments and the marginal notes of the text.

A place in Fez was called al-Kaṣrātīn, probably because a karastın was placed there (see Dozy, op. cit., s.v.).

The following are Arabic works on weights and balances besides those of al-Khāzīnī:

-Treatises of Euclid on the balance (mīzān), ed. Wepcke in J. A., Ser. inap, vol. 58 (1851), p. 27. According to Wepcke, it comes from the Banū Mūsā, according to M. Curtze and L. Heiberg from Euclid (cf. Th. Ibel, p. 35). The work ascribed to Euclid on “Light and Heavy” is preserved in Arabic and often mentioned.

Works with the title “On the karastın” were written by the Banū Mūsā (about 950), Thābit b. Qurra (862–901), Kusṭā b. Lūkā (964–923) and Iba al-Haitham (1065–1036).
Important information on balances, especially the karastün, is also contained in the work on masses and weights by Eliyya bar Shinñây (975 to a year later than 1049); Archbishop of Nisibis, which is perhaps based on a work by Kustâ b. Lükkâ, Kürâsh fi'l-Musulûn wa'l-Mü̇kûl. Part of it was dealt with by H. Sauvain in the J. R. A. S., vol. ix. 291, and 1850, vol. xii. 110; much information is also contained in the work by Hasân b. Ibrahim al-Djâbarî (1698—1774) entitled: al-Ibad al-šamâ'a mina yasta'allâku bi'l-Mawâzin, or as it is also called: al-Durr (al-Ibad) al-šamâ'a fi'l-Mawâzin. According to his son 'Abd al-Râhîm al-Djâbarî, weighing machines in Egypt etc. had fallen into great confusion about 1758, which was completely cleared up by his father, who may therefore be regarded as the reformer of Egypt in this respect. In the composition of this work he was assisted by the Shaftâr al-Khabbân, 'Ali b. Khâlih.

Other authors and their works are:
Abu l-'Abbâs Naǧmî al-Dîn al-Khâzarîjî (1247—1310), al-Iâbâb wa'l-Fawâ'id fi Marifat al-Mü̇kûl wa'l-Musulûn, "science of mass and weights"; Hm Abî 'I-Fathî al-Sûfi al-Misrî (about 1494): Two treatises on the steelyard (Risâlât al-Khabbân). A number of MSS. on the subject in the Viceregal (now Egyptian) library in Cairo is given by H. Suter in his translation of the math-astron. part of the catalogue in the Zeitschr. für Mathematik und Physik, hist.-liter. Abteil., year xxxviii.

---

Above the beam of the balance is written al-‘Amî’d, to the right of it al-karaštûn, marhâsh (mark) for gold, for silver. Below are the hook (al-takrîb). Below the weights is written: the large, middle and small rummâna (running poises) for the hundreds, tens and units, for the fractions. Partly below again is information relating in part to the separate running poises. Above on the left of the scale instructions are given for putting on the running poises. Above this the six parts of the balance are given: 1) the beam with the indicator etc.; 2—4) the three rummâna's etc.; 5) the scale etc.; 6) the compensatory weight. The illustration is taken from "The Balance of Wisdom".

In the following, the works of E. Wiedemann are collected from the Beiträge (B.) zur Geschichte der Naturwissenschaften in the Sitzungsberichte der med.-phys. Gesellschaft (S.B.) zu Erlangen. When the whole part deals with the subject only its number is given: 1) Wagen bei den Arabern (gefasst): B., iv., S.B., xxvii. 368—392; 2) Über die Lehr von Schnittpunkten: B., vi., S.B., xxvii. 405 and 427; 3) Zur Mechanik bei den Arabern: B., vii., S.B., xxviii. 7—10; 4) Anbange aus der Schrift des Archimedes über die schwimmenden Körper: B., vii., S.B., xxviii. 152—162; Über al-Fârâbî's Aufzählung der Wissenschaften: B., xi., S.B., xxxix.
KARATEGIN, a district on the Wakhsh or Surkhab (Turk. Kizil Sā), one of the rivers which form the Amīr Daryā, called Rāšt by the Arab geographers [cf. l. 339]. The principal place (or "the fortress", al-Kaʿī, al-Ṭarīkhī of Rāšt) considered as regards its situation perfectly with the modern Garm, the only town in Karategin. Rāšt then formed one of the frontier towns of ʿAlam and was defended on the east against the inroads of the Turks by a wall built by Fāḍl b. Barmak [on him cf. i. 665, ii. 37]. In ancient times there ran through this region the road from Western to Eastern Asia described by Ptolemy. Karategin is frequently connected with the "highlands of the Komeds" ʿAjāḥīd (e.g. as recently as Chavannes, Documents sur les Traits Occidentales, p. 164, on the authority of Seyrūn in the Bulī, de la Société Géogr., part iii. 1890, p. 420—431); but in the middle ages the name (Arabic Kutumbed or Kumād, Chinese Kiu-mi-tu) was borne by the country below Rāšt. In the middle ages and later the valley of the Wakhsh seems to have had no great importance for trade; as far as has been so far ascertained, only the embassy sent by Shah Rukh to China (1419—22) used on its return journey the road between Farghāna and Balkh described by Ptolemy.

Like all the highlands on the upper course of the Amū Daryā Karategin also was under its own rulers down to quite modern times; in the pre-Mongol period only one Amīr of Karategin, Diṣ-far b. Shamānūkū (Gurīzī in Barthold, Turkest an etc., i. 9, under date 337 = 948/949) is mentioned. Under ʿTimūr and later the name of the country Kār Tegin (or Tīgın) is found, in the printed edition of the Żafīr-nāma, i. 189, erroneously Tīr Tegin; when and how the present form arose is unknown. In the manuscripts of the Bābur-nāma (ed. Beveridge, f. 33b and f. 63b ʿArūṭīgīn, f. 69b and f. 81 ʿAyīrtīgīn) and of the Tuʿrīkhī Radhī (transl. Ross, especially p. 241) both forms are found. Karategin is popularly explained as a Turkish word for "blackthorn" (cf. Radloff, Württem. Ind. 135, Ottoman Karā Kūn or as the name of the two first Kīrghız tallers of the soil (I. Minayev, Suyuyuva ʾs stranakh ʾp verkhovym Amū Daryā, p. 241, following Arendarenko). As is narrated in the Bahar al-Asrār of Maḥmūd b. Walī (India Office MS., Ethē, Cat., No. 575, f. 277a, in Radjāb, 1045 (Dec., 1635—Jan., 1636) 12,000 families of Kīrghız, then still pagans, went through Karategin to Iṣārār. At the present day the Kīrghız (Kara Kīrghız) form a part of the population of Karategin along with the Tadjīk (and a small number of Özbek).

Karasu. [See al-Furāṭī, KaRASU-BĀZĀR, a small town in the Crimea, east of Simferopol, in 45°10' N. Lat. and 34°36' E. Long. of Greenwich. In 1736 after the destruction of Bāghchē Sarāy [q. v.] by the Russians, Karasū-Bāzār was for a short time the residence of the Kūn; but this town was also taken by the Russians under General Douglas in 1737. The town has preserved its oriental aspect down to the present day: there are many Kūns' there with wash-houses and coffee-houses. The large Tāṡ Kūn, said to have been built as a fortress in the seventeenth century, now serves the same purpose. The town was several times pillaged by the Don Cossacks in the seventeenth century. Cf. Veliamin- nol Zernof, Matırxian für servir à l'historie du Khamat de Crimee, St. Petersburg 1864, Index. (W. Barthold)
(later also called Mużaffar Şah). When in the year 1869 Hisār had to submit to the Amir of Bukhārā, Karategin also was occupied by the troops of the Amir and Mużaffar Khan taken as prisoner to Bukhārā; the conflict thus engendered between Bukhārā and Khoḵand was only settled by the verdict of the Russian governor-general (K. v. Kaufmann) and Mużaffar Khan again restored to his principality; but after his death Karategin was definitely incorporated in Bukhārā. Karategin also became involved in the last fighting in Farghāna before the final subjection of this country by the Russians (1874–1876); the Beg Muhammad Ṭāhir Khan advanced to resist the insurmountable with force, although they had been favoured by his brother Mużaffar Şah (apparently not identical with the prince already mentioned). The frontier between Farghāna and Karategin (on the heights east of the valley of Kīčik Karamuk Ša) was defined by a treaty concluded between Skobelew and another brother of the Beg, Šaḥ Khan on August 28 (Sept. 9), 1876.

It was not till 1878 that Karategin was for the first time visited by a European (W. Oshāni). In the following year the Russian Beg Nur Ṭāhir and his successor Almās Beg had a mountain road, one of the best in Central Asia, built through Karategin on the right bank of the Wakhsh, which made Karategin much more accessible, but in winter Karategin is completely cut off from neighbouring lands. Oshāni and later travellers describe Karategin as a fertile country with numerous villages and orchards, and as one of the most prosperous provinces in the kingdom of the Amir of Bukhārā. It is said (Loqofet, p. 322 sq.) that in Karategin all the inhabitants without exception make a living by agriculture (including gardening), and that there is no landless proletariat there; anyone who neglects his piece of land for three years loses any right to it. On the other hand, Rickmers (p. 340) says that many peasants go from Karategin to Farghāna, work there as day-labourers and servants and bring their savings home, so that Russian money is taken more readily there than Bukharian. The only town is Garm; as regards the number of inhabitants, estimates, as usual in the east, are very contradictory: according to Oshāni 2,300, houses, to Masalskī 4,000 people, to Logofet 15,000. Information regarding administration, taxes, etc. is given especially in particular by A. Semenov (Journal of 1898). The question: “When will the White Czar (pāūdžīhūhī safīd) take us to himself?” was frequently asked Semenov by the people embittered by the arbitrary conduct of the tax-collectors.

Karaul (Karavul, Karahului), an Eastern Turkic word meaning guardian, watcher, guard, sentinel (borrowed by the Russian in the last sense); a hunter who watches game from a distance; the chief of a body of these hunters is called karaul-begi. In Ottoman Turkish karavu means a police-station. The word is connected with the root kar-, karâ-, to observe, watch or guard. — At the present day in Bukhārā, the name of karaul-begi corresponds to that of lieutenant (P. Kounzietsoy, Lute des civilisations et des langues, Paris 1912, p. 83).

In Persia the name karaul-khūna is given to the watch towers erected on the mountain tops, commanding the surrounding country (Chodzko, Specimens of the Popular Poetry of Persia, Or. Transl. Fund, p. 228, note). Bibliography: Radloff, Opys, ii. col. 146 and 165; Pavet de Courteille, Dict. turc-oriental, p. 398; Sulaimān Efendi, Mehāt-i Iqābārān, p. 216; K. Yousouf, Dict. turc-français, s. v.; Barthier de Meynard, Dict. turc-français, s. v.; Mme Carla Serena, Hommes et choses en Perse, Paris 1893, p. 56. (Cl. Huart)

Kara Yazdíjí, leader of a serious rebellion in Asia Minor from 1599 to 1602. His proper name was Abū al-Ḥālim and he was chief of the corporation of Segbāns (Seğbān bâlûk bâzīl). His followers consisted of Kurds, Turkomans and a large body of soldiers who had fled in Hungary, chiefly on account of the Grand Vizier Çīhânda’s harsh and cruel treatment of them. They are therefore called Frārīn, another name is Djalâlîn; their rebellion is known as the Khurđi-djalâlîya. Kara Yazdíjí’s first act was the occupation of Rūhā or Urfa (= Edessa) in 1600 A. H. The former Beglerbeg of Ahvassia, Husein Pasha, who had been sent as an inspector to Anatolia in the previous year and had also rebelled against the Sulṭān, took refuge with Yazdíj on hearing that Sinān Pasha Zāde Mehmed Pasha had arrived at Koɔya in order to bring him to book. They sustained together a siege in Rūhā in which they were finally compelled to cast bullets into silver coins, but in the end Kara Yazdíj made terms with the government troops by handing over Husein Pasha to them. The latter was sent to Constantinople and put cruelly to death. Kara Yazdíj was then appointed governor of Amasia. In this town he again began a reign of terror; as Ewliya Çelebi tells (ed. Constantinople 1314, ii. 184), the inhabitants hid themselves and their possessions in the mountain caves. Mehmed Pasha again succeeded in driving him into the mountains round Siwâs and, after passing the winter in Diyar Bakr, marched a second time against him. But Mehmed Pasha, Beglerbeg of Siwâs, and other nobles went to Constantinople and convinced the authorities that Kara Yazdíj had abandoned his evil ways. Accordingly the latter was given the sandjak of Corum, on condition that he would swear fealty. But, with his brother Deli Hasan (in Na’ima, i. 128 the name is once written Husein) he continued his propaganda, so that Ibrahim Paşa, former governor of Damascusa, and Hasan Paşa, former governor of Bagdadā,
were sent against them; these two Pashas were utterly defeated at Kaşgar by the 11th of Shawwāl, 1008 (April 25, 1600) by 20,000 rebels. After this victory Kara Yazidi regarded himself as an independent sovereign over the regions which he had taken from the Ottoman power. Finally he was defeated on the 12th of Shawwāl, 1010 (April 5, 1602) by the vizier Hasan Sokolli, at Sepentalı. The rebels fled to the mountains of Džnik; here Kara Yazidi died in Ramadān of the same year (according to Şüfî-i-Üzümâ, Constantino-plot 1311, iii. 301 sqq., his death took place already in 1009). He was succeeded by his brother Deli Hasan and three chieftains called Şahverdi, Yulcar Karpaš and Tawil; his body was cut up by them into several pieces which were buried in different spots in order that the 'Othmānīli might not have it in their power to burn the corpse. The new chiefs afterwards waged war successfully against the already mentioned Hasan Pasha, who was killed by them in Tekšt.

The inner history of this rebellion, which continued until its bloody suppression by Murad Pasha in 1605, has not yet been sufficiently studied. It does not seem unreasonable to seek religious pro-Shī'ī motives behind it (cf. Babinger in the Z. D. M. G., lxxvi. 143), as a name like Şahverdi suggests. On the other hand the moment was very favourable for a rebellion, the bulk of the 'Othmānīli power being then occupied in Hungary at the siege of Kutoc. On the name Džšili cf. Babinger, Ist., xi. 14, note 3.

Kārīm. [See Kārīn, Kārīn.]

Kārib, the name of a modern metre used by the Turks and Persians and called al-munṣarād by the Arabs. Its measure is in each hemistich: maṣfīlun, maṣfīlun, faṭīlun, faṭīlun. The principal variations are: maṣfīlun by ḥabī [q.v.], maṣfīlun be kaff [q.v.], faṭīlun by ḥabī [q.v.], faṭīlun = faṭīlun by kāf [q.v.] and lastly faṭīlun = faṭīlun by ḥabī [q.v.].

In Persian, it should be added, maṣfīlun may become faṭīlun (= maṣfīlun) by khār [q.v.].

Bibliography: See the article 'Arūb.[(Moh. Ben Cherub)

Karbiya. [See Kurabiya.]

Karim, of persons: generous, benevolent, liberal, honourable, noble, high-born; of things: bounteous, plentiful, honourable, noble, splendid. Al-Karim is one of the ninety-nine attributes or "excellent names" (Sūra vii. 179) of God, but in the twenty-seven passages in which the word occurs in the Koran it is only twice applied to Him. It is applied to Muḥammad, to an angel, and, ironi- cally, to unbelievers, but it more frequently qualifies things, e. g. the recompense and provision awaiting the faithful, the Kafran, the letter sent to Bilkis, queen of Saba' [q.v.], the entry of the faithful into paradise, plants, cornfields, dwellings, the mode of addressing parents, etc. In Ḥadīth the term is often applied to Vusuf, who is called al-Karim ibn al-Karim (al-Bukhari, Manākıb, bāb 13; Tāfṣir, Sūra 12, bāb 1). Al-Karimātina denotes the eyes (Ahmad b. Hanbal, Musnad, iii. 283).

Bibliography: The lexica, s. v.
(T. W. Hagi)
KARIN means a companion of any kind (muqaddim in the Sūrah and the Lisan, xvii. 214 sq.; khalid in al-Baiḍawi on Kurān, xlii 24); thus Abū Bakr and Tāliah and Abū Bakr and ʿUmar are called the two Karin. It is plain, too, that for Muḥammad and pre-Muḥammad Arab the word also suggested a spirit-companion. That is the overwhelming usage of the Kurān. In theology, every human being has, as a kārin, a ṣāḥīfān and also an angel appointed to accompany him and, respectively, to tempt him to evil or to incite him to good (Lisan, loc. cit.). The ṣāḥīfān is sometimes called a ginni and will be cast into the Fire at the Judgment along with his human comrade whom he has led astray. These two karin are therefore different from the recording angels which accompany each human being (Kurān, lxxixi, 10-12). The basis of this is both Kurān and Ḥadīth. The word occurs in the Kurān eight times; in Kurān, xxxvii. 40, a human companion is evidently meant (gīfts of ṣuḥūr, al-Baiḍawi); in Kurān, iv. 42 (b), the ṣāḥīfān is a kārin in Kurān, xlii. 24, the plural ṣāḥīfān is used, but the context and special meaning of the term is not, for, on the other hand, shows that tempting spirits are meant; closely paralleled is Kurān, xlii. 35, 37, where a ṣāḥīfān is “ordained” (qayyad) by Allāh as a kārin on Kurān, l. 22 al-Baiḍawi is in doubt whether by kārin a ṣāḥīfān or an angel is meant, but on v. 26 he is certain that it is a ṣāḥīfān. In this he follows the oldest exegetical tradition on the whole subject given in al-Ṭabar’s Tafsīr, xxvi. 93 sq. Even the prophets have such a ṣāḥīfān, but that of Muḥammad was converted by him to Islam; a great many traditions bearing on this are given in the Akān al-nawzān of Muḥammad ʿAbdul-Ḥāfiẓ bin ʿAbd al-Rahmān, p. 26 sq. (ed. 1326). A very suggestive and full ethical-theological treatment of the whole subject is in the Iyā of al-Ghaznī, Kitāb ad-dīn al-bala, ed. with comm. Ilīf al-sādah, vii. 264 sq., where the traditions are given in detail; cf. D. B. Macdonald, Religious Attitude in Islam, p. 274 sq.

At the other extreme is the folkloristic development in popular Islam; for it see S. M. Zwemer, Influence of Animism on Islam, chap. vi. Much of this, too, may easily have been in the mind of Muḥammad and his world.

Another use of kārin in old Arabia was for the ginni who accompanied a poet and brought to him his verses. This use has been transferred into Islam to the angel who consorted with the Prophet and brought him his revelations (Lisan, loc. cit.; Goldziher, Abhandlungen zur arab. Philologie, i. 5 sq.; D. B. Macdonald, op. cit., p. 19 sq.).

Bibliography has been given above; add traditions in Ahmad b. Ḥanbal, Musnad, iii. 385, 397 sq., 401, 460; cf. ii. 323; al-Dārimi, Musnad, Rīḍā, hāb 25; Muslim, Ṣahih, Siṣī al-Munāṣibīn, Trad. 69 (ed. with al-Nawawī’s commentary, Cairo 1253 v. 362; Constantinople 1334, viii. 138).

(D. B. MACDONALD)

KARKARLA, a Cossack village and the capital of a district in the territory of Semipalatinsk, 49° 2′ N. lat., 74° 7′ E. Long. (Greenwich); it has about 3,000 inhabitants of whom two-thirds are Muḥammadans.

(W. BARTHOLOMEW)

al-KARKH, the name of an important quarter of old Baghdad. The word Karak, which comes from the Aramaic (Karka), is found in Greek and Roman writers as Carcha, Charcha and Charase (see Pauli-Wissowa, Realencykel, d. klass. Alterthumsquiz, Suppl. i. 275, 283) and means town; cf. Yākūt, Muṣḥam, ed. Wustenfeld, iv. 252, 18; Streck, op. cit. (see Bibli), p. 92, 186; G. Le Strange, Baghdad, p. 63. There was still in the Muslim period a whole series of places or parts of towns called al-Karkh within the area of influence of Aramaic culture, in the Irāk, Kūf, Ḥārān, and al-Dirāz; they were distinguished from one another by the addition of a geographical name (like Maṣṣan, Ṣanāra). Yākūt, iv. 252-257 gives 9 such places; see also al-Ṭabar (ed. de Goeje), Indiciss, p. 762. Our Karak is often more exactly defined as Karkh Baghdād.

As the Aramaic name shows, the al-Karkh quarter was already in existence before the foundation of Baghdād by al-Manṣūr (145 = 762), as a small independent township said to have been founded by the Sāsānian Shāhīn II (309-379 A.D.), which, like the other earlier settlements on the site of the future capital of the Caliphs, was no doubt mainly inhabited by Aramaic Christians (cf. above, i. 564). This pre-Muslim Karak was selected by the Caliph al-Manṣūr to be the mercantile centre of the busiest quarter of Baghdād owing to its commercial character. Al-Karkh was at first quite separate, south-east of the so-called round city of al-Manṣūr and a fair distance from it; but as new roads and squares grew up all around it, it soon became merged in the sea of houses of the great capital.

Al-Karkh was watered by the Nahr ʿĪsā, the most northerly large canal of the Euphrates in the Ḥārāk, as well as by its branches, the Nahr ʿĀrāt and the Nahr Karakḥāyāt. The latter is the “Karakhian Canal” (Karkhāyāt = كركهاي ن) see Freihel, Die aram. Provenz. im Arab., Leipzig 1886, p. xx) which left the Nahr ʿĪsā below the small town of al-Μuḥauwāl near the village of al-Barābā (see above, 655) and supplied the southern part of the western half of Baghdād, i.e. the mercantile quarter and its neighbourhood, with its branch channels, which in places ran underground. Numerous bridges carried the busy traffic over it. On the Nahr Karakḥāyāt and its canal system see Ibn Saʿrān, ed. G. Le Strange in the J. R. A. S., 1895, p. 24, 17-20; 286-8, 292-3; al-Khāṭir, Baghdād, ed. Salomon (see the Bibli, p. 60-68, 154-5; Yākūt, iv. 253; Streck, op. cit., p. 85-90; G. Le Strange, Baghdād, p. 52-56, 63-80; Herzfeld in Serre-Herzfeld (see the Bibli), ii. 110.

In the civic history of Baghdād, especially during the Būyids period (xth-xith century), al-Karkh, which was regarded as a Shīʿa stronghold, is frequently mentioned (cf. above, i. 567). Under the Būyids who had Ṣaffād sympathies the already frequent encounters and frictions between the Sunnis and the Shīʿa of the capital became more and more serious. Sanguinary street fighting between the two hostile sects often accompanied by pillaging and incendiaryism was the order of the day. Al-Karkh was usually in the very centre of this civil strife; its inhabitants were always at daggers drawn with the Sunnis of the adjoining quarters (Bāb al-Baṣra etc.). Sulṭān Djalāl al-Dawla (416-453 = 1024-1044) under whom the situation had become unusually serious was even on one occasion, in 422 (1031), reduced to take refuge with his Shīʿa co-religionists in al-Karkh. In 445 (1053) a considerable part of al-Karkh was laid in ashes as a result of these feuds. A great fire had previously devastated al-Karkh under the Caliph al-
Wählich (227—232 = 542—7); but the destruction was very soon made good.

In course of time numerous mosques and tombs arose in the area of al-Karkh in the wider sense, by which the whole southern half of Baghdaad west of the Tigris was often meant. The most celebrated is the tomb-mosque of the local saint Muhammed b. al-Farazrud al-Karkhi (d. 200 = 816) and the alleged tomb of Zuhayda, the wife of Hārūn al-Rashid, barely 300 yards south of it. Both mausoleums (see also I, 569) still exist and are important starting points for studying the topography of old Baghdaad. In their present form they were renovated by the Caliph al-Nāṣir (575—622 = 1180—1225); but they have been frequently restored since then. On the tomb of al-Karkh, which as early as the 13th century was one of the most popular places of pilgrimage in Baghdaad and which lies in the middle of an impressive cemetery as in the ‘Abbasid period, cf. Streek, op. cit., p. 159; G. Le Strange, op. cit., p. 98—100, 350; Massignon, op. cit. (see the Bibl.), p. 49, 108; Herzfeld, op. cit., ii, 172—3. For the so-called grave of Zuhayda see G. Le Strange, op. cit., p. 100, 161 sq., 350 sq.; Massignon, op. cit., p. 108 sq.; Herzfeld, op. cit., p. 73. On other mosques and tombs in the west side of Baghdaad see Massignon, op. cit., p. 64 sq. or 94 sq.

Al-Karkh was not only the largest but also the most long-lived quarter of the western half of Baghdaad. When the quarters around it had gradually fallen into ruins, it stood quite isolated — as early as Yākūt’s day for example (beginning of the xiiith cent.) — like a separate town, as it had been in the earliest period after the foundation of Baghdaad. It was a mile distant from the then still inhabited quarter of Bāb al-Brār (in the southeast of the old round city of al-Mansūr). In the later middle ages (cf., for example, Ibn Batūta in the xivth century) the name of the Bāb al-Brār quarter was not infrequently extended to all the quarters of western Baghdaad still standing i.e. even to include al-Karkh; cf. G. Le Strange, op. cit., p. 336; Herzfeld, op. cit., ii, 114 sq. We may here point out that the topography of al-Karkh and its vicinity in Yākūt is not quite in agreement with the other sources. It appears that the local knowledge of the author of the Geographical Dictionary at the time of writing was no longer quite reliable. Cf. G. Le Strange, p. 84, 159.

Al-Karkh is also known as a rare mint; there are coins of the reigns of the Caliphs al-Mukhtadīr, al-Kāhir and al-Ridi, dated in the years 308, 315, 318, 321, 325; cf. Numismatische Zeitschrift, Vienna 1893, vol. xiii, 321; Lavoix, Cat. des Monn. Mus. de la Bibl. Nat., i, 285; Numismatic Chronicle, 1902, p. 272; 1910, p. 197. The wine of al-Karkh was highly esteemed in poems of the older ‘Abbasid period (e.g. in Abu Nuwas, Ibn Mu’tazz) it is often mentioned; cf. G. Jacob in Oriental Studien, Th. Neideke’s geniedt, Giessen 1906, p. 1065.

At the present day the part of Baghdaad on the right bank of the Tigris, which barely makes up a third of the area of the city, is called Karshiaka, properly (Turkish) Karshy Yak = the other side (lying opposite the city proper on the east bank), a reproduction of the popular Arabic Ḥālak al-Dīnārī. This name has therefore no connection with al-Karkh (the contrary view is held by Le Strange, op. cit., p. 66). Ḥālak was for long merely an insignificant suburb; but in recent years it has increased somewhat in importance and will certainly continue to do so as the railway station of Baghdaad is there. Since the second half of the xvith century Arabs of the tribe of Čaql (Čogel, ‘Ağel) have settled here, who with other caravan people form at the present day a considerable part of the inhabitants of this western town. Cf. thereon Černik’s expedition in Petermanns Geograph. Mitt., suppl. part 44, Gotha 1875, p. 28, 30; Oppenheim, Vom Mittelmeer zum persischen Golf, Berlin 1900, ii, 224, 238; cf. H. Hurst, Hist. de Bagdad dans les temps modernes, Paris 1901, p. vii, 188 sq.; Massignon, op. cit., p. 99 sq.

KARKHA. [See KARKHĀ].

AL-KARKHĪ, ABŪ BAKR MUḤAMMAD B. AL-ḤASAN (or AL-ḤUSAIN), was one of the most important mathematicians of the Arabs; he also calls himself al-Ḥasib (the arithmetician). He lived in Baghdaad in the time of Abū Ghālib Muhammad b. Khālid al-Fakhr al-Mulk, vizier of the Būyid Bahā’ al-Dawalī (q. v.) and his son Sulṭān al-Dawla Abū Shaddīj. The date of his death is not known but it may lie between 410 and 420 (1021—1029). The two of his mathematical works that still exist are entitled al-Kāfī fī’l-Ḥisāb (the requisite for arithmetic) and al-Fakhrī (i.e. the book dedicated to the vizier Fakhr al-Mulk). The first exists in a unique manuscript in Gotha, the second in Paris, Oxford and Cairo. The Arabic text of neither of these works has yet been published but there is a German translation of the former by A. Hochheim, Kāfī fil Ḥisāb des Abū Bekr Muh. b. Alhussein Alkarkhī, in 3 parts, Halle a/S. 1878—80, and a synopsis of the second in French by F. Woepcke, Extrait du Fakhrī, Paris 1853. The second work is the most important next to the Algebra of al-Khayāmī that has come down to us on this branch of mathematics. In it al-Karkhī closely follows the Greek mathematician Diophantus of Alexandria; for the first time among the Arabs indeterminate equations appear in this work and they are solved after the fashion of the Greek mathematicians;
whether al-Karkhi deliberately took no notice of the Indian methods or was not acquainted with them cannot be decided. In his book on arithmetic, like almost all Eastern Arab mathematicians (except 'Ali b. Ahmad al-Nasawi, about 980—1040), he does not use Indian numerals but writes out all the figures in words.

**Bibliography:** There is not a separate article on al-Karkhi in any of the Arab biographical works so far published; he is only occasionally mentioned in Ibn Khallikân, ed. Cairo 1310, ii. 65; and by de Slane, iii. 279. Cf. also M. Cantor, Vorlesungen über Gesch. d. Mathem., 2. ii. 718—729; H. Suter in *Abhandl. z. Gesch. d. mathem. Wissenschaft*, xx. 84.

(H. Suter)

**KARKIŠIYÂ (also KARKIŠIYÂ), a town in al-Djazîrâ on the left bank of the Euphrates, close to the confines of the Khâbûr, a little above the 35° N. Lat. Karkišiyya is simply an Arabic reproduction of the Graeco-Roman name (rò) Karpéoûs, (trò) Karpéón (Karpis in the *Notit. episc.*), ed. Parthey, p. 67). Cirkesium, Syriac Kirkiusia, Latin = Caerimon Circense, the Castle with the Circus = Cirkis, op. cit. (see Bibl.), p. 3. Hassa al-I斯塔bûrî in Yâkûr, iv. 63 sq., still knew the etymology of the place-name (Karkišiyya, arabicized from Karkišyâ, from kir- = arab. kalas, Hippodrome). The name Circesium for the place at the mouth of the Khâbûr in any case first appeared, when a Roman military station was built there. This perhaps may have been even before Diocletian. It was, however, this Emperor who first made the place of great importance by making it a powerful fortress on the extreme frontier of the Roman Empire in Southern Mesopotamia. From this it seems quite impossible that Circesium could have been a latinisation of the Aramaic Kharka = town (see the article al-Karkhid), as Moritz, op. cit. (see Bibl.), p. 37, supposed; see Streck's arguments in the *Z. A.*, xxvii. 259.

A situation so favoured by nature as the mouth of the Khâbûr must certainly have been already inhabited in remote antiquity. But the names of the settlements there have — as frequently happens in the East — changed several times in the course of centuries.

The old native name of the place was perhaps the Nabagath mentioned by Isidor of Charasse (cf. Hefsel, op. cit., i. 174). Another name is perhaps preserved in Chabara i.e. the town on the Khâbûr; see Streck in Pauly—Wissowa, op. cit. (see the Bibl.). In the inscriptions of the Assyrian kings of the ninth century (Tukulti-Ninurta II., Assurnasirpal) we find mention of a place named Sirku (Sirkî), which, according to the itinerary of Tukulti-Ninurta, was the last western stage along the Euphrates on the road to the mouth of the Khâbûr. Following Maspero (*De Carchemis oppressa sita*, Paris 1872, p. 13), this Sirku has been connected with Circesium and the latter name actually derived from the Assyrian one; see for example Sayce in *Proc. of the Society of Biblical Archaeology*, xviii. 174; S. Schiffer, *Die Aramäer*, Leipzig 1911, p. 20 and 22, and Meissner, *Babylonien und Assyrien*, i., Heidelberg 1920, p. 344; it is queried by Scheil, *Annales de Tukulti Ninîp*, ii., Paris 1909, p. 48. This identification is untenable; see against it Streck in the *Z. A.*, xxvii. 269 sq. and Horn in the *Z. A.*, xxxiv. 150 sq. The site of Sirku is besides to be sought on the right bank of the Euphrates; on the probable situation cf. Forrer, *Die Provinzialaufteilung des Assyrischen Reiches*, Leipzig 1920, p. 15. According to the above mentioned itinerary of Tukulti-Ninurta, Rummunina (on the reading see Horn, op. cit., p. 151) must probably be located in the region of the junction of the Khâbûr with the Euphrates.

Simply on account of the similarity of names, Circesium used to be identified with Carchemish, the great Hittite city, for example in the older Biblical commentaries, by the Jewish traveler Benjamin of Tudela, also by Ritter, op. cit., x. 15 and by Chesney, op. cit. (see the Bibl.), p. 250. The lack of foundation for this identification was shown notably by Maspero in the above mentioned work and by Noldeke, op. cit., p. 1 sq. Besides, the site of Carchemish has been identified for several decades beyond all doubt in the ruins of Dîrîbûs or Dîjârîbis on the right bank of the middle Euphrates, a few hours' journey below Birekît.

In the fourth century A.D. Cirkesium passed into the hands of the Persians by the shameful treaty made by the Emperor Chosroes (395). The Arabs, next captured it in the conquest of al-Djazîrâ. The occupation by the Muslims, which took place, apparently without fighting, under the commander Habîb b. Maslama who was sent by 'Yâşî b. Ghann, probably happened in the year 19 (640), not 16 (637), as many sources say. Cf. thereon al-Baladhûrî, *Kîlāb al-Futûk* (ed. de Goeje), p. 176 sq. (and cf. p. 111, 175, 178, 179); al-Tabari (ed. de Goeje), i. 2478; Ibn al-Athîr, al-Kamil (ed. Tornberg), ii. 409 sq.; Yâkût, Mu'jam 'al-Abbâsî (ed. Wittenfeld), iv. 65 sq.; Weil, *Gesch. des Chaliften.*, i. 82; Czetw, *Annales del' Islam*, vii. 402, iii/I. 734, 755 sq., 799. Karkisîyâ became the capital of the district of Khâbûr in the province of Diyar Bakr. On account of its very characteristic situation, Karkisîyâ is mentioned by all the Arab geographers in their descriptions of the river-courses and roads, but no detailed account of it is given. The place probably did not contain any great size in the Islamic period either. The high percentage of Jews (500 families) found by Benjamin of Tudela in the second half of the 12th century there is remarkable; see the Hebrew text of his travels edited and translated by Grünbôh and Adler (Jerusalem 1903, Frankfurt a/M. 1904), i. 49, 21 sq. and ii. 47.

In the history of the wars of mediaeval Islam we find Karkisîyâ often mentioned. When 'Abd al-Malik was engaged in his campaign against Mu'âsh, governor of the Ífrîk and brother of the anti-Caliph 'Abdallâh b. al-Zahhâb, he had to devote his attention to Karkisîyâ in 71 (690), where the Kâsî Zafar b. al-Hâfîz was ruling independently and had successfully resisted the governor of Ïmîs, who had been sent against him. After a siege of some length, Zafar had to submit to the Caliph's army; cf. the account in Ibn al-Athîr (ed. Tornberg), iv. 275 sq.; Weil, *Gesch. der Chaliften*, i. 431; J. Wellhausen, *Das Arabische Reich und sein Sturz*, Berlin 1902, p. 115—116, 119—120, 126. In the wars fought in the ivth (xth) century on Mesopotamian soil in the Hamdânî epoch, we find Karkisîyâ playing a part along with al-Raŷba, a day's journey down the Euphrates from it; cf. Freytag in the *Z. D. M. G.*, x. 451—2. The rulers of Egypt repeatedly extended their power as far as Karkisîyâ, for example the Tulûnî Ahmad, from
whom, however, the Caliph al-Mu'tamid's vigorous brother al-Muwaffaq was able to retake it in 263 (881); see Wüstenfeld, Die Staatshistorien von Legißen zur Zeit der Chälifen, Abb. G. G. W., (1876), vol. xxii., part iii. 20. Several centuries later the Egyptian Sulaiman Balbars again advanced his frontier up to the Khabur, when he took Karkisiya from the Mongols in 663 (1264); cf. Weil, Gesch. der Chälifen, iv. 96.

At the present day the site of Karkisiya is marked by a miserable village of 30–40 houses and hovels of clay and an extensive ruined site adjoining it. It is now called Busaira (Besira); wrongly written Busayra, by the travellers give the form Abū Serai etc. Busaira is probably a corruption of Abū Serai (as, along with other authors, Moritz, op. cit., p. 37, thinks); it has been with less probability taken as a derivative from Basr, the older name — recorded by Abu l-Fida' for 732 (1331) — of the present Dār ez-Zūr (see Hersfeld, op. cit.). According to Hersfeld, the old name Karkisiya still survives locally in the form Karṣa.

Busaira lies on an irregularly shaped tongue of land formed by the Khabur at its junction with the Euphrates and is about half an hour's journey distant from its mouth. Communication with the hinterland is broken by a ditch so that we have a well-marked peninsula. The plan of the old fortress can still be easily recognised; it forms a rectangle, the longer side of which runs along the Khabur, while the shorter faces the Euphrates from which it is now about 1000 yards distant. Four more or less well preserved towers and a fort-like building (praetorium, serai) can still be seen, from which Moritz (op. cit.) suggests that the modern name Abū Serai (Busaira) may be derived. The fairly extensive town lay to the north-east of the fortress and is still marked by numerous walls of earth. Descriptions of the modern ruins are given by Sachau, Moritz and Hersfeld; plans of them are in Sachau and Hersfeld (see Bibli.).

The important part once played by Karkisiya as a trading centre as a result of the important roads which meet here — from Syria to Babylonia, Māşūl to Syria — has in modern times been to a great extent regained by the town of Dār ez-Zūr on the Euphrates (see above, i. 936) above mentioned, a few hours' journey above the mouth of the Khabur.

concerning the conquest of Central Asia by the Kara Khitai [q.v.], the latter appear as the allies of the Khan of Balasaghun [q.v.] against the Kauluks; the Kara Khitai of Samarqand, on the other hand, are the allies of the Kauluks against Sultan Sandjar (cf. especially al-Rawandi, ed. Muḥ. ʿAbd al-Rasul, Gibb Memorial Series, new series, ii, p. 172). Later the Kara Khitai induced the Kauluks in Samarqand to abandon their warlike life and to take to agriculture. According to Ibn al-Athir, this took place in 559 (1163/4) (Kāmil, ed. Tornberg, xi, 205), but this date seems to be late; cf. W. Barthold, Turkestân, ii, 358. In the second half of the 12th century the Kauluks are mentioned for the last time (by al-Kātib al-Samarqandi; cf. the text as edited by Barthold, Turkestân, i, 71 sq.) as enemies of the Khan of Samarqand; in the history of the 12th century they no longer appear. A Kauluk state N. of the Ili with the capital ʿAwālij is however still mentioned; cf. especially Taʾrīkh-i Diwan Ḵᵛāzla, i, 567 sq.; other reports in Barthold, Turkestân, ii, 433 sq., 477. The son of the Kauluk prince Arslan Khan, who had submitted to the Mongols and taken part in the expedition against the Khwarizmshah Muhammad, was given in fief Uzgand in Farghana by the Great Khan Mangu (1251—1259; cf. Taʾrīkh-i Diwan Ḵᵛāzla, i, 58); there is no later mention of this dynasty. To the same division of the Kauluks perhaps belonged the dynasty of the princes of Almalīgh (cf. the art. KULJA). The name Kauluk seems later to denote an Ozbek family only. (W. BARTHOLO)

KARMAṬIANS (ḴARMAṬI, plur. KARMAṬIJA: Carmathians). In the strict application of the word, the name was given to the rebel federations of Arabs and ʿAbātaeans, which were organized in Lower Mesopotamia after the sargive war of the Zandj [q.v.] from 264 (877) and based on a system of communism into which initiation was necessary; active propaganda extended this secret society among the masses, peasants and artisans; in al-ʿAfsa, where they founded a state independent of the Caliph of ʿAbābād; in Khorsān, in Syria and in Yemen, where they formed lasting hotbeds of discontent.

In the broader sense, the name Karmāţian means the great movement for social reform and justice based on equality, which swept through the Muslim world from the ninth to the twelfth centuries of our era; this movement, captured and controlled by an ambitious family, the Ismaʿilī dynasty (cf. ISMAʿILĪYA, ʿṢABĪYA), who founded the Fatimid anti-caliphate in 297/910, became abortive and finally succumbed with this dynasty by the counterstroke of the Crusades.

The movement is characterized, from the point of view of knowledge, by the adaptation of the Arabic language to certain technical achievements of foreign origin, especially Hellenistic (Neo-Platonic, pseudo-Hermetic and Ṣahaean writings); from the political point of view, by the exploitation of the ʿAlid legitimist tradition on behalf of a conspiracy, carried on in a strict secrecy, in which the name of the supreme leader was never pronounced; from the point of view of worship, by the use of an allegorical and mythical catechism, ʿOrfāne in origin, adapted to all creeds, to all races and all classes. The movement was based on reason, tolerance and equality, with a system of graduated initiation and the ritual of a gild which encouraged the rise of the trade gild movement (see the art. GILD) and universities—seems to have reached the West and to have influenced the formation of European gilds and freemasonry.

I. Etymology and early history.

The etymology of the word ʿKarman (not ʿKarmīt) is disputed. It appears as a descriptive adjective in the name of the first leader of the insurrection, Ḥamdān ʿKarman (cf. ʿAll b. ʿKarman, a heretic quoted by the ʿUsāiri author Maimūn Ṭabarānī). Voilers has connected it with the Greek ʿkhrimēta, but it is more probable that we should see in it a borrowing from the local Aramaic dialect of ʿWaṣat, where ʿKarmanū (this day means undallū (Arabo-Aramaic dialect of the Midīn, ed. Ālādīrī, x, 18, p. 857). From the year 255 (868) we find mentioned in the same region, along with the Ṣarāryīya, a corps of Karmāţiya among the rebellious troops of the Zandj (al-Ṭabarī, iii, 1757; cf. iii, 1749: ʿRāghid Karmāţī).

The name ʿKarman in palaeography means a particular kind of naskh; in addition there is a special secret Karmāţian alphabet used in the Yemeni texts recently studied by Grinti.

The Karmāţian insurrection was begun by Ḥamdān in the neighbourhood of ʿWaṣat; in 277/890 he founded a dār al-khā/] (an entrenched place of retreat) east of Kūfa for his partisans, whose various voluntary contributions supported the common chest: these contributions were always at the breaking of the fast (zahūl ʿal-ʿifr), for the right to use the place of refuge, a fifth of all income (ḵūns), right of all participation in the agapes (būchī; cf. the art. ʿUSĀRĪ); community of all objects of general utility (sulfa). These details, which we know from Sunni sources, are perhaps accurate; at the agapes they ate "broad of Paradise"; this detail which we find in the contemporary trial of al-Ḥallādī is perhaps simply a transference of the consecrated bread (pohta) used among the Mandaeans of ʿWaṣat (mawdūsita = nāṣīrāya; cf. al-Ṭabarī, year 278 (981), on the Karmanīya of ʿAbū ʿOṣūmān of Naṣrān; or to be pointed Naṣūrāya).

We find along with Ḥamdān his brother-in-law ʿAbādīn (d. 286/899), a master of a manual of initiation for the seven degrees (balagḥīt sābaʿ). Both seem to have been dependent on leaders whose identity remained a secret, living outside of ʿWaṣat, the ʿṢabīl ʿal-ʿZahrā, who is said to have invested Ḥamdān, and the ʿṢabīl al-Nākān, who had dismissed ʿAbādīn and put in his place Ḥikrauiwāl ʿAbādīn. Ḥikrauiwāl in 288/900 gave the signal in the desert of ʿWaṣat among the Banū ʿUlaś for the general Karmāţian rising — so long prepared (expected in Khurāsān) for the year 290/902 — and proclaimed as leader the ʿṢabīl al-Nākān, under the Ismaʿilī regnal name Abū ʿAbd Allāh Muḥammad, who took the dynastic name ʿṢabīl al-Ḥalāl, who as ruler took the name Abū ʿAbdalshāh ʿAbdāzīr, and who was captured and executed at ʿAbābād in 291 (933). The Karmāţian movement in Lower Mesopotamia, drowned in blood, ceased to be an active factor in politics in 294 (906) with the death of Ḥikrauiwāl.

In time the movement regained strength in
al-Āṣār, where the ʿṢāḥib al-Naḥaṣ had sent as his representative Abū Saʿīd Ḥasan b. Buhām al-Djannābī in 281 (894); with the support of the Kaʿbah tribe of the Abī al-Kaṣīr, al-Djannābī seized the whole of al-Āṣar (286 = 899) and made it an independent state, the bulwark of ʿĀṣār power and the terror of the Caliphate of Baghdaḍ. His son and successor Abū Tāhā Sulaimān (301—
323 = 914—943) began to lay waste Lower Mesopotamia, cut the pilgrim routes and finally seized (Mekka on the 8th of Dhu al-Ḥijja, 317 = Jan.
12, 930) from which he carried off the Black Stone six days later to take it to al-Āṣar. Abū Tāhā, like his father, was only the emissary of a secret organisation, its "commissionary for foreign affairs" for al-Āṣar; while waiting the opportunity to enthrone the expected Imām there, he appointed a representative council over it, the Ṣūda (i.e. the elders of the tribe) for the political administration of home affairs. This organisation was still in existence in 422 (1030) after the decline of the military power of the ʿĀṣār; it seems to have maintained local autonomy down to the xviiiith century, when the revival of propaganda took the form of a new Imāmī dynasty (Makramīs).

The name of the ʿĀṣār was also that of a Makramī (new name given to Hadjār; on the site of the present Ḥufūf).

In Yemen, ʿArmanī propaganda, directed from 266 (879) by Maṣūr al-Yaman (title of Ibn Hawshab) with the dār al-ḥidara near ʿAdanā, failed against the resistance of the local Zaidī chiefs and could only find some little principalities, the Ṣuṭ-Sahs, and the Makramīs of Nadjān (texts studied by Grifinī).

In Khurāsān the movement began in 260 (873) at Raʾis with Ḥalāf, then spread to Marw al-Rūḥī and Ṭālāṯān in Dijarjān, where the Amīr became a ʿĀṣārī aṣārī. Dalīm which was to become a bulwark of the Imāmī dynasty (see the art. ALAMĪT, ASSASINS), was next taken for the cause, finally Muḥammad al-Nasafī al-Baradjuʿī (d. 331 = 942) undertook the conversion of the Sāmānid rulers. His execution destroyed the political hopes of the party: the small ʿĀṣārī centres of eastern Khorāsān — if we except the wāqūt of Nāṣir-i Khusraw — only produced a moderate literary activity (texts studied by Iwanow).

In Syria the centre seems to have been Salamīya; but, except for some biased Sunni records, we do not know what happened there after the insurrection of 288 (991), nor the part played in it by the future ʿUbād Allah, the first Fāṭimī Caliph. Syriān ʿĀṣārīanism is still dormant, without showing any signs of activity nor of contact with the Druses, who are its distant brethren.

The small local bodies, among which ʿArmanī manuscripts have survived down to our days (for a list of them see the art. ISMIṢAYA, li. 549 sqq.), have not been the scene of any serious doctrinal activity apart from the writings of the Syrian Rasḥīd al-Din Sinān (xivth cent.), the Ḥudūdān of the Indian Māmūd Fānti (Mohed Shāh) (xviiith cent.) and the Turkish and Persian texts of the Ḥurūfīs (xviiith—xviii cent.).

II. The position of the ʿĀṣārīs relative to the Fāṭimīds.

The general tendency of ʿĀṣārī doctrine was to consider ʿĀṣārī legitimacy as a means rather than an end. The Imām, the supreme authority, is not a hereditary monopoly transmitted in a dynasty; it is an intellectual characteristic, a divine investiture, an imperative mandate (siyās al-amīr) conferred (taliṣīṣ) on the new holder of the title from among the initiates by a sudden illumination of his intellect, which makes him "substituted" or "spiritual son" of his predecessor. Such is the justification, given in the formula of initiation in the Druze books, for these alleged "usurpations" of genealogy, which are the rule in the annals of the ʿĀṣārīs from ʿAbd Allāh b. Maimūn down to Ḥasan al-laḥīḵhī Ḥaṣānī. And this is the meaning of the definitions of the imāmate given by adepts like Ibn Masʿūd, Kuʾīn, Ibn Ḥanī and the Ḥudūdān al-Naṣafī and ʿṢāḥib al-Naḥaṣ in 288 (990), and ʿUbād Allāh in 292 (995) had assumed a Fāṭimī dynastic title, neither one nor the other plainly indicated their genealogical connection with the ʿĀṣārīs (cf. al-Makramī, Ṣarḥ, ed. Buzn., p. 7—11). And if this claim was of importance with respect to the public, in the opinion of their enemies, it seems that it hardly interested those initiated into the true doctrine, who expected above all else a chief, possessing a special divine appointment, of the "intellectual order", whether he was ʿAlī or not.

The official version of the ancestry of the family of ʿUbād Allah compiled by his ʿUzī, the Malikī al-Nu ṣān b. Abī Ḥanīfa al-Tamīni (born 259, d. 363 aged 104), is a laudatory and lying composition specially written in reply to a Buḥraidī attack. The versions of two Sunni anti-ʿArmanī pamphlets by Muḥammad b. Kīrām al-Ṣaʿīd, president of the Muḥāṣīn in Baghdaḍ in 326 A.H., and by Muḥammad b. Ṣaʿīd Muhāmmad al-Naṣafī, an ʿĀṣārī of Damascus, who died about 375 A.H., are hardly of any more value. S. de Sacy, Guyard and de Goeje thought they could rely on them as Ibn al-Nuṣairī, al-Dhuwairī and al-Makramī had done. But a result of a comparison with the statements contained in the biographical collections (taḥākīt) of orthodox Imāmī muḥaddithīn, in which the early ʿĀṣārī propagandists have a prominent place, shows that there are serious errors in the exposé by these two opponents. Maimūn Ṣaḥīḥ (d. about 180 A.H. at latest) was not a "Bardesian"; he was a client of the Makhzūmī clan (Kuraib), a native of Mekka, a well-known theologian, the official interpreter of the fifth and sixth Imāms, Bākīr and ʿṢāḥīḥ. His son ʿAbd Allāh, who was official ʿUṣūrī of ʿṢāḥīḥ (which provoked the irony of the poet Abī ʿAbd Allāh al-Maṣṣīrdī), did not die in 250 A.H. but in 230 at latest, "in prison in Kufa under al-Maṣṣīrī"; Dīnān (and not Zaidān) is the sobriquet of an known Imāmī author, Ḥaḍīd b. al-Husain al-Ahwāzī, who died about 250—270 A.H., etc. In these circumstances the statements made in the two Sunni sources mentioned regarding the assassination of ʿAbdān, the illegitimacy of ʿUbād Allah and the usurpation of the soi-disant "son" of Dhikrwalī in 288—291 A.H. have to be received with caution.

After the proclamation of the Fāṭimī Caliphate in the Maghrib the general attitude of the ʿĀṣārīs in al-Āṣar as in Yemen and in Khurāsān was one of expectancy, which the assassination of ʿṢāḥib al-Baḥri (267 = 909) by ʿUbād Allah amply justified. Let us take al-Āṣarī for example: Abī Saʿīd had sent from the first paid the fifth ʿUṣūrī of al-Naḥaṣ; after various evasions, which the intrigues of the court of Baghdaḍ do not quite explain, Abī Tāhā sent it to ʿAlī, but with so little conviction of his legitimacy, that he welcomed and enthroned in 319 (931) as the
expected Īmām al-madān, Abu l-Faḍl al-Zakari al-Tamāsāni (a kind of Heliozabalus, soon put to death). The Black Stone was restored to the Meccans in 260 (971) by order of the Fatimid Caliph al-Manṣūr; but in 356 (960) the Kaʿbārī chief ʿAbd al-Muʿīz al-Yamanī, who had come to him with the intention of giving him the Bayān al-ʿAmrīy, a document which he condemned. The Korān of king Sabaʿ, the soul of the world (nafs), which, like all other Prophet, was attributed to the Kaʿbārī Caliph. 

On the other hand there are abundant proofs of the adoption of Kaʿbārī doctrine by the Fatimid dynasty. It was at the dār al-ḥikma of the Maḥrūb, ʿAbd al-Muʿīz (O Gaudin) founded by the Kaʿbārī ʿAbd al-Muʿīz, who succeeded to the throne of the dār al-ḥikma, etc., in the present masonic term is nafs, which he founded in Cairo. The Druze religion is simply a Kaʿbārī heresy. The introduction of ʿAbd al-Maʿīz of the Sanāʿī ahl al-Talā in the end of the Ḥāfiẓ (131 of the ) in the J. A. of 1855, p. 542) is to be traced to the part of nafs, translated in the Prophecies by the Kaʿbārīs. 

III. The Kaʿbārī Doctrine. 

It is no longer possible to rely, as used to be done, on the accounts of Kaʿbārī doctrine given by the Sunni anti-Kaʿbārī writers on heresies; al-Maʿṣūmi has judiciously said of the latter that they contradict one another and that the Kaʿbārīs themselves recognise nothing of their doctrines in their accounts. For a few lines that are accurate in the Tanbih of al-Maṣālī (d. 377-387) we have to come down to the ixth century of our era to find a conscientious author, al-Shahristānī, able to give us authentic Kaʿbārī fragments, some quite old (of Maimūn Kaddād and Aḥmad Kajīz), and in the Tanbih of al-Maṣālī (d. 377-387), which he does not mention, but which Faḵr Rāzī of Faḵr al-ʿAṣwī (Mafīl al-ʿAṣwī) has identified with the Faḵr arwaʿ of Ḥasan Ṣabūl (on Saʿbānī: ii. 155-155 of the Cairo edition of 1317) and the Sanāʿī al-Ḥikma of Abū Dāʾer Siṣṭānī b. ʿAbd al-Ḥaqq (on Hellenism: ii. 155-193, of the Cairo edition of 1317). 

To deal with the problem more minutely one must search the polemical literature of the Imāmīs and particularly the apologetic treatises in which the various extemists sects endeavour to convert one another, starting from their common technical terms. Lastly the encyclopaedic collection of the Ṣabīn al-Shaʿrī, which has not yet been thoroughly studied since Dieterici, is invaluable for the synthetic understanding of Kaʿbārī thought. 

According to them, the world is a sum total of phenomena which repeat themselves in cycles, playing and replaying the same drama to us time after time; in this spectacle, presented to intelligence (invariable in number) so that they may be illuminated, is the gradual disappearance of the material veil, perceptible by our senses, a multiformal and transitory mirage; then the intelligences are born (khalq Īmtān) by gaining consciousness of a pure intellectual evidence of a unique and impersonal thought, which is divinity itself. 

The divine essence, in fact, outside of which nothing exists, is only the evidence of a single idea, an authentication of indifferented intelligibility and devoid of all content; the via rēminēs (Ēmān) of the Kaʿbārīs, still more rigorous than the īfī of the Ṣaḥābiya, denies all divine attributes and postulates an absolute monism of fundamental intellectualism. 

True worship consists in knowing how to recognize as the result of a graduated initiation what have been the stages of the creation the illumination of the universe outside of God; what exactly leads the initiated by a process of inverse gnostic illumination to forget these stages and to become absorbed in God. 

a) Creative evolution:—the divine essence or supreme light (nafs ʿawḥī), alone in the beginning and in the end, gives forth first of all the nafs ʿawḥī, "glistening" and "victorious (ṣāḥib) light" which then engenders the universal intelligence (cafi kūl) and the soul of the world (nafs); the latter under various modes produce human intelligences (those of the prophets, imāms and elect; the others are only phantoms of nothingness). The nafs ʿawḥī in the second degree gives forth the nafs ʿawḥī, "tenebrous light"; that is matter, passive, "vincible" (naḥṣū), destined to disappear; it appears in various modes as stars at the skies (aṣlū), as perishable bodies on earth. 

b) Gnostic invocation:—the intelligences of the prophets, imāms and their adepts are sparks of "sparkling light" suddenly illuminated in the midst of the tenebrous light, blind and unreal matter like reflections in mirrors, following the cyclic intermitances of the initiatory illumination; these sparks shine, on becoming conscious of their divine identity, in a liberating intuition, in which, losing all individuality, they find themselves "delivered from the five tyrants": — the sky, which makes day alternate with night, nature, which gives desires and regrets, law, which commands and forbids, the state, which controls and punishes, necessity, which forces one to daily labour.. 

c) The immaterial succession of initiatory investitures (nūṭaqa, tāfuq). Initiatory illumination makes the separated intelligences cohere, divine sparks individualised for a moment, following two convergent hierarchic series: increasing, of the initiators (nāẓīr, rāʾī, ṣāḥib); and increasing, of the initiated (ṣāḥib, ḫudūd, ʿānām). Historically the list of their titulars was classed in cycles of limited number; the intelligences, in invariable number, "transmigrate" from cycle to cycle (without "fiding" again their personality, since they have only the appearance of individuality). 

d) Planetary denominations of the cycles of transmigration (akāva, atāva, ẓārāvāt). There are just mentioned are named from their material veins, i.e. from the planetary revolutions, periods and conjonctions. This is a very fine point which must be appreciated. The Kaʿbārīs are nominalists; they do not believe that the name determines the thing and they unani-

KARMATIANS

month and every day). When the moment comes for the final cassation of every action (biqar = datifjir of the Hadith, sahir) cycles and periods will cease together.

e) The degrees of individual initiation. Initial illumination is transmitted to the adept by degrees as in the ancient initiations (Greek, Manichaean) and in modern freemasonry.

It emanates from the divine volition following a method of irrefutable and infallible authority (ta'lim, whence the name ta'limiyah given by al-Ghazali to the Karmatians). The adept submits himself for it (the fourth degree) by a declaration — a solemn contract with a clause (pil'ak mu'addal) of triple repudiation of his favourite wife if he should reveal the secrets (sisih' al-sirr), which constitutes Karmatian adultery, ʿzina. Its formula has been studied by Goldziher (cf. the art. SURAHIJJA). We find it first used during the revolt of the Zandij (al-Tabari, iii. 1750) and Usama alludes to it in his Memoirs. The Sunni heresiographers record 3, 5, 7 (al-Ḥanāni) or 9 degrees; but the names which ʿAbd al-Kahir al-Baḥdānī gives them are doubtful: tafarruk, diagnostic of the future adept, described as "fertile" or "sterile" earth, ta'nis (taming), taḏkāḥ (apprenticeship to medico-didactic double), tašīḏ (talking of the oath), ṭabī, tadīs, ṭafī, ʿzina, and tašīd. The programme for the five highest grades (secret) is little known. The "letter of ʿUbayd Allah to Abū ʿUmar" an apocryphal curiosity (recalling certain modern anti-masonic productions), analysed by al-Baḥdānī, puts in various maxims of cynical impiety, among others the mediaeval parable De TribusImpostoribus (the earliest reference to it; cf. R.I.R., 1920) Al-Maqrīzī's reference to the muḥti of Cairo (transl. by de Seyc and Casanova) shows that initiation simply amounted to showing that the exterior rites (taḏkāḥ) of all the revealed cults conceal under equivalent and inadequate allegories the same hidden meaning (kātin, whence the name Bāṭiniyya of the Karmatians), purely negative and without mystery; initiation being reduced to teaching of the use of wholly speculative philosophical reasoning, which propounds without practical differentiation the antithesis, opposite conceptions like "law" and "break of law", "tawḥīd" and "tašīd"; (cf. DRAJZES). But this is only, as we have seen, one aspect of the fundamental intellectual monism of the Karmatians.

IV. Its Islamic technical vocabulary, its criticism of the other extremist Shi'i sects (Ghulat).

Terrified by the wide and rapid spread of Karmatian doctrines in the most cultivated centres of the Muslim world, the Sunni heresiographers strove to discover and denounce an anti-Muslim offensive in it, originating in a foreign religion — Mazdeism, Mazdakism (Khurramiyah), Manichaism, — in racial hatred, setting Iranian against Arab, the tribe of Rabi' against that of Muṣṣar (Ṣafwāniyya). They quoted parallelisms which are not very convincing.

The hypothesis of the Sabaeans origin of the Karmatians, which is also found among them, is more attractive. It seems to have been put forward by the Karmatians themselves with a view to gaining citizenship in the Sunni Muslim state, presenting their syncretism as the heritage of Abraham (khaliyya) from these mysterious "Sabaeans" mentioned by the Qur'ān. Such is probably the leading idea in the Sabean tale developed among others by al-Shamānī in some pages borrowed without acknowledgment from the Karmatian Ḥasan Salīḥ. The documents hardly permit us to connect effectively the Karmatians, with the pseudo-"Sabaeans" of Ḥarrān or Wāṣṭi.

In reality an examination of the Karmatian technical terms shows that this doctrine was formed before the end of the second century A.H. in the Imāmī circle of Kūfa. The Karmatians retained, embedded in their system, various series of Imāmī special terms, which we find again among other extremist sects, Ḥāklī, Ṣafī, Nāṣīrī, Khāṣṣī, Ḥallājīya; e.g.: nāṣīrī, nasfinī, ṣafī, ṣafīnī, ṣafīnī, muḥājirīn, muḥājirīn, ʿazīdīnī, ʿazīdīnī, ṣafīnī, ʿazīdīnī, faṭīḥ, ṣafī, ṣafī, ṣafī, ṣafī, ṣafī, ṣafī; the mystic sense of the 28 letters according to the ṣafī. The last orthodox Imāmī Maḥdīkullāh received into the Karmatian imām's are Mafṣūdāl b. ʿOmar and Muḥammad b. Sinān al-Ẓahīrī (also admitted by the Nūṣairā).

The most outstanding Karmatian author is Abu ʾl-Khaṭṭāb Muḥammad b. Abū Zaynāb al-Asadî al-Kābilî (d. 167 = 783 at Kūfa); he substituted in place of the "personifying" Kūrahī exegesis of the early ʿArifs an abstract allegorical exegesis; in cosmogony he replaced the use of letters (cf. Mughrīr) by their corresponding numerical values (mystic meanings of ṣafī); it was he also who seems to have invented the pledge guaranteeing the secret of initiation: for the Ḥāklīyya, his adepts, are the only Imāmī sect whom al-Shāhī (Kiṭāb al-Ḥaḍādāt) will not allow to take the oath on the ground that they make of the taṣfī (negative practice of secrecy) a positive precept justifying false testimony (to keep a secret).

After him, Abū ʾIlā Bakr Mīrām al-Kaddāl al-Makkīmī (d. towards 160 = 796) gave definite dogmatic form to the Karmatian doctrine of emanation; he substituted the abstract first principles for the five atām (deity-personal personages), demijures of the first Ghulāt. He denies that the divine essence has any attributes and defines the "eternal Qur'ān" as a pure divine illumination in intelligences.

If one compares Karmatian dogma with the preceding Imāmī systems, their naivey "materialising" (taḏīm) and "personifying" (raṣḥākhshīyā) notions and their idolatry of ʿAli and his descendants, we see at once after the connection a transposition: here they are intellectualised, objectified in abstractions. Finally the Karmatians, considering only rank and the external role played, restore to Muḥammad priority over ʿAli. Not that they in turn deify Muḥammad — it is simply his predestined role of pre-eternally foreseen messenger or herald (nāṣīr) that they look at. They are (to the exact term) not Muḥammadīyya but Miṣnīyya (the letter miṣn means in ṣafī the name, iṣm: that is to say the name of onomatopoeic, nāṣīr, devolved on the prophet), in opposition to the Ṣafīyya (the letter iṣn in ṣafī means the original sense, ma'ānī, whence the hidden meaning, the "silent" (iṣāmī) role of "acutely designated" chief, devolved on ʿAli), like Dāsī and Nakhi.
KARMAJANS 771

sili, modifying the doctrine of the ‘Ainiya to suit the exigencies of controversy, maintains ‘Ali (ma ni = imam) above Muhammad (hijab = khalīja) and Salām (insan = sālih). To the ‘Ainiya arguments Muhammad is the ‘veil’ uncovering the divine appearance called ‘Ali, the Druzes reply with good Karmajans logic that a ‘veil’ only covers and that Muhammad has given more perfect evidence of God by his words than ‘Ali by his silence. Internal sanctity is set aside in favour of the gift of prophecy and sinlessness neglected for infallibility. It is the same polemical attitude which dictates to Maiman Kaddār the order in which he associates his two first principles (followed in that by Ka‘yāl, Baradāy, the Druzes and Ḥašān Sabā‘ah): first the intellect (‘alī = nafs nāliha = awāmī = rāḥīk) and secondly the soul (nafs = nafs huwāni = thāli = fiqīk). Then comes the ‘fāt’ (kūn, qidāda), the central sign of divine intervention, before the second pair of principles, simply reduplication of the first among the Druzes (‘alī and nafs) and in Ḥašān Sabā‘ah (fath and khayal). The identification of the five Karmajans first principles with those of the Hellenistic philosophers, like the physician Rāzi (intellect, soul, matter, space and time) does not seem to be primitive and represents a later effort at syncretic conciliation.

In psychology the Karmajans deprive each human individuality of all definitive reality; his body being removed a priori like an unreal veil, there only remains a momentary principle of indetermination to which they refuse any name implying internal finality, like rūh, nūr, ma‘ṣūr (employed by the early Imāmīs); they substitute for it the term ‘alī ‘intelligence’, indicating a simple causation on the part of God, “ab extra”, a role of an observer who takes no actual part in what he sees.

They criticise the gross materialism of the first Qhulat (and of the ‘Ainiya) who believe that souls are fallen stellar bodies, fallen from the higher heaven (of which the sun or the moon is the threshold) and destined to return there by that same predesigned attraction which caused them to adore the divine. They then imperfectly seen in the course of the cycles of bodily transmigration (tanānāk). For the Karmajans there is no corporeal transmigration even for the damned (they have only been phantoms) in the bodies of animals and we cannot even speak of true spiritual “transmigration” for the elect, since the immortality of the intelligence is only impersonal whether it assumes modes as “spark” or not.

Contrary to the ‘Ainiya, who refuse initiation (and immortality) to women, the Karmajans admit them (risāla al-nisā‘ in the Druze canon).

The Karmajans profess an integral nominalism; the letters of the alphabet are only intellectual symbols; the name is the mask of the thing; not its manifestation (‘Ainiya view); each symbol ought to be detached and permitted access (taḥzīl) to the pure Idea. The obligatory duties of religion etc. are only supererogatory counsels leaving free play to all human faculties (iḥāba).

V. Its connections with Hellenistic philosophy.

Karmajans preserved from its place of origin an old stock of primitive Islāmic terms, Kordanic and others, in which it retained the archaic special meanings they had before the third century A. H. (e.g. amr, tāl, ‘ard, kun, sam‘, šahid, balaq, ġāna, ṣabā‘a, kālāma, ṣabā‘at, riqā‘, ta‘līm). From the same period it retained an ignorance of certain problems, which were only put forward later, among the Imāmīs after Ibn al-Hajjāk, and among the Sunnis after Naẓār, such as the perception of sensation, the conceptual process, the modality of a harmony between the movements of the limbs and the intentions of the heart which accompany them. The Karmajans on these three points profess a kind of fatalism, a blind occasionalism, something like that of Da‘īm.

They, however, like the Mu‘tazilis in another field, marked the very first awakening of Muslim philosophic reflection at its contact with Hellenistic science: by the systematic employment of the word ‘alī, intelligence, to designate the principle of individuality which constitutes man. This brought them not only to the abstract allegorical exegesis above in which dialectic gives place to logic, but also to the direct acceptance of scientific bases, of natural constants — viz. consideration of arithmetical properties (numbers 3, 5, 7, 9, etc.) permitting the calculation of the astronomical calendar (new-moon festivals: against the Sunnis), of the four elements and the “humours” (tabā‘a), specific remedies (iḥāba), the foundation of medicine.

Without going further or assimilating the whole corpus of Hellenistic philosophy, as the Ḥanawī al-Ṣafwī attempted to do, Karmajansism prepared many minds to understand it; it presented to them as divine prophets the ancient philosophers of Greece: Pythagoras, Empedocles and Plato, the masters of hermeticism (Agathodæmon, etc.), stimulating in consequence its adepts to read works coming from these foreigners as freely as the Kurān.

The same licence was to a less degree allowed for certain Persian sources (books of Da‘īm, the “amshapand’s”, being regarded as prophets) and much later for Hindu sources also.

VI. The role of Karmajansism in the evolution of the Islām.

The influence of Karmajans authors, especially of the encyclopaedists the “Fait or Frayds” (Rā‘ūl ‘āmm al-Ṣafwī), on diverse Muslim thinkers belonging to the Sunna or to orthodox Imāmism has been considerable.

In philosophy, it inspired the political theory of idealistic imāmism (iṣṭi‘ād il-nubuwasu) of al-Fārābī and Ibn Sinā (Rāzi had polemics on this subject with Ka‘yāl), the emanation theory of the ten ‘uqūl (Ibn Sinā). The famous parable of the self-taught (Ḥayy b. Yaqzān) would also be of Karmajans origin (cf. the art. Druzes).

There were in the same way various infiltrations into dogmatic theology: abstract allegorical exegesis of the Kurān, tanānāk of Ibn Ḥā’it and Ibn Yānāsh, and the nūr Mahdī. This ‘uqūl of Ibn Sinā. The famous parable of the self-taught (Ḥayy b. Yaqzān) would also be of Karmajans origin (cf. the art. Druzes).

In mysticism, it is still clearer from Sahl al-Tustari [q.v.] to Subhwardi of Aleppo (nūr kāhir). The mystics who attack Karmajansism use al-Hallāj, al-Tawhidi, al-Ghazzālī [q.v.]. Ibn Taimiya rightly pointed out the adoption of Karmajans theses in works of the Andalusian school of Sunni mystics, Ibn Barradān, Ibn Ǧasīr, down to their pupil, the great mystic Ibn al-‘Arabī [q.v.]. When he defined the five periods of creative evolution and of gnostic invasion (same number in al-Fargān); three times in ‘Abd al-Karim Dīb) and when he identified the spirit (ra‘ī) with in-
telligence (‘abūl) in his monist description of the fundamental unity of being (mahdāt al-muqaddam) in reference to the Kārmaṇi themes of the covenant (mithāl) and the Nocturnal Ascension (fātūk kawāsīn). Ibn al-‘Arabī only took up Kārmaṇi exegesis again in a more moderate form.

KARMISIN. [See KIRMISIN.]
KARNAK. [See AL-LUGUK.]
KARNAL (1). A town of 23,559 inhabitants (1901); situated a few miles W. of the Djamān R. in 29° 41' N. 76° 59' E. The town is the administrative centre of a district of the Pandjāb, but historically and ethnologically it belongs to Hindustan rather than the Pandjāb. The language commonly used by the inhabitants is a dialect of Western Hindi. It is no doubt a place of great antiquity, and the name is traditionally derived from Karna of the Mahābhārata (Karnāyā = Abode of Karna). But it was not of great importance in early times, and is not mentioned in the accounts of the invasions of India by Mahmūd Ghānawī and Mu‘izz al-Dīn. Its prosperity seems to have been commensurate with the construction of the canal from the Djamān by Ferōz Shah Tughlak (see Shamsi-Sirāz), Tarīq-i Ferōz Shāh, Elliot and Dowson, Hist. of India, iii. 300). The country became productive and rich, and being on the direct road to Dīhlī from the north became an object of attention to invaders and rebels. Thus in 980 (1573), while Akbar was engaged in Gudhārat, Karnāl, Pāñhipat, and Sāopat were plundered by Ibrahim ‘Iṣa’un Mīrāz. Dāhīnghar halted at Karnāl in 1013 during his pursuit of his rebellious son, Khusraw (Elliot and Dowson, o. c., VI, 296, also Beveridge’s trans., Jahangir’s Memoirs, Vol. i). In 1120 (1708) during the reign of Bahādur Shāh, Karnāl was attacked and plundered by the Sikh rebels (Elliot and Dowson, o. c., vii, 410). But the most noteworthy event in its history was the great victory of Nādir Shāh over Muḥammad Shāh of 152 (1753) which fought just outside the walls of the town. The imperial army was before the battle encamped on the banks of the canal, where it was re-enforced by the 30,000 cavalry of Burhān al-Mulk, Nāgin of Awadh (Oudh). But Nādir Shāh’s army was under better discipline and provided with abundant artillery, and the defeat of Muḥammad Shāh’s forces was sudden and complete. After the break-up of the Mughal empire following this invasion (and those of ‘Alāmah Shāh Durrānī and the Mahārrattās) Karnāl and the surrounding district again became a prey to the Sikhs. Gudjpat Singh of Dīhlī took possession of it in 1763 after the battle of Sirhind but Nadīr Khān recovered it in 1775. After this the Sikhs and Mahārrattās contended for its possession with varying results. The intrepid adventurer, George Thomas, drove out the Sikhs in 1798, but only held it for a short time. Gurdit Singh, the Sikh chief of Ladwa, then held it for a space until driven out by a British force under Skinner in 1803, after Lake’s defeat of the Mahārrattās at Dīhlī.

After these events Karnāl became the headquarters of a British district and was for several years the most advanced military post towards the north-west. Partly due to its unhealthiness and partly owing to the advance of the British frontier to the Sattālid it was given up as a military post in 1841, but remained the centre of a civil district. When the mutiny of 1857 broke out, Karnāl was held by the British with the assistance of the Sikh Rājā of Dīhlī and the Muslim Nawāb of Karnāl, and remained an important link in the chain of communications between the Pandjāb and Dīhlī. Its later history is uneventful. The canal originally constructed by Ferōz Shāh and afterwards extended by ‘Alī Mardān (whose name it bore) in the reign of Shāh Dāhān 1, was entirely remodelled by British engineers and now irrigates a very extensive tract. The only building of importance is the tomb of the Saint Bā ‘Alī Kalmār ‘A, locally said to have been built by Ghiyāth al-Dīn (probably Tughlak), but the architecture shows it to be a much more modern building. Bā ‘Alī Kalmār died in 1325 (1833) and Ghiyāth al-Dīn died the following year, so the tradition as to the original foundation of the tomb is probably correct. Both Pāñhipat and Karnāl claim to have this saint’s tomb.

2. A district in the province of the Pandjāb lying between 29° 11' and 30° 15' N. and 76° 11' and 77° 17' E. Area 3153 sq. m. Population (1901) 883,225 of which 241,412 are Muslims. Its eastern boundary is the R. Djamān, the District of Dīhlī lies to the S., that of Ambala to the N., and the territory of Pāltāna and other Sikh States to the W. In addition to the Djamān, the small rivers called Čīang and Saraswati flowing from N. E. to S. W. traverse part of the district. The first named is absorbed in the Western Djamān canal system. The Saraswati joins the Ghaggar and the joint stream is lost in the Rājputana desert although, when the Saraswati held a greater supply of water, it was a famous river, and the stream probably joined the old course of the Sattālid, otherwise called the Hākra. It gave its name to the town of Sarsut or Sirsa. The territory in the N. of the Karnāl district was the Kurukshetra of the Mahābhārata still locally called Kulchhāt. Sthānēswara (now Thenāsār) was the principal town. Towards the end of the 6th cent. it became the centre of a powerful kingdom to which Harṣavardhana succeeded in 606 A. D. He spread his rule over Northern India from the Bay of Bengal to the Sattālid and Gudjpatār and was an enthusiastic supporter of Buddhism. He was visited by Yuan Ch’ang at his camp at Kanawd in 635.
is called al-Sidjastānī, a fairly full biography is given by al-Samānī in the Anbār, 476b, 477a. According to this, he was of the Banū Nizār, was born in a village of Zarandī, was brought up in Sijistan, and afterwards went to Khōrāsān, where he attended the courses of Ahmad b. Ḥab, the Ascetic (d. 254); at Balkh he heard Ibrahim b. Ūṣuf al-Mākīyānī (d. 257), and in Merv (Ṣāḥīb al-Ṭarīq, d. 244); and in Herāt 'Abdallāh b. Mālik b. Sulaymān, and he recited many traditions on the authority of Ahmad b. 'Abdallāh Dāraybārī (d. 247) and Muhammad b. Tamīm Faryānānī: "he had known these two, he would have left them alone", both being notorious fabricators. After spending five years in Mecca he returned to Sijistan, where he sold all his possessions. He proceeded to Nishābūr, where he was imprisoned by the governor Muhammad b. Ṭahir b. 'Abdallāh (according to the Tāj al-ʿArīš on two occasions); after his release in 251 he left Nishābūr and proceeded to Jerusalem, where he ended his days in 255. The sanctuary of his followers there, called Khānikāh, is mentioned by Muḥammad b. Ṭahir (Livre de la Création, ed. Huart, v. 149) a hundred years later, as also by al-Muḥaddīsī.

2. Doctrines. The opinions of this person were set forth in a work called Alḥāb al-Ḡabr “The Torment of the Tomb”, of which some citations are given in the Fark bain al-Pirāk, pp. 202-214, where there is the fullest account of the sect, with some of whose members the author held debates. His chief theological doctrine, which caused the inclusion of his sect among the Ṭashabbiyān, was that the Divine Being is a Sub stance (Dāyvar), for which some of his followers substituted Body (Qisām), though without human members, and in contact (numāsā), for which the euphemism mutlabāt was substituted) with the Throne, which is located in space. This was apparently a deduction from the Kurānic ʿala ʿArzī jāva, and, indeed, the rest of his theology would seem to have been an endeavour to work the Kurānic texts into certain parts of the Aristotelian philosophy, notably the distinction between Substance and Accident, and that between dynamis and energia. Thus his followers could maintain that God was “speaking” before he spoke, and could be worshipped before there were any worshippers. The doctrine of the eternity of the world was reconciled with the Kurānic creation by some subtle expedients; God, he held, was subject to certain Accidents, such as willing, perceiving, speaking, coming in contact, over such accidents He has power, but not over the world and the objects therein, which were created not by His will, but by the word bān. Thus, it would seem, the tense in bān fayakānī could have its proper meaning.

Another doctrine to which allusion is often made in kalām works is that faith (imān) is constituted by a single utterance of the two shahāda’s, and involves neither conviction nor works. This view, through similar to the chief thesis of the Murdja’s, is said to have been held by no one before him (Ibn Taimiyya, Kitāb al-Imān, Cairo 1325, p. 57, which refutes it at length). The rest of his opinions, as recorded in the Fark, seem to have been in the direction of moderate. Thus the infallibility of Prophets was confined within certain limits, and a reason was found (somewhat in the style of Ibn Ṭalaf) why those
whom no prophetic message had reached ought to believe in prophetic missions; he held that there might be two Imāms simultaneously, and that each would have a right to his followers' allegiance even when the two were at variance. His innovations in the Fārābī were such as to render the law more flexible.

3. History of the Sect. It would seem that the Karramī doctrine spread chiefly in Khorāsān, and in 370 the author of the Fārābī debated with a member of the sect in the presence of the Šāmānīd commander Muhammed b. Ibrāhīm b. Sīmādžūr. It was favoured by Sabuktaknī of Ghazna out of respect for the asceticism of Abu Bakr Ištābī b. Mahmūdshāh (d. 383), the chief of the Karramīs in his time, who is said to have converted some 5,000 dīnārs. This person's son Muhammed encouraged Mahmūd b. Sabuktak in a violent persecution of the Bātūnīs; from this there seems to be an echo in the Life of the Šīfī Abū Sa'id (357–440; ed. Jhakhovski, 1899, i. 84–91), where Ištābī b. Mahmūdshāh makes common cause with the Ākū at Sa'id (a Hanafī) against the saint; the numbers of the Karramīs in Nisābūr at the time are given as 20,000. In 403, however, this Ākū, who had made the pilgrimage, and been favoured by the Caliph Kādir, complained of the Karramī heresy before Mahmūd of Ghazna; Muhammed b. Ištābī thereupon repudiated the doctrine, while those who openly adhered to it were penalised. Many, however, continued to hold it at Nisābūr; Ibn al-Athir in 488 records a civil war in that city between the Karramīs and the joint forces of the Hanafis and Shāhīs, the leaders of the first being descendants of the leaders of the sect's early years, Kāfar (s.v. ʿAbdīsī) mentions a Karramī preacher who acquired popularity at Nisābūr in the middle of the sixth century; and ʿAbd al-Kādir Dālūnī (d. 561; Ghunya, Cairo 1288, i. 81) speaks of them as still numerous in Khorāsān. Farābī al-Din Rāzī (d. 606; Aṣār al-Takdīs, Cairo 1328, pp. 96–98) apparently thinks of them as still existing. It is probable, however, that the sect was practically exterminated when the lieutenants of Činīqh Khān massacred the inhabitants of Khorāsān; and when writers of a later time allude to its doctrines (e.g. Ibn Taimiya and the author of the Mawāliği) they probably derive their knowledge from earlier works.

4. Literature of the Sect. In the Fārābī it is stated that the sect was subdivided into three minor sects, which, however, were mutually tolerant; these were called Ḥaḳḳāqīya (I.), ʿĀṣīr-iya (II.), and Ištābīya (III). Shahrastānī mentions twelve minor sects, of which he enumerates six: ʿĀṣīr-iya (as above), ʿĀdībīya, Nūmīya, Zarbīya, Waḥidiya, and Haiṣamiya. On these the first was doubtless named after Ištābī who was mentioned above; whereas the last was named after one Muhammed b. al-Haṣam, who is called their Muṭakallim in the Mīzān. The works therein the founders of these minor sects put forth their views seem to have contained little notoriety; the author of the Bayān al-Maḍīn (485; Schefer, Christostamhie Pteranes, i. 152 text), though living at Ghazna, just knows the name of the main sect; and ʿAbd al-Kādir (loc. cit.) in giving the names of Karramī authorities is in error in each case. The work of the founder ʿAbbāb al-Kābir seems to be known only from the citations in the Fārābī.

(D. S. MARGOLIOUTH)

KARS, a town in Armenia, called Kars in Ibn al-Athīr, Kars in Yakūt and Ḥamd Allāh al-Kawāzīnī, Kār in Shams al-Dīn 'Azīz Yāḥyā and later. According to a doubtful etymology, the name comes from the Georgian kari "gate", karī-kēlakī is said to mean "town at the gate" (from its situation on the frontier between Armenia and Georgia). The town (rāz Kāz) is first mentioned by Constantine Porphyrogenitus (De administ. imperii, ch. 44) as the capital of the chief of the Armenian princes (μαραθάν οῦ καὶ ἀρχηγόν). From 961 Musheg, a brother of the king of Ani, Ashot III (cf. above, i. 355), ruled in Kars, and his successors. A manuscript of the Gospels found in Jerusalem with miniatures of important historical interest for the history of the last of these princes, Gagik (1028–1064). The king, queen, and their daughter are represented seated in Oriental fashion and wearing Oriental costume; Kars, although it did not then belong to the Caliph's empire, was apparently under the influence of its culture. Gagik continued to hold his principality even after Ani had been incorporated in the Byzantine empire (1044). It was only when danger threatened from the Turks that he was induced to renounce his rights voluntarily in favour of the Emperor Constantine X Ducas (1059–1067) and received in return a town in the Cilician Taurus. But even the Byzantines could not avert the danger, for in the same year Ani and Kars were both conquered by the Turks. Kars remained a Muhammadan town till 603 (1206–1207), when it was taken by the Georgians (Ibn al-Athīr ed. Tornberg, xii. 169). It was besieged in vain by the Khārazmshāh Ljulalet al-Dīn (about i. 1004) in 1226 and taken by the Mongols in 1239 and, according to Ḥamd Allāh al-Kawāzīnī (Nuzhat al-Kulāḥ, ed. Le Strange, p. 93), it belonged at a later period with Ani to the province of Georgia (Gurjistān wa-Abhaz) in the kingdom of the Ikhānīs (cf. above, ii. 465 sqq.) and later again apparently to the kingdom of the Ğalār (cf. above, i. 1003). Unlike Ani, Kars was never a Muslim mint. In 1386 Kars was captured by Timūr; it is said to have been levelled to the ground (Zafar-Nāma, i. 400). The town was then in the possession of a prince named Kruz-Bahkht, who does not appear to be mentioned elsewhere. It was not till the year 1579 (according to ʿAbdīdī Khalfī, Ḏīkān-nūmā, p. 407, however, 988 = 1580) that Sulṭān Murād III (1574–1595) had Kars rebuilt as an Ottoman fortress by Lālit Muṣṭafā Pasha; during the operations a marble slab is said to have been found with an inscription recording an earlier section of the time of ʿĪsā al-Dīn probably Kiliḍ Arslān II, 1156–1185). Kars was raised to be the capital of an eyalet of six sanjakıs under Ottoman rule and also became a place of pilgrimage; the tomb of the Šīh Abū ʿl-Ḥasan al-Karākānī (d. at the beginning of 425 = Nov., 1033) was shown there (cf. Samʿānī, ed. Margoliouth, fol. 194 b), but he can never have been in Kars. The tomb is said to have been revealed by the saint himself in a dream — a story often told of other places. The
first Friday mosque was built by 1ahl Pasha of the tomb of the saint.

Kars was conquered by Şah ʿAbdulla in 1604 and in 1616 rebuilt by the Turks, attacked in vain in 1628 and 1744 by the Persians and captured for the first time by the Russians on June 23 (July 5), 1828. On Nov. 16 (28), 1855, Kars had to surrender to the Russians after a long defence under General Williams (later Sir Fenwick Williams of Kars). In the war of 1877–1878 Kars was stormed in the night of 6/18 Nov., 1877, and ceded to Russia by the peace of 1878; in 1918 it was returned to the Turks by the treaty of Brest-Litovsk; this cession survived even after the treaty of Brest-Litovsk became void.

The number of inhabitants of Kars about 1860 was 12,300 (Ritter's Geogr.-statistisches Lexikon 5, s.v.), in 1878 only 8,672 (according to the Encyclopaedia Britannica). Under Russian rule the number seems to have fallen considerably at first and then to have risen again rapidly (1889 only 3,941, in 1897 20,805, in 1908 18,397, mostly Armenians). The old Armenian church which had become a mosque (probably the Këzil Kilsa monastery mentioned by Ebliyä Celebi; as a mosque called Hassan Katchuda Gëjmi) now became a Greek Orthodox church. Therefore, in addition to two Armenian churches and three mosques (two Sunni and one Shia). No accurate information is available in Russia regarding conditions since the restoration of Turkish rule; this fact is said to have been fatal for the Armenian population.

(W. BARTHOLOD)

KARSHI, an Uighur word for "castle, palace", probably borrowed from a native language of Eastern Turkestan and later adopted by the Mongols. The town of Nakhshab or Nasaf [q.v.] has taken its modern name of Karshi from a palace built for the Khan Khabak (1318–1326; see the art. ÇAGHATAI KHAN), 2 farsakh from the town, all trace of which has long since disappeared. Cf. Sharaf ad-Din Yazdi, Zafar Nâmû, ed. Muḥ. Ḥaḍîd, Calcutta 1887–1888, i. 111; G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 270 sg.

(W. BARTHOLOD)

KARSHUNI is the name, the origin of which has not yet been explained, for the Syriac alphabet adapted to suit the Arabic language. Yiṣuf Daryān, Archbishop of Tarsûs, wrote recently on the name in the Muḥāfiz, 1904, vii. 785–790, but his suggested derivation of the name from an unknown Syriac karkûn, diminutive of karkû, which would describe the alphabet as the "small", "round", is quite improbable. Just as the Jews used their alphabet to reproduce the language of the countries that afforded them hospitality, not only for the churches and schools but also as a sign of nationality, so also the Syrians must have written the language of their conquerors in their own alphabet soon after they had adopted Arabic for everyday use. The letters lacking in the Syriac alphabet were supplied by pointing those already in existence, but in doing this this modification was paid to the sound than the shape of the Arabic letters. Aḥā and g̢ain, for example, are usually reproduced by Syriac ʿāf and g̢amal with wālkaḥa, ḍīn by the Jacobites usually by a point inserted in the letter, by the Nestorians by a hook below it. Zā and dād are written by the Nestorians after the Arabic fashion with points over ʿāf and g̢adāl, but among the Jacobites often by a point in the letter, because they had come to be identical in pronunciation. The feminine ending is usually represented by ʿi with two points above it in the Arabic fashion. Vowels are written in the Syriac, and sometimes in the Arabic way, but ā and ī are almost always represented by ḍamma and karrā. Whether there were different rules in different periods and localities can only be ascertained after an accurate examination of manuscripts but nothing of the kind has so far been attempted.

(C. BROCKELMANN)

KART, the name of a dynasty which ruled Herat from 1245 to 1389 A.D. It was founded by Shams ad-Din Muhammad I, Kart, who was descended from the Shamsabani house of Ghur, the family to which the brothers Ghiyâṣ ad-Din Muhammad and Muʿizz ad-Din Muhammad b. Sâm belonged. As Herat recovered from the devastating raids of the armies of Cingiz Khân, Shams ad-Din gradually gained power, and by 1245 had established himself as ruler of the state, and used the title of Malik, borne by his descendants. In 1251 Mang, the great Khân, when reorganizing the administration of his empire, confirmed Shams ad-Din Kart as governor of Herat, Sistan, Balkh and the country lying between those provinces and the Indian frontier. During the latter part of Shams ad-Din's reign his son Rukn ad-Din acted as his coadjutor, but predeceased him, dying in 1283, and when Shams ad-Din himself died, in 1285, he was succeeded by Rukn ad-Din's son, Fakhır ad-Din. As the power of the Mongol Il-Khans of Persia declined, that of the Kart Maliks of Herat increased, and Fakhır ad-Din befriended the powerful Amir Cûbûn, who had been regent of Persia during the minority of Abû Saʿid Bahâdur Khân, the fourteenth Il-Khân. When Abû Saʿid Bahâdur, apprehensive of the growing power of this family, attacked it, Amir Cûbûn sought an asylum with Ghiyâṣ ad-Din, who received him but in 1327 treacherously put both him and his son Djâlaw Khân to death. Ghiyâṣ ad-Din himself died in 1328 and his two elder sons, Shams ad-Din II and Hâfiz, who succeeded him in turn, died in 1329 and 1331. The historian Hand Allâh Mustâfi attributes their deaths, following one another at such short intervals, to the divine displeasure incurred by Ghiyâṣ ad-Din's treachery towards Amir Cûbûn.

Hâfiz was succeeded by a third brother, Muʿizz ad-Din, who sent an army to the assistance of Malik Kûb al-Din of Kirmân, driven from his capital by the Amir Murâbîs al-Din. This army was defeated and a second army was sent to the aid of Kûb al-Din was shut up in Kirmân and compelled, at the end of 1340, to capitulate. Muʿizz ad-Din, who died in 1370, left two sons, Muḥammad, who held the government of Sarakhs, which he retained after his father's death, and Ghiyâṣ ad-Din Pir ʿAlî, who succeeded him in Herât. In 1380 the Amir Timûr sent an envoy to Herât, to claim the
allegiance of its ruler and his presence, with a contingent, at the forthcoming muster of his army, but Ghiyāth al-Dīn Pir 'Alī detained him on various pretexts while he provisioned the city and completed its defences. The envoy was obliged to return to Samarqand and report the failure of his mission, and in the spring of 1351 Timur marched to Herāt and captured the city, its ruler and his eldest son, Pir Muhammad, after a few days' siege. Some of its leading citizens were deported to Shahri-Šabz and its defences were dismantled, but the Malik and his two sons, the younger of whom had been induced to surrender the strong fort of Ishaqla, were pardoned, and Ghiyāth al-Dīn Pir 'Alī was permitted to retain Herāt as a vassal of Timur until 1385, when the dynasty was extinguished.

KĀRTĀS. [See KĪRTĀS.]

KĀRŪN, the largest river in Southern Persia. It rises in the north-eastern part of the district of 'Arabštān (earlier called Khūţistān); a little above 32° N. lat. on the Zardeh-Kūh (Kūh-i Zard) mentioned as early as the 13th century by Ḥamd Allāh Mustawfi; see the Bibliography), which belongs to the Bakhtiyārī mountain system, to be more accurate on one of the range named Kūh-i Rang, one of the highest mountains in S. W. Persia (estimated at 13,000 feet). The actual source of the river, according to Sawyri (Bild.: op. cit., p. 486, with a picture), is about 10 miles above the place called Seri-i Čhesmi-i Kurang "main source of the Kurang (Kuran)". The Zāindohe or Zāndeh-Rūd, also called Iŝfāhān-Rūd, likewise rises on the Zardeh-Kūh and flows eastwards towards Iṣfahān where it is joined, according to Ritter, op. cit., ix. 222; G. Le Strange, op. cit., p. 207; cf. also ii. 529 and the article ZENDE-RUD). As the source of the Kārūn is only about 100 miles from Iṣfahān, Shāh 'Abbas I, the Great, thought of leading the Šāh into the Zāndeh-Rūd by a tunnel through the mountains. The work although almost finished at his death, was not continued by his successors, however; the remains of it may still be seen at the present day; cf. Layard, op. cit., p. 59 sq.

The valley of the Kārūn is not yet sufficiently known, particularly in its upper course; among those who have explored it are Kinneir, Rawlinson, Selby, Ainsworth, Layard, Chesney, Loftus, Houtum-Schindler, Mackenzie, Lynch, Bateman, Champain, Wells, Sawyer and Grandtvon Roggen. We may call the upper part of its course down to its exit from the mountains at Štšur, the middle course from Štšur to Ahwāz or Nāšīrye, which breaks through the spurs of the Djabal Hamrān; its lower course runs through the alluvial plain formed by the Kārūn system. As a result of the great windings, which the river takes in its course, it covers about 500 miles from its source to its mouth in the Štshal al-Abāb, while a straight line between the two points is only about 150 miles. In its upper course the Kārūn makes two great loops in about 32° N. Lat. Shuster which is a little above this line and only a little south of the source of the river is in a straight line only a third of the distance the river has covered from the source. The course of the Kārūn is at first a south-easterly one; it then runs from east to west, while the next section runs north-west to Sūsān where the second smaller loop is formed towards the south-west and then the river runs north-west again. This direction is maintained till Chamāni Yorga (20 miles as the crow the N. E. of Shuster) is reached. From there to its mouth the Kārūn runs S. W., although at times it describes very wide curves.

At Shuster, a little above the town, the Kārūn divides into two navigable arms which unite again about thirty miles away at the village of Band-i Kūr (near the medieval 'Askar Mulkara; see above, i. 488) and thus form an island. The western arm is the main stream, the Kārūn proper; it is now called Ab-i Shāhāt (popular for Shāhtāt = little river; cf. i. 970b for the same name for a bed of the Tigris) and further down also Ab-i Buzurg Shuster (= great water of Shuster). The east arm is artificial in origin and is now called Ab-i Gerger; the Arab geographers of the middle ages know it by the name of Maran (Mashrūn, Mursūn) which is explained as a corruption of the Persian Ardashir-Kān (= Ardashīr's trench). The form Wardekhūadministration is noteworthy: it occurs in a Syriac chronicle edited by Guidi in the Actes du 2e Congrès des Orientalistes, Leiden 1891, p. 32, and cf. thereon Noldeke in the Sitz.-Ber. Ak. Wiss., 1893, cxxviii., Abb. ix. 42). The first Sassanid king is said to have been the maker of this water-course. The Persian geographers of the 9th century call the western water-arm, which carries the bulk of the water, Čahar Dānīkah (= 4/6), the eastern Dānīkah (= 2/6); cf. Le Strange, op. cit., p. 236. These names are still known locally, according to Layard (op. cit., p. 27). It may further be noted that in the 9th century, according to Arabic sources, the Masrūn canal did not enter the main stream, the Kārūn proper, at 'Askar Mulkara, but ran parallel to it and reached the Persian Gulf by a course of its own.

The Kārūn delta begins a little above the village of Sālā. Three channels break off from the main arm, which continues its course till its junction with the Štshal al-Abāb at Māhjama, and these run S. E. into the Persian Gulf and finally enter in estuaries (Čahar, Čīr) which are at times swamps. Their names are:

1. The Štshal (or Rūd) al-Kādīm (= the old stream) which leaves the Kārūn about an hour's journey above Sālā and broadens out into the Khūr Mūsā (also called Khūr Mūj Allāh; mūj in 'frāj Arabic = water). In it we have probably the oldest course of the Kārūn.

2. The Štshal al-Amāya (as it is usually written on maps) or al-A'āma (= the blind stream), probably so called because its bed is usually choked with mud. In Ritter (ix. 159, 166, following Renouard) the name is wrongly explained as "šawerer" (the form al-Amara in Ritter, xi. 1028, 1390, is certainly wrong). The same name is given to an arm of the Štshal al-Hāi, below Kūt al-Amārā (see Ritter, ii. 169; Ainsworth, op. cit., ii. 259, and the maps). Cf. also the analogous name Dišāla al-Âwar for the present lower course of the Tigris; see above, i. 970b, as well as
The Shāṭt Bāmishīr (Bamishir, Behesmhīr) which leaves the Kārūn 6 miles below Sābla and expands into the Khor Silīd (Seluge in Kiinuhr, op. cit., p. 292) or the second oldest branch of the Kūrūn. This branch from the Kārūn is considerably wider and holds more water than the other two. According to the Persian Gulf Files, p. 284; see the Bibli.) It is 54 miles long (40 as the crow flies). This may now be regarded as the natural mouth of the Kūrūn. Bammishir is a corruption of Bahman-Ardashir, the name of the first Sasanian king, to whom is ascribed the making of a whole series of canals in southern Iraq. The most southern district of this province, on the coast, was called Bahman-Ardashir after him, as was a town opposite Ubala (east of Basra) on the left bank of the Dījdīl al-Awra (Shat al-Arab); cf. Yāḵūt, Muǧjam, ed. Wustefeld, i. 770, 20, where the arabicised form Bahmanshir is also given. It appears as if in the middle ages Bahmanshir was regarded as the Persian equivalent of Dījdīl al-Awra. Different scholars (like Rawlinson, Ainsworth, Le Strange) have made the further deduction that the Shat Bāmishīr is to be identified as the old mouth of the Emphates or Tigris (before the formation of the modern Shat al-Arab). But it is very easy to suppose that the name Bahmanshir (Bamishir) was at a late date transferred from the Dījdīl al-Awra (Shat al-Arab) to its eastern neighbour, the third branch of the Kūrūn. For Bahman-Ardashir and Dījdīl al-Awra cf. especially Reinaud, op. cit., p. 207 sq.; Tomashchek, op. cit., p. 78; Ainsworth, op. cit., ii. 173, 182; Le Strange in the J.R.A.S., 1895, p. 300 and op. cit., p. 43.

The two western branches of the Kūrūn, the Shat al-Amā and the Bāmishīr, form two long islands with the Shat al-Arab which runs parallel to them the main Kūrūn in the north and the Persian Gulf in the south. The eastern island, bordered by the Shat al-Amā (Kolān) and the Bāmishīr is called Kōbān (Goban, Gobban); the western branch between the Bāmishīr and the Shat al-Arab is now usually called Dāzāra Abbādān, a name it already had in the middle ages, from the town of Abbādān (see above, i. 57) which probably lay at the mouth of the delta originally. The island is also called Dāzāra Khūdrī after the prophet Khūdrī [q.v.] highly revered in Muslim popular belief especially in the Iraq as a patron of water, who had or still has a sanctuary near Abbādān (Chodder Abbadān in Niebuhr, Reisebeschreibung nach Arabien etc., ii. Copenhagen 1773, 206) as mentioned as early as the xiii and xiv centuries by al-Dimashḵī (Nābūkkat al-Dahr, ed. Mehren, p. 97, 18) and Ibn Batūta (ed. Defrémery and Sanguinetti, ii. 19, 9). With Abbādān the most important place in it in the middle ages seems to have been al-Mūhirīha (Mūhirīa) and the island seems to be occasionally called after it; in Portuguese sources of the xviith century the island is therefore called "ilha Murziq"; cf. Tomashchek, op. cit., p. 76; for Mūhirīa see Yāḵūt, i. 502, 137, 712, 13; iii. 598, 9; iv. 709, 5; al-Dimashḵī, p. 97, 61; al-Kazwīnī, Aḥṣār al-↵Rūbāṭ, ed. Wustefeld, p. 280, 14. The Persians gave this island the name Miyaṭī Rūbāṭ (= between the rivers, Marxhaqfa) see e.g. Yāḵūt, iv. 708, 23, and Le Strange, op. cit., p. 482.

It has already been pointed out that the Kūrūn at an earlier period probably entered the sea through the Shat al-Amā apart from the river-bed represented by the Shat al-Kadīmeh, which is perhaps the oldest bed. According to the Arab geographers of the middle ages, the different branches and tributaries of the Dudjaile (Kūrūn) united at a place called Ḥišn al-Mahdī. Whether the Nahr Ṣiddīr (= Lotus-river) which also enters there must be considered the main arm of the Kūrūn from Ahwaz onwards, is doubtful: cf. Le Strange, op. cit., p. 237; Schwehr, op. cit., p. 306. The reunited Kūrūn called Nahr Ḥišn al-Mahdī (see Schwehr, op. cit.) then enters its estuary (Faid Dudjaile) which ends at Sulaimānān on the coast On Ḥišn al-Mahdī and Sulaimānān cf. Le Strange, op. cit., p. 48, 243, and in the J.R.A.S., 1895, p. 302; Schwehr, op. cit., p. 306, 329-330, 400. Ḥišn al-Mahdī perhaps lay in the neighbourhood of the present Sābla; Sulaimānān is perhaps to be located somewhere in the region of the Khor Silīd; the end of the course of the Kūrūn in the middle ages would thus coincide practically with the modern Shat al-Amā. In the middle ages there must have been several other separate smaller mouths of the Kūrūn. In these topographical investigations it should not be forgotten that southern Iraq and Khazāstān, the delta of the great rivers, has undergone far-reaching changes in its hydrographic structure in the course of thousands of years. In ancient times the Persian Gulf extended much farther into the mainland, so that the Kūrūn, Kerkti, Euphrates and Tigris had all separate mouths; cf. above, i. 675 sq., and Andreas in Pauli-Wissowa, Kademykli, d. klass. Alterturmzeit, i. 1394, 281. During the middle ages and in modern times the coast line had been steadily advancing southwards.

The bed of the Kūrūn from Sābla to Muhāmara seems to have been in human hands. In the tenth century the Bigyid Aḏud al-Dawla (see above, i. 143) had a canal made, which was called Aḏud after him, to secure direct communication between the Tigris and Kūrūn (= Basra and Ahwaz). As in those days apparently the Kūrūn flowed into the Persian Gulf through the Shat al-Amā, the Aḏud in its main lines probably corresponded with the present course of the Kūrūn between Sābla and Muhāmara. It is very doubtful if the work of the Bigyid Sultān was something quite new; it is more likely that he undertook the restoration of an older channel which had fallen into neglect and become silted up. A century earlier we have evidence from the Arab geographers of the existence of a canal called Nahri al-Djādīd (= New Canal) which led from Ḥišn al-Mahdī (near Sābla?) to the Tigris and may well have coincided with the Aḏud From a still earlier period we have the Bayan canal (see above, i. 9703); considering its course it may wholly or in part have coincided with the Aḏud or Nahr al-Djādīd. Whether there was in ancient times about the period of Alexander an artificial channel connecting the Kūrūn and Tigris following the same direction cannot be ascertained with certainty; on this question cf. Andreas in Pauli-Wissowa, op.
In modern times the name Hařar (usually written Haftar in books of travel and in maps) has come into use for the stretch of the Karun between Sable and Muhhammara, which suggests that here we have a work of human hands, not a natural bed dug out by the river itself. At the present day, however, this name is limited to the short stretch, only about an hour's journey long, from the beginning of the Shatt Bilimshir (the mouth proper of the Karun at the present day) to Muhhammara. This lower Hařar is (according to Stolze-Andreas, op. cit., p. 48) about 600 yards broad and 20–25 feet deep, while the Karun above Sable before the beginning of the delta is a mile broad and 25–30 feet deep. It should also be noted that in the second half of the xviiith century Sulaiman, the powerful Shaikh of the tribe of Ka'b (on him see below) destroyed the connection between the Karun and the Shaṭṭ al-Árāb by placing a dam (band) across the Hařar at Sable and led the water into the Shaṭṭ al-Ámā. The district of Kōbān was thereby soon raised to great prosperity. But at Karun Khañ's [q.v.] second invasion the dam in the Hařar was destroyed (cf. Kinneir, op. cit., p. 90). On the communication between the Karun and Tigris by the 'Aqīdī, Nahr al-Dżadd, Bayān and Hařar canals see Kinneir, op. cit., p. 90, 293–294; Layard, op. cit., p. 55–56; Tomasek, op. cit., p. 76–77; Ainsworth, op. cit., i. 174, 184; Persian Gulf Pilot, p. 296; Le Strange, op. cit., p. 48, and in the J. R. A. S., 1895, p. 308–309; Schwarz, op. cit., p. 309, 311, 390.

While still in the mountains the Karun receives a number of abundant tributaries, for example above Sāsān the Ab-i Bāzūf on the right and the Ab-i Bās on the left. A little above Chamani Yorgha the Talak joins it. But the most important tributary is the river of Dīzif [q.v., i. 983 sq.], the Dīzif-Rūd or Ab-i Dīz. This has no name of its own at the present day; it was the same in the middle ages as it figures in the Arab sources simply as the "river of Djiandal-Suhrūr". On Djiandal-Suhrūr, which must have lain to the S. E. of Dīzif, see i. 983 sq. and more recently Schwarz, op. cit. p. 346 sq. The Dīzif-Rūd, which, like the Karun, has a very winding course, rises out of the confluence of two little streams in the district of Būurjerd in Little Lāristān (cf. von Bode, op. cit., ii. 274). It joins the Karun at Band-i Kīr; in earlier times the confluence seems to have been a little further south (cf. Le Strange, op. cit., p. 239); it may have at one time flowed into the Kerkhā (q.v.), as modern tradition still says (see Layard, op. cit., p. 65). As to the Kerkhā, which now loses itself in the marshes below Hawza [q.v., i. 294 sq.], it must be assumed from the statements of the Arab authors and the ancient river-bed, which can still be traced, that the bulk of its waters joined the Karun a few hours' journey below the town of Āhwāz (on this see also Billerbeck, op. cit., p. 30). Another arm of the Kerkhā but hardly the main stream (contrary to Rawlinson; cf. Andreas in Pauly-Wissowa, op. cit., i. 1394) may have at one time entered the Shaṭṭ al-Árāb in the region of Kurna.

The Dīzif-Rūd, the upper course of which still requires more thorough geographical exploration, has as its principal tributary the Bāwij-Rūd which enters it about 7 miles S.W. of Dīzif. Another important tributary of the Dīzif-Rūd is the Shāwār (Shībūr, also written Shāu, Shuwer), a narrow but deep water-course which rises a few miles above the ruins of Śīr [q.v.] and falls into the Dīzif-Rūd about 15 miles (as the crow flies) west of Bandi-Kīr. In the middle ages the Shāwār, like the Kerkhā, was called the "river of Śīr" because it flowed past this town — which, it may be noted, is at the point where the Kerkhā, Dīzif-Rūd and Karun are nearest one another. The Shāwār and the Dīzif-Rūd were at one time and in part still are connected with the Kerkhā and the Karun by canals. On the Dīzif-Rūd and Shāwār cf. Hamd Allihn Mustawfi, Nuzhat al-Kulûb, ed. Le Strange, p. 215 sq.; 218, 219; G. Le Strange, op. cit., p. 233, 239, and in the J. R. A. S., 1895, p. 312; Schwarz, op. cit., p. 303–305; Kitter, ii. 193 sq.; Layard, op. cit., p. 56 sq.; v. Bode, op. cit., ii. 193; Loftus, op. cit., p. 329, 342, 346; J. Dieulafoy, op. cit. (see the Bibliography), passim; Sawyer, op. cit., p. 490 sq.

The Kārun is not only connected with the Tigris and Kerkhā in the west but in the east it is linked up with the Dījārsīh or Kūrdistān-Rūd or Ab-i Kūrdistān (the Taib of the Arab geographers; see Le Strange, op. cit., p. 270; Schwarz, op. cit., p. 5 sq.; see also the article Arakṣān, above, i. 460). At Sābā a canal navigable by boats leaves the Shaṭṭ al-Ámā and runs to Dwarkā (Dörak)-Felāhīye (see the art. Dījārsīh) on the Dījārsīh.

The more important towns on the Kārun in mediaeval as in modern times lay on its central course between Shuster and Āhwāz. At the two termini of this stretch stood the two capitals of the mediaeval province of Kūhdizān, Āhwāz and Tustar (Shuster). Ahravāz, formerly the capital proper of this district, has a very important situation. This is at the gateway of the Kārun where the Nile breaking through its last barrier, the Dījārsīh range, enters the plain and henceforth offers no impediment to navigation to the sea. The later place of this name is built near the ruins of the old city; a mile south is the modern town of Naṣīrīye, which is growing rapidly (cf. Herzfeld, op. cit., p. 77). Cf. on Āhwāz above, i. 208, and Schwarz, op. cit., p. 315 sq., and Graedt van Roggen, op. cit., p. 202 sq. (with plans); for Tustar see the article SHUSTER and on the site (particularly the bifurcation which begins there) Graedt van Roggen, op. cit., p. 174 sq.

Places worth mentioning between Shuster and Āhwāz are: the large village of Wāris, where a dead arm of the Kārun runs to the east, and Band-i Kīr (usually pronounced Khīr), a place of considerable importance owing to its situation at the junction of the two arms of the Kārun and the mouth of the Dīzif-Rūd. Band-i Kīr is the successor of the mediaeval Aṣkār Makrum, the ruins of which (called Lāhījar; Lāhījar is the Persian equivalent of the Arabic Aṣkār) lie 3 miles north of it. On Aṣkār Makrum see above, i. 488 sq., and Schwarz, op. cit., p. 377 sq.

The lower course of the Kārun from Āhwāz to Muhhammara has no places of great importance on its banks. Among them are Ismā'īliya and Sābā, remarkable for its situation at the beginning of the bifurcations of the delta; it has the ruins of a castle which was at one time the favourite resort of Sulaimān, the influential Shaikh of the Kā'ba already mentioned (cf. Kinneir, op. cit., p. 87). Muhhammara [q.v.] at the junction of the Kārun and the Shaṭṭ al-Árāb is, however, a place of unusual
importance. It is undoubtedly the best harbour in Persia, easily accessible at any time, and is destined to have a still greater future. The fact is noteworthy that all the places of any importance that we have mentioned on the central and lower Kārūn lie on its east bank.

In the mountainous upper course there are no longer any towns of importance. In late antiquity and in the middle ages the most prominent were Susean (also called Avūd or Aūth and Džabaliḳ; see the sūsan) on the right bank and Ḩidżhad or Mūl Anū [q.v.] opposite on the left bank. Both are famous for the very fine remains dating from the Elamites and Susaans. Along the upper course in parts runs a road protected by many forts, now mostly in ruins. The Kārūn in general is one of the most historically interesting rivers in Persia owing to the numerous ruins from ancient times which are everywhere found on its banks.

The dwellers on the Kārūn in its upper course and on its middle course to beyond Shuster are the Bakhit-iyaṛis [q.v.] i. 603 ff. we have already mentioned as one of the three principal tribes of the Great Lūr. In the lower half of its central course and the whole of the lower stretch the powerful Arab tribe of Ka'b (popularly pronounced Thā'b, Shā'b, Sha'ab) are predominant; their Shaikh lives in Dawrāk-Fellāhaye. On this tribe which has only become important in these regions since the xvi century see Kinneir, op. cit., p. 85–87, 91; Buckingham, Travels in Assyria, Media and Persia, London 1830, ii. 195 sq.; Selby, op. cit., p. 214; Layard, op. cit., p. 36 sq.; v. Bode, op. cit., ii. 110–120; Lotius, op. cit., p. 285 sq.; Ainsworth, op. cit., ii. 527–530; Hertel, op. cit., 153–156, 161, 1398, 1063–1064. From Ahvāz to Mahmārā we find also Bāwi and Idris tribes who are subject to the Ka'b (cf. Selby, op. cit.).

In the military history of the middle ages the Kārūn basin only occasionally occurs as the scene of fighting; cf. thereon Schwarz, op. cit., p. 299–300. During the World War of 1914–1918 the possession of this territory became very important on account of its oil-fields; cf. thereon Schweer, op. cit., p. 140–144, and the section relating to the Trak and southern Persian fronts in books on the war.

As early as the Sasanians powerful dams (shāhhrān's) with the necessary sluices had been erected at various places to enable the water thus dammed back to be led by numerous small canals to fields on a higher level, especially on the central stretch of the Kārūn. During the whole of the middle ages this irrigation system was kept in excellent repair and transformed the land it watered into flourishing gardens. Since then, however, most of these works have fallen more and more into ruins as a result of neglect and great stretches of once fertile country have become desert again.

The most celebrated was the gigantic dam at Shuster, which was regarded in the east as one of the wonders of the world. Its erection is ascribed to the Sasanian king Sapor I (241–272 A.D.). It is very probable that the tradition is correct which says that Roman prisoners of war were forced to build it for him; the modern name Band-i Kaisar = Caesar-dam, also points to its Roman origin. On this great system of dam and sluices here, which after considerable restoration is still partly in use to-day, see Ritter, op. cit., ix. 186 sq.; Noldke, Geschichte der Araber und Perser zur Zeit der Sasaniden, Leiden 1879, p. 331; Justi in the Grundriss der iran. Philologie, ii., Strassburg 1896 sq., p. 318; Le Strange, The Lands of the Eastern Caliphate, p. 235; Schwarz, Iran im Mittelalter etc., p. 296. At Ahvāz, a few hours' journey below Band-i Kūr, the ruins of a great dam may still be seen (cf. Herfeld, op. cit., p. 76). In Ahvāz, at the rapids there, considerable remains of a triple ancient system of dams still exist. Band-i Kūr (= Bitumen-dam) has got its name from the ancient dam coated with bitumen. At the beginning of this century the Persian government thought of restoring the province of 'Arabistān to its former high degree of prosperity by restoring the old system of canals with dams and sluices. It was intended to begin with the island formed by the Abl-i Shaţāṭi-Kārūn and the Abl-i Gerger between Shuster and the Band-i Kūr and the Dutch engineer Graadt van Roggen was appointed to make a survey. He published the valuable results of his investigations in an important treatise illustrated with numerous plans and sketch-maps (Notices sur les anciens travaux humains sur Shuster in the Mem. de la Délegation en Perse, vii., Paris 1905, p. 167–207); he also went fully into the old irrigation systems of Shuster and Ahvāz. Unfortunately political jealousies have prevented the execution of this most useful project of the Persian government.

The Kārūn is the only river of Persia that admits of navigation. Communication is maintained with the Persian Gulf through the Shatt al-Arab and the Shatt Dāmīshār. There is evidence as early as the Umayyad period that there was regular traffic up the river as far as Ahvāz (cf. Schwarz, op. cit., p. 300); for the Kārūn is navigable as far as Shuster. The only obstacle is the rapids caused by the gypsum rocks below Ahvāz (see the very full description by Wells, op. cit., p. 156 sq.) which make unloading and reshipment necessary; in 1891 a little railway was put in use for this purpose. The Abl-i Gerger is also navigable; but in it also reshipment is necessary at Shihili (6 miles below Shuster). One can sail up the Dīfūl-Rūd as far as the vicinity of Dīfūl (cf. Persian Gulf Pilot, p. 298). The first to show that steamers could ascend the Kārūn as far as Shuster was Selby in 1842, accompanied by Layard, although in 1836 Major Estcourt, accompanied by Ainsworth, had previously reached Ahvāz in a steamer of smaller size. In 1888 the Kārūn was opened to international navigation. At the present day there ply on it boats of the firm of Lynch who have long had a concession, the Persian Naşiri company founded in 1889 and a Persian government steamer. If the bed of the river received a certain amount of regulation and the caravan roads from Shuster to Isfāhān were improved, we should have an important route for traffic, which would shorten by about half the journey from the Persian Gulf to Isfāhān, the centre of Persian commerce, which now mainly follows the difficult road from Būšīr via Şhrāz. Steamers of a moderate size can go as far as Ahvāz; from there to Shuster only small boats of shallow draught.

The shipping on the Kārūn has in the last few years become specially important for the transport of the petroleum obtained in Southern Persia. The Kārūn valley possesses a series of oil-wells, e.g. at Ahvāz. The oil-fields of Mādān-i Naftān (east of Shuster) are particularly productive, perhaps the richest in all Persia. The exploitation and
development of the Persian oil-fields is now in the hands of the Anglo-Persian Oil Company. The yield of the oil-fields, where the most modern methods are now in use, has grown to such an extent that the transport of oil down the Kūrān in tank-ships is now no longer sufficient and two special pipes have had to be laid in addition. On the oil industry in the Kūrān valley the best authority is Schwehr, op. cit., p. 22 sq., 110 sq., 177 sq.

We conclude by dealing with the names of the Kūrān; in its upper course it is called Abī Kūrān = "water of the Kurān." Kurān (cf. Wells, op. cit., p. 146; Le Strange, op. cit., p. 252) is said to be a corruption of Abī Rang = "variegated hill." The name of the mountain already mentioned in which the river rises. Whether this explanation is correct, need not be discussed here. Kurān, or Kūrān, seems to have become Kūrān in the mouths of the Arabs. Among the Portuguese historians of the xvith century we find the name as Rio Caron; cf. Tomasech, op. cit., p. 83. They presumably only refer to the lower course of the river, which alone is called Kūrān at the present day. This name is quite unknown to the Arab and Persian writers of the middle ages. They give the river various names. It is usually called Dudaúj (is little Tigris) by the Arabs, apparently because it was not the larger river. As the name Dudaúj was also found elsewhere (for example a Tigris canal above Sâmarra; cf. i. 970 sq.; a water-course near Kūf, see Schwartz, op. cit., p. 299, note 6) it was more accurately specified as Dudaúj al-Ahwāz = the Dudaúj of Ahwāz (Khūzestān or its capital; see the art. AHWAZ, i. 208). According to Hāmza al-Ifṣahānī in Yākū (ii. 555 sq.), Dudaúj represents the translation of the Pahlavi Dīda Kūdā. The Kūrān was also called "river of Khūzestān or of Ahwāz" (Abī Ahwāz is still usual for the stretch near the town of Ahwāz; see above, i. 208). It was also called "river of Taxtar" (Shuster) after the second principal town of the medieval Khūzestān; in Ibn Baṭṭūta (ii. 24, r) we find the name Nahī al-Azrāk = "the blue river," from the blue colour of its mountain water which was generally esteemed for its remarkable freshness. We have already discussed above local names for particular parts or arms of the river, for example in the bifurcation between Shuster and Band-Cir and in the delta. Brief reference may be made to the cuneiform names L'ā (also in O. T.), Idīdē, Iđūdūd and to the names found in Greek and Roman literature: Adāma, Etaicēs, Hedyphon, Koprates, Patisgris, which were used not only for the Kūrān itself, but also for its tributaries, like the Dafak-Rud with the Shāwīr. For the cuneiform inscriptions cf. Streck, Assurantipal, Leipzig 1908, p. cccxxxii., 26, 787, 788, 813; for the classical references cf. Pauly-Wissowa, i. 435 sq., 436, 1393, v. 2459, vi. 1661-1663, vii. 2594, xi. 1635.

(M. STRECK)

Kūrān occurs in Kūrān xxvii. 76-82; xxix. 38; xi. 25. In the second and third passages he, with Hāmid, is an unbelieving minister of Pišān in oppressing the Israelites; he behaves proudly towards Mūsā, saying that he is an enchanter and a liar. In Kūr. xxviii., he is the Biblical Korah (Num. xvi.) and he behaves proudly towards the people of Mūsā but it is because of his immense wealth which he believes to have been given to him on account of his knowledge (Cāla īmān āndī). He makes a great public display
of his wealth and is swallowed up by the earth with his palace (dīr). He is thus an example of the wise who prefer the fleeting wealth of this world to gaining by alms and humility and righteousness the abiding riches given by Allāh in the world to come. This is apparently a moralized echo of a story heard and remembered vaguely by Muḥammad. To this the commentators and the compilers of prophetic wasāṣ have added a long and involved legend derived in whole or in part from rabbinic literature. For this, on the rabbinic side, see the Jewish Encyclopedia, vii. 556 sqq. and, on the Muslim side, the notes in Sale’s translation of the Kur’ān and al-Ṭabarānī, Ḳīṣṣ, Cairo 1314, p. 120 sqq. It is plain that Ḥanān has become a minister of Pharaoh because he is bracketed with Korah in rabbinic literature for rapacious wealth. The legend of Ḳūrān has had two special developments. 1. From his wealth and knowledge (above and Kur. xxviii. 78) he has become one of the founders of alchemy. See the preliminary statement of the Fikrist on alchemy (p. 352, l. 1) and al-Ḥaḍā‘ī alludes to this (Muṣīd al-Ḏharī‘, viii. 177). 2. He is associated in Egypt with lakes. Thus what is left of Lake Moeris in the Fayūm bears his name (Baederer, Egypten, p. 184; Jeannes, Egypte, p. 611; Heerodotus, ii. 149). Also, beside the Birket al-Fil to the south of Cairo, near the Mosque of Ibn Tūlūn, there was formerly a Birket Kūrān which had evidently associations of supernatural legend. Al-Maḥṣū‘ī describes it (al-Kāhīf, ed. 1325, llii. 261 sqq.) and tells that Kāfūr who build beside it was said to have been driven from his house by djinn. He figures also in the Story of Jŭdār the Fisherman in Zotenberg’s (cf. Not. et Extr., xxviii., i. 167 sqq.) Egyptian Recension of “The 1001 Nights” (Nights 606–624) as a place where spirits take refuge from magicians. Von Hammer suggested in a note to his transl. of this story (Der Tausend und Einen Nacht noch nicht überseitete Märchen, etc., trans. Zinseler, i. 32; trans. Trübmann, i. 291) that Kūrān had here become confused with the Egyptian Charon.

(D. B. Macdonald)

KĀRĀN (older former kar-bān, “he who protects trade”) the original of the word caravan, means in Persian a number of merchants who organise themselves into a body to defend themselves against robbers and brigands (Ar. Ḳīṣīḥ). The beasts of burden are camels, horses and mules. The camels are usually arranged in files of seven animals (ḥāṭar); the camel-driver rides on an ass at the head of the procession. The camel drivers are slow and do not hurry, but their work is hard and trying; a man has often ten or twelve camels to watch and guide: sometimes thirty or forty are managed by three men. The men have to unload their beasts on reaching a stage and feed and tend them: it is only when this has been done that they can think of themselves. In the middle ages the signal for departure was given by beating kettle-drums (kāt).

In desert regions, the caravan camps under the tents that it carries with it; but sovereigns and generous benefactors have had built from stage to stage and at the resting-places, buildings called karawānshāry “caravan-houses”. Their plan is always practically the same; — a square courtyard surrounded by walls with no windows looking outwards, upon which abut a series of rooms each with a door and window or sometimes little huts without a roof, intended to serve as a lodging for the night for the merchant and his goods. The beasts of burden remain hobbled in the courtyard. These caravanserais are as far as possible supplied with running water or at least a well. In Persia the bulk of these buildings still standing date from the Șafawid dynasty and are traditionally attributed to Shīh ʿAbdās the Great. There is nothing here but the four bare walls; the travellers carry everything that is necessary with them, beds, carpets, cooking utensils, etc. In the towns especially, however, there is to be found near the caravanserais a caterer who has always ready the dishes loved by Orientals.

The Shīh considers it a work of piety to be interred near the mausoleum of ʿAlī at Nadjef (Mesḥhed ʿAlī) and of ʿHuṣain at Kerbelā (Mesḥhed ʿHuṣain), both places situated in Ottoman territory. For this purpose corpse-caravans have been organised, which carry from the remotest corners of Persia dead bodies by thousands. The bodies placed in wooden coffins or rolled in mats or carpets are tied in twos, threes or fours to the back of a horse. At every stage the bodies are unloaded as packages. As the journey lasts several weeks, these caravans give out an unbearable stench and never camp at less than three or four miles from the villages they pass through.

(CHR.)

KĀRWĀSH b. AL-MUṢĀ‘ALLAD ABU L-MANIFI, Mu‘TAMID AL-DAWLA, an ʿUqailid. After the murder of al-Muṣā‘allād in 391 (1000/1), Kārwāsh succeeded as Amir by being chosen by ʿUqailids. In 392 (1001/2) the latter sent an army against al-Mādā’in, which then owed allegiance to the Buyids. The ʿUqailids, however, had soon to retreat and when they made an alliance with the Banū Asad under Abu l-Ḥasan ʿAlī b. Māzyad, Bahā al-Dawla’s [v. s.] deputy, Abu Da‘far al-Ḥadjījādī, at once took the field against them and summoned the Banū Khafījā to help him. In Ramāḍān of the same year (July–August, 1002) the armies met; Abu Da‘far was defeated but gathered his forces together again and soon inflicted a heavy defeat on the ʿUqailids near Kūfa. In the year 397 (1006/7) Kārwāsh undertook an expedition against Kūfa but was defeated. A few years later (1011) he abandoned the ʿAbbasids and had the khutba read for the Fātimid caliph, al-Ḥakim bi-Amri l-lāh, but on the approach of an army under Bahā al-Dawla’s general, Ḥusain b. Ustādī Hormūz, at once returned to his allegiance. In 411 (1020/1) Kārwāsh was attacked and defeated by the Mazyadids and the Caliph’s troops and was only allowed to retain his position by the Caliph’s grace. But peace did not last long. The Banū Khafījā invaded Kārwāsh’s lands and when he took the field against them they made an alliance with Dubais b. ʿAlī b. Mazyad (417 = 1026/7). An army from Baghdad also joined the
allies. The vanguards met near Kuīf; Karwāsh took to flight and the allies for the time being occupied the town of al-Abdār. Internal feuds then broke out. Two 'Ukālidis, Nadīd al-Dawla Kāmil b. Khālid, and Rašīd b. al-Husāin, who were joined by Badrān, a brother of Karwāsh and lord of Nāṣībin, made an alliance, advanced against Karwāsh with a strong army and the two forces soon met. In the midst of a desperate conflict, however, a reconciliation was effected on the battlefield and Badrān was allowed to retain Nāṣībin. In the meanwhile Manī b. Ḥassān, commander of the Banī Khafsādār, plundered the town of al-Djabālān, which belonged to the Māzādīs, whereupon Dubais made peace with Karwāsh. After Manī had twice burned down the town of al-Abdār, he submitted to the Būyād Abū Kālidīdār [q.v.], while Karwāsh assisted the people of al-Abdār to fortify their town. In the struggle between the Turkish prince Barṣotāgnān and the Būyād Djalāl al-Dawla [q.v.], Karwāsh was on the side of the latter. In the year 432 (1040/1) they quarrelled for various reasons, but friendship was soon restored after Djalāl al-Dawla had sent an army against al-Abdār and Karwāsh had to pledge himself to obedience. In the years 432 and 433 Mesopotamia was invaded by the Ghuzz [q.v.], cf. the article MARWĀNIDS; on Ramādān 20, 435 (April 21, 1044), however, they were defeated by Karwāsh in combination with the other 'Ukālidis and Dubais at Ra's al-Ayīl and had to retire to Dīyār Bākr and Aḥbarbadān. Karwāsh had also to wage war on his brother Abū Kāmil Baraka. Their good relations were interrupted by 440 (1048/9); their nephew, Kuraīšī b. Badrān, joined his uncle Karwāsh and put Abū Kāmil to flight. In Muharram, 441 (June, 1049) it came to fighting between the two brothers; but as several of the followers of Karwāsh went over to Abū Kāmil, the latter had little difficulty in taking him prisoner and bringing him to al-Mawṣil. Although Karwāsh continued to be nominally recognised as suzerain, he no longer played an active part in politics, and as Abū Kāmil found him too independent, Karwāsh was deprived of his freedom in 442 (1050/1), although he was still treated with respect. After the death of Abū Kāmil in 443 (1052) his nephew Kuraīšī was recognised as Amir. Karwāsh died on Rajab 1, 444 (Oct. 27, 1052) in the fortress of al-Djar-rābiya near al-Mawṣil. According to one story, Kuraīšī had him assassinated.

Kārya, a village or small town (balad). It is not now used of a large town or city (madīna) unless it is qualified by an epithet denoting greatness, but in the Kurān, where the word is of frequent occurrence, it is applied without a qualifying epithet to cities of whatever size, including Mecca and Jerusalem. It is now used chiefly of such villages and small towns as are in India styled mawādī, that is to say fiscal units which are not the chief town of any district or local area.

Bibliography: The lexxica v. (F. W. Hall)

Al-Kaṣābā, a town in South Arabia in the Wādī Bāihān. The town comprises 12 strong castle-like buildings and 400 houses—there is a Jewish quarter 50 houses—and is surrounded by palm-groves. It has four main streets with shops in which a busy trade is carried on. The goods come mainly from 'Aden and are brought via Bāl-Hāf. Cotton, which is much grown here, is used for the manufacture of excellent cloths which are much sought after in South Arabia. Indigo is also much cultivated and a number of dyeworks produce the well-known blue-coloured material which is in great demand throughout the south. There are also seven sesame-mills in the town. In addition to cotton and indigo, the fertile soil yields wheat, barley, millet, the red variety (Pennisetum glaucum), and summer-millet, dates, grapes and vegetables. The Jews of al-Kaṣābā, the capital of Bāihān, are, like all the jews everywhere in South Arabia, mainly silversmiths and leather workers.

Kaṣaba means primarily the interior part of a country or town and hence a fortified castle, such as is occupied by a commander and his forces, and the town in which such a castle stands, the chief town of a district. It is also applied to a new well. In India, where it is locally pronounced kaṣaba, it is applied to the chief town of a pargana or mahāllī, which is the smallest subdivision of a fiscal district, and is distinct from the mawādī, the village or small town which is a complete fiscal unit, and from the mahārī or hamlet, which is included in the area and in the fiscal accounts of the mawādī of which it is an off-shoot.

Bibliography. Besides the lexica: The Imperial Gazetteer of India, Oxford (T. W. Hall)

In the Muslim East, the name is especially applied to the citadel in fortified towns in opposition to the rest of the town. It is the centre of defence and also the governor's residence. Sometimes it is a town beside the town. It is not uncommon to find the two parts of the city taking opposite sides and having violent quarrels. The history of Fez, Tara or Rabat give numerous examples of this. The Kaṣaba developed in the Maghrib especially after the Almohad period (twelfth century); the great ornamental gateways (usually single and simply swung, differing from the outer, more complicated of towns), which were built at this time between a town and its kaṣaba (a dialectical form of the word) are among the most magnificent monuments that survive from this brilliant period (e.g. the gate of the Kaṣaba of the Udaya at Rabat, Bāl-Agdīw at Marrākshē).

Under the Sherifi dynasties of Morocco (from the xvith century) and especially under the 'Alawiids (xvith century to the present day) the word was commonly used to designate little forts of very simple plan, built here and there in the country where the sovereign maintained small garrisons to watch the country; the name is also given near the towns to the different cantonments supplied by particular tribes liable for military service (Kaṣba of the Filāla, K. of the Shīrārā at Fez &c.).

Europeans extend the word more or less legi.
Kasha, or Kasam, is a verb in the Arabic language, which, like all verbs, has a definite meaning and function in the sentence. Kasam means "to divide", and it is often used in contexts where a division or separation is taking place. In religious contexts, it can also be used to refer to the division of time or space.

The verb kasam is in the root word kasam. The prefix is kas, and the suffix is ama. The verb kasam is used in different contexts, such as in the context of a wedding ceremony, where it might be used to describe the division of property or the separation of two individuals. It can also be used in the context of a scene of separation, where it might be used to describe the division of roles or responsibilities.

In the context of a religious ceremony, the verb kasam might be used to describe the division of time or space. For example, it might be used to describe the division of a prayer rite or the division of a ritual space. In this context, the verb kasam might be used to describe a moment of separation or a moment of division.

In the context of a wedding ceremony, the verb kasam might be used to describe the division of property or the separation of two individuals. It can also be used in the context of a scene of separation, where it might be used to describe the division of roles or responsibilities.

notably the period after the *yalat al-fayr* (see Goldziher in the *Archiv für Religionswiss.*, iv, 297 sqq.). There is evidence of oaths in connection with *sacrifice* from the pre-Islamic period (Zuhaih, i, 50; Ḥamāsā, p. 243, 10). Swearing by the sacrificial animals is common, still more frequent by the lord of the sacrificial animals (e.g. Ḥamāsā, 715, verse 6). Among the traditional forms of oath is the *kāla*. According to al-Djawhari, *ṣiḥāb*, s. v., it consists in taking the oath by the fire of the tribe into which salt is thrown. This ceremony, referred to by al-Kumait (al-Haǧīmiyāl, ed. Horovitz, no. 4, verse 36), still survives (Landberg, *Arabica*, v, 133 sqq.).

The magic circle is often used at the present day; this, which is sometimes divided by lines at right angles, often has something put in it, such as dung, ashes or a piece of cloth. One solemn oath consists in sticking a sword in the ground in the centre of the circle and placing ants beside it; this is the *yamla waw-nīmile* oath. Sometimes one takes a piece of wood in the hand and swears "by the life of this wood"; this is the *din al-ṣūd*. Popular customs could be mentioned, such as laying a hand on the tent-pole, taking bread and coffee in the hand, turning towards the *kīla* etc. (see the works of Musil, Jaussen, Landberg, Burchhardt and Doughty). Increasing the gravity of the oath by various procedures is acknowledged in official Islam and called *taqlīt al-ayamīn* or *taqīn al-ayamīn*; for example, the Kūrān or al-Bukhārī's *Ṣiḥāb* is placed in the bosom while the oath is being taken (cf. Goldziher, *Die Zāhirīn*, p. 115; Lane, *Manners and Customs*, i, 168, 470). Great oaths are called *Aīmān bīl-ḥākīma* (Ṣūra ixviii. 39; cf. Dīḥād *aimānumīn*, Ṣūra xvi. 58; vi. 109; vi. 40). The oath formulae give the substance of the oath. Apart from special kinds of oaths such as the curse and the vow, the usual formula is for that by which one swears to be introduced by a particle. The most common particles in this connection are bi, ta and wa, which are all used in solemn oaths (wawtalāhā, wa-bī-lāhā wa-tallāhā); the two last mentioned are not so freely used as bi. The particle bi is the common preposition "in combination with"; ta is probably the termination as in anānula or layātā; wa is an intensive particle like ḍa, which is used particularly in the formula la-tawrī, la-anrukan *by my (thy) life* etc.

Other demonstrative particles occur in oaths such as a, ħā, or sometimes the simple accusative is used; abbreviations of *aimānum* like āimin, ima, un, mu etc. are also sometimes used as particles in oaths. There are several linguistic peculiarities associated with oath formulae; for example, a negative can be omitted after the oath; vice versa, we find occasionally in the Kūrān a negative la before the oath, which is apparently intended to give it particular emphasis. A further intensification of the oath is expressed by prefixing la to the following verb (on the grammatical point cf. al-Mufāṣṣal, ed. Broch, p. 163 sqq.: Ibn Ya‘ish, ed. John, p. 259 sqq.).

Just as an oath is taken at a holy place or at a sacrifice, so we find oaths taken by the place or by the sacrifice (or by its lord). The Ka‘ba and all that belongs to it as well as the pilgrimages are used in oaths in continually changing phrases. The old Arabs swore especially by their gods and fathers. The *kāba* is often sworn by natural phenomena (Ibn Ḥishām, ii, 11). It is in keeping with the character of the oath that in Islam swearing by Allāh is alone permitted, but that, on the other hand, swearing by fathers, sants and especially by the Prophet (by the tomb of the Prophet, *Akhān*, vi, 91, l) is found in everyday life. Swearing by one's father was particularly forbidden by the Prophet (al-Bukhārī, iv, 253) but it is sometimes used by `Umar and Abū Bakr (al-Bukhārī, ii, 444, 6) and even by the Prophet himself (Muslim, commentary on *Al-Nawār*, iv, 99). It is a good Muslim oath to swear "by the Lord of my father" (al-Bukhārī, ii, 203, 15) or "by the Lord of the Ka‘ba, of the sacrificial animals," etc.) The Prophet also swears by his honour (Zaid b. Ali, ed. Giuffi, p. 104, 4). The formula may call God to witness, as, for example, "God knows that I am not lying:" "God is witness that I am saying this," etc. God is often referred to by some descriptive phrase; for example, "by Him Who sent Muḥammad with truth," while a Jew says "Mūsâ" for "Muḥammad." The oath can also be adapted to particular words; they may have their favourite oaths; the Prophet, for example: "by Him in Whose hand my soul is," etc. The oath is intensified by repeating the formula three or more times.

One is freed from an oath to fulfill a vow, when he has performed it (ṣuṣra or ḥālal yamin). "Discharge from the oath" (ṭaqlīt al-ḥāsaw) may mean a small quantity or a short period of time, literally: sufficient for release from the vow (cf. al-Bukhārī, i, 316, 11: iv, 265, 12; Sūra xix, 72; Caiyai b. Abī T-Salt, ed. Schultess, xxiii, 14). The man, to whom someone has vowed to do something, may, however, release the latter from his oath. The latter is allowed to disregard his oath if higher considerations demand it. There is evidence from the Muslim as well as the pre-Islamic period that such a solemn promise was accompanied by the taking off or rending of certain articles of clothing (al-Wāqī’ī, tran. by Wellhausen, p. 197; al-Tahārī, iii, 862, 14 sqq.). Release from a vow is obtained among the modern Beduins by a sacrifice. One may bind others with an oath if one conjures them. The formula is often of this kind: "I call (nαygα) God to thee" or "I mention (īdhābā) God to thee." But it is an oath of the speaker and it depends upon the relation between the latter and the person adjured whether the latter will fulfill the vow; in such forms of oath appeal is often made to mutual friendship or relationship (e.g. Līsān, vi, 428, 73; Ḥamāṣa, p. 254 middle). One can also appeal to God. "A servant of God is one whose God redeems when he appeals to him" (al-Bukhārī, ii, 168, 19, 204, 2). God is more pressingly conjured, if the appeal is made through one of His favourites, like the Prophet (Īrvāsāl be‘l-Nābi). Mu‘āwwī al-Kairkhi is said to have advised a disciple to call upon God through him (al-Ḳushairī, Ṭītalā, Cairo 1330, P. 9, 23).

Between the popular use of the oath among the ancient Arabs and in Islam there is no essential difference, as is clear from what we have already said. But there are special rules regarding the oath in Islam. In the Kūrān, especially in the older Sūra’s, the oaths taken by the kāhins by natural phenomena are usual (Sūra lvi, 74; lxxx. 15–18; lxxxi. 1; lxxix. 1–3; cxi. 1–7 etc.) we also have instances of swearing by the Kūrān (xxxvi. 1; xxxviii. 21; lvii. 1; l. 1, 1), by the angels (xxxvii. 1), by the Last Day (lxxxvi. 1) etc. Iblīs swears by
God's majesty (xxxviii, 23) and we have evidence (Zaid b. 'Ali, ed. Griffini, p. 286, 7 sq.) that God swears by His majesty and grandeur (cf. for the oath in the Kur'ān ḥaqq, al-Kaṣāṣṣ, Abūāśmā, al-Kāshās). Two passages in the Kur'ān are of special importance for the use of the oath. In Sūra v. 91 and ii. 224 sq., it is said that inconsidered expressions (lāghū) in oaths can be (broken and) expiated. The context in both passages makes it probable that the references are to vows of abstention, sometimes from food, sometimes from women. Vows of the last mentioned kind, called išār, are limited to four months (ii. 226), in connection with ii. 224 sq., after which time they must be expiated or the man must divorce the wife. A particular vow of this kind (ṣīḥār) in which the husband says "Thou art henceforth as the back of my mother to me (ba-zākhī umum)" is especially condemned in Sūra xxxiii. 4; Ivi. 2, 4 sq. (see Juynboll, Handbuch des islamischen Geistes, Leiden and Leipzig 1910, p. 224 sqq.; Sachau, Muh. Recht, 1897, p. 13, 68 sqq.).

The practice of atonement for such oaths after repenting of having taken them seems to be taken from the Jews (cf. Mishna, Nedarim, and Lev., v. 4 sq.). In Sūra lxvi. 2 we read "God hath prescribed you the dissolution of your oaths" and this prescription is applied to a case in which the Prophet had sworn to his wife Ḥafṣa not to touch the slave-girl Māriya, which he later regretted (cf. al-Ṭabarī, Taṣfīr, xxvii. 90 sqq.).

Among hadiths first place must be given to a saying of the Prophet: "I never take a vow without being prepared to expiate it if I see that another is better and adopting the better". In this and similar sayings, which are collected by al-Bukhārī, Muslim and other traditionsists (see Kishār al-imān wa'l-nahrūr), the expiation of vows is recommended in cases other than vows of abstention. On the other hand it is insisted that one should keep one's oath (Sūra xxvi. 93, 96; cf. iii. 71; Ivi. 15, 17, 19 etc.) and carrying out what one has sworn to do (ṣūdār al-mukāsām) is mentioned by al-Bukhārī, ii. 99, 3 among the seven principal requirements. It is only in Paradise that there are no such pledges, for there vows are fulfilled and oaths are disposed of (Unaiyāb a. Abi ʾl-Salt, ed. Schultess, xii. 23). But an oath must always give place to a higher consideration. It is therefore recommended not to take an oath without adding the stithāna (the formula "if God so will") (al-Bukhārī, iv. 286; Muslim, comment. of al-Nawawi, iv. 106; Zaid b. 'Ali, ed. Griffini, p. 463).

These statements in the Kur'ān and in the Sunna form the foundation of the Fikhl system on the subject. According to this, the person taking the oath must be nukhāli, he must be acting deliberately as a free agent and intend the oath. He must not take an oath to commit a sin; views are divided on the question whether such an oath is valid at all. One can only swear by God, either by His existence or by one of His names or attributes. The oath by the Prophet is recognised by some Hanbalis but in general is not considered a binding oath. The barā'a oath already mentioned is not recognised by the Fikhl. The breaking of a vow (ḥinnā) is considered a duty in certain cases, when one has sworn to commit a sin. The išār already referred to must be broken within four months if the man does not divorce his wife; after the ḍhar the wife must at once be divorced or the vow must be expiated.

Expiation (haṣārī) consists, according to Sūra v. 91, in setting free a slave, feeding ten poor men or clothing the same number; for those who cannot afford this, three days' fasting is equivalent. The things to be done are described in detail in the Fikhl books. In the išār the expiation is the same as in other oaths while in the ẓāhar it consists in releasing a slave who is a believer or fasting for two months or feeding 60 poor people (Sūra Ivi. 4—5). The Muslim law recognises the oath of affirmation as well as the vow to perform. The former only occurs in law-suits. A special case is formed by the kāsāma already mentioned which was taken over from the ancient Arabs. It is limited in Islam to trial for murder and consists of 50 oaths which can be sworn by one or more individuals. The oath is imposed on the accuser but only in connection with certain indications (lawli) which must be regularly ascertained. If the accuser refuses to take the oath, the 50 oaths are applied to the accused; if he refuses they apply again to the accuser. In other cases the principle in Islam is that the onus of proof is on the accuser and the accused has to take the oath. Witnesses as a rule do not take an oath; witnesses to the will of a testator who has died in a foreign country are an exception (Sūra v. 105). If the plaintiff has only one of the two necessary witnesses, the oath of one of the parties may take the place of the second witness (al-Bukhārī, ii. 158 sq.). When the plaintiff has not valid proofs, the oath is put to the defendant; if he declines to take it, it is put to the plaintiff (yanīn al-radd). Perjury on account of some crime is called yanīn al-żamās by Muslim scholars, an expression which originally meant a peculiarly binding oath. Such oaths can be expiated in the above fashion, according to the Shāfiʿi school, if they are false, according to other views they cannot. The latter hold that expiation only applies to vows.

The formalism of the legal system opens the way for all kinds of artifices by which an oath can be broken, yet formally kept. Thereby there arose a whole literature regarding such subterfuges; the best known work is al-Khāṣṣī's Kīṣār al-ḥiyal wa'l-mākhārid (ed. by Joseph Schacht [autogr.], Hannover 1923; printed Cairo 1314).

(Johns Pedersen)

al-kaṣāṣ "the story", title of Sūra xxviii. of the Kur'ān, taken from vs. 25. See further KISĀṣ.

KASB. The root occurs a large number of times in the Kur'ān with the meanings, "seek", "attain", "earn", "work" (good and evil); see C. C. Torrey, The Commercial Theological Terms in the Koran (Leiden 1892), p. 27 sqq. and Nöldeke's note there. Terms i. and visi are used synonymously although al-Baḏawī on Kur'ān ii. 286 (Fleischer's ed., i. 143, 21), following al-

The Encyclopaedia of Islam, II.
al-Nahr the name was everywhere pronounced Käs is very doubtful; for the later period the pronunciation Keš is proved by the frequently recurring expression Keš-i Dubašt. The accounts of the Arab conquest are discussed by Marquart in particular (Etibānahr, see Index). The Käs of the Samanid period is described very fully by the Arab geographers (Bibl. Geogr. Arab., ed. de Goeje, i., al-Iṣṣākhūr, p. 324; ii., Ibn Hawkal, p. 575 sqq.; iii., al-Mu'adhdhah, p. 258). The town was then within the territory of the tribe of Asad (about a mile) in length and breadth; the old city (madina, Persian shahrwān) as well as the citadel (shahābān) were already deserted, only the outer town (rabād) was inhabited; in the vicinity of the earlier Käs a new town was arising. This suggests that the modern town has a site different from that of the Käs which existed before the Muslim conquest. Nothing is known of other transferences of the site. Käs is never mentioned in the history of the Mongol conquest, so that it must have submitted to the Mongols (617 = 1220) without resistance. The name Shah-i Sabz first appears — on coins also — about the middle of the eighth (fourteenth) century. Many buildings were erected by Käs by Timür, who belonged to the district of Käs, and his contemporaries; thereon cf. W. Barthold in Zapiski mos. otd. arkh. obk., xxii. 1 sq. Especially famous is the palace Ağ Saray built at the end of 782 (beginning of 1380) by builders from Khrasān, cf. Shahīf al-Dīn Yazdī, Zafar Nāma, Calcutta 1887—8, i. 301 sqq., and the notices by Nizām al-Dīn Shāhī and 'Abbāl al-Razzāk Sarmandī in W. Barthold, Umgieg i ego wremia, Petrograd 1918, p. 23; N. Sitnikowskij in Protokol Turk. Krēzā LBukh. Abh., v. 114 sq. As late as the tenth (sixteenth) century Käs or Shahīf Sabz is described by Hāfiz-i Tānish (Abī ʿAlā Nāmī, MS. of the Asiatic Museum, 574 age, f. 87v) as an important town usually governed by a prince of the ruling house, while the administration of Nasaf or Karšī (q.v.) could be left to a military official (daraḵwā). At the present day the situation is reversed and Shahīf Sabz is an unimportant town in comparison with Karšī, the result of the political changes in the twelfth (eighteenth) century. The district of Shahīf Sabz is surrounded by hills on north, south and east, so that it can hardly be expected that this region will be soon linked up with the railway system, while Karšī is already connected by railway with Bukhārā and Termīdī; the town of Shahīf Sabz has therefore little prospect of renewing its prosperity.

(K. BARTHOLOMD. 

KASHAN (in Arab authors often Kāshān), a town in Ilrā 'Adāmi (al-Dībāl, Media) one day's journey from İshāhīn and twelve days' from Kumm. It is an ancient town which is said to have been rebuilt by Zabāhsī, wife of 'Abūn al-Rashīd. The heat there is excessive in summer, but the winter is very mild. Water, which is scarce, is brought by an aqueduct from the spring at the castle of Fin outside the town, to which

KASHAN — KASBF.

KASHF. [See KHUSUF.]

KASHF, the modern SHAH-I SABZ ("green town", on account of the fertility of its surroundings) a town in Bukhārā on what was once the great trade route between Sarmandk and Bukhārā. According to Chinese authorities, Kashi (Chinese transcription Kia-ša or Kié-shuang-na, also Kla-ša, as a town Ki'-she) was founded at the beginning of the seventh century A.D.; cf. J. Marquart, Chronologie der alttürkischen Inschriften, Leipzig 1898, p. 57; Eränjahr etc., Berlin 1901, p. 304; E. Chavannes, Documents sur les Tourn. (Turc) occidentaux, St. Petersburg 1903, p. 146. Yakūt's statement (Muṣājam, ed. Wüstenfeld, iv. 274) on the authority of Ibn Makulā, who died in 743 (1058/9), that in Mā warī
the inhabitants go on pilgrimage once a year. The melons and figs of this locality are esteemed. Large numbers of big, black and very dangerous scorpions are found there. The natives are all Shi'is and were already noted for their devotion to the twelve Imams at a time when this part of the world was still Sunni. In expectation of the return of the hidden Imam, they used to go out every morning with great ceremony to be ready to meet him; after a long wait they returned home disappointed but not discouraged. Almost the same thing was done at Hilla (Cl. Huart, Histoire des Arabes, ii, 324—5).

The town was destroyed by an earthquake in the reign of the Wāki Khārim Khān Zand, who had it rebuilt. Situated in the centre of a fertile plain, it was surrounded by walls flanked with towers, with a deep ditch running all round; it had six gates. Although not very important (15,000 inhabitants of whom 300 were Jews at the beginning of the nineteenth century), it is one of the prettiest towns in Persia; its streets are clean and paved. According to A. Williams Jackson, Persia Past and Present, New-York 1906, p. 410, it has now about 20,000 inhabitants. Its manufactures are cauldrons, silk embroidered with gold and silver flowers, plain stuffs with stripes of colour and a kind of velvets. Gold, silver and alabaster are worked there. It has become especially famous for the plaques of faience called Kāshī [q.v.], of which there was no longer any trace as early as 1408.

KASHANI. [See 'ARD AL-RAZZĀZ].

KASHANI, HADJĪ MI'RĀJ DĀDĪ, the Bābī historian, was a merchant of Khash who, with two of his three brothers, Ḥadījī Mirzā Ismā'īl Dādī and Ḥadījī Mirzā Ahmad, was among the earliest disciples of Mirzā 'Ali Muḥammad, the Bāb. When the Bāb, in 1847, was being conducted from Isfahān to his prison at Mākū the brothers bribed his escort to allow him to be their guest for two days and two nights at Khash. In the following year Khashānī, with Bābī 'Alī, Šubī-i Azal and other prominent disciples, attempted to join the Bāb insurgents of Shāhīk Tabarsi near Bārūrūsh in Māzandarān but was captured by the royal troops and imprisoned for some time at Amul, until ransomed by two merchants of Khashānī. "We find him always impelled, as it would appear, by religious zeal, now at Bārūrūsh, now at Mashhad, now at Tībrān." The Bāb was put to death on July 9, 1850, and Khashānī occupied the next two years in writing his history of the movement, for which task he was qualified by personal acquaintance not only with the Bāb, but with Šubī-i Azal, Bābī 'Alī, and almost all the early apostles of the Bābī religion, and by detailed and accurate information of every event connected with the movement during the first eight years of its existence. His history (which, for some mystical reason not readily comprehensible he styled Nūḥat al-Kūf "the Point of Kūf"), is accurate, but is disfigured by fulsome and almost idolatrous adulation of his hero and by coarse abuse of his persecutors. When Nāšīr al-Dīn Shāh resolved to cut off at a blow the adherents of the new religion, Khashānī was forcibly removed from the shrine of Shāh 'Abd al-'Azīm, about six miles south of Tībrān, where he had taken sanctuary, and thrown into prison, where he shared the cell of Bābī 'Alī. On Sept. 15, 1853, he was put to death at Tībrān in company with twenty-seven of his co-religionists. As an act of policy, in order to divert vengeance from himself and his master, the Shāh handed the heretics over to his local governors and at the adherents of the new religion, Khashānī was delivered to Aḥsam Mahdī, Malik al-Tūdžūrī ('chief of the merchants'). According to one account he suffered death by being flayed alive, and according to another the merchants and shopkeepers of the city inflicted wounds on him until he was Novet.

Of his brothers Ismā'īl died at Tībrān and Ahmad, who, after the death of the Bāb, recognised Šubī-i Azal as his successor, was slain at Baghdad by some Bābī's, followers of Bābī 'Alī. Bibliography: Ḥadījī Mi'rāj Dādī, Nūḥat al-Kūf, ed. E. G. Browne in the Gibb Memorial Series; Browne, A Traveller's Narrative, written to illustrate the Episode of the Bāb, Cambridge 1891; do., The Türkeri-Tabār, or New History of Mirzā 'Ali Muḥammad the Bāb, Cambridge 1893. (T. W. Hato)

KASHF, "uncover", has two technical uses. I. In prosody it is the elision of the seventh voweled letter in the root masā'āl, changing it to masā'ala and farther to masā'ala — a combination of wašaf and kāf. This is often called kāf, "cut", which is more probable; but that root has unlucky associations (Freytag, Darstellung der arabischen Verbenkunst, p. 87; De Sacy, Grammaire arabe, i. — Tratté de la Prosodie, Tab. iii.; Garcia de Tassy, Réhormique et Prosodie, p. 241; al-Durūjīnī, al-Tarifīnī, under kāf). — II. In the emotional or religious sense (tāsawwuf) it is the broadest term for the unveiling of the mystic. When this is analyzed more carefully it is commonly divided into three: (i) mudākara, in which reason (šikā) is the means by proof (bārān); (ii) nūkhāsafā in which taught knowledge (šulūk) is the means by explanation (hayān); (iii) nūkānāhā by means of immediate, personal experience (ma'rīfā). By (i) 'ilm al-yāqīn is reached by the arba'āl al-wāli, this is still in the realm of reason and is not really kashf. By (ii) 'a'n al-yāqīn is reached by the ʿāqīb al-ulūm and by (iii) ḥāf al-yāqīn is reached by the ʿāqīb al-ma'rūfī, the last is the immediate Vision of God and is sometimes called muḥāwīn al-Kashfīr, al-Risāla, ed. with commentaries of Zakariyā al-Arūsī, and al-ʿAzhārī, Būrān 1290, ii, p. 79 sqq.; on this cf. R. Hattmann, Al-Ansāhirīs Dasstellung des Ṣūfītums (Turk. Bibl.,
KASHGAR, a town in Chinese Turkestan, called Su-le in the oldest Chinese sources: the same name is still used in Chinese official documents. The name Kashgar first appears in Chinese transcription (K'iu-ch'a) in the Tang-shu, cf. E. Chavannes, *Documents sur les T'ou-Kin (Turke) occidentaux*, St. Petersburg 1903, p. 121 sq. On the pre-Muhammadan Kashgar and the ruins of Buddhist buildings in the vicinity see A Stein, *Ancient Khotan*, Oxford 1907, i. 52 sq.; do., *Serindia*, Oxford 1921, p. 80 sq. Arab armies did not reach Kashgar; the story of Kuts Abu-Khulthum’s campaign in 96 (715) is, as H. A. R. Gibb (*Bulletin of the School of Oriental Studies*, ii. 467 sq.) has shown, a mere legend. On the flight of a prince of Farghana to Kashgar in the time of the Caliph al-Mansur (755-775) see the article FARGhana. In the Sāmānid period a Dihān of Kashgar with the name or title Tughān Tegīn is mentioned (Ibn al-Athīr, ed. Tornberg, viii. 37), with whom the rebel prince Iyās b. Ishāq took refuge; whether this Dihān had already adopted Islam is not mentioned. At a later date Satuq Boghārā Khān is mentioned as the first Muslim Khān of Kashgar; in the oldest reference to him that we have (Djamal Kurshei in Barthold, *Turkestan in its ethnic mongolokh namestviania*, i., St. Petersburg 1898, p. 130 sq.) the date of his death is given as 344 (955). This story already contains features which are certainly legendary; in the story of the building of the first mosque we have the well-known folklore motif of the cutting of an ox-skin into strips. The later legend, reproduced by F. Grenard (*Journ. As.*, Ser. 9, vol. xvi. 1 sq.), has not this feature but contains many other legendary traits and absolutely false dates. The year 344 A.H. is perhaps too early as probably the story of the adoption of Islam by a numerous Turkish people (200,000 tents) in 349 (960) must be referred to the Turks of Kashgar; this story is found not only in Ibn al-Athīr (viii. 396) but also in Ibn Miskawayhi (*The Eclipse of the Abbasid Caliphate*, ed. Margoliouth and Amedroz, Oxford 1921, text ii. 181, translation v. 196); the original source is probably Thabit b. Simān al-Sabī (cf. Ibn al-Athīr, viii. 476 and 491; *The Eclipse etc.*, *Index*). The tomb of Satuq Boghārā Khān is in Artuq (now pronounced Artush) north of Kashgar, where it is still shown.

Under the rule of the Ikék-Khāns [q.v.] Kashgar was politically the most important town in what is now Chinese Turkestan; perhaps it was also the most important from the point of view of culture. In the fifth (eleventh) century there was already in existence a work in Arabic on the history of the town, composed by Abū 'l-Futūh Abū al-Ma‘ṣūr (or Abū al-Ghaffār) b. Husain al-Alma‘sī al-Kashgari (sic!); the author’s father, who survived his son (according to al-Samání by about ten years), died in 486 (1093). On father and son and the works of the latter see al-Samání, *Kitāb al-Ansaḥ*, ed. Margoliouth, Leiden-London 1912, f. 470a and 472b; Djamal Kurshei in Barthold, *Turkestan* etc., i. 123 sq. The rulers were buried in a special mausoleum (Arabic al-dawruth al-ḥāṣāniyya) on the bank of the Tumen; the first prince buried there died in Muharram, 424 (Dec. 7, 1032—Jan. 5, 1033) and the last in Rajab, 601 (Feb. 22—March 23, 1205). During Mongol rule a madrasa was built in Kashgar by Mas‘ūd Beg (cf. the art. BUKHARA); in its library was the copy of the Siḥāt of al-Dhuwayrī used by Djamal Kurshei for his translation (E. Sachau and Eith. *Cat. of the Persian... Manuscripts of the Bibliotheca Oxoniensis*, Oxford 1889, col. 983). Kashgar was later under the rule of the Dughlat Amirs [see the article DUGHLT]; the last of them, Abū Bakr, reigned till 920 (1514), according to the statement of his relative Ḥāfiz ʿAbd ar-Rahman [q.v.]. This forty-eight years (*Tarhib-i-Kashgari*; English translation, London 1895, p. 253 and 326); but this is contradicted by the author himself, who says that Kashgar was not conquered by Abū Bakr till 885 (1480/1). Abū Bakr is the founder of the modern town. He destroyed the old fortress and in the last years of his reign rebuilt it on a new site, on the other side of the Tumen on the tongue of land between this river and the Koll Sū (ibid., p. 286 sq. and 295).

Under the rule of the “Mongol” Khans [cf. the Bibliography to the art. QACHTAKH-KHAN] and later under that of the Kalmicks and Chinese the capital of the district was no longer Kashgar but Yarkand; it is only quite recently, since the reconquest of the country by the Chinese in 1877, that Kashgar has again attained considerable importance as the residence of the Tao-Tai, who is over the western and southern part of Chinese Turkestan as far as the oasis of Čereq, and the residence of the Russian and English consuls. On Kashgar in 1873 see II. W. Bellew in Sir T. D. Forsyth, *Mission to Yarkand in 1873*, London 1875. On modern conditions see especially Kornilow, *Kashgariya*, Tashkent 1901 (review by W. Barthold in *Zapiski vost. otd. arkh. obs.,* xx. 131 sq.) with plan of Kashgar on p. 268, and M. Hartmann, *Chinesisch-Turkestane*, Halle a/S. 1908, especially p. 45 sq., 89 sq., with plan of the town from Kornilow. The most important building in Kashgar and vicinity is Ḥadrat Ḍāpūk, the tomb of the famous saint of the eleventh (seventeenth century) Kashgar is now also of greater importance than Yarkand for its intellectual life; Yarkand, “which, down to the conquest of Kashgaria by the Chinese, was the political capital and also the principal centre of learning and sanctity, has now fallen behind Kashgar. Its day is over!” (M. Hartmann, *op. cit.*, p. 49). The number of its inhabitants is said to be about 50,000.

KASHĪ (in Yaqūt: KASHHĀN, KASHĪ; in Ibn Baṭṭuta: KASHHĀM), the name derived from that of the town of Kāshān [q.v.] in Persia, given to square, sometimes hexagonal, plaques of faience used in the exterior decoration of buildings or of interior walls.

It is one of the most ancient arts of nearer Asia (already known to the Assyrians and then to the Achaemenids) which survived in Persia in the middle ages, and more especially, it appears, in the town of Kāshān. The monuments of modern Persia from the time of the Safawids to our day (those that are older are in ruins) are covered with these plaques of faience decorated with conventional flowers (kashī-kārī), in which the predominant colours are indigo blue, turquoise blue, green, less frequently red and yellow. Those
KĀSHĪ — KASHIF

789

with figures in relief are the rarest and the most esteemed.

When this industry was brought to the town of Damiq by Persian artisans — perhaps Christians (some plaque-like inscriptions in Syriac) — the Syrians called these plaques khashā (from the Arabic orthography Kāshān). The art disappeared perhaps over a century ago; the ruins of the factory which made them are still shown outside the Bud Shahrā. These fragments were imitated in Turkey at İzmir and Kütahya. Recently an attempt has been made to revive the factory, but the modern work is far from equaling the beauty of the ancient pieces; it is some place in Persia where the beautiful models of past ages are clumsily imitated at the present day.

AL-KĀSHĪ, DANISHMAND R. MAṢṢĪR B. MAḤMŪD, GHAYTH AL-DIN, a Persian, was the first superintendent of Ulugh-Beg’s observatory in Samarqand and a collaborator with this prince in the preparation of his astronomical tables. Besides his astronomical and mathematical researches he also studied medicine; he must have died about the year 840 (≈1436/7). Of his works there have survived: (1) Zād-i Khaṣṣā (the Khāṣṣā tables), in Persian, a manuscript in Constantinople (Aya Şofa); a supplement to the Il-Khāṣṣā tables (of Naṣrāl-Dīn al-Tūsī); (2) Mīṣāf al-Ḥiṣāb (key to arithmetic), in Berlin, Leiden, British Museum, India Office, etc.; the preface to it was translated by F. Woepcke (see Bibliography); (3) al-Risāla al-Kanā‘īya, also called Sulīm al-Samā‘ (the ladder of heaven), on the magnitudes and distances of the heavenly bodies, in Oxford, Leiden, India Office; (4) Risāla fi isktārād dā’īb darafā’ waḥida, etc. (an essay on the calculation of the sine of a degree), in Cairo; in this al-Kāshī solves an equation of the third degree by an interesting process of approximation (cf. below Hankel’s work).

KĀSHĪF, MUḤAMMAD SHARĪF B. SHAMS AL-DIN, with the taḥkālīt KĀSHĪF-UL KUMĀT, a Persian man of letters of the xth (xvi) century. What is known of his life comes mainly from the Khāṣṣā of his Khaṣṣā u Bakār. The author’s father, Shams al-Dīn Muḥammad, also known as Shams al-Dīn Shīrajī, was living at Karbalā’ when his son Muḥammad was born and left it for Isfahān in 1006 (1597/8). He had been imprisoned in the Zanjan factory to escape persecution from the Sunnis. Muḥammad, the son, was then three years old so that he was born in 1003 (1594/5). In 1008 (1599–1600) Shams al-Dīn went to Mashhad and returned seven months later to Isfahān. These dates are given by the Brit. Mus., according to Rieu’s Catalogue; from Rosen’s description of the St. Petersburg MS it seems to make the author five years old in 1006 and to put the journey to Mashhad in 1010 (1601/2). After a stay of 23 years in Isfahān the family moved to Ray where the father died in 1035 (1625/6). Muḥammad Šarīf himself was Kādī of Ray for 15 years.

In the Taḏkira-i Naṣrābādī (synopsis in Sprenger, Catal. of. the . . . . . manuscripts of the Libraries of the King of Ondh, i. 88 sqq.), there is a notice of Kāshīf and his two brothers, Isma‘īl Muḥammad and Muḥammad. The date of his author’s death is unknown but must be after 1063 (1652/3). This date is given by the chronogram at the end of the Khaṣṣā u Bakār in the London MS. as the date of completion of the work; he mentions his other works in the Khāṣṣā as already written so that the Khaṣṣā is the last.

**Works.** Kāshīf, who, as he himself tells us, had a literary training and devoted a considerable period to study, wrote both prose and poetry. He composed three epics, two of which (the Laila Muḥammad and the Haft Fārs), like very many epic poems of the later period, were very popular since Niẓām’s time. The third was called Abāzānūnā, probably a panegyric on the Safavid Abbas II (?). Then there are his shorter poems, ḵaṣṣā’s, rubā’ī’s etc. His prose works are: Sirāf al-Munīr, a work inspired by Sa’dī’s Golestān, composed in an ornate style with verses interspersed. The text is divided into 20 sections (ramā’ī) and deals with the different virtues and moral qualities which are illustrated by anecdotes. The London MS. gives 1050 (1625/6) as the date of completion of this work; but it is probable that this date refers to the time of copying the MS. and the work itself is a few years older. Khaṣṣā u Bakār, his last book, is a collection, also in ornate prose, of tales which his young brother Muḥammad urged him to compile. Most of the stories are taken from the earlier al-Parādīs ba’d al-Shidda of Ḥusain al-Dihistānī, but he details, for example, also an incident that happened to his father Shams al-Dīn. The work consists of a preface (mubāṣṣāma), fourteen sections (aṣāṣa) and a conclusion (khāṣṣā) (lithogr. Tabriz 1294). Two other prose works from his pen are recorded, namely Durr-i Muḥammad and Hawwā’-i Ḥātīn.

KĀSHĪF, ḤUSAIN WAṢĪ, a prolific writer, who flourished in Hirat (during the reign of Sulṭān Ḥusain Mirzā [q. v.]) and died in 910 (≈1503). Among the best known of his writings are (i) a work on ethics, entitled ʿĀlākaḵā-µuhītan, dedicated to Abu ‘I-Muḥsin, a son of Sulṭān Ḥusain Mirzā, and completed in 900 (≈1495); it was printed for the first time in Calcula, 1609, and frequently since; (ii) a modernised version of Nasr Allah b. Muḥammad b. al-Ḥanāfī’s [q. v.] earlier Persian translation of Kalīla wa-Dimnak [q. v.]; he undertook this task at the suggestion of Niẓām al-Dīn Amir Shahī Aḥmad al-Suhailī (ob. 907 or 908 ≈1501–1503) and entitled it Anawār-i-Suhailī; it is written in a very artificial style, overlaid with rhetorical ornament, and has on this account been much admired in the East;
KASHIFÎ — KASHIÜL

MSS. are common, and it has been printed several times, for the first time in Calcutta, 1804. His other works comprise Djawhir al-tafsîr li-tub NATIONALISME, a Persian commentary on the Kur'ân, compiled at the request of Mir Ali Shir in 899, but he only completed one out of the four volumes he had planned, and broke off this work to compile for his patron a shorter commentary, entitled Mawâlikâl-alîya, but usually styled Tafsîr-i-Hasinî; a-Rawdat al-Shukhâda, a history of the martyrdom of ‘Ali and his family (abridgments exist under the titles, Dah Modâjîs and Muntâjabî-r-Rawdat al-Shukhâda); — Badâtî al-A’fkar fi Sena’i al-Aqîhâr, a treatise on figures of speech and poetic artifices, as well as faults in poetic composition; — Mazhûn al-inzâhî (compiled in 907 and dedicated to Husân Mirzâ, and later) Safaî-i-Shâhî, two works containing models of epistolary composition; — Kitâb wa-Aghâri-i-Hâtim Tacîl (or, Risâla-i-Hâtimîyeh), completed in 919, giving the story of the Hâtim Tacîl [p. v.]; — Tuba- nat al-salawât; — Risâla al-âlîya fi l-mukhtalîf al- nabawiyeh; — selections from Djalîl din Râmi’s Mawâlikî, translated by Lubbî-i-Lubbâb. Several of the above works have been translated into Turkish, and are the first two into English.

KASHISH-I-DAGH (in Turkish “mountain of the priests”), a name given by the Ottomans to Olympus in Mysia, at the foot of which is built on the north the town of Brussa [q. v.]. Its slopes are covered with forests now much diminished; its summit is covered with snow which only melts in summer (height 6,200 feet). Its massif is formed of granite, marble and felspar. At the time of the Ottoman conquest, Olympus was covered with convenits and hermitics’ cells whence its Turkish name. The Christian monks were replaced by dervishes. The poet Lami’s has described the two monasteries Geikli Baba and Doghlu Baba. At the foot of the mountain in a quarter of the town of Brussa is the tomb of Shahsh Shams al-Din Muhammad b. ‘Ali of Bukhârâ, better known by the name Shuljan Amir Walt; a mosque is built over the tomb.

(Ch. Huart)

KÂSHKÂL, a Turkish people in Persia. The name is said to be the Turkish kashka “horse with a white spot on its forehead” (W. Raillot, Versuch eines Worterbuches der fûnfs Dialekte, ii, 395). The Kashkâl are said to be descended from the Turkish Khaladj (cf. also B.G.A., i, 158: Khaljî) mentioned by al-Istakhri (B.G.D., vol. i), and later writers in the country between India and Sistan. The Khaladj are said to have migrated first to the Persian ‘Irâk where a district near Sâwa is still called Khaladjistan; there is still said to be a Turkish speaking people there (private information from V. Minorskiy). The Kashkâl are said to have come from the ‘Irâk to Fârs where they lead a nomadic life at the present day. Their winter quarters are in the southern part of this province, especially around Fârâbâbâd, where the chief of their tribe (lîkâmî) is regarded as ex officio as governor; the stronghold of Fârâwa was built there by the Ilkhâns Sâlnâ-i-Dawla (from 1245/6–1296/7). In summer they wander as far as Kûmesâ and Gomandelîn in the southern part of the province of Isfahan. According to Curzon (Persia and the Persian Question, London 1892, ii, 112 sqq.), the Kashkâl were a numerous people down to about 1870 (60,000 families; in case of war about 120,000 horsemen) but they suffered greatly from the famine of 1871 and 1872; at the time of Curzon’s journey (1889) the number of families was said to be 25,000, while he put it at really some 10–12,000. The number 12,000 is also given by Tumanisky (1894) for the tents of the Kashkâl proper, but he says the number of all the nomads for whom the Ilkhâmî of the Kashkâl paid the taxes was double (24,000). Larger figures are given by later travellers: 35,000 (1906) and 55,000 (1914). In 1914 the Kashkâl formed a well armed division of an army of about 20,000 men and took part in the conflict on the Armenian side against England. All the Kashkâl were fanatical and were engaged in horse-breeding (the breed is related to the Arab); the women weave carpets. A few Kashkâl have gone over to a settled life in the south at Dârâb and in the north at Kûmesâ. According to Curzon, the Kashkâl, in spite of their Turkish descent, were considered to belong to the Lûr family; in their customs they also differ little from the Bakkûyânî and Kûtgelî (the Turkish tribe of the Aghâcherî also belongs to this Lûr tribe); but the language of the Kashkâl, as the songs written down in 1914 by A. Romaskevič show, is a Southern Turki dialect closely related to the Turkoman and Aqha’râchidâni.

(W. Barthold)

KASKUL (v.), an oval bowl of metal, wood or coconuát (calabash), worn suspended by a chain from the shoulder, in which the dervishes put the alms they receive and the food which is given them. The etymology of this word is obscure; a popular one is given by the Persians: kash “draw” (impertative) and ðul “shoulder”; “what one draws over the shoulder”; but as we find a form khasrîl attested in the older poets (Anwari, Saif Isfaranji), this explanation can hardly be accepted. The dictionaries give as the first sense “beggar” and then “beggar’s bowl.” We are not able to tell whether they are right.

In literature the word means an album, a collection of different pieces from different sources, and is applied particularly to the Kitâb al-Kasha’ul
KASHMIR

The name Kashmir (in Arabic works also Kashmir) has from early times been employed to denote the valley situated in North-west Himalaya between 33° 30' and 34° 40' N. Lat. and 74° and 75° 30' E. Long. This valley has a length from N. W. to S. E. of about 84 miles and a breadth from N. E. to S. W. of 20 to 25 m. The area is about 1900 sq. miles. It is separated from the outer hills of Djamnâ, Râjdjâwari and Pâmâ by the lofty Pâr Pandjâl Range of which several peaks are more than 15,000 feet in height. On the North-west side ranges which come nearest to the valley rise to greater heights, the principal peaks being Gâwshâ-birî (21,800 ft.), Amarâth (21,341 ft.) and Hâramukh (19,903 ft.). Beyond these is an extensive mountainous district through which the passes connecting the valley with Lâdâk, the Upper Indus valley, and Central Asia are few and difficult. The Zâlji Pass (23,300 ft.) is the principal means of communication with Lâdâk, and the Burzil Pass (13,500 ft.) with Astdor and Skârdû. With the plains of India the most direct pass is via Bhimbar over the Pâr Pandjâl (11,400 ft.), but the easiest and only route open throughout the year is that by Bârâmîla which is the R. Djeblam or Bhalat leaves the valley. This may be approached now most easily by the good road from Râwâl Pâtî via Mârî, which follows the gorge of the Djeblam, but the Aibottabâd route which joins the other at Mûasâfarâbâd (the confluence of the Kishangangâ with the Djeblam) has more natural facilities and was most used in early days. The geography and geology of this isolated valley are largely described by Drew, Lydkeker and Oestreiche, and the historical geography has been elucidated by Cunningham and Stein.

The valley is shown to be a lacustrine basin formed by the Djeblam R. and its tributaries, of which the Sinâ and Lidak are the principal. The drying up of the lake which filled the valley is due to the removal of the rocky barrier which must have closed the exit at Bârâmûlia, and no doubt the general progressive dessication of this part of Asia contributed to the result. The Wular Lake is the principal remaining sheet of water, and the small Mârâsbâl Lake and the Srinagar Dal also deserve mention.

The surface of the valley lies between 5000 and 6000 ft. above sea level, it is nearly level and of great fertility, and seems to have attained prosperity at an early period, although its remoteness and inaccessibility protected it from many of the storms of invasion which have swept over Northern India. The people of Kashmir, although of fine physique, have generally been stigmatized by travellers and rulers alike, from Yuvârâng to Abu l-Faḍî [q. v.] and Gâlûb Singh, as an unsavory, cowardly and cunning race, but, as Lawrence has pointed out, these defects have been exaggerated by persistent oppression. It is evident that a race which maintained its independence for so many centuries could not, even though assisted by the great natural difficulties of approaching the country, have been altogether destitute of a manly character.

Although historical information does not go back to a very early period, yet for the last two thousand years Kashmir is exceptionally well supplied with sources of historical information. The principal of these is Kâlaââ's Râjdârângâ, a metrical chronicle composed in the 16th century, which is almost unique in India, and which as edited, translated, and annotated by Stein is the main source of our knowledge. Other authorities are the Chinese pilgrim, Yuvârâng, who visited Kashmir in the 7th century, the chronicle of al-Birûnî [q. v.], in the 10th century, the Aîmâ Akbarî of Abu l-Faḍî, the diary of the Emperor Dîjâhângîr, and the accounts of many modern travellers, beginning with the French physician Bernier, who accompanied the Emperor Awrangzâb [q. v.] on his visit to the valley. There is also a very complete series of coins illustrating the history of Kashmir from the 6th century till the present day through the period of the Ephthalites, the Sârakhs, the Hârâns, the Musâlim sultans, the Mughal Emperors, the Durrânîs of Afghanistan, the Sikhs and the present rule of the Hindû Dogras of Djamnâ, under British suzerainty.

The most noticeable point in the history is the immunity of the valley from the great historic conquerors. Alexander did not touch it, and it repelled the attack of Mâhîmdû of Ghâzânî, Cînzî Kâhî [q. v.] and Timûr passed it by as did Bâbur [q. v.]. It fell easily into the possession of Akbar after he had consolidated his power over the whole of Northern India, and it was unmolested by Nâdir Shâh even when the Mughal power had crumbled away under his attacks. Yet the disorganised country succumbed at once to the attacks of the mountainbred Afghans of Ahmad Shâh Durrânî, and the later Durrânîs, divided among themselves, were easily defeated by the Sikhs. In these cases the people of the valley, regarded simply as subjects for extortion, had no ground for preferring one set of conquerors to another, and they took no part in these later struggles.

No information about Kashmir can be derived from classical sources before the time of Ptolemy, as the Greek historians of Alexander do not even mention it. Ptolemy (in the middle of the 2nd cent. A. D.) describes it as a very powerful state extending far beyond the limits of the valley, and it is evident that it formed part of the great kingdom of the Kishân which spread over Northern India at that time. He calls it Kaspisparis, and states that it lies below the sources of the Bistaspes, the Sandalph and the Adris, i.e. the Vistâs (Vâhat, Bhalat or Djeblam), the Candrabhâga (Cinâb) and the Airawati (Râvî), a very accurate description.

Before this time however, although there is no contemporary information, there is good ground for believing that Kashmir formed part of the dominions of Asokâ about 250 B. C. The defeat of Seleukos by Candragâpta had enabled the Maurya monarchs to extend their power northward, and the spread of Buddhism made it easy for Asokâ to extend his influence into Kashmir when he adopted that creed. No inscription of his edicts has been found in the valley, but that at Mansehra was situated close to the most obvious route
to Bāramulla through the Paklí plain forming part of Uraš (Harara), and Yuan Cháng tells us that he erected four stūpas in the valley.

This is confirmed by the Kārgētarangī (1.104), which shows the tradition still existing in Kāla-pā's time. It represents Aśāka as a king who built numerous stūpas, and founded the city of Srinagar, the name of which is preserved in the modern capital Srinagar, although its actual site is marked by the temple of Pāndārājan (i.e. Pu-rānādhisthāna “ancient capital”), three miles away.

The chronicler again embodies an actual tradition when it comes to the kings Kālikāsha, Dūṣṭhakā, and Hūṣṭhakā, who correspond very closely to the Kūṣhāna Kālikāsha, Vāsishtha, and Hūvishtha, known from coins and inscriptions. We know from the Chinese and other Buddhist records that Kālikāsha called together the second great Buddhist council in Kashmir, and it seems probable that this took place, if the Buddhist tradition is correct, 400 years after Buddha's death, viz. the last half of the 1st century B.C. Even if the theory identifying Kālikāsha's date with the Sāka era should prove correct, this council cannot be dated later than the first cent. After the decay of the great Kūṣhāna kingdom it is probable that Kashmir remained under the rule of minor chiefs of that race who were overthrown by the Epiphalites or White Huns in the early part of the 5th century.

All through this early period the name Kashmir or some similar form seems to have been in use. Stein shows that 'Ptolemy's Kaspuria corresponds with a Prākrit form Kavstrā, which is preserved in the modern Kashmiri form Kāshmir, while the older Sanskrit form Kasmirā has survived almost unaltered in India and Persia as the appellation of the country. The derivation from a supposed Kasīyapa-pura advocated by Wilson and Lassen is not now generally accepted, and the Kasparystos of Herodotos certainly does not refer to Kashmir but to some place bordering on the Indus. He places it in the province of Paktiukh which must have been the later Pākhtā, the hilly district lying between the Indus and the Dīhlam which gave its name to a sākār of the Mughal empire under Akbar). Hekataios also mentions Kasaparyos as a city of the Gandharvi. In the viii th cent. the Chinese pilgrims adopted the name Kī-pūi for Kashmir, but Yuan Cháng also uses the form Ka-si-mī-lo.

The Epiphalite occupation of Kashmir does not seem to have formed part of the direct invasion of India, which came from the west. Their king Mīhira-gūla seems to have been established at Sākāla (Siwāl-kār) in 520 A.D., when the Chinese pilgrim Sung-yun found him making war on Kāshmir. How far he succeeded is not clear, but after his defeat in Central India in 528 A.D. he appears to have retired into Kāshmir, and seems to have gradually obtained possession of the country, whence he attacked his brother who had usurped his throne in Gāndhāra. Yasūdharman, his Indian conqueror, appears to have followed him into Kāshmir and struck coins there, but probably Mīhira-gūla remained in possession, as coins in the Kāshmir style are found in the names of his successors, Khiṅgila and Tōrāmāna, Yuan Cháng, who visited Kāshmir early in the next century, states that Mīhira-gūla was a tyrant and oppressor of Buddhists. He was favourably received by the king then reigning, whose name he does not give, probably Durlābha the founder of the Kārkotāka dynasty and found 100 Buddhist monasteries still existing. Shortly afterwards king Harsha of Kanawā [q.v.] restored from Kāshmir the tooth relic of Buddha, but did not invade the country. Relations with China were frequent during the viii th cent. An embassy from China arrived in 713 A.D. After 720 A.D. the kings of Kāshmir were recognized by the Chinese emperors. The last recorded embassy from China was in 759 A.D. The Kārkotāka dynasty was then in possession, and the embassy in 713 A.D. seems to have been due to an application by the king Candrapadā for assistance against the Arabs, who now appear for the first time. Muhammad b. Kāsim after the conquest of Sindh had advanced to the foot of the Himalaya, but no further advance was made. The regular coinage of Kāshmir reproducing that of the later Kūṣhāna (with gradual degradation of designs) begins with the Kārkotākas and continues till the supersession of the Hindū by the Muslām kings in the xiv th century. The earlier kings of this race had possessions extending far beyond the limits of Kāshmir including Pākhtā, Pūru, Kāḍājarpuri, Taxila and the Salt Range.

The expression of the Kāshmir style of architecture, which is found almost unaltered in the ancient temples of the Salt Range, may probably be referred to this period. Hinduism and Buddhism flourished side by side in Kāshmir, as we learn from Yuan Cháng, and even as late as the xii th century when Kāla-pā wrote; and the style of architecture used for the Hindū temples was probably identical with that of the Buddhist vihāras. Foucher ('L'Art Greco-Bouddhique, p. 136–145) has proved its derivation from the Gāndhāra architecture of the i st and ii nd centuries. The double pyramidal roof, its distinguishing feature, has been perpetuated in Muslām mosques up to the present day. The mosque of Shāh Hamādān in Srinagar shows this feature.

It is also in his account of this period that references to the Śāhīs of Gāndhāra begin to appear in Kāla-pā's chronicle, and (as was the case with China) the growth of Islam appears to be the cause of the alliance between Gāndhāra and Kāshmir. In addition to the progress made in Sīnd attacks were being made on the Gāndhāra border towards Kābal, Al-faham tells us that as early as A.H. 23 'Āsim b. Amr reached Kan-dāhār (Gāndhāra) and the Indian frontier, and under al-Mansūr, 136–158 (754–775), according to al-Balādhurī, Hishām b. 'Amr al-Tabghībī, governor of Sind "conquered Kāshmir and Mūltān .... then he came in boats to al-Kāndāhār and conquered it", and al-Ya‘qūbī confirms this. The territories of Kāshmir which were conquered were no doubt outlying portions of the dominions between the Indus and Dīhlam, and not the valley. It was no more than a raid without permanent effect on Kāshmir, where the Hindū kings continued to rule undisturbed for some centuries. The most remarkable of these kings was Avanti-varman (A.D. 855–883), founder of Avanti-pur, where the ruins of his temples still exist. He also carried out extensive works to regulate the floods of the Dīhlam. The alliance with the Śāhīs is again met with in his time, and the names closer as time goes on. Copek (902–904) helped Tōrāmāna or Kamalukā, the Kamalūc of al-Biruni, to recover his capital from a rebel,
and Kshëma-gupta (950—958) married Diddå, grand-daughter on her mother’s side of Bhimä, successor of Kamaluka. Diddå exercised great influence in successive reigns, and ultimately became queen herself. She was a member of the ruling family of Lombardia in Pùnë, and through her influence, this dynasty became rulers of Kashmir. In 404 (1013) Måhmåd of Ghazni destroyed the Shãhí kingdom. The last king, Trilócán-pål, assisted by a Kashmir force, was defeated and put to flight, but Måhmåd’s attempt to penetrate into Kashmir itself was brought to a stop at the hill-fort of Låhara, the Lawhår of al-Birùnì which he describes as the strongest place he had ever seen. Even after the destruction of the Shãhí kingdom princes of that family continued to exercise influence in Kashmir. The Låhara dynasty reign throughout the Ghaznawi period. The half mad king Harhå (1089—1101), according to Kalhånpa, was under Målîmans influence, employed Turkish soldiers and destroyed Hindu and Buddhist images. The appointment of “Tarùshka” or Turkish troops is attributed partly to the incapacity of the Kashmiris. It is evident that the country was distracted at this period by frequent plots and rebellions caused by misgovernment, and it is probable that foreign troops were employed quite as much on this account as for the reason alleged. Kalhånpa’s chronicle comes to an end in 1149, and it is evident from the continuation by Dñorådåga that the condition of affairs became worse, and also that a gradual conversion of the people to Islam was in progress. An invasion from the north by Tåtàrs under Dùh ‘l-Kådår Chån (Zulål) took place in 706 (1303), and it is stated that after plundering Kashmir, this army perished in the snows while returning northwards. This perhaps made the way easier for the next Muslîm adventurer, Shãh-Mår Swåtī (probably an Afgån), who seized the crown and brought in Muhammadan rule under the title of Shams al-A’alam in 735 (1334). The change seems to have been accepted by the bulk of the nation, and the Hindu, mainly Brahmins, who retained their religion were treated with toleration, still continuing to hold official posts. In the reign of Sikandar Shãh, 788—813 (1356—1410), a change took place, and this fanatic ruler commenced a violent persecution and reduced the ancient temples to the ruined state in which they still remain. His nickname Butåshân (Iconoclast) commemorates these deeds. Zåin al-Abidin, who reigned 820—872 (1447—1467) reverted to the policy of toleration, and was an excellent ruler in every respect. His reign is looked back upon by Kashmiris of every class as a golden age in which justice was prevailed. He constructed roads, canals, and bridges and in every way promoted the prosperity of the country. Under his successors misrule again prevailed. The Shãhí Çaks who, according to Lawrence, probably came from Dardisånt, obtained great power, and ultimately displaced the later kings of the legitimate line. Ghâzåt Chån Çak was king in all but name, and Husain Shãh, Muhammad ‘Ali, and Yùsuf, as shown by their coins, took the title of Badshåh in rivalry of the Mughal emperors, and not of Bahlùn used by the former kings.

After Bâbur’s conquest of northern India the emperors turned their eyes on Kashmir, which offered great attractions to a race accustomsed to a cool climate, running streams, and gardens. Bâbur himself sent a small expedition into the country which met with no success. In 947 (1540), the year in which Humayûn was driven from power by Shâh’s rising, his cousin, Håidar Shãh Dåghåli, a member of the ruling family at Kasåhír [see Kasåhír], a man of great ability and fame, and a historian [see Håidar Mirzå], persuaded Humayûn to attempt the conquest of Kashmir, and thus to obtain a safe refuge from his opponents. Humayûn, however, found himself unable to carry out the project, but Håidar Mirzå went on with the expedition, and receiving much local support established himself as ruler in Humayûn’s name. He maintained himself till 955 (1551) when he was killed in an outbreak. This was probably organized by the Sûrî kings as a coin of Isâm Shãh struck in Kashmir in 957 is known. The Çaks continued to rule until Akhår invaded the valley. In spite of the determined opposition of Yâkîb Chån, son of Yûsuf Shãh, all resistance was overcome in 995 (1586) when Kashmir became part of the Mughal empire. It became one of the favourite resorts of the emperors.

Akkår’s first personal visit was in 997 (1589) by the Pir Pandål Pass, the next in 1000-1001 (1572) when he was accompanied by Nigåm al-Dån, author of the Tåbahât-i Akhår. On his third visit he had a land-settlement carried out by his financial, Todar Mal, and fortified the hill at Srinagar on which now stands the fort of Hari Parbat. A full description of Kashmir under Akhår is given by Abû l-Fadl in the Pâr-i Akhår. Dñåhångir as a prince accompanied his father to Kashmir, and induced his fondness for the country by the fine all the time after he became emperor. He erected numerous summer palaces and laid out gardens, of which the Nighåt Bågh on the shores of the Dal, Achabal where the springs of one branch of the Dçhelam gush from the rocks, and Vëräng are the best known. To please his consort, Nûr Dçhåån, he is said to have introduced the chimår or plane-tree from Persia, her native country, and the fine groves and avenues of this tree are still one of the beauties of Kashmir.

His successor Shãh Dçhåån also laid out many gardens, and under his reign ‘Ali Mårådån Chån built serais along the Pir Pandål Road. His son, Dàrâ Shîkhå (q. v.), built the Pâr-i-Mahâli or Fairy Palace of which the ruins still stand on the mountain side above the Dal. Here as elsewhere the intolerant policy of Awrangzåb brought in trouble. He only visited the valley once, and some mosques erected by him still exist. The outward splendour of the empire was still undiminished, and the condition of Kashmir is vividly described by Bernier who accompanied the emperor on his visit.

Under the later emperors the administration became very bad. Nådîr Shãh’s invasion, although he did not touch the valley, brought in anarchy. Its rûbahår became practically independent. About 1752 Ahmad Shãh Darråni (q. v.) took possession and in 1756 he appointed Bùlånd Chån Sàdåzå to be rhûbahår of Kasåhír, Coinage however continued in the name of the emperor ‘Alâmgar II till 1774 (1760) and Ahmad Shãh’s first Kashmir coinage is dated 1759. (The coin of 1762 mentioned by Rodgers is shown by Whitehead to belong to the Mughal Emperor Ahmad Shãh and not to Ahmad Shãh Darråni).
The condition of Kashmir under the Durrâns was thoroughly bad. They were barbarous and uncivilized rulers, and their governors looked on Kashmir simply as a field for plunder and extortion. The internal wars between claimants to the throne, especially between Mâhmûd Shâh and Shudûtâ al-Mulk, are faithfully reflected in the coins. From the time 1227 (1814) when Fâtykhân Bârakzâi obtained possession of Kashmir by the help of Randjit Singh, the Sikh ruler of the Panjâb, the nominal rulers were Mâhmûd Shâh and afterwards Aylûb Shâh, but the real power was in the hands of the Bârakzâi chiefs, especially Muhammad A'zâm Shâh, by whom the coins in the name of Muhammad (1227—32) were probably struck. In 1223—1225 the anarchy prevailing is shown by the issue of coins in the name of the popular local saint, Nûr al-Din, instead of any nominal king. This state of affairs was brought to a close by the invasion of Randjit Singh in 1234 (1819), who annexed Kashmir to the Sikh kingdom. The Sikh rule also was harsh and oppressive but firmer and better than that of the Durrâns. Hari Singh was a governor noted for his severity, and Miïân Singh was the most just and efficient. Moorcroft, the traveller, visited Kashmir during this period and gives an unfavourable account of the condition of the people under Singh rule.

Under Randjit Singh a Dôrgr family of Djamûm consisting of three brothers, Dhiyân Singh, Gûláb Singh, and Saçût Singh, had risen into notice. They were not Sikhs but orthodox Hindus. The Dôgras are a Râjpút race of the outer hills, but not of the Kashmir Valley. Dhiyân Singh, became one of the chief officials of the Sikh state, while Gûláb Singh was invested with the Djamûm Râjâ, which had been confiscated by Randjit Singh about 1220. In Randjit Singh's name he annexed one hill-state after another, increasing thereby his own power, and his influence in Kashmir itself.

In this way he added Kishâwar and Ladakh to the Sikh dominions. After Randjit Singh's death in 1239 and the dissections which followed it, Dhiyân Singh's position was for a time a very powerful one, and through his help Gûláb Singh was able to consolidate his power in the mountain country. After the murder of Dhiyân Singh with Mahârájâ Shîr Singh, by the Sîndânâwallâs (1243), Gûláb Singh after a time withdrew to his mountain possessions, but previous to this he had been sent into Kashmir to put down a mutiny in which Miïân Singh, the governor, had been killed (1242). This he did successfully, but the country had again fallen into anarchy, and the rebellious Bombâ tribe defied the Sikh army. In 1245, when the Khâlsâ army plunged into war with the British government, Gûláb Singh took no part in it, and after the war he acted as representative of the young Mahârájâ Dalip Singh in the negotiations which followed. Ultimately, on the advice of Major H. Lawrence (Sir Henry Lawrence), Kashmir and the adjoining territories between the Indus and the Râvi were separated from the Panjâb and formed into a separate state of which Gûláb Singh became Mahârájâ on payment of a subsidy and recognition of British suzerainty. The treaty in which these terms were embodied was signed in 1846. From this date begins the modern state of Djamûm and Kashmir.

Gûláb Singh did not obtain peaceful possession of his new dominions. The governor Imâm al-Din allied himself with the turbulent Bombâs. Gûláb Singh's troops were defeated, and he was able to assert his authority only after a British force had entered Djamûm. The Bombâs continued to resist for several years. Ultimately all the rebellious tribes submitted. These movements had not had any hold on the agricultural population whose only desire is to live quietly and escape excessive taxation from officials. Gûláb Singh's rule was on the whole firm and just, and the condition of the country gradually improved. He died in 1257 and was succeeded by his third son Randjit Singh, a good and well meaning ruler, but lacking the strong character of Gûláb Singh. The famine of 1277—79 caused great misery in the country and the earthquake of 1285 enormous losses. Randjit Singh was succeeded in 1285 by his eldest son, the present Mahârájâ Pârtâb Singh, who is a pious and conservative ruler. In 1293 the famine and earthquake were followed by one of the most disastrous floods in record. In spite of these catastrophes the preservation of peace and an orderly administration has caused an enormous increase in prosperity. One of the principal contributory causes has been the establishment of a regular system of land revenue administration under the settlement made by Mr. Wingate and Mr. W. Lawrence in 1287-92, adhered to and modelled on the settlement in British India. These have been since improved and developed by Mr. W. S. Talbot, settlement commissioner. The development of communications by the construction of a good road through the Djamûla Valley to Bâramulla and more recently the cart road from Bâramulla to the capital has been a great benefit to the country.

Kashmir is divided for administrative purposes into the districts of South Kashmir, North Kashmir and Muåffarábd. The first two comprise the valley with the smaller river valleys and mountain slopes immediately adjoining it. The third consists of the narrow valley of the Djamûla below Bâramulla and that of the Kishân-gângâ which joins it at Muåffarábd. This tract has from time immemorial been treated as part of Kashmir. North Kashmir was formerly known by the name of Kamrájâ, and South Kashmir as Mañjâd. The Kashmiri language extends down the Djamûla some distance below Bâramulla, but not to Muåffarábd or the Kishân-gângâ valley where the dialect spoken is a form of Lahândâ or Western Pandjâb.

The population was 1,295,201 in 1911. It consists of about 94 per cent of Musalmans and 6 per cent of Hindus, including a small number of Sikhs. The Hindus are mainly Brahmans, commonly called Paujîtis, whatever their occupation may be. The aboriginal agricultural population has become Musalmân, there has been little or no admixture of foreign races, and the original castes survive among them, but intermarriage between them is permitted, and family names (kînîm), often nicknames in their origin, have to a considerable extent superseded caste-names.

There is a great deal of artistic talent, and a natural gift for craftsmanship among the Kashmîris. The old-established industry of shawl-weaving for which Kashmir was once famous, has died down to very small dimensions, plain pashmina woven from the pashm or wool of the Tibetan goat has to some extent taken the place of
the shawls of the same material. Other industries have however sprung up; carpets, unbordered felts and tablecloths are made in considerable quantities, while the products of the wood carving, lacquered and painted wood and papier-maché, silverwork, and copperwork all find a good market in Kashmir and among tourists.

A considerable class, the Hāndjīs or boatmen, live entirely on boats on the rivers and lakes, and form a very distinct element in the population.

Kashmir has always had an attraction for visitors, and the improvement of communications has increased the number of visitors. It has become one of the principal summer resorts for European residents in India as well as for tourists from all parts of the world, who travel about the country in camps or house boats on the rivers or settle in the upland valley of Gulmarg, 8000 ft. above sea-level. Game large and small in the mountain valleys formerly attracted many sportsmen, but it is no longer abundant, and seekers after trophies now seldom visit Kashmir.

The language of Kashmir, as Kashmiri or Kāshār is a Prakrit tongue differing much from the dialects of the Panjāb, and showing so much affinity in some respects with the Shīrām language of Dardistan that it is classed by Grierson with the Pāvā group of languages.

The principal travels in Kashmir which may be consulted in addition to the earlier authorities prior to the 17th century which have been mentioned above are those of Francisco Xavier (who accompanied Akbar to Kashmir), François Bernier (who accompanied Awrangzēb in 1664), George Forster in 1783 (during the reign of Timūr Shāh, Durban), William Moorcroft and George Trebeck (through Ladākh and thence into Kashmir in Randjīt Singh's time 1819–25), Victor Jacque- 

ment (1831), Von Hugel (1835), and Vigne (1835).

For more modern times the best general descriptions are those of Drew and Lawrence and for ancient history the works of Stein.

(2). A name frequently given to Srinagar, the capital of the country of Kashmir. It was the name applied to the mint-town under the Muhammadan Sultan, the Mughal emperors, the Durrānī Shāh’s, and even as late as 1835 von Hugel speaks of the City of Kashmir. The ancient name of Srinagar which, according to Kal- 

aha, was given by Asoka, has been revived by the Hindu rulers in modern times and is now in general use.

(3). The extensive dominions of the Mahārājās of Djamātm and Kashmir are now frequently included under the name Kashmir in atlases and official publications such as the Censuses of India. These include vast tracts not only in the outer hills, southwest of the Pir Panjāl Mts., including Djamāt and Rādājwāri, but in the inner Himalayas comprising the conquests made in the name of Randjīt Singh and those made by the Mahārājās of Kashmir in more recent times. This region extends 32° to 37° 30’ N. Lat. and from 73° to 86° E. Long. and has an area of 84,432 sq.miles and a population of 3,158,426 in 1911. Of this population however 2,885,061 is comprised within the narrow limits of Kashmir and Djamāt, while the outer enormous area, the greater part of which consists of mountains, contains only 265,960. The countries of Ladākh, Skādā (Baltsān [q. v.]), Cilās, Gilgit [q. v.], Hunza-Nagar [q. v.], and Yāsin are comprised in this region and will be found described under their own names, the connection with Kashmir being purely modern.

**Language:** Grierson, Kāṣrī Grammar
KAȘIDA, not infrequently also Kaşid, is the name given to a form of Arabic (also Persian, Turkish etc.) poem of some length. The name is derived from the Arabic root kašada with the meaning "a aim", because in the earlier times it contained the praise of the poet's tribe and attacks upon its adversaries, later the praise of a person or family by a poet who expects and openly asks for presents for his eulogies. From the earliest times the elegance (mađhīya) does not appear to be included under the same designation, but poems of insult (hidījī) are frequently by older poets called a kaşida, though the latter probably had frequently not the characteristics which come into the scheme of a proper kaşida. We can form the best opinion by taking as the basis for investigation the poems of the authors who lived in the first century of the Hijra, instead of beginning with the poems preserved from the time of Paganism, though the latter formed the model of the former. A perfect kaşida should contain three essential parts.

First the nasīl or erotic introduction in which the poet describes his visit to the erstwhile abode of his lady and his yearnings at finding the place forsaken. Secondly follows a description of his ride to the persons whom he intends to praise. This gives him ample scope for describing the terrors of the desert and the comparison of his camel with various animals of the deserts. At last comes the chief portion of the poem containing praise, or abuse of the person or tribe aimed at. Some poets, when so inclined, finish up with some moral reflection.

An Arabic (or Persian etc.) kaşida is a very artificial composition; the same rhyme has to run through the whole of the verses, however long the poem may be. In addition the composition is bound by a metre which the poet has to guard most scrupulously through the whole course of the poem. The result is that we cannot expect very much beautiful poetry; the description of the desert and its animals and terrors may have a certain charm at first, but when the same descriptions recur in endless poems expressed in the same manner, only with different words, the monotony becomes nauseous. The difficulty was keenly realised by the poets themselves and accounts for the fragmentary character of most poems, which required much time in their composition. The poem Dhu 'l-Kummata stated that for a long time he could get no further than the first verse of his now celebrated poem (November 1 of his Divān) and that it was only when he visited Isfahān that the remaining verses (128 in the edition) came to him with ease (Asā'ī al-Balāgha, s. v. r-3). The poet Dījarī, though stung to his soul by the attacks of Djalīl, the son of al-Raŷī, composed at first only about 80 lines of his reply, though rhyme and metre are the easiest possible in the Arabic language, and completed the remainder at a later time (Nasīrī, ed. Bevan, p. 430). We can likewise be sure that al-Tirmīdhī composed only a portion of his renowned poem against the tribe Tānim and al-Farázak that and the additional verses sometimes included in the poem are by the poet himself and not interpolations by others. When a poet had composed a kaşida he would recite it whenever an occasion offered and it is quite natural that he should add or cancel verses himself, especially if he reply to his poem opened fresh avenues of attack. Poets certainly never rose to composition of a poem containing all the essential portions of a kaşida, and it is foolishness to assume in each case that part of a poem has been lost if only a certain part is recorded. Such a poem was sent into the world before the poet had time to complete it and it is equally certain that lampoons in particular did not lend themselves easily to the complete scheme. Very early poets also composed poems which, though called kaşida, did not contain the essential portion, the praise or insult. As such we must take e.g. the poems of 'Umar b. Abī Rabī'a and some poems of al-Tirmīdhī. Some of the latter's compositions were made to display the art of description and were never intended to be kaşid in the proper sense of the word. The Arabic kaşida was naturally imitated by poets who wrote in other languages and the Persian poets Anwārī and Khákānī are celebrated as masters of this style. The form of the kaşida has survived to modern times and I have specimens by poets still living where we find the absurdity of a description of a desert-ride by persons who live in Cairo and travel by railway and steamer. The kaşida by its references to persons and events is also a source of historical information. This, however, must be handled with the utmost care, as false statements, by design or through ignorance, are frequent and the mention of a battle-day does not necessarily imply that the poet was present. As an example I mention only that the Asādi poets 'Abid and Bishir b. Abī Khāzīm, probably a century distant from one another, both boast that their tribe was victorious at al-Nisār and al-Dīfarī.

KASIM, the name given by the Ottoman Turks to St. Demetrius whose festival falls on October 26 of the Julian calendar. It was formerly the beginning of the winter semester, during which the fleet took up its winter-quarters at the Golden Horn.

(Cf. Huarr)

AL-KASIM b. ḤĀSHIM b. ḤĀSHIM, usually called Abu Dula, a Muslim general. When in 125 (511) the Caliph al-Amīn sent an army under 'Abi b. Ḥāshim b. Ḥāshim against al-Maʾmūn's general Tāhir b. al-Husayn, Abu Dula went with him. When Ibn Māhān had fallen, Abu Dula came back to the neighbourhood of Hamadhān and, although he declined to pay homage to al-Maʾmūn, Tāhir left him in peace in al-Karadaj. In 214 (829/30), when al-Maʾmūn came to Rayy, he sent for him. His friends advised him not to go, but he went and the Caliph rewarded him with the greatest goodwill. In al-Muʿtāsim's reign Abu Dula was appointed by al-Ashāfīn [s. v.] who was jealous of his bravery and eloquence. Al-Ashāfīn accused him of murder
and treason and on the evidence of false witnesses he was condemned to death but reprieved at the last minute by the intervention of the chief kaši Ahmad b. Abi Dūdād (q. v.). As soon as the latter heard of the danger threatening Abū Dūlaf he hurried to al-Ashīn and told the Caliph that he had ordered him to spare Abū Dūlaf. When the latter had been released, Ahmad went to the Caliph and told him that he made up the story to save the life of the innocent accused, whereupon al-Mu'tasim forgave him and pardoned Abū Dūlaf. The latter died in 225 (839/840) or 226 (840/841) in Baghdad. He left several works. He was also famed as an exceedingly ardent devotee of the Caliph 'Ali. On his descendants see the article DULAFIDS.

AL-ḴĀSIM, a district in Central Arabia, on the high plateau of the Arabian desert. It owes its fertility to the Wāḍī Kūmān, which runs to the northeast and whose course is barred by a series of parallel sand-dunes and hills from 1600—2000 feet high, which run from north-west to south-east. The water, richly provided by the spring and summer rains, sinks into the valleys and even in dry periods is preserved for years at a little depth under the red or yellow sandy soil and this supplies the essential requisite for a rich vegetation. The plateau is therefore covered in spring and summer with a rich crop of grass and affords excellent pasture for the great herds of camels and cattle and the numerous smaller animals. The sand-hills are covered with tamarisks (atššī, tānuvari nilotica Ehrbg.) and varieties of acacia indigenous to Arabia (ḫarāṣ, acacia Arabica W., ḥafād, acacia Senegal W.). Millet, maize, wheat, vetches, etc. grow in the fields. Fruit-trees of all kinds yield plentiful crops. So early a writer as Yākūt makes special mention of the figs, peaches, grapes and pomegranates. The most important and most cultivated fruit-tree is, as elsewhere, the date-palm, which is represented in al-Ḵāsim by a particularly fine variety.

Among plants of economic importance may be mentioned the cotton-tree, which supplies local requirements. In the western part of al-Ḵāsim rock-salt is found. This mineral, so important for the cattle-breeders, is sold in the towns, especially in Boreida and 'Aneiza.

Al-Ḵāsim plays an important part in the caravan traffic of Arabia on account of its wealth in camels and its enterprising population. Of the population, estimated by Palgrave at 25—30,000 souls, at least a third devote themselves to caravan traffic either hiring out animals or acting as attendants or as small merchants. The caravan business takes them through the Wāḍī Dawasir and Wāḍī Nadẖrān to the Yemen, from which the best coffee is exported to Kuwait, al-Brāṣa, Baghdad and Djebel Shammar, to Mokka and Syria via Khābar. It is in the nature of things that many natives of al-Ḵāsim settle in the frontier districts or in one of the towns just mentioned and many have attained prosperity and wealth. Al-Ḵāsim also plays an important part in the trade in race-horses. Al-Djarād, also called Djarād al-Ḵāsim, in olden times the chief town of al-Ḵāsim, a day's march from 'Aneiza on the road to al-Baṣra, has been identified by A. Sprenger with the Tābaḵ of Ptolemy. The ancient settlements of this area which al-Hamdānī includes in al-Yamāma are all in ruins; the modern larger towns date from the late middle ages.

The district which lies in the centre of Arabia has had a lively history. One of the battle-days* of the Arabs is called after it. Zuhair, Akhthāl, 'Aws b. Ḥadjar and other poets know and mention al-Ḵāsim. The young faith of Islam found al-Ḵāsim at first on the side of the anti-prophet Musallīma, but in the decisive encounter between the Muslims and the followers of the Prophet of al-Yamāma we find al-Ḵāsim on the side of Khālid, the "Sword of Allāh"; in the struggle for the Caliphate, Nadẖjād and al-Ḳāsim were on the side of 'Ali but the victory of the Umayyads brought the whole of Central Arabia under their sway and there was no change with the 'Abbasids. It was not until the revolutionary movement led by the Karakūmīs that Nadẖjād was lost to the 'Abbasids. In the eleventh century, Dārīm, a native of al-Rass in al-Ḳāsim, was able to conquer a large part of Nadẖjād and Yemen and unite it with al-Ḳāsim. His kingdom was inherited by his sons and successors but the increasing power of the chiefs of al-Yamāma and 'Ārid conquered Dārīm's kingdom bit by bit, till finally it was again reduced to al-Ḳāsim. Al-Ḳāsim was from the first somewhat hostile to the Wahhābī movement; but Abī al-'Azīz b. Sa'ūd of al-Darīya succeeded in gaining possession of Boreida, al-Rass and Tinnūn. The other villages then rose and in 1772 slew all the Wahhābīs they could capture. In 1780 a new rising broke out against Ibn Sa'ūd, which Sa'ūd, who was only able to put down after much fighting with varied fortunes. Ibn Sa'ūd's kingdom soon found itself faced with an extremely dangerous opponent: Meḥmed 'Ali of Egypt had been commissioned by the Sublime Porte to take measures against the Wahhābīs and sent his son Tūṣān to Arabia, where in a rapid succession of victories he conquered the whole of the west coast (1811—1813).

After the death of Ibn Sa'ūd (1814) the Egyptians extended their intrigues against Ibn Sa'ūd's kingdom to the interior of Arabia, and in 1815 Tūṣān marched into Central Arabia and captured the fortress of al-Rass in al-Ḳāsim after gaining over the greater part of the country by bribery. The peace concluded between Tūṣān and Abī Allāh b. Sa'ūd was, however, not confirmed by Meḥmed 'Ali, who ordered Ibrahim to conquer Arabia; in 1817 he took al-Rass, Boreida and 'Aneiza and thus became master of al-Ḳāsim. Abī Allāh b. Sa'ūd had to retire to Darīya, was taken prisoner and in 1818 beheaded in Constantiople. Al-Ḳāsim was now under Egyptian suzerainty and formed a strong base for Meḥmed 'Ali. But by 1822 the Arabs of Central Arabia had begun their war of liberation from the Egyptian occupation which ended in 1841 in the Egyptian-Turkish troops being driven out. Al-Ḳāsim was now for a time under the protection of the Grand Sharīf of Mokka; in 1855 Ṣāmīl Al Šalim, who resided at 'Aneiza, was recognised by Ibn Sa'ūd as independent ruler of al-Ḳāsim, but in 1861 the district was again paying tribute to Ibn Sa'ūd. After six years al-Ḳāsim was again able to attain its independence and in 1879 Ibn Sa'ūd surrendered his claim to suzerainty over al-Ḳāsim in favour of Ibn Rāshīd.
lord of Hā’il. A rising against Muhammad b. Rashīd in 891 ended in disaster and Zāmāl Al Salim lost his life in battle. The Turks then took advantage of the fierce feud between Ibn Sa‘ūd and Ibn Rashīd to gain a firm footing in al-Kašīm again, all the more easily as the people of al-Kašīm were weary of the long struggle and anxious for peace, and even Ibn Rashīd would rather have the Turks in al-Kašīm than the governors of his enemy Ibn Sa‘ūd. Āḥmad Fa‘īl Pāsha therefore invaded Central Arabia in 1905 and occupied al-Kašīm also. Soon the Turks became the masters of the region, uncontenable, especially as Ibn Rashīd now sided against them; the Turkish troops had to evacuate al-Kašīm and Āḥmad Fa‘īl Pāsha’s successor, Sāmī Pāsha, was no more able to restore Turkish authority. In 1906 al-Kašīm belonged to Ibn Sa‘ūd; in 1911/12 there were again attacks on Ibn Sa‘ūd, especially by the Grand Sharīf of Mecca, but since 1913 al-Kašīm has formed a province in the wide kingdom of Ibn Sa‘ūd.

KĀSIM AGHA, called Қaғa (the old), an Ottoman court architect. He was appointed court architect in 1532 (begun Nov. 5, 1622) in succession to the distinguished architect Mehmed Agha, who built the Ahmedi mosque in Stambul (on him cf. the Rāhālī mīrāmūn in MS. of Dījar Agha), received of his duties in 1535 (began March 22, 1624; cf. J. von Hammer, G. O. R., v. 335) and his office given to Musa‘īd Agha, known as Merammetçi, lit. “mender”. But after a few months only he was restored to the office as the result of a low estimate (cf. Nā‘mā, Ta‘rīikh, ii. 46; J. von Hammer, op. cit., v. 335 sp.). His many intervention on behalf of Kopruđ Mehmed Pasha, afterwards Grand Vizier, cost him his office and dignities very soon after the Sultan’s mother Mah-Feiker (Kosem Valide, q.v.) had appointed him to manage her affairs (Pūya) in October, 1651, on account of his honesty. He was imprisoned in the Seven Towers and soon afterwards banished to Cyprus (Nā‘mā, op. cit., ii. 335 sp.). He was later released and after being unsuccessful several times finally succeeded in the summer of 1655 (Nā‘mā, op. cit., v. 551) in getting for Mehmed Pasha the Grand Vizierate. He died, apparently at a great age, in 1670 (begun Nov. 18, 1660). None of his buildings seem to have been of great importance. His work did not apparently extend to public buildings. It is only known that he was engaged in 1651 in building the Yeni Valide қaғa but hardly as the chief architect. The part which he played as a politician in Ottoman history is more important and the historian of the empire, Na‘mā, in particular, deals very fully with it.

KĀSIM-I ANWĀR, a Persian poet, man of letters, born in 757 (1356) in Sārāb Tabriz. For Sārāb (in Vākšī Sārāb) Dawlatshāh, Todiqār, p. 346, gives Surkhāb; this name is not found in Yāqūt, but Dawlatshāh has three times the phrase Surkhābī Tabrīz; the name is once found in a play on words (in a rubā‘ of Kamāl-ḵudāndī in Dawlatshāh, op. cit., p. 326). According to the Persian lexicographers, Surkhāb is a hill near Tabrīz (Vullers, Lexicon Pers.-Latinum, s. v., No. 7). Kāsim’s family came from Ardābīl. His religious teachers were ‘Ṣād al-Dīn-i Ardabīlī (an ancestor of the Sa’ㄨawīs) and ‘Ṣād al-Dīn Aḥī Yāmānī, who was a pupil of ‘Abūl-Haq al-Dīn-i Kirmānī. As ‘Qāmī (Nafṣāt al-‘Uṣnā, p. 690) tells us, mention was made of Yāmānī but not of Ardabīl in a work on Kāsim’s Šundū, which came from the circle of his intimates. This circumstance might suggest that Kāsim did not think so highly of Ardabīl’s instruction. The facts given in Browne, Hist. of Pers. Lit. under Tabrīz Dominion, p. 473, contradict this, however. Among Kāsim’s own murāds there must have been several free-thinkers, as ‘Qāmī, op. cit., p. 690, mentions that the teacher himself was, however, free from this imputation. The truth is that he — although it cannot absolutely be proved that he was a Ḥūfī — strongly sympathised with this sect (Browne, op. cit., p. 479). He travelled a great deal; first of all lived in Gīlān; Gīlān expressions are several times found in his poetry. From Gīlān he migrated to Khurāsān where he lived first in Nishābūr and later in Herāt. He was expelled from the latter town when the king, Shāh-Ruḵh, was murdered by a Ḥūfī in 830 (1426/27). It was assumed that Kāsim was connected with the murderer, had harboured him and knew of the attempt beforehand. A singular story is given by Dawlatshāh, op. cit., p. 346 sp., according to which he had already been expelled from Herāt once previous some individuals had complained to the king that the murād was gathering many young pupils around him, which aroused mis-givings among them on moral grounds. Shāh-Ruḵh, according to the story, then intervened and banished Kāsim. The latter then travelled to Balkh and Samarkand but returned later to Herāt. This story is not very probable but it is evidence at any rate of the great popularity of the teacher in Herāt. Whether the liebous reason given for his expulsion is true cannot be proved either, but it must be confessed that at that time there were great rascals among the Sūfis. It seems to be certain that Kāsim found a protector after his banishment in 830 in Ulagh Beg in Samar- kand. As we also find Samarkand mentioned in the story in Dawlatshāh, it may be suggested that the story in Dawlatshāh is an invention duplicating the story of his actual banishment.
Kāsim-I Anwār — Kāsim Pasha

Kāsim later returned to Khurāsān again and settled in Khardjīrīd in the district of Dānim. There through the support of well-do-to friends he was able to lead a life of freedom from care down to his death in 837 (1433/34). Dawlatshāh, op. cit., p. 348, makes him die in 835, deriving from the other authorities, is, however, a matter of what Rieu says (Catalogue, p. 676) on the date of Kāsim's death. See also Rosen, Les Manuscrits persans de l'Institut, p. 121, where a chronogram on his death is quoted from a St. Petersburg MS.

Kāsim was buried in Khardjīrīd; Dawlatshāh says that in his time 'Ali Shīr began to embellish the site of the tomb with buildings. The same authority tells us that Kāsim in his youth practised asceticism to such an extent that he injured his health. But after later years he altered his views — for example he said to someone who could not help expressing surprise at his prosperous appearance that he was no longer āsātī but mairātī; he had once been a beggar but now he was a king.

Works: The author, who, according to Dawlatshāh, op. cit., p. 303, derived the title of admirer of Ḥāfeẓ from the poetry of Ḥāfez, left a Dīnawār behind him containing ghazāls, ḵūšāns, ṭūbīs, elegies on mysteries and mathematics. Some pieces are composed in Gilânī and Turkish. His other works, Anis al-Ārifūn and Anis al-ʿĀšikīn (also called Rasūlī al-Amāmā) are treatises on mysticism in prose and verse. Finally we may mention his extracts from Šāhūn's Bustaŋ entitled Khudā-anī Bustaŋ.

These writings are unpublished; judging from the not very extensive specimens in Browne and the few pieces in Dawlatshāh (Ibnād’s Century where ten of Kāsim’s ghazāls are published I have not seen) we can agree with Browne when he says “the poetry of Qāsim ‘l-Anwar, so far as a foreigner may venture to judge it, is only of average merit”. One cannot deny his ability to write pleasing Persian verse but I ask to write in vain for anything out of the way which would give him a claim to a place among the great names of Persian literature. A just verdict on his literary activity, however, will only be possible when his works have been published.

Kāsim Pasha (or Kāsim Paşa), an Ottoman statesman.

The son of Christian parents (i.e. Ayas Pasha and Kāsim Pasha) sont tous venus de chrétiens, in C. D. Schepper, Tagebuch, in Missions diplomatiques de Corr. Dipl. de Schepper, dit Scottsers, de 1523 à 1555, par le Brn. de St. Genou (and G. A. Yssel de Schepper, in vol. xxx. of the Archives de l’Académie de Belgique, Brussels 1861, p. 169 infra), he was born in the reign of Hayazīd II and brought up in the Imperial Serāí (Evelīyā, i. 169). He attained the rank of a rībāh aghāsī (“stirrup-aghāsī”), accompanied Selim I on his campaign to Egypt, was appointed governor of Ḥamā on its capture in August, 1516 (sandjakbeyi) (cf. L. Forrer, Dit am, Chronik des Rustom Pascha, Leipzig 1923, p. 55; not in Halil Edhem, Tagebuch der agypt. Expedition des Sultans Selim I., aus Ferdinands Sammlung der Staatschriften, Weimar 1910, p. 15), and soon afterwards governor of Adana. A few years afterwards, he became Beylerbeyi of Anatolia and Rumelia, probably as early as the first year of Sultan Sulaymān, appointed second vizier in 1527 (began December 12, 1520) Kāsim Pasha held a command in the expedition against Rhodes (Chronik des Rustom Pascha, p. 62 at the top). When on Kadijāb 12, 929 (May 27, 1523) the Egyptian governor Muṣṭafā Pasha was dismissed, Kāsim succeeded him but lost the office with 34 days (on Sha’bān 16, 929 = June 30, 1523) (cf. J. von Hammer, G. O. K., iii. 35). A few months later, when in Rabī‘ II (February, 1525) the traitor (ḵā’in) Āḥmed Pasha, his successor, was slain in a rising, he went to Cairo as governor for a second time but was again dismissed by March, 1525. Down to 935 (beginning September 15, 1528), when he once more became second vizier, he seems to have held a government (”Bażīr“). Occasionally he was called on to attend to some sources, but which could only have been a temporary appointment). In May, 1533, the Fleming C. D. Schepper, envoy of the Hungarian royal widow Maria, saw him in Stambul as vizier along with the Grand Vizier Ibrāhīm Pasha [q.v.] and Ayās Pasha (d. July 13, 1539): Cassim Basa a la face plus grande et rouge et n’est si grand que le dict Ayas (op. cit., p. 169). In 1537 he was governing the Morea and sandjakbeyi at Modon; in the summer of this year he attacked unsuccessfully the two last bulwarks of Venetian rule in the Morea, Nāpoli di România and Malvasia (cf. Zinkeisen, G. O. K., ii. 771, 785). He may have then fallen into disgrace and lived in exile. The date of his death is uncertain. In 939 (began December 29, 1551), however, he seems to have lived in the Morea in non-activity; cf. ‘Atīr, Dhoi on the Shakīk al-ʿAmal-ulūnyā, p. 23. In 944 (began June 10, 1537) he had a madrasa built for the poet Surūrī [q.v.] in the garden of the turbe of Mehmēd Yāziddī Oghlū [q.v.] which is now burnt down (cf. ‘Artī, op. cit., p. 27); he cannot have, therefore, died in 939 (1532). It is certain, however, that he was buried in Gallipoli.

Kāsim Pasha earned lasting fame from a series of pious foundations and by building a mosque, a madrasa and a bath in Stambul. To this day one of the most important quarters in Constantinople, the Byzantine “Suburb of the Spring” (krenides or pegal) is called after him Kāsim Pasha mehālesi (cf. J. v. Hammer, Constantinople and the Bosporus, Pest 1822, p. 55 sqq.; Evelīyā, Siyākatnāme, i. 169, 416 sqq.; The Travels of Evelīyā, transl. by J. v. Hammer, London 1834, i; Hāfīz Husain, Hadiḵat al-Dīwānāmī, ii. 2 sqq.; J. v. Hammer, Geschichte des osmanischen Reiches, ix. 106 sqq.). His daughter Neftise Khutan also endowed a school and is buried in it; cf. Hadiḵat al-Dīwānāmī, i. 48-53.

Bibliography: In addition to the works quoted above: Sīdīlī ʾatīmānī, iv. 46 sqq. (defective and inaccurate); Geoffroy, L'Estat de la Cour du grand Turc, Paris 1542, fol. 10v; Guil. Postel, La tierce Partie des orientales Histoires, Poitiers 1560, p. 61 sqq. (Casino Bassa du temps qu’il estoit Basa, avoit 20 mille ducats, il en peut avoir autant, de Sangrevale de Morea. Maintenant en son lieu est Meushafa Bassa).}

(Franz Babinger)
KASIMOV, in Russian originally gorod tse or gorodok meshechsky, in Tatar Khan Karmän, formerly the capital of the Tatar princes subordinate to the Czar of Moscow and now a district capital in the government of Ryazan. It took its name from Kasim, son of the founder of the kingdom of Kazan, Ulu Muhammad. In the wars between the brothers that followed the assassination of Ulu Muhammad (1446), Kasim was engaged in the service of the Russian Grand Duke. The town, which bears his name, was granted him about 1452 (not later than 1456); there he built a mosque (of which only the minaret still exists) and a palace of stone (no longer standing; it was seen as late as 1768 by Pallas). After his death about 1469, his son Daniyar reigned till about 1486. Kasimov was next under the rule of the prince Nur Dawlat of the Giray dynasty and his sons Satighan and Djanaï. About 1512 Shaïkh Awiylar (grandson of Khan Kučak Muhammad), descended from another branch of the descendants of Djoe, is mentioned as prince of Kasimov. In 1516 his son Shâh 'Ali (he is so called in his epitaph, but is usually known as Shaïkh 'Ali, Russian Shigaley Shigavliyovitch) was reigning (nominally). After a life of vicissitudes (he was repeatedly appointed Khan of Kazan by the Czar and then deprived of all his dignities and condemned to the severest imprisonment, then pardoned and again restored to his principality), Shâh 'Ali died childless, aged sixty-one, on Monday, Shawwal 10, 974 (April 21, 1567). The tâkya built by him in Ramadân, 962 (July-August, 1555), in which are his tomb and the tombs of several of his relatives, has been several times described, first by Pallas in the year 1768, most recently by Welyaminov Zernov in 1863. During his rule in Kazan, his brother Djân 'Ali represented him in Kasimov and later ruled for a short time (1532–35) in Kazan also until he was murdered during a rising there. The "Czar" Shâh 'Ali was succeeded in Kasimov by his distant relative Séyin Bulât, great-grandson of the Khan of the Golden Horde Ahmed. In 1573 he adopted Christianity, received the name of Simeon, moved to Moscow and was there given by Ivan the Terrible the title of "Czar of all the Russians". He died in 1616 as the monk Stephen. It was not till 1585 that a successor to him was appointed in Kasimov, Mustâfa 'Ali, whose father, Abd Allah b. Ak-Kubak, also a great-grandson of Khan Ahmed, died in 1570 and was buried in Kasimov. About 1600 we find mentioned as prince of Kasimov Uzay Muhammad of the family of Khans of the Kizir Kazak, who afterwards took part in the fighting during the civil war in Russia and was killed in 1610. The last rulers of Kasimov were Arslân (grandson of the last Siberian Khan Kučum) and his son Saiyyid Burhân, descended from the house of Siberian rulers; the latter, first mentioned as ruler in 1627, was baptised between 1653 and 1655 (he received the name Wâsîliy) and yet remained prince of Kasimov till his death soon after 1678. To this period belongs the forcible conversion of a part of the Tatars by Mesaiyl, Archbishop of Ryazan (1651–56); in one of these attempts at conversion the Archbishop was killed by the enraged populace. The verse from the Korân (iii. 52), constantly quoted in epitaphs in Kasimov, seems to have been placed there in antagonism to the zeal of the Christian missionaries.

Even under Wâsîliy the administration of Kasimov was in the hands of a Russian woyewoda; the Tatar prince exercised only nominal rule. The mother of Wâsîliy, Fâtma Sultan, was re-elected as ruler in the years following Wâsîliy's death on the first terms; she is last mentioned in 1681. After this there was no "Czar" or "Czarevitch" (sometimes one, sometimes the other title is used) of Kasimov any longer. In the modern district capital of Kasimov the Tatars only form a comparatively small part of the population, according to the census of 1897, 13,545 souls (according to Reclus, as many as 14,100 in 1870), including 1,539 Tatars, in 1909, 17,075, including 2,000 Tatars. The Bullgar industries (tanning and shoemaking; cf. above, i. 7858), introduced to the Russians through Tatar intermediaries, are especially followed in Kasimov.

Bibliography: The most thorough and still indispensable, although several new documents have since been made available, is Wilyamnov Zernov's great work "Istoïa Kasimovskij Zarey zi zarevčity" (4 vols., Trudi Vost. Okt. Imp. A. Arch. Obšč., ixxi–xxi), based as all that has been written about the princes of Kasimov in the west, especially Howorth, History of the Mongols, ii. 429 sqq. Cf. moreover recently N. Lîچelay, Simen Bekbudovitch, Trier 1891, review by D. K.obeiko in the Zap. Vost. Okt., viii. 335 sq.; N. Shishkin, Istorya giroda Kasimova, 1889; review by V. R.osen, ibid., v. 122 sq.

(K. BARTHOLOMEW)

KAŞIYUN, a bare and rocky massif — the summit is over 4,000 feet high — commanding in the north-east the Ghiţa [q. v.] and dominating Şâlihiya, the suburb of Damascus. It lies between the valley of the Barada [q. v.] and that of the Halbûn. The Nahî Yazid which flows out of the Barada runs along the foot of Kaşiyun. There they venerate the birthplace of Abraham on the slope adjoined the village of Barza. This mountain has been famous since remote antiquity as a place of ascension and retreat of prophets ("Ibn Džumâh, Adam is the name of the stars") and Cànik killed Abel there, whose body was buried on this "sacred and most venerated mountain" (Yşakat), which is covered with sanctuaries. The encyclopaedists and the historians of Damascus associate its history with several thousand of myths and prophet and his name received between the Bab al-Farâdis and the slopes of Kaşiyun.

(H. LAMMENES)

KASKAR, the name of a town in the 'Irâk. When al-Hadîjâdîd [q. v.], the governor of the 'Irâk appointed by the Caliph 'Abd al-Malk, had put down the rebellion there, he began in 850–856 (702–705) to build a new town which was called Wâsî ("centre") because it was midway between the two Arab capitals of this province, Kâfâ in the north and Bâsra in the south. For the site of the town he chose the vicinity of the town of Kaskar on the Tigris, which had played a not unimportant part in the Sâsâniân period. The new Muslim town was built on the east bank of the Tigris, while Kaskar lay opposite it on the west side; a bridge of boats linked the two halves of the city. Neither Wâsî nor Kaskar
exist at the present day and until quite recently their exact situation was uncertain. In looking for the site we must not think of the modern course of the Tigris in Central and Southern Babylonia; in the days of the Caliphs this river ran much farther to the west; its course in those days probably corresponded for a good part to that of the Shatt al-Haiy (cf. i. 6779, 9709). Kaskar-Wâsit certainly lay somewhere in the neighborhood of the modern Kut al-Haiy (cf. i. 6779, 9709).

According to the results of an archaeological journey by Count Aymar de Liedekerke-Beaufort (see Babylonica, vii., Paris 1922, p. 115) the now insignificant ruins of Wâsit lie almost 25 miles west of Haiy on the dry Tigris bed of Shatt al-Khâdir. On the other hand the map of Mesopotamia (Sheet Baghûdâ, 5 d) published by the General Staff in Berlin 1917, puts Wâsit about 15 miles N. E., as the capital of the seventh district of Kut al-Haiy. On the modern ruins of Wâsit see also the notes by Mas'ûd signon based on information given by a native of the district in his al-Hailâj, Martyr mystique de l'Islâm, Paris 1922, p. 23. For further information on the site see the article.

As to Kaskar, it probably dates back into the Assyrian period. It may be recalled that we seem to have a Babylonian town Ka-as-ka-ri mentioned in a fragment of an inscription probably of the time of Assur-bani-pal, in the British Museum (i. 1882: 3—23: 128; see Beold, Catalogue, p. 1824); cf. Streck, Assurbanipal, Leipzig 1916, p. Lxxviii.

The place is perhaps also mentioned in the Babylonian Talmud (Yoma, fol. 104, where Baghûdâ has probably been corrected into Kashkar); see Marquart, Erânakhr, Abh. G. W. Göt. d. New Series, iii., No. 2, Berlin 1901, p. 164. In any case Kaskar was known in Syriac and Christian Arabic sources, is one of the oldest Christian towns in Babylonia. It frequently appears in the ecclesiastical history of this region. The episcopal diocese of this name was considered second in importance within the Nestorian church. Its occupant was the right arm of the patriarch of Seleucia — Ktesiphon (see MADDIN) and his representative when the office was vacant.

Among the signatories to the acts of the Syriac councils we find bishops of Kashkar from the period 410—750 (Gilli in Z. D. M. G., xliii. 411 and Chabot in the A. E., xxxvii, Paris 1905, p. 675). According to the Syriac "chronicle of Arbelâ" there was a bishop of Kashkar as early as the first half of the third century A.D. The Christian Arabic "Chronicle of Secert" also mentions an occupant of the episcopal see there of the period before 410 A.D. On the bishopric of Kashkar and a list of its occupants see J. Labouret, Le Christianisme dans l'empire perse sous la Dynastie Sassanide, Paris 1904, passim (s. the Index s. v.); Sachau, Die Chronik von Arbeba (= Abh. Pr. Ak. Wiss., 1915, No. 6), p. 21; Sachau, Zur Ausstellung der Christentums in Asien (= Abh. Pr. Ak. Wiss., 1919, No. 1), p. 30—31.

The town of Kashkar, like the bishopric which bore this name, was the home of many founders of monasteries, as may be seen from the work compiled in the eighth century by Jeshi'dî, entitled K'tâba hâlî makhshî (ed. Chabot in Mélang. d'archê, et d'histoire de l'Ecole Française de Rome), xvi., Paris 1896, p. 225 sq.; the Great Abraham (d. 588) was especially famous, s. Jeshî'dî'shî No. 14; Labouret, op. cit., p. 315;
the denominators 3 to 10, i.e. \( \text{thith} \left( \frac{1}{10} \right), \text{rafi} \left( \frac{1}{9} \right), \text{khuwu} \left( \frac{1}{8} \right), \text{sud} \left( \frac{1}{7} \right) \) etc. In other cases, e.g. instead of \( \frac{1}{11} \), one writes "five out of eleven parts". If the denominators can be broken up into factors, the following formula is used: \( \frac{\text{sixth}}{10} = \text{one sixth} \) of one eighth. The fraction \( \frac{1}{4} \) is expressed by \( \text{nis} \) (half).}

**KAŠR,** a palace, castle, mansion or pavilion, in which sense it is synonymous with the Turkish kāşk. The word occurs in the Kurān three times, once in the singular and twice in the plural (kāšār), and is applied twice to castles on earth and once to the abodes of the faithful in Paradise. It is the common word for the palace of a king in his capital or of a governor in the chief city of a province, e.g. Kāšr-i Kāshār, the Palace of the Kāšārs, near Tbrān. The word, with the article, has been naturalised in Spanish as alcázars and is applied to old Moorish castles, such as the alcázars of Segovia and the alcázars of Seville.

**Bibliography:** E. W. Lane, *An Arabic-English Lexicon*, s.v.; Stanley Lane-Poole, *The Moors in Spain*, London 1872, (T. W. Haig)

**KAŠR FĪRA’WN** is the name given by the Moors to the ruins of the Roman city of Volubilis, which lie in a little valley of the Djbal Zarhūn about 20 miles N. of the present Meknès. Volubilis, at the entrance to the fertile plain of the Wādi Rdom in a district where the olive-tree flourishes, was the principal Roman centre of the interior, although it lay almost on the southern edge of the zone effectively occupied by the Romans. It was still a flourishing town in the fourth century A.D. In the fifth the Vandals, without establishing themselves there, put an end to Roman power in Morocco. The Byzantines, when they reconquered the country in the seventh century, had no effective authority outside of the north coast. There is reason to believe, however, that Volubilis left to itself was not depopulated but there grew up there, as in other parts of North Africa, a kind of state, comprising the remnants of the urban populations, romanised Berbers for the most part, and the surrounding tribes under the authority of a native chief. Little by little, in the course of these two centuries this region became the centre of the great Berber confederation of the Brānēs, the dominant tribe of which at that time was the Awağa (Warba) and the chief, at the time of the Muslim conquest, Kosalla (whose capital some authors have tried to locate in the Awağa, which is untenable). When the Berbers, who under the leadership of this chief, had overcome 'Oğba b. Nāfi' and succeeded in driving the Arabs out of the whole of Africa Minor (63 = 683), had to abandon Kašarān again five years later, the Warba contingents having lost their chief and having been severely punished, returned to Walīti (Ullī = Volubilis (68 = 688). These events much diminished the power of the Warba. Henceforth they lived quietly, taking no part in the great Kāšārījī risings which began in 122/740, but recuperating their strength, until the day when, after the battle of Fakkāh, Idrīs b. 'Abd Allāh b. al-Hassan b. Allī (of the art. Idrīs I, above, ii. 450) settled in Ullī, where he was received by Išḥāq b. Muḥammad, chief of the Warba (172 = 788/9). He was soon recognised as sovereign by the Waḥba and ultimately by all the surrounding tribes either voluntarily or under compulsion. Ullī became the capital of a state stretching from the Atlantic to the region of Tiemcen, the first Muslim empire in Morocco and the centre of intense missionary activity among the heretical tribes and those which had remained Jews, Christians or pagans. It was there that Idrīs died in 177 (793), poisoned, it is said, at the instigation of Hārūn al-Rashīd. His son Idrīs II (q.v.) continued his policy of conquest and conversion, but in 192 (808) abandoned Ullī for Fāṣ which he had just founded, no doubt in order to escape from the tutelage of the Warba, whose chief Išḥāq b. Muḥammad he had killed. When he himself died in 213 (823) he was buried beside his father in Ullī, according to most of the earlier authorities. But in 841 (1437) his tomb or at least a tomb reputed to be his was discovered, conveniently for political reasons, in the Djamī al-Shurafa in Fāṣ; and this tomb has become the most popular sanctuary in the town founded by him.

After the building of Fāṣ, Ullī lost all political importance. The Zarhūn remained a much visited place of pilgrimage. Around the sanctuary of Idrīs rebuilt two centuries ago by Sultan Isma‘īl, two miles from the ruins of Volubilis in a very picturesque situation of two mounds commanded by higher hills, stands the town of Mūlay Idrīs of the Zarhūn with about 9,000 inhabitants, the majority Idrīsī sharīf's.

The Idrīsī town of Ullīn, of which no remains seem to survive, probably lay on the site of the present town, a remarkable natural fortress. Excavations systematically conducted since 1915 in the Roman town have already yielded interesting results, bringing to light inscriptions very important for the history of the settlements of the Romans in this region and works of art of the first rank.

**al-KAŠR AL-KABİR** (Kašar al-Kabīr), a town in Northern Morocco, about 50 miles south of Tangier on the right bank of the Wādi Lūkkos, which at one time ran through it, but the course of the stream was diverted to prevent inundations. Lying in a vast plain commanded on the east by heights it is divided into two parts, al-Shari‘a in the north and Bāb al-Wādī on the south, between which lies the suq or market-place. The only buildings of any importance are the great mosque which is pre-Almoravid, the mosque of Sidi al-Azmī and the Djamā‘ al-Saida, finished in 1089. Within and around the town are many knubba’s dedicated to local saints. The most venerated marabouts are Abu al-Hasan al-Kurshī (Kursāsh), a native of Spain who came towards the end of his life to teach in al-Kašr, where he died in 508 or 573 (1112-75 or 1177-1235). Sidi Ben Ahmed, Sidi Ali b. Khlef b. Ghalib, usually called Mūlay ‘Ali al-Ǧahāl and regarded as the patron saint of the town, and lastly Sidi Bel-‘Abbās, who is really a Jewish rabbi, Vīda Yabalay.
The population numbers about 9,000 belonging for the most part to the Khbôt, Tîk, and Djbâla. It also includes Risans, a few families originally from Tétwan and Fès as well as Algerians who left Tlemcen and Oran as a result of the French occupation. The Jews number 2,000. Many of them have settled in the town quite recently in such numbers that the Melîb was too small for them and they had to live among the other inhabitants. They speak Arabic and Spanish but Muslims use only the former language. Industry at one time flourishing is now limited to the manufacture of cloths for local needs. Agriculture, on the other hand, is prosperous in the country around as a result of the system of combination between townspeople and tribesmen. Al-Kašr is thus a busy market for corn, barley, beans and flax.

History. The site of al-Kašr perhaps corresponds to that of a Roman town (Oppidum novum?) which had already disappeared by the time of the first Muslim invasions. In the second century A.H., a fortress was built in these regions by the Danhâda, a branch of the Kartâm. According to Zîyânî, it was built in 970 (1070) by al-Mami Abd al-Karîm al-Katami whom the name Kašr 'Abd al-Karîm (al-Idrisî, Description de l'Afrique, ed. Dozy and de Goeje, p. 78; transl. p. 89; Kitâb al-Istîhâr, ed. von Kremer, Vienna 1852, p. 78; transl. Fagnan, Constantine 1900, p. 140; as well as Ibn Khalîlûn, Hist. des Berbères, ed. de Slane, i. 401; transl. ii. 323) or Kašr Kétâmâ which the town kept for several centuries. Al-Bakrî, however, makes a distinction between Süy Kétâmâ "a large and magnificent town situated on the river Lukkos with a djami and a very busy market" and Kašr Danhâda "a castle built on a hill and commanding a large river". Ibn Khalîlûn, on the other hand (op. cit., text i. 188, transl. ii. 291), connects Kašr Ketâmâ with the Danhâda (cf. also Kitâb al-Istîhâr). Süy Kétâmâ was the capital of the state governed by Idrîs b. al-Kâsim b. Ibrahim. Al-Makaddasî (Bibl. Geogr. Arab, iii. 219, 2) mentions Süy Kétâmâ among the towns dependent on Fès. Although eclipsed by the rapid development of Fès, al-Kašr seems to have retained a certain amount of commercial importance. Al-Idrîsî (loc. cit.) mentions its very busy bazaars. But it was only under the Almohads that the town rose out of the semi-obscenity in which it was vegetating. Yaqwub al-Manṣûr surrounded it with a fortified wall and made a hunting-ground and a hospital called Hârat al-Mudjârin. This is perhaps why he was regarded by Leo Africanus and Marmol as the actual founder of al-Kašr. Under the Marinid dynasty, the town was given a madrasa by Abî 'Inân which attracted many students and was still frequented in the xivth century. Al-Kašr recognised the authority of the Marinids from 620 (1223-1224). In 687 (1288-1289) the latter appointed as its governor the Ra's Abî 'l-Hasan b. Ashkilkîla, whose descendants for long remaining lords of the town. The memory of this local dynasty, whose members, in alliance with the Banu 'l-'Amr of Granada, distinguished themselves in the holy war, is still alive today.

The period following the disappearance of the Banu Ashkilkîla was one of calamities. The Portuguese, established on the coast, threatened the town. The inhabitants did not dare to cultivate the soil more than six miles from the walls. In 1503 the governor of Aqila, Don Juan de Menecez, attempted to take it but without success. In the century following, al-Kašr became the most advanced post of the "volunteers of faith" (Mudjâhidîn) who harassed the Christians settled on the coast. During the period of anarchy that preceded the establishment of the Filîlî dynasty, the town became the residence of the Ka'id Ghalûn, who had gained possession of all Gharb. Driven from his capital by Mûlay al-Rashîd in 1798 (1098), Ghalûn was able to return to it on the death of this prince. He held out there till 1804 (1673) when he was defeated and killed by Mûlay Ismâ'il. Al-Kašr fell again, this time finally, into the hands of the Sharîf, who dismantled its walls.

Al-KAŠR AL-SÂGHîR, a town in Morocco, now in ruins. It lay on the south bank of the Strait of Gibraltar, 14 miles W. of Ceuta, 23 miles E. of Tangier, at the head of a bay sheltered by a spur of the Djebel Ghomari at the mouth of a navigable river.

In ancient times this site was perhaps occupied by a Phoenician factory and then by a Roman town (Lissa or Exilissa of Potlemy). A fortress was erected there quite early in the period of Muslim occupation, in 9 (708/9), according to al-Zîyânî, Archives Marocaines, vi. 494, on the territory of the Maison which the name of Ma'sûmâ whence the name of Ma'sûmâ (cf. Ibn Khalîlûn, Hist. des Berbères, ed. de Slane, i. 280, 13; transl. ii. 134) which is given by the author of the Kitâb al-Istîhâr and by al-Idrîsî. Al-Bakrî calls it al-Kašr al-Awwal to distinguish it from al-Kašr al-Kabîr [q. v.]. According to him, it was inhabited by the Banu Tarîf and surrounded by great plantations. Under the Almohads it took the place of Marsâ Mûsâ as the port of embarkation for Spain. Many authors call it therefore Kašr al-Majdî (Geogr. d'Aboul-fida, transl. Reinau, i. 185; Ibn Khalîlûn, loc. cit.), or Kašr al-Djâwâ "Castle of the crossing" (Ibn Abî Zârî, Rawd al-Kirèsât, ed. Tornberg, p. 138, 143, 146). The Almohads erected important buildings in it and established naval dockyards there. But the prosperity of the town declined in proportion as the rulers of the Maghrib lost their hold on Spain. Deprived of the income which the transport of the armies had assured them, the inhabitants turned to piracy. Al-Kašr therefore became one of the first towns that the Portuguese sought to capture. In 1458 King Alfonso V attacked it with a fleet of 80 ships and an army of 17,000 men; after repelling
two assaults, the Muslims, overwhelmed by the Christian artillery, capitulated. They were, however, granted permission to retreat with their arms and baggage. Alfonso V entered the town on Oct. 10, 1458. The great mosque was turned into a church, the fortifications were strengthened and a garrison installed under the command of Don E. de Menezes. Two attempts made by the Sultan of Fass in 1458 and 1459 to recapture the town did not succeed. In 1463 the tribes of Anjara recognized the suzerainty of Portugal and in 1471 Sultan Muley Sa'id signed a treaty by which he ceded al-Kaşr to the king of Portugal. Al-Kaşr remained in Christian hands till 1540 but during this period it was continually being attacked by the Moors. John III therefore decided to evacuate it after previously dismantling it. Some years later (1550) a French prince, Antoine de Bourbon, king of Navarre, obtained al-Kaşr in exchange for the men-at-arms that he was to supply to the Sharif of Fass but the intrigues of the king of Spain, Philip II, prevented the treaty from being carried out. Since that date no attempt has been made to rebuild the town. The inhabitants abandoned it and the harbour became silted up and no longer used except by smugglers. The site is marked by the ruins, still imposing, of the Portuguese fortress, by ditches, the remains of the wall and the ruins of the gate through which the citadel communicated with the town proper.

(G. Y. E.)

**Kaşr-i Shirin**, a town in the south-western part of the district of Ardîlan or Persian Kurdistan (cf. Ardîlân) in 34°30' N. lat. and 45°30' E. Long. (Greenwich) on the right bank of the Huwîn-rusually called, as the Kurds call it, the Alwân or Alwând. This river alters its course, hitherto east to west, at Kaşr-i Shirin to a southerly one and enters the Diyâlî [q. v.] at Zeugmâd. To the west and south-west of Kaşr-i Shirin lies the great range of Agh-Dagh; in the S. E. also on the left bank of the river run imposing mountain chains. Kaşr-i Shirin was an important caravan station from the earliest times. The most important route through it is the very old road from Baghâd to the Iranian highlands — the **Turîf Khorwâân** of the Arabs of the middle ages (cf. above, i. 925a). Kaşr-i Shirin lies about halfway between the two stations of Khânhîn [q. v.] in the south-west and Sari-pul (in mediaeval times Huwîn, S. of Sari-pul; see **Sarful-i Zohûr** in the east. Less important roads also branch off here to north, north-west and south-east.

The modern Kaşr-i Shirin (1600 feet above sea-level) is an insignificant town surrounded by a wall of earth and stone. Outside the walls on the east is a commodious caravanserai; to the west is a fort of modern style which, according to Aubin (op. cit.; see the **Bibl.**), Dowân Mir built at the beginning of the sixth century and plundered passing pilgrims to Kerbelâ and merchants from it until he was captured and killed. The population of the town, which de Morgan estimated at 3,000—6,000, is Kurdish. Shâh Abûâhisîh inscription (1587—1628) transplanted to the region of Kaşr-i Shirin to guard the Turco-Persian frontier 900 families of the Kurdish tribe of Sandjâh (on which see Rawlinson in the **J. R. G. S.**, ix. 33; for a Lur branch of this tribe cf. Rabino, **Les Tribus de Louristan**, Paris 1916, p. 17). A Lur chief acts as Persian governor of Kaşr-i Shirin. Since the beginning of the eighteenth century there has been a small customs house here. Opposite the town on the left bank of the river lies the Bagh-i Shâh = "King’s Gardens", a park laid out with date palms, orange and pomegranate trees by Naşr al-Dîn Shâh on the occasion of his pilgrimage to Kerbelâ.

The most remarkable feature at Kaşr-i Shirin, which makes it one of the most interesting places in Persia to the historian or archaeologist, is the extensive system of ruins dating from the Sassanian period in its vicinity. The name Kaşr-i Shirin, "Shrine Palace", dates from the later period of the Sassanian empire. Shirin, a Christian, was the favourite wife of Khusraw II Parwêz (560—578) who called the great palace built by him as a summer residence after her. Kaşr-i Shirin and the neighbourhood was the scene of the unhappy love-story of Shirin and the royal architect Farhâd, which plays a great part in the romantic poetry of Persia; cf. above, ii. 67, and Justi, **Iranisches Namenbuch**, Marburg 1895, p. 1028. A rock tomb south of Kaşr-i Shirin, for example, is popularly known as Utâk-i Farhâd = "Farhâd’s chamber"; see Sarre and Herzfeld, **Iranische Felsreliefs**, p. 10. The famous late-player, Bûrbûd (on him see Vullers, **Lexic Persico-Lat.**, i. 168, and Justi, op. cit., p. 63) also spent some time at the imperial court at Kaşr-i Shirin; he also plays an important part in the cycle of legends which centre round Khusraw Parwêz. Among the 30 melodies or songs which he composed for the king (see the list of them in Vullers, op. cit., ii. 359) there is one (No. 4 in Vullers) entitled Bagh-i Shirin = "Shirin’s Garden"; another (No. 30 and cf. also Vullers, ii. 129b) is entitled Nâzâkîra = "Hunting Song", probably the Bagh-Nâzâkîra in Yaqîb, iv. 113, 13. Both songs obviously refer to Kaşr-i Shirin, the summer-residence and hunting-palace of the Sassanian ruler.

The period of Kaşr-i Shirin’s glory was only a brief one. Ten years after the death of Khusraw II the Sassanian empire collapsed before the onrush of the Arabs and in the Muslim period the palaces of Kaşr-i Shirin seem to have been no longer inhabited. They fell quickly into ruins, mainly as the result of the poor quality of the building-material used. Al-Yâkûtî (B. C. A., vii. 270) as early as 278 (509) talks of the ruins. Ibn al-A‘lîr (ed. Tornberg, viii. 388) mentions
that as a result of an earthquake in 345 (950) the walls of Kašr-i Shirin were cracked. The Arab and Persian writers including Ibn Kohe, Yākūt, al-Kazwini and Ḥamd Allāh Mustawfi, emphasize the great scale of Kašr-i Shirin with its halls, horsenages, treasure houses etc. and the splendid gardens containing very rare animals roaming at large in them, but give no detailed descriptions. Yākūt and al-Kazwini give especially the story of the origin of the palace, which the former (Ma‘lid, iv. 115) actually regarded as one of the wonders of the world.

We owe the most accurate description of the modern ruins to the French expedition of J. de Morgan. The main ruins lie on a broad plateau N. E. of the modern town. Near the latter is the quadrangular citadel of Khusrav flanked by 6 round towers (called Ke‘lā or Kašr-i Khusrav, also Ke‘lā-i Khusrav) surrounded by a ditch. Built as barracks for the ruler’s troops, we have preserved in it one of the rare perfect examples of the military architecture of the Sassanians.

North of the Ka‘lā are further mounds of ruins of the object of which we do not know. About 500 yards to the N. E. we reach the wall of a gigantic park in shape not quite regular oblong, enclosing the summer-residence proper of the king, measuring, according to de Morgan, 300 acres. The wall round it which also served as an aqueduct, the highest part of which reaches 20 feet, is about 6,000 paces in extent. Another aqueduct-wall divides the park into two parts. The requisite water for the irrigation of the gardens was brought from the Hulwān-Rūd and, as already observed, led farther along the top of the miles’ long surrounding wall; the aqueduct can still be traced in the Hulwān-Rūd valley until it is lost in the maze of ruins of Hāwsh Kūnī. In the centre of the whole scheme is the main palace, now called ʿAmārāti Khusrav (= house of Khusrav) or Hādjiqī Kāfe-sey (= pilgrim palace). It is a vast building lying east to west (1080 feet long, 625 feet broad) with vaulted rooms and a long terrace in front which is still mostly imposing with its huge dimensions and colonnades. Before the palace still exists a 600 yards long stretch of the aqueduct flanked by two kiosks. West of the ʿAmārāti Khusrav stands a smaller similar vaulted building with 4 doors and a square principal chamber. It is now called Chār Kāfu or (pure Persian) Čar Dāvari = “Four Doors”, or Ka‘fā-i Chār Kāfu = “Palace of the 4 Gates”. The object of this building (perhaps for audiences) is obscure.

About 3 miles E. of Kašr-i Shirin is another late Sassanian ruined palace, called Hāwsh Kūri = “House of the Horses” (so the name is explained: Kūri = probably Pers. kurrāh, kurāh = colt; Rich gives the name Hāwsh Kerk), because it is popularly believed to contain the stables of the horses belonging to the palace of Kašr-i Shirin. These ruins which consist of a palace 600 feet long with annexes and another mound of ruins are the latest of all the palaces of Parwez so far known.

Kašr-i Shirin is, of course, a town of much greater antiquity than the time of this Sassanian king. A site so favoured by nature must always have invited settlement. So far it has not been ascertained what ancient city — which must have practically occupied the site of the present town — stood here. It was still thought — e.g. by Malcolm, Kinner, Ker Porter — that Dashtārdjīd was here, but this is certainly to be located in the ruins of Eski Bghāṛ (cf. above, i. 926). This erroneous identification was previously attacked by Buckingham, Rich (see Bibl.) and Ritter, i. 84, 590. The ancient Artemisia, a town of Apollonias, has also been supposed — e.g. by Kinner (see Bibl.) — but this is much better located in the region of the later Dashtārdjīd [q. v.]; and Herzfeld in Sarre-Herzfeld, Archael. Reise im Euphrat- u. Tigrisgebiet, ii., Berlin 1919, p. 78. Herzfeld, op. cit., ii. 329, suggests with all reserve an identification of Kašr-i Shirin with the station Danas of the Tabula Peutingeriana; but see against this view my article DANAS in Pauly-Wissowa, Realencyk. der klass. Altertumswiss., Suppl., i. 337. Kašr-i Shirin has not the slightest connection with Kiniwar or Kašr al-Luqā, although there was a great palace built by Khusrav Parwāz there also (cf. on this G. Le Strange, op. cit., p. 188; Schwarz, Iran im Mittelalter, p. 494 sq.); the latter place lay much farther east between Kirkūn, Shāhān and Hamdān. This corrects Caetani, Annot. dell’Ismā‘īl, v. 17, vi. 144 (where Kašr-i Shirin and Kinkiwar are regarded as one and the same).

There is a village 12 miles north of Kašr-i Shirin called Ke‘nd-i Shirin. A short hour’s journey above it are some oil-wells, not, however, very rich, which form part of the Anglo-Persian Oil Company’s concession. On them see de Morgan, op. cit., ii. 81 sq., and Schwer, Das türkisch-persische Erdölwesen, Hamburg 1919, p. 21, 48, 110, 112, 143-144.

Down to the Great War the Turco-Persian frontier, which was not minutely defined, ran about two hours’ journey S. W. of Kašr-i Shirin. On the Persian side the frontier was guarded by the fort of Ka‘li Selzi where a detachment of Sandjābī cavalry was stationed (cf. Aubin, op. cit.). On the place see also Rich, op. cit., ii. 263 (where it is wrongly called Kalai Selzi; Buckingham calls it Khallet el-Suezy). An hour’s journey beyond it is the Turkish frontier-station Ka‘fī Rādīsfy.

**KASRA**, lit. “break”; name of the sign of the vowel i; the vowel itself is called kār.

**AL-KAṬĂLĀNĪ**, Abu ‘l-‘Adbās ˚Ahmad b. Muhammad b. Abū Bakr al-Khaṭṭīr Shihāb al-Dīn al-Shāfī’ī, an authority on tradition and theologian, born on Dhu l-Ka‘dā 12, 831 (January 20, 1448) in Cairo where he spent his life as a preacher — and apart from two stays of some duration in Mekka — and died on Friday, Muḥarram 7, 923 (January 31, 1517). He owes his literary fame mainly to his exhaustive commentary on the Šāhīh al-Bukḥārī entitled Iqrāḥ al-Šārī ‘fi Sharḥ al-Bukḥārī, which exists in numerous MSS. and printed copies; of these latter the earliest may be that of Bu‘lāk of 1267 and next the Lucknow edition of 1869 (others in Brockelmann, *Geschichte der arabischen Literatur*, i. 159). The Cairo edition in 1325/6 gives the glosses of Yaḥyā al-Anṣārī and the Cairo edition of 1279 those of Ḥasan al-‘Idwī (d. 1203 = 1887). In the field of Ḥadīṣ he wrote a Muḥaddidma which was printed at Cairo (n.d.) with the commentary of ‘Abd al-Ḥādī al-‘Abayrī (d. 1305 = 1883). Great popularity is enjoyed in the Muslim world by his history of the Prophet entitled al-Muwaḥḥid al-ladunīya fi ‘l-Mīnak al-Muḥaddida, which he completed on Sha‘bān 15, 899 (May 22, 1494) and caused him to be accused of plagiarism by al-Suyūṭī. It exists in numerous MSS. and has also been printed several times, e.g. Cairo 1281, several times commented on, e.g. by al-Zurkānī (d. 1122 = 1710), printed in 8 vols. Bu‘lāk 1278, 1291, and translated by ‘Abd al-‘Abās into Turkish, printed Stambul 1261. Not long ago al-Nabānī, the President of the Court of Justice in Bāḍrīt, prepared a synopsis of it entitled Al-Anwār al-Muḥaddidma min al-Muwaḥḥid al-Ladunīya, Bāḍrīt 1310–1312. Finally in the same field he prepared a commentary on the Ṣuḥāīḥ al-Shāmī‘ī al-Ṭarīḵī (Geschichte der arab. Litt., i. 162). Besides studying the science of tradition he worked also at the readings of the Kurān. His principal work on the subject is entitled Lāṭif al-İzāhā r li-Funūn al-Kirā‘āt. He also wrote a biography of the teacher of Kurān reading, Abu ‘l-‘Aṣim al-Šāhītī, (C. A. L., i. 409), and a commentary on the Muḥaddidma al-‘Idwārī on Tafsīrīd (op. cit., ii. 202). Finally he also wrote on mysticism and personal piety; among his works in this sphere are his Maṣāḥat al-‘Arīfī, Maṣāḥat al-‘Aṣim fi ‘l-Maṣāḥat wa‘l-Nābi al-muṭafī, and his commentary on the Burda al-Busīrī (C. A. L., i. 265).

**Bibliography**: ‘Ali Bāshā Mūbānār, al-Khaṭṭīr al-Iṣfahānī, Bu‘lāk 1306, vi. 11; Wüstenfeld, *Die Geschichtsschreiber der Araber*, No. 509; Brockelmann, *Geschichte der arabischen Literatur*, ii. 73. (C. BROCKELMANN)

**KAṬĂLĂNĪ** (Kesteli), Muṣliḥ al-Dīn Muṭafī, Ottoman theologian and Hāfiz jurist. Muwalānā Muṣliḥ al-Dīn was a native of Kesteli (from Latif Castellum), a village not far from Brusa, where in after life he built a mosque. From his native place he took the name of Kestelī, or, more impressive, Kaṭălănī. In his youth he attended in Brusa the lectures of the celebrated theologian Khīdīr Pāg in and on the conclusion of his theological and legal studies was appointed teacher in various madressas, for example in Mardin, Demotica (medrese of Urudī Pasha), and finally “guardian”. Next he was for some time kādī of Brusa, Adrianople and in 886 (began March 2, 1481) of Stambul, but in the same year was appointed military judge of Rumelia with the rank of a fourth vizier. He was the first to hold this office separately: it had previously been combined with that of military judge of Anatolia (cf. the art. KĀṬĂLSKY). At the same time Hādīǧī Ḥasanāzāde Mēhmed Efendi was appointed the first independent military judge of Anatolia (cf. J. von Hammer, *G. O. R.*, ii. 246). In 891 (1486) he was deprived of his office. He died in 901 (1495–1496) in Stambul where he was buried in the cemetery of Esref. — The Hanafi Kaṭălănī composed a number of popular works in Arabic including highly esteemed marginal glosses on the commentary of al-Tāfażzīnī on the ‘Aqā’id al-an-Nasīf (cf. Hādīǧī Khalīfa, Ḥāfiẓ al-Zanūnī, iv. 226, as well as Brockelmann, *G. A. L.*, i. 427, which, however, belongs to ii. 196; MSS. in Berlin, No. 1973, and Leiden, No. 1998) as well as an essay on seven doubtful matters (Aṣḥāb) in the Jurdānī’s commentary on al-Iḍī’s Kitāb al-Mawāki‘ī fi ‘l-İzāhā r al-Kalām (Hādīǧī Khalīfa, vi. 240), also a work Tanfīl al-Masʿīlīn (Hādīǧī Khalīfa, ii. 442), an essay on the orientation of the Kitāb (Risāla fi Dīyāt al-Kitāb; cf. Hādīǧī Khalīfa, iii. 387) and lastly a work called Yaḥyā Dhu‘ayf al-Tarīḵ (cf. Hādīǧī Khalīfa, vi. 511).

**KAṬĂMŬNĪ** (in the Arab geographers, Abu ‘l-Fida‘, al-Dimashkī, Ibn Bassātīn, Ibn Biābī and on the coins Kaṭămūnīya with variants; al-Iṣrī‘ī, ed. Jaubert, ii. 321: Kaṭămūnī; ibid., p. 393: Tama‘ūn; the Kaṭămūnī of the Byzantines, in Chalcodýnys, corresponding to the oriental form, Kaṭămūnī; corrupted in various ways by Western writers: Albertus Aquensis: civitas Constantia; Clavijo: Castamoc; Benedetto Dei: Chastarumina, Cattinma; Menavino: Castelmol; with modern Greeks and Europeans: Kastamolos; cf. Leundavias, *Hist. Musulm.*, col. 313, 40, a town in N.W. Asia Minor, capital of the vilâyet of the same name, which corresponds to the ancient Paphlogonia. The town is not mentioned in classical literature although the rock tombs there show that the place was settled in historical times. In the middle ages Kaṭămūnī was famous as the family stronghold of the Gaṭṭaounī, who waged a desperate warfare with the Danishmand-oghlu and the Saldjiqs for its possession until it was finally lost to the Byzantines about the middle of the 14th century A.D. The town then passed, along with the other possessions of the Danishmand-oghlu, under the sway of the Saldjiqs of Könya and formed a beylerbeylik, which was hereditary in the family of Hūsān al-Din Cōbān. On the break-up of the Saldjiq
KAŞŤLIYA, the name given by Arab writers to the district of Tunisia adjoining the Shuṭt's and to Tawzer, the most important area in Tunisia. Its boundaries are rather difficult to determine. The descriptions by Ibn Iḥawṣ and al-Ṭibrī refer only to the town of Kaşṭliya. Al-Bakrī, on the other hand, distinctly distinguishes between the town and the district. "The land of Kaşṭliya," he says, "contains several towns, such as Tawzer, al-Ḥammar and Neṣfa. Tawzer, which is its metropolis, is a large town." In another passage he refers to Tawzer as marking the eastern limit of the land of Kaşṭliya. 'Abd al-Wahhāb al-Marrakushi opposes the land of Kaşṭliya, "formed by Tawzer and the cantons attached to it" to the "Zāb, which includes Bišrā and its dependencies." Ibn Khaldūn (Histoire des Berbères, ed. de Slane, i. 646; transl., iii. 156) includes among the dependencies of Tawzer the "cantons" of Kaşṭliya, to the south of the Shuṭt al-Djarid and Neṣfa. The same indications are given by al-Zarkušī. Ibn Khaldu'n (op. cit., i. 122; transl., i. 192), on the other hand, seems to identify the Bilād al-Djarid with the land of Kaşṭliya. After enumerating among the towns of the Bilād al-Djarid, Neṣfa, Tawzer, Gafṣa (Kafṣa) and the places in Neṣfa, he adds: "All this country is called the land of Kaşṭliya." The Shanī al-Tidānī, in his turn, applies to Tawzer the description "capital of al-Djarid." From the fifteenth century onwards, we no longer find the terms Kaşṭliya and land of Kaşṭliya as the name of a district or of a town, but only those of Tawzer and Djarid, still in use at the present day. The enumeration of the towns of Africa given by al-Kairawāni (Kitāb al-Muṣnis, transl. Pellissier and Remusat, p. 28) in which Kaşṭliya is mentioned is probably taken from an earlier writer. In brief, the land of Kaşṭliya seems to correspond very well with the present Djarid, i.e. to the group of oases (Neṣfa, Tawzer, al-Udŷāna and al-Ḥammar) occupying the isthmus which separates the Shuṭt al-Djarid from the Shuṭt al-Ḫarsa and perhaps to al-Neṣfa. The Arab authors are unanimous in praising the wealth of the land of Kaşṭliya. The cultivation of dates and other fruit-trees, watered with great care, was very flourishing there. Flax, indigo and sīnāna were also grown. The fields of sugar-cane, noticed by Ibn Iḥawṣ, were beginning to disappear by the time of al-Bakrī and soon afterwards vanished. Commerce was active and prosperity general. In the time of al-Bakrī the taxes of this area amounted to 200,000 dinārs a year.

The population was composed for the most part of Berbers, many of whom practiced Kharīḍī doctrines or, as at Neṣfa, Shī'a doctrines. Al-Muṣaddasī (Bibliogr. Arab., iii. 243, 244) and al-Bakrī mention that cypnographica was practised among them. According to al-Tidānī, they lived alongside the Berbers of the Rūm, who occupied this region the Berbers the descendants of the Rūm. When this Shanī visited Tawzer the remains of Christian churches were still to be seen. Ibn Khaldu'n (op. cit., i. 646—647; transl., iii. 156) says that there were in al-Neṣfa and the land of Kaşṭliya people of Frankish origin, whose ancestors had come from Sardinia and settled in the country as tributaries of the Muslims to whom they paid poll-tax.

Bibliography: Ibn Ḥawṣal, Bibliogr. Arab., ii. 67, 69, 1—3; transl. de Slane, Journ. As., 1842, third series, vol. xii. 243, 248; al-

empire, the Turkmen-İsândiyār-oghlu of Alańi seized the region of Kaşṭamuni and made the town their capital. It was taken from them by Bayazid I in 1402, but restored to them by Timur after the battle of Angora (804 = 1401/2) and remained in their possession till they were ousted by Mehmed II (864 = 1455/56). Henceforth Kaşṭamuni formed a sandjak of the eyalet of Anadolu, in more recent times a vilâyet, which besides the so-called meğes sandjak included the sandjak's of Boli, Kánglī and Sinūb (Sinope). The Kaştemuni of the earlier Isândiyār-oghlu is described by Ibn Batūta (ed. Paris, ii. 341 sqq.); Chalcocondyles (sixth century) calls it a "flourishing and strongly fortified town." (p. 260, Bonn edition); the description in Hādīdī Ḥakīm's Dīthān-nūmā (p. 648 of the first edition) dates from the beginning of the xvith century. Kaştemuni was first visited by European travellers in the beginning of the xit century, first of all by Kinneir in 1814. The erstwhile family stronghold of the Comnenoi with its Byzantine and Saŀdājk fortifications was abandoned and left to fall into ruins after the Turks had maintained a garrison and artillery in it down to a century ago. There are no antiquities in existence that date from the classical period but numerous buildings survive from the times of the Saŀdājk and Isândiyār-oghlu. The town contains no less than 62 large or small mosques (Ďjtim and masjdī), 16 medresses, 12 dervish monasteries, 4 libraries and 30 tombs of saints. The oldest dated building is the tekke of the Divl (called Yilanlı Tekyeye) of the year 671 = 1271/2; from the same period dates a mosque built in 672. The following are also of special mention: — the Djtim's of Ghażī Atābeg with medrese, of Hādīdī Naṣr (of the year 754 = 1353/54), that of Ḥādīdī Salāh al-Dīn (of the year 806 = 1403/404), and the last Isândiyār-oghlu, İsmā'īl Beg, dated 855 = 1451/52, but these monuments have not yet been scientifically examined. They bear witness to the way in which the former lords of the land fostered Muslim culture; İsmā'īl Beg himself, after his dispossesion, composed a much esteemed theological work, the Ḥulūliyya-ī Sulṭanī (cf. Rue, Cah. Turc. M.S.S., p. 12 sqq.). Lajjī (q. v.), the biographer of poets belonging to Kaştemuni. Hādīdī Ḥakīm calls Kaştemuni the "city citadel" (kāfīda) of the Turkomans and the dialect of Turkish spoken there still survives. The population of the town was estimated at about 30,000 including 1500 Turkish speaking Greeks and 500 Armenians but the latter may have emigrated since the war. Bibliography: C. (J. H. Mordtmann)

**Kāṭ, dījīt (A.), Ĕxt (Amharic, Gallu), Ėṭāo (Kaffa)**, is a name of a smooth-stemmed shrub, of the family of Celastraceae (represented in Central Europe by the spindle-tree: *Catha edulis,* Forskål, [or *methysophyllum glauceum,* Eckl. et Zeyher]), reaching a height of 12 feet, which is found in East Africa from Cape Colony to north of Lake Tānā (Sānū) and in the Yemen. The leaves are called *kāṭa* in Arabic. Those and the skins of the young shoots contain an alkaloid, *katin,* which accounts for the stimulating or intoxicating effect of these parts of the plant (or a. decoction made from them) and the widely spread use of *kāṭ* in the Muslim lands of Abyssinia and South-West Arabia.

In Abyssinia, as well as in S.-W. Arabia, the leaves and young shoots of the *kāṭ* are chewed; more rarely a decoction is used, which is either taken as *tea* or added to the Abyssinian honeywine (Amharic *daḏàq*). The most esteemed are the tender shoots and young leaves which have a pleasant, sweetly aromatic flavour and are merely stimulating and anti-soporific and slightly intoxicating only in large doses, while the older tough leaves are unpleasantly astringent and have a much stronger effect. All accounts agree that the use of *kāṭ,* as ordinarily taken, which has become regular in all classes of society in the Yemen, underlines the physical and moral health of the people and also does the greatest damage from the economic point of view.

As a result of the enormous consumption of *kāṭ* leaves (about 30,000 tons are exported annually from Abyssinia and the adjoining countries) the cultivation of the shrub, which is propagated from cuttings, is very important. In the Yemen, Djabal Šābīr, Djabal Raima and Ūdān are mentioned as the centres of its cultivation. The *kāṭ* twigs, which are not plucked till the plant is in its fourth year, are tied in bundles for transport (Arabic *katōt,* pl. *katūt*) and, in order to keep them fresh as long as possible, are bound up in moist, leafy branches and banana leaves.

*Kāṭ* is first mentioned in "The Military Exploits of the Ethiopian King *Amāda Seyōn against the Muslims* of the year 1322/33, which puts the following words into the mouth of *Amāda Seyōn’s opponent, King Šābīr al-Din:* "I shall make . . . . his royal palace Mar’sāde (Arabic *Mar'adād*) my residence and plant *kāṭ* there." Al-Makrīzi († 846 = 1442) mentions the *dījīt* as a plant found in Awīl (Ethiopian Iptf, in Eastern Shoa (Shoua)), the leaves of which are eaten. The Shaikh *Abū al-Kādīr al-Dījiz, who wrote in 995 (1587), says that *Ali b. Umar al-Shahibīl (al-Māzīqa, † 827 = 1424), as is still said in West and South Arabia, introduced coffee into the Yemen, which took the place of *kāṭa,* i.e. the *kāṭ* leaves, previously in use. Ibn Ḥadjar al-Haitami († 1574 = 1657) wrote in the *Institution of people from Ṣan’ā* and Zabīl a treatise in which he, without taking up a definite attitude to the contradictory opinions of reputable scholars regarding the effects of the *kāṭ,* includes the enjoyment among the *gūrābāt,* from which one should refrain. Among European travellers Niebuhr and his botanist collaborator Forskål give the earliest accounts of our plant and its use.

Further references are given in Dillmann and Beitler.

(J. J. Hess)

**Kāṭ (A.),** a cut. The Arabic verb *kāṭ* has, as the dictionaries show, undergone a remarkably varied development of meaning both in its original and metaphorical senses. Here we only deal with cases which are of importance for the history of religion, etc.

The infinitive form *kaf* is not found in the *Kurān* but the verb occurs in the literal meaning (*Sūra v. 42;" cut off the hands of a thief, male or female" — the well-known law adopted in the Fikh, sometimes briefly known as *Kaf al-Līṣ —*) and in a more metaphorical sense (*Sūra ii. 25 and xiii. 25; "cut asunder what God hath ordered to be bound together").

The old reciters of the *Kurān* (*kūrān*) gave the name *kaf* or *wukf* to a pause in reciting whether required by the sense or for another reason. Later reciters distinguished between the brief pause necessary to take breath and other pauses required by the sense: *kaf* was only applied to the first (according to others only to the last).

The grammarians give the name *alāf* to the strong hamza which cannot be elided in contrast to the hamzat *al-waw* (cf. the article *alīf*). *Kaf* is also the deliberate division of a syntactical combination in a sentence for special reasons, e.g. for *al-hamdu li’l-Īkhān hamīdah:* *al-hamdu li’l-Īkhān hamīdah* (= wa-hamna *l-hamīdah*) or *l-hamīdah* (= *dīn l-hamīdah*).
In prosody ḫ<t: means the elision of the end of certain feet, e. g. the abbreviation of fa:š:to to fa:š:: in or of mu:št:l:: to mu:št:: This shortened form is then called mu:št::

The conic section ḫ<t, alt-mūk̄i:di is of importance in mathematics and the varieties are ḫ<t: wād, the hyperbola, ḫ<t: nūs, the ellipse, ḫ<t: mūk̄i:, the parabola and ḫ<t: mūk̄i:d: mu:gamān, the paraboloid.

In astrology ḫ<t: al-awwārak meaning a format of paper, has acquired some importance in the history of administration. According to the Arab accounts, ṭirās (papyrus-paper was probably not used before the third or fourth century; cf. above, i. 385) was used from Mu:š więya's time for documents in the chancellery of the Caliph and at quite an early date we find five different formats used: (ḫ<t: thulūth, al-thani, the chancellery of the Caliph and the chancellery of the court in Cairo and those used in the province of Syria. He distinguishes, giving exact particulars regarding the size and particular uses, of nine formats in use in Cairo: ḫ<t: al-hādū d: a: kāmil, ḫ<t: al-waw a: ri, ḫ<t: al-nūs, ḫ<t: al-thulūth, ḫ<t: al-mūk̄i:di, fi 'l-mu:nsīrī (rubūt), ḫ<t: al-ṣa:qi:gh or ḫ<t: al-ā:la (rubūt), ḫ<t: al-khānī, ḫ<t: al-ṣa:qi:gh (min warā: ak:far); also four Syrian formats: ḫ<t: al-thānī, ḫ<t: nūs, ḫ<t: al-khānī, ḫ<t: al-ā:la (min al-tha:li, ḫ<t: wa:di: al-ṣa:qi:gh. The smallest formats were used for the pigeon post. Al-Kalbānī only gives quite general observations for other countries.

In the history of religion the expression ḫ<t: yā:ninā: meaning "to take an oath", which Pedersen (Der Eid bei den Semiten, p. 46; cf. also p. 12, note 5) compares with the Hebrew ḫr: bērī, is interesting. It is perhaps through the influence of this expression that ḫ<t: comes to mean "to settle, to decide", as do verbs meaning "to cut" in other Semitic languages. In logic we find it meaning "to assert something with confidence, to refute someone completely", etc., or e.g. alina ḫa:ṣ: or ḫa:ṣ: wa:li: "to be absolutely sure of something", ḫa:ṣ: al-ki: "a decisive proof".

A small Shīʿi sect is called ḫ<t:ya because it "eats short" the list of Imāms at the death of Muṣa: ʿl-Kāsim.

s. v. Catabanes and Chatramis, to read Ktisbaia in Theophrastus need not be accepted. Glaser wrongly supposed (Studien der Geschichts und Geographie Arabiens, Berlin 1890, ii. 6) that Ktisbaia (or, as he incorrectly writes, "Kittibaini") lay on the Persian Gulf; later and fuller is the reference to Katabān in the synopsis in Strabo, xvi. 768, of Eratosthenes (end of the third century B.C.), who, in addition to the sources available to Theophrastus, had at his disposal itineraries of seafarers and travellers by caravan in Egypt and Petra. According to this, the Katabānī, who are given after the Minaeans and Sabaean(s in order from north to south of the four principal Arabian peoples and before the Chatramoties (inhabitants of Hadramot), whose lands stretched farthest east, dwelled down to the straits and entrance to the Arabian Gulf (πρὸ τὰ στενὰ καὶ τὴν διαδρασθὲν τοῦ Ἀραβίου κόλπου); their capital was Tā'aus. From Strabo's information it may be assumed that the Katabānīs in the time of Eratosthenes lived in the part of the west coast south of Saba', holding the western parts of the south coast of Arabia, being the eastern neighbours of the Sabaean(s. From Strabo's account of their lands which refers to the straits of Bāb al-Mandab, it is clear that the boundary for the kingdom in Glaser (op. cit., p. 19), who sought to locate the Katabānīs "mainly east of the Djabal Sabir" with the Gebanites west of them and the Hīmys south of the Katabānīs and Gebanites, was not correct. This could have been deduced from the fact that in the time of Eratosthenes the Hīmys did not form an independent kingdom (cf. the art. Saba') but belonged to Katabān, which Glaser, who later modified his views considerably, had to confess in his book Die Absteiner in Arabien und Afrika, Munich 1895, p. 112. The Jaffūn of Strabo (xvi. 768), the Gebanites of Pliny (vi. 153), were presumably at this date still a part of the kingdom of Katabān (see the article GABAOI in Pauly-Wissowa's Realencyk.) and only became independent about Pliny's time and at that time were, it is true, the neighbours of the Katabānīs but not on the west, as Glaser supposed, but on the southeast between Katabān and Saba'. The statements in Pliny, Nat. Hist., v. 65, are also in agreement with Eratosthenes, according to which the Katabānīs lived in the S.W. of Arabia Felix. From the idea we get of the geography of their lands from Eratosthenes, which is nowhere contradicted, we see the impossibility of the mixture of right and wrong in the location of the four principal kingdoms in Glaser, Dem und die südarabischen Reiche, M.V.A.G., 1899, iv. 21, according to which Katabān in the old part was the land south and S.W. of Saba', bounded by N.W. Hadramot and later stretching to the straits of Bāb al-Mandab so that it originally included the land of the Hīmys and would appear as early as Theophrastus as the immediate neighbouring of Hadramot on the west. Glaser at the same time also assumed in the passage in Theophrastus the alteration Σαβα' in the text (said to be = Shehār, Sjeha, "frankincense coast") for Σαβα', which, however, is wrong (cf. the art. Saba'), and further altered his early views on the frontiers of Katabān (cf. below). That Eratosthenes mentions the Katabānīs between Saba' and Hadramot and that the Katabānīs inscriptions found by Glaser, according to his own words (Abessinier, p. 111), "all came from the region between Mārib and Sabr-wat" (M. Hartmann's "Die Arabische Frage in der Islamische Orient," vol. i., Leipzig 1909, p. 169), observation on this statement, that the description of the find-spot of Glaser's inscription No. 1693, "which is of Ru'ānin provenance", is not in keeping with it, can now be more easily estimated at a true value; cf. the topographical data in N. Rhodokanakis, Katabanische Texte zur Bodenwirtsch., Series 2 [S. B. Ak. Wien, 1922, CXXVIIii, p. 57 sqq.] is, as the expression quoted πρὸ τὰ στενὰ ... κόλπου in Strabo shows, not sufficient evidence for the conclusion that the land of the Katabānīs was limited to the territory between Saba' and Hadramot and does not prevent - neither does another circumstance - the assumption that Katabān was not only the land directly on the coast but also stretched into the interior, towards the upper Wāfān. - A. Sprunger's view (Die alte Geographie Arabiens, Bern 1875, p. 64, 254 sq., 264, 273 sq. etc.) that the Katabānīs were the Arabian tribe of Kufta'a was absurd. Obsessed with this view, he recognised the definition of the land of Katabān in Eratosthenes as only correct "in a limited sense". When J. Halévy and J. H. Mordtmann established the identity of the name Katabān in the South Arabian inscriptions with the same name of a land and people mentioned by the Greeks and Romans, any linguistic connection of Katabān with Kufta'a and the localisation of the original nucleus of the Katabān kingdom far to the east (near the Khar) were ruled out (see D. H. M. von der Burg und Schlottke, Südarabien, vol. ii. [S. B. Ak. Wien, 1888, CVIIIi, p. 1025 sq.]). Nevertheless Sprunger again at a later date in his Bemerkungen zu Mordtmanns Ansiehe von Glasers Skizze in the Z.D.M.G., xxiv. 505, maintained a connection between the names Katabān and Kufta'a. Relying on the similarity in sound of the Katabān inscriptions to the name of the plain of Kaţāb in the vicinity of Zafar (near Yarim), the later capital of the Hīmys, D. H. Muller endeavoured to locate the Katabānīs there, assuming that "they exercised their power in the place where traces of their existence have survived in the name of the place and where those who followed them in power had their capital" (op. cit., p. 1020); cf. for this view so early a writer as Ch. Forster, Historical Geography of Arabia, London 1844, vol. i., p. lxxx. and 84; K. Müller in the index to his edition of Strabo, p. 769, and Sprunger, Vorderasien, loc. cit. In support of this form of the name Katabānī against Katabānīs of most MSS. of the passage in Strabo is the form Katabaia of the name of the land, a few lines below in the majority of manuscripts in the passage from Theophrastus quoted above, the form quoted below from Pliny, the varia lectio in Ptolemy with single t, finally also the Arabic original form. The form Katabānī has influenced the error Katabān in the MSS.
an error in copying the equally erroneous Kāfrān (and Kāfrānaw) of the other MSS. In the note immediately following in Strabo on the capital of Chathamotae, the name of which was first restored by (Gräskau) as Kāfrānaw (= Shabat of the invaders) (followed in modern, von der Kämmer, Memel, K. Müller, etc.). On the etymology of the name nothing definite can be asserted. Forster’s [op. cit., vol. i., p. xxvi., 35, 83 sqq., 87, 89, 91 sq., 105, 115; vol. ii. 154] also quoted by K. Müller [op. cit.], connection of the name with the Arabic Kāfrān and his derivation (i. 83) from kāfrān in the sense of scribae or notarii, according to Bochart, is simply one of the curiosities with which his book is filled. Even C. Landberg’s (Arabica, Leiden 1898, vol. vii., p. 62) derivation from kāfrān (jack-saddle) in reference to the wealth of the region of Bahān al-Asfāl in camels, is not exactly probable.

Eratosthenes calls the capital of Katabān Tahma. That the Katabānians had a monarchical constitution like the Mineans, Sabaeans and Chathamotae is known from the South Arabian inscriptions. Sprenger, in his Geymüller’s Katabān (p. 268), notes the association of the name with Θεότως in Polymyrm. vii. 7, 37, and (p. 268, 309) consequently sought it between the Sabean capital Marib and Sabatha, the capital of Hadramot, had, as a result of his preconceived notions regarding the Katabānians, as he himself said (p. 268) “some difficulty in finding the bulk of the kingdom”. Of the earlier writers Glaser came nearest to settling the question of the situation of the capital. While, according to his opinion expressed in the Skizze, ii. 18 sq. (in correction of Skizze, i. 48), Tahma was identical either with Dammam Diba or more probably with Dammam Khadi, not very far E.S.E. of (the highest part of the) Dibah Sabir on the road from the Turkish frontier-custom station of Surra (Kaida) to Ta’izz, he later (Abessinier, p. 112, 115) said that Tahma (Tinma) of the Katabānian inscriptions was Tamme of the Wādī Bahān al-Asfāl and this was not only the Tinma of Eratotheneus but the Thonma and Thomala of Pliny and also the Θεότως of Ptolemy, thus abandoning his idea that the massif of the Dibah Sabir was the frontier of the Katabānian kingdom. Of these attempts at identification Landberg (Arabica, v. 81 sq. on the land of Harib), especially p. 100, said that Glaser, after looking for Tahma here and there almost always found it when in his paper Zwei Inschriften aus dem dammbruch von Mārib (M. P. A. G., 1897, ii. vi. 58) he wrote a propos of the name Tinma mentioned in the Sirwāh inscription (Glasner 1000) “Tinma”, the former capital Tahma or Thonma of the Katabānians, is in the Wādī Bahān. This identification of Glaser’s, who (Abessinier, p. 112) expressly stated the conviction of the correctness of his location of the Tinma of the inscriptions, was corrected by Landberg (p. 107 sq.) when he fixed the position of the present Tinma, the site of the ancient capital of the Katabānians, in the land of Harib in a plain by the Wādī Ablah, a tributary on the left of the Wādī ‘Ain, which is bounded in the S.S.E. by the hills of Rokhama, in the S.E. by the Kawim Al Djeňah, in the midst of which rises the hill of Had Wadj; the Wādī Wadj waters the part of the plain called Tin Tinma. Following this, Hommel (Grundris der Geographie und Geschichte des alten Orientes, Munich 1904, p. 137 [65]) identified Tinma and the town of the inscriptions as Tinma, “in a tributary Wādī of Bahān al-Asfāl S.S.E. of Mārib”. M. Hartmann (op. cit., p. 168) was wrong in objecting to the location S. E. of Mārib “in spite of the view expressed by Hommel with absolute conviction”; he sought Tamma’s east of Yarim, on a hypothesis which is quite without foundation. Rhodolamakis (Die Inschriften der Mutter von Kokhan-Tinma in the S. P. A. Wien, 1924, c. viii. 8), identifies Timma, the capital of Katabān, with Kokhan, by combining mentions in the inscriptions with a study of photographs taken by G. W. I bury, who in 1901 visited Kokhan (Karkhan) on the left bank of the Wādī Bābān and took impressions and photographs of inscriptions there for the South Arabian expedition of the Vienna Academy and also gave an account of the ruins. Sprenger, relying simply on the Telenemiac location for Thonma (between Marib and Sabatha) had come very near to the identification proposed by Landberg. It may safely be concluded that not only the royal seat but also the original home of the Katabānians lay not far from the frontier of Saba’ and the gradual expansion of the tribe of Katabān—now also known from inscriptions—into the kingdom took place towards the S.W. The equation of Tinma with Thonma, which Pliny (vi. 1533 xii. 63) calls a town of the Gebanite, proposed by D. H. Müller (op. cit., p. 1010), Mordtmann (review of Glaser, Skizze, vi. i., in the Z.D.M.G., xiv. 184), Glaser (loc. cit. and Punt, p. 57) and Landberg (op. cit., p. 109 sq.), has a certain probability in spite of the phonetic difference in the initial dentals of the two names, which we also have between Θεότως and Tinma, which had already been equated by K. Müller (op. cit.). But it should be remembered that Ptolemy may have referred to names of similar sound to one place. In favour of the identification of Θεότως and Thonma we can quote—in addition to the form of the name—Pliny’s remark (xii. 65) on the frankincense route. Of the towns of similar sound in Pliny, it may here be remarked that neither can Thonma, the capital of the Gebanite, be identical, as Glaser suggests, with Thomala, which Pliny (vi. 154) expressly calls a town of the Sabaeans, nor can Thomala be altered to Thonma, as Mordtmann (review, p. 186) proposed. The latter (ibid.) and Hommel (Die archaische Oberlieferung, Munich 1827, p. 274) assumed that the name of the Katabānian capital and that of the Edomite tribe of Tinma (Gen., xxxvi. 40) were connected.

Strabo’s further remark that Kartasa (var. Karasa, the same form as in Stephanus Byzantinus, s.v.) produced frankincense, has recently been wrongly taken to mean that, according to his authority, frankincense was not found in other parts of South Arabia (cf. the art. Saba, below, iv. 69). Glaser’s suggestion (Skizze, ii. 26) that there is “obviously some confusion” in Strabo may be met by the statement in Pliny (xii. 69), which is based on authentic information, as well as the corroborative statements of modern travellers, like C. Niebuhr, Beschreibung von Arabien, Copenhagen 1774, p. 283, and Th. Pentz, Southern Arabia, London 1806, p. 77, 91, 254; Glaser himself acknowledges the possibility “that even by the tribes of Eratotheneus individual Katabānians owned lands in the frankincense areas” (similarly in Abessinier, p. 111 sqq.; previously Sprenger, Geographie, p. 264; cf. K. Müller, op. cit.; in Punt, p. 46 (cf. 50 sq., 57) Glaser speaks of Katabānian suzerainty over the frankincense
country. His deductions (Abessinier, p. 112 sq.) that Kataán perhaps also had possessions in the African fringe area and that the whole of Azania belonged to it may be emphatically rejected.

Pliny twice mentions the Kataánians; v. 65: Kataánanes (this is the better reading, not Catta-
banes) Arabs and, in another form, vi. 153: Catapani, a divergence which is probably explained by the use of different sources. According to the first passage (also Solin, ed. Mommsen, Berlin 1895, § 707), they are to be regarded as the possessors of the south-west of Arabia Felix. Glaser (Skizze, ii. 291) wrongly says that by Pliny’s time there was no longer a Kataánanian tribe. He is possibly correct in saying that they and the Hadramówites had inhabited the southern Mineanan territory and could only hold out by continually fighting the Sabaeans. Whether there still was a kingdom of Kataán, as known to Erotróstenes, in Juha’s time is doubtful. Glaser (Abessinier, p. 114) denied that the Kataánanian kingdom was still in existence at the time of Gallus and thought (Punt, p. 56) that it no longer existed by 81 A.D. and that the Kataánians “disappear completely from the scene as an independent people” in the first half of the first century B.C. (ibid., p. 48; cf. Abessinier, p. 77; for the time of Gallus see D. H. Müller, Burgen, ii. 1030). This view must be considerably modified, if only on account of the mention of the Kataánians in Pliny and Ptolemy (see Glaser’s own limitation, Punt, p. 48, i). Against Hommel, who (Grundris, p. 139, 142) placed the end of the kingdom of Kataán in the second century B.C. (on this chronology see Glaser, Abessinier, p. 115), Hartmann (op. cit., p. 164; cf. 168) said that Kataán does not disappear before 80 B.C. That the references in Ptolemy from the time of Juba refer only to the people of the Kataánians and no longer to the now weakened kingdom, cannot be asserted with certainty. It may however have been included in the Himyar kingdom at the beginning of our era (on the supposed beginning of the Himyar epoch see the art. Sab’a, below, iv. 8).

This question is bound up with that of the connection between Kataán and the Gebánianites of Ptolemy (vi. 153, xii. 93, 68 sq., 87 sq., 93), the Gebán of the inscriptions, into the details of which, as they would require a special article, we cannot go here. Sprenger’s view (Geographiae, p. 256, 268, 282) that the Kataánians lived in S. W. Arabia before the Gebánite and were driven out by them in Juha’s time was supported by D. H. Müller (Burgen, ii. 1028 sq.) (also Glaser, Punt, p. 36). 48, 50). In my articles Gabain, and Gebanitae in Pauly-Wissowa, Realencykl., it has been suggested, that the Gebanite, called Ṭabiyyu by Erotróstenes (Strabo, xvi. 768) and therefore known to him alongside of the Kataánians, were settled in Kataán or close to its frontier (for other errors of Sprenger see ibidem). Glaser, Punt, p. 35, 60, regarded the Gebanitae as a subdivision of the Kataánian people. But it is not quite clear even for the time of Juba whether the Gebanitae are not still to be regarded as neighbours of the Kataánians. D. H. Müller’s other considerations are discussed in another connection (see the Bibliography). The Gebanitae, like the Kataánians, also became a part of the Himyar kingdom, probably not before Pliny’s time. Hartmann’s proposal (op. cit., p. 410; cf. 22) to alter Gebanitae in Pliny, xii. 63, to Catabanitae cannot be accepted. This unquestionable reading is amply supported against emendation by vi. 153; and besides, Pliny never uses the form of the name which Hartmann’s conjecture would introduce.

That the Periplous Maris Erythraei (cf. the art. Sark, iv. 9), presumably composed between 40 and 45 A.D., does not mention the Kataánians — a fact on which Glaser (Abessinier, p. 115) laid stress in support of his view that their kingdom came to an end at an early date — like the non-
mention of the Mineanians, means nothing, especially as the much later Ptolemy — and Pliny also — mentions the Kataánians along with the Sabaeans, Mineanians and Chatramotites (vi. 7, 24, Kotraβovoi [var. Kotraβovoi, vulg. Kotraβovoi]), i.e. all the four main peoples of South Arabia known to Erotróstenes. This is at any rate an argument against those who hold that the Kataánian people had entirely disappeared from history by the time of Gallus and was therefore a view at first challenged by Glaser. That the Ptolemaic map placed them between the frankincense region and the modern ‘Oman is explained to mean they had also lands in the former. The Kotraβovoi mentioned in the same passage by Ptolemy were originally considered by Glaser — who wrote their name erroneously “Kutheraner” — (Skizze, ii. 4, 6, 8, 268 sq.) to be the inhabitants of the Kotraβovoi of Theophrastus, said to be situated on the Persian Gulf, and regarded them as well as the Kotraβovoi as different from the Kataánians. This was only intended to serve as a basis for his assertion that even by Pliny’s time there was no longer a Kataánanian tribe (see above). Later (Abessinier, p. 111) he abandoned his view that the Kataánians are not mentioned in Ptolemy and (p. 115) conceded the possibility at least that they are the Kotraβovoi so that he now took up an intermediate position. On the question of the relation of the two peoples with similar names to one another no definite answer can be given. According to Mordmann (review, p. 187), they were identical, and it is in fact not improbable that Ptolemy refers to the Kataánians under two different forms of the name, just as in one passage (vi. 7, 10) he calls the people of Ḥadramawt Ṭaβarμaτa (var. Ṭaβarμaτa) and in another (vi. 7, 25, 26), Xtraβovoi. The capital of the Kataánians can be recognised in his Ṣab’an (Thomna in Pliny). Mordmann was wrong in his view that Ptolemy erroneously — as a result of different estimates of the distance — had given Thomna twice (31 and 37) in his map.

The mentions of Kataán in the later literature of the Greeks are of no value, such as Dionysius Periegetes, ed. K. Müller, vi. 95 sq., nor perhaps from the geographical didactic poem of Alexander Lychnus of Ephesus — in the phrase ἐκ τῆς Ἐφεσίας Καταβανῶν rightly describes the Kata-
banians as neighbours of the Sabaeans mentioned just before. This mutated form is a misreading of Kataβανoι of the original source; it appears also in the Latin paraphrases of Dion. Periegetes and as Cletas in the Geographer of Ravenna, ed. Pinder-Parthey, Berlin 1860, ii. 7.

The references to Kataán in South Arabian inscriptions were down to the last decade of the sixth century very limited, e.g. the Minean inscription Ḥaléyy 504 (= Glaser 1087) in which a Kataánian king is mentioned as a contemporary of Minean kings, and Frenzel 56 (= Glaser 461).
in which there is mention of a peace between Saba' and Katabān. A deeper knowledge of the past of Katabān was first obtained from the rich finds of inscriptions made by Glaser, who, in his fourth journey to South Arabia (1892–1894) before which no Katabān inscription had been known, brought back scribes of about 100 Katabān inscriptions, one particularly remarkable result of his journey of exploration. Hommel's conjectural dating of these inscriptions "from about 1000 B.C. to the end of the Katabān kingdom (3rd century B.C.)" (Grundrisse, p. 139) is too early in both its limits. The beginning is not earlier than that of the Minean kingdom (see the att. Saba'); on the latter see above. Hommel (ibid.) was only able to say further that there were about 18 Katabān kings' names in these as yet unpublished texts, out of which Glaser had, however, already gathered much valuable information, and that it, apart from a few passages in inscriptions which Glaser himself published (e.g. Punt, p. 58 [beginning of Glaser 1592]; Zwei Inschriften über den Daumbruch, p. 105 [contents of Glaser 1690]), other Hommel utilised for his researches in the history of religions (from Glaser 1599, 1600 and 1604), some of these inscriptions were again squeezed by Arabs, one for the Greek Kallisperis (published by Hommel, Z. D. M. G., 1899, liii. 98 sqq., the first Katabān inscription made generally accessible), three others for 'Aden, whence they were sent to Paris (pub. by H. Derenburg, Nouveaux textes yéménites inédits, R. A., 1902, vii/v. 117 sqq. [N. ii., iii., iv.; new edition with emendations in the Répertoire d'Épigr. sem., 1903, i., No. 310 sqq.]) Ditlef Nielsen in the M. V. A. G., 1906, xi/xiv., published in his Neue katābanische Inschriften, a German version of his Studier über sudarabische Indische, Copenhagen, 1906, §, Katabān texts (Glaser 1600, 1492, 1110, 1584 and one fragment) (which he had received from Glaser) with notes (critically reviewed by O. Weber, Studien zur sudarabischen Altertumskunde, in M. V. A. G., 1907, xii/i. 1–22); at the same time Glaser in his Altjemenische Nachrichten, Munich 1906, p. 60 sqq. and 162 sqq., published the first of these inscriptions and Glaser 1606, of which Nielsen No. 5 was a fragment. The article following the above mentioned one by Weber was his Neue sud-arabische Inschriften (p. 23 sqq.) (Landberg 1–5) (No. 1 already published by H. Derenburg in Nouveaux envois du Yemen [despatched in 1903] under No. 3; Landberg 3 is identical with the first third of Glaser 1230 [in Glaser, Altjem. Nachrichten, p. 147 sqq.])

On the basis of the earliest publications from Glaser's papers, research was at once begun on individual problems of Katabānian antiquity. Hommel, for example (Grundrisse, p. 85 sqq., 140 sqq.), first proposed hypotheses regarding the religious system of the Katabānians. Hartmann gave his views on the constitution, from the important inscription Glaser 1606, and on historical questions (from Glaser 1599/60, 1693 etc.; op. cit., p. 430 sqq.; cf. also 164 sqq.). It is a noteworthy fact that the kingdom of Katabān appears also in the inscriptions as existing contemporaneously with some of Ma'in, Saba' and Hadramāt, just as we find it in Eratomethes. As regards language, Katabānian is nearer Minean than Saba'ean; Hommel said the Katabānian dialect was practically Minean. The traces of Saba'ean in it are due to contact with the neighbouring people. Weber had already pointed out (Studien, p. 2, 63 sqq.) in the epigraphy certain peculiarities from the few reproductions available to him. It is unnecessary to go further into the details of this earlier literature, especially in view of the comprehensive edition of Glaser's Katabānian inscriptions which is being undertaken by Rhodokanakis (see the art. Saba'). The latter had already published in his Der Grundzat der Öffentlichkeit in den sudarabischen Urkunden (S. A. B. Ak. Wien, 1915, clxxvii/i. 12 sq.) the Katabānian inscription Glaser 1606, already discussed by Glaser (see above) and Hartmann, (op. cit., p. 431), with very thorough notes; he then published some hitherto unknown inscriptions in Katābanische Texte zur Bedeutungswissenschaft in the S. A. B. Ak. Wien, 1909, cxix, namely Glaser 1601, 1602, 1395 = 1604 = No. 84 of the inscriptions collected by the South Arabian expedition (S. A. E.), Glaser 1412 = 1612 = S. A. E. 81, Glaser 1413 = 1613 = S. A. E. 82; in the already mentioned series of the three inscriptions Glaser 1396 = 1610 = S. A. E. 83, S. A. E. 48, of which the Kallisperis inscription (see above) forms one part, and Glaser 1693; lastly in the already mentioned treatise Die Inschriften an der Ma'in von Kobla Timma the inscription S. A. E. 77 = Glaser 1404 = 1614, S. A. E. 80, 80A = Glaser 1397 sqq. and, in elucidation of the title of Ma'inrib among the Katabānians, S. A. E. 94 = Glaser 1405, S. A. E. 85 + S. A. E. 60, Glaser 1410, and in the appendix S. A. E. 86; a new edition of S. A. E. 78 sq. = Glaser 1605 sq. has appeared in W. E. K. M., xxxii. 22 sqq. These publications mark an extraordinary advance not only for the accurate reproduction of the texts of the inscriptions and the very full commentary but also for the systematic investigation here attempted for the first time of problems of law, constitution and economy (see the art. Saba', iv. 12), as well as, for example a propos of the discussion of inscriptions Glaser 1601 and 1693, of details of the earlier history of Katabān; for example, in Katāban Texte, i. 26 sq., 34 sq. (supplement in Katāban Texte, ii. 98 sq.) a chronological order is proposed for some groups of Katabānian kings (cf. A. Grohmann, Katābanische Herrscherchronik in the Anze. Wien, x., 1916, p. 42 sqq., older attempts in Nielsen, op. cit., p. 42 sqq., and Studien, op. cit., p. 9 sq.; Hartmann, op. cit., p. 165 sqq. 601). Our knowledge of the history of ancient South Arabia is for the first time enlarged on many points by a combination of these newly published inscriptions with those already known. We see that certain smaller countries were dependent on Katabān, with which they for some time formed a great power. In Glaser 1396 there is mention of the dependence of the Ma'in tribe on the leading tribe Katabān. The inscription Haley's 504 (quoted above) shows that Ma'in was dependent on Katabān. On the other hand, from the Minean inscription Glaser 485 Ma'in appears as the donor of Saba'; Katabān was for some time one of the enemies of Saba'. But the period after the Minean inscription Glaser 418/419, in which Katabān is mentioned along with Ma'in among the enemies of Saba', was weakened by Saba'. At the time of the Sirwāt inscription, Glaser 1000, which mentions a campaign of Saba' in which Katabān was on its side, it had lost political control over considerable territory (cf. Glaser 1600 and
1620). A war lasting many years between Kataban and Saba’ (Glaser 481 = Fresnel 56 [see above], Glaser 1693) in the course of which (according to Rhodokanakis’ supposition) there was a rupture of the alliance between the two powers ended in a peace. References to Kataban being included in the kingdom of the Himyars may also be gleaned from inscriptions. None of the inscriptions concerned can be definitely dated in a known era, but it is possible to bring some of them into a chronological series relative to one another. The publication of new material alone will show whether the unsettled problems will be cleared up or remain unsettled.

**Bibliography:** The books and articles of Glaser, Rhodokanakis, Hommel, Deringen, Hartmann, Landberg, Weber, D. H. Muller, J. H. Mordtmann, Sprenger etc. are already cited in the text; reference need only be made here to my article Saba (Realexykleptaii s. v., esp. coll. 1425 sqq., 1448 sqq., 1457 sqq., 1492 sqq.).

(J. Tatsch)

**Kataban** b. Idas, ancestor of the Shariifs of Mecca from the beginning of the 13th century A.D. onwards. In 1201, 1202 or 1203 A.D. he overpowered the then ruling family of the Habisim and established his authority in the Holy City. The last Shariifs of the Banu Hashim had lived in continual family strife and quarrels. Meanwhile Kataban (for his pedigree cf. Snouck Hurgronje, Mekka, i., Stammtafel I between p. 24 and 25, and Stammtafel II between p. 74 and 75) had enlarged his estates from Yanbu’ southward in the direction of Mecca, thus preparing his attack on this city. When the Meccans were out of the town in order to assume the hajj [q.v.] for the *uura* on the 27th of Rajab, the commemoration day of Muhammad’s Ascension, he made use of this occasion to establish his power in the town. According to another story, however, his son IJzanah captured the town and prepared his father’s entry.

Kataban, in contradistinction to the Banu Hashim, his predecessors in the Hijaz, was a man of political genius, who pursued the idea of founding the independent principality of the Holy Land of Islam. He repaired the walls of the town which had fallen to ruins, captured Ta’if and brought the Thalibi-tribes under his dominion. He continued the war with the Shariifs of Medina, built a fortress at Yanbu’ and organised his army with peculiar care.

His attitude towards the Ayabids, the caliph and the Zaidites of Yaman is to be viewed in the light of his central political idea. He did not suffer manifest signs of any foreign power in his territory, so that relations often became strained and sometimes even ended in open hostility. Nevertheless the caliph once invited him to visit Baghdad. It is said that Kataban started on his journey to the capital, but returned to his own country when he was met by an embassy of the caliph which had in its train fettered lions. Be this legend or fact, this much is certain, that Kataban embodied his idea of the “splendid isolation of the Hijaz” in verses which are a typical illustration of his negative attitude towards foreign powers. Probably his encouragement of the Zaidite occupation of Yaman is to be viewed in the same light.

In his last days he undertook an expedition against Medina. Illness, however, induced him to return to Mecca, where he was killed in 1221 by his son Hasan, who suspected him of favouring one of his relatives as a candidate for the throne. His descendants were ruling Shariifs at Mecca, until in 1916 Husain converted the shariifate into a kingdom.

**KATAK** (Cuttack), a district in Orissa [q.v.]

**KATANGA, a province in the Belgian Congo.**

**Geography and History.** Katanga is the most southern, richest and least populated of the four provinces of the Belgian Congo. It lies between 5° and 13° 30’ S. Lat. and 21° 30’ and 30° 30’ E. Long. It is bounded on the north by the eastern province and the province of Congo Kasai, on the east by Lake Tanganyika which separates it from the former German East Africa (now under British mandate) and by Northern Rhodesia; in the south by Northern Rhodesia and Portuguese Angola; in the west by Angola and the province of Congo Kasai. The area is 207,000 square miles, about a quarter of that of the Belgian Congo. Its native population is about a million and a half of Southern Bantus (Balubas, Lunda, Basonge, Bangango, Warua, Watumwbe, Babui, Baholoholo, Kanioka and Batschok), while its white population is about 4,500, of whom the great majority are Belgians, about fifty Dutch, a few English, Americans, French, Italians, Portuguese, Greeks and Scandinavians. In 1922 there were forty-nine Hindus, eight Turks and fifteen Arabs and Zanzibaris. These figures have since been considerably increased.

The province of Katanga is divided into four districts — Upper Lupula, Lomami, Luba and Tanganya Moero. A number of towns — Elisabethville, Likasi, Alberville, Kongolo, Kabinda, Sandonge and Kambove — have arisen in it as a result of the economic conditions of which we will give a general account below.

We may add that Katanga enjoys a fairly temperate climate, especially south of the tenth parallel, in which the altitude varies from 3,500 to 5,500 feet and that it is well watered by rivers and streams, such as the majestic Lualaba (upper reaches of the Congo river) which runs through it from south to north and is fed by many tributaries of which the most important are the Lufira, Lupula, Luvua, Lovoi and Lukuga, which flow from Lake Tanganyika. If the soil of Katanga, which is covered with a forest of more or less dense bushwood, is far from having the great fertility of the immense central depression which constitutes the most extensive part of the Belgian
Katanga

Congo, and if it does not offer to the fascinated eye of the traveller the imposing beauty of gigantic forest, its soil, on the other hand, possesses wealth incalculable. It is to the exploitation of this that the economic policy of the Belgian colonisers has been primarily directed.

Deposits of tin are abundantly distributed between Luulaba and Lake Tanganyika; two important coal-mines are worked at Albertville and Lutena; auriferous dykes, pipes of kimberlite and alluvial diamond-bearing deposits have been discovered in various places. Since 1922 the Mining Union has been working an extremely rich deposit of uranium which was found at Shiukolobwe. In 1923, 450 tons were exported which enabled Belgium to produce several grammes of bromure of radium.

But the principal source of the wealth of Katanga is certainly the copper found in profusion in immense deposits worked by the natives before, the Belgians came, which the earlier travellers simply could not help discovering. The richness of the ore, the density of which is 14%, and the intelligent organisation of the industry have enabled 80,000 tons of raw copper to be exported in 1924. This production, like economic development in general, will certainly make new strides ahead when "white coal", the reservoir of hydraulic energy of enormous power abundantly distributed through the province, has been controlled and put at the disposal of industry.

The first methodical exploration of Katanga dates from 1890. Famous explorers — Buton, Speke, David Livingstone, H. M. Stanley in the Cameroons, Böhm and Reichard and certain Belgian expeditions of the Association Internationale Africaine, representatives of which — Pulselin, Ramakers, Storms and Becker — founded the stations of M'Toa, Karem and M'Pala on Lake Tanganyika — had, of course, visited it previously. But it was only at the end of the nineteenth century, just when Cecil Rhodes was pushing his railway and British influence northwards, that the Congo Free State began to take notice of the urgent necessity of recognising and organising the most southern part of its vast territory. King Leopold II, sovereign of the new state, whose colonial plans did not meet with very great approval in Belgium, to realise this scheme had to have recourse to a private society, the Compagnie du Congo pour le Commerce et l'Industrie, with which he founded the Compagnie du Katanga.

This society was essentially a body for exploration and occupation, whose duties and rights were defined by the convention of March, 1894, which imposed on it the following obligations:

1) The placing of a certain number of craft on the Upper Congo — the building of stations — giving assistance in the suppression of the slave-trade and the trade in spirits and prohibited arms — the organisation of a sufficient police service — the eventual exercise by its agents of the functions of the different branches of government service.

In return it received:

1) Full possession of a third of the lands belonging to the domain of the State, in the part of the valley of the Upper Congo lying to the south of the fifth parallel.

2) The right of exploitation of the soil of the ceded lands for a space of ninety-nine years.

But the division of the lands between State and Company raised serious difficulties and the necessity soon appeared of putting the properties of the contracting parties under joint ownership.

There was therefore created in 1900 the special Committee of Katanga to which the State and the Company entrusted the management of their affairs. The resulting agreement provided that "all the advantages or benefits to be gained from the exploitation and all expense, charges and losses would be divided by the Committee in proportion of two-thirds for the State and one-third for the Company; the Committee would further have the most extended powers of administration and alienation without exception or reserve".

A decree of 1910 deprived the special Committee of the delegation of the functions of the executive powers, but made no essential modification in its functions as regards the administration of the patrimonial rights of the State and of the Katanga company.

This is the regime that is still in control; our reason for giving at length the circumstances that brought it into being is that it is at bottom extremely original and that — contrary to what is often thought — the position of the Katanga Committee is totally different from that of great companies like the Chartered Company of Rhodesia, or the British East Africa Company, and of other distant possessions. Nowadays Katanga has made great progress, thanks to the policy of the Belgian government and the activity of private initiative. The railway, which runs from Bukama to Sakania and connects the mining region with Luulaba and with the railways of Rhodesia, has been equipped in a very up-to-date fashion and soon a new line will link it up by the Kassi river with the port of Matadi and the Atlantic Ocean.

Muhammadan penetration, the slave trade and the anti-slavery campaign.

History tells us that even before the Hijira Arab barques were traversing the ocean between the Red Sea and the Persian Gulf. But it was only when the great Muslim movement had made its immense advance into North Africa and caused the migration on a huge scale of the disciples of the Prophet, that we find the Arabs devoting themselves to the methodical conquest of the lands round the Indian Ocean and building up important satelites there, of which those of Sofala and Zanzibar have from time to time had bursts of splendour and passed through periods of power and brilliance.

But this power soon began to degenerate and assume a new character. It passed into the hands of traders and exploiters for whom, as Privelle said, "the normal state of society was the choice by them of the most convenient and most remunerative method of exploitation".

It is then that we find chiefs penetrating into the very heart of East Africa where the weak and poorly armed natives offered them no resistance and where they found vast riches, from ivory to human cattle, for whom the American planters and the Asiatic Muslims offered handsome prices.

Setting out from Zanzibar and the coast of Mozambique, the movement reached Lake Tanganyika at the beginning of the nineteenth century. It reached Katanga by the bay of M'Toa and spread through the whole of the eastern province by the road from M'Toa to Kabambare and
Kasongo. A regular Arab power extending from the banks of Tanganika to Stanleyville was established by the chief Tippo-Tip and his nephew Rashid. We know (Stanley and Livingstone have given terrible pictures of it in their works) the horrors which accompanied this invasion and the rapid disintegration of native communities which was produced by the constant wars, flights, endless migrations and continual rupture of the most sacred links of family life. Europe was moved. Cardinal de Lavigerie preached a holy war and on the initiative of Leopold II the civilized nations met in an anti-slavery conference in 1889. War was declared on the chiefs Rashid, Sefu and Kumalaza. While Dhanis was fighting them in the south of the Congo, Commandant Jacques and his lieutenants fought fierce battles with them on the banks of Lake Tanganika, at Kataki, Albertville and McPala, which were to liberate for ever the native population from the scourge which had fallen upon them. What influence did this activity of the Muslim world leave upon the Bantu peoples of Katanga? From the shores of Lake Tanganika to Stanley Falls, we find at the present day negroes who profess Islam. They are called arabised "wangwana". There is no reason to doubt that the Arabs used to make and still make serious efforts at conversion to Islam; but is there any reason to doubt that a religion which, like Islam, preaches hatred of the kaffir and recommends polygamy is specially suited to attract the natives of Africa.

We must say, however, that if we consider this influence serious in the eastern province, where we have important groups of arabised natives at Kasongo, Mbangwe, Kirundu and Stanleyville, and if it is reviled as fairly considerable in the residencies of Ruanda and of Urundi (former German districts, now under Belgian mandate) it is perhaps not quite the same in Katanga. For if there are still a few arabised negroes on the shores of Lake Tanganika and along the old Arab roads, they are really very few in number and their religious education is of the most rudimentary nature. They like to wear a white dress to show their superiority over the other negroes and sometimes perform their qalār turned towards Mecca and fast in Ramadān, but for the rest they are ignorant and still believe, like their pagan kinsmen, in spirits, witchcraft, superstitions and in the power of malevolent magic.

Is any influence of this kind worthy of the attention of colonising nations? We think so, for one thing is certain, that the arabisation of the negro very quickly gives him a contempt for the kaffir and for European authority and the Muslims do not hesitate to encourage these sentiments.

Alongside of the arabisised negroes there remain in Katanga a certain number of Arabs who have been joined by Muslim Indians. They devote themselves to trading with untiring industry and some of them possess substantial shops, doing a big business and have prospered exceedingly. Indeed, we are at the commencement of a powerful economic offensive, the strength and meaning of which we must try to estimate.

Economic penetration from the East. Dār al-Salām (Léopold) and Zanzibar lying at the crossing of the routes from Europe, Africa and Asia, have become by force of circumstance depots for Asiatic merchandise of all kinds which eastern commerce intends for East Africa, into which they penetrate as a result of the activity and business skill of the immigrant Arabs and Hindus. To give an idea of the importance of this trade, it will be sufficient to consider that in 1922 Bombay and Zanzibar sold in Tanganika Territory (under British mandate) goods worth £ 694,000, the total imports being at most £ 1,386,500 and Great Britain herself purchased to the extent of £ 292,000. The goods which reach Katanga by this route are mainly cloths, articles of clothing, blankets and a certain amount of foods, soap and miscellaneous articles.

As regards textiles, the Hindu and Arab merchants import the most varied kinds, but especially the white cottons called "American" and "chader", which sell very well in the markets of Katanga. Not only do the importers attach a great importance to the quality and variety of their goods, but they pay special attention to the measurements of their cloths and call for a certain amount of goods which are not native-produced, as for example the port of Albertville alone, 18,000 kilograms of chader, 27,000 kilograms of American and 8,000 kilograms of cotton printed and dyed, as well as a considerable quantity of blankets and other goods.

Their activity is not confined to imports alone. They also export and it will give an idea of the magnitude of this branch of their trade if we say that a single Arab house in Albertville imported almost millions of francs worth of ivory. Several of these firms extend their activity from Zanzibar or Dār al-Salām to Albertville and from Albertville to the Stanley Falls. They have branches in the more important stations and have agents in their service and petty traders who are of great value to them, sober and active, living almost like natives, carrying on business at insignificant expense and thoroughly acquainted with the soul of the negro with its vices and weaknesses, which they can flatten when necessary even — and particularly — to the detriment of the prestige of the European; they carry into the remotest corners eastern influence with their wares.

In Katanga we can see an attempt at economic penetration which will have great developments and the figures which we have given ought in our opinion only to be regarded as stages in an increasing progression which, if European commerce does not take care, will assume considerable importance.

Is this economic influence susceptible of having a serious repercussion in other spheres? I should be premature to try to answer this question definitely. But we know that the demands raised by Orientals in the Kenya Colony in 1923 created profound uneasiness there and that the commercial strike began at the beginning of the same year by Hindu and Arab merchants in Tanganika Territory seriously disturbed the economic and political atmosphere of this colony. And then — and this is a thing which no colonising nation can afford to neglect — we are at the present watching the evolution of a phenomenon which an American author has styled "the blood tide of colour" and which may perhaps be a subject for grave anxiety to humanity to-morrow.

Bibliography: Travaux du groupe d'études coloniales (Instituts Solvay), Le Katanga; A. de Bauw, Le Katanga, Brussels 1920; O.
The peninsula was of some importance even in ancient times on account of its important situation commanding the Gulf of al-Bahrayn. A. Spranger has sought to identify the Cattaraei of Pliny (Naturalis Historiae, vi. 28, § 147) with the inhabitants of al-Kaṭar. The peninsula used to belong to the Sulṭānate of Ṭūm. From 1872 till 1914 it was under the suzerainty of the Turks, who had a garrison in al-Bedja down to October, 1914, and belonged to the province of al-Ḩaṣa, forming the kada of the same name in the sandjak of Naḍja. Since 1913 Abd Allāh al-Thānī has been lord of the peninsula. But parts of it became independent earlier. For example, in 1862 Dawaḥa made a treaty with England, ratifying her protectorate; in 1862 Dawāḥa, and in 1814 other places followed this example. Al-Ḳaṭar is now under the control of the ruler of Central Arabia, Ibn Saʿūd, who has thus regained the position once held by the Wahhābī kingdom to the peninsula, which the Turks had for a time usurped.

(KARL GROHMAN)

Kaṭarī b. al-Fuḍjāʿa, the last chief of the Azraḳ Khāridjīs (cf. above, i. 542). He belonged to a clan of the Tamīm (the tribe which furnished one of the most noteworthy contingents to these rebels), the Banū Ḋiyāb b. Ḍiyāb b. Māzin (Wüstenfelde, Geneal. Tabellen, i. 14). The name of his father, al-Fuḍjāʿa, is said to have been a surname and his real name was Djaʿwanī. Like other Arab chiefs, al-Ḳaṭarī had a double kunya (cf. Goldziher, Muḥ. Studien, i. 267): Abū Muḥammad in peace and Abū Maʿṣūma in war (Dżahī, Bayān, i. 131, i. 126). Of his youth we only know that he took part under the command of Abū al-Ǧaḥmān b. Samuel, along with several other chiefs among whom was al-Muhallab b. Abī Ṣafra al-ʿAzdi, destined later to become his bitter enemy, at the submission of Siṇā, in 42 A. H. (al-Baladḥurī, Futūḥ, ed. de Goeje, p. 396; Khāliṣa b. Khaṭīb in Ibn ʿAbd al-Barr, al-ʾIsrāʾīlī, Haiđerābād 1318, p. 405; Ibn Ḫadjar, Ṭaba, Cairo 1325, iv. 161). He must have reached a fairly mature age when, 27 years later, he was acclaimed ʿCommander of the Azraḳs when the latter, defeated by al-Muhallab and his lieutenants, were forced to surrender to nature. They passed through a very serious crisis. Kaṭarī, endowed with tremendous energy and indifferent to danger, was able to arouse the enthusiasm of his partisans, and after leading back the remnants of the army into the mountains of Kirman, reorganised them; he then went down again into the Ṭirāq, occupied Alważ and threatened Ba-rā. Kept for a long time in check by Muhallab, he nevertheless succeeded in maintaining his position on the left bank of the Ḫudjaṣ and after the Ṭirāq, as a result of the defeat of Moṣjàb b. al-Ẓubair at Māṣrik (71 A. H.), had fallen into the hands of Abīd al-Malik. Finally al-Ḥaḍjijād b.
Yusuf, appointed governor of the 'Irak, decided to reappoint Muhammad to the command against the Arzakis, in which he had been replaced without success by other chiefs. Muhammad then crossed the Djırafa along the line of the Djırafa to the Djudjaila and the offensive, pursued them into the very centre of their power. Kirmın. Kaṭari nevertheless was able to hold out for a long time in his lines (it is to this period that a silver coin with a legend in Pahlavi and Arabic of the year 75 struck in the name of Kaṭari as Amīr al-Mu'minin, refers [Z. D. M. G., 1585, xii. 52, No. 303]). The discontents that broke out within the Arzaki army between Arabs and Mawāl resulted in a split: Kaṭari had to leave the town of Djudjaila which was the Arzaki head-quarters and take refuge along with the Arabs in Tabaristan, while the Mawāl continued to hold Djudjail under the command of their chief, 'Abd Rabb or 'Abd Rabbi, (there are two individuals of this name among the Mawāl distinguished by the epithets al-Kābir and al-Saghir and the sources give the rank of commander sometimes to one and sometimes to the other or even distinguish two groups of the Mawāl which separated successively from al-Kaṭari and were led by 'Abd Rabbi the Great and the Less respectively). This division proved fatal, for Muhallab had no difficulty in routing the Mawāl and killing their chief; al-Hadjdjādī sent the Kābī warrior Sufyān b. al-Abrād against Kaṭari; or rather the latter (according to a tradition recorded by al-Yaqlī) as governor of Kaly received the appeal which the Ḥarāfī (local chief; cf. A. Siddiqi, Studien über die Pers. Fremdwörter im ksl. Arabischen, p. 784) addressed to him on behalf of the people of Tabaristan who were exasperated by the rigid application of the Ḧarāfī tax by Kaṭari. The Arzaki surprised by Sufyān's troops in a defile in the mountains suffered a decisive defeat. Kaṭari who fell under his horse and was abandoned by his followers was discovered and killed by a native. His head was cut off and borne in triumph to Kūnī and then to Damasc as was to be presented to the Caliph. The remnants of the Arzaki under 'Abida b. Hīlāl al-Yashkuri fled to Saghwan, a stronghold near Kūnī (Yaqlū, ii. 62) where they sustained a long siege from Sufyān; having exhausted their supplies, they made a desperate sortie which were wiped out. The chronology of these events is far from certain: the sources say that Kaṭari was in command for 13 or even 20 years are of no value. According to Wellhausen (cf. Bül.), the election of Kaṭari as Caliph probably took place at the end of 69 A.H. and his death in 78 or 79.

Kaṭari b. al-Fudjā'a represents in striking fashion the type of Kāhrīdī insurrectionist and also that of Arab Sayyid, half cavalier and half brigand. Like the other Arzaki, as a result of his fanatical zeal, he preached and practised istiraq (assassin.) of anyone who did not accept the Kāhrīdī creed) and declared the kā'ad (singul. kā'id) infeudals, that is to say those who, while professing the Kāhrīdī doctrine, refrained from taking part in the war against their adversaries. On the other hand, he was proud of his Arab blood and that of Bedouin character; like several other illiterate Kāhrīdīs, he had a real talent as orator and poet. One of his speeches is recorded by Dāhīj, Dayān, i. 196, 197; 'Ubd, ii. 195-196 (cf. also Fīrāṣ, p. 125 ff.); the fragments of his poetry that have survived to us, of which the most celebrated is the fragment Ha'madah, p. 44 (frequently quoted, with numerous variations), are remarkable for the elevated style and a heroic contempt for death and place their author in the first rank of Kāhrīdī poets.

Curoet, p. 59—90; Abd al-Khārīr al-Baghdādī, al-Fārik bi-nu'l-Fīrās al-Garīb, Cairo 1328, pp. 65—66; R. Frimmel, Die Christenfehde unter den ersten Ommeyaden, Leiden 1884, p. 44—46; J. Wellhausen, Die religiöse-politischen Oppositionsparteien im alten Islam (Abb. G. W. Grote), Berlin 1900, vol. vii. 36—41. Kāth, the ancient capital of Khwarzim, is the modern Khiva; according to Yaqlū, Mu'addī, ed. Wustenfeld, iv. 222, the name meant a wall (qā'it) in the desert in the language of the Khwarzims, even if there were no buildings within this. The fullest accounts of the old town and citadel of Fil or Fir, which was gradually washed away by the Amū-Daryā (the last traces of it are said to have disappeared in 834 = 994), are given in al-Biruni's Qātīb al-Anbār b. Dāyīya, p. 55; on which E. Schauz based his Zur Geschichte und Chronologie von Khwarizm (Sitzungsber. der phil. hist. Cl. d. K. Akad. der Wiss., Innsbruck, Vienna 1873, esp. p. 459 sq.). On the description of the town by the geographers of the 11th (xth) century cf. G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 446 sq.; W. Barthold, Turkestân w forquha mongolskog nasjonaliteten, i. St. Petersburg 1900, p. 143 sq.; the fullest information is given by al-Mu'addī, ed. De Goeje, 1906, p. 287 sq. The town lost its political importance when the dynasty of the first Khwarzimshah was destroyed by the prince of Gurgāndī, Abu T'Abbas Ma'mūn b. Muhammad, in 385 (995); cf. W. Barthold, Turkestân, etc., ii. 275 sq. Kāth is mentioned by Ibn Batūta (called al-Katb by him; cf. ed. Defrémey and Sagninetti, iii. 20) as the only inhabited place between Khwarzim and Urgench (the ancient Gurgandī). In the 12th (xith) century Kāth along with Khiva before the rise of the native dynasty in Khwarzim, belonged to the kingdom of Ghur. mā (Zafar- Najmā, Calcutta 1887, i. 232), this is shown for example also on the Chinese map of 1331 (in Bretnscheider, Medival Researches from Eastern Asiatic Sources, 1888, ii. 63). On the storming of Kāth by Timūr in 1372 cf. Zafarnāma, i. 237 sq.; for the assertion of P. Lorch, Khivas oder Khwarizm, St. Petersburg 1875, p. 21) that the army crossed the Amū-Daryā between Se-Fāyā and Kāth, which would mean that Kāth even then was on the left bank of the river, there is no authority in the text. In the 13th (xvth) century Kāth was on the bank of a dry canal; Anuṣa, Khān of Khiva (1665—1687), therefore built a new Kāth west of the main stream on the bank of the Yarmūk canal which he
himself had dug (W. Barthold, K istorii o rožen'ya Turkestana, St. Petersburg 1914, p. 95, from the MS. of the Asiatic Museum 590 ob, History of Khiva, fol. 335). The ruins of the old Kālīkh east of the Amū-Darya are now called after the alleged tomb of a saint of the earliest period of Islam, ʿAbbās Wallī; they were visited in 1873 and described by A. Kuhn (Materiali diya statističkii Tur. Kraya, iv. 252). Besides the tomb of the saint, the only building adorned with glazed bricks, there are mentioned here a half destroyed minaret and the remains of the city wall, all of baked bricks. The modern village (200 houses, 15 shops with schools) occupies only a small part of the ancient site and the modern fort only a quarter of the old citadel. According to V. Masalskiy (Turkestanskii Kray, St. Petersburg 1913, p. 749), the ruins are 31 verses from Petroalexandrovsk (called Turkul since the revolution) and 7 verses from the present right bank of the Amū-Darya. (W. Barthold)

KATHAI, KETAI [See China].

KATTA [See K'AI].

KATIC, writer or scribe, is probably derived from the word kāṭāb (book) and from both was later formed the verb kataba (he wrote). The word was perhaps imported with the art from the Northern Arabian neighbours of the Arabs. We not only find the word in the earliest poetry preserved, applied to those who wrote the Arabic script but also ancient poets speak of Ḥimāriyā kāṭābs. In the time before Islam the art of writing, though apparently practised in all parts of Arabia, was the accomplishment of the few, and Ibn Saʿd in his Ṭabākāt makes a point of mentioning each time when he states that a certain ʿAṣāḥib could write, that the art of writing was little known at that time. Among the Companions at Medina some ten are stated to have been kāṭābs, and ʿAṣāḥib b. Mālik in a tradition preserved by Aḥmad b. Ḥanbal (iii. 459) mentions that he is a kāṭāb as a particular accomplishment. It is further recorded that several prominent men in Mekka also wrote, and we may assume that the kāṭābs of the court of al-Ḥira (like ʿAbd b. Zaid) were employed in drawing up the safe-conducts (mentioned by Tūsail al-Ghanawī or hīfi-contracts referred to in the Naṣaḥāt and in the Muṣallākā of al-Ḥarīrī b. ʿUllī and written in Arabic. Of far greater importance from an Islamic point of view were the men who wrote down the revelations of the Prophet; they are named Kāṭīb al-Walīy. Such men were ʿUbayy b. Kaʿb, Ibn Masʿūd and Zaid b. Ṭabīt. These same men were also employed for writing the various letters sent by the Prophet to prominent men in Arabia inviting them to embrace Islam. The office of kāṭīb was one of great honour and the rank, which was later occupied by the waṣī, was filled during the whole time of the first four Caliphs and the Umayyads by men who had the simple title of kāṭīb, and it was only under Abu ʿl-ʿAbd b. Sālih that the title of waṣī was first employed. By this time, on the model of the Persian chancellery, a complicated system of government offices had developed. The chief secretary had the title of Kāṭīb al-Sirr "Private secretary", others were employed to make the first drafts of official documents; these were called Kāṭi b al-Inṣāq. The control of the army with the payment of the troops was regulated by the Kāṭīb al-Dhakād, which might equate with the "Secretary for War". Other secretaries were employed for the supervision of the landed property of the ruler. The whole system of kāṭībs was the Divān [q.v.]. This class of men became all-powerful and it was from them that the highest officials of state were recruited. They appear to have kept themselves apart from the other men of education, for only rarely find we any of them mentioned among the innumerable traditionists and theologians, though many are found among the men who made a mark as poets or authors in other branches of learning. As they were required to have a general knowledge of all manner of subjects, authors early began to compose books for the benefit of this class and as this office maintained its importance the works for their benefit have come down to us in many copies. The chief works on the education of the kāṭīb are the Abab al-Kāṭīb of Ibn Ḥusayn (q.v.), the Kitāb al-Kutṭāb of Ibn Durustawāhi, the Abad al-Kāṭīb of al-Sūlī and especially the voluminous work of al-Kalāshandī. While the first three works give us an insight into the requirements of a competent kāṭīb in the earlier centuries, the Suhh al-A'īdā of al-Kalāshandī contains practically all that it is necessary to know on the subject. We can trace step by step how the kāṭīb improved the whole of Arabic prose literature; from the simple and clear letters of the earlier periods we come gradually to the bombastic composition of later times in which it is frequently difficult to discover the purpose of a document in the volume of sounding words. The disease was due to the zeal of the kāṭīb to outdo his colleagues or predecessors in the imagined elegance of his diction. We may owe many useful works to their authors' desire to supply the kāṭīb with the material for his compositions, but the whole striving for grandiose language has been the cause for making so much Oriental literature so indigestible to our taste. This is perhaps aggravated by Persian, Turkish and Indian kāṭībs. They were proud too when they could solve the meaning of the tangle of words and we get a glimpse at that mentality when a renowned kāṭīb like the ʿAbd b. ʿAbdāb object to a letter being sent to him, because the words were properly pointed and vocalised, as he considered it an insult to his intellect. Though the kāṭībs rose to high positions, they appear as a class to have been of a cowardly disposition, and could only intrigue; and I believe no one ever rose to become a ruler, which so many bold spirits succeeded in doing during the last twelve centuries. Bibliography: Ibn Ḥusayn, Abad al-Kāṭīb, ed. Grünew and several Oriental editions, especially the Commentary of al-Batalyūsi entitled Abad al-Kāṭīb; Ibn Durustawāhi, Kitāb al-Kutṭāb, ed. Cheikh; al-Sūlī, Abad al-Kāṭīb, ed. Beirūt; al-Kalāshandī, Suhh al-A'īdā, ed. Cairo in 14 volumes and the abridgment of the latter entitled Al-Daw'n. (F. Krenkov)

KATIB CELEBI. [See ḤIJJILA].

KATIB-I RUMI. [See 'Ali b. Husain].

KATIBI SHAMS AL-DIN MUHAMMAD B. ABD ALLAH, a Persian poet, born at Tarak, Wardenesh; a village of Turğiş in Khwarāsān, studied at Nishāpūr, went to Herāt, and in 1082 at Harat to the court of Timūrids, where he did not receive the welcome he expected, and lived for a long time in Shīrāz where the prince Mirzā Shaikh Ibrāhīm (d. 820 = 1417) had taken him under his patronage. He then lived in Adharbudān, where he was not appreciated by Iskandar b. ʿUṣūf, and in Iṣfahān, where
he immersed himself in the study of mysticism, and died of the plague at Astara in 838 and 839 (1434—1435). It was in the last-named town that he undertook to compose a *khawāna* "a group of five poems" in imitation of Nizāmī and Amir Khosrow but he only finished the *Gulshan-i Abru* "Rosebush of Pious Men" and his *Laftāt-i Maḏjūnāt* of which the only known manuscript is in St. Petersburg. In the field of ethical and didactic poetry he wrote a book entitled *Dīh Bāb* "The ten Chapters" or *Tadhāifik al-Funūn*; he also left a *Dīwān* of ten gazelles were published and translated by Bland in his *Century*, p. 18—21, the *Pul-i Qubbat* "Thirty Letters", devoted to mystic love, and among the *Mathnawī* of allegorical and epic matter the *Mathnawī al-Bahrawn* "Confluence of the two Seas", which has a double rhyme, and can be read in two different metres and represents the mystic love of two personages named Nāẓir and Maḥnūr, and the *Dīrūzād* "Ravishing of Hearts", an allegorical history of Khūbd, king of the Yemen, and of his minister, fertile in ruses. His poetical surname of Kātibi probably comes from the fact that he was a calligrapher, having received lessons in Nisāfūr from Mawla Ilqī, who later quarrelled with him. He spent the whole of his life in poverty as a foolish and meagre-voiced person which prevented him in a few days the sums he received from the munificence of his patrons.

(CI. Huart)

**Al-Ḵātīf, a seaport on the coast of the Persian Gulf in the bay of the same name.** The latter, which faces due east, is about four miles broad at the entrance, and enclosed on the north by a narrow promontory, shaped like a mussel-shell, on which lies the fortress of Dārūn. Its point is called Rās Tanūrā. The south side of the bay is confined by a jutting horn of land, called Zahrān, from a hill on it shaped like a sugar-loaf, which forms an excellent landmark for ships entering the bay. On this side of the bay lie the fortifications of Dammān. Towards the mouth of the bay lies the island of Tārūt, four hours' journey in length from north to south, well provided with water and thickly planted with palm groves. This island lies exactly opposite al-Ḵātīf. The best and safest passage to the harbour of al-Ḵātīf is through the deep channel on the north between the island of Tārūt and Rās Tanūrā; the channel south of the island is shallow and difficult to navigate. The waters of the Gulf are shallow almost everywhere in the bay, and only show a level surface of water at high tide: when the ebb sets in, landbanks appear, and little islands, shallows and bushes of sea-plants, among which wind narrow channels filled with mud. The coast is very flat; except at a few places it is almost level with the sea.

It is significant of the change in the coast-line that Abu 'l-Fida (d. 1331) tells us that in his time Tārūt was still part of the continent and was only surrounded by the sea and became an island at high tide. As soon as the sea went back a part of the land between Tārūt and al-Ḵātīf appeared, so that people could pass along it to the mainland. According to him, Tārūt was half a day's journey from al-Ḵātīf and rich in vineyards with excellent grapes. Al-Maṣūdi (d. 956) puts the distance between Tārūt and al-Ḵātīf at a mile. As Tārūt is now an island, the sea has swallowed up part of the coast here. On the land side al-Ḵātīf is surrounded by a broad girdle of gardens and orchards. The flourishing crops in the gardens far surpass those of the best watered places in the interior, e.g. at Huhūfī. The date-palm does exceedingly well here in a soil richly irrigated, partly by salt water, which the flood-tide carries far into the interior, and partly from the fresh water springs of the adjacent hills. Cereals, wheat, barley, rice, and all kinds of vegetables, figs, apricots, mangoes, pomegranates, grapes, citrons and lemons also flourish here. Through an uninterrupted succession of palm-groves, which it takes several hours to traverse in either direction, wind-sieve-like ites, the arches and canals of an old irrigation system, which date from the Karmaṭian period, and formerly supplied al-Ḵātīf with better water than could be had in the immediate neighbourhood of the town. The whole length of the system, now in ruins, must have been about five miles. Al-Ḵātīf has walls and towers. The western gate has a high stone arch of delicate work and is flanked by towers and walls which are now in ruins. Just outside the gate are two cemeteries. The town, which is about a quarter of a mile long, is damp and filthy, and with its suburbs has about 6,000 inhabitants; the whole district, according to Sallier, had nine walled and seven open villages, the population of which including al-Ḵātīf he put at 25,000. The continual fighting, of which the town has been the scene, has much affected its appearance. It now has a dismal, broken-down look. The market-place, on which the products of the country are to be amply had, is large. At the inner end of the small bay already mentioned, stands the powerful citadel said to have been built by the Karmaṭian Abū Saʿīd al-Dānaībī, later used by the Portuguese, the high massive walls of brick and stone of which come down almost to the water's edge, so that only a narrow path along the shore is left, on to which opens the main gate defended by an outwork. Close to the shore there is now also the customs-house. The outer court forms a quadrangle and is surrounded by high walls with towers at the corners, and protected on the land-side by a ditch. At the south-west corner stands the old palace of the Karmatians, of which part has fallen in and been taken away and part has been very clumsily restored. The entrance is through a great archway in the Moorish style, supported by slender pillars, three arches deep and five long with fine cross-vaulting with arabesques in stucco, which have now for the most part fallen down. This archway leads into a long gallery, formerly covered, of which the side walls and pillars and a few arches remain. One then enters the inner court, which is surrounded by a series of chambers still fairly well preserved. A lofty room, long and
The climate of al-Kāṭif is very unhealthy; fever and other diseases have given the coast a bad reputation. The harbour, which was once accessible to heavily laden ships, is now for the most part silted up, and accessible only to small vessels at high tide. The sand-banks which run out on either side make entrance difficult, nay even dangerous. To the west and south the bay is well sheltered by the promontories and the islands of Tārūt and Suwaq. It is also favourably situated for trade with the ports of al-Bahrain, Būhhār and other places. Al-Kāṭif might again attain some importance as a harbour, if it were dredged and kept in order and given better communications with the interior. The inhabitants of al-Kāṭif are mainly engaged in pearl-fishing and in trading. Their type shows the strong Persian stamp, which dates from the pre-Muḥammadan period.

History. A. Sprenger has identified the bay with the Sinus Capensis of Pliney, Nat. Hist., vi., 28, § 147. Before the days of Isām, al-Kāṭif, like the whole of al-Bahrain, was under Persian suzerainty. Šāhpūr II about 320 A.D. conquered the whole Arabian coast beginning at al-Kāṭif. In the early days of the Parthian Empire there were still many Persian colonists (Maqjans), Jews and Christians in al-Kāṭif, as well as in the other towns of al-Bahrain. In al-Kāṭif, however, the ‘Abd al-Ka‘is were predominant in those days. The whole country of al-Bahrain including al-Kāṭif then submitted to the Prophet in al-Medina and came under the administration of al-‘A‘iz b. al-Hādrāmi. But when the general rising broke out among the Muslims under Muḥammad’s death, al-Bahrain was one of the first districts to proclaim its independence from the lord of al-Medina. In 111 A.H. the rebels under al-Ḥādī Ṭabī‘i occupied al-Kāṭif, but the rebellion soon collapsed. In 67 A.H. there was an encounter at al-Kāṭif between the Abī al-Ka‘is and Nadjiya b. ‘Amir al-Hafal, in which the former were decisively beaten. Nadjiya then abandoned the tents of the people of al-Kāṭif, who had risen against him, and took up his headquarters there. Much more momentous for the town than this transitory feud was the invasion by the Kārmat ‘Ajam Abī Sa‘id al-Ḥasan b. Bahram Al-Djinnabi in 286 A.H. Many inhabitants perished. Abū Sa‘id had pitched his camp in the town and then undertook a bold campaign against al-Baṣrah. The governor of the town, Ibn Bānū, gave battle to the Kārmāṭians at al-Kāṭif in 290 A.H.; the latter were defeated and suffered heavy losses, including Abū Sa‘id’s successor designate. The town was taken by Ibn Bānū and Abū Sa‘id had to abandon his campaign against al-Baṣrah and hurriedly return. Al-Kāṭif fell again into the hands of the Kārmāṭians, who were now masters of almost all al-Bahrain with Ḥadjar, al-‘Aḥsa‘, al-Kāṭif and al-Tā‘if. When at the period of decline of Kārmāṭian power in 378 A.H., al-‘Aḥsa‘ with a section of the Banu ‘d-Mun-

\textbf{Kat\text{"u}n}, Kad\text{"u}n (v.), [see K\text{"u}t\text{"u}n].

\textbf{Kat\text{"u}l} (a.), killing, putting to death, used in the two principal meanings of the word — the crime of murder and the punishment of execution.

I. \textit{Kat\text{"u}\text{"u}l} as a crime.

1. In the \textit{Kur\text{"u}n} unlawful slaying is forbidden in a series of verses, which date from the second Mekk\text{"a}n period to nearly the middle of the Medina period. The passages may be arranged chronologically as follows (cf. Th. Noldke-Fr. Schwally, \textit{Geschichte des Kor\text{"a}n}, vol. i. and ii. Grimm, \textit{Mohammed}, vol. ii.); when the exact order in the particular passages cannot be ascertained, the passages are here arranged in the order of the \textit{S\text{"u}ras} and verses): — xvii. 33 35 (second Mekk\text{"a}n period, according to O. Procksch, \textit{"Uber die Blutstotte}, p. 74, note 4, later than vol. 152): "Kill not your children for fear of being brought to want; We will provide for them and for you; verily the killing them is a great sin. Neither slay the soul which God hath forbidden you to slay unless for a just cause; but whosoever shall be slain unjustly, We have given his next of kin (wait) power (to demand satisfaction) but let him not exceed the bounds of moderation in the killing; indeed he is protected"; xxv. 65 sqq. (second Mekk\text{"a}n period): — (and the servants of the Merciful are those) who slay not the soul, which God hath forbidden to be slain unless for a just cause, for he who does this commits sins (or: will bring retribution upon himself); his punishment will be doubled on the day of the Resurrection and he shall remain in it covered with ignominy for ever; except him who repents and believes and performs good works; for them God will change their evil deeds into good" .... (here killing and unbelief are considered together so that the question, what happens to a believer who kills unlawfully, is left quite out of the question): v. 152 (third Mekk\text{"a}n period; similar to xvii. 33 35); iv. 94 sq. (about the years 3 5; according to Procksch, \textit{op. cit.}, p. 86, to be dated between the treaty of al-\textit{Hudaiya} and the capture of Mekka): "it is not lawful for a believer to kill a believer unless by mistake (by \textit{qiy\text{"a}d}); but if anyone kill a believer by mistake he shall set free a slave who is a believer and pay a \textit{diya} to the next of kin of the dead man, unless they waive it; .... but if the person slain belong to a people hostile to you, but a believer, a slave who is a believer shall be released; but if he belong to a people with whom ye have a treaty, a \textit{diya} must be paid to his relatives and a slave who is a believer set free; if anyone cannot afford to do this, he must fast for two successive months so that Allah may look upon him again .... but if anyone kill a believer deliberately (with \textit{am\text{"a}d}) his reward is hell in which he shall remain for ever and Allah wrathful against him and curse him and shall prepare a great punishment for him" (the true interpretation is undoubtedly this, that every Muslim who kills another Muslim with \textit{am\text{"a}d} is condemned to eternal hell-fire and that Allah will not accept his repentance, a view which is ascribed to Ibn \textit{Ab\text{"u}b\text{"u}s}, Ibn \textit{M\text{"u}\text{"u}n}, Zaid b. \textit{b\text{"u}b\text{"u}s} and al-\textit{Hudaiya}; the view held by \textit{Ikh\text{"a}ma} and others that the verse refers to the particular case of a \textit{wurt\text{"u}d} who has killed a believer is not to be accepted; this is already a transition to the view that has finally prevailed, which tones down the literal wording of the passage, either by adding with al\textit{M\text{"u}d\text{"u}j\text{"a}d} unless he repents or by holding, as has become usual, that Allah will not leave a Muslim eternally in hell, and can even remit entirely the threatened punishment of hell-fire; but this is only the result of speculation and combination with other passages in the \textit{Kur\text{"u}n} [e.g. xi. 108 110; xxix. 54] and is therefore to be rejected: iv. 33 sq. (from about the same time; similar to iv. 95); ix. 12 (probably dates from soon after the treaty of al-\textit{Hudaiya}; similar to xvii. 33 35).

There are further two passages, in which it is asserted that Allah forbade the Jews to kill: ii. 75 sqq. (from about the first half of the year 2 \textit{A.H.}) and v. 35 (probably of the year 6 or 7; according to Grimm, to be dated before the battle of Badr).

There are also a number of verses in which killing is not exactly forbidden but is more or less strongly deprecated and represented as a mark of the unbeliever, just as committing no murder is a sign of the believer, e.g. lxxxi. 5 sq. (first Mekk\text{"a}n period); ii. 28 (probably third Mekk\text{"a}n period; according to Grimm, Medina); xvi. 24 (probably the battle of Badr); xii. 138, 141; xvi. 61 xvi. 26 (same time); viii. 30 (after the battle of Badr); v. 33 (shortly before the capture of Kh\text{"a}bar). In numerous passages in this connection the unbelievers are reproached with the slaying of prophets, e.g. ii. 58, 81, 85 (from the first half of the year 2); iv. 154 (after the outbreak of open war with the Jews of Medina); iii. 177, 180 (probably soon after the battle of \textit{Ubud}); xx. 108 (shortly before the war with the Banu \textit{b-N\text{"u}d\text{"i}}); v. 74 (later Medina period).

2. \textit{Supplements to the \textit{Kur\text{"u}n} passages from the \textit{S\text{"u}ra}, accounts of the life of Muhammad.}
In the so-called ordinance of the community, which dates from the first Medina period, it is laid down that no believer may kill a believer on account of an unbeliever; in another passage it is said: "If anyone kill a believer and is convicted, then vengeance for bloodshed must be done, unless the soul of the man slain waive it". In all probability Muhammad had in mind in the murder of a non-Muslim member of the community (Frockch, op. cit., p. 71): this agrees with the development given above. In the ba'itha, the initiation into the community, the initiate had to pledge himself, among other things, not to commit an unlawful act of slaying (cf. Kurān, lv. 12). Once Muhammad cursed a murderer (cf. the art. ḫiyāraṯ). In the so-called first temple-speech (of the year 650), the genuineness of which is not absolutely certain, however, on every point and seems doubtful on this particular point, there appears the by no means exactly defined conception of ḫatl shabab 'amad (see below, sub 5); Muhammad is also said to have declared there that all blood-guilt attached to a Muslim dating from the period of paganism was to be cast off, which extends the corresponding passage of the ordinance of the community. Finally it is to be mentioned that the Sira knows of several cases of deliberate and of unpunished slaying; so far as they are liable to be punished, they are dealt with in the article ḫiyāraṯ.

3) Comparison of the views of authoritative circles in the Muslim community in the older period as preserved in Ḥadith (tradition). It is obvious that in the Ḥadith also the slaying of a Muslim is strictly forbidden; by the adoption of Islam (and of monotheism at all) life and property are protected. The life and property of a Muslim are as inviolable (ḫarāṭiḥ) as the day of sacrifice in Dhu'l-Hijja in the sacred territory of Mekka (al-Bukhārī, Diwāšt, bāb 8, etc.). All blood-guilt, which has weighed a man down from an earlier period, is thus wiped out by the adoption of Islam, even if the crime was committed just before conversion to Islam. Only if a Muslim kills another, or, to be more exact, if he commits a crime worthy of death, can it be blamed. Everyone who perfectly agreed that killing with 'amād is one of the deadliest sins (kalābīr); it is usually considered the gravest sin, along with the ṣhirāk (polytheism; e.g. al-Bukhārī, Diwāšt, bāb 1, 2), whether it is asserted of killing with 'amād in general or of the killing of newborn girls usual among the heathens. Therefore many Ḥadith's express disgust at killing; e.g. "the slaying of a Muslim is to Allāh like the cessation of the world", or "the cessation of the world is even less to Allāh than this"; "if someone is killed in the east and another in the west approves of it, he is guilty of the person's blood"; "the work of Allāh; cursed he who destroys Allāh's works". The first murder which introduced killing into the world is the subject of special condemnation: Cain is accessory to every later murder. Murder is punished in the next world as well as on earth; on the Day of Judgment cases of the shedding of innocent blood will be judged first. As to the punishment itself, a whole stratum of ḥadiths reflects the already mentioned view of Ibn 'Abbās and others regarding the eternalness of punishment in hell for slaying with 'amād; e.g. "whoever sheds blood in an unlawful way, for him there exists no way of escape"; "whoever contributes though only by a word to the slaying of a Muslim must despair of the mercy of Allāh". In several passages the deliberate murder of a Muslim is considered equivalent to unbelief (baḍāʾ in which a warning is simply uttered against murder being a sin of the unbeliever are, of course, not dealt with here). It is even said: "if two Muslims attack one another with swords and one kills the other, both go to hell (unless it was a case of legitimate self-defence), the sayer for his deed and the slain because he wished to kill the other" (cf. e.g. al-Bukhārī, Diwāšt, bāb 2); and: "if all the inhabitants of heaven and earth together had killed someone they would all go to hell". In these two passages it is not exactly demonstrable that eternal punishment in hell is meant but it is very probable. In several of the traditions mentioned, Ibn 'Abbās appears as the authority. Such ḥadiths were naturally rendered harmless by "interpretation" by the representatives of the other view, if they were not entirely suppressed, which did happen to not a few. Thus the description of deliberate murder as unbelief is sometimes interpreted to mean that it is a very grievous sin and sometimes taken as a reference to the refusal of the protection of Islamic law, which occurs in both cases, to the life of the slayer or of the unbeliever. This was not found sufficient, however, but traditions were put into currency to prove the contrary, namely that Allāh would accept the repentance of a murderer, even if he had committed several murders as if these traditions is provided with a grotesque story, the object of which is quite apparent, as corroboration. In one tradition the kaffāra, especially the liberation of a slave, is represented as a means to save the murderer from the merited punishment of hell, obviously by someone who demanded it even in case of ḫatl with 'amād (see below sub 6). It is even asserted in public controversy against the views of the other side that after the Day of Judgment no Muslim will go to hell and that, on the contrary, all sins will be forgiven them. — The killing of a muḍāriḥ, i.e. a Muslim under the protection of the Islamic state, is threatened with punishment in the next world (e.g. al-Bukhārī, Diwāšt, bāb 50; al-Dārīmi, Sīyar, bāb 60; the Kurān is silent on the question); but, as might be expected, the view is very rarely expressed that this punishment is eternal. — The prohibition of suicide, which we do not find laid down in the Kurān, is given in the Ḥadith and the suicide is threatened with eternal punishment in the next world.

As an appendix to the above we may briefly mention the connection of several kinds of animals with ḫatl, which is also dealt with in tradition. Muhammad had, as is related, recommended the slaughter of dogs but later withdrew the order, although the dog always remained subject to certain exceptional regulations (cf. the art. KALIN; the sunna further orders the killing of the ṣawāṣn, a kind of lizard, but if possible it should be done with one blow: on the other hand the killing of ants and of cats is forbidden (among the authorities for this last tradition is Abū Hujairah); on the killing of snakes cf. Guillaume, Th. Traditions of Islam, p. 116 sq.

As regards the value of the traditions just quoted, the genuineness of none of them can be proved; while the falsity of those, which seek to save the murderer of a Muslim from hell, is
apparent, it is also probable of those which hold the contrary view.

4) The controversy regarding the punishment of the murderer of a Muslim centres round a passage in the Koran, which in itself could and must form a foundation for it, and is in part at least independent and original. This controversy and the conception of *khat* in general are, however, very closely connected with the disputes aroused by the *khadda*, *kadaria* and *mu*-

The controversy and the conception of *khat* in general are, however, very closely connected with the disputes aroused by the *khadda*, *kadaria* and *mu*tulits; the determinations of these articles; here it is sufficient to recall the following questions: — *is the committing of death a sin* and *killing with *samad* is certainly one of them — *unbelievers*? "Does man create his own actions, including sins, himself, or do they happen through *kadar*?" "Can man by his intervention interfere with Allah's decision, for example by killing another sooner than the period predestined for the latter's life?" We have more than one example of these questions being applied to *khat*, and they have been cited in discussing *khat* (cf. e.g. Goldziher, *Vorlesungen fiber den Islam*, p. 98 sq.; sec. ed., p. 92 sq.). But the Mu'tazilis' view of the eternalness of hell-punishment for him who commits a deadly sin and does not repent, is specially important in this connection; al-Zamakhshari gives an explanation of the verse of the Koran in question from this point of view. Finally the concensus of orthodox opinion agreed that the deliberate killing of a Muslim is certainly a deadly sin, but the slayer, on the other hand, if he repents and voluntarily submits to the punishment prescribed, will not he further punished in the next world and, even if he does not repent, will in no case remain in hell eternally (agreement was reached on this point even before the rise of the Fiqh-schools; therefore there is no *ikhtila* of the madhhab on this question); this view has found its way into all text-books of Fiqh and of doctrine.

5) A statement of the prevailing Ikhwan views on killing. *Khat* in the Fiqh is the act of a man whereby the life of a fellow-man is brought to a close (the death need not immediately follow the act). It may be qualified by any of the five "legal categories": — death without necessity, recommended (naudah), e.g. when the ghaazi kills his unbelieving kinsmen if they insult Allah or his Prophet; permitted (mukhab), e.g. when the Imam kills the unbelieving prisoner of war, in the case when the reasons for killing him exactly balance those for granting his life; killing in self-defence is also allowed i.e. in defending oneself against an illegal attack on one's life, person or property, in defending oneself or some one who comes to help, if the attack cannot otherwise be averted (on further questions there is *ikhtila*, also on the question whether a man who surprises another in adultery with his wife or endeavouring to see into his harem, and kills or mutilates him, is acting legitimately or not; one tradition on the subject is interpreted in different ways); disapproved (makruh), e.g. when the ghaazi kills his unbelieving kinsmen without their having insulted Allah or his Prophet; illegal and therefore forbidden (haram).

Illegal killing as the result of actions in themselves legal may take place in five ways:

a) as *sama*, i.e. someone willfully makes another the direct object of an action in general fatal so that the other dies as a result; according to one view, the intention of killing is necessary for the conception of *khat* which, however, is always presumed in the case of any act generally fatal in its result, which is illegally inflicted on another; so that, for example, any one, who strikes a blow at the hand of another with an instrument adapted in general for killing, but inadvertently hits his neck and kills him, *cesir*as *purush* is unanimously regarded as equally guilty with the man who strikes another in the neck with the same instrument, willfully intending to kill him and slays him: this killing is a sin (ma'dhaw) and in general is punished by *khat*, or else the slayer is bound to pay the heavier *diva* and to lose any possible legacy from the deceased to himself;

b) as *khat* (or *khat*), i.e. there is no intention of committing an act illegally on the other as in the case of a), while the action itself is premeditated: two kinds are distinguished, according as the *khadd* (mistake or misadventure) which shows that the killing is not wilful, is in the intention of the doer (*khat*); or in the carrying out of the action (*khat*); The former is the case when someone treats another as a wild beast or a *harbi*, (an infidel not enjoying the protection of the Islamic state, against whom the *djuhal* is to be waged) the killing of whom is not illegal, and kills him; the latter when someone unluckily hits another, while shooting at a target or at a *harbi*, so that he dies, or strikes at the hand of another person but inadvertently hits the neck of a third person and kills him; this killing is not sin but brings with it (without *khat*) the obligation upon the *ahila* of the killer to pay the smaller *diva* and to lose any claims to any inheritance from the deceased as in a); besides the obligation of the killer to perform the *kafrara*;

c) as *shabah* (or *shibh*) *samad* = similar to *samad*, i.e. someone intentionally makes another the direct object of some action, not always: but sometimes fatal, and death results. Actions which experience has shown not to be fatal are all thus quite open; if someone as a result of such an action as this, it is an unfortunate accident, which is not followed by any penal consequences. This killing is a sin and brings with it (without *khat*) the obligation upon the *ahila* of the slayer to pay the heavier *diva* and to lose any possible inheritance from the deceased as in a), and in addition the slayer is bound to perform the *kafrara*. This category only exists in cases where death actually results; in cases of bodily injury, which, by the way, are similarly classified, the action is regarded as *sama*;

d) as *djiir* madjira *khat* (or madjira *khat* or *khat* *matam* ak-*khat*) "equivalent to *khat*", i.e. the factor of deliberation is lacking in the action (and also the intention of directing the action illegally against another) in the circumstance of b) and c), for example: someone falls upon another in his sleep or falls from a roof upon him and kills him; the legal results are the same as in b);

e) as *khat* bi-*sabh" indirect killing", i.e. someone brings about the death of another without doing anything directly against him; e.g. he digs a well and someone falls into it and dies as the result; sometimes this category is treated as a subdivision
of death; but it is a matter of indifference, whether the act, which indirectly results in the death of another, is deliberate or not, intentional or unintentional, even if the action has been planned in some very cunning way such as setting a savage beast on another person with the intention of causing his death, it does not alter the situation. The legal consequences are in any case limited to the obligation upon the 'zālia of the doer to pay the lighter diya; larger works on Fiqh usually discuss very fully the question what acts are to be considered direct causes of death and which are khat bi-sahab and in which there can be no question of a causing of death so that no legal consequences result.

Two cases are especially dealt with in the Fiqh books: a) The causing of a premature birth or abortion and b) killing through giving false evidence. 

a) If in causing an abortion, or premature birth, the embryo — which must be sufficiently developed to be of human form — is brought into the world dead or dies after the birth or the mother dies, it is not a case for the application of khat; there is in any case no khat bi-sahab in the mother whose killing is dealt with under the above rules and the embryo before completion of birth is legally not in full possession of its powers but is usually regarded as a limb of the mother. [Hence we have the following law: if the head of a child appears out of the mother's womb at birth and the child cries (and is therefore certainly alive) and then someone cuts off its head, it is not a case for khat and only the punishment prescribed for producing an abortion is to be inflicted. Different amounts are to be paid for the embryo according to the different cases and if it comes alive into the world and then dies the person who causes its death is liable to kaffāra; he also loses any inheritance that might have come to him.

b) If anyone is killed on evidence which shows that a crime deserving death has been committed and then the witnesses recall their evidence or in other ways it is proved that their testimony was false, khat cannot be executed on the witness; the diya must be paid, the heavier if the false evidence was deliberately given, the lighter if otherwise.

6) We may add the following — taking only the most important points — to the above exposition of the Hanafi system, with reference to ikhkāāf (difference of opinion among the schools).

a) On 'amād: the difference of opinion within the Hanafi school already mentioned, regarding the part of the intention to kill in 'amād is also found outside the Hanafi school; among the Shāfī's the view which does not demand the existence of the intention to kill has become predominant, and the evidence for the other views is sometimes interpreted as meaning a presumption of intention. Abū Yūsuf and al-Shāhī in agreement with Mālik, al-Shāfī and Abū lbn Ḥanbal, assume 'amād if the action is as a rule fatal; Abū Ḥanifa, on the other hand, limits it to the use of a weapon or of a thing which can be used like a weapon to cut off limbs; among such he includes fire; deliberate killing, for example with a large sharpened stone, or a big stick, which in the ordinary way would kill, or by drowning in water, which would be generally regarded as sufficient depth to do so, is therefore considered by the former as 'amād, but by Abū Ḥanifa as shahab 'amād, relying on a passage in the so-called first temple speech of Muhammad, which the champions of the other view naturally interpret otherwise, and this view was later considered the better by the Ḥanafīs. The qualification of the various actions generally differs sometimes considerably and the Ḥanafīs often make use of istihlāl, exercise of discretion. In the Mālikī and Ḥanafi view no kaffāra is to be performed for 'amād; al-Shāfī, on the other hand, demands it if the khat is not executed and both views are given on the authority of Abū lbn Ḥanbal.

b) On khat: that khat is not a sin is more exactly explained to mean that it is neither permitted nor forbidden but that this killing is rather fit al-shāfi, "action of a thoughtless person", and is to be judged in the same way as the act of a mentally defective person or of an animal. Except in the Ḥanafi madhab, categories d) and e) [sub 5] are not distinguished from khat, which also was the earliest view of al-Shāfī (Z. D. M. G. 38) and khat bi-sahab has generally the same legal consequences as khat; we thus have three kinds of khat: 'amād, shahab 'amād and khat, of which shahab 'amād is considered to be composed of 'amād and khat.

c) On shahab 'amād: this category is also called 'amād khat, khat 'amād or khat shahab 'amād; in contrast to it, 'amād is also called 'amād maḥād and khat also khat maḥād (pure 'amād or khat); the application of khat is said to be permissible by al-Shāfī if the killer, for example, repeats the blow with an instrument not normally adapted for killing so frequently that the person attacked dies; the act is then considered 'amād; one of the two opinions handed down on the authority of Abū Yūsuf and al-Shāhīn is to the same effect while the view that became predominant in the school was to the contrary. Mālik allows khat in shahab 'amād in general.

d) On khat bi-sahab: Mālik, at-Shāfī and Abū lbn Ḥanbal demand kaffāra in addition if the placing of the cause of the death was illegal.

e) Different views also prevail as to the amount to be paid for the killing of an embryo.

f) On causing death through false witness: if the false evidence was deliberately given, according to al-Shāfī and the better known opinion of Mālik, khatās can be executed on the witnesses.

7) Notes on the question of permission, request, compulsion and assistance in illegal killing. a) If someone kills another by his request or with his permission there is neither khat nor obligation to pay diya.

b) No definite punishment is laid down for the case of a request to kill someone; such a request does not mean the expulsion of the slayer; only if the person requested is a minor or a slave claims may be made from the 'āqila of the minor, or from the proprietor of the slave.

c) A forces B to kill C; then, according to Abū Ḥanifa, the khatās is executed on A, according to Mālik and Abū lbn Ḥanbal on B; as to al-Shāfī's view, there is no doubt that A is liable to khatās; as regards B both possible views are transmitted, of which the one that ultimately became predominant in the school makes him also liable to khatās. Mālik further makes A also liable to khatās if the compulsion comes from a person having authority, or from a master to a slave.
II. Katl as punishment.

The punishment of death may be described quite generally as "katl" in the following account cases in which it is applied are given seriatim; in contrast to raqab and jahil (cf. below) "katl" is also used in the narrower sense of execution with the sword.

1) In the cases of illegal killing described in detail above, the nearest relative of the dead man, who in this capacity is called "wali al-dam," is entitled to kill the culprit in retaliation if certain definite conditions are fulfilled. This punishment is called "kiyyu" or "kawad," names which also cover retribution exacted for wounds which are not fatal; for further information see the article "kiyya." 

2) There are special regulations regarding sorcerers ("sajdah"), about whom there are also various traditions. Malik, al-Shafi'i and Ahmad Ibn Hanbal regard sorcery ("sajdah") as an actual force. Abu Hanifa disputes this, but there is a consensus of opinion that it is forbidden to study it; it is even described as unbelief ("kufr") almost as a general rule. Malik and Ahmad Ibn Hanbal say that the sorcerer is to be killed with the sword simply for studying, teaching and practising magic; al-Shafi'i limits this punishment to the case in which someone has been killed by sorcery (i.e., he makes it a case for "kiyya," which in practice is only justified by the confession ("hirar") of the guilty person; while the punishment in Abu Hanifa, Malik and Ahmad b. Hanbal is regarded as "hadd."); two different more lenient views are credited to Abu Hanifa. Opinion differs on particular questions, such as whether the conversion of the sorcerer effects a remission of the punishment, whether a woman is to be punished equally with a man, how sorcerers of the Ahl al-Khiṭab are to be treated, how far soothsaying is to be considered sorcery.

3) The punishment of death by stoning ("rajd") — in certain circumstances also by the sword ("katl") — occurs as "hadd" in certain cases of immorality; on this see the article "aridal." 

4) Highway robbery ("kaft al-qariq") may also in certain circumstances be punished with death. The authority for this is Kurâ, v. 37 sq. (from about the years 6 or 7, before the conquest of Kahtar; Grimes puts the verse before the battle of Badr): "The punishment of those who fight against Allah and His prophet and create ruin upon the earth is that they shall be slain or crucified or have their hands and feet cut off on the opposite sides or be banished from the country. This is their humiliation in this world and in the next world they shall be severely punished — unless they repent before ye have them in your power. . . . ." It can be asserted with certainty that this refers to the unbelievers, very probably to the Jews; ruthless war is ordered to be waged on them and their repentance is the adoption of Islam. There are still traces of this interpretation in the commentaries. But in general this passage is connected with Muhammad's attitude to certain murdark's (which will be dealt with in section 5); this cannot be correct, if only because the procedure there practised does not entirely conform to these rules, so that they were forced to restore harmony in a different fashion. Those murdark's were considered as highway robbers, from the point of view of the later definition strictly and only in this way could a law for the punishment of highway robbers be found in the Kurân. 

The more important laws of the Shafi'a are the following. Only such persons as are adults in full possession of their faculties and who are able to be dangerous to travellers are to be considered highway robbers. According to Abu Hanifa, highway robbery can only take place in the open country, according to Malik, al-Shafi'i and Ahmad Ibn Hanbal in the town also. Malik gives the Imam — and this is certainly the correct interpretation of the passage in the Kurân, which is also found in the commentaries — absolute freedom in the choice of punishment, even in the contingency of a cumulative application, whatever form the robbery may have taken; but if the person concerned has killed someone (in this connection killing implies a murder to which "kiyya" might be applied), he must at least be executed with the sword. The three other Imams grade the punishment to fit the different forms of robbery on the highway; according to Abu Hanifa, the criminal is put to death if he has caused the death of his victim; if he has also robbed him (and in such a way, it must always be understood, that the hadd for theft can be carried out; cf. the art. "kaft") he may be further punished by cutting off his hands and feet on alternate sides and with crucifixion ("jal"") which in that case takes the place of killing with the sword; if he has only committed a robbery, we have only the cutting off of hands and feet on alternate sides; according to al-Shafi'i and Ahmad b. Hanbal, he is killed, if he has killed his victim; if he has also committed a robbery, he is crucified after being put to death; if he has only committed a murder, he is punished by cutting off his hands and feet on alternate sides; if he has only made the neighbourhood unsafe, then, according to Abu Hanifa, al-Shafi'i and Ahmad b. Hanbal, he is put in prison; whether this must be done in another place is a debated point. In Abu Hanifa and Malik (also in some Shafi'is but their view is rejected by the school) crucifixion consists in the criminal being tied alive to a cross or a tree and his body ripped up with a spear so that he dies, and this is certainly the more original form; according to al-Shafi'i and Ahmad b. Hanbal, he is first killed with a sword and then his corpse is ignominiously exposed on a tree or cross. All these punishments are "hadd" and a right of Allah; therefore any re-nunciation by the wali al-dam of the "kiyya" is of no avails even though he is one who has the right to carry out the katl. If the criminal repents before he falls into the hands of the authorities (what exactly is meant by repentance is disputed) these "hadd" punishments are dropped; but clains by indivi-duals to "kiyya" etc. can still be brought against him.

5) The murdark, that is the renegade from Islam, is liable to the death-penalty if his apostasy is proved. If we leave out the passages dealing with the munafik's [q.v.] who are separately dealt with — their execution is, however, described under
certain conditions in Kurān, iv. 91 — there is no such law in the Kurān referring specially to the murattad, although xvi. 128 (third Meckkan period), ii. 244 (of the year 2), iii. 80—84 (Medina; passed by Grimez shortly before or after the battle of Uhud), 102 (soon after the battle of Uhud), iv. 136 (of the same period) threaten the eternal punishment of hell for all those who apostatise from Islam and do not repent, as well as for all unbelievers, and in ii. 95 sq., 142, and ix. 67, a warning against apostasy is uttered. Among the traditions we find in various forms the story that Muhammad, contrary to the rules of the Sharī'a, cruelly mutilated and killed some murattad's, who had killed one or more of his herdsmen and driven away the camels, but the tradition is probably correct just for this reason. This contradiction was felt and an endeavour was made in the ḫadīth to justify the cruelty of the punishment, and even the text was altered. Of 'Ali also a cruel act, of another kind, however, is recorded in a similar case, but Ibn 'Abīa is said to have protested against it. Two murattad's, each of whom had killed a Muslim, were executed by Muhammad's orders after the capture of Mekka; a third man, against whom there was nothing but his apostasy, was also placed on the list of the proscribed; his foster-brother 'Ulmān, however, obtained security (amīn) for him although Muhammad would gladly have seen someone kill him before immunity was granted; he later became a Muslim again. There is also a saying of Muhammad's: "Slay anyone, who changes his religion" or 'He who secedes from you shall die'; and others similar, e.g. that the blood of a Muslim could only be shed for apostasy; and, and khal 'amid; there is also a story that Muṣṭafī b. Djabal killed a murattad because Allah and His Prophet had so ordained; Muhammad is also said to have ordered that conversion should first of all be attempted and a period of three days allowed for this; but all this can hardly be genuine. There are also the traditions regarding the Aḥl al-Ridda (cf. the art. Ridda) who refused the zakāt and were treated as apostates by Aḥbār Bakr. The tradition "He who is a good Muslim will not be punished for his sins from the pagan period but he who is a bad Muslim will have them counted against him" does not refer to the murattad, as it is usually said to do.

The punishment of death laid down by the Sharī'a for the murattad is sometimes described as ḥadd, sometimes not; in the latter view he is simply killed as an unbeliever (kāfir) and the punishment need not be carried out in every individual case. Only an adult in full possession of his faculties and not acting under compulsion can become an apostate from Islam; opinions are divided regarding a man who apostatizes while intoxicated or a minor (on the verge of his majority) capable of discernment (murākh; muna'iṣṣ). There is also difference of opinion regarding the attempt at conversion and the granting of a period, usually fixed at three days, for reflection. If the murattad does not repent, he is to be beheaded with the sword; torture and cruel methods of execution are forbidden. According to al-Shāfi'i, his punishment is left to his owner, if he is a slave; but Abū Hanīfah and his school limit the punishment of death to male apostates and the consensus of opinion excludes the minor; a woman (and also a minor) is imprisoned and beaten every three days till she repents; according to Abū Ḥanīfa (contrary to Abū Yūsuf and al-Shāfi'i) she may also be made a slave and this is recognised as right by the school. Anyone who puts to death a murattad of whatever kind without powers granted by the authority, is generally liable not to kūfī, but only to ta'zīr. The same rules generally hold for repeated apostasy.

Similar to the punishment of the murattad is that of the sīnādī, i.e. anyone who, professing to be a Muslim, is really an unbeliever or any who belongs to no religion (cf. Masṣūn, Al-Halajī, l. 186 sqq.). The conversion of a non-Muslim to another non-Muslim religion is similarly dealt with, although such an one is not called murattad. He can only escape punishment by adopting Islam; on the whole of this cf. Goldziher, Muhammedanische Studien, ii. 215 sq.

How exactly one becomes an unbeliever and therefore a murattad is disputed in particulars, especially the question how far this is the case with irreverent utterances regarding Allah or one of His prophets; there are various special enactments regarding the latter, which threaten the death penalty to non-Muslims and in part allow a Muslim no remission of punishment if he recalls the words.

For further information see the article MURTADD.

(6) There is no law in the Kurān for dealing with a man who omits the ṣalāt (ritual prayer) (ṭārīkh al-ṣalāt), where its performance is, on the other hand, often strictly enjoined, and not a single unequivocal ḥadīth on the subject can be found — quite apart from any question of genuineness. The Sharī'a lays down the law as follows: — Anyone who does not perform the ṣalāt, as in duty bound, without denying its obligatoriness (anyone who does this is murattad) and has no — even invalid — excuse for this, according to Malik, al-Shāfi'i and the more popular of the two views credited to Aḥmad b. Ḥanbal, if he does not have, i.e. makes good his omission and says he will never commit the fault again, is to be executed with the sword. The punishment is also sometimes described as ḥadd. According to Abū Ḥanīfa, the culprit is imprisoned till he again performs the ṣalāt. In all these views he is considered a Muslim, while the other view attributed to Aḥmad b. Ḥanbal deals with him entirely as an unbeliever, i.e. a murattad; but these regulations are modelled on those for apostasy (cf. the remarks on the Aḥl al-Ridda above).

There are two more cases in which the suppression (fiṣād) of the enemies of orthodox Islam is prescribed; killing, of course, plays the main part and therefore we must discuss this aspect of the process here.

(7) Firstly, the fighting of the bughāt is prescribed. It is said in Kurān, xlix. 9 (late Medina period): "If two parties of the believers contend with one another, make peace between them; but if one oppresses the other (bughāt — from which bughāt is the plural of the participle), fight against the party which oppresses them until they again obey Allah's command; and if they do this, make peace between them with equity and act with justice" (this refers to a quarrel among the emārū). Oppression is often forbidden and disapproved of elsewhere. But Muhammad at any rate did not know the later conception of bughāt, although
its development begins at a point closely connected with this. Some traditions on the bukhāt are in agreement with the legal enactments. The Sharī'ah understands by bukhāt sectarianising Muslims who reject the authority of the Imām, are able-bodied, so that they might offer resistance, and justify their attitude, although erroneously, with their dogmatic conviction (they are to be distinguished from highway robbers, for example — individual bukhāt, who are guilty of breaches of the law are punished like them —, on the one hand, and unbelievers on the other). If they do not attack the orthodox community, they need not be attacked otherwise their suppression is a duty of the Imām (the head of the Islamic community) and a fard al-kifaya for the Muslims (cf. the art. FARD). This punishment is also sometimes called ḥadd. In general the rule is that only participants in the actual battle can be killed during the fighting. Fugitives, wounded, those who surrender and prisoners, as well as women and children, cannot be put to death. According to Abū Hanīfa, the Imām may kill a prisoner if he knows that he would again join the bukhāt if spared; according to him, a captured slave who has been fighting by the side of his master can also be killed.

(8) Regarding the Qiyād see that article; there are also traditions regarding the following regulations. If the unbelievers with whom war is being waged are not among those from whom the qiyāa can be taken — who exactly those are is a matter in dispute — the men are killed, if they do not adopt Islam and the women and children enslaved. If, on the other hand, they refuse Islam and will not pay the qiyā, they are to be fought. All able-bodied men can be killed as long as they are not taken prisoners; men incapable of bearing arms, as well as women and children, cannot in general be so dealt with unless they take part in the fighting or assist in it in some way; they are to be taken prisoners and enslaved. The free, able-bodied prisoners may be (a) executed with the sword if they will not now adopt Islam; (b) made slaves; (c) exchanged for Muslim prisoners; (d) ransom (e) or set free without a ransom being paid (in all these cases by the Imām). Any one who kills a prisoner without authority is only punished with ta'zir.

Every unbeliever who does not pay the qiyā or does not belong to a people which has a treaty with the Muslim community or is not a musta'min (on these cf. the art. KSY) is khalil al-lum (to be killed with impunity) and may at any time be killed by any Muslim without his being liable to qiyā or to pay any diya or perform kafara. This enactment is only the natural consequence of the Qiyād law and Muḥammad himself not infrequently made use of it.

(9) The views of the Sharī'īs on all the points dealt with above agree almost entirely with one of the Sunni views. It would take up too much space to deal with them in a similar fashion.

(10) The infliction and execution of the death penalty was in practice very often a strong contradiction to the regulations laid down in the Sharī'ah (cf. the art. 'ADHAB; Snouck Hurgronje, Verspreide Geschriften, ii. 200, etc.). The historians afford many examples for the actual practice and so do accounts of European travellers; on the conditions in the empire of the caliphs in the tenth century see Mez, Die Renaissance des Islam, p. 347 sqq. also Massignon, Al-İtâbat, i, especially p. 200 sqq., 292 sqq.; on those in Egypt in the first half of the nineteenth century see Lane, Manners and Customs of the Modern Egyptians, end of the chapter on Religion and Law; on those in Persia in the same period see Polak, Persien, i. 328 sq.; on those in the Ottoman empire of the eighteenth century see Mouradgea d'Ossb, Tableau Général de l'Empire Ottomane, especially vol. vi. (1834), p. 244 sqq.; for Turkey the Kânûnînms are also useful (cf. Mitteilungen zur osmanischen Geschichte, i. 13 sqq.); among the published sources quoted there are of special importance: Digeon, ii. 245, 262; v. Hammer, Staatsverfassung, i. 125, 133; 143—150; T. E. O. M., iii. (1328), Appendix i. 27 sqq., ii. 1—4, 7, 9; M. T. M., i/i. 341 sqq. and from the Kânûnîname itself (edited there; p. 19—21, 32—34.

Bibliography: The Fih'books, the works given in the article 'ADHAB, especially Juyb'il, Handbuch des islamischen Gesetzes, p. 284—209. and the literature there given; the articles MURDER and EXECUTION in T. P. Hughes, A Dictionary of Islam. Besides the articles already referred to, the article 'ADHAB and those dealing with the Arabic expressions not explained above should be consulted.

(J. SCHACHT)

KATRÂN B. MANŞUR, a Persian poet. 'Awfî calls him Katrân al-'Adudi al-Tabrizi; according to Dawlatshâh, he was born in Timurîd. Others say he was born in Djabal-i Daiam; Djâbal is also found as his nick. Dawlatshâh says that he spent some time in Balkh and later lived in the 'Iraq. The period of his literary activity lies about the middle of the eleventh century A.D. Naşîr-i Khusrav mentions in the Sufarîname that he met Katrân in Tâbriz in 1348 (1049); a well-known poem by Katrân commemorates the earthquake in Tâbriz in 1348 (1042/43). According to a ta'khîva quoted in Rieu, Supplement, p. 149, our poet died in 465 (1072). He was the panegyrist of the rulers of Daiam and of 'Abhârîbâdjan; among his patrons are mentioned the Amirs Faqlûn, Wahsûdân, Abû Nasr Mâîlûn b. Wahsûdân, who was appointed over a part of 'Abhârîbâdjan by the Sâlidjûk Sulṭân in 450. and Muḥammad b. Kamûdî (according to Dawlatshâh, governor of Balkh and 4andjar; if this is correct he long survived the poet) and further the Bâyiî 'Adûd al-Dâwla, as is indicated by the epithet 'Adûd given by 'Awfî.

Works. Katrân left a Dîwan (manuscripts of which are found in European collections) and a nâmawîn called Kaws-nâmâ. The poems of Katrân are sometimes wrongly attributed to Rûdagi in manuscripts; the confusion is caused by the similarity of names of their respective patrons (Naşî b. Ahmad the Sâmânî in the case of Rûdagi and Abû Nasr Mâîlûn in the case of Katrân). On this question cf. Rûdagi and Pseudo-Rûdagi by E. Denison Ross in J. A. R., 1924, p. 609 sqq. Criticisms on the poetry of Katrân are given by Naşîr-i Khusrav and Watîwî. The former says, curiously enough, that Katrân did not know Persian well but otherwise was a good poet; Watîwî (in Dawlatshâh) places him very high and allots him a special position with regard to the other poets. 'Awfî's verdict on Katrân means very little for us, as this author regularly introduces each of his biographies of poets (if we may so call his inflated empty prose) with a rhetorical eulogy of the person
in question. But he is at least to the point when he says that Kāṭrān was fond of rhetorical artifices and particularly of the kind called tadjinī (cf. Ibn Ḳais al-Kāṭrānī Ma’dhīq, Bib. Mem. Ser., x. 309 sqq.). The only quotation from Kāṭrān given in Ibn Ḳais’s manual of poetics (p. 312) is quoted to illustrate one of the varieties of tadjinī (tadjinī-nī tāqī). On Kāṭrān’s skill in managing the more difficult poetic forms cf. also Daulatshāh, p. 67, 14 sq.

Although the Divān is not yet published one can form a fair opinion of the skill of the poet from what is in print. A few Ḳaṣīda’s and fragments of Ḳaṣīda’s are given in Schefer, Chrestomathie Persane, ii. 240 sqq.; others in Browne’s edition of ʿAwfī’s Lūṭab al-Alab (ii. 214 sqq.). All that is given in Daulatshāh (ed. Browne, p. 67 sqy.) is also found in ʿAwfī, only Daulatshāh gives much less and has a few unimportant variants. The oft occurring substitution of Arabic terms for the rarer Persian words is also found in him; thus the less well known ṣhāmar (= pond; ʿAwfī ii. 215, 10) becomes in Daulatshāh (p. 68, 1) ṣhāmar and the verse is, of course, nonsense (or it may be that we have simply a copyist’s mistake). It may be assumed that Daulatshāh, as far as the poems are concerned, simply copied ʿAwfī.

In the poems printed in Schefer, rhetorical artifices are not more used than in the other panegyists, for example Mināḥšīr or Azraṣḥ; we find among other figures Tuhī in wa-Tafṣīr, p. 245 pauper., p. 246, 6 sq., m wetazama, p. 245, 1. These poems have something in common with the old panegyics; the three fragments of Ṭaṣfī’s describing spring, autumn and winter contain themes already known from Mināḥšīr, such as the comparison of wine grapes with women, namely negroes and Rūmī’s, while Mināḥšīr compares them with little girls. Kāṭrān gives more prominence to the epic element in his panegyrics than do his predecessors. The first poem in Schefer (i. 240) is noteworthy in this respect; its maḏḥ commemorates a victory of the Amir Waḥsūṭānī and Mamlān, and the oft quoted song (p. 243) to Mamlān, the ṭaḥṣīb of which contains the description of the earthquake which demolished the town of Tabriz in 434 (1045), is equally noteworthy; this description is in this case the main thing. The fragments in ʿAwfī are obviously chosen to illustrate the use of tadjinī by the poet, which is discussed in the prose notice of Kāṭrān by this author. The tadjinī found here is almost exclusively the tadjinī-nu ṣuwadāwī (Ibn Ḳais, p. 313); the tadjinī-nī ṣuṣī (cf. Ibn Ḳais, p. 312) is also found (p. 214, 11: giṣā ṣuṣī) and ṭakīr (cf. Ibn Ḳais, p. 315) in the second part of the distich (ʿAwfī, ii. 214, 21). The rhetorical effect achieved by means of homonyms (tadjinī-tāmī; cf. Ibn Ḳais, p. 309), of course, occurs, e.g. ʿAwfī, ii. 215, 9–11, where the word ṣir is repeated four times each time with a different meaning. In contents these fragments offer nothing new or noteworthy.

The prominence deliberately given to the narrative element in the court-lyric may be an innovation of Kāṭrān’s own. That his lead was followed is shown by Daulatshāh, who not only calls Anwarī a pupil of Kāṭrān’s but also mentions others (Raṣḥīdī, Rūḥī, etc.) and “most poets of Balkh and Transoxiana”.

Al-Kattānī, Muhammad b. Dīnār b. Idrīs, a member of the important family of the Kattānīyn and Sharīf in origin, a contemporary Moro-

<box>coon writer (he was still writing in 1314 A.H.). He is the author of a number of works including a book in honour of his ancestor Idrīs (al-Anṣār al-Aṭiwar al-Anfās bi-dīlār hād Mahāsin Kūth al-Naqībī, Fās 1314 A.H.). The most important is his Ṣawwāt al-Anfās wa-Muḥāvahdat al-Abyās minman nūrān ʿl-Islāmi m ʿl-Yuṣūfī bi-Fās (3 vols., Fās 1356 = 1898–99). The first part of this book is devoted to showing the merit which is acquired by visiting ʿawwās’s and tombs of saints. He then proceeds to give, quarter by quarter, the illustrious men who have lived in Fās or are buried there and this part of the book contains valuable information on the historical topography of the town. He consulted a considerable number of books a list of which he gives at the end of the third volume. We know no details of his life, not even the date of his birth.

Kāwālā (also Cavaalla), a seaport on the Aegean Sea, opposite the island of Thasos on the boundary between Macedonia and Thrace. In ancient times Neapolis lay here, the port of the town of Philippi, just as Kāwālā is now the harbour for the district of Drama. The town is partly built on a promontory which is still surrounded by walls which date from the middle ages; there is a harbour on both sides. An aqueduct has also survived from the middle ages. Kāwālā was captured by the Turks from the Byzantines in the reign of Murād I, who conquered Thrace. Murād had sent the sandjaq-bey Deli Balban to besiege Seres; soon afterwards he sent Lala Şahin to assist him; the latter then captured Kāwālā, Drama and Seres. This event is usually placed in the year 775 (1373/4) (Saʿd al-Dīn, Taḡī al-Tanwīrī, Constantinoople 1279, i. 91), and von Hammer, G.O.R., i. 181, whose statements are inaccurate in other respects); the anonymous chronicler, ed. Giese, p. 260 (on the other hand, gives the date 787 (1385/66). He adds that nomads from Sarāmūn, who were then settled here and in the Vardar plain. Not much more is heard of Kāwālā in Turkish history; Sulaimān I fortified it before beginning his campaign against Rhodes. The population probably always remained predominantly Greek. Muhammad ʿAlī, the Egyptian Khatūbe, was probably born here; at any rate he lived here in his youth (born about 1769; P. Zaidān, Maḥṣūṣī al-Sharīf, Cairo 1910, i. 4). Muhammad ʿAlī later endowed the town with a school (Muḥendis-ḵāneh) and other foundations, for the upkeep of which he set aside the revenues of the island of Thasos.
In the sixteenth century Kawâr attained great importance as an exporting harbour and the main depot for the tobacco grown in the neighbourhood and in the whole hinterland (Drama, Seres and Xanthi). In the years before 1912 this brought the Turkish Tobacco Regie an annual profit of over 10 million francs; the tobacco is for the most part manufactured and every year 5,000–6,000 people from the surrounding country come into the town for this work. This is probably why the figures given for the population differ so much (cf. e.g. Sâmî, Kâmîs al-Âlim, v. 3704). According to an accurate calculation, before the Balkan war there were 17,000 Greeks, 13,000 Turks, 1800 Jews and 800 Bulgarians in Kawâlî (Nicolaides, Grîchenlands Anteil an den Balkankriege, Vienna and Leipzig 1914, p. 222). The town at that time was the capital of a kadî of the same name in the sandjak of Drama in the vilayet of Salonika. The treaty of San Stefano (March 13, 1878) had already given Kawâlî to Bulgaria. In the first Balkan war the town fell into the hands of the Bulgarians (Nov., 1912) but in the second Balkan war it was taken by the Greek fleet (July, 1913) and finally incorporated in Greece by the peace of Bucharest (Aug. 10, 1913) in spite of Bulgaria's protests (Nicolaides, op. cit., p. 367 1997). Since then many Greeks have migrated thither from Xanthi and the number of Turks in the population must have been considerably reduced.

Kâwâr, a group of oases situated in the Sahara (Bilma, the most southern oasis, is in 18° 41' N. Lat. and 13° E. Long.), to the west of the massif of Tibesti on the caravan route from Tripoli to the country round Tchad via Fezzân [q.v.]. On this route Kawâr is nearly halfway between Fezzân and Kanem, separated from the former by a hamâma and from the latter by a region of sand-dunes. It owes its formation to a continuous chain of cliffs running from north to south, which blocking it on the east shelters it from the dreaded winds from the north-east. It is a coiltor of oases, about 50 miles long from north to south and never more than 2 to 3 miles broad. The water is at no depth and fairly abundant but usually brackish. In all the oases together there are about 100,000 palm-trees; the inhabitants, whose number does not exceed 3 or 4,000, are Tubu by race, considerably mixed with Kanuri blood (the common language is Kanuri); they are sedentary and peace-loving, unlike their kinsmen who live in Tibesti. They are scattered up and down in a dozen villages of which the chief are Anâî, Acharma, Dîrîî and Bilma; these villages consist of wretched huts that beside one on a cliff inaccessible except by ladders a place of refuge is prepared, a precaution which until quite recently was far from being unnecessary. The inhabitants live on the produce of their palm-trees, the poor crops which they raise and particularly by trading. The caravan route from Tripoli to Tchad via Fezzân, although hard, is the shortest of those that cross the Sahara; it was at one time very busy and Kawar was the place where it was joined by the roads from Zinder and Agades; its inhabitants were destined to become caravan-men. But their principal revenue came from their salt-pans. Those of Bilma are especially famous. The salt which the waters bring to the surface of the soil is treated by evaporation and pressed into cakes of great purity. Some is sold to the Tuaregs who come to buy it on the spot along with dates; the remainder is exported to all quarters of the Sudân from the Niger to Dârâût. The salt-pans of Kawar are of the same importance for the country as those of Tsodoni for the region of Timbuktu and the western Sahara.

The history of Kawar is very obscure. The caravan route on which it lies was already in use in ancient times although we have no formal evidence of this. In any case this group of oases was already in existence at the time of the conquest of North Africa, if we may rely on the stories of the Arab historians who attribute its conquest to the legendary hero of the conquest, U'bla b. Nāfî'. He is said to have taken the castles of Kawar one after the other. Al-Idrisi, in the twelfth century, several times mentions the importance of the trade through these regions. He mentions the inexhaustible mines of salt there must be some confusion with the salt-deposits. It seems that at this time Kawar was under independent local chiefs. Later when the kings of Kanem extended their authority over Fezzân, they certainly held Kawar; this is the situation described by Ibn Khaldûn following Ibn Sa'di; for the rest, local traditions seem to preserve the memory of migrations from the south. It is certain that a strong power at one or other extremity of the caravan route would try to control the whole route.

In the sixteenth century, Kawâr was visited by several European travellers; first in January, 1823, by the Denham, Clapperton and expedition and then by Vogel, Barth, Rohôf and Nachtigal and lastly by Monteil. In the closing years of last century Kawar was in a somewhat wretched condition. It was under the nominal authority of a chief (ma'l) elected by the notables; in reality each village ruled itself. Kawâr had been seriously affected by the general decline of trade in the Sahara; it was still more affected when the French occupation of the Tchad region put an end to the slave-trade, the principal source of business. The inhabitants paid tribute, apparently to the Tuaregs; they were nevertheless plundered and blackmailed by them and raided by the Tubu and Awlân and afterwards by the Kasar. The Kawar then became the centre of political aspirations. The Sanûsîya had had a zawiyah there for quite a long time; it was a necessary station for them when they were endeavouring to extend their influence in the countries of Central Africa and when the Sanûsî Shaikh dreamed of creating a regular principality bounded by the two sides of the Sahara. The Turks also tried to make their authority recognised in the Kawar as they tried to do at Djannet and in Tibesti. The occupation of the Kawar by French troops from the Tchad region in July, 1906, and the establishment of a permanent post there put an end to these efforts, at the same time giving the inhabitants of this group of oases effective protection from the exactions of their turbulent neighbours.

(Henri Basset)

KÄWINTERN (F.), marriage, dowry, see MANH, NIKH.

KAWKAB, star, in Arabic astronomy the general term for a luminous heavenly body. The five planets known to the Arabs (Mercury to Saturn) were called al-kawâbîk al-khumsa (al-mus-tæhayyirâ). The general term for the sun, moon, and the five planets is al-kawâbîk al-jârîyâ or al-
kawâbîk al-sâyîyâ (i.e. the moving stars), in contrast to the fixed stars (al-kawâbîk al-ğasbî). The name kawâbîk al-kalâmî is applied to the star e of the Little Bear, which is nearest the north pole of the heavens. In al-Birrûni it is called tarf al-
idanâb wa-husna jâlî al-kibla (= tip of the tail, i.e. the little goat [for ascertaining the kibla]. This presupposes that from a knowledge of the north pole (direction of north) one can ascertain the diametrically opposite south, which is identical with the direction of the kibla (santo al-kibla). This method of ascertaining the kibla is only correct in regions which lie approximately north of Mekka (cf. Reinard's note in his introduction to Geographie d'Aboufisâ, p. cxvii; Or, la Mequê is au midi de la Syrie ainsi que d'une partie de la Mesopotamie et de l'Egypte (1), le mot Kiblah est devenue pour les musulmans de ces contrées, le synonyme de midi et il a été employé ailleurs avec la même acceptation)]. Finally it may be mentioned that the stars â, ß, and ù of Cepheus were, according to Ulugh Beg, also called kawâbîk al-
ârîk, i.e. stars which inhabit the flock of sheep flock of sheep.

A catalogue of fixed stars, of which the Arab astronomers had several, is called Djâlât al-kawâbîk.

(C. Schoy)

KAWKABÂN, the name of several places in South Arabia.

1) The name of a sanctuary mentioned in the inscription Halevî N°. 686, 3–4, copied from a building in 'Aden by J. Halevî (mihrâbân Kaw-
kabân). Cf. also F. Hommel, Grundzüge der Ge-
ographie und Geschichte des alten Ostens, ii, Leip-
gzig 1925, p. 707.

2) The name of a castle near Żafîr north of Na'âf. It was called Kawkabân, the two stars, i.e. star-castle, because it was adorned with silver stripes outside, the roof was covered with white slabs of stone, the interior panelled with cypress wood and paved with mosaic, different gems, ivory and corundum, which shone like stars at night. This small town was naturally ascribed to the Djinn. This castle is perhaps also mentioned in the inscription Glaser N°. 218, 3 (Bait wa-Kawkabân), which comes from Bait Churî in the vicinity. The castle is said to be still standing.

3) A little village on a great cliff on the right side of the Wâdi Sâfâma, N. E. of Ḥadjâ and called Kawkabân-Ḥadjâ to distinguish it from other places of the same name.

4) Capital of the province of the same name, N.W. of Ṣâfâma. The town of Kawkabân lies at a height of 8,750 feet above sea-level in 15° 31' 42" N.Lat. on the southern part of the ridge which begins about half a mile S.E. of the town of Kaw-
kbân at the left towards Jawâla and runs S.E. to N.W. for several hours' journey. It is part of the great Maṣâma'a plateau and is called Džabâl Dalûs. The south-eastern part of the range, the especially precipitous part, is separated from the main massif by an almost straight ravine, the Wâdi Nabhân, which runs from Shîbâm past the one gate of the town of Kawkabân (Bâb al-Ḥadîd) to the Wâdi Na'âf west of the Džabâl Kawkabân. Two roads run over this mountain, cut off only by the ravine of the Wâdi Nabhân, the one through the town of Shîbâm, following the very deep ravine of Nabhân which is bridged over, an old winding narrow path of steps hewn out of the rock, and the second, an easier one, running in the Kâ'a Dalûs and crossing a bridge over the Wâdi Nabhân just before reaching the Bâb al-
Ḥadîd. The town of Kawkabân stretches from the Bâb al-Ḥadîd to the S.E. and runs quite close to the eastern slope of the cliff, all along that side. This part seems to be the oldest. Not very far from the gate on the great open square in the centre of the town (in the northern part) is a double wall for the most part now in ruins. Between the two walls a great number of skillfully walled pits have been cut out of the ground, which served as granaries for the old inhabitants. Similar granaries, but of more recent date, are to be found in the southern part and outside the town.

The town itself consists of a large number of excellently built houses of red stone the architec-
tural effect of which is often striking: the doors of the houses are often ornamented with fine iron work. The houses of the former Imâms now for the most part decayed or shot together are particularly striking with their splendid façades. Besides the principal mosque with minaret, the only one in the town, there are seven small mosques. The water supply is provided from two huge and finely built reservoirs; the one, called Mużâlî, lies in the south, exceedingly deep and enclosed on the west side by a wall 60 to 80 feet high. The second, to the east of it, begun but not quite finished by Saïyîd 'Abd al-Kârim about 1450, is called Barîk al-'Azîyâ. There are also four smaller cisterns. This water-
supply would suffice for a town three times the size of Kawkabân. The Jewish quarter lies E. S. E. outside the town but consists almost entirely of low stone houses with little windows and doors.
A stone bridge with huge arches led across the Wadi Nabhān to the Bāb al-Hadīd but it was blown up by the Arabs in 1872.

Kawkabān is an ancient city dating from the Himyar period, as inscriptions found there show. Al-Hamdānī mentions a stronghold of Kawkabān on the summit of the Dājil Dhukhār which is certainly identical with the old town of the modern Kawkabān. In troubled times its strength made it a desirable place of refuge — in 1569 the Turks besieged the stronghold in vain — and for centuries Kawkabān has been important as a capital and residence of the Imāms of the principality of the same name. The latter comprised in addition to Kawkabān the towns of Shāhib, Ḥadja, Tawila, the Khāb Batir (between Kawkabān and Harrā), the lands of Miswar, Sārī, Ḥoṣāṣ, Milāḥin, Abddīr, Arūsa, Bani Khayjiyā, al-Shahduyi Lā’a, a part of the Bani Ḥuṣayn, the Bani Naḍhir and of al-Ahmār.

The old dynasty of the country, which traced its descent from the Imām Ḥādi of Ṣa’dah, was able to retain its imāmat even during Turkish rule and to maintain its independence from the imāms of Ṣa’dah after the Turks were driven out in 1630. C. Nāhr (op. cit., p. 260; see Bibliography) has given a general historical survey of the princes of Kawkabān. When the Turks again invaded Yaman in 1872 and subjected the country, Kawkabān after a seven months severe siege also passed to the Turks but only after capitulation. The last ruler of Kawkabān, Sāyiīd Aḥmad b. ‘Abd al-Raḥmān, who had bravely defended the town against the Turks, afterwards lived in Ṣa’dah on a pension given to him by the Sublime Porte. At Glaser’s visit in 1878 his brother Sāyiīd Yaḥyā still lived in the old ancestral home in Kawkabān, which is remarkable for the splendid stucco-work of the interior and the rich ornamentation of its façade. The windows and doors had all sorts of varied shapes, colours and ornaments.

Kawkabān is now almost depopulated; although the houses, which in spite of much destruction are still imposing, afford accommodation for some 30,000 people, the area is barely 100, now in the town; from the town one gets a splendid view over the fertile fields and valleys of the country around, especially the plain of Shīḥām, a part of the plain of Ṣa’dah and the surrounding hills.

5) Kawkabān al-Shā’a is in Mahīwīd, west of the town of Kawkabān, but belongs to Tawila, a small place of no special importance.

(Adolf Grohmann)

KAWM (Ar.), plural ʾaḏwām, ʾaḏwāmin, ʾaḏwīmin, people. The word occurs also in Nahalitean, Palmyrene and Şafīti inscriptions in the name of the deity Šaʿīr al-Kawm ‘support of the people’, see Lidzbarski, Ephephiser für semitische Epigraphik, 1, 235, 46, 45, etc. According to some lexicographers the word applies in the first place to men; evidence for this opinion is afforded by passages from literature where K. is used in opposition to niḥā (women). The term does not primarily suggest the meaning of nation. A man’s K. are his ʾaḏhā and his ʾaḏhīrā (Līdā). In this limited sense the word occurs also in the well known tradition: ‘Who clings to a K. without the permission of his master (palṭon), is cursed by Allah, the angels and the prophets’ (Bukhārī, Fāṭiḥat al-Mahīs, bāb 1). — Used without article it has the same meaning as English ‘people’, French ‘gens’ and German ‘Leute’, e. g. ʾaḏrā (people who do not understand); cf. 8, 66; 9, 61 (also with the article ʾaḏrā); the plural has the same meaning. In a tradition it is said: ‘There will be people (ʾaḏwām) in my community, who will proclaim licentiousness regarding women and wine’ (Bukhārī, Ashrība, bāb 6).

In the Kurān the term is chiefly used in connection with the prophets, Muḥammad’s precessors: the people of Ibrahim, Lūlū, Nūh (e. g. 7, 146; 11, 91; 22, 43; 26, 105, 166; 38, 11), i.e. their unbelieving contemporaries. In this sense it
is also used in connection with Muhammad himself: "Thy people declare Him a lie, though He is the Truth" (sūra 6, 66). The same term is to be found in Ḥadīth, e. g. Buhārī, Ahūsānī, Uṣūlanā, Ibn Hanbal, Ibn-Muṣnad, v. 72, where Ṭūfāl, one of Aḥṣa`ī’s brothers, relates a dream which he had. He dreamt that he passed by some Jews and said to them: "Verily, ye would be the people, were it not that ye pretend that 'Umar (Iṣra) is the son of Allāh". They answered: "And ye would be the people, were it not that ye say: 'Ma ʾisū Allāh-wa-ma ʾisā Mūḥammad'"? 

In Aḥṣa`ī (Aṭṭāh) the term has acquired a peculiar form and use: Ḳawwām has here the genealogical meaning of "all those who descend from one man in the male line", see Snouck Hurgronje, The Aḥṣa`īn, Index s. v. Ḳawwām.

For special meanings of the word see Dozy, Supplément, s. v.
(A. J. Wensink)

Al-ḲAWS = the bow; in Arabic geometry the arc of the circle; in astronomy the constellation of Sagittarius, the ninth sign of the Zodiac (Greek Ἀργον, Latin Arcem or Sagittarii). (H. Suter)

ḲAWS KUZAH (أ.), the rainbow. The ancient Arabian deity Kuzah [q.v.] who is described as shajāt (devil) was a thundergod who shot hail-arrows from his bow and then hung the latter on the clouds. He is found in the combination Kaws Kuzah, rainbow. Kuzah is also in popular belief the angel who looks after the clouds. Other names of the rainbow are: Allāh’s bow, the bow of the prophet of God, bow of the heavens, bow of the clouds (ẓhammān, nuwaq), signs of heaven (ʿalāmāt al-nuwaq). It is also called Ḳawwām ʾisā (Christ is the supporting arrow of the sky). Quite different in origin are the names Ḳawwām (dust), Ḳawwām (mold), Ḳawwām (mist). Muslim scholars include the rainbow among the Ṭāhār al-ʿuswāya, the upper phenomena. The rainbow is usually opposite the spectator, while the sun is at his back and there is a dark cloud or wall behind drops of water; the drops may be in a cloud or formed at springs, water-wheels, in turbulent rivers where spray is formed, in the steam of baths or in water which is ejected from the mouth in a spray (see Beitr. V., loc. cit.). Frequent reference is made to a description by Ibn Sinā (E. Wiedemann and M. Hörtin, loc. cit.), among others, who was on the top of a very high hill at the foot of which lay a vast bank of mist. The sun was above the hill and Ibn Sinā saw a rainbow on the mist below him.

Numerous descriptions of rainbows occur in literature e.g. in the Ḥamāsī (F. Tuch, Z. D. M. G., iii. 200 sqq.), also by the Ḥamāsīn and Saḥṣar al-Dawla (333–356 = 944–967) and by the poet Wāʾil († 990 = 999); see F. Dieterici, Mūtanāblī and Saḥṣar al-Dawla aus der Edelprose des Ḥamāsī, Darmstadt, 1847, (227 and 175).

More or less strictly scientific studies of the rainbow are also numerous. Ḥabīb Khalīfa (Kashf al-Zamān, iv., No. 9640) quotes a special Ḳawwām Kuzah (science of the rainbow) he

deals with all questions that can arise. According to him, "it investigates how the rainbow is formed, the reason why it is formed and why it is circular; further the reason for the difference in its colours, why it appears after rain at the end of a day, and why it is often seen by day but only rarely at night by moonlight. It further investigates the astrological significance (al-akhīm) of its appearance". Descriptions on similar lines are found, for example, in the works of al-Qazwīnī (Adīlīb al-Makhlīktah, ed. Wüstenfeld, p. 98; Kosmographie, trans. Ethé, p. 201, in the Kitāb al-Ṭūfāl al-Ṣafī, Bombay 1305, ii. 52 sqq. (cf. F. Dieterici, Die Naturanschauung der Araber, Berlin 1861, p. 87); also by Shihāb ad-Dīn Ahmad b. Idrīs al-Karāfī († 1285 = 1285/1286) in his Kitāb al-Ṭūfāl al-Ṣaḥīh, dār al-ṭāhira fī al-ṭawārub al-ʿalākār; and in the Risāla fi Kaws Kuzah of Husain al-Dīn al-Tarakī (about 850 = 1446; see Berlin Catalogue by Ahlwardt, No. 5691); two anonymous works are published by Cheikho (al-Muqrib, 1912, xv. 736–744).

A considerable section in a meteorological work (Ahlwardt, Berlin Catalogue, No. 6054) and no doubt many other passages deal with our phenomenon. The most important and most comprehensive work, however, is from the pen of Ibn Sinā in his Shāfī (see the Bibli.)

The descriptions of the rainbow are in general very similar. Not only the simple rainbow but also the double and even triple are described. The first is said to be produced by the sun’s rays themselves, the second by the rays shining through the rays from the first and the third by the rays from the first two; the bows therefore are successively weaker. It is emphasised that the rainbow is not always composed of the same colours, a phenomenon which has recently been fully investigated by M. Pernter. It is also mentioned that the rainbow is particularly beautiful when the sun is on the horizon.

The older treatment of the theory of the rainbow goes back to Aristotle, with whose meteorological works the Arabs were acquainted. Thabit b. Kuirma is said to have translated a commentary by Athāfirīdīzus = Epaphroditos (?) on Aristotle’s essay on the rainbow (Ibn al-Kifīs, p. 59). Aristotle is followed by Ibn Sinā, Ibn al-Haitham, al-Kararī etc., although in many details they make additions and corrections to his views. It is always assumed that the rainbow is produced by beams of light or visual rays which are regularly reflected on the raindrops on very minute reflecting surfaces. Later Kamāl al-Dīn al-Fārsī (q.v.) gave a brilliant exposition of the correct explanation, as far as was possible in the general state of knowledge in his day, when the dispersion of light was unknown. Like us he says that the light is once or twice reflected in the interior of the gLOBule of water and then radiates out from it; thus we see it in its colours. Why it appears only by day he endeavours to investigate the cause of the colours although, of course, not satisfactorily. By experiments he proves the correctness of his results, which are on a much higher level than those of Theodoricus of Freiberg (about 1300).

From Kaws comes a word takāṣīn (the word is not takāṣīn, as I said in the Archiv für die Geschichte der Naturw. und Technik, 1902, iii. 9). It means “showing the colours of the rainbow” or briefly “the colours of the rainbow”. It is defined by Kamāl al-Dīn as “differentiated

The Encyclopedia of Islam, II. 53
colours in the region between blue, green, yellow, red, smoke-coloured white, that is, as regards sensual perception".

The rainbow is also given an astrological significance according to the zodiacal sign in which it appears. In the ram it means plague and death (Ahlwardt, Berlin Catalogue, No. 5006, al-Kawl 'alā Ṭūl Ka'ūs Ka'ūs). In another MS. (No. 5915, 2) it is said that in September a rainbow indicates great tyranny and oppression.

(E. Wiedemann)

KAWSHA, a small volcanic island in the Mediterranean Sea between Sicily and Tunis (now south of Cape Granitola and 45 miles east of Cape Bon [Ras Addar]; area 40 sq. miles), now called Pantelleria. The name Kawsha (variously written in the MSS. goes back to the classical Cossoya (cf. Pauly-Wissowa's Realencyclo- pide der klass. Altertumswiss., xi. 1503). The island, famous for its antiquities (cf. Orsi, Pantelleria in Monumenti dei Linz, 1899, iv. 450-539), was already important in ancient times for intercourse between Sicily and the African coast and played an important part during the conquest and rule of the Arabs in Sicily, which was always attacked from Africa. The first conquest of Kawsha by the Arabs as well as their expedition to Sicily under Mu'āwiya b. Kha'dad in the time of the Caliph Mu'āwiya (Ibn Khuldan, K. al-pharr, i. 211; Yāqūt, Mu'ājam, iv. 200, according to the Aḥbāb Ibn al-Kaitā; al-Baladhuri, ed. de Goeje, p. 235, does not mention the island) was only transitory; the Byzantines soon recaptured it (al-Bakri, K. al-Musālik, Bibl. Arabo-Sicula, p. 13). According to Ibn Taghibrībīdī (ed. Juy- boll, Leiden 1885, i. 136) 'Ali's murdered, Ibn Muldījam, was banished to Kawsha. 'Abd al-Malik b. Khātān, the general of the Caliph 'Abd al-Malik, recaptured the island from the Rūm (al-Tidjānī, Kāhla, Bibl. Ar. No., p. 375) but Muslim rule was only firmly established under the Aḥbāb Ziyādī, Allah whom representative, Asad b. al-Forat, captured Sicily (210-213 = 825-828) and Kawsha (Ibn Khuldan, loc. cit.). In 220 (835) an expedition against the island was once again necessary (Ibn al-Atīhīr, Ka'mīl, ed. Tornberg, vi. 239). In the two following centuries Kawsha was partly converted to Islam. Its harbour was a naval base for the Arabs. Their ships were often wrecked in its vicinity. When the power of the Muslims began to decline, Kawsha was again exposed to raids by Christian states (e.g. 481 = 1088 by the Pisans and Genoese; Ibn al-Atīhīr, Ka'mīl, 110). When Sicily had entirely passed out of Muslim hands, the island was taken in 516 (1122-23) by George of Antioch, Roger II of Sicily's admiral, on his first campaign against the Zirid al-Iṣāsan b. 'Alī [q.v.] in Mahilya; the island served him as a base for the capture of this town in 543 (1148) (Ibn al-Atīhīr, Ka'mīl, xi. 82).

The Arab geographers tell us very little about Kawsha. The distance from Sicily and the African coast is usually given as a day's journey; the harbour is celebrated (al-Idrīsī). The production of figs, cotton and mastic is often mentioned (Abū 'l-Fidā'). The Muslim inhabitants remained there after the Norman conquest as dhimmīs of the Franks (al-'Umāri, Mālik al-Ashur; al-Anfūsī). Down to the xviii century the Arabic language was spoken on the island of Pantelleria; it has exercised a considerable influence on the local Italian dialect (above, i. 419; Gregorio and Seybold in Studi di glotto- logiai, italiani, in. 1901, 235-238). Amari has published a tomb inscription from Pantelleria (Le epigrafe Arabiche di Sicilia, Palermo 1879, p. 118 sqq.).

KA'WTHAR, a word used in Sūra cviii. 1 after which this Sūra is called Sūrat al-Kawthar. Kawthar is a small form from kathara, of which other examples occur in Arabic (e.g. nawṣāf; further examples in Brockelmann, Grundriss der verglei- chenden Grammatik, i. 344.). The word, which also occurs in the old poetry (e.g. the examples in Iba Hilāmī, ed. Westenfeld, p. 261, and Nuldekeschwalli, Geschichte des Qorans, i. 92), means "abundance" and a whole series of Muslim authorities therefore explain al-Kawthar in Sūra cviii. 1 as al-ḥādir al-kathīr (see Ibn Hilāmī, op. cit. al-Tabarī, Taṣfīr, xxx. 180 sqq.). But this quite correct explanation has not been able to prevail in the Taṣfīr. It has been thrust into the background by traditions according to which the Prophet himself explained Kawthar to be a river in Paradise (see so early as Ibn Hilāmī, p. 261 below, and notably al-Tabarī, Taṣfīr, xxx. 179) or Muhammad says that it was a water-basin intended for him personally and shown to him on his ascent to Paradise (al-Tabarī, Taṣfīr, xxx. 178), which latter view al-Tabarī considers the most authentic. Even the earliest Sūra's (lxviii. 41; lxxxvi. 12 etc.) know of rivers that flow through Paradise, but it is not till the Medina period that they are more minutely described, notably in Sūra lxxvi. 11: there are rivers of water which does not smell foul; rivers of milk the taste whereof does not change;
and rivers of wine, a pleasure for those that drink, and rivers of clarified honey. These rivers correspond to the rivers of oil, milk, wine and honey, which had already been placed in Paradise by Jewish and Christian eschatology; the only difference is that Muḥammad replaced oil by water; in Arabia pure water was not to be taken for granted, and besides it was necessary to mix with the wine of Paradise (see Horovitz, Das koranische Paradies, p. 9). When, after the Prophet’s death, eschatological explanations of the “abundance” of Sūra cviii. 1 began to be made, al-Kawthar was identified as one of the rivers of Paradise and when we find in one of the versions quoted in al-Ṭabarî’s Tafsîr that “its water is whiter than snow and sweeter than honey”, or “and its water is wine”, etc., we have obviously an echo of Sūra xxviii. 11. But they did not stop at simply transferring these Karānî descriptions to the Kawthâr but the imagination of later writers gave the river of Paradise a bed of pearls and rubies and golden banks and all sorts of similar embellishments. According to a later view (see Abûl-Ḳāsim ibn Ḥanâfî, ed. Wolff, p. 107), all the rivers of Paradise flow into the Ḥawaḍ al-Kawthâr which is also called Nahr Muḥammad, because, as we have seen above, it is the Prophet’s own.

(J. Horovitz)

KAWUĞLU, “the man with the kawûg”, a character in the Orta Oyunu.

The Turkish word kawûg means the inner cap-shaped part of a certain kind of headgear, a rather high cap around which the headdress proper, the sârāz, is wound; a cap like this could be of different shapes; it either culminated in a rounded top or in a flat surface; sometimes also it was wider at the top then on the bottom. It was usually made of wadded felt in perpendicular strips narrowing towards the top. These kawûg’s were worn by officers of different ranks in the Janissaries. They varied in form, colour and name according to rank. For further details see Mahmut Şahvet, Osmanlı Tekâbilât ve-Kıyâfet-i ‘atkerî-yesi, Stamina 1325, i. 29 sq. Other professions also had particular kawûg’s; thus there were molla, kâtib and paşalîk kawûghu or, from the shape, one talked of tepeli kawûg, while dal kawûgh acquired the special meaning of parasite. The word kawûg (plur. kawûğîn) has even penetrated into Arabic.

Kawûg, “the man with the kawûg”, has acquired a special significance as one of the two principal characters in the Turkish folkplay of Orta Oyunu. It is not till last century that we are at all minutely acquainted with the Orta-play and the names Orta and Kawûg do not seem to be any older. According to a tradition, the character of the Kawûg was first introduced by a certain otherwise unknown Şükri, in place of a character called Nekre whose main feature is said to have been a fondness for opium. Kawûg is the real comic figure in the Orta-play and plays a part like that of Karagöz (q. v.) in the shadow-play. Peskâh, the other principal character in the Orta Oyunu, is, on the other hand, the real director of the piece, a kind of stage manager, who always appears first on the stage and corresponds roughly to the Hâdiwâd of the shadow-play.

The costume of the Kawûg is sometimes described in the pieces themselves. Its chief feature is a high kawûg on his head. This is usually flattened above, red in colour and made of strips (dîmîl) sewn together, almost like a top-hat without the lower brim. The kawûg is jokingly compared to a tandir, the Turkish stove of similar shape. A shawl called aghâh, made of wool and silk, is wound round the kawûg. The kafan (dîmûr) of the Kawûg and his trousers are also of red cloth while his under-garment (enârî) is of striped woollen cloth or silk (sham sharîris or allî pârûş). An ordinary shawl is used as girdle. The Kawûg wears yellow Turkish saffron leather slippers (celek pârûş) usually with heels, over the leather stockings called meyt. He usually carries an umbrelîya made of different coloured parts. In modern times more and more of the old dress has been lost and even the kawûg has had to give place to a fez with a long tassel.

In the play the Kawûg is usually a shopkeeper, artisan or a servant. Like Karagöz he is responsible for the grotesque and comic element. He misunderstands the remarks of the other players, especially the Peskâh, in substance as well as language, carries out orders in a stupid fashion, coarsens sentiments or twists them into the obscene. He is tactless and stupid, especially when he has to be on good behaviour among high class people, but in his absence he exaggerates respect even from his friend, whom he treats badly, and is very capricious. If he describes his experiences, he exaggerates tremendously but unmercifully disparages any presents that have been given to him etc. If he is caught in a trick he usually succeeds in escaping by some of his thousand shifts. A further favourite source of humour is the imitation of foreign voices and dialects, taṭıld (Ewliyâ, i. 645 sqq., gives the name to Orta-like plays of his time), sometimes with the addition of disguises. It seems that the players were originally foreigners and non-Muslims and in the older period the business was still considered unseemly and it is regretted when a Muslim earns his livelihood in this way.

All his pranks have to be improvised by the player, only a rough outline of the piece being given. The part of the Kawûg makes the greatest demand upon the player and only a few really great actors have succeeded in playing the part to the general satisfaction. The most famous was a certain Hamîd at the end of last century and in most of the texts known to us from that period the Kawûg is often addressed simply as Hamîd.

KAWURD B. DÂÜD ÇÂGHRIPEG, sometimes also called Karî Arslânbey, the founder of the line of Salûqûd of Kirmân. The first year of his reign is usually given as 433 (1041). Perhaps it was he and not Ibrahim Imâl (cf.Ibn al-Âthir, ed. Tornberg, ix. 349) who led the Ghuzz, who came to Kirmân in 434, but he did not succeed in establishing himself there then, for the lord of this province, the Bûyid Abî Kâlidîr (q. v.), was informed of the raid and sent troops who put the Ghuzz to
flight. It was not till some years later (440 = 1048) after the death of Abābū Kūlūdijī, that the capital
of the country, Ba'dir, where Bahram b. Lash-
karsīnān commanded for the Būyids, was taken and
henceforth the land belonged to Kāwūr. By a
stratagem he was able to subjugate the rude tribes of
the Kūf and Kufādijī, who dwelled in the
Garmast (the hot region). He also waged war in
Shēhān and in Fārs, in the latter country with the
chief of the Šahbānār Kaflu—on him cf. Ibn
al-Balkhī, ed. Le Strange and Nicholson, p. 166
and with the assistance of the Amir of Hormoz
even sent troops across the Gulf to the coast of
Arabia who conquered Omān so that his successors
ruled there till 537 (1142—43). He was an energetic
ruler in every respect and maintained order in the
land and acquired merit by making wells and
building towers to serve as landmarks in the desert.
One of these towers still stands between Ourg
and Fardaj (cf. P. M. Sykes, Ten Thousand Miles in
Persia or Eight Years in Irān, p. 418). But in
the end his ambition proved his downfall. Even
during the reign of his brother Alp Arslān, he
could scarcely bring himself to acknowledge his
suzerainty but when the latter came twice to Kirmān
(456 = 1064; and 459 = 1067) he did not dare
throw down the gauntlet but showed himself sub-
missive. But as soon as he heard that his brother
had fallen (1072) and that his son Malik-shāh had
succeeded him he collected his forces and marched
against him. The two armies met near Hamaštān.
Kāwūr's troops were put to flight, he was taken
prisoner and strangled. The best account of this
battle, which was fought on Dju'dān 26, 466 = Jan.
27, 1074 (according to Ibn al-Ainhir, x. 53,
in Shēhān = April), is contained in the Zubdat al-
Tabārīk, B. M. MS., fol. 33. The victor, how-
ever, left the sons of Kāwūr in possession of
Kirmān.

Bibliography: In addition to the sources quoted in the article: Recueil de textes relat. à
l'histoire des Selj., i. 2 sqq.; cf. in addition
Houtsma in the Z. D. M. G., xxxix. 367 sqq.

KAWWĀS, an Arabic word meaning originally
archer, then archaebus, finally, like the French
archer, came to mean military police. The form
kawwās (with šd) is found in the 900t Nights
(Dowy, Suppl.). The word is applied in the Levant
specially to the military police, called in French
cavalerie or sometimes janissaires (because before
the abolition of the latter, they were chosen from
their ranks), detached to act as guards to em-
bassies and consulates. They go in front of the
head of the embassy or consulate when he goes
into the town, whether officially or not, and make
way for him in the crowded streets and bazaars.
In Turkey they are called yasak-li. In terms of
articles 45 and 50 of the renewal in 1740 of the
treaty between France and the Ottoman Empire,
known as the capitulations, the ambassadors and
consuls may employ such janissaries as they please
without their being forced to use any who do not
suit them (T. X. Bianchi, Nouveau Guide de la
Conversation, Paris 1835, p. 275—274). The
regulations of Şafar 23, 1280, fixed the number of
natives that the consulates could employ in account
of their privileges, at 4 yasak-li for consulates
general and consulates in the chief towns of pro-
vinces, 3 for ordinary consulates and 2 for vice-
consulates or consular agencies. Their appointment
is notified to the governor-general of the province
who keeps a register of the names of those employed
(Aristarche-bey, L'escàton en Ottomate, Constanti-
nople 1873—1888, iv. 15 sqq.).

Bibliography: Descr. de l'Egypte, Paris
1822, xxiv. t. 326—327. (Cl. Huart)

KAY. [See KERIHWAK.]

KAYI, the name of one of the 24 tribes
of the Huzz [q.v.] or Oguz from which the
Ottoman ruling house is descended. Cf. the
pertinent text of the Tabrīzīh-Aīt Selīldijī and
the Kayak Dīlī Kaygīsh in the Zem., ins. 977.
Mahmūd Kāshānī, Diwanugah al-Turk (I. 1)
still has the old form Kaygīsh, which refutes the
identification proposed by J. Marquart (Abb. Ge-
W. Gottingen, Nine Folks, xii. fi. 39 sqq.) with
the Kāi mentioned by al-Birūnī and al-Awīf
in the extreme east. The Kay are regarded by Marquart
as turkicized Mongols (op. cit., p. 88) which also
he says, op. cit., p. 191) explains "the rôle which the
blood-stained and fratricidal race of Oman and Ot-
oman people have played in history". That the Kay
were Mongols is very probable. They are cited by
Mahmūd Kāshānī (op. cit., i. 30) with the Tātār
and others among the peoples who speak a language
of their own, although they also knew Turkish;
but the Oguz tribe Kaygīsh or Kayfī had cer-
tainly nothing to do with the Kāi.

(W. Barthold)

KAZ (t.), goose, occurs also in geographical
names such as Kāz Dagh, the Caucasus [see KARE].
KAZA. [See KAD].

KAZAK (t.), robber, disturber of the
peace, adventurer; on these and other mean-
ings see W. Radloff, Versuch eines Wörterbuches
der türk. Dialekte, i. 304. The existence of the
word in Turkish can be first shown in the ninth
(xvb) century. During the civil turmoils under the
Timurids the pretendors, in contrast to the actual
rulers, were called kazak; those who would not
accept the verdict of fortune led but the life of
an adventurer at the head of their men; cf., for
example, the mention of the kazak years (kasakli)
of Sultan İfusin, afterwards ruler of Khorasān, in
the Bāhū-Nūma, ed. Beveridge, p. 173 b, infra.
The name kazak is also applied to whole bodies of
people, who had separated from their princes
and kinsmen; in the Tārīık-i Rashidī (transl.
E. D. Ross, especially p. 82 and 272) the Ózbek,
who had abandoned their K Hasan Abu l-Khair
(cf. the article), are called Özbek-Kazak or simply
Kaza; the latter name has been retained by their
descendants as an ethnic to the present
day (cf. the art. KIRGE). In Russia the word
kazak first appears about the same time as in
Central Asia (in the second half of the xvb century)
and is probably borrowed from Turkish although it
appears in Russian in a larger number of meanings;
thus individuals without kinsmen or possessions
were called kazak even although they did not lead
a wandering or marauding life; the word, therefore,
had not yet the exclusively military meaning which
it had afterwards. The word Cossack, used in
Western Europe, is the result of the Little Russian
and Polish pronunciation. No certain etymological
explanation of the word kazak has yet been given.
The last suggestion by N. Marx (Zurnal Min. u.
Prom. 1915, June, p. 286), according to which the
old Caucausian ethnic kazak mentioned in the
Russian annals under 6473 = 906 is preserved in
Kazak, is a hypothesis which can hardly be accepted
by the historian.

(W. Barthold)
KAŽAN, also written Karazin, in the xvth and xviith centuries the capital of a Tatar principality, in the xvbth century a Russian university town, now capital of the Tatar Soviet Republic. According to legend, the town was built by Vitus. In 1391 Kažan was destroyed by Russian fisher-boomers from Novgorod, and again in 1399 by the Prince Vwryi Dmitrievič. About 1445 a powerful kingdom was founded here by Ulū-Muhammed and his son Maḥmūde (in Russian works Maḥmūtces) who had been banished from the Golden Horde; in the same year (1445), in which Ulū Muhammed captured the Russian Grand Duke Wasiliy, Kažan, where a prince called ʿAli Beg was ruling, was captured by Maḥmūde. In 1460 Ulū Muhammed was killed by Maḥmūde; two other sons of Ulū Muhammed, Kašim and Yaḵūb, had to flee to Russia from their brother, where Kašim founded a local dynasty in Kasimov [g.v.], which is called after him. Like many later pretenders who sought refuge in Russia, Kašim took part on the Russian side in the wars against Kažan. Maḥmūde died about 1464 and was succeeded by his sons, first Khaḷil, then Ibrāhim. In 1468 even Wsibka had to submit to Khaḷil Ibrāhim but in the following year the campaign took a more favourable turn for Russia; Ibrāhim had to make peace and restore their freedom to all the Russian prisoners in Kažan. Ibrāhim’s successor was his son Iḫsan; in 1487 his brother Muḥammad Amin appeared before Kažan with a Russian army; after a siege of three weeks Iḫsan had to surrender and was sent with his wife to Wologda; Muḥammad Amin was installed as Khaḷ in his place. In 1496 the Khaḷ and with him the Russian party was driven out by the conqueror Makhmud, for after the victory of the Russians — at the request of the people of Kažan — it was not Muḥammad Amin but his brother ʿAbd al-Laṭif that was installed as Khaḷ but by 1502 ʿAbd al-Laṭif was brought back to Russia and the throne restored to Kaḥ Muḥammad Amin. In 1505 the Khaḷ rebelled against Russian suzerainty and killed or robbed the Russian merchants who came to the annual fair in Kažan; the Tatars advanced as far as Njini-Novgorod. In 1506 a Russian army was defeated; while a second campaign was being prepared the old relations were restored by a treaty of peace in 1507. Muḥammad Amin died in 1518, ʿAbd al-Laṭif had died the previous year; with them the dynasty founded by Ulū Muhammed became extinct.

The following decades were a period of almost uninterrupted fighting between the pretenders supported by Russia, the brothers Shah ʿAli (on his tomb in Kasimov, not Shahk ʿAli) and Dān ʿAli, who had come from Astrakhan, Russia, and the national party supported by the Crimean Tatars and the Noghai. The latter won their biggest victories in 1524; Shah ʿAli was driven out by prince Şahib Giräi who came from the Crimea; the brothers Muḥammad Giräi from the Crimea and Şahib Giräi from Kažan advanced up to Moscow; the Grand Duke Wasiliy abandoned his capital; a peace was concluded in his name by the Tatar prince Peter, a convert to Christianity, by which the Russian government bound itself to pay tribute to the Khaḷ of the Crimea. The Russian prisoners were sold as slaves by the Crimean Tatars in Kafa and by the people of Kažan in Astrakhan. In 1524 Şahib Giräi went to the Crimea and left his thirteen year old son Şafā Giräi in Kažan. The only original document that survives from the period of the principality of Kažan dates from the brief reign of Şahib Giräi: it is a decree dated Safar 12, 929 (= Jan. 1523), confirming a faculty as "Tāriḵān", that is nobles freed from all taxes. The text is very detailed so that the document is of some importance for the domestic history of the principality.

After vain efforts to come to an agreement with Russia, Şafā Giräi was driven from the throne by the Russian party in 1530; at the wish of the people it was not Şah ʿAli but Dān ʿAli that was elected Khaḷ; he was killed in 1535 in a rising of the national party; Şafā Giräi recalled and supported by his father Şahib Giräi, then Khaḷ of the Crimea. The Russian attempts to restore their suzerainty had therefore for a long time no success; it was only in the year 1546 that Şafā Giräi was driven out and Şah ʿAli put in his place; but Şafā Giräi returned immediately after the departure of the Russians and held the throne till his death in 1549. He was succeeded by his two year old son Otemiş, who was taken to Russia in 1549 and christened by the name of Alexander and lived till 1566. The brief and cruel reign of Şah ʿAli ended with his banishment. Yaṭiyr Muḥammad, a prince born in Astrakhan, was summoned from the land of the Noghai to Kažan as Khaḷ. The Grand Duke Iwan who had already conducted two unsuccessful campaigns (1548 and 1550) against Kažan now appeared before the town with a larger army; after hard fighting Kažan was stormed on Oct. 2, 1554, and all armed men put to death.

The town retained its former appearance and its military importance under Russian rule for a long time. The town had ten gates and a citadel separated from the other quarters of the town by a ditch; the old wooden wall was replaced by one of stone in 1555. The town was then about 600 cubits (= a mile) in length and 500 cubits (1500 yards) in breadth. To injure the commercial importance of the city, the Russian government as early as 1524 had forbidden the annual fair at Njini-Novgorod; at the same time merchants were forbidden to go to the fair at Kažan. Christianity was indistinctly preached. Kažan was the see of an archbishop from 1555 and later of a metropolitan. The immigration from Russia proper assumed considerable importance. Little is left of the old town; a tower in the citadel still bears the name of the princess Şiyûnbigi, wife of Şahib Giräi (she was previously married to Dān ʿAli and later to Şah ʿAli). Under the influence of national Tatar movement the memory of this princess is kept green; in 1914 a biography of her appeared and a periodical for women is published under her name; but it is not definitely known when and how the tower received this name, and what parts date from the Tatar period and what from the Russian. During the xviiith century Kažan had lost all military importance and was easily taken — with the exception of the citadel — by Pugacev in July, 1774; there were then 2,867 houses in it. Even at this date Kažan was of much greater importance than Njini-Novgorod as a centre of government and of culture. The university founded in 1504 became famous especially for its Oriental faculty (strictly the Oriental section of the faculty
of history and philology). In 1855, as a result of the opening of the Oriental faculty in the University of St. Petersburg, instruction in Oriental languages in the university of Kazan was stopped and the library and other accessories for the most part brought to St. Petersburg.

Instruction in Muhammadan languages was resumed in the university of Kazan in 1861. According to the census of 1897, Kazan had 131,568 inhabitants, in 1911 182,477, of whom 30,781 were Tatars.

W. Barthold

KAZBEGI. A Persian copper coin worth one ghori, according to Chardin, the thirtieth part of a ghori. It is now obsolete. Chardin says, iv. 279 (Rouen, 1723), the name means "the King’s money," but see the titles Goszek and Csebacege in Hbbon-Jobon (revised ed.). Another form of the word seems to be Kazbini from Kazin where they were coined.

W. Beveridge

KAZERUN, a town in Persia in the province of Fars, between the sea and Shiraz and 55 miles from the latter at a height of 3,000 feet. It is supplied with water from wells and pipes as the district has no river. Its industries used to be flourishing; it manufactured a kind of cotton called ghatavi (Yakuti, ii. 288); it had a rich trade carried on by merchants for whom ‘Ajdal al-Dawla the Buayd had built a bourse and who had luxurious dwellings and pleasure-houses in the town and vicinity. A kind of date called gilican was gathered there. At the present day it is surrounded by tobacco-fields; there is a horse-market there frequented by the nomad tribes. The principal mosque was built on a hill commanding the hazar. Among the tombs of saints venerated there, mention is made of that of Shikh Abi Ishak Ibrahim b. Shabriyur Kazeruni, patron of the sailors in Indian and Chinese seas, their protector from storms and pirates, a capacity which brought his swaiya abundance of axvoto’s ( Ibn Batuta, ed. Paris, ii. 89). Twenty miles to the north are the ruins of Sabur; Kazeruni began to rise in importance from the time Sabur fell into ruins. The district was called Shul, a name that survives in the modern name Shulustin. In the vicinity there is a very salt lake full of fish which in the fourth century was called Buahair Muz (or Muraq).

(C. HUART

KAZI-ASKER (A.T.), military judge, one of the highest offices in the judicial system of the Ottoman empire; its holders took precedence immediately after the Shâhîd al-İslâm, the chief of the ‘âmmârî; they are entitled sâhir (i.e., iv. 45); they are equal in rank to the vizier and na’shir. They are entitled in written petitions to be addressed as semâeh-hâ “your benevolence.” There are two Kazi-Askers, one of Kûm-lî and the other of Anatolia. Before the reforms, the first was inspector-general of all the dedicated properties (wâfî) except those of the two holy cities, when they become vacant (ma’âlî) by the decease of their administrators (mutawawil); since the timâniât this duty has fallen upon the Minister of the Awlâf.

The title Kazi-Askar was created in 763 (1362) by Sultan Murad I in favour of the Kâdi Kara Khan Djiendere-li; this judge followed the Sultan in the army and excercized his functions in camp. After the capture of Constantinople, Mehemd II ennobled 885 (1481) and by the advice of the Grand Vizier Karamanlı Mehmed Paşa (q.v., ii. 745), jealous of the credit enjoyed by Mûniçeh Çelebi, Mûniçeh al-Dîn Kasîflânî and Hadjiî Hasanîâwere the first holders of these new offices. The Shâhîd al-İslâm or Grand Murdi did not have precedence over them until the reign of Sultan Süülâmân al-Kânumî. They had the right to appoint all the kâdi’s and mudarrî’s (professors of theology) except those of Constantinople, Brusa and Adrianopolis, the three successive capitals of the empire; these nominations were reserved for the Grand Vizier.

The Kazi-Askar of Kûm-lî dealt with the cases of Muslims in questions belonging to the capital while those of non-Muslims were left to the Kazi-Askar of Anatolia. The importance of the first of these posts put the second on the background. His competence extended to cases relating to estates, to debts of the state and interests of the treasury; down to the reign of Mahmüd I the sphere of jurisdiction included the three Barbay regencies; his authority over the kâdi’s of the Crimea was recognized by the treaty of Kainarde (1775) and the convention of Aineli-Kavak (March 21, 1779).

KAZI KUMUKH. [See KUMUKH.

KAZIMAIN. A town near Bagdad, one of the most celebrated of Shî‘a places of pilgrimage. It is a little over a thousand yards on the right bank of the Tigris, which describes a loop. It is separated from the river by a girdle of gardens. Kazimain itself is prettily situated among palm-groves; there are also gardens almost without interruption in the direction of Bagdad. It is connected by a horse-tramway with the west side of Bagdad (Karhîyak; see the art. AAKHII) about three miles away, which was laid down by the governor Mirhat Paşa, who did a great deal for Bagdad (1869—72; cf. i. 568). Quite recently Kazimain has also become a station on the Bagdad-Samarrâ railway, which runs along the right bank of the Tigris. Down to the World
War Kāzimain was the seat of a ḍār-i-moḥamāt and the capital of a ḍār of the sandjak of Bāgh Ḍād with a population of 25,000 (of whom 5,000 are Shīʿis); see Cuinnet, op. cit. The number of inhabitants of the town itself Cuinnet estimated at 6,000, Aubin (1907) at 7–8,000, of whom two-thirds were Persians. They are very fanatical; access to the sanctuaries is strictly forbidden to Christians. The Arab Beduin tribe of al-Maḍāma' encomaps along the Tigris as far as Kāzimain (see M. v. Oppenheim, op. cit., ii. 71).

The name Kāzimain, a so-called duali a potiori (cf. Wright, Grammar of the Arabic Language, i. 190), means ‘the two Kāzīms’. The reference is to the two ʿAlīs buried here, Mūsā al-Kāzīm (d. 186 = 802) and Muḥammad al-Jawād (d. 219 = 834), the seventh and ninth Imāms of the Shi‘a sect of the ‘Twelvers’; [cf. ʿināʾ ashkariyya, ii. p. 563]. The place is often briefly called Kāzim (also Ghaḍim in books of travel) or Kāzīmiyye (Kāzīmiyye); the name Imām Mūsā is also Alīd, but as the region is the seat of Najaf (in Ibn Khallikān). At the present day Kāzimain is one of the four greatest sanctuaries of the Shi‘a. Its favourable position at the junction of the roads to the three other Shi‘a places of pilgrimage, Sāmarrā in the north and Kerbelā and Najaf in the south, accounts for the fact that many thousands of pilgrims pass through it annually. Frequently 25–30,000 believers assemble here on one day. The throng is greatest during the first ten days of the month of Muḥarram, which are specially dedicated to the memory of Husain and the ʿAlīs generally. One of the most prominent and the principal spiritual leaders of the Shi‘a, lives in Kāzimain.

The sanctuary of Kāzimain is one of those exceedingly splendid and rich temples which the ʿIrāq owes to the Shi‘a and for which Persia and Shi‘a India supplied the necessary millions. With its domes covered with gold, the drums and the spires of its minarets it is visible to the traveller a long way off. Its present form faience covered, is due to the ʿIrāqī Imāl ʿIsmāʿīl (903–940 = 1502–1544), whose family claimed descent from the Imām Mūsā al-Kāzīm (cf. above, ii. 544). The inscription published by Massignon, op. cit., p. 90, of the year 926 (1519) refers to this and the complete transformation of the old building by the ʿIrāqī. The restoration not quite completed by ʿIsmāʿīl was finished by the Ottoman Sultan Sulṭān Sulṭān I, who visited Bāgh Ḍād in 941 (1544). The covering of the domes with golden tiles was done — according to the inscription in 1211 (1796) — by command and at the expense of Shāh Aḥmad Muḥammad Kāhn [q. v.], the founder of the ʿIrāqī dynasty. On the occasion of his pilgrimage (1870) Shāh Nāṣr al-Dīn had the gold plating on the principal dome and on the roofs of the minarets renewed; cf. Cuinnet, op. cit. The double cupola flanked by four minarets, which two sides are covered beneath it. Close to this mausoleum stands an isolated pavilion under which are shown the graves of ʿDjafar (formerly supposed to be that of ʿIsmāʿīl) and ʿIrāhīm, sons of the Imām Mūsā. The cupola of this building is modern and a gift of the general of division Salīm Paḫa; cf. Massignon, op. cit., p. 100. It may be noted here that there is also at Ḥadīthā on the Euphrates (between Āna and Hit) a small sanctuary which is said to contain the tomb of Muḥammad, son of Mūsā al-Kāzīm; see Herzfeld in Sarre-Herzfeld, op. cit., ii. 321. On the tomb of a certain ʿHānma b. Mūsā al-Kāzīm in Kārīyat al-Bāṣiyya (in the ʿIrāq) cf. Massignon, op. cit., p. 60. In the vicinity of Astarābād [q. v.] there is also an Imām-zāde (tomb-chapel) where a descendant of the Imām Mūsā called Imām Kāzīm is said to be buried; cf. Melgunof in the Z. d. M. G., xxii. 235, and in Das sudliche Ufer der kurdischen Mecres, Leipzig 1868, p. 119–120.

Like the sepulchral mosques of other great places of pilgrimage that of Kāzimain also is surrounded by a very broad court-yard (ṣābīn) enclosed by a wall. This latter was rebuilt in 1298 (1880), with the permission of the Turkish government, by a wealthy Persian named Fāhrād Mīrzā and adorned with ceramic work and inscriptions containing whole sūras; cf. Massignon, op. cit., p. 110. In the great court, in course of time, extensive buildings for the housing of numerous pilgrims (with treasury) grew up, especially along the enclosing wall. In 1907 Aubin estimated the number of bazaars and caravanserais within the area of the sanctuary at forty-five. There are also a number of petty coffee-houses.

Adjoining the wall of the court-yard is a Sunni mosque with the tomb of the famous ʿHānafī lawyer Abū Yūsuf (q. v., d. 182 = 798); cf. Massignon, op. cit., p. 57, 100. It is a mistake, as Le Strange (Baghdad, p. 161 sq., 350 sq.) does, to locate the grave of Zabūaid, wife of Hārūn al-Raṣīl, in or near this Kāzimain; cf. against this Massignon, op. cit., p. 110 sq., Herzfeld, op. cit., ii. 111, and also the article A.L.KARSH.

In the time of the Caliphs, extensive cemeteries lay on the west side of Baghdad above the Ḥarbiyya quarter. The two ʿAlīd graves were in the cemetery of the Kūraṣīh (Maṭḥāb al-Kūraṣīḥ); the names Shāhīzīya and cemetery of the Bāb al-Tībān are also found for it. When Yashīk wrote (623 = 1226), Maṭḥāb al-Kūraṣīh was a fairly populous suburb surrounded by a wall. Ḥamd Allāh Mustawfī about a century later found that this place, formerly reckoned a suburb of Baghdad, was now an independent little town. With the first built the ʿAlīd sanctuary at Kāzimain is unknown. We know that princes of Shī‘a tendencies, like the ʿAybūṣ, frequently bestowed gifts upon it. But in the course of time, especially during the frequent fighting in the capital between Shī‘is and Sunnis, it was repeatedly burned and plundered, notably in the years 43 (1051) and 622 (1225). At the conquest of Baghdad by Hulāgū in 656 (1258) it was again laid in ashes. It may be mentioned that in 1801 on the occasion of the Wahhabi invasion the treasures of the sanctuary were removed from Kerbelā to Kāzimain; see Jacob in A. Nöldeke, op. cit., p. 48, note 1.

Opposite Kāzimain, on the left bank of the Tigris, connected with it by a bridge of boats, is the suburb of al-Muʿazzam (see above, i. 568—569), a stronghold of the Sunnis and a kind of national sanctuary of the Turks. In this place of about two thousand inhabitants is the highly venerated sepulchral mosque of Abū Ḥanīfa, the founder of one of the four orthodox schools of Muḥammadan law (q. v., d. 150 = 767). On this tomb cf. M. v. Oppenheim, op. cit., ii. 241; Streck, op. cit., i. 162; Le Strange; Baghdad,
for their campaigns against the latter. Muhammad b. al-Hajjājī, b. Yūsuf built a mosque here called Māshjd al-Dhawr "mosque of the white." The Caliph Mūsā al-Hādhī built a new town opposite the old one, called Mādina Mūsā. Mubarak al-'Urkī, a freedman of al-Ma'mūn or al-Mu'āsir, built a fortress there called Mubarakya in which he put a garrison. When Harūn al-Rashīd passed through the town on his way to Hamaḏān the inhabitants of Kāzinī asked and obtained a relief from their tithes, alleging that, living on the frontier, they had to fight for the faith. Harūn built a mosque there and began to restore the ramparts which work was continued by the Amir Abī 'Ali al-Dārifārī in 411 and finished by Ṣadr al-Dīn al-Maʿrūš, minister of Sulṭān Arslān, in 572. Ruined by the Mongol invasion at the beginning of the viii (xiii) century Kāzinī revived again under the Sāfawīs. Taḥmāsp I lived there for long and Abū Bakr I adorned it with fine buildings. In 1723 its inhabitants drove back the Afghāns. Kāzinī has retained a certain importance as the roads from Tabriz and from Rešt to Teherān meet there; the latter is fit for carriageway traffic and is used by motors. Kāzinī is a depot for the silks of Gīlān and Shirvān and manufactures carpets.

Kāzinī, the name given by Ṣūfīn Ṣūlṭān of Mysore (1197-1213 = 1785-1799) to the 1½ rupee (1 anna) in silver; it commemorates Mūsā al-Kāzinī, the seventh Imām. (J. ALLAN)

Kāzinī. [See KASIMOW.]

Kāzinī, formerly Kash-win, a town in Persia in the province of 'Irāq; the distance from the sea, by the sea road, is 103 miles from Esfahan at the foot of Mount Alburz, [q. v.], a height of 4,000 feet above sea-level; the population about 25,000.

The etymology of the name is uncertain. Al-Baladhūrī (p. 321; cf. Ibn al-Fakhr and Kudāma) says that Kāzinī means "the boundary which one watches," i.e. "well guarded"; it may also be explained as "the one who watches the corner," but this seems to be a popular etymology. It has been connected with Carpius (Spiegel, Erān. Alterthumskunde, i. 74, note 1). Founded by Ṣāḥibūr I (Ibn al-Fakhr) and called Ṣāḥib Shāhīr by him, it was besieged by al-Barkhārī b. 'Adījī in 464 (444) and surrendered to him. The people adopted Islam to escape the imposition of the dīya (poll-tax). This strong place, which was a barrier against the incursions of the mountainers of Dīlam, was used by the Muslims as the starting point.

The Cosmography consists of two parts the first of which deals with heavenly things and the second with terrestrial. After a very full introduction the heavenly bodies (sun, moon, stars etc.) are described; next the inhabitants of heaven (the angels) are dealt with; the first part concludes with a chapter on chronology. The second section discusses sub-lunar phenomena and the elements in general, especially the sphere of fire, air and water, natural history in the three kingdoms (minerals, vegetable and animal) and lastly man. The Cosmography also contains a great deal that is purely geographical as it describes the more important mountains, islands, seas, rivers and springs; in the Geography to some extent the same things are again dealt with, usually in the same words.

The manuscripts of the Cosmography differ very much from one another. There are longer and shorter versions and further abbreviated editions or more or less modified versions, sometimes published under another title. References to the manuscripts of the Cosmography are given by Pertsch, Die arab. Hess. der Bibl. zu Gotha, iii. 126—127; supplementary information in the Cat. cod. Arab. Bibl. Lugdun. Batavi., ii. 14. The oldest copy of the text is Cod. Monac. 464, which, according to Seybold, was written in 678 (1280) i.e. three years before the death of al-Kazwīnī (cf. BI., iv. 260). Almost identical with it is the Cod. Sarre prepared about 1420 (see Taeschner, Die Psychologie des Kazwīnī, 1912, p. 6; Saxin in Isl., iii. 152).

Wüstenfeld (see his edition of al-Kazwīnī, vol. i., p. iii. sq.) distinguishes three different editions of the Cosmography all of which he believes to have been prepared by al-Kazwīnī himself: the first of the year 661 (1263), the second of 674 (1176), much enlarged and considerably rewritten, and a third which is represented only by a single codex the latter part of which is incomplete (Gotha, Nov. 1508). Taeschner and Wüstenfeld based his edition of the text has two titles, an earlier, Tuhfat al-Kazwīnī, and a later, Mirāt al-Kazwīnī. In it, apart from other minor additions, we have two entirely new sections (on the different races of mankind and the various arts).

This idea of Wüstenfeld's is, however, untenable, as Ruska has shown in his important Kazwīnī-Studien in Islam, 1913, iv. 14—66, 236—256 (a summary of his researches was given in his article Über den falschen und echten Kazwīnī in der Mittell. zur Gesch. der Medizin und Naturwissenschaft, 1914, xii. 182—193). As a result of his analysis of the structure of the text of the anthropological and mineralogical chapters (especially of the section on the rain-stone) of the Cosmography based on a number of Arabic MSS. and Persian translations of the text Ruska comes to the conclusion that we must distinguish not three but four recensions of the Cosmography. Of these I (= Wüstenfeld's II) is so far known only from two Gotha MSS.; II (Wüstenfeld's I) is represented in many — some very old — MSS. and in the text of the Cosmography given on the margin of the printed edition of al-Hamidī. To this second recension also belongs the already mentioned oldest MS. of al-Kazwīnī (Monac. 464) and the Codex Sarre. The Arabic original of Rec. III is lost; it is not certain what its relation was to the two preceding.
Its characteristic feature is the addition of chapters 7 and 8 on the races of men and on the arts. The Arabic original of Rec. III — of which the date and compiler are unknown — must also have been the original of the Persian translations as well as the basis for the version preserved in Rec. IV. The idea of a Persian version without an Arabic basis, i.e. of a retranslation of Rec. IV from the Persian, may be set aside as quite improbable. Rec. V, which is only represented in the already mentioned Cod. Gothanus 1508 defective at the end, represents a version of Rec. III. It is quite different from the text of the Persian translations in contrast to which it has marked interpolations; many chapters are amplified by considerable additions. It alone contains the extracts regarding the Turkish hordes of the tenth century from the journal of Miṣar b. al-Mahalhil [q.v.] and Ibn Faḍlān's [q.v.] notes on the Slavs, Khazars, Russians, etc., as well as the excerpts on jewels from al-Ḳazānī’s book. This Rec. IV (= Wüstefeld’s III) cannot be from the pen of al-Ḳazānī himself. Cod. Goth. 1508, besides, as has already been mentioned, has a different title from the other three recensions and, indeed, expressly describes itself as a commentary (ẓahrā) on al-Ḳazānī. Goth. 1508 is perhaps original; at any rate it was compiled by someone with a thorough knowledge of the old literature.

Wüstefeld’s edition of the text of the Cosmography therefore does not contain the genuine text of al-Ḳazānī but a much later recension of the xviiith century. Almost the whole of Wüstefeld’s volume (p. 73—366) follows the text of the recension o. Cod. Goth. 1508. But portions are omitted from this and replaced by portions from other manuscripts, which have also been used to fill up other gaps. Wüstefeld’s procedure has therefore given us an entirely arbitrary edition of the text. To obtain the true text of al-Ḳazānī’s Cosmography it would be best to choose the older, shorter Rec. II (= Wüstefeld’s I) which also seems to have been the most widely distributed. Among the numerous manuscripts of this recension the oldest Cod. Monac. 464 should be taken as a basis.

Extracts from the Cosmography also exist. One with the title Kitāb al-Durar mutawāfū min ʾAṯār al-Buldān is in the Paris Bibliothèque Nationale; cf. de Sacy, op. cit., iii. 449 sq., and de Slane, Cit. des Ms. arabes de la Biblioth. Nat., N°. 2182. A similar abbreviation ibid., N°. 2419(3).

The anonymous work ʾAṯār al-Maḥḍūrat al-Ṣughrā, i.e. “the little Cosmography” (also in Paris, de Slane, N°. 2182) has much in common with the Cosmography.

On account of its relatively succinct form yet containing all essential information generally popular at the close of the middle ages, al-Ḳazānī’s Cosmography was translated into various foreign languages, notably Persian and Turkish. As to the Persian translations their relation to the Arabic original has already been briefly discussed. But two or more recensions or paraphrases have to be distinguished among the Persian versions, the relation of which to each other and to the Arabic original requires still to be more closely investigated. One of them is called Ṭuhfāt al-Ḳarāʾib (Vienna MS. N°. 1438; see Flügel, ii. 506 sq., and cf. thereon Persich, Vers. der pers. Hs. , . . . zu Berlin, p. 367). On the Persian translations cf. de Sacy, op. cit., iii. 436; Wüstefeld’s edition of al-Ḳazānī, vol. i., p. xii., and Ruska in Jb., N°. 17, 160. There are also abbreviations e.g. London, British Mus. (Rieu, 1853, p. 403, N°. 7). In Cambridge is a manuscript which also contains excerpts from the Geography of al-Ḳazānī; see Browne, Catal. of the Pers. Ms., 1856, p. 208 sq., N°. 126. Ḥامزة ʿAbdūr ʿAṣfār’s al-Dālin (d. 866 = 1461) composed a poetical synthesis of the second part of the Cosmography entitled Ḥusrāʾib al-Dārūy. Of this the Bodleian in Oxford (Catalogue by Sachau-Ethe, col. 401—403) and the India Office in London (Ethé, Cat., 79 and 191) have each 2 MSS. This synopsis forms the second part of a much more comprehensive poetical cosmology in four chapters which ʿAbdūr published under the title Mirāṯ.

There are also various Turkish translations; on them cf. Taeschner in the Z. D. M., G., lxxvii. 35. There is one by Ayīb b. Khalil finished in 977 (1570) in M.S. in Vienna (Flügel, Kataf. der Hofbibl., ii. 508); it is entitled Ṭuhfāt al-ʾAṯār wa-Tardjumāt al-Qaẓānī. Another translation was made by the famous theologian al-Maqūḍī (d. 850 = 1454); there are manuscripts of it in London, British Mus. (Rieu, p. 107—109; Add. 7284 and Add. 24,954).

The anonymous Turkish translation in the Berlin Library N°. 177 (see Persich’s Catalogue, p. 197—

198) is probably different; its author has dealt very freely and arbitrarily with the Arabic original, has omitted many articles and added others in their place. The original work has been much abbreviated throughout and the arrangement of the matter is different. Another Turkish translation made by Ismāʾil ʿAbdūr and dating from the year 1109 (1697) is only known from Ḥāfẓi Khalīfa (ed. Flügel), vii. 154, N°. 14,608.

The Berlin and London translations (Brit. Mus., Rieu, Catal. p. 205—209) also differ from the Arabic original and from almost all the Persian translations in that they include a book of countries, a synopsis of the Geography, as in the Cambridge Persian Codex mentioned above. Ahmad Yādzīdī-atings work, ʾAṯār al-Maḥḍūrat, is probably only a free version of al-Ḳazānī’s Cosmography; cf. Persich, Kataf. der arab. Hs. zu Gottha, iii. 127, and Persich, Verzeichnis der türk. Hs., ... zu Berlin, p. 199.

There is apparently a Çağhatāi version of the Cosmography in the St. Petersburg Library (Chanykov, N°. 108); see Persich, Kataf. der arab. Hs. zu Gottha, iii. 127.

2. The Geography. The Geography exists in two editions with different titles; the older is called ʾAṯār al-Buldān and the latter Ṭuhfāt al-ʾAṯār wa-ʾAṯār al-ṭuḥfāt. The first recension represented by MSS. in Berlin (see Ahlwardt’s Catalogue, p. 370) and Paris (de Slane, p. 392) dates from the year 661 (1263). The second, much enlarged and on some points completely altered edition dates from the year 674 (1275). On the two recensions and their relationship to each other see Wüstefeld in his edition of the Geography, p. viii. sq.; he based his edition on the second recension which exists in numerous manuscripts. On the MSS. see the references in Wüstefeld, op. cit., vol. ii., p. iv. sq., and Persich, Kataf. der arab. Hs. zu Gottha, iii. 152 sq.

In this work al-Ḳazānī gives a description of the earth following the Ptolemaic division into
seven climes or longitudinal zones (see the art. iktifam and also Taeschner in the Z.D.M.G., lxxvii. 51 sq.). Within the seven climes the separate countries, towns, mountains, islands, lakes, rivers etc. are arranged in alphabetical order. Their remarkable features are described and many historical events connected with them are given. Considerable space is taken up by the sections on the life and work of famous men born in the various places. The book is therefore, like Yakût’s Geographical Dictionary, loaded with historical and biographical material. In arrangement it is a geographical lexicon, like Yakût; only, as a result of the division into seven sections, it is less easy to consult. Many articles such as those on various mountains, lakes, rivers etc. are also found in the Cosmography usually with identical text.

There are also Persian translations of the Geography; manuscripts of them exist, for example, in St. Petersburg (Chanykow, N.° 107; see Persch, Katal. d. arab. His. zu Gotha, iii. 153) and in Oxford (Sachau-Etke, Catalogue of Pers. MSS., coll. 401, N.° 401). It has already been mentioned that a synopsis of the Geography of al-Kazwinî in a Persian translation (MS. in Cambridge) and seems to have been inserted in several MSS. of a Turkish version of the Cosmography.

A synopsis of the Geography of al-Kazwinî was made about 806 (1405) by al-Bakûwî ʿAbd al-Rashîd b. Saʿîlî b. Nârî, entitled Taʾlîkh al-Āthâr wa-ʿAḍîr bîl-Malik al-Ṣâhîrî. The unimportant alphabetical arrangement of the names within the seven climes is retained; on al-Bakûwî and his book see Hâdiqî Khalîfa, ed. Flugel, ii. 399, N.° 3529; Reinard, Geographie d’Alphonse, 1., p. clxi.—ii.; Wüstenfeld in Lüdder’s Zeitchr. für vergleich. Erdkunde, i., 1841, p. 59, and in his edition of al-Kazwinî, ii., p. viii.; Aumer, Katal. der arab. His. . . . zu München, p. 402; Brockelmann, G. A. L., i., 481, ii. 213. A translation of this book based on a Paris MS. was given by de Guignes in the N.F., ii. 386—454. On the relationship of al-Bakûwî’s Synopsis to al-Kazwinî’s original see especially Juyvboll, Lexic. Geograph. Marvîzîd al-ʿIttîhâdî, vol. iv., p. lxxvi.—xxii. al-Bakûwî usually adds the latitude and longitude to the places mentioned, which are lacking in al-Kazwinî. He is also of use in correcting wrong readings in al-Kazwinî and coming to a correct opinion on doubtful ones.

We may here say a little about the illustrations found in many MSS. of al-Kazwinî’s works, astronomical figures and tables, etc. Painted pictures are not abundant, only found in MSS. of the Cosmography. We may assume with certainty that the originals of al-Kazwinî were full of such pictorial embellishments and of tables. Indeed, almost all the larger MSS. of the Cosmography are embellished in this way. Manuscripts which show gaps deliberately left for the insertion of pictures must also have been copied from illustrated originals; such are Gotha N.° 1508 (cf. Ruska in ltt., iv. 261) and London, India Office (Catal. by Roth, p. 209 sq., N.° 725). Rude pictures are contained e.g. in Gotha 1507, Munich 463 and Vienna 1436; better Gotha 1506 and Vienna 1437; numerous fine illustrations in Munich 404 and Cod. Sarre (see supra); cf. thereon the Catalogue of Aumer (Munich), p. 192 sq.; Flugel (Vienna), ii. 505 sq., and Persch (Gotha), iii. 128 sq. The Persian versions of the Cosmography also are usually adorned with miniatures e.g. the two Berlin Codd. 345 and 346 (see Catal. by Persch, p. 367 sq.) and London, Brit. Mus., Nº 8 (Catal. by Ricke, col. 464), the latter with illustrations in the Indian style. Although these pictures with their illustrations of plants, animals, marvels of the sea etc. are very often quite fantastic in character and not infrequently pure invention, they ought not to be simply ignored in any future edition of the Cosmography, as Wüstenfeld did, who has only reproduced the astronomical and other figures and tables in his editions of the Cosmography and Geography (cf. thereon Wüstenfeld, Kosmographie, p. iv. sq.). So far only a few facsimiles have been published by Moller in the old Gotha Catalogue, vol. I., from Gotha N.° 1507.

The miniatures in al-Kazwinî’s Cosmography have, however, been used in the discussion of important problems, e.g. by Salz in his investigations into the history of the representation of the planets (in Islam, iii. 151 sq.). There he discusses the seven pictures of planets of Codex Monac. 464, which he also reproduces (Pl. 4, fig. 1—4 and 5, 6—8). Sarre in Münchener Jahrbuch der bildenden Kunst, i. 18 sq., discusses the somewhat different figures of the Cod. Sarre.

In criticizing al-Kazwinî’s two works, it is also important to know what sources were used for them. A list of the authorities quoted in the Cosmography was compiled by Moller and there are two MS. copies of it in the Gotha Library; see Persch, Katal. d. arab. His. . . . zu Gotha, iii. 131, N.° 1509—1510. Wüstenfeld in the G. A. K., 1848, i. 351—355, briefly discusses the sources known to have been used for the Geography (practically the same as for the Cosmography). According to him, about 50 authors are quoted in the Geography, including the more important geographers and historians. The following are specially cited for the geography of Spain: al-Ǧârâraṯi Muḥammad b. ʿAbd al-Rahim (d. 1168; on him see Wüstenfeld in Lüdder, Zeitchr. für vergleich. Erdkunde, i. 43) and al-Uṣâthī Ahmad b. ʿUmar (d. between 476 and 500; on him see Jacob, op. cit., i. 3 sq.). Abâ Hamîd al-Andalusî, d. 565 (1169), the author of a Cosmography entitled Taḥfîz al-ʿAlâb (on it see Jacob, op. cit., iii. 69—94), is often quoted. The already mentioned Persian Cosmography of Ahmad al-Ṭâṣî (on it see Reinard, Geogr. d’Aboufîdâ, vol. i., xlvii., and Persch. Die pers. His. . . . zu Berlin, p. 366) is also found among the sources. Further may be mentioned the works of Avicenna, the so called Petroleo of Aristotle wrongly ascribed to Aristotle (cf. the two works by Ruska; see Rieß) and the Kitaib al-Hayawân of al-Dājrî. Ibn Fadlan and Muḥarrar al-Muhallî have already been mentioned. Many of al-Kazwinî’s sources e.g. the African travels of al-Dâjânî are now lost to us. Al-Kazwinî also utilised oral information from foreigners e.g. al-Multânî Abu ʿI-Rahîb Sulhâmî who had travelled in the interior of Africa. The remarkable information regarding various French and German towns which al-Kazwinî owed to the Spaniard Ibrâhîm al-Tâṣî (fl. 477 = 1055) was also probably communicated orally and not taken from a book; on this cf. Jacob, op. cit., i. (third edition entitled Ein arabischer Reisestersteller aus dem 10. Jahrh. über Fulida etc., Berlin 1896) iv. 137 sq.
As to the printed editions of the two works of al-Kazwini, the first and only complete European edition is that of Wustenfeld. The Geography (published as the second part of al-Kazwini) appeared in Gottingen in 1849 and the Cosmography (= Part i.) in 1848. The value of the latter has already been discussed above. In the east the Cosmography has been repeatedly printed on the margin of al-Damiri's Kitāb al-Fawā'īl al-Ażwā'īn, e.g. in Cairo 1505, 1509 and 1539. An edition of al-Kazwini printed in 1531 in Cairo (only the Cosmography) is mentioned in Harrassowitz, Best. über neue Erwerbungen, No. 2337. On earlier editions and translations of parts of the two works of al-Kazwini cf. the references in de Sacy, op. cit., iii. 431, 435, 450; Wustenfeld in Lüttke's Zeitschr. f. vergl. Erdk., i. 1842, p. 49, and in his edition of the Cosmography, p. iv; Pertsch, Katal. der arab. Hss. zu Gotta, iii. 1881, p. 126. Of earlier editions of parts of the Cosmography we may mention: de Sacy, op. cit., iii. 385–516, with Arabic text, p. 168–207 (sections on minerals, plants, men, with translation and full notes); L. Ideler, Untersuchungen über den Ursprung und die Bedeutung der Sternnamen, Berlin 1809, p. 373–405 (the text of the description of the stars with annotations); Volck, Calendarium Syriacum Arabice Latinumque edidit et notis instructum, Leipzig 1859 (dealing with the chapter on the Syriac months).

Of translations alone we may also note: Ethê's translations of the Cosmography, part i., Leipzig 1896; this only covers about the first half of the Cosmography (Wustenfeld, i. 1–208). Of special value is the very full appendix of notes (with many textual emendations by Fleischer); J. Ruska, Das Steinbuch aus der Kosmogr. des Kazwini, Heidelberg (Progr. der Oberrealschule), 1896 (translation of Wustenfeld, i. 208–245); cf. with this also J. Ruska, Das Steinbuch des Aristotheles, Heidelberg 1912, p. 81 sq.; J. Ansbach, Der Abschnitt über die Geister und wunder baren Geschöpfte, transl. and annot. Erlangen (dissert.), 1905 (transl. of Wustenfeld, i. 368–374, 448–451); Taeuschner, Die Psychologie Kazwini's, Tübingen dissert. Kiel 1912 (transl. of Wustenfeld, i. 301–322). Valuable material for a commentary on al-Kazwini is further given by the works of G. Jacob and E. Wiedemann, who have translated and elucidated various shorter articles from the works of al-Kazwini. Special mention should be made of Jacob's Studien in arabischen Geographien, part 1–4, Berlin 1891–1892 (of which part I appeared in a third enlarged edition in 1896); E. Wiedemann has made many contributions on the subject to the Mitteil. zur Gesch. der Medizin und Naturw., S.B.P.M.S. Erl., and to other periodicals; cf. for example, the references by Ruska in Ist, iv. 336 (No. 303), xii. 270 (No. 76) and 277 (No. 129).

In conclusion, attention should be drawn to the fact that in preparing a new edition of al-Kazwini's works Fleischer's own copy of Wustenfeld's edition of the text, containing numerous emendations, which is preserved in the MSS. Dept. of the Berlin Library, should be utilised.

have it). Mention must also be made of the critical work which al-Kazwini (probably before he began work on the Za‘farānname) did on Firdawsi’s Shāh-nāma. The London MS. of the Za‘farānname has the text of Firdawsi edited by our author to the margin (Rieu, op. cit., p. 172). Work on the Za‘farānname was interrupted by the compilation of a compendium of universal history, the Tārikhi-Guzāda (finished 730 = 1330). This work comprises the history of the Muslim-madan world from the creation to 729 (1329) and is written in a very simple, indeed arid style, except for the preface which contains a dedication to Ghiyāth al-Dīn, son of the vizier Rašīd al-Dīn. The preface is followed by an introduction (fātiha) dealing with the creation of the world and then come six sections (labī) dealing 1) with the prophets, 2) the old Persian kings, 3) Muḥammad and the Caliphs, 4) the dynasties of the Muslim period in Persia and adjoining lands, 5) scholars and poets, and 6) history and topography of Kazwin.

A khāsimat follows containing genealogical data and genealogies, which latter, however, are wanting in most MSS., according to Browne. Some of these manuscripts, like Brit. Mus. Add. 22,693 and that published by Browne in facsimile, have between labī 4 and 5 a synopsis of the history of the Muẓaffarid dynasty which is not by al-Kazwini (Rieu, Catalogue, i. 82; Browne, Gibb Mem. Ser., xiv/ii. 151 sqq.). The compendium must have enjoyed great popularity on account of its wealth of matter, for it has often been copied in the East and is therefore of frequent occurrence in European collections also. Browne, J. R. A. S., 1900, p. 725, gives a list of the most important copies and says that one published in facsimile by him is not included; it was written in 875 (1453) and comes from a private Persian collection (Gibb Mem. Ser., xiv/ii. p. xv). The sources on which the book is based are given by the author (ed. Browne, p. 8). On this cf. Browne in the Gibb Mem. Ser., xiv/ii. 1 sqq., and Hist. of Persian Literature under Tartar Dominion, p. 87 sqq. They include the celebrated historians al-Ṭabari, ibn al-Aṯīr, Ḥamza al-Iṣfahāni etc., also Persian authors of a later period, like Dīwainī, Niẓām al-Mulk’s Siyāsāt-nāma, also the Shāh-nāma and a Tābdhirat al-Asyāḥa, which, according to Browne, is the well-known work of the same name by Farid al-Dīn Aṯār. The main source seems to have been Rašīd al-Dīn’s Dīwān al-Tawārīḵ, with the second part which the author edited by our author in an arrangement (ed. Browne, p. xii. sqq.). Another work now lost, the Salīqāt-nāma of Ẓahrīr of Niẓāmpūr was used by al-Kazwini and by Rāwandī also in his Rāḥat al-Sudūr; on the relation of the Rāḥat to the Guzāda cf. Muḥammad Iḥbāl in his introduction to the first edition mentioned work (Gibb Mem. Ser., New Ser., ii. 30 sqq.). The Guzāda itself is five times quoted in Dwlattāsh’s Taẖkhirat al-Shu’arā, among other things for the well-known story of the Sāmānī vizier Naṣr and Rūḍgār (Dwlattāsh, ed. Browne, p. 51 = Guzāda, ed. Browne, p. 382). Dwlattāsh once (p. 105) expressly quotes as his authority the Taẖkhirat of poets preserved in the Guzāda. On the relation between Dwlattāsh’s Taẖkhirat and the Guzāda see also Browne in the J. R. A. S., 1899, sqq. Lastly it may be mentioned that the Guzāda itself is one of the sources of Mir-khwānd’s Rawdat al-Safā.

Al-Kazwini’s last work, the Nuzhat al-Kulūb, completed in 740 (Rieu, Catalogue, i. 419), is mainly geographical. It is divided into an introduction (fātiha), which deals with cosmography, and three sections (maḵāla), which deal with natural history, anthropology and geography. Then follows a concluding section (al-khawāṣim) on wonderful things and curiosities in Iran and other lands. As in the case of the Tārikhi-Guzāda there is a large number of MSS. of this work (a survey of them is given in Le Strange’s preface to his edition in the Gibb Mem. Series, xxii/ii., p. xiv. and xx.). On the sources of the Nuzhat cf. Rieu, Catalogue, i. 418; Browne, Hist. of Pers. Lit. under Tartar Dominion, p. 99. They include, as might be expected, the famous geographer Yākūt, the older Kazwini, Ibn Khurābdībīh and others not so well known. The statements regarding Fārs are taken from Ibn al-Balḫī’s Fārs-nāma. That he, as Le Strange supposes, made use of official documents, taxation lists, as to be expected from his position as finance officer, is very probable.

Bibliography: On his life see Tārikhi-Guzāda, ed. Browne, p. 3 sqq.; Rieu, Catalogue, i. So sqq.; Supplement, p. 172—174; the prefaces by Browne and Le Strange to their editions of the Guzāda and the Nuzhat; Browne, History of Persian Literature under Tartar Dominion, p. 87 sqq.

Nuzhat-i-Kulūb: editions: Bombay 1311 (1894; I have not seen this, an edition of the whole work); The geographical part of the Nuzhat al-Qulūb ..., ed. by G. Le Strange, Gibb Mem. Ser., xxii/ii. (text), ii. (Engl. transl.) 1915 and 1919. A part of the text had been previously published by Schefer, Siasetnamā, Supplément, 1897, p. 141—235 (not accessible to me).

(V. F. BUCHNER)

AL-KEF (الكاف), a town in Tunisia, 110 miles S.W. of Tunis and about 20 from the Algerian frontier, situated in 36°11' N. lat. and 8°30' E. long. The population in 1911 was 6,312, including 1,200 Europeans and 800 Jews. Many of the latter are descended from the Jews who used to live among the Beduins, whose customs and dress they had adopted.

The word kef means "rock". It is given on account of the situation of the town on a spur of the Djebel Dyr at a height varying from 2,486 feet in the S.W. to 2,853 in the N.E. Before the establishment of the French protectorate, it was surrounded by a wall now in part destroyed. The area circumscribed by the wall contains many
buildings now in ruins and empty spaces; in compensation a European town is in process of formation on the plain near the station on the railway now connecting al-KeF with Tunis. At the foot of the wall rises an abundant spring, the Ain al-KeF, an object of veneration to the inhabitants and regarded by them as "marabout." Commanding the principal roads from Algeria to Tunis and, for long one of the busiest markets of the Regency; in economic importance the town ranked next to Tunis and Sfax. This is no longer the case since the building of the Tunis-Constantine railway to the towns in the valley of the Medjerda. Nevertheless the mineral resources of the adjoining country assure to al-KeF the elements of future prosperity. The town was, and still is, a religious centre. The two most popular brotherhoods in the Regency, the Kadhiriya and the Râhînîya, have each a much frequented zawiya there.

Al-KeF is the ancient Sica Veneria, a Punic town which became a Roman colony under Augustus. Very prosperous during the early centuries of the Christian era, it was in the Byzantine period one of the strongest places in Africa. There still survive many ruins, columns, capitals, fragments of statues, inscriptions, remains of temples, baths and Christian basilicas. The cult of Tainus, identified with Venus, whose name is found in that of the ancient town, may even have left some traces in local superstitions.

Sica survived the Arab invasion of the seventh century A.D. The ancient name of the town continued in existence in the form Sijjka Banâriya. This is the name used by al-Bakri (ed. de Sane, p. 33; transl. p. 82) in the Arâb al-idhâr and even in Ibn Khaldûn (Hist. des Berbères, ed. de Sane, i. 220, 256, ii. 20; transl. ii. 42, 98, iii. 209). We know very little of the history of the town till the seventeenth century. Ibn Khaldûn, however, tells us that it was governed at the beginning of the sixth (twelfth) century by a certain Ilyâd b. Našr Allâh, who succeeded in protecting it against the incursions of the Hilâlis, and whose son submitted to 'Abd al-Mu'min in 554 (1159—1160). In the following century the Sulaim settled in this region and incorporated the Houwâra Berbers, who had been settled there since the beginning of the second century A.D. In the beginning of the sixteenth century A.D., al-KeF and the surrounding country were occupied by the Ulema Sulä, a section of the Banû Shennûf, who attached themselves to the Muhallil, one of the two great families into which the Sulaimi Ku'ub were divided.

Under Turkish domination, the region of al-KeF played an important part in the fighting between Algerians and Tunisians, especially in 1629, 1685, 1694, 1705, 1746 and 1756. The rulers of Tunis during this period tried to make al-KeF strong enough to bar the invader's road to the capital. Muhammad Bey scattered the Banû Shennûf, put in their place a makhzen formed by the Ulema Ya'qûb, and stationed a smâla of spahis near the town. The Bey 'Ali built a kasba in 1675, so strong that the place was able to repulse an Algerian attack four years later. In 1739—1740 'Ali Pasha built a wall round the town and placed forts on the cliffs which commanded the kasba. In spite of these precautions, al-KeF, which had been unsuccessfully attacked by the Algerians in 1746, was taken by the Dey's troops in 1756 after a siege of thirteen days. In the beginning of the nineteenth century a new Kasba was built (1813) by Hamada Pasha, who said that "his body was at Tunis, his head was at al-KeF. The garrison was put under the command of an aga, independent of the kadi and civil governor. The taking of Constantine in 1837 by the French, by holding the key of the dangerous proximity of the town was, however, the military importance of al-KeF, the fortress was now only used to protect the town against Berber raids. During the Tunisian expedition, the French troops entered the town without striking a blow on April 25, 1851.

this place. The descriptions of Ani as a royal residence have some resemblance to those of the other place of the same name (see the art. ANI) situated on the Arpa Cai.

Kemâk was taken by 'Umar b. al-Hulâb al-Sulaimân in the year 590 A.H. It has, however, from that time onwards often changed its master. In 133 (751/52) it was besieged by the Emperor Constantine. The 'Abbâsîd caliph al-Mansûr tried to strengthen his hold on it by a restoration of the citadel; it is said that he intended to use it chiefly as a bulwark against the invasions of the Khazars. In 177 (793/94) it was besieged by the Byzantines. 'Hamd Allah Mustawfi (born 680 = 1281/82) mentions it as a small town. The Ottoman Emperors Bâyazid and Selim took it after a siege, the former, at the hands of his general Timurtaş, in 1396, the latter in 1515. Timûr beleaguered it for seven months, without being able to take it. According to J. Brunt, who visited the town about 1830, its population consisted at that time of 400 Turkish and 30 Armenian families; it was the residence of one of the last Derevelis [q.v.]. Kemâk is the chief place of the Kaţû of the same name, Sandîqâ Ernedjûn, wilayet Erzerum. It is the residence of a kâmil muwafîk. In the vicinity are numerous turba's. At the present day it is still an important centre of commerce and industry.

The population of the Kaţû consists of 14,547 Muhammâdans, 3,503 Greek Armenians, 189 Pro- testant Armenians and 633 orthodox Greeks (Cuinet).

KEMAL AL-DIN ISMA'IL, a Persian poet of Iṣfâhân, son of Djamâl al-Din 'Abâl al-Razâkî, was one of a group which devoted its eulogies to the family of the Sa'îdîs (also called Alî Khudjandî) which kept political and judicial power in its control in Iṣfâhân. Surnamed Khalîl al-Ma'ānî "creator of thoughts", he dedicated his odes mainly to the judge Rukn al-Din Sa'îd b. Ma'âd, but also to the Khwarizmshâh ('Alî al-Din Takaşh), Muhammad, his son, Djalâl al-Din and Zbiyâh al-Din, his grand-sons) who ruled in Iṣfâhân, as well as to the Atâbeks of Fars who ruled at Shîhâr (Sa'îd b. Zang and his son Abâ Bakr). In 1328 he retired from the world and devoted himself to the mystic life under the guidance of Shaikh Shihâb al-Din 'Umar b. Muḥammad al-Suhârâwî. He was tortured and put to death on Djumâdâ i 2, 635 (Dec. 21, 1237), at the capture of Iṣfâhân by the Mongol soldiers of the army of Ogotâi, son of Çingiz Khân, who hoped to find hidden treasure in his house. His Discourse has been printed at Bombay (n.d.); there are partial translations by H. Gray, put into English verse by Ethel Watts Mumford (Hundred Love Songs, New-York 1904) and by Theodosia Garrison (Lippincott's Mag., iv. 783), of the 15 quatrains published by Salemann-Shukovski, Persische Grammatik.

KEMAL KHODJANDI (Kamal al-Dîn Mas'ûd), a Persian lyric poet, born in Khudjand in Transoxania. He followed the mystic path, went on a pilgrimage to Mecca and on his return settled in Tibriz the climate of which had pleased him. On the capture of this town by Togtamish Khan, he was taken to the town of Sarai at the request of this prince's wife. He remained there four years. Having returned to Tibriz the Dja-lîrîd Sulîn Hüsain, son of Sulîn Uwaïs, had a house built for him. He likewise received favours from Miân Shîk, son of Timûr and governor of Alâbarbâdân, who paid his debts. He died there in 792 (1390) according to Dâwlat Shâh, or 803 (1400) according to Khondemîr. He was buried in the Fârâb-âbîshî quarter where his tomb became an object of pious visits. Ten of his ghâzâls have been published by Bland, Century, p. 9-12. There is, in the national library of Vienna, a very beautiful manuscript of his poems illuminated with miniatures (Flagel, Die arab. pers. u. türk. Handschr... zu Wien, i. No. 581).

Bibliography: Dâwlat Shâh, Ta'lihât al-Shârârâ, p. 325; Lu'f All Beg, Atâbekhî, in the section on Tûrân (not paginated); Ridâ Kuli Khân, Ma'dîma ma'ul-faşâh, ii. 29; J. v. Hammer, Schone Redekünstler Persiens, p. 555; Khondemîr, Mas'ûd al-Siyâr, iii. 3, p. 90; Sir Gore Ouseley, Biographical Notices of Persian Poets, p. 192-194; H. Ethé, in the Grundrisse d. iran. Philologie, ii. 304. (CL. HAURIE)

KEMAL MÊHMEĐ NÄMÎK, one of the most important of Turkish poets, novelists and authors, the principal leader of the Turkish moderns, creator of the modern Turkish prose language and the most notable Turkish patriot of modern times. Kemal, born on Dec. 21, 1840 (Shawwâl 26, 1256), in Rhodosto on the Sea of Marmara, belonged to an old aristocratic family which could be traced back through his father, the astronomer Mustafa 'Âşûm Bey, his father Shams al-Din Bey, the first Chamberlain of Sulân Selmî III., the admiral Kapudan Ahmed Râhî, and the great Visier Topal Qâshân Şahşah, the conqueror Nâdir Şah of Persia. His father was Adem Shehi in Anatolia and his mother to Konica in Albania. The Albanian strain in his father was of the highest importance and explains much in his
indomitable character and his strong passionate nature. In appearance he was quite like a European. He was liberal, open-hearted and attractive.

Kemal had a rather irregular, unsystematic education at home; he had only nine months' regular schooling in Constantinople at the Bayazid-Rüştüye and the Valide-Mektebi. He was trained in Arabic, Persian and French by private tuition. In 1852 he was with his grandfather Şams al-Din Bey in Kars and later in Sofia where he began to write poems although only 14 years of age, quite in the style of Sümül-Zade, whose Divân had to serve him as a model for lack of other patterns. Returning to Constantinople in 1857/8 he entered the translation bureau of the Sublime Porte and soon became a member of the then flourishing group of poets of the old school: Nâifî, Maqbul Pasha-Zade Memdûh Faik, Hület, Henselk ʿArif Hikmet, Ġâlibî and Kaşım, who imitated ʿNeşî and ʿFebrî who, Kemal quickly won an honoured place among them. He put together a slim Divân-i Murstebe of not very original poems. In his poems he took the pen-name of Nâmîk. It is remarkable that the last incomplete ghaşal of the divân is the first of his patriotic poems.

He only entered upon the field he was to make his own through ʿShinâsî Efendi, who had studied in Europe and was now in Constantinople endeavouring to attract men of intellect to western culture and ideas, mainly in his capacity as editor of the influential newspaper Taşpur-i Efsâr. Kemal became friendly with him and soon fell completely under his influence, which directed him from the imitation of classical models to the spirit of the west. Kemal grasped with ardour the new ideas, the importance of which he at once realised. He made it his aim in life to bring about a literary, political and scientific renaissance in old fossilised Turkey and to secure her a place among the nations of the West. He began his troubled career by writing for ʿShinâsî's paper. Henceforth he wrote under the name Kemal, which soon gained the greatest popularity.

When ʿShinâsât q.v. fled to Paris in 1864 he left the editorship of his paper entirely in the hands of the young Kemal, who at first found it a very difficult task. For a year he published almost nothing but translations from the French. Then important political questions (the Polish rising and the American Civil War) helped him to raise the standard of the paper which had gone down very much. He now took the field with political articles of his own which aroused the greatest interest on all sides and made the Taşpur-i Efsâr the most influential newspaper. It was in its pages that the expression “Young Turk” first appeared.

Kemal became more and more embarrasing to the government. Although only 23 years of age, he had already been given the müteşarrîfluk of ʿKafe-i Sulṭânîye (Gallipoli) for a short time and next they wished him to become an ambassador to Persia in order to get him away from Constantinople. But he did not accept this post. It was only with difficulty that he escaped being sent to Erzerûm. Kemal had joined the Young Turk Committee founded by Ziyâ among the elements in favour of reform, the main object of which was to raise Turkey from her backward state and obtain a constitution. When the members were threatened with arrest, Ziyâ, Kemal, Nûrî, Rifât and ʿAllî Sulâtî fled from Turkey in 1866 to London where they settled down. At the time of this his first voluntary exile Kemal was expecting the birth of his first child, who afterwards became the poet ʿAllî Ekmek. In London Kemal published the paper Mükâbir (“The Correspondent”) on behalf of the party; it was later transferred to Paris and then replaced by the Hürriyet (“Liberty”). In Paris he studied law and economics and translated important French works into Turkish.

His stay in Europe was of overwhelming influence on his political and literary development. Henceforth he came back again and again to the subject of civilization. When, after the death of the Grand Vizier ʿÂli Pâşâ, it became possible for the Young Turks to return home, Kemal underwrote the constitution in Constantinople of the Young Turkish paper İhârî. He succeeded by his articles, which are of permanent value, in making the paper one of the most important in Turkey. At the same time he contributed to a number of other papers and periodicals and thereby completely influenced and revolutionised public opinion.

When Kemal became inconvenient to the government by his political activity, especially through his patriotic drama&Wafan, which aroused unbounded enthusiasm, he was banished to the fortress of Famagusta in Cyprus. At first he was in the closest solitary confinement, where he planned in his subterranean cell his drama ʿAkrî Bey, which he wrote out and printed as soon as the rigour of his imprisonment was slackened. He was detained in Famagusta for 38 months until the accession of Murâd gave him his liberty and permission to return to Constantinople. But Murâd only reigned 93 days. With the accession of ʿAbd al-Ḥamîd a limit was soon put once more to Kemal's activity. Kemal took part in the preparation of the constitution and shared in the deliberations with Midhat Pâşâ and Ziyâ Pâşâ.

His liberal activities aroused the deep distrust in ʿAbd al-Ḥamîd. He was arrested and spent 5½ months in the common prison in Constantinople where he spent most of his time in historical study in preparation for a history of the Turkish army. In spite of his acquittal after a trial, ʿAbd al-Ḥamîd sent him to detention in Mytilene (Chios). This enforced inactivity was a great trial to him after the disastrous conclusion of the war with Russia and he expressed his feeling in songs like the touching Mubâṣṣir barm ʿAllîh ibn olđur beni.

After two years' detention during which he wrote the Dîvâni and the Ljesni, he was appointed Mûteşarrîf of Chios. There the disease of the lungs, which was to cause his premature death, first broke out. When Chios became the capital of a wilâyet, he was moved to Rhodes, where the more favourable climate restored his health and revived his creative powers which had somewhat abated. With the assistance of a splendid library, for the enlargement of which at great personal expense he had agents in India, Persia, Egypt and Europe, he set about the preparation of a history of the Turkish Empire.

From Rhodes he went to Chios, as müteşarrîf again. He worked at his history with a feverish activity and, in spite of the fact that his health was much affected, displayed considerable literary activity in all other directions. The order forbidding the printing or continuation of
his history which came from Constantinople as the result of a treacherous denunciation of him was therefore a frightful blow and he died during the night after receiving the order, Dec. 2, 1888, in Mytilene.

His body was first of all interred in Mytilene in front of the mosque and then solemnly removed by his son 'Ali Ekrem to Bulair, 8 miles north of Gallipoli and there buried with military honours in the türbe of Sulaiman Pasha, a worthy honour for the great patriot. 'Abd al-Hamid built a splendid türbe for Kemâl. While Sulaiman Pasha's türbe was already a place of pilgrimage, Kemâl's türbe became to a still greater extent the goal of many Ottomans, who saw in him the incarnation of their ideals. The first thing done after the revolution of 1908 by the "Committee of Union and Progress" was to go solemnly from Salonica to his tomb at Bulair as to the grave of the "founder of the building of liberty" and pay homage to his manes. The unexamined moderation with which the victorious party proceeded was also a tribute to the influence of Kemâl.

The supreme and unique position occupied by Kemâl in Ottoman literature can hardly be too highly appraised. His influence on his own and the following generation was tremendous. He was perfectly aware of the difficulty of his task but always believed in a successful result, which was quite in keeping with his singular temperament. His personality — he was a born agitator and thoroughly revolutionary in spite of his aristocratic birth — with his unusual energy and inflexible and undaunted strength of will exercised an overwhelming effect on the masses. He was filled with a deep, most fervent religious, spirit, thoroughly Islamic in its attitude and he believed in his people, his country and their future. Basing himself on the idea of the true Islamic culture with a strong leaning to pan-Islamic ideas which he endeavoured to realise by going back to primitive Islam and rejecting the Islam of the past which did not satisfy him, he evolved the idea of the Ottoman fatherland and was able to impose it on his "lethargic" people. It was Kemâl who first awakened his countrymen to the conception of Watân (fatherland), which was later replaced by the Turkish Yarı, and to the conception of Millet (nation) and Hurriyet (liberty) which the Young Turks took as their watchwords.

Kemâl remained faithful to his task which he regarded as a kind of apostolic office, in spite of the most difficult conditions. His talent as an author was certainly not small but this does not completely explain the almost magical influence which he has exerted down to our own day. The most recent Ottoman literary criticism is rather inclined not to estimate him so highly. But what no critic can deny him, what places him high above all others is his thirst for freedom, his patriotism, and the fearlessness with which he expresses his ideas and above all his masterly command of language. When he began writing, he found the language in a chaotic condition, at his early death he left it a wonderfully modelled instrument. The creation of the modern Turkish prose language is undeniably Kemâl's work.

In his political and literary essays Kemâl is vigorous and convincing when he wants to defend any view. No one has surpassed Kemâl in his essays.

His longer works have a tendency to resemble a series of collected articles rather than a consecutive whole.

The admission in which he was held found expression in his many imitators.

Works. Kemâl was not primarily a poet. Besides his Divân written in the old style, although already showing traces of new features (love of country and people) and adopting modern ideas (theatre, steamer), in the ghalâl he composed a not very large number of powerful poems which passed from mouth to mouth like revelations. He was readily followed simply because he still paid part tribute to old ideas in his poems. Many poems are scattered through his works and many went unprinted from hand to hand. They all show his deep patriotism.

In his Wawaila ("groaning, wall", republished 1326 = 1908) Kemâl laments his fatherland which is wrapped in a windig sheet. His Bârîk-î Zafar ("Flash of Victory", 1872) written in an elaborate style is a panegyric on the conquest of Constantinople. His enthusiastic Watân Müşâmsesi did not appear till 1326 (1908).

Kemâl's main success as an author was won by his dramas of which he wrote six. He might be regarded as the creator of the Turkish drama. In the play by Abu 'l-Ziyà Tewfîk, his most devoted friend and follower, Edlî-î Kafta ("The Threatened Fate", 1288 = 1871/72), the first national Turkish drama, he was a silent collaborator although his name was never mentioned. He then tried his skill independently:

1. Watân yakhid Silüstrâ ("Fatherland or Silistra") a play in 4 acts first printed in 1872 and often since (transl. into Russian by W. D. Smirnow in the Wiesbad Eurogî, 1876, ix. 151; German by L. Pcktotsch, Vienna 1887). The play, which is important from the sociological and psychological points of view, depicts heroic scenes in the defence of Silistra in 1854. The piece aroused tremendous enthusiasm and was the main cause of his banishment to Famagusta.

2. Zawâlî Coğûb ("The Poor Child"), a drama in 3 acts (1873). It describes the consequences of the abuse of parental authority over the child and is an attack on the traditional manner of arranging marriages. Kemâl deals with the new idea of the freedom of women to feel and to love. The influence of "La Dame aux Camelias" is unmistakable.

3. Akîf Bey, a drama in 5 acts (1874). In this the patriotism of the Turkish naval officer is emphasised and contrasted with the faithlessness and inconsistancy of his wife who abuses the absence of her husband.

4. Gûl-nikâh, a drama in 5 acts (1875), probably based on Hamlet, extolling the motive of vengeance, especially woman's vengeance and rebellion against despotism.

5. Dîlâl al-Din Khâirem-zâhâ, a tragedy in 5 acts (1875), with a long literary introduction (muşâddele) on the defects of Ottoman literature and the technique of the drama, first published by Rodosî Şâlıh Djinmêl and then printed in Cairo without the introduction in 1292 (1875); the muşâddele alone is printed in Mevînê-i Âbu 'l-Ziyà, No. 41 (1885), and Kitâb-işân-i Âbu 'l-Ziyà, No. 69.

It is a romantic tragedy from Persian history in the style of Hugo's "Cromwell" and "Hernani".

Dîlâl is thought to mark the zenith of Turkish romanticism. It is a drama intended to be read
only, a passionate protest against the government system of the Ottoman Sultan. On account of its obvious bias the piece was always suppressed by the censor.

6. Kara Bela "Black Misfortune", first published in the Kulübet in 1908, written in Famagusta in 1875, describes the violation of an Indian Emperor's daughter by a negro who has smuggled himself into the harem as a eunuch and takes the place of her lover. The disinterested lady commits suicide by poisoning herself on the eve of her marriage after killing the black monster.

Sarköylu seems to be wrong in ascribing a drama Anadolu Kıyıleri to Kemal, for which the Sultan is said to have granted him a special reward. Kemal's dramas suffer from a lack of naturalness, a want of lucidity in the inner motives, from sentimentality, too much patriotic pathos and from tirades. But he knows how to grip the attention of his audience and carry them with him. A certain psychological depth cannot be denied him. The Turkish theatre was then something quite new. The plays are great achievements for their time and circumstances, in spite of all their dramatic and technical defects, especially as Kemal was mainly concerned with using the drama as a medium to carry his ideas to the masses and to arouse the feelings dormant in the people. For him the theatre is "an amusement useful to influence the people".

He followed similar lines in his two novels, which have the same defects. But in them we have the typical features of Turkish life and thought vividly and realistically portrayed. From the point of view of style they reveal great beauty. The influence of his novels was great; they became the model for a whole school whose most ardent representative was Vedjiief. The two novels are:

1. İhtihâb yâkub Ali Bey'in Seragüzeşti "The Awakening or "Ali Bey's experiences" (1874; the original title is said to have been Son Peşânmâle). It is the description of the adventures of a rich spoiled mother's darling, who finds himself in the clutches of a harlot, deluded by her intrigues heartlessly sacrifices his innocent sweetheart and is completely ruined, until finally he kills his mistress, after the sweetheart whom he has abandoned has saved him at the cost of her own life, and ends in prison.

2. Lüzuni, a historical novel (1927 = 1880, printed 1935 = 1887/1888), the romantic love story of 'Adil Girai of the Crimea and the sister of the Shah of Persia during 'Adil Girai's captivity in Persia in the xvii century. The main facts are taken from history; Lüzuni marks an important technical advance on 'Ali Bey in the compactness of its style and its wealth of colour. Pan-Islamic ideas are very evident in it.

The most noteworthy of Kemal's historical works are: his biographies Evrak-i Perîbân "Scattered Leaves" (1901) in 4 parts in which he gives accounts of the lives of four remarkable Muhammadan men, writing in a learned style in the European manner, in the further development of his Islamic tendencies; the four are: the Aiyubid 'Salih al-Din, the Ottoman Sultan Mehmed II, Selim I Yawuz and the Emir Newroz Bey. The collection is considered a classic among the Turks, both in language and learning although it is only a good compilation, mainly taken from European sources. In vividness of description and vigour of style they take almost the first place among his works; 2) Derâ-i İsrâîl "The Period of the Invasion"; 3) Kanîsâ, the story of the capture of the fortress of Kaniza in Hungary, written in 1290 (1873) in Famagusta and printed anonymously the same year.

4) Kemal was a passionate believer in the vitality of Islam. There is, however, in his views a certain lack of coherence between the Muslim ideas and the Romeeanian formulae which he has adopted. He endeavours to prove the equal worth of Islam with the ideals of modern nationalisation which are the end ideals of Islam also; Islam was in no wise backward down to the xvii century, and had only to give way to the superiority of Europe with the rise of experimental science. In reply to Ernest Renan's attempt to prove the hostility of Islam to education, Kemal wrote a defence Renan Müdafa'â-ı-nâmües published in the Kulübet, which is based on much sounder foundations than the other Muhammadan pamphlets combattting Renan's views.

5) Melekâl, the history of ancient Rome and the history of Islam which comes down to 438 (1046), were intended as an introduction and a foundation for his Ottoman history. The latter runs from the beginning of the empire to the death of Sultan Selim I Yawuz in 1526 (1520).

6) Köyû "The Dream", the most vigorous and inspired of his writings, which every Turk must have read at the time of the reaction, dreams of the days when the chains will fall in the fatherland. It has been often reprinted, for example twice in Cairo (I'dîâbê) in 1907 and 1909.

7) Seragüzeşti (1326 = 1908) also describes a dream.

Kemal was above all a publicist. He raised the 'Ifrat to be an ideal newspaper. His articles which appeared in it are still reprinted again and again and put into collections. The separate numbers of the newspaper are still carefully preserved. As a critic he also displayed a comprehensive activity, an appreciation of which has been given by Gibb. He mercilessly scathed the old Parnassus and helped the new school to victory. There is much criticism in his essays and in his Mehadime. When Ziya Pascha, his old comrade in arms, made a rather unfortunate selection in an anthology of Turkish literature in his three volumes Kharâbât, Kemal wrote two vigorous criticisms of the first two volumes, Tâhirî Kharâbât, 1928 = 1931, and 'Abd al-Mâlik Kharâbât, reprinted in 1930, which Gibb considers among the best essays in Turkish.

Kemal's letters are of great importance, as he corresponded with almost all the leading personalities in Turkey, political as well as literary. Unfortunately they are only in part published so far, for example the letters to Midhat Efendi, 'Irîfân Pascha, a part of those to Abu 'l-Ziyâ Tewfîk, 'Abd al-Hasîn Hâmid and others. He wrote naturally and vigorously and was the first to teach his people the epistolary style.

We must not omit his official papers. However conventional and crarked Ottoman official style is, he nevertheless succeeded in giving it lucidity and clearness. The number of official documents which he composed in his different official positions is legion. They are essays on the
creation of the state and its reforms, the rights of the people, its intellectual and ideal requirements, on law, history, political economy, social philosophy, schemes, protocols, semi-official documents, etc.

Finally we may mention his numerous translations: Behri-i Dâvûd ("Spintime of Knowledge"), translated with a literary introduction from the work of the Indian Shâhî, 1 miejszy Atâh. He also translated from the French of Victor Hugo, Lamartine, Montesquieu, J. J. Rousseau, Condorcet, Volney, etc.

A complete edition of his works was begun by his son Ali Ekrem. But his scheme was too ambitious and he broke down in the middle of it. The biography of Kemal promised by Ali Ekrem has, so far as I know, not yet appeared. It is unfortunate that the essay on Kemal's place in literary history by Dr. Riad Tewfik has not yet been published.

(TH. MENZEL)

KEMAL-PASHA-ZADE, the usual name of the Ottoman historian, lawyer and stylist ŞAMS AL-DIN ÂŞMAD B. SÜLÂMÂN B. KEMAL PASHA, often also called Âb Kemal-pasha. Kemal-pasha-zade belonged to a distinguished family of Adrianople where he was born as the son of the wealthy Süleimân Pasha. His grand- father was Kemal-pasha who, like his father, had taken part in repeated campaigns against the infidels and attained great prestige (on him see Süçüli-i 'Othmânî, iv. 78). Kemal-pasha-zade served at first in Bâyazîd's army but was induced to take up a legal career by an experience which is minutely reported by Taşkhoupruze. He was one day in the Grand Vizier's Dwân when Aşmad, the son of Ewenos [q.v.], entered and was received with great respect. Soon afterwards there appeared a man with shabby clothes and no head- dress, to whom the vizier, to Kemal-pasha-zade's surprise, showed even greater respect and even gave him the seat before the son of Ewenos. He was the celebrated jurist Lâfi of Tokat (d. 96a— 1498). The ambitious youth, surprised at the reference shown to a müdderris with 30 aspers over a nobleman of the empire, at once made up his mind to abandon the army and became Lâfi's pupil. The latter lectured at the Dâr al-Hashiy in Adrianople together with other celebrated professors, like Kaştfâltâr [q.v.], Khatib-zade, Muârriiz- zade, on Muslim law subjects. After completing his studies, Kemal-pasha-zade was appointed teacher in the most famed medrese of 'Ali Beg in Adrianople but was soon afterwards summoned to Uskûb as müdderris, finally to return to Adrianople to the Hâlabîya medrese. After a great deal of hostility from the Chief Justice Hâdî, Hasan-zade, who was jealous of all rising talent and put every obstacle in its way, he was appointed by the Sülan, on the advice of the poet Muâ'ayyed-zade (Talkhillus Hattimi, d. 932 = 1506), teacher in the Taşkâli High School (= 'Ali Beg Medrese) at
Adrianople on a salary of 30,000 pesos. The influential patronage of Mu'tiyyed-zade procured him all sorts of liberties, so that he was able to spend some time in Sofia and some time in Dupniza (Bulgaria), to carry out with the greatest leisure the composition of the Ottoman history entrusted to him by the Sultan and at the same time to write the most varied works, sometimes on law, sometimes on history, sometimes on poetry and sometimes on rhetoric. Over 300 treatises etc. are said to have come from his pen in this period.

In the reign of Sultan Selim I, Kemal-pasha-zade in 1516 finally attained the rank of military judge of Anatolia and in this office accompanied the Padishah on his Egyptian campaign. On the march he was commissioned to translate into Turkish, among other things, two works of the Arab historian Abu l'Mahasrin b. Taghibirdi (q.v.) on the lands of the Caliphs. Every morning he handled his master an instalment of the translation, which, according to Hâdîjî Khâlîfa (No. 5,878 and 13,616), was called al-Kawwâb al-Bâhira miin al-Nu'dîn al-Bâhira (on this cf. Brockelmann, G.A.L., ii. 42), and took the opportunity to enlighten the Sultan regarding the feeling in the army through a soldier-song, made up by him, expressing the desire for a speedy return home. Although Selim saw through the plan, he pardoned the poet and even gave him a present of 500 gold pieces as a mark of honour (cf. J. v. Hammer, Gesch. des osm. Reiches, ii. 153; H. F. v. Diez, Denkmâr-

digkeiten aus Asien, i. 323), and the Defterdar Abu l-'Yâfish supplement (Zekiel, part 4) to Hisht Behtih of his father Ridîlîs, MS. of the Vienna National Library H.O. 16 d., fol. 126). After the return home, Kemal-pasha-zade resumed his old position as teacher in the Dâr al-Hadîth, then at the Bâyazidîya in Adrianople and at the same time resumed his scholarly and poetical activities. On the lines of 'Sdîl's Bustân and Gulsân he wrote in Persian the Niştîrân (i.e. "picture-gallery") (cf. Hâdîjî Khâlîfa, Kaşf al-ğunûs, vi. 351, and Der Islam, vii. 118; extracts in German are given by C. v. Harrach in the Fund. des. Orients, i. 401 sqq., ii. 249 sqq., iii. 47 sqq.). Kemal-pasha-

zade is the author of an Ottoman history which begins in the year 856 (reign of Bâyâd II) and goes down to the first Hungarian campaign of Suleiman the Great in 933. Manuscripts of the complete work seem to be exceedingly rare.

The Saxonische Landesbibliothek in Dresden seems to have most parts of it (cf. J. H. Mordtmann's collation in Der Islam, xii. 153 sq.), while in Vienna, for example, there are only fragments of the whole work which was perhaps written and issued in separate parts dealing with particular periods from time to time (at least as early as the reign of Bâyazid II) (cf. G. Flügel, op. cit., ii. 220; the work cf. H. Khâlîfa, Kaşf al-

zu'nûs, ii. 111, No. 2153). An edition would be very desirable and of considerable value in solving the problems of the old Ottoman chronicles. That Kemal-pasha-zade prepared a translation of the Hisht Behtih of Idris, as is stated in the Umîye Sâlimnâmi, p. 347, is probably a mistake. Kemal-pasha-zade subjected the campaign of Mohæs to a very full review, which was published for the first time with a French translation by Pavot de Courteille (Hist. de la Campagne de Mohæs, Paris 1859). There is a very good manuscript of it in the Dresden Public Library.

His poetic masterpiece is the story of Yâufû and Zulaikha often dealt with before (e. g. by Hamdî, q.v.) and after him, but his treatment of the subject is peculiarly fictitious; his other poems, in which his sharp wit much admired in his life-time and his intellectual nimbleness are revealed, are collected in a separate Divân which appeared in 1313 in Stambul (cf. Ghib, Hist. of Ottoman Poetry, ii. 347—363; where a full appreciation of his literary activity is given). He further wrote a number of philological works of which we may mention here a dictionary to elucidate difficult Persian phrases, called Daşîqâ al-Hâshî'î (cf. G. Flügel, op. cit., i. 130). Of legal works special mention must be made of his Risâla fî Tabâkât al-

He left a vast number of commentaries on the Hûdâya, Tâjîrîd, Mîfâs, Tabâfsî, notes on the Kur'ân, marginal notes on the Kaşfâsh etc. which are represented in most eastern collections of Oriental MSS. (cf. e. g. G. Flügel, op. cit., i. 130, 132, 133, 251, 291, 524, 710, 714, 722, 723; ii. 220, 221, 612; iii. 179, 215 sqq.; list of several treatises in Ahlwardt, Berliner Kât., i. 12, No. 19; collection of 59 treatises in the Fihrist al-Kutub al-

'Arâbiya al-mahfûzah bi n-Kutubkhâna al-khadâ-

wiya al-Mîrâya, vol. vii., Cairo 1309, p. 435—445; also Defter-i Kutubkhâne-i Avâ Sûfîa, Stambul 1304, No. 4794, 4797, 4820; Defter-i Kutubkhâne-i Laâlî Dînîyâ, Stambul 1300, No. 2433, 3645, 3647; collection of 26 treatises appeared in two parts at Stambul in 1316 (Iç-

He even wrote on the subject of bah, as his Kûtub al-

Rudiqâ'at al-Shâbî i-iî Sîbîh fi 'l-Kawwâb 'adâl al-Bâh shows (printed Cairo 1316 and 1335; Turkish version: lithogr., n. d., 90 pp. in 8°).

Kemal-pasha-zade died on Shawwâl 2, 941 (April 6, 1535), at Stambul and was interred outside the Adrianople Gate in the monastery of Mahmûd Çelebi, where one of his pupils, Mahmûd Bey, who died as Çâli of Cairo, erected a stone monument to his memory. Three chronogrammatic verses (tâ'izâh) in Arabic were inscribed on his coffin, his sword and his tombstone, the numerical value of which was each 941 (cf. Hâdîjî Khâlîfa, Djhawûmûz, i. 180, 181, and Ekwîya Çelebi, Sijûllâ-

nâme, i. 345, esp. 359; cf. on the other hand, J. v. Hammer-Purgstall in the Z.D.M.G., vi. 282, and Sitzungskr. der Wiener Ak. der Wiss., 1851, vi. 326—328, according to which the date is 940, which is certainly an error).

Dâchz, ii. 205 sqq.; Brussal Mehmed Tâhir, Osmanlı Matellîsleri, i. 223; Umîye Sâlimnâmi, Stambul 1334, p. 346 sqq.; Mehmed ârî Bey in the Kütûbe Hikâye Ottoman, p. 1411 sqq.; C. Brockelmann, Gesch. der osm. Lit., ii. 449—453 (where most of his works are given under their titles).

(F. v. Baringer)
KEMAL REIS, Turkish corsair and sea-captain during the reign of BAYAZID II. In his youth he had been given as a present to the Sultan by the Kapudan Pascha Smail, on which he was brought up as a page at the court. He began his career as a chief of 'azabi, then took to the Mediterranean and captured and razed to the ground in 1496/1497 a Maltese Prince ('Sidilli-i 'Othmanî, iv. 28). In 1498, by order of Bayazid, he raided the Spanish coast in order to support the last Nasrid of Granada, Mulay Hasan, who, in his critical situation had invoked the Sultan's aid. This expedition is only recorded by Hâdidji Khalifa in his Ta'kvim al-Tavâribî but not in his Story of the Naval Wars (Tâhfat al-Kibâr) and it seems to be unknown to the other historians; in any case it cannot have been of much importance in view of the great difficulties of the Ottoman Empire occasioned at the time by the wars against Egypt and Austria. In 1497-1498 we find Kemal Reis marauding in the Eastern part of the Mediterranean with other corsairs; he took several Christian ships and brought his booty to the key of Alexandria ('Ashik Pascha Zade, p. 250); at this time therefore he probably was not serving the Sultan. But in the war of the Turks against Venice (1498/99) he was one of the admirals of the fleet. The Turkish fleet had three newly equipped unusually large battleships (turkish: kâbi) of which one was commanded by the Kapudan Pascha D'fûd, and the two others by Kemal Reis and Burâk Reis ('Sidilli-i Bashî, writes Budâlî, so also Leenclavius, Budâcicus). In the naval battle of Sapienza (28 July 1499) the Venetians took the latter's ship for that of Kemal Reis, on whom they particularly wanted to take revenge. Burâk Reis was boarded by two big and some smaller Venetian ships; he defended himself with burning naphtha, until he, and his enemies, were blown up together: the island of Sapienza was called after him Burâk Reis Adašli. After this battle the Turkish fleet took Lepanto (Ie-nâbulî). In the next year, after the towns of Koron and Modon had been taken by Turkish sea-power, Kemal Reis was sent with 40 ships to Navarino (Turkish Aleviz), of which town he captured the citadel from the Venetian commander. He died on the是什么呢, according to Sâmi ('Kemâlâ bil-'Alâm, v. 38), in the beginning of the 17th century, perishing by a ship-wreck ('Sidilî-i 'Othmani). 

KEMANKES (i.e. 'Acherger') is Ali Pascha, an Ottoman Grand Vizier. He was born in the Anatolian district of Hamid-eî [q.v.], came early to Stambul, where he was brought up in the imperial palace. In 1600 (1600/1601) he was appointed governor of Diyar-bakr and soon afterwards of Baghdad. Next year he was given the rank of third vizier of the dome (kübbe uwarî). In Dhu 'l-Ka'da, 1032, he was given the imperial seal in place of the dismissed Grand Vizier Mere 'Usain Pasha, mainly through the efforts of the Shaikh i 'Al-Islâm Yahya Efendi, but also as a reward for his readiness in assisting in deposing the incapable and imbecile Sultan Mustafa I. Kemã negociates 'Ali Pasha, weak, timid and common in character, began by getting rid of his enemies and rivals by throwing the viziers GürAli Mehmud Pascha and Khaîr Pascha into prison and dismissing the Mufti Yahya. His greed and avarice prompted him to the most contemptible embezzlements and frauds on the Treasury; he had coins minted with a slight proportion (barely one-fifth) of silver, put the pay of the Janissaries into his own pocket and in other ways let the state go to ruin. Within six months he had made a huge fortune by depreciating the currency and selling offices. Sir Thomas Roe who describes the Grand Vizier at his accession to office in a despatch of August 23, 1623, as "a man quietly honest, but of untried and therefore suspected ability, for so great a charge" (cf. The Negotiations of Sir Th. Roe in his Embassy to the Ottoman Porte, from the year 1621 to 1623, London 1740, p. 173) talks on April 3, 1624, of "his owne sordid covetousness, who in six moneths had heaped up infinite treasure, by portsale of all justice and offices, which hath weighed him to the ground" (op. cit., p. 230) and a Venetian report of August, 1624, puts his wealth at a "somma di 700,000 scudi in contanti, molto opportuna" (cf. J. v. Hammer, G. O. R., v. 21).

The terrible state to which the empire was reduced (rebellions in Asia Minor and Egypt, the threat from Persia, the fall of Bagdad on November 28, 1623, concealed from the Sultan, Stambul without food, the currency depreciated, the treasury exhausted, the Janissaries out of hand) aroused to the highest pitch the wrath of the youthful Murad IV against the Grand Vizier responsible. Kemâ negociates 'Ali Pasha was summoned to the palace on Dju'nadât II 14, 1623 (March 24, 1624), and summarily beheaded. His body was buried in the forecourt of the mosque of 'Atik 'Ali Pasha (cf. Hâdidî al-Dowâmî, i. 150; J. von Hammer, G. O. R., ix. 75, Nû. 320). His successor was Cerek Mehmud Pasha, who succeeded 'Ali Pasha, was married to a daughter of the celebrated Kâfi-asker and Shaikh al-Islâm, Bostân-zade Mehmud Efendi.

Bibliography: 'Othmanî-zade Ahmad Tâbi, Hâdidî al-Wuza'ir, Stambul 1271, p. 72; Hâdidî al-Dowâmî, i. 150 sq. (with short sketch of his career); J. v. Hammer, G. O. R., and J. W. Zinkeisen, G. O. R., under Kemâ negociates Ali Pascha; Na'imî, Târîkî, Stambul 1280, ii. 294 sq.; Hâdidî Khalifa, Fedâhîk, ii. 52 (execution); 'Sidilli-i 'Othmani, iii. 510. (Franz Babinger)

KÉNÄ, a town in Upper Egypt, on the east bank of the Nile (23,357 inhabitants in 1917 against 17,485 in 1875, 15,402 in 1884 or 27,500 in 1897). It is the capital of the province (mu/dirîs) of the same name which is divided into seven districts (muvazzâa), namely: 1. Dîshnî, 2. Isnî, 3. Kên, 4. Kûsâr, 5. Kûs, 6. Luzurî, 7. Nadjî Hamadî. In 1897 the population of the province was 711,457 of whom 120,330 are in the province of Kêna. — The region produces cotton and cereals, in the town, cloth and sweet-stuffs are manufactured. But Kêna is especially noted for its porous pottery; the jars (kûlê) which are made there are called
Kenān Pasha, also called Şafi K. Pasha, an Ottoman Grand Admiral. He was a Russian (I Circassian) by birth and came as a slave into the service of Bâkîreddî Ahmed Pasha, Ottoman governor of Egypt. On the latter's execution he was taken by Sultan Murad IV into the Serai and educated there. He was promoted to Agha of the stirrup-holders (Ribâb-â-dâr aghâşis) (Chronicle of Weilhiji, fol. 91b of the Vienna MS.), became a favourite of Sultan Ibrahim after his accession (Feb., 1649) and married his daughter 'Atike Sulâne. He was at the same time appointed third vizier but banished soon after Ibrahim's death (Aug., 1648) to Crete. In Sept., 1652, he returned to Istanbul and was appointed to the charge of the defences of the Dardanelles. On Sept. 9, 1653, he was given the governorship of Ofen, but deprived of it on Sept. 22, 1655, and on Feb. 9, 1656, appointed governor of Silistria. On May 3 of the same year he was appointed Grand Admiral (Kapudân Pasha, q.v.). On June 26, 1656, while in command of the Ottoman fleet sent out against the Venetians, he suffered a severe defeat in the Dardanelles, the greatest naval reverse inflicted on Turkey since the battle of Lepanto (cf. J. v.Hammer, G. O. R., v. 649 sqq.). The whole weight of the Sultan's wrath fell upon Kenān Pasha who was immediately thrown into prison. He was finally released on the intercession of his Russian countrywoman, the Sultan's mother (Kösem Wallide; q.v.) but was dismissed from the office of Grand Admiral almost immediately, on July 18, 1656. Two years later, on June 23, 1658, he was appointed Kâmi-mâşîm [q.v.] but the very next month, on July 16, 1658, dismissed again and sent to Brusa as commander of the garrison (Müfäţez) (cf. J. v. Hammer, G. O. R., vi. 37; Naţâni, Târîх, first ed., ii. 660). He set out from here by arrangement with the Anatolian rebel 'Abâsa Hasan with whom

Honoured during his life for his reputation for sanctity and asceticism he has become one of the principal saints of Egypt along with Ahmad Badawi, İbrahim Dâsîki and Abu 'l-Hâjîdîlî Aş- surî. At one time a pious formula used to be handed down which if recited beside the tomb hastened the realization of a desire or brought about cures. According to some travellers, the pilgrims who came to Kenâ made circuit (tawâfî) of the tomb of 'Abd al-Rahîm similar to those made by the pilgrims at the Ka'ba (Adfuwî, Tahtî Sâlîh, Nî. 29; Goldziher, Nih. Studien, ii. 315; K. R. K., ii. 284; Gaudeffroy-Demombynes, Le pèlerinage à la Mekke, p. 224). There were descendants of 'Abd al-Rahîm living in Egypt for two centuries; they were particularly jurists and professors (Adfuwî, Nos. 29, 117, 129, 308, 402, 405, 476, 553; al- Maṣṭîrî, Aḥšâfî, ii. 423).

(G. Wiet)
he closely allied himself, only to share his fate, treacherous assassination, on Febr. 17, 1659, in Aleppo (cf. Naṣrūn, Tārizī, ii. 685). His head was brought to the Diwan in Stamfl on March 9, 1659.

If this is the Kenān Pasha mentioned by Ewliyā Čelebi, Sūhāt-nāma, iii. 396 (and he certainly never was governor of Oezakov any more than was Kōdja Kenān Pasha [d. 1652 = 1651/52] who is also often confused with the Grand Admiral e.g. in the Sīǧīfī’s ʻOtbūna, iv. 81), he was also an author and composed a Şahāt-nāma in honour of Şāh Șāhī Pīā (q. v.). His own warlike exploits, especially his military operations in the years 1036–1038 (1626–1628), were celebrated in a rhymed Pāsha-nāma by the poet and judge ʻUtlīn ʻIbrāhīm Efendi (of Kalkandelen) of which there is a copy in the Brit. Mus. (Sloan MS. 3584); cf. Ch. Rieu, Catalogue of the Turk. MSS., p. 191 sqq., with detailed summary of contents. The possibility that it celebrates the above mentioned Kōdja Kenān Pasha who had a very similar career to his name-sake and contemporary (both were, for example, governors of Ofen) has always to be remembered. The biographical data regarding Şāhī Kenān Pasha are much confused, as the article on p. 65 sq. in Rāmūs Pāsha’s-tāde Mahmīd, Adhīrāt-i Kapsūndādām-Dürsî (Sīla 1285) and Sāmī Bey Frasherī, Kāmān-āl-ʻĀlm, p. 3990, who follows it, shows. According to this authority, Kenān Pasha was buried beside the school not far from Kūr Ҫeşme.

(Franz Babinger)

KENEZ. [See knez].

ALKERČ, a fortress east of the Dead Sea in the ancient Moab. The name goes back to the Aramaic karḵāt, “town”, which the Targum gives for yir in the Moabite place-names Kīr MōṬh (Is., xi. 1) and Kīr Nāzīr (Horšt; Is., xvi. 7, 11, Jer., xlviii. 31, 36). It is found as karxwāna in Ptolemy (xv. 1.4) on the mosaic map of Ma’dāba, in Stephanus Byzantinus, etc. Its situation on a steeply sloping spur only connected by an (artificially deepened) saddleback with the main ridge makes al-Kerak an unusually strong fortress. It is remarkable that it is not mentioned in connection with the Muslim conquest of the East Jordan country or in the following centuries; only with the Crusading period, after it had been fortified by King Fulco’s former cupbearer, Payan, does it begin to play a part, and that a prominent one. The Christians of that time, who were not well read in geography, sought the ancient Petra here and called it Petra deserti. As it commanded the pilgrim road from Damascus and all traffic between Syria and Egypt, it caused the Muslims much trouble and was therefore repeatedly but vainly besieged from 656 (1170) onwards by Na’dīn and Sālāḥ al-Dīn until finally it was so starved out (stambûl, 1188) to Sālāḥ al-Dīn’s brother al-Malik ʿAlī (q. v., to whom it was allotted after Sālāḥ al-Dīn’s death. In the years that followed it belonged to various Ayyūbids and even after the rule of most kings of this family was over, al-Mughīth ʿUmar still held out in al-Kerāk until Baibars captured it by treachery and put him to death (661 = 1263).

Behind the strong walls of the fortress the Mam-lūk Sultan ʿAlāʾ found shelter in 708 (1309) when he escaped from Cairo to found a real power. At this time al-Kerāk was capital of one of the mam-lūkāt into which Syria and Palestine were divided; its territory lay chiefly to the south of it. How powerful the fortress, the majority of whose inhabitants were still Christian, then was, is seen from the descriptions by al-Dimāshqī, Yāḥūt, al-ʿUmarī and Kāhil al-Zāhīrī. Under Turkish rule it lost its importance until quite modern times when the Ottoman government put a strong garri-son into it and made al-Kerāk capital of a separate administrative district. The walls date mainly from the middle ages, while the lower strata go back to an older period.

KERBELA’. [See mešẖīd Ḥusain].

KERČ (KERTCH), a town and fortress on the Crimean peninsula; according to the census of 1897, it had 28,582 inhabitants. In ancient times it was the site of the Greek colony of Pantikapion, later called Bosporos as the capital of the Bosporan kingdom, from the end of the seventh century the residence of the Khazar governor (with the title Tudun) of the eastern part of the Crimea (the western with the capital Kheresones still belonged to the Byzantine empire). The name Kerč first appears in Muslim sources and is variously written; to the references to the texts (for the forms Karz and al-Karsh) in J. Marquart, Ost-europäische und ostasiatische Streifzüge, Leipzig 1903, p. 506, may be added Rukn al-Dīn Baibars in W. Tiesenhausen, Sborník Materialů, oto-nyh螅hķ in istorii Zobol Ordī, St. Petersburg 1884, p. 89, 5 (there Kardł). In Marquart, op. cit., the derivation of the name from the Greek Κόπρος or Καρύς, “as a monastery near Kerč is called”, proposed by Russian scholars (Wassilyevski, Bruun, Kunik, Harkavy), is also given. In old Russian sources the town is called Korčèv; for example in the well known inscription of the year 6576 (1068) quoted by Karamzin, Istorija gosudarstva Rossiskago, ii, note 120.

After the final destruction of the Khazar empire by the combined forces of the Byzantines and Russians about 1016 the eastern part of the Crimea with Kerč belonged to the Russian principality of Tmutarakan, the capital of which of the same name lay on the peninsula of Taman opposite
Kerč. About a century later the possession of the steppe territory passed to the Kipčak or Komons and that of the seaports to the Byzantines. As Yu. Kulakowski (Probyłayye Tauridiâ, Kiev 1912, p. 93), on the authority of Miklosich and Müller, Acta et diplom. gr. mediæ aevi, ii, 25, suggests, the town of *Taurida* mentioned in the treaty of 1169 between the Emperor Manuel Komnenos and the republic of Genoa is to be identified with the Russian Kerčev. From the xiii-th century the Crimean peninsula belonged to the Tatar kingdom of the Golden Horde; in the year 698 (Oct., 1298—Sept., 1299) Kerč with some other towns of the Crimea was destroyed by Nobigay and vengeance his grandson who was killed in Kafa (Tischenhausen, op. cit.). In the xv-th century Kerč came into the hands of the Ottoman Turks. After the conquest of Azov, Peter the Great, during his stay in Vienna in 1698, asked that Kerč should be ceded to Russia by the Turks in the peace negotiations then about to begin. But this demand was not granted. After the peace of Carlowicz concluded in the same year, Kerč remained in the hands of the Turks (V. J. von Hammer, Geschichte des Osmanischen Reiches, ii, 909; S. Solowjew, Istoriya Rossi, izd. tovar. Obščestvo Poltva, iii, 1171). On account of the danger threatening from the Russians, Sulṭān Muştafa II in 1702 had a new fortress built not far from Kerč (now Veni-Kale) (v. Hammer, op. cit., iv. 47). In 1771 Kerč and Veni-Kale were occupied by the Russians without resistance; Abaza Pagha, who was sent to defend Veni-Kale, did not once dare to expose his troops and returned to Sinope (op. cit., iv. 622; Solowjew, op. cit., vi. 738). The cession of Kerč demanded by the Russians during the peace negotiations in Bukharest (1773) was steadily refused by the Turks (v. Hammer, op. cit., iv. 638) but had, however, to be granted after the treaty of Kucuk Kainardje (1774). Henceforth Kerč was a Russian fortress of the second class; during the Crimean war it was occupied by the Allies in May, 1855.

The town, which is world-renowned for its monuments of the Greek, Roman and early Christian periods, had no longer the same importance in the Muhammedián period and has therefore no Muslim buildings of importance.

(W. Barthold)

Keresun (ancient Kerasos, Cerasus), on the maps Kerassoudie, a town and harbour in Asia Minor, on the Black Sea. It is the chief town of a kaža of the vilayet and the sandjak of Trebizond, 70 miles west of this last town. The population is 8,440 (3,588 Muslims; 3,906 Greek orthodox and 946 Armenians). It is built at the end of a rocky cape. The botanist Tournecourt found still there the forest of cherry-trees which gave their name to the town, for it was from there that Lucullus imported them to Europe. This source of revenue is now replaced by the export of nuts (5,000,000 lbs. produced annually) and of beans (a million okes = 2,825,000 lbs. annually). There are ruins of the ancient walls, of a citadel and of a city-gate. The remains of an amphitheatre may be seen some distance off. The ruins of a mole to the north of the town could be cleared away at small expense and the area made into a harbour which would facilitate the export of the produce of the provinces of the interior. The town contains 11 mosques, 1 tekke, 9 Greek churches, 2 Armenian churches; it has also barracks and an arsenal. — The Keresos of Xenophon lay in the valley of the Keressin-dere: the present town is built on the site of the one founded by Pharmacis I, grandfather of Mythradates VII, King of Pontus, who called it Pharmacis after himself.

The kaža of Keresin includes 138 villages and 4 närìya’s; it has a temperate maritime climate; mountains of volcanic origin, covered with forests, cover about half the area of the district. The inhabitants are fishermen on the coast and miners in the interior (mines yielding argentiferous lead, iron, copper and antimony). The total population is 64,526 (5,704 Muslims and 11,884 Greek Orthodox).

Kerka, a river in Khûzistân whose sources lie to the east and south of Nihâwênd in 'Irâk 'Adjamî. The Çâshî-ê Kêşîm is regarded as the source proper and rises in the Kûh Çîhî Nabilîghan. The map shows a little stream called Sura Kênî here, which receives the Kar Sara from the east, then near Nihâwênd the Abî-i Kûlan from the east which rises in the Kûh-i Ferrtâz and next the Sirwîn Rûd from Dawlatâhâb. In this district the river is known as the Gamasîb, more accurately Gamasîb (corrupted to Garasîb).

The direction of the river, at first N. W., gradually changes to the west. Before it reaches Bisûtûn it is joined by the Shâdja Rûd reinforced by the Kangarshâh. It then turns to the south and is joined by the Kara Şu, the river of Kirmânshâhân and later by the Abî-i Karînd, which itself has a number of important tributaries. While the tributaries so far mentioned are all on the right side, on the left it has the Kasgân Rûd which has as its tributaries the Hadrian Rûd on the right and the Rûd Khorrâmâlûd with the Rûd Kûkîl on the left. Next come, also on the right, the Lalîm Rûd and the Abî-i Zâl. The direction of its course now changes from southern to westerly for a short stretch and then to south-west. On this latter stretch the river is called the Kerka (Kerka), a name which it temporarily exchanges between Lalîm Rûd and Abî-i Zâl for the name Abî-i Şâîmêre. This name preserves the name of the town Şîmârâ [q.v.] which lay west from the river and some distance from it. After the confluence with the Abî-i Zâl the river again turns southwards; as soon as the region of Pû-i pul is reached we have canals linking it with the Abî-i Diz and its tributaries, the Nahr Tabâl Khan and the Nahr Daghdari. The ruins of Susa lie on one of the eastern watercourses which is later called R. Sharw. The Kerka ends its course in the region south of Nahr Hâshîm, where it receives the water of the Shaṭṭ al-Dîjamuz. At an earlier period the river ran north-west from here to Hawizia (Huweza).

Among the roads which follow the course of the river from time to time, we may mention the great highway connecting Hamadîhân and Mesopotamia in the region of Bisûtûn, and also the road from Hülwan to Şaiman.

The ancient geographers called this river the Choaspes. The name Kerka is not found in the Arab geographers; according to Rawlinson, it first appears in a xivth century Persian text. It is, however, probably older. Ibn al-Thir mentions a
Kerkhā under the year 553 (1158). If the reference is to this river the name must go back to the sixth century. Ibn al-Athir, who usually avoids geographical details as much as possible, must have taken the name from an older contemporary source. Kerkhā must be Aramaic and mean "the [river] of Karkhā" i.e. Karkhā de Lēdān.

The river is certainly twice mentioned in the Arab geographers although not by name. According to Ibn al-Fahī, a particularly esteemed kind of black sealing-clay was obtained on its bank near Nihāwend. The "large river" near Būratūn mentioned by Ibn Rosteī must also be the Gamasiāb. The bridge between Šimāra and Tārīn, considered a marvel of architectural skill, may also correspond to the Pul-i Khurāw over the Kerkhā. The Kerkhā is usually called the "river of Sās", e.g. as early as Ibn Ḫordādhbih. The geographers have no reliable information regarding its sources; Ibn Ḫordādhbih says it rises in Dinawar and Ibn Wāḏīh at Hāmadān, which is true, at least for the tributaries of the Gamasībā, if we take these names to refer to provinces. The river, according to the Arab geographers, flows into the Dudjāil of Ahwāz. Mention is made of the fact that at high tide the river is about two mil broad at Sās. According to Ibn Wāḏīh, the river was called Hindwān. Probably the "river of Bassinā" or "Bassina" which drove 7 water-mills and raised a bowl-shot from the town of Bassinā, mentioned by al-Mukaddasi and Yākūt, is identical with the Kerkhā.

(K. G. B.)

Kerkūk. See Kerkūk.

Kerkūk, a heap of stones, especially a sacred heap of stones. The cult of heaps of stones is extremely ancient and distributed all over the world. It seems to come not from an act of litholatry in the strict sense but from a rite of transference or expulsion of evil; the individual, picking up a stone, causes the evil of whatever kind that afflicts him to pass into it — as the case may be, fatigue, physical or moral suffering, sin, the dangerous power that attaches itself to a man in certain sacred neighbourhoods, or all these things together — and gets rid of it by throwing it or depositing it with the stone on a place suitable for absorbing it; the accumulation of these expiatory pebbles forms the sacred piles of stones which rise all along the roads, at difficult passes and at the entrances to sanctuaries. Alongside of these, the throwing or placing of a pebble or the building of a little pyramid of stone often becomes one of the obligatory rites of the pilgrimage and the rite losing its primitive character has been sometimes taken for a true offering-rite (cf. R. Dussaud’s view, La Matérialisation de la prière en Orient, in the Bull. et Mém. de la Soc. d’Anthr. de Paris, 1906, p. 213—220). The kerkūr are often built at the place where a man has been killed and buried; this has been explained from the desire to bury more deeply a dead man whose spirit might be tempted to come out and avenge itself or, less plausibly, as a kind of homage to the dead; but this casting of stones can also be explained rather as a rite for the expulsion of evil (a dangerous place, the infection of death, proximity of disturbing magical forces). It appears therefore that we always find rites of purification in the origin of the kerkūr.

Pre-Islamic Arabia knew the rite of casting stones and sacred heaps of stones. The sites of the Ḫadīḏi have preserved evidence of this. It may be asked if there is not a rite of this kind in the origin of the lappations at Minā (for other explanations see the art. Ḫadīḏ, ii. 201) and in any case, as G. Demombynes (Le Pélérinage à la Mekké, Ch. i.) has recently shown, the raised
stones or raqjam which stand at the mawṣūḥā marking the ūrum of Mecca are exactly comparable to the kerkûr which are found from Central Asia to North Africa along the roads at points where one begins to approach the great sanctuaries; there are also examples of this practice to be found equally in Christian countries.

Islam found the cult of piles of stones in all or almost all the lands that it conquered and although orthodox lares of the gods were sometimes too numerous to accommodate itself, as to so many other popular practices, which owed their origin to paganism in the remote past. The kerkûr are especially numerous in certain regions, Syria for example, but nowhere has their cult been so developed and is so vigorous as in North Africa, especially in the south of Morocco, where it has been especially studied by E. Douillé. There, one may say, there is not a pass, or ravine or cross-roads which has not its little pyramids of stones or its great kerkûr to which every passer-by adds his pebble, not a rustic sanctuary but has its sacred piles of stones.

Sometimes the kerkûr itself, as in other cases a spring, a track or a rock, has given rise to a sanctuary which has become islamised in a marabout fashion. It is also very common to find under the aegis of a saint several of these cults combined, strange sanctuaries which perpetuate the ancient rites of paganism, still vigorous after twelve centuries of Islam.

Bibliography: The bibliography of the subject is very extensive. What is essential from the general point of view is given in Frazer, Golden Bough, third ed., part vi, The Scape-goose, p. 8–36, where also are given a certain number of references to Muslim countries; from the Muslim standpoint in Douillé, Marrakech, Paris 1905, p. 58–103; and, Magie et religion dans l'Afrique du Nord, Algiers 1908, ch. x. Since the publication of this last work, E. Westmarcht, The Moorish Conception of Holiness (Baraka), Helsingors 1916, p. 26 sqq. (on Morocco). (Henri Basset)

KERMÁNSHÁH. [Kirmānshāh.]

KERMES. [See Kermei.]

KEMIYAN. [See Kermiyan.]

KERRÍ, a village and district on the right bank of the Nile, fifty miles north of Khartum. In the xvith century the governorship of the surrounding territory was conferred by the Fungi ruler, Úmára Dunkas, on Abd Allâh Djamâka (4. 1554–1562) of the Arab tribe of Raffâa. His descendants, the Abdallâb, maintained their position as a semi-independent dynasty with the title of Mândjî or Mângâluk until the Egyptian conquest, but transferred their seat from Kérrî to Halfayat al-Mulâk after the rise of Shendi in the latter part of the xvith century.

KERIS. [See Kerri.]

KETÂMA (or Kótma), one of the great Berber families; when Islam was introduced into North Africa, they occupied all the northern part of the modern department of Constantine, between the Aurâs [q. v.] and the sea, that is the region containing the towns of Íkádn, Sefti, Bâghâya, Ngaua (Nikâwus), Tiguikt (Tikist), Mila, Constantine, Skikda (Philippeville), al-Koll (Cullo), Djdjelî [q. v.], Bellezma, and the part of Kalyûla in the department of Algiers, i.e. the region between Wed Sahel and the Seban. One legend flattering the national pride makes them descended from the Hîmaryates brought there by Iriqos. Kôtâm, the eponymous ancestor of their race, was said to be the son of Bernes. He had two sons, Ghræsen and Isâlû, from whom are descended all the tribes of the Ketâmâ. They do not seem to have played a part in the civil and religious wars which desolated North Africa from the time of Ûkba to the days of the Aglabîds; we do not find them among the Khâridjîs. When Ûbâyîd Allâh gave himself out to be the Mahdi, his emissaries made some Ketâmî pilgrims in Arabia and converted them to Isámílî doctrines. The principal convert was Mûsâ, chief of the Sâkîn, a branch of the Djmila whose name survives in the town of this name. The missionary (da'î) Abû 'abd Allâh al-Shîrî [q. v.] settled in Íkádn and succeeded in maintaining his position there in spite of the efforts of the Aglabids. From there he was able to extend his influence to the Mahdi who was a prisoner at Sîdjîmâsa. The empire of the Fâtimids was then founded with the help of the Ketâmî. It was they who furnished its main strength and supplied the means of conquering Egypt. But these continual efforts exhausted them. Those who remained in the Magrib after the exodus of al-Mu'izz were forced to submit to local rulers, as Ibn Khâldûn tells us.

In our day the principal representatives of the Ketâmî are the Zawâs of the Djurdjura and the population around Djdjelî and in Little Kabylia. We do not know at what date Ismâîlî doctrines disappeared from among them but long afterwards their attachment to this teaching was regarded as a subject of obloquy and for this reason the powerful tribe of Sedzikish of Ketâmî origin renounced all connection with this family. At the present day all the Berbers of this region are Sunnis.

KETKHÛDA (v. kethû "house", khudû "master, lord"), originally meant the master of the house or head of a family; the name came to be given in Persia in the villages to the headman or bâllîf and in the towns to the "dixenier de quartier" (Ghârîne, Voyages, 1811, iv. 77) or "district tithe-man"; a kind of police officer whose duty it was to inspect his district and who was responsible to the kâltarî [q. v.]. The administrative reforms recently introduced into Persia have led to making the ketkhûda the representative of public authority (mayor) in the karya (village), the smallest territorial division. Unfortunately, these officials, whose duties were formerly confined to the levying of dues, are powerless in face of the great landed proprietors (R.M.M., June 1914, xxvii. 194) whose stewards they are and who appoint them; there are, however, some villages where this agent is appointed by the governor or even elected by the inhabitants.

The word has passed into Ottoman Turkish where it has been corrupted to kekâya, kâya and means the "steward of a house". Ernîf kâya-
is the chief or syndic of a workman's guild. The kliya kadin is the first lady of the palace, the housekeeper who has charge of the domestic arrangements and the servants. The kapu kliya is the representative, the agent of the governors of provinces at the Ottoman Porte. The name develet kliya-i used to be given to an official whose function corresponded to the minister for home affairs in modern constitutions; ől Kliya-i was the inspector of the Janissaries, lieutenant of the Agha and his chief of staff, who could only be dismissed with the consent of the whole odjik; he himself had an agent with the Agha who had to transmit the chief's orders to the commanders of fortresses and was called kliya-yeri, "the inspector's lieutenant".

KHA', the seventh letter of the Arabic alphabet, representing the harshest of the gutturals, with the numerical value 600. It belongs to the sounds peculiar to the Arabic alphabet (in which it is distinguished from ţa by a diacritical point), so far as the Hebrew and Aramaic scripts do not distinguish it from ġa. In Ethiopic, on the other hand, Kharm in contra-distinction to ḫawt is denoted by a sign of its own; it is, however, to be observed that in the MSS. the two signs are often interchanged and that in the modern languages of Abyssinia there is little or no difference in the pronunciation of the gutturals. In Minean and Sabean ƙa is denoted by a sign which slightly deviates from ġa. In the Assyrian script the sound corresponding to ġa is usually distinguished from the softer gutturals.

KHBAR (A.), plural akbhar, akhbar, report, news. The word is not used in any special context in the Kur'an. In the Hadith it occurs among other passages in the tradition which describes how the djinn by eavesdropping obtain information from heaven (khabar min al-somā) and how they are pelted with fiery meteors to prevent them from doing so (al-Bukhari, Adhān, bab 105; Muslim, Sunat, trad. 149); al-Tirmidhi, Tafsir, Sūra lxii., trad. 1).

In his collection al-Bukhari has a chapter entitled Akbār al-Ḍahd, which, as the firdauma indicates, deals with the validity of traditions regarding adhān, saūd, fasting, the law of inheritance, and judicial procedure, which are only given on the authority of one man.

Al-Ghazālī gives the name akhbar to the traditions that go back to Muhammad. He distinguishes the sayings of the Companions by the term ṣāḥib (see his Iyâ', passim). On such and similar technical distinctions see Lane's Lexicon s.v. and Dict. of Techin. Terms, ed. Spranger and Nasau Lees, s.v. Akhbar is further often found in the titles of historical works; see Brockelmann, Gesch. d. arab. Litt., Index ii.

Ṣāḥib al-Khabar was the title of one of a sułtan's officers in provincial capitals whose duty it was to report to his master all new happenings, the arrival of strangers etc. The postmaster was often given this office; see Dozy, Suppl., s.v., and the literature there given. — As a technical term in grammar khabar is predicate.

(A. J. WENSCINK)  

Khabn, a term in prosody, indicating the suppression of the second letter when quiescent of a foot beginning with a sabah khaṣṣ (see the art. 'Arūn). It affects: 1st. ʕāliʿun (≥ ʕāliʿun), 2nd. mutasfiʿun and muntasfiʿun (muntasfiʿun = maʕāliʿun), 3rd. maʕāliʿun (maʕāliʿun = ʕāliʿun), 4th. ʕāliʿun (ʕāliʿun). It is found in the metres mawdūd, haft, raṣīf, ramaṭ, sīr, musambaṭh, khaṣṣ, mukhtād, rubūṭṭ, and musamāṭh and musamāṭh and musamāṭh and musamāṭh and musamāṭh.

Bibliography: cf. the article 'Arūn.  

(MOH. BEN CHENER)  

Khabūr, the name of two rivers. I. The larger Khabūr is one of the chief affluents of the Euphrates, which it joins at Karkisya [q.v.]. In classical literature the name is written in various ways: 'Arba war, Ḥasy anâna, 'Arba war, 'Aṣba war, 'Aṣba war, 'Aṣba war, Bāṣara, Chaboras. Xenophon calls it 'Arbasia.

It takes its origin in the Northern Mesopotamian mountains (the Iza M. and Masius M. of the classical authors), flows through the plain of Mesopotamia, passes between Djabal 'Abd al-'Azîz and the Singâr mountains, where it takes a southern direction which it changes in the last part of its course into a south-western one.

Its springs, as well as those of its numerous affluents, are chiefly connected with three important towns, Ra's al-'A'in (Reshâàna of the Syrians) in the Northwest, Mardin in the North and Nasîbîn in the Northeast. The springs at Ra's al-'A'in are said to be three hundred in number; they were shut off by iron grills, in order to prevent people from being drowned in them.

Downstream from Ra's al-'A'in the Khabūr is joined by the river of Mârîn, which in the Arabic geographers is called Sâvur; on Sachau's map it bears the name of Naher Zarg. Just before passing between Djabal 'Abd al-'Azîz and the Singâr mountains it is joined by the river of Nasîbîn, which in classical literature is called Mygdonius; the Arab geographers apparently mean this river when speaking of the Hirmûs; on Sachau's map it is called Djaâchîja. The course and the nomenclature of this and other affluents are still uncertain.

The Arab geographers mention several more or less important places situated on the Khabūr between Djabal 'Abd al-'Azîz (classical Gauzânis) and Karkisya, such as Şâhî, Taninsir (upper and lower T.), Šâbân (also on Sachau's map), 'Arbân or 'Arbûtân (also on Sachau's map), Zâkair, al Shamsâniyya (probably Sachau's Schenismak), Makisin ("the custom-house"), al-Gudair ("the pool"), and Şwa'îr (Sachau's es-Sawâr). At Makisin there was a bridge of boats. "Much cotton was grown here and by it lay the small lake of deep blue water called al-Munkhârik, said to be unfathomable" (Le Strange).

The whole region through which the Khabūr flows, chiefly in its lower course, was renowned for its fertility. Its trees are mentioned in Arabic poetry, its fruits were exported to the towns of the Irâk. But al-Idris already speaks of the plundering raids of the Beduins which cast a shadow over these natural riches. Sachau calls the tribes residing in the plain near Shiddâdiya Djabûr. When he travelled there (1899), the large fertile
valley was devoid of towns, villages and human beings in general.

II. The Lesser Khabur, one of the affluents of the Tigris which takes its rise on the mountains of Southern Armenia, south of Lake Van and west of Lake Urmia. It passes between the mountain ranges which are now called Djibah Harbāl (North) and Zakhā Dagh (South). The latter mountains derive their name from the town of Zakhā (classical Azochis). The Khabur joins the Tigris between Maghāra and Maza. The Arab geographers often call it Khabur al-Hasaniya, after the town of this name. Here the river was spanned by a magnificent stone bridge which was looked upon as a miraculous piece of masonry. Al-Hasanía probably survives in the hamlet of Ḥasan Agha.

KHADHILAN (Khadhi'a, A.), women actionists from the root ḥ-la-l 'to leave in the lurch', a technical term in Muslimaean theology, applied exclusively to Allah when He withdraws His grace or help from man. The disputes regarding it first appear in connection with the quarrel over ḫadār (q.v.). A starting point is found in Sūra iii. 154: "but if He abandon you to yourselves (yakhibkulam), who will help you after Him? Let the faithful therefore trust in God". On this al-Rāzī observes: "The Companions deduce from this verse that belief is exclusively a result of Allah's help (cf. John, vi. 65), while unbelief is a result of His khadhīlan. This is obvious as the verse points out that the matter is entirely in God's hands".

A more detailed exposition is given by Ibn Hazm: *Right guidance and assistance consist in God's preparing (tairur) the believer for the good for which He has created him; while khadhīlan consists in God preparing the fašíh for the evil for which He has created him. Linguistic usage, the Kurfān, the force of logic, and the attitude of the fašíhs and those in the past who handed down traditions and of the companions and successors as well as of those who came after them and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligence, namely such as belong to the followers of slanderers and outcasts, like al-Nazā'im, Thumāna, al-'Alīf and al-Dhāhib, are all unanimous*. Then follows this reasoning: Allah has given man two forces, hostile and opposed to one another, tawmiz (power of discrimination) and kawāl (passion, desire). When Allah protects the soul, tawmiz prevails by His help and power. But when He leaves the soul to itself (khadhīlan), He strengthens the kawāl with a strength which amounts to leading astray (ifilāt).

Khadhilān is therefore, according to Ibn Hazm, the opposite of kūdā and tawmīk and the conception approaches that of ifilāt. The Muʿtazilis (as already indicated by Ibn Hazm's words) see it in contradistinction to Allah's justness: according to them, Allah does not urge a man to evil. In their terminology khadhilān therefore means the refusal of divine grace (manṣ al-latīf), while, according to the Ashāris, khadhilān is "the creation of the ability to disobey".

KHADIDJA, Muhammad's first wife, was a daughter of Khwawīd of the Kuraish family of 'Abd al-Uzza. The authorities are unanimous in saying that when she made Muhammad's acquaintance and took him into her service she was a well-to-do merchant's widow who worked on business independently. She had been twice married previously and had children of both marriages. The one husband was a Makhrūmī, the other a Tamlīn, Abū Hāla, whose real name is variously given; but this Abū Hāla is also mentioned by others among the followers of Muhammad, which — if both stories are true — would make Khadidja a divorced woman. When she discovered the brilliant qualities of her young employee — the story of this is adorned with all sorts of legendary features — she proposed marriage to him according to the generally accepted story, her father was dead by this time, according to another, still alive and opposed to the marriage, so that she only obtained his consent after making him intoxicated — a favourite motif in fiction (cf. the art. DIJHIMA). Most authorities make Muhammad twenty-five at this time and Khadidja forty, which, in view of the fact that Arab women age early and that she bore him at least five children (see the art. MUHAMMAD), is not even probable, although in later times extraordinary capabilities in this direction were ascribed to the Kuraish women (cf. al-Dhāhib, Tria Opera, ed. van Vloten, p. 78). Otherwise we do not need to doubt the essential accuracy of the tradition, for the alteration in Muhammad's circumstances has witness borne to it in the Kurʾān (xxiii. 6 sq.) and the fact that in spite of his later so marked sensuality he was content with one wife so long as Khadidja lived is best explained by her superior social position which she perhaps used to insist on this condition. Her wealth must have been a great help to him during his struggle and her death (which is said to have taken place three years before the Hijra) after she had probably suffered
considerable losses through the hostility of the great merchants, contributed to make his position still less endurable. But her personality seems to have been of even greater weight with her husband; in any case tradition draws a very attractive picture of the moral support which she afforded him during the excitement and agitation of the first investigation. That Wâliya b. Nawfal [q. v.] was her cousin must have helped to make her sympathetic to Muhammad's aims.

(Ch. BuHl)

KHADIM (A.), servant; in Turkish often used with the secondary meaning of "eunuch." The word is applied to male and female, freemen or slaves alike; as to the latter see the art. ABD. The collective is Khadimun and the plural Khudidîm. Khâdim al-Haramain al-ghāfîfâin (servant of the two sacred areas i.e. Mecca and Medina) was one of the titles of the Sultan of Turkey (see Barthold, Isl. vi. 1916, p. 379, sqq.).

There have always been free servants alongside of slaves in ʿIslâm. Anas b. Mâlik [q. v.] entered Muhammad's service as a youth (al-Bukhârî, Diwâh, bâb 74 etc.) and he records it to his master's credit that the latter had never said a harsh word to him nor even asked him for an explanation of his doings (al-Bukhârî, Waṣâyâ, bâb 25). Servants were used on journeys especially, and put up the tents, etc. These servants are called farrâq (lit. spreaders of the carpets), a name which is, however, given to servants who look after the beds and the house generally (Lane, The Thousand and One Nights, London 1859, ii. 202, note 16).

In Egypt in Lane's time there was an organisation of servants. They were under special shaikhs to whom anyone who required a servant had to apply: these shaikhs were responsible for any dishonesty or breach of trust by their people (Lane, Manners and Customs, London 1899, p. 139). There were also free female servants who performed the lowest household duties (eb. cit., p. 147, 197) for a very small wage (p. 168). Some of the male servants used to shave their beards (p. 572).

In Turkish houses of the upper classes these people, who are usually addressed by their name followed by Agha, work as cooks, gardeners, janitors, etc., and they have to avoid the women's apartments in the house with which they communicate by the swivel-box (dolâh). If they are married they do not live in their master's house.

The women servants in the konaks live in the women's apartments and have very little personal freedom. They sometimes belong to impoverished Turkish families or are the children of former servants and slaves. They are called kâfîs (from kâfîf) or kâlıî (from kâlıkh) and the men mîšâk, dâfiyâh, hizmekâr (khâidemâkîr). The servant girls (khîmetâfî = khâidemêfî) are usually Greeks or Armenians.

Uniformed officials in the imperial and official services were divided into various corporations (chamberlains, janitors, musicians) and were included under the general name kadâma = khdâma (information supplied by Dr. Kramers). On such corporations see also v. Hammer, Constantinopel und der Bosporus, Pest 1822, i, 395 sqq.

In North Africa, especially in Algeria, conditions have become considerably influenced by European customs. In place of khâdim, ṣâhab, plur. ẓâhîb, is commonly used; this honourable designation is applied to the clients of prominent Moroccan families who are employed in various duties from the lowest to the most confidential missions. They usually receive no regular salary but live on the bounty of their master. They accompany him on the road, look after his mount, and order illumination for trips at night, etc. If their master is a great kâ'id or the head of a brotherhood he appoints one of his ṣâhîb to accompany travellers who are passing through the areas over which his authority extends. This is a sign that they are under his protection.

In the zâwiya servants of this type form a guild to which is entrusted the care of pilgrims and of the buildings; cf. Depont and Coppolani, Les confréries religieuses musulmanes, Algiers 1897; Doutté, l'Islam algérien en l'an 1900 (information supplied by Prof. H. Basset).

The Ḥâdhîth has handed down various sayings of Muḥammad which endeavour to secure good treatment for servants: in this it is not always possible to distinguish whether the reference is to freemen or slaves. The khâdim is responsible for his master's possessions (al-Bukhârî, Waṣâyâ, bâb 9); on the other hand alms which he bestows out of his master's property bring him a heavenly reward (al-Bukhârî, Zakât, bâb 25). One should be ready to forgive one's servant (al-Tirmîdî, Bîrî, bâb 32); he should neither be beaten nor cursed (al-Tirmîdî, bâb 30, 31, 85); and the servant who has prepared a meal has a right to partake of it (al-Bukhârî, Aţîmâ, bâb 55; al-Tirmîdî, Aţîmâ, bâb 44, etc.)

A. J. WENSINCK

AL-KHAḌĪR (al-Khîdîr), the name of a popular figure, who plays a prominent part in legend and story. Al-Khâdir is properly an epithet ("the green man"); this was in time forgotten and this explains the secondary form Khîr (about "the green"), which in many places has displaced the primary form.

Legends and stories regarding al-khâdir are primarily associated with the Kûr'ānic story in Sûra xviii. 59–87, the outline of which is as follows: Mûsâ goes on a journey with his servant (faţâ), the goal of which is the Madjâmâ al-Bahrîn. But when they reach this place, they find that as a result of the influence of Satan they have forgotten the fish which they were taking with them. The fish had found its way into the water and had swum away. While looking for the fish the two travellers meet a servant of God, Mûsâ says that he will follow him if he will teach him the right path (raṣâhid) They come to an arrangement but the servant of God tells Mûsâ at the beginning that he will not understand his doings, that he must not ask for explanations and as a result will not be able to bear with him. They set out on the journey, however,
during which the servant of God does a number of apparently outrageous things, which causes Müsâ to lose patience so that he cannot refrain from asking for an explanation, whereupon the servant of God replies: "Did I not tell you that you would be lacking in patience with me?" He finally leaves Müsâ and on departing gives him the explanation of his actions, which had their good reasons.

This servant of God is called al-Khâdir by the majority of the commentators. Others, however, identify him with Müsâ’s servant (see below). Both interpretations have their roots in Oriental legends. The Qur’anic story may be traced back to three main sources: the Gilgamesh epic, the Alexander romance, and the Jewish legend of Elijah and Rabbi Joshua ben Levi. The first two, of course, again closely related to one another; at the same time it should be noted that the fish episode is lacking in the epic and is only found in the romance (cf. R. Hartmann in the Z. JA., xxiv., 307 sqq.).

The main features which the three sources have in common with the story in the Qur’an are the following:

The Gilgamesh epic. Overcome with melancholy at the death of his friend Enkidu, the hero Gilgamesh sets out on a series of travels to look for his ancestor Unnapishhitim (Khasisatira, Xisouthros) who lives at the mouth of the rivers and who has been given eternal life. Gilgamesh wants to ask him about the plant of life which will save man from the power of death.

The Alexander romance. The fish episode (with which we are here concerned) which shows Alexander on the search for the spring of life is found in greatest detail in Syriac literature, in the Lay of Alexander (cf. C. Hennius, Die syrische Alexanderlied, in the Z.D.M.G., lx. 169 sqq., lixe 188 sqq.). Alexander is accompanied by his cook Andreas (cf. the article Andreas). During the laborious journey through the land of darkness Andreas on one occasion was washing a salted fish in a spring; the contact with the water made the fish live again and it swam away. Andreas jumped in after it and thus gained immortality. When he told Alexander his adventure the latter at once realised that this was the well of life. All attempts to find it again failed: Alexander is denied the immortality which becomes the lot of the unfortunate cook, who does not know what to do with it.

The Jewish legend (printed in Jellinek, Bet ha-Midrasch, v. 133–135) tells how Rabbi Joshua ben Levi goes on a journey with Elijah under conditions laid down by Elijah, like those absent of the servant of God in the Qur’an. Like the latter, Elijah does a number of apparently outrageous things which affects Joshua as it did Müsâ. Zunz, Gesammelte Vorträge, X. 130 (not accessible to me) first pointed out the similarity of this story to the Qur’anic legend. A comparison of the main features of these three sources with Sura xviii. 59 sqq. suggests the following conclusions, questions and hypotheses.

The chief figure in the Qur’anic story is called Müsâ. Some commentators doubt his identity with the great prophet (see below). There is not, however, the slightest hint of another Müsâ anywhere in the Qur’an. On the other hand, we have no legends of Moses which make him, like Gilgamesh and Alexander, go on the great journey. We might suggest the following explanation of the difficulty. The figure of Joshua ben Levi, with which Muhammad first became acquainted through the Jews and which does not again appear in Muslim legend, was identified, as we shall see, with Joshua b. Nün. This identification may have resulted in a confusion of his master Elijah with Joshua b. Nün’s master Moses. Müsâ thus represents Gilgamesh and Alexander in the first part of the Qur’anic story and Elijah in the second.

The figure of the travelling-companion is not connected with the Gilgamesh epic where it is not found, but with the Alexander romance and the Jewish legend. It probably comes in the first place from the romance. This is suggested by the fact that the companion is called faša (here practically “servant”), a term that points to Alexander’s cook rather than to Rabbi Joshua; the fish episode, which also is only found in the Alexander romance, points in the same direction.

The Madjma’ al-Bahrain is given as the goal of the journey. The expression has no direct original either in the epic or the romance, although there are points of contact in both. Unnapishtim lives ina fi maratì, i.e. at the mouth of the rivers. It is not quite certain what this expression means, but it is probable that the place in the extreme west is meant where the sources of all running water are. This, however, still leaves the dala in the Qur’anic expression unexplained. This is still the case, if we attempt to trace it to the Alexander romance where (i.e. in the Syriac Alexander legend; see Budge, op. cit., p. 259) Alexander with his army crosses a strip of land between the eleven bright seas and the ocean. It is also possible that the expression goes back to none of these but to another story unknown to us, which perhaps never found its way into literature, in which there was mention of the meeting-place of two seas. According to western Semitic cosmology, this is the end of the world where the oceans of earth and heaven meet.

We can likewise only guess at the origin of the rock (verse 62). It also belongs to cosmology (see A. J. Wensinck, The Ocean in the Literature of the Western Semites, in the Verh. Ak. Amst., xix., No. 2, p. 26 sqq.). It is found neither in the epic nor in the romance, again an indication that the Qur’anic story borrowed from other sources also.

The servant of God at the Madjma’ recalls Unnapishtim-Khasisatra. He is called (verse 64) one to whom God’s mercy had been shown, to whom divine wisdom had been granted. This sounds almost like a translation of the name Khasisatra and the granting of divine favour is perhaps an echo of Unnapishtim’s immortality.

The test of patience to which he subjects the newcomer comes from the Jewish legend only; the servant of God in this respect thus represents Elijah.

II

The commentators, Hadith, and historians have collected a mass of statements around the Qur’anic story, additions which, like the story itself, came for the most part from the three sources already mentioned.

The first question discussed is whether the principal character is Müsâ b. Imrân or
Mūsā b. Mīshā (Manasseh) b. Yūsūf b. Ya'qūb, i.e. a descendant of the patriarch Jacob (al-Rāzī, Mafāתיح al-Qāhira, iv. 333 sq.); al-Zamakhshārī, Koshghāfī (on verse 59). Commentators are almost unanimous in favor of the former alternative and base their opinion on the following legend which is transmitted in several forms. When Mūsā, the famous prophet, was one day preaching to the children of Israel he was asked if there was any man wiser than he. When he replied in the negative, Allāh revealed to him that his pious servant al-Khaḍīr, was wiser than he. He thereupon decided to visit this wise man. The story comes from Jewish legend; it is found in a considerable number of Arabic sources (al-Bukhārī, ‘Ilm, báb 16, 19, 44; Anbiyā’, báb 27; Tafsīr, Sūra viii., báb 2–4; Muslim, Fadā’il, trad. 170–174; al-Tirmīzhī, Tafsīr, Sūra viii., báb 1; al-Ṭabarī, ed. de Goeje, l. 417; Tafsīr, xv., 165 sq.; Fakhri al-Dīn al-Rāzī, op. cit., iv. 333). The (salted) fish serves as a guide to the route; the place where it is lost or retrieved by contact with water is the spring of life where al-Khaḍīr lives (al-Ṭabarī, i. 417). A further indication of the spring of life is that it is marked by the rock, for it rises at its foot (al-Ṭabarī, Tafsīr, xv. 167; al-Bukhārī, Tafsīr, Sūra viii., báb 4). The rock is also located before the river of oil or the river of the wolf (al-Baidāwī and al-Zamakhshārī on Sūra viii. 61; al-Ṭabarī, Tafsīr, xv. 164). Some connection between a river of oil and the spring of life is in itself not impossible. According to many statements, oil is a feature of Paradise rivers. Then writing which could easily arise. Voellers considers the reverse probable; he thinks that “river of the wolf” is a translation of the name Loubā, which is not uncommon in classical literature as a river-name. If this hypothesis is correct, one might think of the Lukkos in Morocco or the Lyucus on the Syrian coast, two regions with which the idea of extreme west is associated, as we shall see directly.

The Madīma’ al-Baḥrān in explained in various ways. Some regard it as “the place where the Persian Ocean unites with the Roman Sea, to the east” (al-Baidāwī on Sūra viii. 59; al-Ṭabarī, Tafsīr, xv. 163). This points to the Isthmus of Suez and is an echo of the idea that the coast of Syria was the extreme west (see A. J. Wensinck, Bird and Tree as Cosmological Symbols in Western Asia, in the Verh. Ak. Amsterdam, 1921, p. 17 sqq.). Others say that it is the junction of the Roman Sea with the Ocean (Tafsīr, Tafsīr, al-Irīkīya; al-Ṭabarī, Tafsīr, xv. 163; al-Zamakhshārī on the passage). This view reflects a later cosmological standpoint which regarded the Straits of Gibraltar as the extreme west. A far-fetched explanation is that the union of the two seas means the meeting of Mūsā and al-Khaḍīr, the two seas of wisdom (e.g. al-Damrī, Hayāt al-Hayawan, i. 318).

When Mūsā first sees Khaḍīr he is wrapped up in his cloak, as the Kur‘ān says, “because he was sleeping”, says al-Ṭabarī (ed. de Goeje, i. 418). When he sees a bird drinking out of the sea he says to Mūsā: “Your wisdom is as insignificant compared with that of God as the amount the bird drinks is compared with the sea” (al-Ṭabarī, ed. de Goeje, i. 418; al-Bukhārī, Tafsīr, Sūra viii., báb 3; al-Rāzī, Mafāţiḥ al-Qāhira, iv. 333 sq.). Al-Khaḍīr lives on an island (al-Ṭabarī, ed. de Goeje, i. 422), or on a green carpet (jinṣa‘ī) in the heart of the sea (‘aṭa‘ habīd al-baḥr; al-Bukhārī, Tafsīr, Sūra xviii., báb 3).

The test of patience is embelished by the commentators with a wealth of detail. It would take up too much space to go into them here; cf. the commentaries on Sūra xviii. 59 sqq.; see the works on history and tradition mentioned in the Bibliography.

As may be expected from what we have said above, another branch of tradition lays particular emphasis on the connection between al-Khaḍīr and Alexander’s search for the spring of life. Friedländer, however, goes much too far when he says (Die Chaldäerlegende, p. 108 sq.) “that originally Chadhr had nothing at all to do with the puzzling servant in verse 64 — who belongs to quite a different cycle of stories — but with the servant of Moses (Alexander) who has charge of the fish in verse 59 sqq.”, in other words his search is identical with Alexander’s cook whom we know so well from Pseudokallisthenes and the Syriac homily”. For Khaḍīr is, as we have seen and will see further, connected with Umāpīstīm as well as with Alexander’s companion.

There is no translation of the Alexander romance in the Arabic literature known to us (cf. Weymann, see Bibliography). On the other hand, there are a number of, in part unedited, versions of the Alexander saga, which have been examined by Friedländer. It would take us too far to go into the differences between these versions with regard to our subject. These sources show their independence of the Kur‘ān not only by the fact that the Khaḍīr is the companion of Dhu ‘l-Karnain, but also by the complete absence of any reference to the fāṣ of the Kur‘ān. Al-Khaḍīr usually appears as the commander of Alexander’s vanguard on his march to the spring of life. In al-Sūrī’s version he is called the king’s vizier and has become the principal character, throwing the king himself into the background; in ‘Umāra he is Alexander’s cousin, conceived and born in similar circumstances to him and at the same time. The usual account of the journey to the spring of life makes Alexander and al-Khaḍīr go their ways separately; in some versions, the latter has the fish with him and discovers the miraculous well through the fish’s becoming alive when it touches the water; in other stories, on the other hand, there is no mention of the fish and al-Khaḍīr recognizes the spring by other signs; in others again he dives into it without knowing its virtues (e.g. al-Ṭabarī, i. 414). In one version in Niẓāmī, al-Khaḍīr does not go with Alexander but with Elijah to the spring, out of which both drink and both become immortal.

III

The descriptive character of the name al-Khaḍīr is so obvious from its meaning that tradition could not but give the hero’s real name, as well as his genealogy and dāte. We find him most frequently called Bāyazīb b. Malkān. In al-Mas‘ūdī (Marrāǧ, i. 114) the latter is called a brother of Kaḥṭān and thus given a place in the South Arabian genealogy. This makes it probable that Malkān is identical with Malkam (1 Chronicles, viii. 9), who is also included among the
South Arabian patriarchs. This genealogy is next traced back to Shem through Fālah (Phaleg) and ʿAbīr (Esar) (cf. al-Tabari, ed. de Goeje, i. 415; al-Maṣʿūdī, Murajjī, i. 92; al-Nawawi, on Muslim’s Sahih, v. 135). Is this Balyā (بالي) (perhaps not a corruption of Elia (إليا) which is identical with a Syriac form of the name Elijah. On the other hand, Elijah is also given in the Muslim form Ilyas al-Khadir’s proper name and also Elisha, Jeremiah (cf. God’s words in Igaba, p. 887). Khadrīn (al-Tabari, ed. de Goeje, i. 415; al-Diyārīkī, Tuʾrīk al-Khamis, i. 106, and Friedländer’s Chadirjergende, p. 333, under Chadirj). Ibn Ḥadjar also gives the following genealogies (Igaba, p. 883 sq.): (1) He is a son of Adam (weak imād); with this is connected the story (Igaba, p. 887 sq.); Abū Ḥātim al-Sulṭisānī, Kībūl al-Muwallamasin, p. 1) that al-Khadir took care of Adam’s body and finally buried it after the flood; (2) He is a son of Kāhl called Khadrīn; (3) He is al-Muʿammār (the Long-legged) b. Mālik b. Ṣubūr b. Nāṣr b. al-Azd; (4) He is Ibn ṣāmīl b. al-Nār b. al-Jābī b. Isḥāq; (5) He is the son of Pharao’s daughter; (6) He is a Persian, or his father was a Persian, his mother a Greek or vice versa; it is also said that he was born in a cave, fed there on the milk of wild beasts and finally entered the service of a king (al-Damiri, i. 318; Ibn Ḥadjar, p. 891 sq.); cf. also his meeting “on the market-place of the Bānū Isrāʾil” with the man who asks him for alms (Igaba, p. 894 sq.).

This does not, however, exhaust the traditions about his names and genealogies. We shall only quote here the following from Maracci, Pseudomonicus Serae xvi. 57: Alchedrus, quem fabulatatur Moslemi emundi fuisse, ac Phineum Eleazarí, filii Aaron; cujus anima per metempsychon emigravit primum in Elam, unde al Elia in S. Gregorium, quem propertes Mahometanis oamse summo honore prosequuntur. — The latter identification is probably due to a confusion with St. George, with whom al-Khadir has certain points of resemblance; cf. thereon Clermont-Ganneau in the Revue archéologique, vol. xxxii. sq., and Friedländer, op. cit., p. 275. Clermont-Ganneau further pointed out the relationship between the consonants ḥḏ-ḏ and the North Semitic group ḥḏ-ḏ. The name has also been taken as a corruption of Khaisāstara (Guyard in the R. H. R., i. 344 sq.) or connected with Ahasuerus, the wandering Jew (Lidzbarski in the Z. A., vii. 116).

Very varying dates are given for al-Khadir’s period. Sometimes he is called a contemporary of Abraham, who left Babel with him (al-Tabari, ed. de Goeje, i. 415); sometimes he is put in the period of Afrūdīn; he is a contemporary of Alexander and lived down to the time of Mūʾṣa (Ibn Ḥadjar, Igaba, p. 886); according to others, he was born in the period of Nāṣīḥā b. Amūṣ (i.e. Ismaʾil b. Amos) (al-Tabari, op. cit., p. 415 sq.). The divergence in these statements is partly connected with his immortality (see below).

More important are the explanations of the name given in the Oriental sources. He is said to have become green through divining into the spring of life and thus got his name (Ethiopic Alexander romance); cf. Friedländer, op. cit., p. 235 sq.). As already mentioned, he lives on an island (al-Damiri, op. cit., p. 317); he is also said to worship God on the islands (al-Nawawi, op. cit., p. 135; al-Iḫṣāṣī, p. 107). This may point to al-Khadir’s having originally been a marine being. The following circumstances point in the same direction: he is frequently called the patron of seafaring people (e.g. Tuʾrīk al-Khamis, i. 107); he is said to be appealed to on the Syrian coast by sailors in stormy weather. In India he has become a regular river-god under the name Khwāja Khīḍr [q.v.], who is represented sitting on a fish. Clermont-Ganneau and Friedländer sought the origin of the figure mainly in this direction, the latter on the assumption that the Greek Glaucus legend reached the Muslims through a Syriac intermediary (op. cit., p. 107 sqq.). But apart from the fact that we know nothing of any such intermediary, a connection between al-Khadir and Glaucus would only explain one aspect of the former; nor would it tell us anything about the origin of the figure, indeed one may doubt whether it is right to seek for the origin of a figure so complicated as al-Khadir, who has characteristics in common with Unāpsītham, with Alexander’s cook and other figures.

There are other things to be considered. In a number of Arabic explanations of the name, al-Khadir is conceived not as belonging to the sea but to the vegetable kingdom. “He sat on a white skin and it became green” (e.g. al-Nawawi on Muslim’s Sahih, v. 135; cf. al-Tabari, Tafṣīr, xv. 168). “The skin”, adds al-Nawawi, “is the earth.” Al-Diyārīkī (i. 106) is still more definite. “The skin is the earth when it puts forth shoots and becomes green after having been bare.” According to Umāra, al-Khadir is told at the spring of life: “Thou art Chadirj and where thy feet touch it, the earth will become green” (Friedländer, op. cit., p. 145). Wherever he stands or performs the salāt, it will become green (al-Nawawi, op. cit.; al-Rāzī, Maʿṣūfī al-Khālīq, iv. 336). These are statements (especially the last) which remind us of a Messianic passage in the Old Testament: “Behold the man whose name is the branch and he shall grow up out of his place” (Zachariah, vi. 12). Al-Khadir is really connected with two Messianic figures — with Elijah (cf. the art. Ilyās) and with Jesus; these three form with Idris [q. v.] the quartette of those who have not tasted death (Tuʾrīk al-Khamis, i. 107).

The variations in the character of al-Khadir result in different views regarding his nature. If he is a prophet (see Igaba, p. 882 sqq.) it remains doubtful whether he is to be included among the Apostles (al-Nawawi, op. cit., p. 135). He is, however, a real human, angelic, mundane and celestial (al-Tabari, ed. de Goeje, i. 444, 798). Popular piety as well as Sufi circles really regard him as a saint (wālī). According to one Sufi view, every age has its Khadir, in so far as the Nasib al-ašwilīyā for the time being is al-Khadir (Igaba, p. 891). As wālī, if three times appealed to, he protects men against theft, drowning, burning, kings and devils, snakes and scorpions (Tuʾrīk al-Khamis, i. 107; Igaba, p. 903). Sky and sea and all quarters of the earth obey his sway; he is God’s khalīfa on the sea and his wakīl on land; he can make himself invisible at will (Umāra in Friedländer, op. cit., p. 145). He flies through the air, meets Elijah on the dam of Alexander and makes the pilgrimage to Mecca with him every year (cf. Igaba, p. 904 sqq.).
Every Friday he drinks from the Zamzam well, and Solomon's pond and washes in the well of Siloa (Tarikh al-Khamis, i. 107; Friedlander, op. cit., p. 148 sq., 151); he can find water below that is clear and pure, and the languages of all peoples (al-Sar’ in Friedlander, p. 184).

His immortality is particularly emphasised (cf. Rückert's poem "Chidžer"; Umara in Friedlander, op. cit., p. 145; Abū Ḥātim al-Sūdīštānī, Kīṭāb al-Mawā’imur, p. i; Iṣbāḥ, p. 887 sqq., 892, 895). According to the Iṣbāḥ, p. 882, he was given immunity after a conversation with his friend, the angel Rafael, in order to establish the true worship of God on the earth and maintain it. Ibn Ḥaḍjar describes a meeting between al-Khaḍīr and Muḥammad in various versions (Iṣbāḥ, p. 899 sqq.). On meetings with individuals who lived at a later date see Iṣbāḥ, p. 908 sqq.; on the table which was let down to him from heaven see ibid., p. 919; on his presence at the battle of Kādīsiya see Mūrūdī al-Dhahab, iv. 216.

He lives in Jerusalem and performs his pilāt every Friday in the mosques of Mecca, Medina, Jerusalem, Kūbāʾ and on the Mount of Olives; his food is kām’a and water-parsely (Tarikh al-Khamis, i. 107; Iṣbāḥ, p. 889 sqq., 904).

On his matrīages we have as early as classical Ḥadīth (Ibn Ḥadāj, Zuhd, bāb 23) a legend also mentioned by al-Tha’labi, Kītāb, p. 193 sqq., which in its main features must have come from Christian sources. It is the motif of the pious youth who married his parents against his own wish in order to preserve her virginity (cf. the Syriac Acts of Thomas, 2nd Praxis). The story links up with that of Pharaoh's daughter's handmaid.

(Al. W. Senninck)

Khwādīja, a Persian word of uncertain etymology, an honorific title applied to personages of a town, not of military rank, bourgeois. It was generally borne by ministers of sovereigns who were chosen from among the learned. It was later used to designate eunuchs. It is found as early as the beginning of the 9th (xiith) century in a verse by the poet Anwārī. The derivative substantive khwādīja in the sense of "merchant", "tradesman" is found in Meninski and the Sicilian documents published by Michele Amari (p. 212, 2).

It passed into Arabic in the forms khwādīja and khwādījī, the modern khāwādīja (eastern dialects) and means "Sir, Mr., Monsieur". It has been borrowed by Ottoman Turkish in the form khoda (q.v.) and here means "scribe, clerk, copyist, literate, private tutor"; it is found again in the western dialects of Arabic which have borrowed it with the same pronunciation and the same meanings. It is found in the roor Nights (cf. Dozy, Suppl.). The title of Khoda, like that of Shahāk, is in Turkish only given to descendants of the Caliphs Abū Bakr and 'Umar and to those of 'Ali through his wives, among whom Fatima (Defrémery, Ministres d’histoire orientale, ii. 407, Nr. 1; Malcolm, Hist. of Persia, Lahore 1888, p. 86).

(C. H. Hart)

Khwādīja (or Khīzir in India), is in many parts of India identified with a river-god or spirit of wells and streams. He is mentioned in the Sīkhand-rāmā as the saint who presides over the well of immortality. The name was naturalized in India, and Hindu as well as Muslims reverence him; it is sometimes converted by Hindus into Rādja Khīzār. On the Indus the saint is often identified with the river, and he is sometimes to be seen as an old man clothed in green. A man who eats a worm becomes endowed Khwādīja Khair (Temple, Legends of the Panjūd, i. 221). In a poem by a Bāligh regarding a fight on the Indus a boat is unloosed "to float on the Khwādīja's waves", and it is asserted "the Khwādīja himself will remember that battle". (Popular Poetry of the Balochis, i. 74), and by one poet his name in substituted for that of Mīkāl as one of the archangels. His principal shrine is on an island of the Indus near Bakhar, which is resorted to by devotees of both creeds (Sind Revisited, ii. 226). Manucci who was present at the siege of Bakhar in 1669 (1658) alludes to this shrine under the name of Cōla Quitan. Burnes also mentions it in his *Bokhara*.

The saint is believed to ride upon a fish, which was adopted as a crest by the Kings of Oudh, and appears on their coins. Possibly in this case there is also a survival of the fish-avātār of Vishnu. Muslims offer prayers to Khwādīja Khīzār at the first shaving of a boy, and a little boat is launched at the same time; also at the close of the rainy season. — See further fāhrīd.

**Khwāf, a town in Khurāsān, more accurately Khwaf, is first mentioned by al-Muqaddasi in the form Khawāf as a district of Nisabūr; he describes it as small, rich in pomegranates and grapes which were made into musctab, and he calls the capital Shūmāk. According to Yākūt, the district was bounded by Būshendj of Herāt and Zūzen of Nisabūr; it included 200 villages and three towns: Sandjān, Sirāwadh, Khardjīr. Al-Ḳazwini says that Khwāf was near Naṣīr. According to him, it was large with many inhabitants, and had many villages, gardens and streams. It is perhaps to the same locality that Saiyid al-Muṭarṣaḏ ṭ refers as Khāf (without w), "a village in the land of the Persians (ṣāʿītān)". The modern Khawaf lies on the southern road, which does not touch Nisabūr, from the Caspian Sea to Herāt, and between Turkān and Karī Kān Naḏīr on a tributary of the Ḥarūd. Preble and, following Macgregor, gives the total population as 15,000. According to Clerk, he describes the chief town Khaf as a town of 500 houses with several forts surrounded by pretty gardens; fields and villages stretch along the river for four miles from Khaf, of which latter the largest were Nāṣīrābād with 300 houses and Salama and Sungun with 400 houses. Sungun must correspond to the Sandjan of Yākūt; Salama may be the modern form of al-Muqaddasi’s Shūmāk and would have been the capital of the district in older times. According to Yākūt, Khardjīr lay near Būshendj and must therefore have been in the eastern part of the district of Khawaf, where in modern times there is no longer any settlement except the fort of Kān Naḏīr. The total number of villages in the district of Khawaf was given by Bunge as 26.

**Khafāḏīa, a subdivision of the Ḥawāzīn tribe of ‘Uqāil which remained as powerful Bedouins longer than most of the other tribes which inhabited the Arabian peninsula at the dawn of Islam. The genealogists give their affiliation to their kindred clans as Khafāḏīa b. Amr b. ‘Uqāil, and they were subdivided into eleven branches: Muʿāwiyah Dhū l-ʿAṣḥāb, Ḥabīb Dhū l-Nuwaqr, al-ʿĀkra, Kaʿb Dhū l-ʿAṣḥāb, Amr b. ’Uṣayd, al-Ḥadām, al-Wāṣṭī, Ḥamza, Ḥadām, and al-Ḥāfīz. They had their territory in the time before Islam to the south-east of al-Madinah and owned one or two villages, among which Sarw Luhb and Shahrāʾin are mentioned. A hundred years later we find them still much further east and at war with the tribe Ḥunayn in the Yamāma (Aqīl, vii. 122). Probably the ʿKarshānian movement in the Yamāma in the early part of the fourth century of the ʿIlām caused them to move further north towards the borders of the ʿĪrāq. Here we find them towards the end of the fourth century established as masters of al-Kūfah under their amir Thumāl and his sons. They may have been at first allies of their cousins the Banū Yūzid (not Buzid as in Wustenfeld’s *al-Athār*) or Yazid as otherwise stated) who established themselves as rulers of al-Mawṣil and the surrounding country. They were rather in opposition to them. In the year 391 (1000) Karwāsh attacked them in al-Kūfah and they were compelled to leave the country and move along the Euphrates towards Syria, where they remained only till the following year, when the ’Abbasid general Abū ʿUṣayf of al-Hadījī called them to his aid when the ʿUkailis besieged al-Madīn. This brought them again back to their ancient dwelling-places and as the Bāghdād government had probably supplied them with arms they utilised these a few years later, in 402 (1011), in an attack upon the caravan of pilgrims. They had seized the wells at Wāqis to the south-west of al-Kūfah a short distance into the desert, and prevented the pilgrims from approaching to the water and then fell upon them, slaughtering and plundering, making many of the survivors prisoners. Emboldened by this success they demanded the lands to the right of the Euphrates which had been in the hands of the ʿUkailis, and marched under the command of Sulṭān, ʿUthān and Ṭadbīr, sons of Thumāl to al-Anbār, looting the whole neighbourhood waste and besieging the town. An army sent against them from Bāghdād and supported by the ʿUkailis drove them out and Sulṭān was actually captured, but released upon the intercession of Abu l-Ḥasan ibn Mazday al-Asadi. No sooner had he been released than in the following year 403, news was received at Bāghdād that they were plundering the country round al-Kūfah under Sulṭān. An army was sent against them which was aided by Abu l-Ḥasan ibn Mazday and they were surprised at the river al-Rumān. Sulṭān escaped but his brother Muḥammad was made a prisoner, but this defeat and the result that many of the pilgrims who had been captured in the year 403 were liberated and reached Bāghdād, where they were believed to have been killed. Meanwhile the ʿUkail Āmīr Karwāsh had been captured and released and he now tried to make common cause with the Khafāḏīa, trying to join Sulṭān ibn Thumāl, but after they had joined they were attacked by troops sent from Bāghdād and routed. They both asked for pardon which, strangely, was readily granted. This gave a few years of comparative peace but in 417 (1026) Dubais b. All b. Mazday al-Asadi and Abu l-ʻIlīyān Manf b. Ḥassān, now chief of the Khafāḏīa, made a plundering expedition against the lands which belonged to Karwāsh in the Sawād [q.v.], assisted by troops from Bāghdād, and they encountered him near al-Kūfah of which he had made himself master. Karwāsh fled towards the North and was pursued by the combined tribes of Asad and Khafāḏīa, who actually took possession of al-Anbār, but after this success the two tribes dispersed again to the pastoral quarters. Manf b. Ḥassān then marched, with his followers to al-Djāmī‘ain a place between Bāghdād and al-Kūfah, which belonged to Dubais b. Ṣadāk b. Mazday and plundered the land round it; when pursued by Dubais they turned North and attacked al-Anbār. The inhabitants defended themselves for a while but
as the town was not protected by walls the Khafādja entered plundering and burning. When they learned that Karwāsh was being assisted by troops from Baghādād they left the town, but soon returned and looted the town for the second time. When finally Karwāsh was able to drive them out he spent the winter in the town and instructed walls to be built to protect the town from further surprise attacks. Now Māni3 swore allegiance to the Bahāyid ruler Abū Kālidār and marched south to al-Kūfa where he had the Khafādja said in the name of Abū Kālidār, for which he received jurisdiction over the waters of the Euphrates. This had the result that in 420 Dubais severed his allegiance to Abū Kālidār as he was afraid of the depredations of the Khafādja. In the following years the Khafādja held sometimes with one party and again with another and when in 425 (1033) Dubais had a quarrel with his brother Thābit they sided with the former but quarrels also arose among the Khafādja chiefs during which Ali b. Thumāl was killed and his nephew al-Hasan b. Abī 3-Barakāt became chief of the tribe. When in 428 (1036) the ḥājdāb Bāris Thugān rebelled in Baghādād, the general of the Caliph, al-Basāṣṣātī employed among others the tribe of the Khafādja to quell the revolt, as a result of which Bāris Thugān was executed. We do not hear much about the Kha-

According to al-Kalkashandi a branch of the tribe of Khafādja was settled in lower Egypt. Among the poets of this tribe in ancient time was Tawba b. al-Ḥumayir, celebrated on account of his love for Laila al-Akhyaṭiya and the ele-
gies which the latter composed upon his death when he was killed in a raid. Bibliography: Nāfiqī, Niḥyayt al-ʿArab, ed. Cairo 1342, ii. 340; al-Kalkashandi, Ni-

Al-Khaḍḍī, 867
both of which cities he was entertained by the men of learning. His expectations in Constantinople were not fulfilled and he gave vent to his anger in the literary outburst which he entitled al-Maṣāmaṭ al-Rūmiya. Instead of making matters easier for himself he incurred the hatred of the Muṭṭi Yaḥyā b. Zakārīya and was ordered to leave the city immediately. As an acknowledgment of his worth as a scholar he received the appointment of an ordinary Kāfī at Cairo, but he seems to have devoted his remaining years to study and the composition of his works. He died in Cairo on Tuesday the 12th of Ramadān 1069 (3 June 1659). Al-Khaḍafdi enumerates most of his works in his autobiography, many of them of considerable size, while he himself tells us that many of his treatises were never collected in book-form. His most extensive work, a commentary upon the Tāfīr of al-Bahlawi which he entitled ḳāfiya al-Kāfī, and which has been printed in Cairo in four large volumes. The work follows the usual tedious method of explanation almost every word, and for traditions and explanations he adduces the statements of a large number of other authors who have treated upon the same subject. The same is the case with his second largest work, a commentary upon the Shīfa of the Kāfī Ṭyāfī, entitled Naṣīm al-Riyāḍ, which we have seen, he studied under Ӏbrāhīm al-Akami. Here again he quotes all accessible literature dealing with the biography of the Prophet, giving the various authorities who have recorded the same traditions. Neither of these works contain anything original, because the subject did not call for anything new. All that was expected of the author was to bring together every detail on his subject he could find in the works on hand. This work has also been printed in Constantinople 1267 A.H. in four volumes. Of an entirely different nature are his two biographical works: Khabāya ʿl-Zawiyā fi mā fi ʿl-Ridād min al-Baḥṣiya and Khaṣūmat al-ʿAllāb wa-Nahdat al-Ḥayāt al-Dunyā. The titles prepare us for the style in which these two books are composed, the evil influence of the Yatimiyya, and the Shīra or of Imidd al-Din is in both works apparent; we get instead of biographies an exuberance of servility without any noteworthy information and in most cases we can only infer that the persons named lived during, or shortly before, the time of the author, but the arrangement according to countries gives us the information where the persons lived. For biographical details both works are useless. We get however a fair amount of contemporary poetry to enable us to judge to what miserable depth the art of rhyming had sunk. While the first named work existed only in manuscript, the Ruhāna has been printed three times in Cairo (1273, 1294 and 1306), which shows us that the work is appreciated in Egypt. The most valuable portion of this work is an autobiography of the author (in which he has omitted to state when and where he was born) and the Maṣāmaṭ al-Rūmiya which is directed against the learned men of Constantinople. The autobiography has furnished the material for the account of his life above and in the work of al-Muḥibbi. Of more value are his Tiwāṣ al-Muḍājilī and his Shīfa al-Alī. The former is a work of the class called anāfi in 50 sessions (muṣaffa), and he tells us in the introduction that Ibn al-Shadairi, Ibn al-Hādīb, al-Kālī or even Ṭaḥlab would acknowledge its excellence if they were able to see the book. Its value consists in having preserved extracts of older works now apparently lost or undiscovered. It is interesting to find him quote from the Kītab al-Maṣāni of al-Uṣūndināni (printed in Damascus 1340), the Miḥāl of Ibn Ḥazm, the Fihrīr of Ibn Nādir or the Ṣanīḥ of al-Zubair Ibn Bakktār, considering how rare manuscripts of these books are. The book is in fact a curious collection of odd information from all sorts of sources. Apparently there are two editions of this book, one Cairo 1284, and a second without date printed in Taṣta. The Shīfa al-Alī fi mā fi Kuṭāl ar-Raḥīm min al-Daḥīlī is, as indicated by the title, a work dealing with words of foreign origin in the Arabic language. The author has used for this purpose the Muṣarrāb of al-Djawālāki [q.v.] and similar works, but is not content with explaining, or simply mentioning, words of foreign origin, as he also gives ample specimens of vulgar errors in correct Arabic speech. Closely resembling this book is a commentary on the Durrat al-Ǧuswaal of al-Harīf, which has been printed together with the Durrat at Constantinople, in 1507. The author does not seldom corrects al-Harīf and frequently gives useful additional information and this work together with his Tiwāṣ are probably the best of his compositions. His Dīnān is mentioned by al-Muḥibbi and has actually been preserved in manuscript in Copenhagen, but my knowledge of his poetry is confined to what al-Muḥibbi quotes or he himself cites in his own work. It is not of a high standard, but his whole works are typical of his period and vividly reflect what we may expect from his contemporaries.
Khāyān al-Mulkī) about 1732–33. He was an intimate friend of Shāh Nawāz, the author of Muʿāṣir al-Umara (who was also a Ḥādīrābdī officer) (v. iii. 680 of the Bibl. Ind. ed. of that work, and Khwāfī Khān, ii. 678).

Khwāfī Khān wrote a history of the Indian branch of Timūrid dynasties, and called it Muntakhab al-Lūḥān (the Choice Compendium). It is a standard work and is much admired, especially by Orientals, for its style, and its accuracy and impartiality, though it is often too grandiloquent for western taste. Still, it is by far the most human and interesting of native histories of India, with the doubtful exception of Bāḍāūnī, and ought to have been translated long ago. After an introduction beginning with Turk b. Vaphiopulos, describing the origins, etc., of the Tartars and Mongols, it gives short biographies of Timūr, his third son, Mīrān Shāh, and the descendants of the latter, who were the emperor Bābur's ancestors. These are followed by a history of the emperors of Agra and Dīhli, beginning with Bāibur, of whom there is a tolerably full account, and ending with the beginning of the 14th year of Muḥammad Shāh. Bābur conquered India in 1526, and the 14th year of Muḥammad Shāh was 1732, so that the history covers a period of over 200 years. The last ten years of the history are given in a very abridged form. The most valuable parts of the work are the accounts of Shāh Djiānān and Awrangzēb, for both of whom the author had a high admiration. The history has been published in the Bibliotheca Indica (2 vols), but the edition is not complete, for it wants the first part or volume. This last, however, is very rare, and perhaps does not exist in its entirety. There is only a portion of it in the British Museum. The author refers to it in vol. i. p. 49 of the printed edition. Khwāfī Khān also wrote a history of the minor Muḥammadan dynasties of India, but this too has disappeared, though a small portion is preserved in MS. in the India Office Library (Eth., Cat., No. 407). It was apparently of little value, being mainly an abridgment of Farīṣtān.

The charm of Khwāfī Khān's history consists in his digressions and his frequent use of his own observations, and of information derived from his father and brother. He is a somewhat bigoted Muḥammadian, and he is too favourable to Shāh Djiānān and Awrangzēb. Thus he slurs over Awrangzēb's treacherous capture and subsequent execution of his younger brother, Murād Bakhsh. The capture he represents as a clever manoeuvre (it certainly was to the public advantage), but he is evidently half ashamed of it, for he declines to give the particulars. In his account of Murād Bakhsh's attempt at escape, and his trial and execution, which he got from his father, he does not plainly set down Awrangzēb's responsibility, and continues to pay him a compliment for his generosity in rewarding the man who declined to prosecute Murād for the murder of his father. He also deals lightly with Shāh Djiānān's conduct to Khurasan, and to his competitors for the throne, and says nothing about his debaucheries. Still he is far more honest than Abu 'l-Faḍl. His accounts of Shāh Shāh and Jahangīr are very fair, and in the latter of them there is a very interesting account of Nūr Djiānān. He says he got it at Shirāt in 1695–96 from a very old man, who as a child had accompanied Nūr Djiānān's father on his journey from Persia to Afghanistan and India. Khwāfī Khān too, though, like Tacitus, he may tell us too much about emperors and their wars, does not omit the more interesting subject of plague, and famine, and of internal administration.

Bibliography: Elliot-Dowson, History of India, vii. (which contains a very full abstract, by Prof. Dowson, of the 2nd volume of Khwāfī Khān); Colonel Lees, Materials for the History of India (Hertford 1868), p. 57 sq.; there is a manuscript translation of vol. i. by Major Gordon in the British Museum (Add. 26, 617).

Khafīf, the eleventh metre in Arabic prosody, containing three 'arūḍ and five 'darb:

All the feet lose their second quiescent letter when the last quiescent letter of the preceding foot is retained and vice versa. The foot fā'ilātun used as first 'darb is often changed to fā'ilātun (= mustaf'īlun) by toshīth. (Moh. Ben Chenefi)

Khībar, an oasis on the road from al-Medina to Syria, 100 miles from al-Medina. Doughty, who stayed in Khībar from November, 1877, to March, 1878, describes Khībar as a group of wide, well-watered valleys, which lie together like a palm leaf on the edge of the lava region (Harra) and all run into one main valley. These valleys are gashes in the lava-field, beneath which lies sandstone which, wherever it crops out, has a burned and discoloured appearance. The oasis lies 2,800 feet above sea level and Doughty puts its population at about 1,000 souls. The bottoms of the valleys are covered with rushes, the springs have a slightly sulphurous taste and are surrounded by incrustations of salt. In spite of its many palm trees, the land has an uninviting aspect and great stretches of ground lie untilled. The commanding height of al-Ḥijān, illustrated by Doughty on p. 104, consists of a great basalt rock, which rises out of the Wādi Zaidiya, like an erratic block. The modern settlement is built on its south side. The length of the walled platform of the citadel and their race the breadth 90. The floor is deep mould, which may be partly of the old clay buildings that have melted away upon the uneven rock. In digging, potsherds, broken glass, eggshells and horse-dung are brought to light. Two ancient pyramids of clay bricks, the lower parts of which are cased with stone, enclose an ancient covered well, which was used to supply the garrison.

The name Khībar is said by Yākūt to have meant "castle" in the language of the Jews who lived there; according to Sahl b. Muḥammad al-Kāthīb, it took its name from Khībar b. Kānīya b. Mahālīl, who was the first to settle there. The ancient Khībar, according to the old Arab geographers, lay in a very fertile district which was rich in palms and luxurious cornfields, and consisted of seven castles: Ḥīn Nā'im, Ḥīn Abī 'l-Ḥāgari, Ḥiṣn al-Shāk, Ḥiṣn al-Ν̄atāh, Ḥiṣn al-Sulālān, Ḥiṣn Wātī and Ḥiṣn al-Kāthība. Al-Bakrī further mentions Ḥiṣn Wādja in, in which there were palms and other trees and which later belonged to the Prophet Muḥammad, and the greatest stronghold
of Khaibar, Ḥiṣn al-Kamīs, which ‘Ali b. Abī Ṭālib, afterwards Caliph, captured, the lower part of which was occupied by the mosque of the Prophet (also called al-Manzila), built after the conquest by Ḥāfa b. Mūsā. The spring in the fort of al-Shīkā was called al-Ḥammā. The Prophet called it Riʿimat al-Malāʾika ("the angels' share"). It was much admired for the remarkable properties of its water. Two-thirds of its water flowed away in one channel and the other third in another. Both had the same direction. If three pieces of wood or three dates were thrown into the well, two went into the channel containing two-thirds and one into the other. No one could take more than a third of the spring water out of this channel and if anyone stood in the channel which took two-thirds in order to send more water into the smaller channel, the water overwhelmed him and flowed past him so that none went back into the second channel to increase its share.

The oldest mention of Khaibar in inscriptions is in the bilingual inscription of 568 A.D. of Ḥarrān in al-Ladja, of which E. Littmann has given the correct interpretation in "Osservazioni sulle iscrizioni di Ḥarrān e di Zibid", in R.S.O. 1911/12, iv. 193 sqq. The inscription bears the date in the year 463 (viz. of the era of Boṣra), a year after the expedition of Khaibar. According to Ibn Kantaib, Khaibar al-Maṣūrif, ed. Wustenfeld, p. 513, this expedition took place under King Al-Harith b. Abī Shamir (al-Ḥarīth b. Dhīlā), who reigned from 528 to 569/570 A.D.; the inscription now gives as the exact date for this event the year 567 A.D. Much more serious for the history of Khaibar and its Jewish population was Muḥammad's campaign; he set out in the beginning of the year 7 A.H. (628 A.D.) with about 1600 men against Khaibar, presumably with the object of obliterating the unfavourable impression made by the treaty of Ḥudaybiyya and of offering his followers a rich substitute for the booty they had lost. The Jews of Khaibar had apparently prepared for Muḥammad's attack, but they were not united among themselves. The population was not a solid body living together within one area, but was scattered among the surrounding valleys, where they occupied in little groups fortified houses in the midst of rich palm groves and cornfields. Every settlement had its own particular name. The valley was divided into three territories, called al-Ṭanāţa, al-Shīkā and al-Katiba. This strategically unfavourable mode of settlement was from the first a disadvantage, and the position of the Khaibaris became still more precarious when their allies, the Ghatafān, left them in the lurch, and their 4000 auxiliaries left Khaibar for their homes. Muḥammad thus had a free hand. The advance was carried out by night and in the morning the Khaibaris found the Muslim troops confronting them; they had taken up their quarters behind the Ḥarrā on the edge of the desert. It took Muḥammad about six weeks to conquer the whole district of Khaibar. Every strong house, every fortified place had to be besieged and stormed, frequently after heavy fighting. The castle of al-Ṭanāţa was the first to be attacked; it resisted for over a week. In revenge for the stubborn defence, Muḥammad's men had destroyed the splendid palm-trees around it and cut down 400 trees were destroyed before the politic Abū Bakr put a stop to further devastation. Al-Shīkā was next stormed. The successes of the Muslims had already much weakened the strength of the defence. Treachery had placed al-Ṭanāţa in the hands of the Prophet, and as engines of war had also been captured, in the use of which a Jewish traitor instructed the Muslims, the resistance of the Jews diminished considerably so that the other strongholds fell more quickly. The last bulwark of the defence, al-Katiba, fell almost without resistance. The Jews were sentenced to lose all their property and were left with their wives and children and allowed to till the soil which they had previously owned. Half of the harvest had to be handed over to Muḥammad. This tribute continued to be paid until the Caliph ʿUmar b. ʿAbd al-Ṭhaḥād drove the Jews out of Arabia. Later, however, the Jews returned in certain numbers to Khaibar. Benjamin of Tudela says that in 1173 A.D. a Jewish colony, 1150 strong, which must have formed a closed community, lived in Khaibar. Not too much stress need be laid on his statement. Burckhardt, who saw Khaibar at the beginning of the sixteenth century, mentions that the Jewish community once settled here had entirely disappeared.

(Adolf Grohmann)

KHAIBAR PASS, the northern route between Afghanistan and India, leading from Kabul to Peshawar. The pass runs from Dākka to Djamrud and is about thirty-three miles long, its centre lying in 34° 6' N. and 71° 5' E. Its highest point, LāzART Kotal, is 5378 feet above sea-level. Alexander the Great probably sent the division of his army under Hephaestion and Perdiccas through the Khaibar, while he himself followed the northern bank of the Kābul river and crossed the Kūnar valley into Badgawar and Sawād. Mahommed of Ghazna used the pass only once, when he marched to meet Dījaḍān in the Peshawar valley. The Amir Timūr used it when invading India in 1398 and when retiring in 1399. Bābur invaded India by the pass in 1525 and Humayun, after capturing Kabul, on his return from exile, traversed it. It was the route regularly used by Akbar and his successors between the Pândjāb and Kābul, and Dījaḍānabad, first fortified by Humayun, was named after Akbar. The pass was held in Mughal times, as now, by the Afrīdīs, a turbulent tribe extremely jealous of foreign encroachment, and in the reign of Akbar their hostility was accentuated by the establishment in this region of a heretical and fanatical sect, the Rawshanīāyā ṣ (q.v.), who commanded the adherence of the Afrīdīs, Yusufozais, and other tribes. In 1586, on the death of Mirza Muḥammad Amin, ruler of Kābul and younger brother of Akbar, Rāḏā Mān Singh, marching to take possession of Kābul in the name of the emperor, was obliged to force the pass, an operation which was performed with
difficulty, and the suppression of the Rawshan Vilas cost much blood and treasure. In 1672 the tribes attacked Muhammad Amin Khan Awrangzeh, governor of Kabul, in the pass, annihilated his army of 40,000 men and captured the women and children and the imperial treasure and elephants.

Nadir Shah, advancing by it to attack Nasir Khan Qajar of Khorasan, was opposed by the Moghul government, but led his cavalry through Bazar, took Nasir Khan by surprise, and overthrew him near Djamrud. Ahmad Shahr Durrani and Shah Zamun used the pass on several occasions when invading the Panjaub.

The British first used the Khairab Pass in 1839 in the attempt to establish Shahr Shudja in Afghani-nastan, and have since used it on several occasions, more than once suffering disasters in traversing it.

By the treaty of Gandamak (1879) between the British and the Amir Yaqub Khan, the control of the pass was left to the former, who have exercised it latterly by maintaining an experienced political officer for the pass, at whose disposal are the Afghan Pasis, a corps of military officers of Afridis under British officers. The arrangement has not been entirely satisfactory, but was probably the best that could be made with so turbulent and treacherous a tribe.

**KHAIR AL-DIN**, an important Turkish architect of the time of Sultan Wali Bayazid II (1481-1512). As a result of the habit of Turkish historians of mentioning favourably every pious founder, writer of chronograms, and calligrapher, but only exceptionally giving the name of the creator of a masterpiece of architecture, or even giving any biographical notice of him, Khair al-Din's activities are veiled in obscurity. It is certain, however, that he is a historical personality. He is said to have been the son of the architect Ustaf Murad. His masterpiece is the Bayazid Mosque, a magnificent piece of architecture, in Constantinople (built between 1493 and 1497) (cf. also see Evliya, Siyabat-nama, Stambul 1314, i. 142; Sa'id al-Din, Tadji al-Tawarih, Stambul 1279, ii. 211; von Hammer, Constantinopolis und der Bosporus, Pest 1822, i. 402; Sklaratos Byzantios, Konstantinopolis, Athens 1890, i. 421).

The popular Turkish view of the importance of Khair al-Din, who is considered the real founder of Ottoman architecture and is approached by none of his predecessors (Eliaa b. Ali, Mehmend al-Madjaan, Mest, etc.) or his successors (M. Kasim, Kanai al-Din) down to Sinan [q. v.], the greatest of Ottoman architects and one of the greatest of the world's architects, is confirmed by his masterpiece, the Bayazid Mosque.

The scheme of two half-domes supporting the principal dome is modelled, it is true, on the Aya Sofia, but dominated by another conception and deliberately developed further. Fious legends are associated with the building.

There is also a little mosque by which bears his name, not far from the türbe of the Grand Vizier Sinan Paşa at Parmak Kapusu. His tomb is in front of this türbe.

(Th. Menzel)

**KHAIR AL-DIN** (Barbarossa), the famous Turkish corsair and Beylerbey of Algiers and brother of the Arudj [q. v.]. In spite of the statement to the contrary by Haedo, it is he who is referred to by a contemporary by the name of Barbarossa (Barbarossa, Aenobarbus) in the diplomatic correspondence of the French court. Born at Metellina about 1483 he was at first a pirate under the command of his brother and acquired a great reputation for skill and bravery. When Arudj set out on his expedition against Tlemcen he gave his brother the governorship of Algiers, which he had just taken. When the news of the death of Arudj arrived, Khair al-Din was unanimously chosen by his companions to succeed him. But he soon found himself in a very critical position. The towns of Cherchell and Ténès had rebelled; the Kabyls of Ibn al-Kahl, king of Kako, deserted him; Abu Hammak, king of Tlemcen, had invaded the Chelef valley; finally the Algerians, tired of the cruelty of the Turks, were only waiting an opportunity to throw off the yoke. Thus feeling unable to cope with all his opponents with the forces at his command, Barbarossa sought the help of Selim, Sultan of Constantinople. He paid homage to him for the lands conquered by his brother and promised to pay him tribute. The Sultan, who had just conquered Egypt (1517), eagerly seized this opportunity of placing the shores of the Western Mediterranean under his sway. He accepted the homage of Khair al-Din and gave him the ranks of Pasha and Beylerbey (cf. the article NEG). At the same time he sent 2,000 men with artillery to Algiers and authorised the enrolment of volunteers, to whom he granted the rights and privileges of the Janissaries [q. v.]. 4,000 Turks or Levantines thus came to serve under Barbarossa and formed the ogluk or militia of Algiers.

The arrival of these reinforcements enabled Khair al-Din to meet the dangers which threatened him. A conspiracy of the Algerians who had agreed with the tribemen to set fire to the fleet and massacre the Turks was put down and the heads of the ringleaders fixed on the gates of the Pasha's palace. A Spanish force under Ugo de Moncade was repulsed. The Christians landing at the mouth of the Harass (al-Harash) had taken up their position on the heights of Kudyat al-Sabun and began to bombard the town. Barbarossa succeeded in driving them out of their entrenchments by attacking their ships drawn up on the shore and forced them to re-embark (1519). In the east, on the other hand, he was less fortunate. A Tunisian
army was advancing on Algiers. He set out against that and met the enemy in Kabylia on the territory of the Flisat Ummellit. In the middle of the battle, the Sultan of Külê, secretly won over by the Hafsid Sulţan, deserted and turned against the Turks. The latter were cut to pieces and Barbarossa, with his road to Algiers barred, had to take refuge in Dijelijel [q.v.]. During this time the Kabylas laid waste Mitidja and occupied Algiers, while Cherchell and Tenès again revolted (1520).

Taking refuge in Dijelijel, Khair al-Din began to reconstitute his army and to gather reinforcements. He resumed his old trade of pirate and from 1520 to 1525 he ravaged the coasts of the western Mediterranean, amassing considerable booty and gathering numerous adventurers around him. He was soon strong enough to seize Collo (1521), Bône (1522) and Constantine. He also secured the help of the natives of Little Kabylia by making an alliance with ABD al-Áziz, the Ban of the first Abbas, rival of the Sultan of Külê. Thus he was able in 1525 to resume the offensive against Ibn al-Kađić. Defeated at the Wâdî Bugdare and again at the pass of the Bani Sâghâ, the latter was killed by his own soldiers. Mitidja and Algiers were reoccupied by the Turks, the rebel chiefs of Tenès and Cherchell were put to death and the inhabitants of Constantine, who had in 1527 expelled their kađić and massacred the Turkish garrison, severely punished. Finally, Jusain, who had succeeded Ibn al-Kađić, tendered his submission and agreed to pay an annual tribute (1528).

The capture of Peñón, a Spanish stronghold located on an island within cannon-shot of Algiers, completed the devastation of Turkish power. In the beginning of May, 1529, Barbarossa began the bombardment of this fortress, the garrison of which the Spaniards had neglected to strengthen; it was taken by storm on May 27 when there were only 25 unwounded defenders left. Khair al-Din had the governor, Don Martín de Vargas, put to death and ordered the outer walls of Peñón to be razed to the ground. The debris was used to build a mole joining the island to the mainland. This jetty protected the roadway from the west winds and enabled the corsairs to leave their ships in shelter which they had previously been obliged to draw up on shore during bad weather. This created the harbour of Algiers, a refuge and base for operations for the Barbary fleets. Disturbed by this new success of Khair al-Din, the Spaniards tried to secure a landing place on the coast by taking Cherchell, but the expedition led against this town by Andreas Doria ended in failure (1531).

Now definitely instilled in Algiers, Barbarossa set himself to increase still further his military forces by organising, alongside of the Janissaries, whose insolence and insubordination rendered them dangerous, bodies of troops personally devoted to him. He formed a guard of 500 renegades, for the most part Spaniards, raised 7,000 to 8,000 Greeks and Albanians, enrolled Kabyls, and entrusted the command of this new force and of his artillery to ra’iz, his old companions. He thus found himself able to undertake an expedition against Tunis, with the inhabitants of which he had long had secret negotiations. By taking this town he wished to anticipate the designs of the Spaniards and secure himself the control of all the eastern shore of Africa. The Sulţan, to whom he had communicated his plans, gave him the required au-

thorisation and sent him auxiliaries. Leaving the government of Algiers to his khâlifa, Hasan Agha, Barbarossa entered Tunisia, seized La Goulette (Aug. 16, 1534) and from there advanced on Tunis. Malây Hasan, who tried to stop him, was defeated in a battle fought near the gate of Al-Djazira, and had to flee (Aug. 18). The Turks entered Tunis and plundered the whole town. The rest of the kingdom submitted without resistance.

Barbarossa’s success was, however, of short duration. In the month of June, 1535, Charles V appeared on the coast of Tunis. On July 14th the Spaniards captured La Goulette and on the 20th became masters of Tunis. The Christian slaves, whom Khair al-Din had refused to massacre, burst their chains and joined the attackers. Fearing he might be surrounded by the enemy, the Beleyberi fell back on Bône, where he found his fleet, which he had sent there on receiving news of the preparation of the Spanish expedition. From there he sailed for the Balearic Islands, sacked Mahon and brought back to Algiers 6,000 captives and considerable booty.

A little later Khair al-Din went to Constantino-

nople by order of Sultan Suleimân, who in 1533 had appointed him Kapudân Paşa and wished to entrust him with the direction of the naval campaign against Charles V and his allies. He had not to return to Algiers, where authority was exercised in his name by a khâlifa. At Constanti-
nople Barbarossa devoted himself entirely to his new office. He reorganised and increased the Tur-
kish fleet and took an active part personally in the naval war. In 1537 he ravaged the coasts of Apulia, tried unsuccessfully to take Brindisi by surprise and took part in the siege of Corfu. Not having been able to capture the latter place, he turned his attention to the Venetian possessions in the Aegean Sea and occupied the islands of the Dodecanese. The following year he completed the conquest of the Archipelago by taking Scáros, Scyros and Carpathos; he then made a descent on the island of Crete where he burned two towns and 80 villages. In the Ionian Sea he gained two victories over Andreas Doria at Teneza and St. Maura. In 1539, with the help of his lieutenants, Hasan Corso and Dragut, he recaptured Castelnuovo in the Gulf of Cattaro and Malvafia and Nauplia in the Morea. The Venetians were forced to submit to concluding a truce with the Porte.

These successes secured Barbarossa a position of preponderating influence in Constantinople. Honoured by the friendship of the Sulţan, he persuaded Suleimân to continue the war in the Western Mediterranean. He was also decidedly in favour of the French alliance. From 1534 he had been in correspondence with Francis I; after the conclusion of the treaty of Baghâdâd, he was the confidant of the ambassadors of the most Christian King and leader of the French party in the Grand Diván. Charles V endeavoured to win him over to his cause by secretly offering to recognise him as sovereign of the whole of North Africa on payment of a small tribute. Barbarossa, while pretending to lend himself to the Emperor’s plans, at once revealed them to the Sulţan. The disastrous end of Charles V’s expedition to Algiers (1541) still further increased Khair al-Din’s prestige, although he had taken no share at all in the defence of the town.

Hostilities suspended since the truce of Nice (1538), began again between Francis I and Charles
V (1541). Barbarossa was given command of the Turkish fleet, which was to co-operate with the French forces. In 1543 he operated along the Italian coasts, took Reggio, ravaged the coasts of Calabria, then, after joining the Duc d'Enghien at Marseilles, laid siege to Nice. The town of Villefranche, where the Turks landed, was taken and destroyed. Nice was occupied but the castle could not be taken. The arrival of Doria's fleet and the Marquis del Vasto's army forced the Turks to withdraw. A portion of their fleet wintered at Toulon while the rest went along the Catanonian coast and sacked Palamos and Rosas. The peace of Crespy (1544) ending the war, Khair al-Din returned to the Levant, pillaging the islands and shores of Tuscany and the Kingdom of Naples.

After this campaign, Barbarossa retired to Constantiopole. He had great wealth in this town, including several palaces on the Bosporus.

He died on July 4, 1546, at the age of 63, and was buried in the mosque which he had built at Büyükk Dere (see the art. DERE). By his will he ordered all his slaves under 15 years old to be liberated and left the others, 800 in number, to the Sultan as well as 30 armed galleys. The rest of his wealth was divided between his nephew and his son Hasan, whose mother was a Moresco, and who on three different occasions filled the office of governor of Algiers (see the art. HASAN PASHA, above, ii. 281).

Barbarossa was not only a successful corsair and a remarkable soldier; he also possessed certain of the qualities of a statesman, an indestructible resolution which enabled him to surmount the greatest difficulties, and a very accurate sense of the conditions on which the establishment of a permanent state in Barbary depended. He understood that Turkish rule, being restricted to the coast, naturally tended to be precarious; he therefore tried to make himself master of the interior. His ambition was to unite in one vast state, of which he would be the sovereign, the whole of North Africa. If circumstances did not permit him to realise this plan, at least he finished the work begun by 'Arûdî and he may be regarded as the real founder of the Regency of Algiers.

interest. It has been a municipality since 1869. Trade has suffered owing to the rise in importance of Sītāpur, but there is a daily market, and a small industry in cotton printing survives.

At the time of Akbar the Sarkar of Khaibād consisted of 22 mahals or parganas, but many of these lay in the present districts of Kheri and Hardol. This pargana consisted of the Southern portion of the country lying between the Gond and Zanjān rivers. It was bouned on the North by Hargram, on the east by Lakpur and Biswan, on the west by Sītāpur and Ramkot, on the South-east by Machhrehta, and on the South-east by Purnagar. The whole of the Southern half of the pargana is a high lying tract with a high soil and good natural drainage producing in favourable seasons fine crops of wheat. North of the road from Sītāpur to Khaibād and from the latter to Biswan, the land lies low, the soil being stiffer and liable to flooding from numerous jhils and water-courses. However, the cultivation is generally poor, the majority of the tenants belong to the inferior cultivating classes, the holdings are large, the cattle are wretched, many of the landlords are heavily in debt and means of irrigation are deficient.

KHAIIRPUR, a state in Sindh, lying between 26° 10' and 27° 40' N. and 68° 20' and 70° 14' E. The state has no separate history until the fall of the Kalhora dynasty of Sindh in 1583 when Mir Fateh Ali Khan Talpur, a Balāt chief, aspired to the rule of Sindh. Subsequently his nephew, Mir Sahib, Khan Talpur, founded the Khairpur branch of the family. His dominions at first consisted of the town of Khairpur and its environs, but he enlarged them by conquest and intrigue until they extended to Sahzalkot and Kashmir on the North, to the Djasalmer desert on the East, and to the borders of Kachch Gandāva on the West. About 1813, during the troubles attending the establishment of the Bārkāli dynasty in Kābul, the Mīrs withheld the tribute which they had hitherto paid to the rulers of Afgāhānīstān and became virtually independent, but jealousy between Rustom, who had expelled his father Sahrab in 1811, and his brother Ali Murād, contributed to the crisis which led to British intervention. In 1832 the individuality of the state as a political entity was recognised by the British government, which secured for itself the use of the Indus and the roads of Sindh. The Mīrs of Sind were able to prevent the passage of British troops through their dominions during the first Afghan war, but Ali Murād of Khairpur supported the British policy, and after the battles of Mianān and Daba, his state retained its political existence.

KHAIIRULLAH EFENDI, an important Turkish historian. Born in Constantinople, of a family which had over 160 years unbroken service with the Sultan, the son of the famous 'Abd al-Haḳḳ Efendi (d. 1830/1854), a theologian and physician, who was thrice Ser-i Atība and from 1269 bore the honorary title Ra's al-ʻUlāmā), he began by following in his father's footsteps and adopted a theological career, his first office being Molla of Sinyara (1258/1842). Later he turned to science, medicine and education. In 1265 he became a member of the Board of Education, the Agricultural Council and a second president of the Academy of Sciences (Emţjuven-i Dāmār), president of various learned bodies, and filled high offices in the newly formed Ministry of Education, was for long head of the School of Medicine, till in 1281 (1864) he was sent as ambassador to Teherān, where he died suddenly in 1283 (1866).

His sons are 'Abd al-Haḳḳ Hāmīd, the most important poet and dramatist of the new Turki, and 'Abd al-Khālīk Naṣīḥī, who have both served their country as ambassadors and envoys.

Khairullāh left a large number of historical, geographical, medical, scientific and agricultural works, the latter of which are mainly translations; some of them have been printed, like the Mutʿal-i Dāmār, which was published in Europe (Auropa seqatāt-nāmē). But his importance rests on his work as a historian. Besides the Waḥṣī-ī Miṣrīye, he wrote a history, planned on a grand scale, of the Ottoman empire entitled Dewlet-i 'Aliye-i ʻOthmānīye Türkāhī, which began to appear almost at the same time as the excellent 12 volume history by the historian of the empire, Ahmed Djedwet [q.v.], which covers the period 1774—1826.

Khairullāh Efendi aims at giving the whole of Turkish history in one continuous work. He is the first Turkish historian to attempt to deal with Turkish history in its place in the world's history, in contrast to the method hitherto in vogue among Ottoman annalists of limiting themselves entirely to Turkish sources and affairs; he was actually the first to succeed to some degree in producing a Türkīh-ı Umūrî, a world history. With the exception of von Hammer-Purgstall's Geschichte des osmanischen Reiches, it is almost entirely French sources that he uses, as is obvious from the fact that he always writes foreign names as they are pronounced in French. At the same time he does not infrequently draws upon hitherto not fully utilised Turkish sources.

A special volume is devoted to the introduction and to the early history of the Ottoman empire, the period before the reign of ʻOthmān I. The further work is planned to have a volume to the period of each Sultan. At the same time a survey of contemporary Muslim and Christian rulers is always given. The treatment of the material is no longer annalistic but pragmatic. In comparison to the inflated style of early historians, his language is simple, clear and intelligible. His history is also meritously distinguished from those of his predecessors by the absence of bias and the lack of any fanatical hatred of non-Muslim culture and conditions.

Of his history, 15 volumes in all appeared (1271—1281 = 1853—1864), from ʻOthmān I to the time of Ahmed I (1603—1617), when death put a stop to his work. 'Ali Shewki, inspector in the Dāmār-i Aşkām-i Adīye, then tried to finish the book, of which Khairullāh had written barely half; but of the three further volumes, 16—18, appeared (1289—1302 = 1872—1875) bringing the work to the time of Sultan Ibrāhīm (1639—1648).

Al-Khayyāṭ, Vahīyā b. Gūzlih Abī ʿAllī, an Arab astrologer, pupil of Māghālīh, often mentioned in Christian writers of the middle ages under the name of Albohali. The exact dates of his birth and death are unknown but the latter may be put with some certainty between 210 and 230 (825-844). Of his works there still survive: Kitāb Sirr al-Anāl (“the book of the secret of action”) dealing mainly with the formulation of astrological questions etc. (in Berlin); Kitāb al-Ma-wālid (“book of births”) (in Oxford and Cairo (?)). The book on births was translated into Latin by Plato of Tivoli (1136) and later again (1153) by Joh. Hispalensis; the latter translation was printed in Nürnberg in 1546 with the title: Albohali Arabici astrologi antiquissimi ac clarissimi de iudiciis natiuitatum liber unus octoac non editus. Cum privilegio D. Ioanni Shenore concotto. In place of Albohali simply we find in MSS. also Albohali Alghihān, Albohali Alchehit, Albenhahit, etc.

Khākān, Arabic transcription of the Turkish regal title Қa̱ḵan. We find this title already borne by the rulers of the earliest people who called themselves Ҭurḵ (“victors” A.D.) and it had been taken by them from their predecessors, the “genuine Avars” or the Ӡan-ʃan of the Chinese (Kiesling in Pauly-Wissowa, Real- enzyklopädie, vii. 2587, s.v. H奴nny; also among the so-called Pseudo-Avars, cf. e.g. Frahm, Hist. Grac., iv. 233). In one of the oldest inscriptions, that of Tonuyuk (W. Radloff, Die alttürkischen Inschrüften der Mongolen, 2nd Series, St. Petersburg 1899), we find Қān alongside of Қa̱ḵan with the same meaning, perhaps only the result of a contraction of Қa̱ḵan. Later a distinction was made between Қān or Ӡan and Қa̱ḵan or Khākan and Khākan used in the meaning of “King of Khāns”, like the Persian ʃāh-ʃāh; this we find as early as the fourth (xii.) century in Abū ʿAbd Allāh al-Ḥawramī, ʿAttāfī all-ʿUmān, ed. van Vloten, Leiden 1895, p. 120; the word Қān which appears in the Mongol period and was not used later has the same significance Khākan is still regarded as the Turkish national title کاکان and has been used quite recently by champions of the nationalist idea in Turkey in preference to Sultan and Khalifat.

(W. Barthold.)

Khākan, (See Faṭḥ al-Shāh).

Khākan (Afḍal al-Dīn Ibrāhīm Ḥaṣīkī, named Khākan), a Persian poet, born at Gandja (Elizavetpol) in 1500 (1165-1167), the son of a carpenter, Ṭalī, and a Persian weaver whom he had purchased from a slave-dealer. His grandfather was a weaver. His uncle Kāfī b. ʿUḥmnā, who was his benefactor, was a physician and druggist. He was taken charge of by him when his father, sunk in poverty, abandoned him. Trained in the school of Abu ʿl-ʿUsh, the latter accepted him as his son-in-law and obtained from the Khāzan Manūchehr permission to give him the taḵallūṯ of Khākan. Later they quarrelled most bitterly and exchanged scathing epigrams (between 538 and 549). It was then that the poet quitted his native town to go to Bekū where the Shirvān-šāh Af簧sān, son of Manūchehr, was settled. Obtaining, not without difficulty, permission to perform the pilgrimage to Mecca he was well received on his return by the governor of Mosul, Djmāl al-Dīn, which earned him the disfavour of his patron and imprisonment in the fortress of Shirmān. Retiring to Tībrīz after the death of his wife, he died there probably in 1595 (1200) and was buried in the cemetery of Surkh Ab. Although the majority of his biographers say that his name was Ibrāhīm, it should be noted that his father called him Badū “the substitute” because he had come to replace the great mystic Ḥakīm Sanāʾī.

The Tawfīq al-Tawfīq = “Gift to the two Ṭawfīqs”, a poetical description of his journey to Bekū and back, was autographed at Agra by Mirzā Abu ʿl-Ḥasan (1855). His Dwān entitled Khulyiyyāt-i Khākānī was lithographed at Lucknow in 1293-1295 (2 vols.); it is arranged in the order of subjects: religious and moral poems, panegyrics, poems with refrains, funeral elegies, short mystical pieces, epigrams, satire; 44 ʃażdas were annotated at the beginning of the xth (xvi.) century by Muhammad b. Dāūd b. Shāhī-Abād (= Mandū, capital of Malwa in India).

Bibliography: N. von Khanikof, Memoire sur Қa̱ḵan, in the J. A., 1864, Series 6, vol. iv. 147 and v. (1865), p. 296; Muhammad ʿAflī, Luḥāb al-Abāb, ii. 221; Dawlat-shāh, Taqīkāt al-Shawārī, p. 78; J. von Hammer, Gesch. der schonen Künste Persiens, p. 125; Ričā Kuli-khan, Mīzām al-Fugūṣ, i. 200-213; Dīmā, Naṣḥāt al-Uns, p. 707; Sprenger, Cat. of the MSS. of the King of Oudh, p. 461; Milanges asiatiques, iii. 114; Ivanov, Descriptive Catalogue As. Soc. Bengol, Calcutta 1924, p. 201; (Cl. Huart).

Khākānī, a Persian poet of the second half of the xvi. century. His proper name was Muḥammad Bey and he was a descendant of Ayās Pashā [q.v.] who was Grand Wazir under Suleiman I. His life was not eventful; according to Sūdālī ʿOğlanı he was mutasfarraḵ and sandād-bey. Khākānī owes his fame to a not very long māḥsūmī called Hilyat al-Shāfī, written in a triposid ramāt-metāt. This poetry is a paraphrase of an Arabic text known as al-Ḥilya al-Navabiyya containing a traditional account of the prophet's personal appearance; each of the enumerated features is commented on by the poet in twelve to twenty bārs. According to Nādžī the poem has acquired the same degree of popularity as the Mawlid al-Shāfī of Suleiman Celebi. It was printed in Constantinople in 1264 and almost the whole
of it is incorporated in vol. iii. of Diya Paša's 
Karakâbât (Constantinople 1291). As Khâkânî states 
at the end of his poem, it was completed in 1007 
(1508–1599); at that time he had already 
atained a great age. The poet Djevri (d. 1056) 
rote a nasîra to the Hîlya. Of other poems by 
Khâkânî — he is said to have composed a 
Dvwân — are only known a mathâawi called 
Miyyâb al-Futûhât an a ghazal, both in a Gothâ 
MS. (Cat., p. 171). He died in 1015 (1606–1607) 
and is buried in the cemetery of the mosque of 
Edîrûn Kayf. 

Khâkânî is a striking figure in the transition 
period of Ottoman poetry after Bîkî, which is 
characterised by a growing taste for religious subjects.

(J. H. KRAMERS) 

Khâl (a.), maternal uncle. The khâl, al-
though, according to the traditional patriarchal 
family law in Arabia, not actually considered a 
relative of his sister’s son, was in popular regard 
equal to the latter’s father and his father’s rela-
tives. It usually took a good deal of effort to 
fight on the side of one’s paternal relatives against 
those of one’s mother, and to avenge the 
death of paternal relatives also on one’s khâl’s. Special 
stress was generally laid on the noble blood of 
one’s khâl’s because the sister’s children in par-
cular were considered to inherit all noble or 
ignoble traits of character of their khâl’s. 
The Muslim law, which, following the old Arab 
family law, paid most attention to paternal re-
liships, however forbids (on the authority of Sîra 
v. 27) the khâl to marry his sister’s daughter 
because the blood-relationship is too close. 

The word khâl, which often has the more 
general meaning of “maternal ancestor,” does not 
seem to go back to one of the original Semitic 
names of relationship.

Khâl‘a. [See Khâl‘a.] 
Khâl‘ja, a Turkish tribe; the Turkish 
name was probably Khâl‘a (see below). As early as 
the fourth (tenth) century we find the Khâl‘ja 
living much farther south than the other Turks, 
in the southern part of the modern Afghanistan 
between Seistan and India. They are said even 
ten to have had their “in ancient times” (’kadi 
am ali‘yâm) (Al-Istakhri, ed. de Goeje, Bibl. 
Gogr. Arab., i. 254). The word is variously 
translated in Arabic manuscripts, e.g. al-Khâl‘ja 
in al-Istakhri, p. 281 infra; Khâl‘ja also in M. 
Longworth Dames (see the art. Afghanistan; 
J. Marquart (Erâniwâr, Berlin 1901, p. 253) con-
nects the Khâl‘ja with the Khlâdân of the By-
zanține sources and the Khlâdân of the anonymous 
Syriac narrative of the year 554–555 and pro-
cceeds to deduce an original pronunciation Khâl‘ja. 
In favour of Khâl‘ja we have two later Turkish 
popular etymologies, given in the legend of Oghuz 
Khân (cf. the art. Oguz) : kâl‘l “remain hungry!” 
in Rashid al-Din, text and translation in W. Rad-
lof, Kudatka Bilik, vol. i., St. Petersburg 1891, 
Introduction, p. xxii, and kâl‘l “remain open!” 
(imperative) in the anonymous legend preserved 
in the Uighur character (Klid, text p. 249, 
translation p. xiii.). The Khâl‘ja are never mentioned 
as an independent political unit but always as 
mercenaries or guards of foreign rulers; their 
leaders, like those of other Turkish guards, some-
times succeeded in founding independent dynasties, 
especially in India, where the pronunciation Khâl‘ja 
for Khâl‘ja prevails (see the articles following). 
It is usually assumed that the Afghan speaking 
Ghâlai of the present day in the upper valleys 
of the Tarânak, Arghandâb and Afgânan are 
Afghanised descendants of the Turkish Khâl‘ja. 
This assumption is disputed by some German 
Dames (cf. the art. Afghanistan and Ghâlai), 
although he grants that the Ghâlai have a good 
deal of Turkish blood. 

(W. BARTHOLOM) 

Khâlaf b. ’Abd al-Malik [q.v.]. [Seh Ibn 
Bashikwâl.] 

Khâlîli, the adjectival form of Khâlîad, the 
name of a Turkish tribe which migrated from 
Turkistan at a period which cannot be precisely 
ascertained and settled in Western Afghanistan. 
From long residence in this country they were 
regarded, even as early as the end of the thirteen 
century, when Firuz Khâlîli ascended the throne 
of Dîhil, as Afghans. They bore a high reputation 
as statesmen and soldiers, many served the early 
kings of Ghâzni and Ghûr, and many afterwards 
attracted to the highest rank in India, as, for in-
stance, Muhammad b. Bâkhûtâr, the conqueror of 
Bengal, Firuz, just mentioned, who founded the 
dynasty which reigned at Dîhil from 1290 to 
1320, and Ma’mûd, founder of the Khâlîli dynasty 
of Mîrâw (1436 to 1531), who was descended from 
Na’sir al-Din, the eldest brother of Firuz. The Lodi, 
the dynasty founded by Bâhlûl, which reigned at 
Dîhil from 1451 to 1526, were a clan of the 
Khâlîli. 
The late Major H. G. Raverty objected strongly, 
but with little apparent reason, to the identification 
of the Ghilaiz with the Khâlîli. Their identity 
cannot be conclusively established, but the Ghilaiz 
claim a Turkish descent and are found in 
the region where we should expect to find the 
Khâlîli; the corruption of the name is not unnatural 
among Afghans, and if the Ghilaiz are not Khâlîli it is 
difficult to say where the latter are to be sought, 
for no trace of them is found elsewhere, and there 
is no record of their extermination.

Nâîrî, and translation by H. G. Raverty, London, 
1873–1881; Niânâm al-Din Ahmad, Šâhâbâd-i Ab-
barî, and translation by B. Dhê (Bibl. Ind. Series, 
A.S. B.) ; Muhammad Khâsir Firâštî, Ghûlan-i 
îrâbânîî, Bombay 1832. 

(T. W. HAIK) 

Khâlîli or Khâli, the dynasty of Dîhil, was 
found by Firuz al-Din Firuz (see Fârz 
Mâkî=i Khâlîlî) of the Ghilaiz or Khâli tribe 
of Afghanistan. A Turkish descent has been claimed for 
this tribe but they had long been domiciled in 
Afghanistan and were regarded as Afghans.
Ljâlî al-Dîn Frûz ascended the throne in Kilokhri on June 13, 1290, and was murdered at Karra by his nephew and son-in-law, ‘Alî al-Dîn Muhammad, on July 19, 1296. ‘Alî al-Dîn ascended the throne in Dîhilî on Oct. 3, 1296, and captured the two sons of ‘Alî al-Dîn Frûz, Arkuî Khan, governor of Mûltân, and Kâdî Khân, who had been proclaimed emperor in Dîhilî under the title of Rukî al-Dîn Ibrâhîm. Having blinded his two cousins and imprisoned their mother, ‘Alî al-Dîn punished with death and confiscation those amîrs who had deserted his uncle for himself. He annexed Gudjarât, Ranthambhîr, and Cîtor and in a series of expeditions to the Dakhân commanded by his favourite eunuch Kâfîr Hazâzînîrî, entitled Malik Nâ’îb, the Kingsdoms of Warangal and Dvâravatipûra were added to the empire. Five rebellions which occurred early in his reign were crushed with merciless severity and vigorous laws were issued with the object of suppressing disaffection. ‘Alî al-Dîn was dissuaded from a design of declaring himself a prophet and promulgating a new religion by the most famous decrees of his reign were those by which he regulated the price of all the commodities of life and its most disgraceful act was the massacre of between twenty and thirty thousand Mughul converts to Islâm, suspected of disaffection. After ‘Alî al-Dîn’s death on Jan. 2, 1316, the eunuch Malik Nâ’îb, having set aside Khîdîr Khân, the heir apparent, raised to the throne Shihâb al-Dîn ‘Umar, ‘Alî al-Dîn’s youngest son, a boy of five or six years of age, and attempted to blind Kâtûb al-Dîn Mubârak, the second son, but the prince corrupted the eunuch’s emissaries and persuaded them to murder their master. Kâtûb al-Dîn Mubârak then assumed the regency, and, on April 1, 1316, blinded and imprisoned his young brother and ascended the throne. The new emperor gained a fleeting popularity by the reversal of all his father’s harsher measures but his debauchery soon converted the love of his people into contempt. Like his father he was addicted to unnatural vice and was entirely ruled by Khusraw Khân, a vile favourite belonging to one of the scavenger castes of western India. A rebellion in Gudjarât was suppressed and in 1318 Kâtûb al-Dîn marched to Dewâgîrî, where he put to death Harpâl Dewa, son-in-law of Kâmânârâ and appointed a Muhammâdân governor to Dewâgîrî. On his return the emperor caused his three brothers, Khîdîr Khân, Shâdî Khân, and Shihâb al-Dîn ‘Umar, to be put to death, and, after scandalizing his court by indecent debauchery, proclaimed himself supreme pontiff and viceregent of God under the title of al-Wâhid bi-l-lah.

Khusraw Khân, who had been recalled from the Dakhân under a just suspicion of treasonable designs soon regained his master’s confidence and on April 14, 1320, caused him to be murdered in the palace and ascended the throne under the title of Nâsîr al-Dîn Khusraw. His brief reign was marked by the advancement of his profligate caste-fellows and an attempt to restore the predominance of Hinduism in Dîhilî, but Malik Fakhr al-Dîn Dâjwân fêd from the capital to Mûltân and persuaded his father, Ghâzî Malik, governor of that province, to march to Dîhilî for the purpose of restoring the supremacy of Islâm. Khusraw marched out to meet him but was defeated at Indârpat and captured and beheaded. On the following day, Sept. 6, 1320, Ghâzî Malik was proclaimed emperor under the title of Ghiyât al-Dîn Taghlagh Shâh. Bibliography: Diya’ al-Dîn Barâni, Túrijî-i Frûz: Shâh, Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Kâsim Fârîsh, Ghiyât al-Dîn Ibrâhîmî, Bombay lithographed edition of 1832. (T. W. Hârî)

KHALÂDJI (Khalâdji), the dynasty of Mâlîwa, was founded in A.D. 1436 by Mâhmûd Khalâdji, of the same tribe as the Khalâdji of Dîhilî [q.v.]. Dîlawr Khân, founder of the Ghoji dynasty [q.v.], had been accompanied to Mâlîwa by his cousin, Malik Mughîth, and on the deposition of Dîlawr Khân’s grandson, Ghazînîn Khân (Mâhmûd Shâh), Mâhmûd offered the crown to his own father, Malik Mughîth, who declined it in favour of his son. Mâhmûd’s long reign was at first disturbed by rebellions on behalf of the late dynasty, fomented and supported by A’hâmad I of Gudjarât and the nânî of Cîtor. After the suppression of these he was engaged in almost continuous warfare with Gudjarât, Cîtor, Khânîsh, Khecâl, the Dakhân, Dîhilî and Dâjwânîr, and was usually successful, except against the Dakhân. He died on May 30, 1469, and was succeeded by his eldest son, Ghiyât al-Dîn, a mean-spirited monarch who occupied himself chiefly with the administration of his harem, for the management of which he drew up elaborate regulations, leaving the affairs of the kingdom in the hands of this advisers and, latterly, of his elder son, Nâsîr al-Dîn, whom he made his prime minister. The later years of his reign were troubled by quarrels between Nâsîr al-Dîn and his younger brother ‘Alî al-Dîn, who was supported by Râm Khurshîd, the mother of both princes. The King, too feeble to keep the peace, fell alternately under the influence of either faction until, in the autumn of 1500, Nâsîr al-Dîn captured Mândî, put his brother to death, imprisoned his mother, and seized the crown. A few months later Ghiyât al-Dîn died, poisoned, it was suspected, at the instigation of his son. Nâsîr al-Dîn’s warlike qualities found employment in the suppression of rebellions among his amîrs, due to his harshness and in war with the rânî Râyamal Simhâ of Cîtor. His later years were disgraced by debauchery and cruelty, his victims being chiefly his most faithful servants. He nominated his second son, Shihâb al-Dîn, his heir, passing over Shâhîb Khân, the eldest, but Shihâb al-Dîn rebelled and fled from his father’s wrath and Nâsîr al-Dîn was succeeded on his death (May 2, 1517) by his third son, who ascended the throne as Mâhmûd II. Mâhmûd was brave to rashness, but possessed no other virtue and was entirely devoid of political wisdom and administrative ability. He first forfeited the allegiance of his amîrs by the elevation of unworthy favourites, one of whom avenged his dismissal by proclaiming Mâhmûd’s eldest brother, Shâhîb Khân, king, under the title of Muhammad Shâh. Mâhmûd, the creature of a faction, reigned nominally and intermittently from 1510 to 1515, and issued coins. The adherents of Shihâb al-Dîn, Mâhmûd’s next elder brother, also rebelled and proclaimed their leader king, and on his death professed allegiance to his son, whom they styled Hâshang II. After the removal of these pretenders Mâhmûd II became a mere instrument in the hands of Medînî Râyâ, a Râjâpût whom he raised to the position of prime minister of the kingdom and who could command a force of 40,000 horse. He made spasmodic attempts to free himself from his ignominious
position but the result of these was to throw the Rājdūpis into the arms of Sangrama Simha, rājā of Citor, and Mālya would have become a Rājdūpis state but for the first apprehensions of a coalition of the neighbouring Muhammadan states. In 1517 Mahmūd II was compelled to implore the aid of Muẓaffār II of Gudjarāt against the Rājdūpis and, having been restored to his throne, reigned as a vassal of Gudjarāt. After his restoration Mahmūd II, aided by a contingent from Gudjarāt, made war against Citor but was totally defeated and made prisoner by the rānā Sangrama Simha, Bābūr’s Rānā Sangā, who, from motives of policy and generosity, restored him to his throne. His ingratitude to Sangrama’s son Ratan Singh and his foolish encouragement of a pretender to the throne of Gudjarāt, where Muẓaffār II had been succeeded by his son Bahādur II, drew on him the wrath of Bahādur Shāh, who invaded Mālya, captured Māndū, and imprisoned Mahmūd, who was slain on April 12, 1531, by his guards, who suspected an attempt at a rescue. The Khalīḍi dynasty ended with Mahmūd II, and Mālya became for a time a province of Gudjarāt.

(T. W. HAIG)

KHĀLĪD B. ʿABBĀS AL-KĀṢĪ, GOVERNOR OF THE ʿIRĀK. The Khāṣ family to which Khalīd belonged was a branch of the tribe of Badjā [q.v.]; his mother was a Christian. In the year 89 (709/710) or 91 (709/710) he was appointed governor of Mecca by the Caliph al-Walīd. He had obtained his head during the life time of al-Walīd; after the accession of Sulamīn in 96 (715), however, he was dismissed and lived in retirement until in Shawaʾl, 105 (March, 724), Hūsham appointed him successor of the governor ʿUmar b. Hubayra and gave him the administration of the whole of the ʿIrāk. He made his headquarters in Wāsīt. Khalīd had been brought up in the school of al-Hadīdī, and if he was not the latter’s equal in ruthlessness he was not lacking in vigour or tenacity. He did not hesitate to express his opinions freely to the Caliph, and, when Hūsham was planning to exclude his nephew al-Walīd from the succession in favour of his son Maslama, Khalīd vigorously resisted this scheme. In place of winning military glory he preferred to devote himself to peaceful activity and to the economic development of his province, and during his long tenure of office peace and quiet prevailed generally in the ʿIrāk. He paid special attention to the improvement of agriculture. The marshes were drained and great stretches of virgin soil made arable. With this fertile activity for the welfare of the state he was at the same time very successful in furthering his personal interests, and in time acquired immense riches, which, however, aroused the envy and dissatisfaction of the people. Other circumstances also contributed to make the doughy Khalīd unpopular. His predecessor in office, ʿUmar b. Hubayra, had been a prominent champion of Kašt opinions. Khalīd’s appointment as ʿUmar’s successor made the Kaštis regard him as an intruder who had driven ʿUmar from the position to which he was entitled, and from the first created an unsympathetic feeling against him, which in spite of his impartiality estranged him from the Kaštis and threw him closer to the Yamanis. His tolerance of members of other creeds brought upon him the charge of religious indiffer- ence. To please his mother he built a church in Kūfa and granted Christians and Jews generally the privilege of building churches and synagogues, and did not hesitate to give Zoroastrian posts in the government. Khalīd was very little troubled by rebels. In 119 (737) there was a conspiracy of a few Shīʿis led by al-Mughira b. Saʿīd in Kūfa, but it was promptly discovered and the culprits were publicly burned. In the same year a Khādirī named Bahamm b. Bīshr preached a rebellion against Khalīd in the neighbourhood of al-Mawṣil and twice defeated the troops sent against him, but was finally overcome. About the same time a certain Wasīr al-Salḥīṭyānī was active around Kūfa, where he was responsible for assassinations and incendiarism. When he fell into the hands of Khalīd he succeeded by his eloquence and his knowledge of the Kurʾān in so moving the gover- nor that the latter wished to spare him, but the Caliph was inexorable and had him executed forthwith. In the same year the Khādirī al-Salḥīṭ b. Shābīb collected a force and rendered the region of Djaḥbul on the Tigris unsafe, but was soon overcome and put to death with his followers.

Hīshām could not in the long run resist the pressure of Khalīd’s enemies. In 120 (738) he dismissed him and appointed in his place al-Ṭahṣifī, who had been for long governor of the province of Yaman. In Dju- mādī I (April-May, 738) the latter arrived in Kūfa. Khalīd was arrested and taken from Wāsīt to al-Hira, where he was kept in prison with his family for eighteen months, and had to defend himself against charges of embezzlement. After his release in Shawwāl, 121 (Sept.-Oct., 739), he wanted to go to the Caliph but was not allowed. In the following year he settled down in Damascus. Here also he was followed by the hatred of Wāṣuf but was able to live in freedom during the last years of Hīshām’s reign. He was again thrown into prison by Hīshām’s successor al-Walīd, and sold for a vast sum to his mortal enemy, Yūsuf, who had him brought to Kūfa and there tortured to death. Khalīd died in Muharram, 126 (Oct.-Nov., 743), and was buried in al-Hira. According to an- other statement, he was dead by Dhu’s-ʿL-Kaḍa, 125.

(K. V. ZETTERSTEN)

KHĀLĪD B. AL-WALĪD B. AL-MUGHIRA B. AL-MAṢĪḤI, A CONTEMPORARY OF MУHAMMAD AND A MUSLIM GENERAL. In the battle of Uhud,
where Khalid commanded the right wing of the Mekkan forces, and by his intervention at the right moment decided the battle in favour of the enemies of the Prophet he first displayed that brilliant talent for leadership to which in later days Islam owed so many successes. After Khalid had gone over to Islam with ‘Amr b. al-‘As at the beginning of the year 8 (629) he took part in the unsuccessful campaign against the Byzantines, and after the defeat at Mu‘a the town was with difficulty that he succeeded in bringing back the defeated army to Medina. As a reward the Prophet gave him the title of the ”Sword of God”; and in the same year he took part in the entry of the Muslims into Mecca. After the capitulation of the town he is said to have destroyed the sanctuary of the heathen goddess al-Uzza by order of Muhammad.

He was soon afterwards sent as ambassador to the Banu Qayyam [q.v.] and in Radjab of the next year (Oct./Nov., 630) he undertook an expedition against Uqaylid, the Christian king of Dumat al-Djandal (see the art. DUMI AL-SIRJÄN). At the beginning of the year 10 (summer of 631) Muhammad sent him to Najran to convert the Banu ‘Hantib b. Ka‘b to Islam, which was also done without bloodshed. In the following year he was sent by Abu Bakr against Tulaiba b. Khwaisil and defeated him at Baq‘ah (see the art. ASAD) and next turned his attention to the Banu Tamim who dwelled in the vicinity. One clan, which was under Malik b. Nukair, was at feud with the others. When the latter submitted, Malik also laid down his arms but was nevertheless taken prisoner and put to death and Khalid then married his widow. When an accusation was laid before the Caliph against Khalid he is said to have excused himself by saying that the incident was due to a misunderstanding. He said he had ordered warm clothing to be given to the prisoners and had therefore said to the soldiers: ”a‘żu aśrākum” which was interpreted by the Beduins to mean ”kill your prisoners”. In any case Abu Bakr was satisfied with administering a reprimand to him and kept him in office in spite of vigorous protests from Umar. Soon afterwards Khalid took the field against the fair ”Sword of God.” At Asr ‘Arab, on the frontier of al-Yaman, the Muslims were defeated and killed, whereupon his followers submitted (beginning of 12 = beginning of 632).

Khalid was then sent against the Persians. In Rabi‘ I, 12 (May–June, 633), or perhaps some months later he conquered al-Hira and soon afterwards occupied the whole Euphrates area. The Byzantines are said to have finally crossed the Euphrates and to have been defeated at al-Fir‘ad (Dhu ‘l-Ka‘da, 12 = Jan., 634) and in Muharram of the following year (March/April, 634) or, according to others, not till Rabi‘ II (June) Khalid set out on his campaign against Syria. In Djumada I or II (= summer of 634) the Byzantines were completely defeated at Adjudanin and retired to Damascus. Defeated again by Khalid, they were surrounded and besieged and in Radjab, 14 (Aug./Sept., 635), Damascus had finally to surrender. About the same time Khalid was deprived of the supreme command and replaced by Abu ‘Ubaidah b. al-Djarrä [q.v.] but continued to take part in the military operations in Syria. In the battle of the Yarmuk on Radjab 12, 15 (Aug. 20, 636), he commanded the cavalry and contributed largely to the victory of the Muslims. Himş was recaptured soon afterwards. Khalid then advanced against Khirbatin and after he defeated a Byzantine army under Minas the town had to surrender and Khalid took up his quarters here for the time. He was for a time governor of a part of Syria but was later dismissed. He died in Himş or Medina in the year 21 (641–642). A. Müller (Der Islam, i. 257) has admirably described him as follows: ”He was one of those characters whose military genius is the whole of their intellectual life; like Napoleon, he cared for nothing but war and did not want to learn anything else.”

Khalid Ziya, Uskaki-Zaide, the leading writer of prose and fiction in modern Turkish literature. Born in 1262 (1886) in Constantinople of a prominent family which came originally from the carpet town of Uskak — hence the epithet Uskak-zade — he spent his youth in Constantinople and Smyrna. He received his education from the Mechitarists in Smyrna. This laid the foundations of his love for and knowledge of the west. He translated industriously from the French and made literary attempts of his own. The collection called Nâbih in 6 volumes contains stories of his own alongside of translations from the most important French writers of fiction. In Constantinople he founded the paper called Neuriia and published the introduction (Melkat) to his never finished Gharibden Sharq Sisila Edebiye (Literary Current from West to East) in Constantinople in 1302 (1888). In Smyrna he continued his literary activity with the foundation of the periodical Khidżim in which his novel Sefile and his Menhüz Şîkrî (”Poems in Prose”) appeared in 1307 (1887); their unusual form aroused a storm of indignation until Ekrem defended them (specimens in Bikeran, Tureckj sbornik, St. Petersburg 1909).

In Smyrna he published in five series his Kaşik Kitaablâr which contain various literary productions, e.g. Bir Muhţerîmîn soû Yaprâkarî (”The Last Leaves of a Notebook”); Bir Islâmî-ajîbki Türkî- Muâshizat (”The Love-story of a Marriage”); Hi-kaya, Temâzi, his Menhüz Şîkrî reappeared in it) and Mezârîn Siser (”Voices from the Grave”), Smyrna 1307 (1889). At the same time he published a whole series of popularly written scientific treatises, with which he endeavoured to spread European learning, for example: Hamî ve-wa-fi Hamî; Kânîn ve-Fenn-i Wilâde; Mîb-hath al-Kîsî; Mîb-hath al-Ki-yâse; ’Imî Simâ; ’Imî Nûsûn; Hûsûb Oynularî; Hikicet Oynularî;
Bikalanın-i Kimiyá; Siniyáv-ı Kimiyá; and the anciodal Taht-i Leşif (1308). It is characteristic of his versatility that he even studied Sanskrit which, however, involved him in difficulties with the ever suspicious government.

Next came the novels Nümide ("The Hopeless Woman"), Constantinople 1311 (1893); Bir Ölınmın Deşteri ("The Diary of a dead Man"), Constantinople 1311, still bearing the imprint of the Alevi censor, which has been translated into German by Haiib Edib in 1918 (Romant des neuen Orient, Berlin), and Ferdi ve Şahvâri ("Ferdi & Co"), Constantinople 1812, dramatised by Ahmed Reâf, Constantinople 1325.

A new period began with his taking over the editorship in 1896 of the periodical Tercümet-i Fünumin to which he has contributed since the poet Tewfik Fikret [q.v.] gave an entirely new form. He opened the new period, which is known as the Tewfik Fikret and Khalid Ziya period, with his novel Mâvî ve-Siyâh ("Blue and Black") (1317 second ed.; 1338 eighth ed.). In the Edebiyât-i Düşûde Kütûb-kâhisi, a new foundation important for modern literature, appeared his next works, the novels Bir Yûnûş Türkiye ("The Story of a Summer") (Constantinople 1318) and Àkkî-Mevvâni ("Forbidden Love"), No. 4 (1316); with Mâvî ve-Siyâh his best novel, and the collection of short stories Selçuk Demet ("The Withered Wreath"), No. 8 (Constantinople 1317), from which a whole series of stories has been translated into French and German (Kaufmann, Türkische Erzählungen, Munich 1916; Die Neue Türkei, Constantinople 1306, etc.). The series ended with his Kitâb Hayâllar ("Broken Lives").

When, as a result of an article by H. Djâhid, the paper was suppressed, Khalid wrote absolutely nothing till the revolution and confined himself to his official work as first secretary to the Tobacco Regie. After the revolution he displayed a feverish literary activity and lent his collaboration to every possible periodical. The novel Nesli Àkkî ("The last Family") in the Sûâtî and many contributions to the İdâm, Tercümet-i Fünumin, Kesimî, Kitâb, Mehâsin etc. are evidence of this. At the same time for a certain period he lectured at the University of Constantinople on aesthetics and foreign literatures and wrote letters from Germany describing his travels there. His activities in this direction were interrupted by his appointment as first secretary to the palace of Sultan Mehemet V in 1909.

It came as a surprise when in 1918 he suddenly entered the ranks of dramatists with his Kullhas (1334), in which he demanded the same rights of divorce for women as for men. The play Furûtân (1334) is one of the adaptations of the "Francillon" of Dumas fils now so popular in Turkish literature.

A third drama, Fârî, is now announced as well as the new collections of stories: Bir Hikâyey-i Sûâtî (1338); Bir Şehr-i Kâyâyl and Onu bekleter, and works on literary history: Kınârde Kalmış and Eski Şehler.

With the poets Tewfik Fikret and Dînâbî Şehâb ed-Dinc, Khalîl Ziya is the principal founder of the modern occidentalising literature. Deliberately turning from the East, rejecting the eastern spirit and the Turkish Muslim attitude to life, they sought to create a modern literature with European affinities with the motto "art for art's sake", after the compulsion to write in Persian and Arabic forms had first been cast off by their predecessors.

With Serayî, Khalîl is the founder of the modern literary novel. He worked especially at the short story, of which he seems to be the greatest master. He is an artist and a poet. He is marked by great sentimentality and a pessimistic outlook, which only later gave place to a more reconciled attitude. He is an acute psychological observer. But he is an absolute Westerner, a Frenchman in Turkish dress. He has not unjustly been called the Turkish Alphonse Daudet. His writings contribute little to our knowledge of the Turks. In spite of the Levantine milieu he is strictly moral. He tells a story vividly and attractively; his style is clear. But his language is still markedly laden with Persian and Arabic words. He paid most attention to style, which owes much to him, for it is he who created the language of modern Turkish fiction. He has taken no part in the recent nationalist development in Turkey. He has remained the old cosmopolitan.

Hartmann, Aus der neueren osmanischen Literatur, M.S.O.S.A., 1916, xix, 152; do., Dichter der neuen Türkei, Berlin 1919, No. 15, p. 60; A. Fischer and A. Mahieddin, Anthologie aus der neueren türkischen Literatur, Leipzig 1910, v. 7; Th. Menzel, Die türkische Literatur, in Himebeer-Kultur der Gegenwart, Die orientalischen Literaturen, Leipzig 1925, p. 310. (TH. MENZEL), AL-KHALIDAT, full form AL-DJAZIR EL-KHALIDAT, probably with allusion to the Arabic Khalîd, the Eternal Islands, are usually called Djaizir el-Sa'âda "Isles of Bliss" by the astronomers, a translation of the Greek Mistan Nôsu which probably came to the Arabs through the translation of Ptolemy. Al-Bakri also knew the Latin name Fortunatae Islands, in the form Forfüstâsh, they are the Canary Islands. Al-Beruni and al-Idrisi speak of six islands, al-Maâkari of seven, and al-Idrisi mentions two by name: Masfâhân and Lâghûs; according to Dozy and de Goeje, the former corresponds to the modern Tenerife, the latter probably to Gran Canaria. According to al-Beruni, they are nearly 200 parasangs (600 miles) from the mainland, while al-Maâkari says that on a clear day they are visible from Sarî. The meaning of the name given by al-Bakri points to the flourishing vegetation of the islands. "Trees and shrubs bring forth all kinds of pleasant fruits without it being necessary to plant or tend them, and the soil yields grain instead of weeds"
and valuable fragrant herbs instead of thorns". On Masafah as well as on Lughat there was a high pillarelike building (janam) of hewn stone, a hundred ells high and crowned by a figure of brass pointing backwards with his hand to the high seas. In Masafah this red column stood on a round hill; the column on Lughat could not be climbed. These were regarded as warnings to shipping to sail farther to the west (al-Maṣkari) says that each of the seven islands had a similar column; according to him, these were idols (qiblat) in the form of men. He distinguishes the Djà'za r al-Sa'da from the Djà'za r al-Khalīdīt and says that the former were of the latter and the first of them is Britain).

Among legendary features of the Arab descriptions of the islands we may mention the following. Since in Ptolemy and the Arab geographers who follow him the longitudes are calculated from the meridian of one of these islands (cf. the older European calculation from the meridian of Terro), it was thought that there was a race of astronomers living on the island; according to al-Maṣkari the "Christian Magicians" came from the Djà'za r al-Khalīdīt and lived as he were idol (qiblat) among them, he is apparently thinking of the Druids of the Celts. Dhu l-Karnain [q. v.], i.e. Alexander the Great, is said to have reached the Khalīdīt. The Himyarite Asad Abū Karib is said to have built the column in Masafah and he also is given the epithet Dhu l-Karnain. The column of Lughat is said to have been built by another South Arabian of the legendary past, Tuba Dhu l-Maraṭib; his tomb is said to exist there in a temple of marble and brilliantly coloured glass. The stories regarding "terrible wild beasts" on the island of Lughat given by the author of the "Book of Marvels", which al-Idrīsī hesitates to repeat, are probably the same as those given by al-Kawzānī on the authority of Abū Ḥanīfī al-Andalusi in his description of the Western Sea. There is also a description of a column on an island called Madīna al-Tarnī.

We may assume that there was trade (indirect) between the Canary Islands and Arabia even in the days of the ancient Arabs, if "andam "dragon's blood" came from Dracaena Dracaena; probably however, it came from another (Indian) plant.

**KHALIFA,** "successor, vicegerent", title of the supreme head of the Muslim community, the Imām [q. v.], as successor or vicegerent of the Prophet (khāliṣfat rasūl Allāh).

I. The word appears frequently both in the singular and the plural (khalīṣf, khalāfān) in the Karāf; in the latter case, the persons referred to are called "successors" as entering into the blessings enjoyed by their forefathers (e.g. vi. 165; xxvii. 15; xxvii. 15; xxvii. 63, used of the righteous; vii. 67, 72, of the idolatrous tribes of 'Ād and Thamīl); the singular is used of Adam (ii. 28), either as successor of the angels who lived on earth before him, or as representative of God, and of David (xxviii. 25). "We have made thee a Khalīf in the land; then judge between men with the truth, and follow not thy desires, lest they cause thee to err from the path of God." In none of these verses is there any clear indication that the word was intended to serve as the title of the successor of Muhammad. Muslim historians commonly assert that it was first so used by Abū Bakr; it is doubtful, however, whether he ever assumed it as a title (Cuvant, Annales d'Island, ii. 52 n.). But from the reign of 'Umar, it has been the common designation of the Amīr al-Mu'āminīn [q. v.]. The designation khāliṣfat rasūl Allāh, "successor of the apostle of God", implies assumption of the activities and privileges exercised by Muhammad, — with the exception of the prophetic function, which was believed to have ceased with him; the latter phrase, khāliṣfat Allāh, "vicegerent of God", implies a bolder claim, and is said to have excited the indignation of Abū Bakr, but it was used as early as 35 a.H. by Hassan b. Thabit in an elegy he wrote on the Khalīf Uṯmān (ed. H. Hirschfeld, xxx. 1, 9), and it became and is common under the 'Abbasids and later princes (Goldziher, Muḥammadische Studien, ii. 61).

In the course of Muslim history, however, the term Khalīfā has not been confined to such exalted reference. As early as the first century of the Hijra, it was used in the Aphrodito papyri for the ἀσκετοῦς or agent at the capital through whom the local official of the finance department made payments of taxes (Greek Papyri of the British Museum, vol. iv., pp. xxv. 35; C. H. Becker, Islamstudien, i. p. 257). It has frequently been used as a personal name (see Index to Tābarī, etc.). In the religious orders, especially among the Kādiyya, the Khalīfā is the delegate of the Shāikh of the order and is invested with a certain amount of his powers and represents him in countries remote from the parent zāwiya. Among the Tādiyya, the Khalīfā is the inheritor of the spiritual power (baraka) of the founder of the order, to whom alone the title Shāikh is applied (O. Depont and X. Coppolani, Les conférences religieuses marocaines, pp. 194—195, Alger 1897; L. Rinn, Moralistes et Khōnānum, p. 78, Alger 1884).

In the Mahdist movements, the Khalīfā is the successor of the Mahdī; Mir Dīlaw was thus Khalīfā of Sajīd Muḥammad Mahdī (ob. 910 A.H.) the founder of the Mahdīs [q. v.]; Abū Allāh was the Khalīfā of Muḥammad Ahmad the Mahdī of the 'Ādīn; and the son and successor of Ghalām Ahmad Kādiyyān (s. i. p. 206) is so described by his followers at the present day. Humber persons have also received this designation, e.g. in the household of the Emperor Bābūr, Khalīfā denoted a woman who exercised surveillance over other women-servants, (Gul-badan Begam, Humayūn-nama, translated by A. S. Beveridge, p. 136). In more modern times, the word Khalīfā was commonly applied in Turkey to any junior clerk in a public office (C. M. d'Osselin, Tableau général de l'Empire Ottoman, ii. 271), and is still a title in respect for an assistant teacher in a school. In Morocco it indicates the deputy of the governor of a city (L. Meakin, The Moorish Empire, p. 224). In modern India it is used even of such insignificant persons as a working tailor, a barber, a fencing master or a cook (H. A. Rose, Glossary of the

Encyclopédie de l'Islam, II.
Tribe and Caste of the Punjab, ii., p. 490. Lahore 1911). In Togo and neighbouring parts of W. Africa, alfa (or Khalifa) denotes a Muslim teacher or even Muhammadans generally (Die Welt des Islam, ii., p. 200).

Bibliography: In addition to the works already quoted, see Goldziher, Du sens propre des expressions Ombre de Dieu, pour désigner les chefs dans l'Islam (K. H. R., xxxv., 1897); D. S. Margoliouth, The sense of the title Khalifa (A Volume of Oriental Studies presented to Edward G. Browne, p. 322—328).

II. As a distinction can be drawn between the history of the Khalifa, or of the political institution of which the Khalifa was the head, and the theories connected with it, and as the former was chronologically prior, it is proposed here to deal with it first.

1. History. The immense wealth and power acquired by the early successors of Muhammad, through the conquest of such provinces of the Roman Empire as Syria and Egypt, together with the dominions of the Persian king, raised them to a status and a dignity which gave to the humble title they bore a new significance; so even before the Arab conquests had reached their limit, the Khalifa had become one of the most powerful and wealthy monarchs in the world. As Amir al-Mu'minin [q.v.] he was commander of these conquering armies and so he described himself on his coins; as Imām [q.v.], he took the foremost place in public worship and delivered the Khutbah [q.v.] in the mosque; as Khalifa he claimed from his Muslim subjects some of the reverence that had previously been paid to the founder of their faith. The civil war that broke out in the reign of 'Ali b. Abi Talib laid the foundation for those rival theories as to the qualifications of the Khalifa, which took definite shape in political and sectarian doctrines. Under the Umayyads [q.v.] the religious associations of the office of the Khalifa were not emphasised, though many of them kept up the practice of leading the public worship, for (with the exception of 'Umar b. 'Abd al-Aziz [q.v.]) religious considerations appeared to have had little weight with them, and it was mainly in Medina that the foundations of Muslim dogma and the systematisation of the Shar'īa [q.v.] were laid, with little encouragement from the Khalifas in Damascus. The claim of the descendants of 'Ali to the leadership of the Muslim world found expression in the formation of the Shi'a party [q.v.], but for some generations their efforts met with no political success. The 'Abbasids [q.v.] came into power largely through their pretended support of 'Abd claims, and largely too through their professions of religious zeal. In Bagdad the Khalifas took on a new character; the Khalifa became a generous patron of the 'ulama' and laid emphasis upon his function as protector of the religion of Islam, and under his fostering care the capital took the place of Medina as the chief centre of theological activity, and the great schools of Law (see the art. right) received definite shape. The Khalifa was no longer regarded as a mere secular monarch, as many of the Umayyads had appeared to be in the eyes of devout Muslims, and the awe with which he was regarded was enhanced by the elaboration of court etiquette and ceremonial. The 'Abbasids, especially in their early days, had generally been readily accessible to their subjects; Mu'tawwiya [q.v.] had preserved in a great measure the frank, familiar manners of an Arab chief of pre-Islamic times, and moved among other Arab chiefs as prinses inter partes. But in the new capital, the traditions of the Persian monarchy reasserted themselves, the 'Abbasid sat on his throne in solemn majesty, surrounded by his guards, the executioner with drawn sword by his side. At the same time he emphasised the religious aspect of his office by wearing the mantle of the Prophet, and his relationship to the Prophet was reiterated in official documents and in the rubrications of eulogists and court flatterers.

From the 9th century onwards, the direct control of the Khalifa over the administration weakened in consequence of the increasing delegation of power to the Wāzir [q.v.] and the growing elaboration and efficiency of the government offices (v. art. Wāzir). About the same period began the decline of the temporal power of the Khalifa, in consequence of the break-up of the empire and the rise of independent principalities in the various provinces, till at last his authority hardly extended beyond the precincts of the city of Bagdad. Concurrently with this decline of his temporal power, increasing stress was laid on his position in the religious order, as Imām [q.v.] and as the defender of religion, and the persecution of heretics and of the adherents of non-Muslim faiths increased. By the year 946 all effective power had passed out of the hands of the Khalifa, and there were to be seen in Bagdad three personages who had held this high office, but now deposed and blinded were dependent for their livelihood upon charity. From this period until 1055 the Khalifa for the first time being was but a puppet in the hands of the Buways [q.v.] and the Seljūqs [q.v.] successively. But in spite of his entire lack of administrative authority, men could not forget the great position once held by his ancestors, and the important Khalifas was still regarded by theorists as the source of all authority and power in the Muslim world. Accordingly, there were to be found independent rulers who sought from him titles and diplomas of appointment, e.g. Mahmūd of Ghur [q.v.], when he renounced his allegiance to the Sāmānid prince in 997, received from the Khalifa recognition of his independent position, together with the titles Yāmīn al-dawla, Amin al-milla; and about a century later, Yūsuf b. Taṣṣifin, the founder of the Almōāvīd dynasty of Spain, received the title of Amir al-Muslimin from the Khalifa Mu'āwīya. When in 1175 Saladin [q.v.] assumed the sovereignty of Egypt and Syria, he was confirmed in this rank by the Khilifas, who sent him a diploma of investiture and robes of honour. The founder of the Rasālīd [q.v.] dynasty in the Yemen, Nūr al-Dīn 'Umar, likewise asked the Khalifa for the title of Sūltān and a diploma of investiture as his lieutenant, and Musta'sīm in 1235 sent a special envoy with the required document. This same Khalifa had in 1220 responded to the request of Iltutmish [q.v.], the Turkish ruler of Northern India, for the title of Sūltān and for confirmation in the possession of his dominion; and succeeding kings of Dīlīn continued to put the name of Musta'sīm, the last Khalifa of Bagdad, upon their coins for more than thirty years after this unfortunate prince had been put to death by the Mongols.

In contrast to this recognition of the Khalifas in Bagdad as the legitimate source of authority,
is the establishment of two rival Khalifs; in 928 'Abd al-Rahmân III of Spain assumed the title of Khalîfa, which continued to be borne by his descendants; these 'Omaysids of Spain, like their predecessors in Damascus, were Sunni's; but the Fatîmids of Egypt, whose founder styled himself Khalîfa first in Mahdiya in 909, were Shi'ite's, and were serious rivals to the 'Abbasids in Bagdad until the destruction of their dynasty by Saladin in 1171.

In 1258 Hulagu [q. v.] captured Bagdad and put to death the Khalîfa Mustâ'în, who perished, leaving behind him no heir. The catastrophe was without parallel in the history of Islam, and for the first time in the Islamic world found itself without a theoretical head whose name could be mentioned in the Khalîfa in the mosques on Fridays. Two members of the 'Abbasid family, who had escaped, the massacre in Bagdad, took refuge one after the other with the Manûlûk Sulûn of Egypt; the first, an uncle of Mustâ'în, was invited by Baibars [q. v.] to Cairo, and was there installed with great pomp as Khalîfa in 1261. Baibars is said to have conceived the idea of re-establishing the 'Abbasid dynasty in Bagdad and left Cairo with a large army, but after he had reached Damascus he persuaded the Khalîfa with only a small body of troops, which was destroyed by the Mongols on its way through the desert, and nothing more was ever heard of the Khalîfa. The second claimant arrived in Cairo in 1262 and was similarly installed as Khalîfa, but no attempt was made to repeat the rash experiment of regaining Bagdad, and the Khalîfa was kept a virtual prisoner in Cairo, though treated with outward marks of respect. For more than two centuries and half, his descendants one after another continued to hold this shadowy office in Cairo, dependent on the bounty of the Manûlûk Sulûn, who found the Khalîfa useful as lending a show of legitimacy to his rule. Each new Sulûn was ceremoniously installed by the Khalîfa, to whom he in turn paid allegiance. But not a single one of them (with the exception of Mustâ'în, who was made the plaything of rival political factions in 1412 and for six months was styled Sulûn) ever exercised any function of government or enjoyed any political power. Makriî [q. v.] describes his time among the nobles and officials, paying them visits to thank them for the dinners and entertainments to which they had invited him (Histoire d'Egypte, ed. E. Blochet, p. 76).

The rest of the Muslim world outside Egypt for most part ignored the existence of the 'Abbasid Khalîfa in Cairo. From the 13th century there had been Sunni Khalîfa in the Maghrib, and from time to time various princes in the eastern lands of the Muhammadan world assumed this title, Seljûks, Timûrs, Turkmans, Uzbek and Ottomans.

But a small number of independent princes, desiring to legitimate their claim to the obedience of their subjects, asked for formal recognition of their position and a grant of titles from the Khalîfa, e. g. the first two princes of the Ma'djarid dynasty in southern Persia (1313–1354); Muhammad ibn Tughlak (1325–1351) and his successor on the throne of Delhi, Firuz Shah (1351–1388); even Bayâzîd I [q. v.] is said to have applied in 1394 to the 'Abbasid Khalîfa in Cairo for a formal grant of the title of Sulûn (v. Hammer, Gesch. d. Osman. Reiches, i. 105), but doubt has been cast upon the accuracy of this report. For, from the latter part of the 14th century, when after the conquest of Adrianople, Philippopolis etc. his father, Musul I, was styled 'the chosen Khalîfa of God' (Firûdîn, i. 293), it became common for the Ottoman Sulûns, as for other contemporary Muhammadan potentates, to claim for themselves the Khalîfa and to find this claim recognised by their subjects and their correspondents in other lands. The qualification of belonging to the tribe of Kûsaî was ignored and sanction was sought for the usage in such verses of the Kur'ân as xxxvi. 25: 'We have made thee a Khalîfa on the earth'; and this and similar verses (e. g. vi. 165; xxx. 37) are constantly quoted in the diplomatic correspondence of the period. So when Selim [q. v.] made his victorious entry into Cairo in January, 1517, and made an end of the 'Abbasîd Khalîfa, by transporting the last representative of it, Mutawakkil, to Constantinople, he had already been accustomed to the use of the title Khalîfa as applied to himself, and to his ancestors for a century and a half. The legend that Mutawakkil made a formal transfer of his dignity to Selim was first published by Du Bos, 1707 (Tableau général de l'Empire Ottoman, i. 265–270, ed. 8vo, Paris, 1788–1824). None of the contemporary authorities who record the conquest of Egypt make any mention of such a transference of the office, and after the death of Selim, Mutawakkil was allowed to return to Egypt and was Khalîfa there until his death in 1543. For the next two centuries, there were only two Muhammadan potentates whose extent of territory and power could add dignity to the title of Khalîfa (in contrast to the indiscriminate use of it by insignificant princes) namely, the Ottoman Sultan and the Mughal Emperor in India. With the fall of the Mughal empire in the 18th century, the Ottoman Sultan became manifestly the greatest figure in the Muslim world; but even his power was being threatened by his aggressive neighbour on the north, and after the war with Russia (1768–1774) he was obliged to surrender territories on the north shore of the Black Sea and recognise the independence of the Tartars of the Crimea. Catherine the Great claimed the patronage of the Christians of the Orthodox Church dwelling in Ottoman territories, and the Ottoman plenipotentiaries who negotiated the treaty of Kûcûk Kainardji in 1774, took advantage of the title of Khalîfa, to make a similar claim for the Sultan, and get inserted in the treaty a clause asserting the religious authority of the Khalîfa over the Tartars who had ceased to owe him allegiance as a temporal sovereign. From this period onwards, it became a common error in Christian Europe to regard the Khalîfa as the spiritual head of all Muslims (just as the Pope is the spiritual head of all Catholics), and to credit him with the possession of spiritual authority over his co-religionists, though they might not owe him civil obedience as Sulûn of Turkey. There is reason to believe that this widespread error in Christian Europe reacted upon opinion in Turkey itself. Particularly in the reign of Sultan 'Abd al-Hamid II (1876–1909), emphasis was laid on his position as Khalîfa, and in the Constitution promulgated at the beginning of his reign it was affirmed that "I M. the Sultan, as Khalîfa, is the protector of the Muslim religion." He appears to have sent emissaries
to different parts of the Muhammadan world to encourage reverence for his own person as Khalifa, and his efforts met with a certain response, since thoughtful Muhammadans (and especially those whose minds were disturbed by the growing control of European Powers over the affairs of the Muhammadan world) recognised that Turkey was the only independent Muslim power left, which was of any account in the civilised world. But the dynamical and reactionary character of Abdul-Hamid's government, his cruel suppression of all liberal movements and all efforts for constitutional reform, alienated the more enlightened sections of his own subjects, and when he was deposed in 1909, the affairs of Turkey passed under the control of a body of men who had little sympathy with the Islamic spirit and realised the impossibility of reconciling an autocracy that claimed to be based on divine revelation with modern constitutional methods of government. In November, 1922, Turkey established a republic and abolished the Sultanate, leaving the Khalifa shorn of all temporal power; but it had not become clear what were to be the functions of the new Khalifah before, in March, 1924, his office was abolished altogether.

In the above account, attention has been confined to the history of Sunni Khalifahs which has played the most important part in Muhammadan history. The two other Sunni Khalifahs, that of Spain and that of the Maghrib, have been only of local importance, and did not inspire loyalty in any other parts of the Muhammadan world; nor has the assumption of the title Khalifa by some of the princes of Java been recognised except by their own subjects. Among the Shi'a, the attempts made from time to time to secure for the Alids a position of power and independence, met with but scant success, and the Fatimids [q. v.] of Egypt represented the only Shi'a Khalifah of any importance. In Persia the establishment of the Safawids [q. v.] dynasty in 1502 did not succeed in making Shi'ism the State religion in Persia until long after the doctrine of the hidden Imam had become a cardinal doctrine of the Sh'a faith in that country.

Bibliography: An enumeration of the sources for the history of the Khalifa would comprise the major part of the historical literature of the whole of the Muhammadan era. For the Arabic sources F. Wustenfeld, Die Geschichts- schreibung der Araber und ihre Werke, and C. Brockelmann, Geschichte der arabischen Literatur may be consulted. Among the more important sources may be mentioned: Tabari, Annals; Ibn al-Azhir, Chronicon; al-Suyuti, Tarikh al-Khalifa and Hama al-Mahjarah; al-Maqari, al-Sulhia li-Mursiwa Dowl al-Malik (partly translated by Quaerevere in Historie des Sultanat Mustrebec); al-Maqrizi, Nafr fi Tarih Chroniken der Stadt Mecca, ed. F. Wustenfeld; Rashid al-Din, Qamari al-Tabarizzi; Ahmad Firdausi, Manzuri at-Saltana; Mustafa Sabri al-Tahiri, al-Nafir ila munirat al-matni min al-da'wah wa'refahiyati wa-luma'ama, Bahrul, 1924. Among European writers, Ca'ertini, Annali dell' Islam (Milano, 1905 sqq.); W. Weig, Geschichte der Chalifen; 5 vols. (1846—1862); E. Muller, Der Islam im Moslem und Abendland (1855—1887). W. Muir, The Caliphate; J. von Hammer, Geschichte des Osmanischen Reiches; A. de la Jonquière, Histoire de la conquête ottomane, 2nd ed. (Paris 1914); Oriente Moderno (Rome 1921 sqq.); C. A. Nallino, Le stori dei califfi di Colgato ottomana (Rome 1921 sqq.); R. Hartmann, Wesen u. Entst. des islam. Chalifats, 1 cykl. 1924; H. Ritter, Die Abschaffung des Khalifats (Arch. f. Politik und Geschichte, iii. 349 sqq., Berlin 1924). 2. Political Theory. As stated above, the theory of the Khalifah was largely an outgrowth from the political circumstances of early Muhammadan history, but speculation has elaborated many forms of the doctrine that have failed to secure for themselves expression in actual historical facts. Al-Shahristani (ed. Cureton, p. 12) says that no article of faith has given rise to such bloodshed and contention in every period of Muslim history as this. (a) The orthodox Sunni doctrine first found expression in the Hadith, which emphasised pre-eminently two essential characteristics of the Khalifa; one, that he must be of the tribe of the Quraysh (Qins al-'Uma'id, ill., No. 2583; vi, No. 3454, 3469), and the other, that he must receive unhesitating obedience from all the rebels against the Khalifah, rebels against God (id. ill., 2580, 2999, 3008). This claim on obedience to the despotic power of the Khalifah as a religious duty was impressed upon the faithful by the designations that were applied to him from an early date, — Khalifah of God, and Shadow of God upon earth. The first systematic exposition of the generally accepted doctrine is found in Mawardi's al-'Askar al-Sulhania (ed. R. Engler, Bonn 1853; Cairo 1298, 1327; trans. E. Fagnan, Alger 1845). Mawardi insists upon the following qualifications in a Khalifah: — membership of the tribe of Quraysh, male sex, full age, good character, freedom from physical or mental defects, competency in legal knowledge, administrative ability, and courage and energy in the defence of Muslim territory. In spite of the fact that the office became hereditary in two families successively, the Umayyad and the 'Abbasid, Mawardi maintained that it was elective, and was at pains to reconcile the doctrine of election with the historic fact that from the reign of Mu'awiya (661—680) [q. v.] Mawardi has not been a Khalifah who ever had nominated his successor. The fiction of election was preserved in the practice of hajja [q. v.], that is taking of the oath of allegiance, first by the nobles of the court and then by the general assembly before whom the new Khalifah was proclaimed. The functions of the Khalifah were defined by Mawardi as follows: the defence and maintenance of religion, the decision of legal disputes, the protection of the territory of Islam, the punishment of wrong-doers, the provision of troops for guarding the frontiers, the wages of ghilaf [q. v.] against those who refused to accept Islam or submit to Muslim rule. In the organisation and collection of taxes, the payment of salaries and the administration of public funds, the appointment of competent officials, and lastly, personal attention to the details of government. About three centuries later Ibn Khaldun [q. v.] approached the subject in a more critical spirit and discussed the institution of the Khalifah in his Muqaddima (chap. 25—8.); written between 1375 and 1379; he faced the facts of history and recognised that with the disappearance of the Arab supremacy there was nothing left of the Khalifah but the name. His account of the origin and purpose of the institution agrees with that given by
Mawardi; the Khalifa is the representative (wā'ilāt) of the Prophet, the exponent of the divinely-inspired law (shari'a), and his functions are the protection of religion and the government of the world; he must belong to the tribe of the Kurāsh and possess the other personal qualifications laid down by Mawardi. But there were other legists who frankly faced the fact that force had taken the place of theory in the Muslim world, and worked out a constitutional theory accordingly; of such writers Abū al-Dīn Ibn Dāvūd (q.v.) 733 = 1333) is a typical example; in his Tadhrīr al-Ahkhār fi Tadbīr Millat al-Islām (K. K. Hofbauer, Wien 1830), he lays it down that the Imām may obtain his office either by election or by force; in the latter case allegiance must be paid to an Imām who by force of arms seizes the office, and such usurpation is justified in consideration of the general advantage and unity of the Muslim community gained thereby (fol. 7–8). Another school of legists abandoned all such attempts to justify the fluctuating course of Muslim history and based their doctrine on the Hadith that the Kurāshīs endured for only thirty years, i.e. up to the death of 'Ali (Kanz, ii, No. 3512); this was the view of al-Nasafi (q.v.) (ob. 1337 = 1422) (see al-Iskandar, ed. Cureton, London 1851, p. 34), and it was adopted by the great Turkish jurist, Ibrāhīm Halāl (ob. 1549), whose Muṣāfaka l-Aḥkām became the authoritative code of Ottoman law. (6) The Shi'i theologians made the doctrine of the Imāmate a cardinal principle of faith; they laid stress on legitimacy, and confined the office of the Khalifāt not merely to the Kurāshī but still further to the family of 'Ali; with the exception of the Zaidīya (q.v.), they rejected the doctrine of election, and held that 'Ali was directly nominated by Muḥammad as his successor and that 'Ali's qualifications were inherited by his descendants, who were pre-ordained by God for this high office. Muḥammad is said to have communicated to 'Ali certain secret knowledge, which was in turn handed on to his son and was thus carried on from generation to generation; each Imām possesses superhuman qualities which raise him above the level of the rest of mankind, and he guides the faithful with infallible wisdom, and his decisions are absolute and final. According to some, 'Ali owed this superiority to a difference in his substance, for from the creation of Adam a divine light passed into the substance of one chosen descendant in each generation and has been present in 'Ali and in each one of the Imāms that succeeded him. The sectarian development of Shi'a doctrine was considerable, see art. EINX ASHARIVA, MUṢĀWILA, SAṬ'YA, ZAIĐYA. (Bibliography: al-Shāhrastānī, Kitāb al-Millat wa-l-Nihāl, p. 108 sqq.; Ibn Khalidin, Prolegomena, i, p. 400 sqq.). (7) The antithesis of Shi'i doctrine was taught by the Khwāridjīs (see KHARIJĪJTES), who so far from confining the office of Khalifā or Imām to any one tribe or family, held that no believer was eligible, even though he were a non-Arab or even a slave; they further separated themselves from other Muslims in maintaining that the existence of an Imām is not a matter of religious obligation and that at a particular time the community can fulfil all the obligations imposed upon them by their religion, and have an entirely legitimate form of civil administration, without any Imām being in existence at all; when, under special circumstances, it may be found convenient or necessary to have an Imām, then one may be elected, and if he is found to be in any way unsatisfactory, he may be deposed or put to death (al-Shāhrastānī, op. cit., i, p. 55 sqq.).

All the above classes of political theory found expression in some form or other of actual political organisation, but there were also statements of the doctrine of the Khalifāt that never emerged out of the sphere of speculation, especially those elaborated by thinkers of the Mu'ātāzila school e.g. that the office of Imām should not be filled during periods of civil war but only in times of peace; that no one could be Imām except with the unanimous consent of the whole Muslim community (al-Shāhrastānī, op. cit., p. 51; Goldziher, Helleinistischer Einfluss auf musulmānisches Chalifät-Theorien, in Der Islam, vi. 173–7).

(T. W. Arnold)
KHALIFA SHAH MUHAMMAD — AL-KHALIL.

KHALIFA SHAH MUHAMMAD, author of a collection of letters in Persian, entitled Djam' al-Rawani or Insha'i al-Khalifa, written while he was a student at Khamgil and collected by him at the request of his friends in 1085 (1674/5); it is much appreciated in India, and has been printed several times.

Bibliography: Rieu, Cat. of Pers. Ms. in the British Museum, i. 414.

AL-KHALIL, the ancient Hebron, so called after the "friend of God" (Ishqab), Abraham (see the art. BRHAIM), a town in South Palestine (also called Habbun, Habul or Madjid Ibrahim). It lay in an exceedingly fertile valley between the heights of the Jebel Naser (a reading uncertain) noted especially for its richness in fruits. According to a widely disseminated legend, Muhammad is said to have granted the four districts Habbun, al-Matun (so Yaght, ii. 1944 in Naseri Khusraw, Safarname, ed. Kaviani 1923, p. 46, tr. Matun, var. Maristan, Marsten; in al-Khalqashandi, Sheik al-Asha, ed. Cairo, xii. 120, c: al-Rufijan), Bait Aisin (i.e. Amun, St. John's, Gosp. iv. 23 etc., Khirbat Bit Ennun) and Bait Ibrahim as a gift to the Emperor Frederick I. Tamin al-Dari, a convert to Islam, and to his descendants. To Tamin al-Dari is traced the custom of having lamp-continuously lighted in the mosque (Clermont-Ganneau, Rec. d'Arch. Orient., vii. 216-220). Al-Khalil is still regarded as the snf of the Taminis. There is no doubt, however, that the alleged letter of the Prophet to Nu'am b. Awl al-Dari, the brother of Tamin, is a later forgery intended to confirm the claims of the Taminis (Caetani, Ant. dell' Islam, iii. 298, 9 A.D., § 69).

Our only information regarding the history of the town in the early centuries A.D. comes from a few scanty Frankish sources of which the most important is the full account of the examination of the sepulchral caves by Christian monks in the year 1199-1200 (publ. by Riant in the Acad. des Ins. et des Lettres, xiii. adv., v. 302-316). According to this (p. 309), the Jews showed the Arab invaders the entrance to the sanctuary, which had been walled up by the Byzantines, and in return they received permission to live on in peace in al-Khalil and to build a synagogue before the entrance to the "Abrahaim". When the Byzantine church was turned into the Marjid Ibrahim it cannot be exactly ascertained; the first information regarding the mosque is given by al-Ihtahi and Ibn Hawkal in the tenth century (not the eighth, as wrongly stated by La Strange, Palestine, p. 309, and Vincent, Hebron, p. 160). According to al-Mukaddas, who is the first to give us a more detailed description of al-Khalil, Abraham's tomb was covered over by a dome built in Muslim times (according to Maddur al-Din, translated by Sauvaire, i. 11, it was already done under the Umayyads). The tomb of Isaac was in a part covered over (mughffi) and Jacob's was on the opposite side. This writer is also the first to mention the rich endowments which were given to the sanctuary by pious princes from remote lands, and the hospitable reception and provision of oil and lentils which the Taminis in the hospice gave to pilgrims, but he thought for purely religious reasons it better to abstain from them. The Mughfiri theologian al-'Abhari of Fas (d. 1757 = 1356) later denounced the eating of these lentils (which were known as adas kalili) and issued a warning against praying inside the mosque (instead of in front of it), as the exact site of Abraham's grave was not known; he particularly vigorously against the dance associated with the "parade-music of al-Khalil" (from which comes the name khalil for a band intended for parades), which one could see every day in the sanctuary (Goldszmer, Z.D.P. V., 1894, xiv. 115-120; cf. also Schreiner, Z.D.M.G., iii. 51 sg.).

Half a century before the beginning of the Crusades Naseri Khusraw visited the town (1047), which in those days lay on the north side of the Haram only; in his journal he gives a minute description of the sanctuary. According to him, a gate was first made in the middle of the north-east wall by the Fatimid Caliph al-Mahdi (918 A.D.); the Haram had previously been three-walled. The covered part of the sanctuary (nakaera), which contained the graves (cenotaphs) of the patriarchs, was richly decorated and provided with numerous niches (mikhrab).

After the capture of al-Khalil by the Crusaders, Godfrey de Bouillon granted the seigneurie of Hebron in 1100 to Gerard d'Avesnes (5, 1102). He was followed by Hugo de Rebeque, Rohardus (Requesius), Gallerus Mahomet and lastly Baldwin, in whose time (in 1110) the explorations under the Crusades began, and the arches were discovered (see above). He and his successors were apparently simply governors of Hebron and were at first under the King of Jerusalem, and later, from about 1155, under the Lord of al-Karak. In 1168 Hebron was made a bishopric.

Ahl of Herat, who visited Jerusalem and al-Khalil in 567 (1171/1172), says that he made acquaintance of a Christian knight in Bait Laqm, who had once visited the sepulchral caves of the patriarchs, when a boy of thirteen, with his father; these, he said, were afterwards restored by command of King Bardawil (Baldwin II) by a knight named Djiwri b. Djurj (Godfrey, son of George). It was perhaps at King Baldwin II's invitation that the buildings around the Haram arose, in which the formerly flat roof of the masjidi was replaced by a system of arches with sloping roofs (Vincent, Hebron, p. 165).

After the battle of Hattin, al-Khalil again passed into the hands of the Arabs. According to a supposition of Maddur al-Din (ed. Balsi, p. 56 below; transl. Sauvaire, p. 16), which is not quite improbable (cf. Vincent, op. cit., p. 242-250), the minbar which stands beside the niche (mikhrab) in the Haram and, according to a still extant Kufic inscription, was originally donated by the Fatimid Caliph al-Mustansir in 484 (1091/1092) for the mausoleum (mashhad) of al-Husain b. 'Ali in 'Askalun, was brought to al-Khalil by order of Salh al-Din, father of Balaq (apparently in 1142 after his burning of the walls of 'Askalun) and put up in the Haram. (van Berchem in the Festschrift Edward Sachau gewidmet, Berlin 1915, p. 298-310; Vincent, Hebron, p. 219-250). After the death of Salh al-Din, al-Khalil passed to al-Nasir Daud al-Karak; it was, it is true, taken from him with other towns in 1244 by the armies of the Saltan al-Salih Ayub, but he recaptured it next year with the help of the Kharismis.

To this period belong two full descriptions of the Haram, that of Abu 'l-Fida' Ishtık al-Khalili, whose account written in 1351 was copied by al-Suyuti (1470) and Maddur al-Din (1496), and
that of Ibn Baṭṭuta, who visited al-Khalil in 1355.

The latter defends (as al-Idrisi had done previously [Z.D.P.J., viii. 127]) the correctness of the location of the tombs of the patriarchs (which others doubted, like his countryman al-Abd al-Qaddī; see above). Jāḥīṣ of Hebron quotes, giving a number of intermediate sources, the story handed down by an attendant of the mosque of Abraham, Muhammad b. Bakrān al-Khālidī (c. 520–952), which is already found in shorter forms in All Ḥarawi. In i: 1 a factor of the sanctuary, Abū Bakr al-Uṣayfī, relates how by his own request he was taken down to the sepulchral cave, to reach which he had to descend 72 steps. The details of the story, however, are obviously invented; the same Muhammad b. Bakrān is responsible for the fantastic “translation” by a learned Shāikh of Ḥalab of a still extant Greek inscription (Mader, Ḥīṣbīlī, p. 135, note 3; Vincent, Ḥībūn, p. 160 sq.).

The Mongols took the town in 1265 but were driven out by Baibars the same year. When Sulṭān, the latter visited al-Khalil in May, 1266. Jews and Christians were strictly forbidden access to the Haram (Rohricht, Gesch. d. Kont. des Jerusalem, p. 929). In 1267, by command of Baibars, the mosque was rebuilt and in 1268 the town (al-Muṣrif, transl. Quartomèze, ii. 48, 51) can only refer to quite unimportant structural alterations at the Haram (Vincent, op. cit., p. 190). Kālāṣīn (1279–1290), as we learn from his inscriptions in al-Khalil, also had decorations and facings for the walls made at different parts of the Haram.

Muḥājir al-Dīn gives us some further information regarding the embellishment and structural alterations in the sanctuary. The viceroy (naḥiyy) of Syria, Ṭankiz, Abu l-Fāid’s contemporary, had the four inner façades of the mosque covered with marble in 732 (1331/32) (van Berchem, Z.D.P.J., 1896, xix. 131 sq.). Considerable alterations took place under Sulṭān Baḥdān at the instigation of Shihāb al-Dīn ʿAbd ar-Razzāq, governor of Jerusalem and al-Khalil and guardian of the two sanctuaries. In 796 (1394), besides the erection of a new miḥrāb for Mālikīs in the Women’s Mosque, a new door was put on the west side of the former Byzantine church immediately behind the tomb of Abraham and another in the west wall of the Haram (in the so-called “Wall of Solomon”), the latter near the Maqṣūd of Joseph.

This was built by Sulṭān Naṣr ʿAbd ar-Razzāq (1347–61) beside the mediaeval Kaʿba (the later Madrasa). Its entrance lay opposite the “well of the eunuchs” (ʿAin al-Taṣwīṣī). Al-Yaghmūrī had a dome built over the Maqṣūd which was similar to those over the tombs within the Haram. In the reign of Sulṭān Muhammad al-Nāṣir (1293–1341), the Amir Sandjar al-Djāḥīṣī had already built the mosque against the north-east wall of the Haram in 718–720 (1318–1320), which is called Djāḥīṣīya after him, into the rocky sides of the Djabal al-Djāḥīṣī. The Manṣūk Sulṭāns al-Malik al-Aṣṣaf, al-Malik al-Qāsī (850–1454) and al-Zāhir Khoṣbāḏam (868–1426/27) were also benefactors of the Haram and the Djāḥīṣīya Mosque.

We know nothing further of the history of al-Khalil and the architectural history of its Haram after 901 (1496) when Muḥājir al-Dīn wrote his book; probably building in the Haram had finished about this time. From the 400 years of Turkish rule (1517–1917) we only possess a few inscriptions of the years 1068 (1599/1600) to 1313 (1895/1896), of ʿAbd al-Hamid, in Vincent, op. cit., p. 206, fig. 79), apart from the notices by western travellers.

The modern al-Khalil consists of the seven quarters Hāsīn el-Shēk (seil. Shēk ʿAbd Bakkā), Ḥāb el-Zāwiya, Ḥ. el-Kuzzāzin, Ḥ. al-ʿAkkābī, Ḥ. el-Ḥaram, Ḥ. el-Muṣṭirakīa and Ḥ. el-Ḳīṭān. It lies in the Wādī al-Khalil between the hills of al-Rumānīd, on which lay the ancient town, and Dār Abū l-Rumānī in the south-west and the Djiböl Dżabbīn in the north-east.

The number of its inhabitants was 17,000 in 1922, of whom 1,500 were Jews. Of the buildings in al-Khalil, the Haram is by far the most important. As a result of the fanatical suspicions of the people so far only a very few Europeans have managed to make a brief visit to its interior. It was not till the week from Jan. 26 to Feb. 2, 1920, that, after some preliminary work by Major Richard, the French archaeologist L. H. Vincent and Capt. E. J. H. Mackay were able to make a more detailed archaeological investigation and to survey the system of buildings. The tombs of the patriarchs, said, according to old tradition, to exist under the Haram, have so far not been discovered.

tative work is: L. H. Vincent and E. J. H. Mackay, Ḥībūn, le Haram el-Khalil, sculpture des Patriarcnes, Paris 1923, with Album (Pl. i.—xxviii.), (E. Honigmann).
He later lived retired from the world and devoted himself to study and work of piety. He made the pilgrimage to Mecca and spent some time in Medina.

From the legal point of view Khalil, like his model Ibn al-Hajib, represents the school of law a little affected by Shafi'i form, for the fusion of Egyptian and Maghribi tendencies in the Mamluk school. His Mukhtasar, in spite of its conciseness which verges on obscurity, is the manual of law which has been and still is most studied in Algeria. It was printed in Paris in 1855 and again and again till 1883; in 1900 a new edition was brought out in Paris by G. Delphine. E. Faggin has published "Concordances du Manuel de Droit, Algérie 1889, based on the edition of 1855. Dr. Perron has given a substantial translation in which he has combined the text and the commentary: "Précis de jurisprudence, ou Principes de droit public, civil et religieux, selon le rite malékite, Paris 1848–1854. Several partial translations have appeared since: Sautaya and Cherbonneau, Du Statut personnel et des successions, Paris 1873–1874; Seignette, Code musulman par Khalil, rite malékite. — Statut civil, Constantine 1878; Faggin, Le Dijhān ou Guerre Sainte, Algiers 1908; do., Mariage et répudiation, trad. avec comment., Algiers 1909. — Among other works by Khalil b. Ishāk are mentioned: 19. al-Tawqīrī, on the Muhākār, in front of the Khalīfah, Algiers, Bibl. Nat., No. 1077–1084; 20. Kīt. al-Mālikī, Bril. Mus., Cat., No. 259, ii., Bibl. Khed., Fikrist, iii. 184; 30. Mālikī al-Shāfi‘ī, Abī ‘Alā al-Mālikī, biography of his teacher, Bibl. Khed., Fikrist, v. 159; 40. Ḳād al-Muṣawwirī, wa-Tarbi‘ah, Bibl. Khed., Fikrist, vii. 278.

KHALIL, AL-MALIK AL-ASHMAR SULAYH AL-DIN, was the second son of Sulaym Kala‘un; his oldest brother is said to have been poisoned by him. As he lay under this suspicion and was also of an immoral and irreligious life (he was accused of pederasty and of drinking wine in maize), Kala‘un could not bring himself to sign Khalil’s appointment as heir-apparent. Nevertheless he was regarded as successor to the throne and acclaimed Sulaym on Kala‘un’s death in 689 (1290). His first official act was to dismiss the high officials of his father’s court with whom he was on bad terms and to prosecute them and appoint his favourites to important posts. But he continued his father’s foreign policy, the goal of which was the destruction of the Crusaders in Syria, and again took up the plan of besieging ‘Akka. After
careful preparation—he advanced with such superiority against the town that, in spite of a brave defence and help from Cyprus by sea, it could not hold out for long. The town itself was first taken, then the strongly fortified towers of the Knights which formed a kind of donjons within the town. The male inhabitants were put to death and the women and children deported to Egypt; but the women were later permitted to go to Cyprus. The other towns still in possession of the Crusaders offered no resistance worth mentioning. Stalis (Suliou), Tyre, Athish, Hafäa and Barutt fell. The last named alone he entered in triumph, as it was not destroyed like the others. The Christian inhabitants who did not migrate had to pay poll-tax. Rejoicings were held for a month in Damascus and the Sultan's name became celebrated as that of the final liberator of Syria for all time. Khalil afterwards planned a campaign against the Tartars in the 'Irak, but he contented himself with the occupation of their fortress Ka'at al-Rum. The King of Armenia, who felt himself threatened, ceded him several towns to secure peace. Khalil also carried out his father's plans for the fortification and development of the Syrian cities; in the citadels of Aleppo, Brälbek, Damascus and the great monastery of Tripoli he found himself as the builder of the fortress of Blakis.

He was after his fashion fanatical; for example he demanded that the Christian officials in Damascus should adopt Islam; those who refused were fined up to 1,000 dinars. He was personally hated by those around him for his evil life and his cruelty. He treated contemptuously even the highest officials, like his Atabeg Bairdar. The high dignitaries therefore could stand him no longer and conspired against his life in 693 (1293) and took advantage of a hunting expedition in Upper Egypt to murder him. This able and energetic prince thus only ruled four years. As he left only two daughters, the throne passed to his younger brother Muhammad [q.v.].

**Biography:**

(M. SOBERNHEIM)

**KHALIL EFENDI ZADE, MEHMET SAID EFENDI,** one of the 'ulamâ' of the time of Sultan Mahmûd I (1730—1754). He was the son of Birgili Khalil Efendi who was twice Kâdice of Anatolia. He studied under his father, then passed through the usual Madrasa course and beginning as molla of Veni-geber in 1135 (1722—1723) ascended the various steps of the 'ulamâ' hierarchy to the highest office. He was appointed Khalil al-Islâm in 1162 (1749) but was dismissed within ten months in 1750 on account of his stern and unyielding disposition and banished to Brusa where he died in 1168 (1754/55) and was buried near Amfî Sultan. He was regarded as a learned man, ready with his pen, and well fitted for all the claims of his office. Besides a commentary, he left the Turkish translation of a part of the history of 'Amîn (762). Of his sons and grandsons several were notable theologians.

**Biography:**

**KHALIL PASHA, name of three Turkish Grand Viziers.**

1. **CENDERELE KHALIL PASHA in the reign of Murad II, vide Cenderele.**

2. **KAŞAÇELI KHALIL PASHA, Grand Vizier under Ahmad I and Murad IV.** He was an Armenian by birth, born in a village called Ruswân in the neighbourhood of Kaisaria (Manadji Minâr; the statement of the Süleyî 1'Ôlhmân, ii. 286, that he came from Mu'âsh is incorrect). The date of his birth is not given but must be about 1560. Having been educated at court as îbîd dârî, he entered the corps of the falconers and became dârî chepî dârî, in which capacity he was in Sulân Muhammad's II immediate entourage during the Hungarian campaign of 1596. In 1616/1607 he became Agha of the Janissaries and fought bravely under the Grand Vizier Murad in the campaign against the rebels in Anatolia. Next year Khalil was appointed Kapudan Pasha as a successor of Hâfiz Ahmad Pasha [q.v.]. In this office he was very successful and captured many Maitese and Florentine ships, especially in 1616/1609, when he, in a battle with the Maitese near Cyprus, a big and famous galleon, called the Turk Aras (also known as "the red Galleon"). This success procured him the rank of vádär. From the end of 1020/1611 to 1022/1613 he was replaced as Kapudan by Öküz Muhammad Pasha, who had become dâmûd, but the latter, having been defeated by the Spanish when conveying Egyptian ships to Constantinople, Khalil was made Grand Admiral a second time. In 1023/1614 he went on an important expedition, first raided Malta, and then went to Tripoli in Africa, where he captured and killed a usurper called Safar Dîrî. During his admiralship Khalil displayed much diplomatic activity in trying to form a confederation against Spain with Holland and Morocco. Therefore he encouraged the Dutch to enter into relations with the Porte and became a powerful protector to the first Dutch ambassador Haga who arrived in 1612. Ever afterwards he showed himself a friend of the Dutch interests, although the planned confederation did not materialise.

In Muharram 1026/January 1617 he was appointed Grand Vizier in succession to Öküz Muhammad Paşa, who had been unsuccessful in the war against Persia and to the disappointment of the latter's Kâtim amir Atmakji Zade. In February of that year he showed his liberal-mindedness by protecting the Christian ambassadors in the capital against an attempt of the 'ulamâ' to impose the kharaj on them. In the same year the Austrian envoy Count Cernin after the failure of his negotiations left Constantinople and in Ramadân [September] preliminaries were signed with Poland at Buda. Khalil, however, seems to have been more interested in entertaining good relations with Venice, Holland, France and England and pacifying the Algerian corsairs. He did not play a prominent part in the course of events, when after Ahmed's I death (25 Dhu'l-Âdha 1026/22 Nov. 1617), Mustafa I was placed on the throne and three months afterwards replaced by 'Ohmânî II (1 Rab. I 1027/26 Feb. 1618). In the beginning of 1618 he took command of the army sent against Persia. The vanguard of the Turkish army was defeated in the plain of Sârên, but Khalil, marching against Ardebel, induced the Shah to
negotiate a peace treaty, which was signed on the same plain (5 Shawwal 1027/26 Sept. 1618) on the same conditions as the former treaty. On his return to Constantinople, he was dismissed from the office of Grand Vizier and had even to take refuge with the great Sheikh Mahmud of Skutari, one of whose adepts he was (1 Safar 1028/18 Jan. 1619). Sultan Othman reproached Khalil, that he had not helped him to succeed to the throne immediately after Ahmed's death, but, on the intercession of Sheikh Mahmud the ex-Grand Vizier was appointed Kapudan Pasha a third time. With an interruption of six months in 1621 he occupied this position successfully. In May 1622 Othman II was murdered by the Janissaries and Musafir restored. During the reign of terror of the Janissaries and their chiefs that followed, Khalil did not sympathize with them and even refused three times the Grand Vizierate offered to him by al-Walid al-Sultan (5 Febr., 1623). Two months before, he had been the object of a hostile demonstration by the Janissaries who accused him of protecting their enemy Abaza Pasha [q.v.]. Still he had great influence and protected in December 1622 the Polish ambassador against anti-Turkish demonstration. But after Merz Hussain Pasha had become Grand Vizier, he was dismissed from the office of Kapudan Pasha and banished to Malharia, where he went in April 1623, not without opposition, especially from the Sipahis. It is, for he was the most popular of the then living viziers, Abaza Pasha, who, as Erzurum had rebelled against the Government, claimed revenge for Othman's death, was a former protégé of Khalil's, who, as Kapudan, had given him the command of a galleys and, as Grand Vizier, had appointed him governor of Marash; his rebellion, however, was contrary to Khalil's advice. Three years after the removal of Musafir (4 Dhu 'l-Ka'da 1032/30 August 1623) and the succession of Murad IV, when Abaza's rebellion continued, it was due to this fact, that Khalil was appointed a second time Grand Vizier — in accession to Hzaf Ahmedi Pasha [q.v.] — in a large assembly in presence of the highest 'ulama; as it was hoped that he would succeed in pacifying his former client (Dec. 1626). Three days afterwards he crossed the Bosphorus, visited his old friend Sheikh Mahmud, and reached Aleppo in March 1627. In July the army went to Diyarbekir. At first an expedition was sent against Akhisar, threatened by the Persians, while Khalil tried to obtain Abaza's submission and collaboration in this enterprise. But Abaza, fearing an ambush, declined and, having at first adopted a conciliatory attitude, he massacred the Janissaries at Erzerum. Khalil was obliged to march against him and began in September the siege of Erzerum. After 70 days, however, in November, an extremely severe winter began. The army was obliged to retreat to Tokat with heavy losses occasioned by snow and cold. This campaign was the cause of Khalil's dismissal; he returned to Constantinople, where he kept his position as vizier (1 Shawal 1037/6 April 1628). In the next year (1039/1629) he died.

Khalil Pasha is praised by European as well as by the Turkish authors for his moderation and love of justice. His personality contrasts favourably with the other Turkish statesmen of his time, nearly all of whom died a violent death. He is described as a religious man which accounts for his friendship with Mahmud of Skutari; he also built in Constantinople a mosque in the neighbourhood of the mosque of Muhammad Fadl. There exists an anonymous biography of Khalil Pasha, The Tarihi Khalil Pasha or Gerçek-i Name-i Khalil Pasha. The MS. used by von Hammer is now in the National Library at Vienna (Flieg, Die Arab. Poes. u. Turk. Handschriften der K. K. Hofbibliothek in Wien, ii. 253, 254).

(see index); Bronnen tot de Geschiedenis van de Levantische Handel, verzameld door Dr. K. Heeringa, 's-Graavenhage 1910 (see index).

3 Khâlid Pasha, Grand Vizier under Ahmed III. He was an Albanian from Elbasan, born about 1655, and had entered the Bostandji corps where his elder brother Sinan Agha was Bostandji Bashî. Having served some time in Bakhchisaray, he returned to Constantinople as Khalik and became Bostandji Bashî in 1123/1711. In Muhammar 1128/January 1716, when the war against Austria was in preparation, he was appointed Beylerbey of Erzerum and sent to Nish to fortify this place. Six months later Khalil became Beylerbey of Diyarbekir and in Shabban (1st July 1716), when the Grand Vizier Damad Ali Pasha [q.v.] had entered Belgrade for the Austrian campaign, he became commander of that town. Damad Ali having been killed in the battle of Peterwardein (Aug. 5, 1716), the Sultan appointed Khalil Grand Vizier, while the Sultan's favourite and future Grand Vizier Damad Furud [q.v.] became his Kâbîl Meşhûr. The latter, however, was by far the more influential. After Temesvár was lost (13 October) a mutiny was feared and the army returned to Adrianople. In the next year the campaign was reopened and Khalil marched to Belgrade, where the Austrian army under Eugen of Savoy was already awaiting the Turks. In the battle of Belgrade (16 Aug. 1717) Khalil was completely beaten, which was due for the greater part to his own inexperience and to the bad advisers. Belgrade was occupied by the Austrians and the Turks retired to Nish. Khalil was dismissed in October 1717 and had to hide himself for two years, after which he was restored in the Sultan's favour. From 1133/1140 (1721–1727) he was banished to Mytilene, then he was given successively the command of several towns in Greece and Crete and died in 1136/1733. He is described as a mild, pious man, but seems to have had so little reputation, that the European historians writing on the battle of Belgrade were not aware of his existence.

KHALIL SULTAN, a ruler of the Timurid dynasty, grandson of Timur, son of Miran-shah and Suyûn-beg Khânsâda, grand-daughter of the Khan of the Golden Horde, Özbeg; born in 786
KHALIL SULTAN — KHALIL

KHALIL. Ottoman poet and mystic of the time of Sultan Meşhed II, belonged to the neighbourhood of Diyarbakır and came to Izmir to study theology where he formed an attachment for a youth and so succumbed to this homosexual passion then so prevalent particularly in the most cultured circles that he entirely abandoned his studies and gave expression to his woes in a book which is known as the Fıratnûma ("Book of separation"). The title Fıratnûma is equally well known, which Seki gives first and which takes the title of a book by Kâbi Hasan b. Allu of Monastir. The poem, which reminds one of the Hiver-nûma of Dīfar Čelebi (d. 1514) with its sincere unaffected verses, bears witness to Khalil's deep passion faithfully described. The book was finished in the year 866 (1461/62). It is written in epic and lyric metres, a varied alternation of muallaqāt and ghazals. Many biographers of poets interpret the poem as purely Sūfi, which does not seem to be correct.

Khalil died in 900 (1455) as superior of a monastery in Izmir. His Divan has not yet been printed. A number of his poems are contained in the Düa'î al-Nafīr compiled by İhadjiyī Kamal in 918, according to Brusali Tahir.

TH. MENZEL

KHALIL (A) is the term applied in the Kur'an (Sura ii. 159; xl. 59; lxvii. 2) to God's creative activity, which includes not only the original creation ex nihilo but also the making of the world and of man and all that is and happens. The verbal forms khalah and khalāhā are of the most frequent occurrence. Among the most beautiful names of Allah in the Kur'an (cf. Sura lix. 21) are al-Khalil (Sura vi. 102, et passim), al-Khalîl (Sura xv. 86; xxxvi. 81), al-fârî (besides Sura lix. 24 only 51) and al-Mawwaqûr. Epithets like the Almighty, the All-knowing etc. are also applied to the Creator. Their meaning is as a rule clear. The only obscure expressions are (cf. H. Grimm, "Morgenländische Überlieferungen der dt. Zahlwörter", p. 247) "Allah created us in his image" (Sura xvi. 33; xxxix. 2-7; xliv. 39; xlv. 2) or as "al-Haqq" (Sura xxii. 5; 95). If we are justified in supposing guetic speculations in the Kur'an it may be recalled that in the Gesner objectified or personified truth coalesces with higher reality (cf. St. John's Gospel, xiv. 6; also S. v. d. Bergh, Die Epitheten der Metaphysik des Atheneus, p. 218 sq.).

Allah is the Creator of all things (Sura vi. 101, et passim). He creates what He will (Sura xxxvi. 82, et passim) but the Kur'an describes at greatest length the creation of man from dust, earth or clay, drops of semen and compressed blood (Sura xv. 15 sqq.; xlii. 5; xxvii. 12 sqq., et passim) and the resurrection of the dead on the day of judgment, a new creation not more wonderful than the first creation (Sura ii. 26, et passim). How important the creation of man is, is evident from Muhammed's coming forward (in Sura xxvi. 1.
generally regarded as the earliest revelation) in the name of his Lord (who created, created man from congealed blood). Everything on earth was created for man (Sūra ii. 27, et passim), especially the animals (Sūra xvi. 5). The same thing is shown in the stages of the creation; it is regarded as taking place from the lowest upwards. In six days the world was completed, the earth first in two days, all that is in it in two more days and in the last two days the world of the seven heavens. Allah is only formally called the Creator of heaven and earth (Sūra vi. 101, et passim) and it is announced as a secret (Sūra xl. 59) that the creation of man was a new thing to Allah. The creation of man, i.e., according to the usual explanation, heaven and earth were created out of absolutely nothing but man was made from dust.

There is no creator but God. He is the One (Sūra xiii. 7, et passim; Sūra xxii. 14 is no exception). He has begotten no children, only created things and beings, none of whom are like Him (Sūra xxii. 11) But passages like Sūra xxv. 9, xxviii. 72, where it is said that Allah, after forming man, breathed of His spirit (rūḥ) into him, make the difference between the Creator and creature appear less rigidly marked. The creation of man is above all a mark of divine power or, in so far as that which has been created is useful to man, of divine goodness. Reference to the harmony of the heavens (Sūra lixiv. 3) and the beauty of the human form (Sūra lixiv. 3) are rare. Finally we may mention that God created all things with one kūdūd (Sūra lixiv. 49 sq.; kūdūd is here, perhaps a synonym for amr) and heaven and earth “for a definite period” (Sūra xvi. 2), i.e., probably to the last day.

The earlier traditions added very little to this (as Prof. Wensinck kindly informs me). Before the creation Allah was in the cloudb (al-Tirmidhī, Taṣāfi‘, Sūra xl., būt 1) and He created in darkness (I. M. lāh v; cf. Sūra xxxix. 8). He wrote a kitāb before the creation (al-Bukhārī, Taṣāfi‘, būt 55). The kitāb was the first thing created (al-Tirmidhī, Kūdūd, būt 17). Allah created man after his own image (Muslim, Fīr, Tr. 115; cf. Sūra lixiv. 3; lxxiii. 8).

In the later traditions the process of creation is elaborated with speculations regarding God’s throne, primeval water etc. and influenced by ideas of Hellenistic and Oriental origin regarding the manifestation or emanation of God in the world. The Neoplatonic expression put in Allah’s mouth is often quoted: “I was a hidden treasure but wished to be known and therefore I created the world.” Knowledge (śīm), or intelligence (‘āfī), is therefore said to have been the first creation.

Just as God’s superiority over man and the world is particularly apparent from the Kūmān (see Kitāb al-falākh, al-falākh, the distance between the Creator and the creature emphasised. In general it is concluded from the transitory character of this world that the Creator is eternal. In favour of God’s omnipotence causality in Nature (cf. Atomic Theory in Hastings’s Encyclopaedia of Religion and Ethics) and freedom of action on the part of man, if not absolutely denied, are suppressed as much as possible. I. M. (q.v.), one of the first Dāhā’ī, wished to define God simply as the omnipotent Creator (Kīlāj, al-falākh, i. 39; ii. 161 sq.) asserts that one can only show with regard to God that He is the Eternal, the Unique, the True, the Creator (al-lāh, man, al-la‘īlah, al-jā‘īla, al-khalq, al-‘āshib) for only by these qualities is He absolutely distinguished from this world.

But misgivings against this sharp distinction were raised, particularly under the influence of Christian dogmatics and philosophical speculation, from three sides i.e. by the Mu‘taṣīlī, the mystics and the philosophers. The Mu‘taṣīlī emphasised the wisdom of God in His creation much more than His omnipotence and His will. According to their teaching, God only creates what is good and man is the creator of his own actions. Nāṣir-i Khusraw summed up what is good and His creating is thought i.e. not an act of volition in the proper sense. According to others, like Abu Ḥamīd and Mu‘īn, God’s will is a kind of intermediary between the Creator and the created world. Al-Jāh ji teaches that God cannot destroy the created world (arguing on Platonic lines, like Philo etc.).

In contrast to this estimation of the world and of human activity, mysticism appears as a deprivation of all that is worldly — but only of the material world. While the mystics regarded this world simply as a ladder to God, they could intensify their spiritual life of the soul up to the feeling of godlike creative activity (cf. L. Massignon, La Passion d’al-Hallūf, p. 513 sq.).

Two schools may be distinguished among the philosophers: one older, more neo-Platonic (e.g. the Ḣawwān al-Safī‘), according to which the emanation of a series of spirits precedes the creation of a temporal material world, and a second more Aristotelian school (notably Ibn Sinā and Ibn Rushd) which makes the development of the intellectual and material world proceed by stages, but without beginning and parallel, after the first ‘āfī has emanated from the divine being. Both schools regard God only as the first cause between Whose activity and this world there are many intermediaries.

The attitude of orthodox Islam to these tendencies developed in very different ways in course of time. The Mu‘taṣīlī doctrine of the ‘ali al-falākh could only be accepted in a modified form; a kāsh (Aṣḥā’ī) or an ‘aṣḥā’ (according to al-Māturīdī, al-falākh was ascribed to man instead of the mosque). The philosophic assumption of a world without beginning was decisively rejected, but the theory of the spheres connected with it was adopted while the spirits of the stars were interpreted as angels of heaven. It was very easy to make common cause with mysticism, which, of course, always insisted that there was no creator except Allah. The creation of man in God’s image and the breathing of the divine spirit into him were of more importance to the mystic than the intellectual and material world (see the catechism and Kūdūd) (cf. Massignon, op. cit., p. 599 sq.).

In the struggle then against the Mu‘taṣīliya and philosophy, the Sunni doctrine developed — in part in alliance with mysticism — and with the greatest success in the Aṣḥā’ī school. According to the latter, Allah is the Omnipotent from eternity. Who can create if and when and what He will but does not need to create. Who with the creation of the material world at the same time places limits of time and space to it and every moment creates the world anew. Allah is
also the eternally speaking as regards the word of creation, especially the word of creation in the Kūran. If the eternalness of the word is taught contrary to the Mu'tazili view, there is hesitation, as regards the activity of creation in calling God the eternally creating, and therefore, the nosology of the 'āteslāt (ḥabīlāt, ṣalāt, etc.), which are regarded as temporal relations, are distinguished from the eternal qualities of His nature. In this respect the system of al-Matsikī diary differs from the teaching of the As'hrā' school: he as-assigns as an eternal quality in the divine being ʿaqıda, creative production. This means an approximation to the teaching of the philosophers that, because there is no cause without effect, God as the first cause created the world from eternity, and thus is really an eternal Creator, whose being and actions are alike unalterable. Some philosophers and certainly many mystics got over the difficulty of this doctrine by the assumption that before the manifestation of His creation the eternal Creator was concealed in God (cf. Massignon, op. cit., p. 657). This idea was born in Ash'arī circles and only later beliefs and gnostic-mystical speculation in al-Ghazālī. On the one hand, he teache quite definitely the temporal creation of the world as an act of divine freedom. After eternal but free deliberation out of pure goodness he created this world and He is creating it down to the last day. He is also the originator of human activities; man has only a kaʾb. On the other hand, however, al-Ghazālī is fond of adopting mystic theories of intermediation. God and man are not simply to one another in the relation of Creator and creature. The world is divided (e.g. in al-Majānūn al-Ṣaghīr, on Sūra xvii. 87; cf. Sūra vii. 72) into the ʿālam al-ghalī, i.e. the material spatial world, and the ʿālam al-anwr, the non-spatial world of the angels and the human spirits (the former in the ʿIḥā, iv. 20 sqq., is also called ʿālam al-nūk wa l-ʿīfahā, the latter ʿālam al-ghār wa l-ʿūlākātī). As a member of the tradition that Allāh or al-Rahmān created Adam in his own image, man in his being, qualities and actions shows similarity to God. The human will acts in his body (microcosm) like the Creator in the macrocosm. The above-mentioned division into sensible and supersensuous world, al-Ghazālī also gives the threefold division (al-Dwra al-fikhira, p. 2 sqq.; cf. Sūra v. 20 etc., where there is mention of the "kingdom of the heavens and of the earth and what is between"): ʿālam dunyawi (al-nūk), ʿālam malakātī and ʿālam djibrīlīt (cf. the art. DJABARĪ). Man thus appears as a citizen of three worlds, corresponding to the old triad: body, soul, spirit, as it was developed by gnosticism in the system of the heavenly hierarchy. On nūk, malakātī and djibrīlīt cf. KEPKON, ḌORU, KEPKON in St. Paul, Ep. to Col., i. 16. According to al-Ghazālī, the human spirit, related to God, will survive not only this material world and the spiritual world of the angels and ġibon but also the spiritual world of the highest angels.

In spite of the authority of this "father of the church in Islam", the development of the idea was not yet finished. Ibn Rushd then advanced against him (Takhrīf al-Tahfrīf) the doctrine that the world had no beginning; many theologians (from al-Rāzī, d. 605 = 1209, onwards) followed more closely the conceptions of the so-called Aristotelians, and extreme mystics, like Ibn al-ʿArabī, let the distinction between al-Ḥokk (the Creator) and al-ḥokk (the creature) disappear in the absolute primeval being (cf. the art. AL-Ḥissy AL-KH crime).

Bibliography: There is no comprehensive work on the subject. Besides books mentioned in the text we may mention: M. Woom, Die Lehre von der Anfangsgeschichte in den neuesten abendländischen Philosophen des Orient und in der Schriftganz durch die orientalischen Theologen (Beitr. z. Gesch. d. Philosophen des M. A., ed. by Eenemuller and v. Hertling, iii. 4, Munster 1900); A. Rohrer, Das Schafungsproblem bei Mose Maimonides, Albertus Magnus und Thomas von Aquin, ibid., xi 5, Munster 1913; T. de Boer, Die Widerspruche der Philosophie nach al-Ghazālī und ihr Ausgleich durch Ibn Rushd, Strassburg 1894; do., De Wijzigende in de Islam, in de Volkeninstitutbibliothek, xi, Haren 1921. See also the articles ALHAY and ṢIF. (T. de Boer)

KHALKHA, the name of a river flowing from it into the Buyr-Nur on the frontier between Manchuria and Mongolia. The river Khalkha is mentioned in the xiii century in the "Secret History of the Mongols" (Russian translation by Palladius in Trudi Ross. Dukhovnoi Missii v Pekine, iv., St. Petersburg 1886, p. 90, 91, 102 and 118 (the edition of the text promised by Pelliot has not yet appeared); in Rashid al-Din, ed. Berezn, in Tristi Vest. Old. Kuzhage Arab. Ogrod., xi., St. Petersburg 1886, Pers. text, p. 216, vol. xv., ibid. 1889, Pers. text, p. 3 sq.: Külä. Since the xviii century the same name Khalka has been given to the north-eastern part of Mongolia (from the western frontier of Manchuria to the eastern frontier of the district of Kobdo and from the Russian frontier to the Gobi desert) and its population, Sasang Ssetsen (Geog. der Ost-Mongolen, ed. J. L. Schmidt, St. Petersburg 1829, p. 191 and 197) speaks of twelve tribes of the Khalka; a distinction was made between five "nearer" and seven "remoter" tribes (op. cit., p. 205, and p. 191 and 285). Geresen (full name and title Gerensent Jālār Khun Taidji) was considered the ancestor of all the chiefs of the Khalkha; he was grandson of the last ruler over all Mongolia, Dayan Khán (d. 1543); on the genealogy see A. Pozdaņev, Mongolia i Mongolii, i., St. Petersburg 1896, p. 472. The four āimaq (q. v.) into which the Khalkha were nominally divided (the Mongol emperors long since deprived the chiefs of any power) have taken their names from the different branches of this dynasty; they are the āimaq (From E. to W.) of Taetsen-Khán, of Tashetut-Khán, of Sayin-Noyen (after 1725) and of Tsatsaktu-Khán. Another division is also mentioned as early as the occasion of the submission of the Khalkha to the Emperor K'ang-Hsi in 1691: Mongol inscription in Dolon-Noi, in text and Russian transl. pub. by A. Pozdaņev, op. cit., ii., St. Petersburg 1899, p. 291 sqq.); Geresen is said to have had 7 sons, whereof the population was divided into seven divisions (kēudan, written Ḍorhān in Arabic); it is not known whether there was a connection between this division and the seven "remoter tribes". Since about 1555, Buddhism has been dominant among the Khalkha; at that date a grandson of Geresen, Abatal-Khán, was reigning, called Abai Ghalsagho Taidji in Sasang Ssetsen, p. 253. (W. Barthold)
KHALKHĀL ("anklet"), the name of a place in Adharbarāḏān. Its position nearly corresponds to 38° N. Lat. and 49° East. Long. It does not occur on modern maps, but see the map in G. Le Strange, The Lands, etc., facing p. 87. It was situated in the mountains which in this region were beset with fortresses. Yākūt passed through this region when he fled before the Tatars in 617 = 1220/21.

According to Ḥamd Allāh Mustawfi it was formerly a fair sized town, which in his days had sunk into a mere village with about a hundred hamlets belonging to it. It was the seat of the government of the province, after Fīrāzābād had gone to ruin.

There is another place of the same name situated at the mouth of the Oxus on the Caspian.

KHALWA, KHALWATI, etc. [See ṬASAWWUF].

KHAMR (A.), wine. The word, although very common in early Arabic poetry, is probably a loanword from Aramaic. The Hebrew ḫayin has in Arabic (ṣayin) the meaning of black grapes. The question has been fully treated by I. Guidi in his Delta sive primitiva dei popoli suiutici in Memorie della R. Acad. dei Lincei, series iii., vol. iii. p. 63 sqq.

Arabia and the Syrian desert are, in contradistinction to Palestine and Mesopotamia, not a soil fit for the vine; there are, however, exceptions, among which may be mentioned al-Tāʾīf (see II. Lammens, Taʾīf, p. 35 sqq., M. F. O. E., viii. 146 sqq.), Shibām and other parts of Yemen. Wine, probably of an inferior quality, is also mentioned in Madīna (see below). Usually, however, it seems to have been imported from Syria and Tāʾīf; in early Arabic poetry the wine-trade is chiefly connected with Jews and Christians, who pitched their tents (ḥāza, also loanword from Aramaic) among the Beduins and provided it with a sign denoting its character. In little olives were held, in the company of female singers who often also belonged to the establishment. The wine was kept in jars or skins, provided with a mouth-piece which was closed by means of a string.

In the days of Muhammad the people of Mecca and Madina used to indulge in drinking wine as often as an occasion offered itself, so that drunkenness often became a cause of scandal and of indulgence in a second vice, gambling. What together with wine, incurred Muhammad's condemnation. Tradition has not refrained from describing how Ḥamza b. Ṭābil, Allāmān's uncle, in a fit of drunkenness mutilated Allāmān's camel (Buḥkārī, Ṣahih, bāb 13; Khams, bāb 1; Muslim, Ṣahih, Trad. 1, 2; Maqāmah, bāb 12; Abū Dā'ud, bāb 19). And the commentaries on the Kurān relate how Muhammad's companion held drinking-parties which caused them to commit faults in ritual prayer (see al-Ṭabarī, Tafsīr on Sūra xiv. 44; Muslim, Fadāʾil al-Salāḥ bāb 1, 4; cf. 45; Abū Dā'ud, La’alā, bāb 1, 185 sqq.).

The prohibition of wine was not on Muhammad's programme from the beginning. In Sūra xvi. 69 we even find it praised as one of the signs of Allāh's grace unto mankind: "And of the fruit of pomegranates and of grapes, ye obtain an unbecoming liquor, and also good nourishment". But the consequences of drunkenness manifesting themselves in the way just mentioned are said to have convinced Muhammad to change his attitude. The first revelation giving vent to these feelings, was Sūra ii. 216: "They will ask thee concerning wine and gambling (muṭārīf). Answer, in both there is great sin and also some things of use unto men: but their sinfulness is greater than their use". This revelation, however, was not considered as a general prohibition, as people did not change their customs and the order of prayers appeared to be disturbed in consequence thereof, a new revelation was issued, viz. Sūra iv. 46: "O true believers! come not to prayers when ye are drunk, until ye understand what ye say!" etc. But neither was this revelation considered as a general prohibition of wine, until Sūra v. 92 made an end to drinking: "O true believers! surely wine and muṭāʿrīf and stone pillars and divining arrows, are an abomination, of the work of Satan; therefore avoid them, that ye may prosper".

This sequence of revelations regarding wine is the accepted one among the traditionists and commentators of the Kurān (see Abūn b. Ḥanbal, Muṣnad, ii. 351 sq.; Tabāri, Tafsīr, v. 58 ad Sūra iv. 46).

The prohibition of wine may, however, also be looked upon from a wider aspect, as Islam is not only the monotheistic religion which has taken a negative attitude towards wine. It is well known that, according to the Old Testament (Numbers xii. 3 sq.) the Nazarite who had wholly devoted himself to Yahweh, had to abstain from wine and spirits, just as the priests before administering the sacred rites (Lev. x. 9). The Nazarite, according to Diodorus Siculus (xix. 94, 3), likewise abstained from wine and one of their gods is called in their inscriptions "the good god who drinks no wine". Likewise, the abstention from wine belonged to the rule of many Christian monks. All this has its roots in remote Semitic antiquity which ascribed a demonic character to wine and spirits. The same is true for Islam, especially singing, which is also prohibited by Islam. It is not improbable that negative feelings of this kind may have worked together with the motives mentioned above, to induce Muhammad to prohibit wine.

The prohibition of the Kurān has been taken over by the doctors of the law; all madhābīs, and also the Shīʿa, call wine ṣawār and the wine-trade is forbidden. For an exposition of the Shāfīʿī view, see al-Nawawī, Muḥātā, ed. v. d. Berg, iii. 241; for that of the Ḥanafīs, Fatūhā ʿAlāmgarī, vi. (Caliutta 1855), 644 sqq.; for that of the Mālikīs Zarkūshī in his commentary on the Muṣnad (Cairo 1280), iv. 26; for that of the Shīʿa Shahrārī al-Īṣāʿī (Caliutta 1859), p. 404. Theology reckons the drinking of wine among the gravest sins (kaḥār)".

Hādīth has many utterances regarding this theme. Wine is the key of all evil (Abūn b. Ḥanbal, Muṣnad, v. 238; Ibn Māḍīya, Ṣahih, bāb 1). Who drinks wine in this world without repenting it, shall not drink it in the other world (Buḥkārī, Ṣahih, bāb 1; Muslim, Ṣahih, Ṣahih, trad. 73, 76-78 etc.). Cursed is he who drinks, buys, sells wine or causes others to drink it (Abū Dā'ud,
Muhammad answered: It is no medicine; it is sickness (Almād b. Hanbal, v. 202 sq.). And not only those who drink and sell wine are cursed by Muhammad, but also those who press grapes and have them pressed in order to drink the juice (Ibn Mājda, ʿArḍa, bāb 6).

Another question of importance arose, in connection with spirits: Had they to be considered as wine or not? All the muḥaddīs, except the Ḥanāfīs, have answered the question in the affirmative sense. They have consequently extended the prohibition of wine, in accordance with the intention underlying it. Tradition, which is the best source for the history of the origin of several institutions, shows that the question belongs to the much debated ones. The standard hadith which is found very frequently in the classical collections runs as follows (I pick out Muslim’s version Ibtān, trad. 26, because it contains important details):

“Some men of ʿAlī b. al-Kāis went to the Apostle of Allah and said to him: O Prophet of Allah, we are a tribe belonging to Rabba’; between us and yourself dwell the infidels of Muṣār, so that we can only reach you in the sacred month. Tell us therefore what we have to tell our tribespeople which will open Paradise for us if we do cling to it. The Apostle of Allah answered: I order four things and I forbid four things, Serve Allah without associating anything with him. Perform salāt, deliver ṣakū, fast the month of Ramaḍān and deliver the fifth part of booty. And I forbid four things: ḥudūd, ḫuntaṭ, ṣalataṭ and ṣalāt. (two other kinds of dates.) In another tradition (ib., bāb 6) wine from fatty ʿalāb and ʿalāb (two other kinds of dates) is mentioned. ʿUmar is represented delivering a khaṭṭa which was meant to settle the question; according to his son ʿAbd Allāh he said: Wine has been prohibited by the Qur’ān; it comes from five kinds of fruits, from grapes, from dates, from honey, from wheat and from barley; wine is what obscures the intellect (tak ḍhāman mā ḍhāmanar alʿalāb; Bukhārī, ʿArḍa, bāb 2). The question remained, whether beverages prepared from grapes in a different way, were prohibited. There was e. g. a kind of syrup. When ʿUmar visited Syria, the population complained of its unhealthy and heavy climate and they added: This drink alone will heal us. Then ‘Umar allowed them to drink honey. Then they said: Honey cannot heal us. Thereupon one of the natives of Syria said to him: May we not prepare something of this drink for you? It has no inebriating power. He said: Well. Then they cooked it till two thirds were evaporated and one third of it remained. They brought it ‘Umar, who put his finger into it and licked it. Then he said: This is ṭila’ like camels’ ṭila’ (viz. the pitch with which they smeared their skins). Then he allowed them to drink it” (Mālik, ʿArḍa, bāb 44). According to the first chapter of the same book, however, ‘Umar who had become drunk on ṭila’ juice from grapes, prepared by pressing only, is considered as wine. Tārīkh b. ʿUwaid al-Ḥaḍramī said to the Prophet: We have in our country grapes which we press. May we drink the juice? He said: No. This negative answer is given three times and when Tārīkh asks whether the juice may be had, the sick to drink, ʿUmar is represented delivering a khaṭṭa which was meant to settle the question; according to his son ʿAbd Allāh he said: Wine has been prohibited by the Qur’ān; it comes from five kinds of fruits, from grapes, from dates, from honey, from wheat and from barley; wine is what obscures the intellect (tak ḍhāman mā ḍhāmanar alʿalāb; Bukhārī, ʿArḍa, bāb 2). The question remained, whether beverages prepared from grapes in a different way, were prohibited. There was e. g. a kind of syrup. When ʿUmar visited Syria, the population complained of its unhealthy and heavy climate and they added: This drink alone will heal us. Then ‘Umar allowed them to drink honey. Then they said: Honey cannot heal us. Thereupon one of the natives of Syria said to him: May we not prepare something of this drink for you? It has no inebriating power. He said: Well. Then they cooked it till two thirds were evaporated and one third of it remained. They brought it ‘Umar, who put his finger into it and licked it. Then he said: This is ṭila’ like camels’ ṭila’ (viz. the pitch with which they smeared their skins). Then he allowed them to drink it” (Mālik, ʿArḍa, bāb 44). According to the first chapter of the same book, however, ‘Umar who had become drunk on ṭila’ juice from grapes, prepared by pressing only, is considered as wine. Tārīkh b. ʿUwaid al-Ḥaḍramī said to the Prophet: We have in our country grapes which we press. May we drink the juice? He said: No. This negative answer is given three times and when Tārīkh asks whether the juice may be had, the sick to drink,
sell raisins if they are to be used for preparing nabidh (Nasā‘, Ḥabrīna, báb 51, 52). It is prohibited to mix together different kinds of fruits so that the mixture should become intoxicating. This tradition occurs frequently; see e.g. Bukhrān, Ḥabrīna, báb 11; Muslim, Ḥabrīna, trad. 16–29; Nasā‘, Ḥabrīna, báb 4–17; Ibn Sād, vii. 380; Ahmad b. Hanbal, i. 276; ii. 46; vi. 242, 292.

But each of these kinds may be used separately for preparing a non-fermented drink (Muslim, Ḥabrīna, trad. 81–83; Nasā‘, Ḥabrīna, báb 14–18 etc.). It can easily be seen that the difficulty in this matter was caused by two circumstances. People were accustomed to prepare from all kinds of dates, from raisins and other fruits, drinks which only became inebriating if they were preserved a long time and probably also if they were prepared after special methods. Where was the line of demarcation between the allowed and the prohibited kind? Several collections of traditions went so far as to mention nabidh among the drinks prepared by Muhammad’s wives and drank by him (Muslim, Ḥabrīna, trad. 79–89; Ahmad, i. 232 sq., 240, 287, 327 sq., 336, 355; 369, 372; ii. 35; iii. 304, 307, 313 sq., 328, 379, 384 etc.). Abū Dā‘ūd (Ḥabrīna, bab 10) and Ibn Madīja (Ḥabrīna, bab 12) have preserved a tradition on the subject which is instructive. I translate Ibn Madīja’s version: SAYS ʿAlī: We used to prepare nabidh for the Apostle of Allah in a skin; we took a handful of dates or a handful of raisins, cast it into the skin and poured water upon it. The nabidh we prepared in this way in the morning, was drunk by him in the evening; and when we prepared it in the evening he drank it the next morning’. In another tradition of the same bab Ibn ‘Abhās says that the Prophet used to drink this nabidh even on the third day; but what was left then, was poured out.

All this could, however, not persuade the majority of the saḥiḥ’s to declare nabidh allowed; three of the maḏhāb’s as well as the Shi‘a prohibit the use of nabidh. The Ḥanafī school, on the other hand, allows it, when used with moderation, for medicinal purposes etc.

It would take us too far to give here a detailed survey of the opinions of the saḥiḥ’s of all maḏḥāb’s; it would be superfluous, to some extent at least, because the more important differences regard chiefly nabidh only. The following rapid survey is based on the Fatwāh ilānugiri, vi. 604 sq. (cf. Sha‘rānī’s Mitār, Cairo 1279, p. 192 sq.).

Allowed according to the idgām is every non-fermented, sweet drink.

Prohibited (ḥarrām), according to the idgām, are wine and sāker of every kind. As to wine there are six cases: to drink it in any quantity or to make use of it is ḥarrām; to deny this is ḥarfi; to buy, sell, present it etc. is ḥarrām; no responsibility (dimān) rests on him who spoils or destroys wine (mutafṣaḥ); whether wine is a possession (māl) is an unsettled point; it is nafī just as blood and urine; who drinks any quantity of it is liable to punishment.

Several kinds of products prepared by means of grapes (bādīkh, minnafat, etc.) are prohibited according to the majority (ʿumma) of the saḥiḥ’s.

Allowed, according to the majority of the saḥiḥ’s are jilī (vide supra) or matulūth and nabidh from dates with the restrictions mentioned above. So is juice from grapes when the process of cooking has made to evaporate two thirds. Muhammad (viz. al-Shāfi‘i, q. v.) has a deviating opinion on this point.

As to the punishment of him who drinks wine, hadith tells us that Muhammad and Abū Bakr were wont to inflict forty blows by means of palm branches or sandals (Bukhrān, Ḥadrīn, báb 2–4; Ḥadrīn, trad. 35–47). Under ʿOmar’s caliphate, however, Ḥabrīn al-Walīd reported to him that people were indulging in prohibited drinks. Therefore, who advised him to fix the number of blows at eighty, a number suggested by the Qur’an which prescribes that those who accuse muhārīnāt of sin, without being able to prove that accusation by the aid of four witnesses, shall be punished with eighty blows (ṣūra xxiv. 4).

Repeated drinking of wine, according to some traditions, was punished by death at Muhammad’s order (Abū Dā‘ūd, Ḥadrīn, báb 36; Ibn Madīja, Ḥadrīn, báb 17; Ahmad b. Hanbal, ii. 136, 166, 171; iv. 93 etc.); it is, however, added in some traditions that capital punishment in such cases is not according to the sunna of the Prophet (Ahmad b. Hanbal, i. 125, 130; cf. Ṭayālīs, N. 183). The different maḏḥāb’s have adopted ʿUmar’s view; drinking wine is punished with eighty blows; if the transgressor is a slave this number is however reduced to forty, because in the Qur’an the punishment of the handmaiden’s sin is fixed at half the amount of blows with which the free woman is punished (ṣūra iv. 30). The Shi‘a, however, cling to the practice ascribed to Muhammad and Abū Bakr; with them the number of blows is consequently forty, resp. twenty (see Zarkūš, iv. 42; Nawawi in Muslim, iv. 156).

The prohibition of wine and spirits (according to three of the four maḏḥāb’s) is one of the distinctive marks of the Muslim world; its consequences can hardly be overrated. This is not seriously affected by the fact that transgressors have been numerous, according to literary evidence. The praise of wine, not uncommon in pre-Islamic poetry, remained one of the favourite topics also of Muslim poets (cf. the wine-songs of Abn al-Mu‘azz; Abū Nu‘wās etc.) and at the court of the Caliphs wine was drunk at reveling parties even if no prohibition existed at all (see e.g. The 1001 Nights, pāsīnī). Even the common people could not always and everywhere refrain from their national drink, date-wine of several kinds; the caliph ʿUmar b. Abī al-ʿĀzīz deemed it necessary to promulgate a special edict in order to abolish this custom (see v. Kremer, Culturgeschichtliche Streifzüge, Leipzig 1873, p. 68 sq.).

Wine has a special place in the literary products of the mystics, where it is one of the symbols of ecstasy. In this point they only took over the language of their Christian and non-Christian predecessors. As early as Philo of Alexandria ecstasy is compared with intoxication (see especially De Vita Contemplativa). Among the Ibabīya, language may have been a reflex of practice; but this cannot be said of Sufi’s in general, who, on the contrary, clung to the ascetic methods of the via purgativa. As to Ḥāfīz wine-and-lovecups, it is an unsettled point whether they are merely metaphorical or not.

(A. J. Wensinck)

KHAMS (A.), the number five. This number has a magical character, from the fact that it is the number of the fingers of the hand and that it is found in certain Muslim dogmas (five foundations of belief, five religious duties, five daily prayers, prescribed by the canon). The hand stretched out with the palm open and the fingers expanded is a symbol that protects against the evil eye; in North Africa we frequently find, among Jews as well as Muslims, a hand painted on the door with the fingers spread out. Amulets in this form are made of gold and silver, called *khams, khoms* by the natives and *hands of Fatma* by Europeans. Thursday, the fifth day of the week, is favorable for magic rites against the evil eye and is the day chosen for pilgrimages to the tombs of famous saints to destroy the effects of the evil eye.

KHAMS, Khamse, the same word as the preceding, pronounced in the manner of the Arabs of the East, the Persians and the Turks; the name given to collections of five poems of which the most famous are those of al-Na'ẓim, also called Paddj-gandj "the five treasures": *Mukhtar al-Asrār* (559 = 1164), *Khusraw u-Shirin* (576 = 1180), *Leila u-Ma'dinān* (584 = 1188), Haft-pokhar (593 = 1197), *Iskandar-nāma* (597 = 1201); of Amir Khusraw of Dihli: *Mo'alla* al-Anwār (608 = 1299), *Shirin u-Khusraw*, *Ma'dinān* (same year), *Aijmān-i Skandari* (699 = 1300), *Hasht-bihāšt* (721 = 1320), of Khwajūj Kirmāni: *Khwās-e Alwān* (finished in 744 = 1343), *Humāyīn Majmūʿ, Kāmil-i Mas'ūda, Gul u-Urūs*, *Dhulqarnān-nāma* (792 = 1391), of Kābi, unfinished; we have the *Gulanzamān-i Abār* and a Leila u-Ma'dinān about 838 = 1434; of Dāmī: selection from the Haft-pokhar, and including the *Thuthaf al-Asrār* (886 = 1481), *Sūkhâb al-Asrār, Yūsuf u-Zulaikha* (888 = 1483), *Leila u-Ma'dinān* (889 = 1484), *Khurāb-nāma* Skandari; of Hāfiẓ, probably unfinished, containing: *Leila u-

Madīnān, Haft-Sangār, Shīrīn u-Khusraw, Ti-

mūr-nāma* (between 917 = 1510 and 927 = 1521); of Faiḍī: *Markaz-i Adwar, Sulhān-i Bālūč, Nal-dāman, Haft-hīdwar, Abāk-nāma* (1604 = 1595), unfinished; of Ḥasan b. Ṣayyid Fath-Allāh, to the glory of Muhammad and the four first caliphs (of 1035/1625 to 1039/1630). The *Khamsa-i Nātiẓa* of Mollā Ṭughrā-i Mughālī is a dratxyz against five persons at the court of Golconda. The author died at the beginning of the reign of Awarānāb (about 1069 = 1659).

Turkish poetry also contains a certain number of works of the same kind such as those of Ḥamd Allāh Cebeli, called Ḥamdi, son of Shaikh Aš Šams al-Dīn, d. 914/1509; *Yūsuf u-Zulâikha, Leila u-Ma'dinān, Nezâdī Nabi, Thuthaf al-'Asrār*, Ghūshā, Muḥammadīya; of Fuḍūl b. Baghādād, d. 963/1556 (mentioned by Lajūfī and Khānīzāde, probably wrongly); of the Albanian Yāhūy, bey of Dukānūgī, d. 993/1576: *Šāh u-Gūdā, Yūsuf u-Zulâikha, Kīūlā-i Cīl, Gūnghārī Rīz, Gulshēn-i Anwār*; of Muʿādī of Kankalandien, contemporary of Bābkī; of Bīhībī, d. 979/1572: *Wūsūk u-'Adīrā, Yūsuf u-Zulâikha, Ḥusūn u-Nūr, Sahīl u-Nawāb, Leila u-Ma'dinān*; of Siān b. Suleimān, surnamed Aṭā'ī and son of Newī, d. 1044/1634 (really only contains four poems, the fifth being the *Dīwān* of the poet): *Sūkhāb al-Asrār, Hafi-

ẓānī, Nāfīẓāb al-Asrār, Sākī-nāma*. The *Khamsa-i Rūmī* of Rezān of Andirinopel, d. 930/1524, mentioned by Shīrīn, probably never existed. That of Nergīš is in prose.

KHAMS (abbreviated from mulayat-i khamsa = the five provinces), the name of a province in Persia of which Zendān is the capital; Sulānīya also forms part of it. It is a small administrative division, forming quite recently a detached district of Yūẓ bīyār. It lies between the provinces of Ādbarāhidān and Kāzvīn and has 11,480 inhabitants. It appears in the Budget with the following statistics: revenue in cash 819,880 āstān, in cereals 10,540 kharwar (of 649 lbs.), straw 9,000 kharwar; value of payments in kind 978,638 āstān. Local expenditure, including the remissions of taxation, 19,129 āstān. The five towns which gave the name of this district are Abār, Farūm, Ġhelāb, Arman-khāne and Zerān-Ābād. The country is inhabited by the nomad tribe of Afghār.

KHĀN (ت), a Turkish title: originally a contraction of Kāghan, Arabic khākan [ت]; in this meaning қ½ occurs alongside of Kāghan as early as the Orkhon inscriptions of the 8th century A.D.; cf. the Tonyukuk inscription in W. Radloff, Die alttürkischen Inschriften der Mongolen, 2nd Series, St. Petersburg 1899, p. 3, and
The quotations in the glossary, p. 93. In the Muslim period the word Khân seems first to appear towards the end of the 8th (yith) century on the coins of the Ilk-Khâns [q.v., u. 465] and particularly in the 9th (yith) century in the texts relating to this dynasty (cf. the quotations loc. cit.) Not till the Mongol period is a distinction made between the Kâghan or Kân as supreme ruler and the Khân as ruler of a separate portion of the whole empire.

In course of time Kâghan and Khân were completely ousted from the popular language by Khân. In the last centuries before the Mongol conquest, the Turkish Khân like the Arabic Mâlek and the Persian Shâh was used as a princely title in contrast to the supreme title Sultan, Sultan only retaining the meaning in Western Asia and Egypt. In Central Asia in the various kingdoms into which the Mongol empire broke up Khân was the real sovereign title and Sultan the title of each individual member of the dynasties descended from Chingis Khân. In the administrative system of the more Persian kingdom founded by the Safawids the Sultan, as governor of a smaller district, was under the Khân, who was governor of a large province.

Khân Djiâhân Lōdî. An Afghan favourite of the emperor Djiâhân [q. v.], who called him his son (farcand). His original name was Pir Khân, and he was a son of Dowlât Khân and descended from the Dowlât Khân Lōdî, who was supreme in the Pandajab when Bâbur entered India. Pir Khân first had the title of Salâtât Khân, and afterward that of Khân Djiâhân. When Djiâhân died, he behaved badly, made the mistake of not recognising Shâh Djiâhân, and of not even answering his autograph letter, and sold the Bâlayghât of the Deccan to Nâzarât al-Mulk. The result was that he was superseded by Mâhabâr Khân, and though he got another appointment, and came to court, he was no longer a favourite, and became apprehensive that he would be arrested. So he fled at night from Agra with his family and dependents. He was pursued and attacked at the Cambal, and many of his people were killed. He continued his flight towards the Deccan, but eventually was killed in Central India in the fourth year of the reign of Shâh Djiâhân, to whom his head was sent.

Biography: Turânki Khân Djiâhân Lôdî; Djiâhânir, Memoirs, transl. by A. Rogers and H. Beveridge, i. 87 etc.; Elliot-Dowson, Hist. of India, v. 67; vi., viii.; Aârî Akbari, transl. Blochmann, p. 502; Bâlayghânâma, i. (Elliot-Dowson, vii. 20); Khâwî Khân, Mumtâzh Khân, Khân Djiâhân, (H. Beveridge) Khân Kâhanân, "Lord of Lords", a title given by the Dilli emperors to their highest officer. It corresponds to the Turkish Beş-tepâr. It was in use in Bâbur's time, the title having been given to Dîlâwar Khân, son of Dowlât Khân. The most famous Khân Kâhanân's were Akbar's ministers, Bâirâm and his son 'Abî al-Râhîm. — Khân Daurân, "Lord of the age", and Khân Djiâhân, "Lord of the world", have similar titles. (H. Beveridge)

Khan-I Djiâhân Mâkbûl Khân. Originally a Hindu by name Kunât or Kattâ, became a Mussalman on entering the service of Muhammad b. Taghâlak [q.v.], who gave him the title of Kâwâm al-Mulk and made him governor of Multân; he afterwards became nâîk wazir and distinguished himself by his administrative ability; on the accession of Fâtur-Shâh Taghâlak [q.v.,], he was raised to the position of Kâghan and enjoyed the confidence of his royal master for 18 years until his death in 776.

Kâhan, from the root Khân, "to dig", aspirated form from kow-kaan; hence: "local, a square on a chess-board". It is found in numerous combinations such as Kêf-kâhan, kâthrib-kâhan, "library"; mîbâz-kâhan, "regimental land"; tâbî-kâhan, "tilled land"; in the time of the Mamlûk Sulân of Egypt; sip-kâhan, "arsenal of artillery"; al-istâf-kâhan, "water-closet", etc. and is also found in Anglo Indian hybrids such as gym-kâhan, "sports meeting" in which gym is an abbreviation for gymnastics (Yule, Hobson-Jobson, s.v.). (Cl. H. Art)

Khânbalîk (usually written Khân Bâlik), the "Khân's town", the name of Pekin as capital of the Mongol Emperor after 1264 in Eastern Turki and Mongol and afterwards adopted by the rest of the Muslim world and even by Western Europe (Czambelev, variants in S Hallberg, Extreme Orient dans la littérature et la cartographie de l'Oisillon, Goteborg 1906, p. 105 sq.). According to Rashid al-Din (ed. Bezir, Târîkh-i Osbî, s. v. Persian text, p. 34), Pekin (Chinese then Tîng-Âl), i.e. the middle capital was called Khânbalîk even earlier by the Mongols, apparently as one of the chief towns of the Kin dynasty (cf. the art Tîng-Âl) as everywhere in the Mongol Empire, Muhammadans enjoyed considerable prestige in Khânbalîk also. Muhammad Yaflâwî h. Muhammad al-Kharîmî (W. Barthold, Tîng-Âl, etc. i. 139), who died there in Kâbi I. 652 (April 21-May 20, 1254), was several times confirmed in office as governor of North China (Rashid al-Din, ed. Blochot, p. 85 and 309). On the assassination of the vizier Ahmad Fânâkî in 1282 and the events that followed see ibid., p. 508 sqq.; Marco Polo, ed. Yule-Cordier, i. 415 sqq. On the town and its situation on the Imperial Canal cf. Rashid al-Din, ed. Blochot, p. 455 sqq.; on the distances between Khânbalîk and other towns by the land routes see W. Feis, ed. Hammer, p. 24, Indian ed., p. 12; N. E., xi. 395 sqq. (al-Umarî); Sharaf al-Dîn Ya'zî, Zafar Mânî, Indian ed., ii. 219 sqq. The name Khânbalîk for Pekin was also retained after the decline of the Mongol empire in Central and Western Asia and also in Europe. On the five months' sojourn (Dec. 1420-May, 1421) of the embassy of Sulân Shâh Khân by Khânbalîk see N. E., xiv. 320 sqq.; the original narrative, which survives in one MS. only (Elliot 422 in Oxford, Bodleiana = Zabulat al-Târîkhî of Hâfîz Abdî, f. 390b sqq.), has so far not been fully investigated (brief account in W. Barthold, al-Musaffariya, p. 27; M. I., p. 107). There was a mosque in Pekin even in those days. Khânbalîk is mentioned as late as the early years of the xvith century in an anonymous history written in Kashghar (Zap., xv. 251). In the reports of the Russian Ambassador of the xvith century, the form Kamâlbâlik (with variants) is used, under Western European influence (Ju. Arsenyev, Vostextestviya...) (Kutkutposlanika Nik. Spasaffyia, in the Zap. Geogr. Obzû, i ot, etnogr., xii, v. 1,
Index. Spăfant (embassy 1675) is the first to write Pechin, under the influence of the North Chinese pronunciation, and this pronunciation also explains the name in the modern literature of Central Asia for Pekin (Bačin or Bađin) (e.g. Tübbeg-Amân-nya, p. 24; cf. Zup., xvi. 0188 sqq.).

Bibliography (besides the references in the text): Ch. Schefer, Notices sur les relations des peuples musulmans avec les Chinois, depuis l'extension de l'Islamisme jusqu'à la fin du XVIe siècle, Centenaire de l'Ecole Or. Vien, Paris 1895, p. 1—43. (W. Bartholo)

KHANDAK (P. A.), ditch, moat. On the etymology of the word see A. Siddiqi, Studien über die Persischen Fremdwörter im klassischen Arabisch (Gottingen 1919), p. 75; it was taken over by the Syriac speaking population of Northern Mesopotamia in early times, as it appears already in the Book of the Himyarites (first half of the fifth cent.; ed. Mebrug, p. 30, l. 14) in the form Kandak. Consequently it may be an Aramean loanword in Arabic. Tradition, however, connects its first use in the latter language with Salman al-Farisi [q. v.], who, it is said, advised Muhammad to protect Medina in the year 6 A.H. against its besiegers by digging a moat, a means of defence hitherto unknown in Arabia but usual in Persia.

The episode of Medina's besiegerment in that year has ever since been connected with the term khandak or ahdab (allies). The sira as well as other historical works give different reports concerning the extension of the moat and the part of the town it was meant to protect. Still it may taken as probable that it started from the marketplace and the hill called Sal, and from there extended chiefly to the North and North-East, partly also to the South.

The digging of the khandak is often mentioned in tradition because Muhammad himself took part in the work (Bukhârî, Qībâhâb, b. 33, 34, 161; Muslim, Qībâhâb, trad. 125—130 etc.). He is said to have hewn a large stone-block in pieces, so that flashes of light emanated from it which shone into various parts of the world (Ibn Sa'd ii. l. 59 sq.).

Several lines of poetry in radiq uttered by him or his companions during the work are recorded amongst them the well-known 97a in behalf of Muâdh-ibn-Jumâh and Asâr. For further information see MADINA, MUHAMMAD.

Al-Khandak is also the name of several places; see Baladhuri, Fârûq, ed. de Goeje, p. 85; Yâkût, Muqâmî, s. v. Bibliography: Spranger, Das Leben und die Lehre des Mohammed, iii. 207 sqq.; Grimm, Mohammedi, Munster 1892, 1. 106 sqg. Caetani, Annali dell'Islam, A.M. 5, 21—43; A. J. Wensinck, Mohammed en de Joden te Medina, Leiden 1908, p. 26 sqq. (A. J. Wensinck)

Khwândâmîr, Persian historian. His real name was Ghiyath-al-Din, and he was the son of Khâwâda Hamâm-al-Din b. Khâwâda Bâlah-al-Din b. Khâwâda Bûrân-al-Din, Muhammad Shârâsî. The historian Mir Khâwând [q. v.] was his maternal grandfather, and Nûmân al-Din Sûlûn Aḥmad Sadr was his maternal uncle. His father was for many years the minister of Sultan Mahmûd of Samarkand, who was Bâbur's paternal uncle. Khwândâmîr must have been born about 1475, and probably in Herât, where his maternal grandfather lived. The Haft Iklîm, however, enters him under Bughârî.

His grandfather Mir Khâwând seems to have been originally an inhabitant of Balkh. He entered the service of Badî' al-Zamân and served Sultan Husain, and was with him in 1502 at Pul-i-Čâgh and heard him tell of his adventures before his defeat at that place by his father, five or six years before. After Sultan Husain's death in May 1506, Khâwândâmîr was with Badî' al-Zamân at Marâl in northern Persia. In the spring of 1507 when there was an idea of opposing Sha'bânî's advance, Badî' al-Zamân and his brother and co-king Mużaffar directed Khwândâmîr to go to Khânâbâr and induce Shah Beg Arghûn to join them. He got as far as Herât, but delay was caused by the death of Djinâk Bégam, daughter of Badî' al-Zamân, and also by the near approach of Shahbânî, and so he did not go to Khânâbâr. He also once went on a fruitless embassy to Khusraw Shâh at Kunduz. A feeble attempt was made at Marâl to encounter Sha'bânî, but the princes ran away, and the gâllant Dhu 'l-Nûn Aighûn was slain. The march upon Herât followed in March 1507, and Khâwândâmîr and his brother's son 'Uthmân, who was inspector (muqâlîb) for the city, were deputed by the inhabitants to interview Sha'bânî at his camp, and to obtain terms of surrender. The nephew went and succeeded in having an interview, though he was stripped and pillaged on the way. Khâwândâmîr remained in Herât after its capture, and he has given an amusing account of how he and his friends were squeezed by the Uzbeks. He was also in Herât when Shîh Ismâ'îl defeated and killed Sha'bânî and took possession of the city in 1510. But in 920 (1514) we find him in retirement at the village of Pasht or Bâshht in Ghûrdjîstân, in northern Persia (not in Georgia, as Elliot has it; see de Sacy on Ghârdjistân, Mines de l'Orient, i. 321), where he occupied himself in writing his books. He now attached himself to the worthless Muhammad Zamân, eldest son of his old master, and shared his fortunes for a while, at Balkh, etc. But when Muhammad Zamân was preparing to go to Khânâbâr, Khâwândâmîr preferred to leave to return to Pasht. He must have afterwards settled in Herât, for he was there in July 1527, when he left it to go to Khânâbâr. Nor did he stay long in Afghanistan, for he went off to India in March 1528. He reached Agra and presented himself before Bâbur in September, and in 1529 accompanied him to Bengal and was with him at the trumlohnî, or junction of the Sardjit and Ganges (Habîb al-Sijîr, lith., ii. 84, end of 4th part of vol. 2). Bâbur died in the end of 1530, and Khâwândâmîr afterwards served his son, Humâyûn, and wrote a panegyric on the latter's buildings and devices, which he called the Khwândâmîr in Humâyûnî, or the Humâyûnânâmâ (there is a MS. of it in the British Museum), and an account of the book accompanied by extracts, is given in Elliot's History of India, v. 116). It is commonly said that Khwândâmîr died in 941 (1534—1535) during Humâyûn's expedition to Gudjarat. But Farâighî's account shows that the death, caused by dysentery, occurred on the return march from Gudjarat. This was in 942, and Khwândâmîr was alive in that year, and made a chronogram on the death of his friend and fellow-traveller, Shîháb al-Din, the riddle-maker (cf. Badà'înî, Rânkîng's translation, i. 450). Khwândâmîr probably died in 942 or 943 (1535—1537). At his own request he was buried in Dihlî, near the tombs of Nişân.
al-Din Awliyā and Amir Khusraw. His age was then probably about 60.

Khāwandamīr was a voluminous writer. His first work was the Ḥabīb al-Alfūhrā (or, the Perfection of Narratives). It was written in 905 (1499–1500) and dedicated to ‘All Shīr, whose library furnished him in 5897 the necessary materials. It is a youthful work, and naturally there is little in it that is derived from personal knowledge. It is in fact a preliminary sketch for the Ḥabīb, but in some places, e.g. in the account of the capture and death of Yādghar Muhammad it is fuller than the latter work. Khāwandamīr’s most valuable work, and the only one that has been printed, is the Ḥabīb al-Siyār. It was begun in 1521 and substantially finished in 1523–1524, though he made additions to it after visiting India. The Ḥabīb al-Siyār — so called after his second patron Ḥabīb Ullāh — is a General History from the earliest times down to near the end of the life of Isma‘īl Ṣafawī I. Naturally, it is chiefly valuable for the author’s own time. The best parts are the lives of Sultan Ḥusain of Herat and of Isma‘īl I. Incidentally, he gives much information about Shabbandi and Bābur, and his account of the latter is the best source that we have for the two great gaps in Bābur’s “Memoirs”. He is a conscientious author, for he wrote the Ḥabīb al-Siyār three times over. He is also accurate, and often writes from personal knowledge. His great fault is his style. It is turgid and rhetorical, like the Anwar-i Suhailī of his contemporary Ḥusain Wallī, and is sprinkled with tags of verse. He bestows too much praise on Shabbandi and Isma‘īl Ṣafawī, and he is also sometimes unnecessarily prolix. For instance, he writes with wearisome detail of the adventures of Muhammad Ṣamān. The Ḥabīb al-Siyār has been lithographed at Tihra and Bombay. Khāwandamīr was also the author of the 7th vol. of the Rawdat al-Ṣafat.

Khānฟū, the region bounded on the north by the Narbadā, on the east by the province of Berār, on the south by the Adjanta Hills, and on the west by the kingdom of Gudjārāt. It became an independent state in 1352, when Ahmad Fārūkī, entitled Rāja Ahmad or Malik Rāja, having joined the rebellion of Bahārān Khān Ṣa‘īdān against Muhammad Bahānī of the Dakan, was obliged to flee from that country and established himself in Khānffū, which owes its name to him and his successors, who long eschewed the royal title and were content with that of Khān, whence their principality was known as “the country of the Khāns”. The country, surrounded by powerful neighbours, was too small to be entirely independent, and its rulers owed some degree of allegiance at first to Mālwa and afterwards to Gudjārāt, but the mutual jealousy of these two states prevented Khānffū from absorption in either. Mirān Muhammad I, the eleventh of the Fārūkī Khāns, was closely related to the ruling family of Gudjārāt, and was elevated to the throne of that kingdom in 1537, but died on his way to Ḥumādābād to assume his new dignity. His promotion encouraged his successors in Khānffū to use the title of Shah.

The administrative capital of the country was Burhānīr, but the fortress of Asir afforded a safe refuge to its rulers when danger threatened. Khānffū was captured by Akbar in 1601 from Bahādur Shāh, the seventeenth and last of the long line of Khāns, and when prince Dānīyūl was appointed viceroy of the Mughul Dakan, which included Khānffū, his father bestowed upon the province, in his honour, the fanciful name of Dāndehs, by which it was known, in official records, as long as the Mughul empire lasted, though the newer name never displaced the older, and is now almost forgotten.

Bibliography: Muḥammad Kāsim Firīṣta, Gudhants darbīhīt, Bombay 1832; An Arabic History of Gujarat, ed. Sir E. Denison Ross (Indian Texts Series), London 1910, 1921; Lt.-Col. T. W. Haig, The Pārīyā Dynasty of Khāndeh (Indian Antiquary), Bombay 1910 (T. W. HAGE)

Khānฟū, in the third (ixth) and fourth (xth) centuries the Arabic name for the most important seaport of China, the centre of trade by sea with the western Asiatic peoples. As is now generally believed, this town “is undoubtedly Canton” (cf. above, i. 842). On the other hand, it used to be urged (by J. Klaproth, J. A., 1824, v. 40 bis; I. Hallberg, L’Extérieure Orient etc., Göteberg 1806, p. 213) that Khānฟū was not Canton but the Gamūf or Gamūf mentioned by Marco Polo (transl. Yole-Cordier, ii. 189, and note on p. 199) lying much farther north, the harbour of Hang-chow-fu. This idea is refuted by the fact that, in the Chinese annals of this period also, Canton is mentioned as the most important harbour and centre of foreign trade; in 758 A.D. Canton was plundered by Arab and Persian pirates (e.g. E. Chavannes, Documents sur les Pou-blaine (Tours) occidentaux, St. Petersburg 1903, p. 173). This event is not mentioned by the Arabs. Arabic sources (Abū Zaid al-Ṣirāfī in Reinaud, Relation des voyages fait par les Arabes et les Persans dans l’Inde et à la Chine, Paris 1845, ii. 63 [text]; al-Mas‘ūdī, Murājī, i. 303; Ibn al-Athīr, vii. 221) report the destruction of Khānฟū by the Chinese rebel Huang-bao in 264 (877–878) when a great number (120,000 or 200,000) of Muslims, Christians, Jews, and Zoroastrians perished. According to the Chinese annals, Canton was taken by Huang-bao in 879; in this connection also the importance of this town for foreign trade is mentioned (F. Pelliot in Toung Poo, 1923, p. 410). The statement of Ibn Khordhābīh (B. G. A., vi. 69, text) regarding the location of Khānฟū (four days’ journey by sea and 20 by land from the most southerly Chinese harbour Lūjkīn, now Hanoi) can, as F. Hirth and W. W. Rockhill (Chao Fu-Kua, St. Petersburg 1911, p. 22; with support from al-Idrīsī) observe, only refer to Canton. The reading Khānฟū (Chinese Kuang [čenfu]) is now regarded as certain although the manuscripts frequently have k for f and even de Goeje (B. G. A., loc. cit.) was inclined to prefer the reading Khānка (for Hong-Kong). According to the Arab authorities, the town brought the government 50,000 dinārs a day (about £40,000) (Reinaud, op. cit., text, p. 41). After the arrival of a foreign vessel, eunuchs were sent to it by the
Emperor to pick the finest merchandise (ibid., text, p. 73 q.v.); the road between Khatūnī and the capital Khudmān (Šīngan-fu) took two months to traverse (ibid., p. 77 and 103). The prince (mutif), i.e. governor of Khadna, bore the title Dīfū (ibid., p. 38); according to Reinaud, note 27, for Chinese Chi-ju. See also the article china, especially p. 840—842.

W. BURTHOLD

KHĀNĪKĪN, a town in the ʿIrāfī, on the Huwān-čai. The statement that Nuʿmān V, king of al-Hira, was kept here a prisoner till his death by order of his overlord, the Sāsānian Khusrav II, suggests that there was a fortress here in the Sāsānian period. The bridge of Khānīkin must also go back to Sāsānian times; it is built of brick and plaster in several arches across the river-valley. The number of arches is said to be 24, each 20 ells wide. At the Muslim conquest a battle seems to have been fought at Khānīkin for a "day of Khānīkin" is mentioned in Ibn al-Faqīh. Under Arab rule Khānīkin was a small town, which made a poor impression on the traveller compared with the splendour of Baghdad, and was an unpretentious station on the road from Baghdad to Kharṣasān. Ibn al-Muʿazzam praises the wine of Khānīkin. According to Muʿāz, a naphtha well at Khānīkin yielded a considerable revenue to the state. Lastly the Zūiß were deported to the region of Khānīkin after their rising in lower Mesopotamia had been suppressed in 219 (834).

The place was often mentioned in recent years as a junction connecting a branch of the Baghdad railway with the railway system proposed by the Russians in Iran.

(P. SCHWARZ)

AL-KHĀNSĀʾ is celebrated as the greatest poet of the Arabs; her proper name was Tumāḏīr, daughter of ʿAmr b. al-Šahrīd of the tribe of Sulaim, from which tribe originated among others the celebrated poet Zuhār b. Abī Sulma. Her father must have been a man of considerable reputation and wealth, for an account preserved in the Kitāb al-ʾAṣimma of al-Marzūkī (ed. Haidarabād, ii. 168 sq.) tells us that her father visited the fair of Uḫād and gave away property in al-Wahīda in the Mikhāl of Yaḥyri to Maʿmar b. al-Ḥāriṯ, the grand-nephew of the poet Diyāl, and al-Aṣmāʾi says that the document then drawn up was still in the possession of the descendants of Maʿmar in the time of the caliph Hārūn al-Rashīd. Assuming the document to be genuine (which I doubt) the brothers of al-Khānsāʾ 15 years before the Hijdīra, in 607 A.D., were already old enough to take part in the affairs of their father, but the year of the Elephant was probably much earlier than the date generally assigned to it by Muslim authorities.

The earliest event in the life of al-Khānsāʾ of which her biographers make mention is the proposal of marriage made by the aged Durad b. al-Šimrā, who was killed in the year 9 A.H. The latter was bound in close friendship to her brother Muʿāwiyah, both having promised to one another that the one surviving would mourn in an elegy the one who died first. Al-Khānsāʾ was then a young girl and as the proposal came through her brother we may assume that her father was dead. It is significant for those times that the girl was permitted to consider the proposal of marriage, and after seeing Durad her decision went against him. She even composed some verses against the rejected suitor in which she mocks him and his tribe and incidentally mentions that she had previously refused another man of the family of Bād, who is not otherwise known. After this she married a man of her own tribe of Sulaim named ʿAbd al-ʿUzza (or, according to Ibn Kutaiba, Raḥīma b. ʿAbd al-ʿUzza), who was the father of her son ʿAbd al-Ṣadr Ṭāhir, ʿAbd Allah, who took a prominent part in the apostasy after the death of the Prophet and did not come into al-Medina till the reign of ʿUmar. This ʿAbd al-ʿUzza probably lived early and had another man of his tribe, Mirdās b. Abī Ṭāhr, by whom he had three sons, Zaid, Muʿāwiyah and Ṭāhir, and probably her daughter Ṭāhirah, who was her youngest child.

There is considerable difficulty in reconciling the chronological data and to arrive at an approximate date for the birth of al-Khānsāʾ, but as her son Abū ʿAmr Shadrijat took a prominent part in the Kaida [q.v.] in the year 13 A.H. and may have been 30 years of age we may fairly assume that al-Khānsāʾ was then between 40 and 50, probably even older. Al-ʿAbbās b. Mirdās, who was one of the poets of the Prophet, was certainly not her son, but the issue of an earlier marriage of Mirdās, Mirdās, an enterprising man, had attempted with some companions to cultivate some swampy ground near a spring, and as a revenge the spirits which inhabited that place contrived to kill him slowly, i.e. he most likely contracted a fever in this unhealthy place.

The turning-point in the life of al-Khānsāʾ, however, was the double bereavement, the loss of her two brothers Muʿāwiyah and Šāhḥr. Muʿāwiyah, in accordance with Arab custom, went out with 18 companions to make a raid upon the tribe of Murra. He had had a quarrel with a man of this tribe, Ḥāshim b. Ḥarmula, at the fair of Uḫād and after one unsuccessful attempt he invaded the land of the Murrites in which he was slain by Durad, the brother of Ḥāshim. The duty of avenging the death of his brother fell upon Šāhhr and he succeeded in murdering first Durad, who had slain his brother Muʿāwiyah and was slowly recovering from the wound he received in the combat; then another Sulami killed the former's brother Ḥāshim. Not content with this double revenge for his brother, Šāhhr continued his raids upon Murra till he was fatally wounded by a man of Fakās, an Asadī clan allied with the tribe of Murra. He lingered for a long time in his tent, apparently becoming a burden to his wife, and finally succumbed. All these events happened before the rise of Islam, but al-Khānsāʾ lived long enough to see the final victory of the new faith and she is said to have been reposed both by the caliph ʿUmar and by ʿAlī for her unreasonable mourning for her brothers, especially Šāhhr. The new religion had no real influence upon her and her poems.
Fortunately several manuscripts of her elegies have been preserved and the indefatigable labours of Cheikhho have put us in possession of a very complete collection of her verses. Naturally we find among the verses recorded in this edition many which have become ascribed to al-Khansa, because of her paramount reputation as a poetess of elegies, but there is no doubt in my mind that we have many poems which are perfectly genuine, especially as the tradition of the undoubted genuine pieces emanates from men of her own tribe from whom the poems were collected at a very early date. It is significant that in these genuine poems we find expressed the true sentiments of the Qishita: there is no mention of a future life; only the blood of the slain demands retaliation and the despair is over and again expressed that no one can replace the departed, whose many mainly virtues are enumerated and extolled.

Both the biography and the merits of her poetry have been critically and elaborately dealt with by Cheikhho, Gabrieli and Rhodokanakis so that it is easy to get a fairly complete estimate of her life and work from these authors. Whether al-Khansa introduced any new features into the marziya or not is very difficult to say, but it is almost certain that her verses inspired many later elegists, among whom figures her own daughter ‘Amra. If we contrast her verses with those of other elegists among her contemporaries—I will only to mention Mutammmim and Abū Dā‘ūb—, we must confess that her verses do not possess the poetical attributes which are found in them, but we have in the contrary in her poems, which are also much shorter, a far more genuine mourning; on the other hand, there is a certain monotony in the repetition of the same thoughts and ideas.

Cheikhho, Bairūt 1895; Gabrieli, *I tempi, la vita e il canzone della poesia araba*: Florence 1899; N. Rhodokanakis, al-‘Akhansa und ihre Trauerlieder, S. D. Ak. Wur., 1897; H. Diener, *Le Divain d’al-Khansa* trad. par le Père de Cappièr, Beyrouth 1889; al-Djumahy, *Tabakāt*, p. 48 and 51; Kitāb al-Aghūnī, xii. 136 sqq.: al-Tabari, i. 1909 sqq.; Ibn Kutaiba, Kitāb al-Shīr, ed. de Goeye, p. 197 sqq.; in addition verses of and notices on al-Khansa are found in almost all works dealing with older Arabic poetry from the Humāsa and the Kitāb al-Aghūnī onwards and single poems are found translated in several European anthologies of eastern verse before the appearance of the edition of the Divain by Cheikhho. (F. Krenkel, *Khalfa or Khansa* in Raghd al-Din, ed. Blocher, p. 49; Khinsissi; in Wasif’s Khinsissi; in the lihagr. edition (Bomboy 1869), p. 21 sqq. Khiṭāb; in the *Nuzhat al-‘ulām* of Ḥamd Allāh al-Karwīnī (ed. I Strange, pp. 10, 7, and 261, 10: Khinsissi; transl. Khan by Ibn Batu’a (ed. Defremy and Sanguinetti, iv. 284 sqq.) and connected with the name of the celebrated poetesses (see the art. al-Khansa) a town in China, capital of the kingdom of the Sung dynasty overthrown by the Mongols, Chinese formerly King Shu, now Hang-tou-fu (cf. above, i. 845). The town is frequently mentioned in the Mongol period and described as one of the greatest commercial cities of the world in those days. Muslim and Christian sources agree in saying there were a large number of Muslims there, as many as 40,000.

**Khānāzadā Begām.** 1. Daughter-in-law of Timūr, of high rank and much esteemed by him. She was wife of Mirāṁ Şāh, and when he became mad, she went from Tibriz to Sarmāskard and reported about him to her father-in-law on his return from India. She is mentioned by Clavigo and by Sharaż ad-dīn Vazīd. (See Dawlat Khān, ed. Browne, p. 440).

II. Bābūr’s full sister and five years his senior. She was with him in Sarmāskard, and is said to have fallen in love with Shāhīnānī (see Muḥammad Şāh, Shāhīnānī-nāma, ed. Vambéry). Bābūr was obliged to allow the marriage in order to escape from Sarmāskard. Shābīnānī divorced her aunt in order to marry her, but he afterwards also divorced her as he suspected her of favouring his brother. She had borne him one son, Shāh Şāh, who became governor of Balkh, but died young. After her divorce she married a Saiyid, Shāhīk Hādí, but he, as well as Shāhīnānī, was killed in the battle of Marw. The emperor Shāh Ismā‘īl sent her to Bābūr. She afterwards married Mahdī (Hobē al-Siyyar, ii. 372, in account of Muḥammad Zamān). She died in Afghanistan in 1545. She had charge of Akbar, his grand-nephew, when his mother was in Persia. She seems to have been an excellent person, and was greatly respected. She delighted in the resemblance of the child Akbar to her brother Bābūr (Gulbānā, *Memoirs of Humāyūn*, transl., p. 37). (E. B. Bieridge)

**Khārāḏj.** The word khārāḏj, borrowed by the Arabs from the administrative language of the Byzantines, — Greek probably: *xpsypa*; see P. Schwarz, *Die Herkunft von arabisch khārāḏj*, (Grund-studien, in *Der Islam*, 1916, vi. 97 sqq. — originally meant the tribute in a general sense (just as did *dīya*), to which unbelievers in Muslim lands were liable. In the later Fīhān-works the word khārāḏj sometimes still has this general meaning (see e.g. *Fatāḥ al-Karīb*, ed. van den Berg, p. 620). But by the first century A.H. khārāḏj — probably because it was taken to be an original Arabic word in the sense of "yield of the fields" — came to mean particularly the tax paid on landed property as opposed to the *dīya*, which was now used exclusively in the sense of "poll-tax". When at the time of the great conquests the inhabitants of the newly acquired territory were left in undisturbed possession of their fields, it was, however, ordained that the soil should be liable to taxation. Henceforth the inhabitants were to pay a definite part of the harvest as a tribute to the Muslim treasury and remained bound to pay this khārāḏj for all time, even if they became converts to Islam (see the art. FAY).
They had been previously accustomed to a tax of this kind in these regions under Byzantine and Persian rule and the old methods of administering it were retained by the Arabs for many details. The tribute was paid mainly in kind. Definite contributions of corn or other foodstuffs were levied on villages or in some cases on districts. The Muslim officials turned these into money. Very considerable revenues reached the Muslim treasury in this way, especially in the first century A.D.

At the beginning of the ʿAbbāsid period we find different scholars (e.g. Abū Yūsuf, ʿAl-Ḥaṣāṣf and Yahyā b. ʿAdam) still endeavouring to collect the traditions and legal enactments on the kharājī and arranging them in special chapters in their books. The regulations regarding the collection of the kharājī in these days were still a very important subject. But after the peoples of the conquered territories had generally adopted Islam they began gradually to drop payment of the kharājī. It was thought that with the payment of the title of the yield of one's fields (see the art. ʿUSHR) enough had been done and the kharājī in the end fell everywhere into disuse. In the later fiqh-books we therefore only find the regulations regarding the poll-tax still given in detail, while those for the kharājī are only dealt with cursorily or even not at all. Only in al-Mawardī's special work on the Muslim system of administration do we find the regulations for the kharājī still dealt with in a considerable detail.

(TH. W. JOYNBOUL)

**KHARAK, an island in the Persian Gulf, the Aractia of the classical geographers.** In the Arab period the island belonged to the Persian province of Ardashir Khurra, and it was so still described by al-Balāghi. Al-Maʿmūd allots it more closely to Dīnānā which lies opposite it on the mainland. For shipping it was an important calling-place on the way from al-Baṣra to India and also to ʿUman. Ibn Khordāḏbih therefore gives a description of it. In his time Khārak was 50 parasang from al-Baṣra, had an area of a square parasang and was cultivated, yielding cereals, grapes and dates. So recently as the end of the xviith century, Niebuhr was impressed by the subterranean works partly cut out of the rock. That there was a large number of inhabitants and that they were Muslims is shown by al-Isḥāqī's mention of a pulpıt-mosque on the island. In Yāḥyā's time there was also a place of pilgrimage in Khārak, the alleged tomb of a son of ʿAlī. The pearl-fishery of Khārak is often mentioned. The pearl-beds here are very deep; it is therefore natural that complications of a poor harvest are made but occasionally very valuable specimens are said to have been found here.

In the xviith century, the island was for a time in the possession of the Dutch East India Co.; a certain Baron von Kniphausen planned fortifications on the island for them and built a factory behind their walls. Later a town grew up in which Arabs and Persians settled. The Dutch E. I. Co. seems to have abandoned the island at the end of 1765 as its occupation proved too costly.

(P. SCHWARZ)

**AL-KHARAKI, Muhammad b. Ahmad b. Abī Asīr Bākū Bāghā al-Dīn.** He was brought up by a Khwarizmshah (Kutb al-Dīn Muhammad q.v.), 490—521 = 1097—1127, or Atsir, 521—551 = 1127—1156) to Merw and was one of the scholars at the court of this prince. He was also connected with Shams al-Dīn Abu ʿl-Husain ʿAli b. Naṣr al-Dīn Muhammad b. al-Muqaflar. For him he wrote the work entitled al-Tahāra etc. (see below). Al-Khārākī died in Merw in 533 (1138/39). According to al-Balāghī, al-Khārākī devoted much attention to philosophical problems as well as to astronomy.

Al-Khārākī treated of cosmography in two works, extant in numerous manuscripts. The shorter al-Tahāra fī ʾIm al-Hāʾa deals only with astronomy while the fuller Muḥtatah al-Ibrād fī Taḥsīm al-Afhām (on this see Hādījī Khālīfī, no. 13, 124) also deals with conditions on the earth.

Very lucidly and with excellent illustrations al-Khārākī expounds the theory of the Al-kazīn, also called Ibn al-Haitham, according to which the planets are supported not by imaginary circles but by massive revolving basins. This assumption differs the difficulty that in the motion of a planet the ether is pressed in front of it and leaves a vacuum behind it.

Al-Khārākī's and Ibn al-Haitham's works were drawn upon by later Muslim astronomers and cosmographers while those of the West utilised Ibn al-Haitham's work Fi Ḥāʾaʾt al-ʿAlām in Hebrew and Latin translations.

**KHĀRDJE, one of the southern groups of oases in the Libyan desert.** The expression al-Wāṣīt al-Khārījīya recalls the *Oase *ē Ḫdrām* of the Greek writers, the word Wāṣīt being a transcription of the Coptic ṢQNA.

The oasis of Khārdje consists of a large valley which runs from north to south for about 100 miles and averages 12 miles in breadth. Khārdje was reached until quite recently from Esne or Fārāhī; from the latter place the journey took four
days by camel. A narrow-gauge railway (100 miles) now connects Farṣījū with the little town of Khārdje, the present capital of the Great Oasis. In 1910 the oasis had about 7,000 inhabitants; the principal places, besides the capital, are Bārīs, Būlāq and Dākhle. Dates are the principal article of commerce in this region. There are about 70,000 date-palms which produce the best fruit in Egypt. The cultivated area is about 4,500 acres, but in recent years artesian wells have been dug with the object of putting a greater area under cultivation. It is somewhat difficult to get accurate notices of the oases in the Arab writers (see the articles BĀRĪS, DĀKHLE; AL-ĀKHAṬ). None of them had their terminology varies with their informants; we feel nevertheless that the ancient tradition still survived with them, which divided the Oases of the Libyan Desert into Little (= Bahriye), Inner (= Dākhle) and Outer (= Khārdje). In the notice he gives of them, al-Makrizī is very hazy, for he repeats practically the same generalities for the Inner Oases as for the Outer Oases. One thing that all the geographers emphasise is the remarkable fertility of the Oases in general. Al-Yaḥṣūh mentions especially the lands watered by running water at Khārdje, on which the grape and rice were grown in addition to palm-trees. This impression of great prosperity is all that one gains from the fairly long but confused text of Ibn Duṭḥān: it is crammed with names of places. Al-Bakrī distinguishes two Inner Oases and al-Makrizī uses the same expression, al-Wāḥīn al-Khārdijain, but only when he is using an official document of the reign of Shāh al-Dīn. As a matter of fact the oasis of Khārdje may well be divided into two distinct groups.

We are badly informed as to how the oases were settled in the Umayyad and 'Abbasid period: one Kāra bears the name of Abshāh (the present Meṣhāh), the ancient Protolama-Poiq and of al-Wāḥīt. It seems very likely that it was the oasis of Khārdje that the Abbasid ravaged in 339 (= 950). Abā Shāhī mentions, for the end of the Fāṭimid period, the title wāli al-wāḥīt but in the course of a notice of the oasis of Bahriye. Under the Mamluks, according to Ibn Fadl Allāh, to whom al-Kalāshandī adds nothing, the Sūfān's government was not at first represented by any official. The oases were all granted as benefices (īfāt) to officers who administered them as best they could. Later the revenues of the oases were earmarked for the Sūfān's private purse.

A description of the oasis of Khārdje and more particularly of its ancient temples is given in Brugsch, Reise nach der grossen Oase al-Khargh, Leipzig 1878. The Survey Department of Egypt has published a fascicule containing a topographical and geological memoir of the region (Bel. Kharga Oasis).

AL-KHĀRĪD or CHAḤIL AL-KHĀRĪD, a valley in al-Djāwīf in South Arabia which contains one of the few perennial streams in Arabia. According to J. Halévy, the river rises in the Bīlād Arūb near Shīrā, in several springs, of which are hot and contain minerals, and flows at first through a plain bordered by low hills. About 200 yards from its source, it becomes much broader and exceedingly full of fish. The people of Shīrā supply the market of Shāh with fish from the Khārīd so that it is of considerable importance to them. The river also irrigates the oases of al-Djāwīf. The water is held back by great dams and kept for the dry season when it is let off on to the fields every day by numerous channels. The Djāwīf owes its rich vegetation mainly to the Khārīd; it could hardly retain its verdure without this important water supply. According to E. Glaser, there is no water in the Khārīd until Bāt Dīḥānī; this place lies in the extreme north of the Bīlād Arūb. It drains the whole district of Shāh, Khawlān and Sawīkh and is the most important stream of the Eastern Sarat. In the land of Dīn Husain it joins the second great wādī of this region, the Wādī Hirān, and then flows through the whole of al-Djāwīf. The natives told J. Halévy that the Khārīd after twisting and turning round the Bālād Hamāti disappears in the sand and only reappears again in Haijamawt, a feature which the Khārīd, however, shares with other rivers of Arabia.

KHĀRĪDĪTES (A., Khawārīḏī, sing. Khārīḏī), the members of the earliest of the religious sects of Islām, whose importance lies particularly, from the point of view of the development of dogma, in the formulation of questions relative to the theory of the Caliphate and to justification by faith or by works, while from the point of view of political history the principal part they played was disturbing by means of continual insurrections, which often ended in the temporary conquest of the provinces, the peace of the eastern part of the Muslim empire during the two last years of the Caliphate of 'Ali and during the Umayyad period, and involuntarily facilitating first Muʿāwiyah's victory over 'Ali, then that of the 'Abbasids over the Umayyads.

I. The Origins of the Khārīḏī Movement.

Opportunity for the schism was given by the proposal presented to 'Ali by Muʿāwiyah during the battle of Shīfīn (Safar, 37 = July, 657; cf. above, i. 284) to settle the differences arising out of the murder of 'Uṯmān, which had provoked the war, by referring it to two referees who would pronounce judgment "according to the Kūrān."
While the majority of 'Ali's army readily adopted this proposal, either because they were tired of waiting or because "Kurrā" or "Kurān-readers" hoped there would emerge from this Surānic judgment the justification of the furious campaign that had conducted against 'Ummān which had ended in the latter's assassination, one group of warriors, mainly of the tribe of Tamīm, vigorously protested against the setting up of a human tribunal above the divine word. Loudly protest that "judgment belongs to God alone" ('llā hukma illa l-lāhī)" they left the army, and withdrawing to the village of Ḥartūrī, with (? v.), not far from Kūfa they elected as their chief an obscure soldier, 'Abd Allah b. Wahhāb al-Rāsibī (I. 32). These first dissenters took the name al-Ḥarūrīya or al-Mukhbalima (i.e. those who repeat the above phrases; cf. R. S. O., viii. 789, note 1), which is often applied by an extension of meaning to the later Khaṭārīdī also. This little group gradually increased on account of successive defections, especially when the arbitration ended in a verdict quite contrary to what the Kurrā expected (probably in Ramaḍān or Shāwāl, 37 = Feb.—March, 658); on this occasion a large number of partisans of 'Ali, including a number of Kurrā "went out" (khurādā; secretly from Kūfa (to which the army had gone during the truce) to join the camp of Ihn Wahb, who in the meantime had gone to the Dūkhā country on the left bank of the Tigris, to a place which commanded the exits of the roads from Fās and the bridge-head, at which in those days stood the little village of Bāghdād, which later was to become the capital of the empire. The rebel camp lay along the Nahrawān canal. It is to this episode of the exodus from Kūfah that the sect of the Khaṭārīdī owes its name ("those who went out"), more probably than to a general epithet describing them as having gone out of the community of the faithful, as it was later interpreted, probably at quite an earlier period (cf. the name of the Jewish sect of the Phasaeis, which Ed. Meyer, Ursprung und Anfänge des Christentums, ii. 283—284, derives from the incident of their separation from the partisans of Judas Maccebaeus in 163 B.C., quoting in support of his explanation the name of the Khaṭārīdī). Another name given to those first Khaṭārīdī (which has also been extended to their successors and seems to be the one which they gave themselves) is al-Shurā (plural of Shārī), the "vendors" i.e. those who have sold their soul for the cause of God (this idea is found in several contemporary verses). The extreme fanaticism of the Khaṭārīdī at once manifested itself in a series of extremist proclamations and terrorist actions: they proclaimed the nullity of 'Ali's claim to the Caliphate but equally condemned 'Ummān's conduct and disclaimed any intention of avenging his murder; they went farther and began to brand everyone infidel and outside the law who did not accept their point of view and disown 'Ali as well as 'Ummān. They then committed many murders, not even sparing women. Little by little the strength of the Khaṭārīdī army grew by the accession of other fanatical and turbulent elements, including a number of non-Arabs, attracted by the principle of equality of races in the faith that the Khaṭārīdī proclaimed. 'Ali, who had so far tried to avoid dealing with the rebels, in order to avoid a war in his rear so long as he had to face the army of Mu'āwiya, after the rupture of the preliminaries of peace was obliged to take steps to avert the growing danger. He attacked the Khaṭārīdī in their camp and inflicted a terrible defeat on them in which Ihn Wahb and the majority of his followers were slain (battle of Nahrawān, Sabrā, 38 = July 17, 658) But the victory cost 'Ali dear. Not only was the rebellion not at all suppressed and was prolonged in a series of local risings in 39 and 40, but 'Ali himself perished by the dagger of the Khāṭārīdī 'Abd al-Rahmān b. Muljīm al-Murādī (cf. i. 283), the husband of a woman whose family had lost most of its members at Nahrawān. The tradition that a conspiracy of Khaṭārīdī had planned to kill simultaneously 'Ali, Mu'āwiya and the governor of Egypt, 'Amr b. al-As, is almost certainly apocryphal.

It should be noted that the narratives of Arab historians on the origin of the Khāṭārīdī movement are very confused and contradictory, and seem to have lost sight of the real connection between it and the arbitration; on the other hand the nature and date of the latter are quite uncertain. The reconstruction which is given above is that proposed by the writer of this article against the view of Wellhausen (followed by Lammens and Caetani) who thinks that the Khāṭārīdī rebellion and the arbitration are independent of one another and even dates the battle of Nahrawān before the verdict of the arbiters.

II. The Wars of the Khaṭārīdī under the Umayyads.

The wise and energetic administration of Mu'āwiya succeeding the feeble and vacillating rule of 'Ali prevented the agitations of the Khāṭārīdī from breaking out, but it did not succeed in extinguishing it any more than it succeeded in suppressing the feelings and aspirations of the Shā. Our sources mention several risings that broke out in Kūfa and Bāṣra during the twenty years of Mu'āwiya's reign (40—60 = 660—680), but they were promptly put down and only served to increase the roll of martyrs, the worship and avenging of whom became one of the features of the Khāṭārīdī movement. It is at Bāṣra in particular, under the governors Ziyād b. Abihi and his son 'Ubad Allah, that we find most risings and suppressions of risings. These insurrections, of which the most formidable was that of Mirdās b. Udaya al-Familī (q.v.), settled the tactics of the Khāṭārīdī, whose raids henceforth took the form of guerilla warfare and owed their successes mainly to the rapidity — which soon became legendary — of their cavalry (the names of some of their horses are preserved in Arabic works on hippology). They mobilized unexpectedly, swept through the country, surprised undefended towns and then retired rapidly to escape the pursuit of the government troops. The centres of concentration of the Khāṭārīdī were the marshy country of the Bāṣra'ī around Bāṣra (cf. al-Baṭṭa) and around Dūkhā, on the left bank of the Tigris, where their movement had originated, from which they could, if defeated, rapidly gain the mountainous lands of the Īranian plateau.

It was only with the great civil war that broke out after the death of Yazid I, that in the midst of the general disorder the Khāṭārīdī movement assumed serious dimensions and contributed more than anything else to render pre-
carious the pretender ‘Abd Allah b. al-Zuhair’s [q. v.], hold on the territory that he had at first been able to subdue. After the fall of Ibn Zuhair, it was the Umayyad governors who had to wage a hard struggle with these indomitable rebels, enemies alike of victors and vanquished. It is at this time that we begin to distinguish among the Khawārijī half political and half theological subdivisions the origin of which is not at all clear, for the tradition which makes them appear at the same time quite suddenly at Baṣra on the death of Yazid has probably altered the real succession of events. In any case we henceforth find the Khawārijī breaking out throughout the eastern part of the Byzantine Empire (Syria and Iraq), and Africa only knew them under the ‘Abbāsids into serious rebellions at the head of which they placed individuals who have given their names to the ʿAzrāk or ʿAṣrāk [see ʿAṣrākites], the ʿAbḍiyā or (better) ʿAbḍiyā [see ʿAbdītās and ʿAbbāsīyā] and to the ʿṢūṭiyā [q. v.]. Of all these movements the most dangerous to the unity of the Muslim Empire and the most terrible on account of its ferociously uncompromising character was without doubt that led by Nāṭīr b. al-ʿAzrāk [q. v.] which gave the Khawārijī temporary control of Mārnā, Fāṣ, and other eastern provinces, constituted a permanent threat to the security of Basra and surrounding country, and which al-Mahallāt b. ʿAbd ʿAṣrāf at first, and later al-Ḥadīdīyā b. ʿUthmān only overcame in 78 or 79 (698 or 699) — after long years of effort which ended in the defeat and death of the last and most remarkable of the ʿAṣrāk leaders, the valiant ʿAṣrāk b. al-Fudūsā [q. v.]. Less serious and less extensive and prolonged but quite as stubborn as the ʿAṣrāk movement was the insurrection which was called after Shāhib b. Yaṣir b. ʿAṣrāk b. al-Ṭabaṣmī (76–77 = 696–697), although he did not begin but it was only its most distinguished leader; it began in the high Tigris country between Mārnā and ʿAṣrāk and its object was the conquest and devastation of Kufa. The partisans of Shāhib, who advanced only in little bands of several hundred horsemen, but who often gathered round them large bands of malcontents, sowed terror throughout the ʿIrāq, and having several times defeated al-Ḥadīdīyā’s troops were only destroyed by the help of an army of picked troops summoned from Syria. Shāhib himself perished, drowned in the Ḥudayd, while trying to reach the mountains of Mārnā; his successors caused a certain amount of trouble to the governors of Yazid II and ʿAbdulrahmān but had never again been a serious danger.

Arabia was another field of Khawārijī activity, where during the generations of Ibn al-Zuhair between the years 65 (668/669) and 70 (690/691) their leaders Abū Ťalūt, ʿAmār b. ʿAbd al-Fudāika captured in succession Zāmān, ʿAṣrāk and ʿAbd al-Ḥadīdīyā captured in succession ʿAṣrāk and ʿAbd al-Ḥadīdīyā. They were only destroyed after the intervention of al-Ḥadīdīyā, but they left the seeds of future movements, especially in the eastern part of the peninsula.

Moving mainly to the energy of al-Ḥadīdīyā, Khawārijīsm seemed definitely quelled. Another factor contributed considerably to its failure, namely the fanaticism and intolerance of the rebels, whose religious disputes ended in splitting their ranks and sometimes resulted in the removal of their ablest leaders on the charge of having on some occasion failed to observe the absolute irreconcilability of their principles. Another cause of weakness may be recognised in the eternal feud between the Arab element and that of the ʿAṣrākī which brought fatal consequences along with it, especially among the remnants of the ʿAṣrākī after the death of ʿAṣrāk b. al-Fudūsā. But under the last Umayyads in the midst of the irreparable collapse of the central government, the Khawārijī again raised their heads, and resumed their exploits, this time not in little bands but in large bodies. While the two most serious risings of this period, that of ʿAṣrākī in 76 (3 AH) and that of the ʿAṣrākī in the Ḥudayd and that of Abū ʿAbd Allah b. Yaḥyā, surnamed Ṣāḥib b. ʿUthmān in Arabia (in the course of which Medina itself was occupied), ended in defeat, it is nevertheless true that the anarchy which they provoked destroyed the eastern rampart of Umayyad power and enabled the ‘Abbāsids’ insurrection to penetrate more easily to the heart of the empire. Under the ‘Abbāsids Caliphate, the Khawārijī movement may be said to be practically extinct in the ʿIrāq and adjoining regions. Except for a few local risings, promptly suppressed, Khawārijīsm no longer presented any serious danger and only survived as a religious sect, without, however, any remarkable vitality or wide dissemination. In Eastern Arabia, on the other hand, in North Africa and later on the eastern coast of Africa, one of the principal branches of the Khawārijī, that of the ʿAbdīyā (‘Abdīyā), played an important part in politics, and even after this role was ended it continued to be of importance from the religious point of view. It survives in our day with its dogmas, its rites and its special laws (cf. ʿAbdītās and ʿAṣrākīyā).

III. The political and religious theories of the Khawārijī.

The Khawārijī, who, as we have seen, never had any true unity of military and political action, did not have either a uniform body of doctrines. Their teachings seem to us like the particular views of a number of independent subsects (the collections of minor numbers, less than half a score including principal and subsidiary together), some of which represent theological schools as well as political movements of a collectivist character, while others confine themselves to expressing differences of individual opinions among the theorists of the sect. One article is common to all: it is that which treats of the question of the Caliphate, a question which has been the starting point of all the religious divisions in Islam. On this question the Khawārijī are opposed equally to the legitimacy of the ʿAṣrākī and the quietism of the ʿAbdīyā. On the one hand they assert what Weihhaus aptly calls their “non-conformity” i.e. the obligation on believers to proclaim illegitimate and impious doctrine that the ʿAṣrākī, who had gone both of the right path (this is how they justify their abandonment of ʿAli after his acceptance of the arbitration); on the other hand they declare every believer who is morally and religiously irreproachable to be capable of being raised by the vote of the community to the supreme dignity of the imamāte “even if he were a black slave”. The result is that each of their leaders has been re-
cognised by them as Amīr al-Mu'āminīn although none of them had, among other things, the qualification of Kūrādī birth. Consequently the only other caliphs besides their own that they recognise as legitimate are Abū Bakr and 'Umar (the latter is particularly venerated by them); 'Uthmān only during the first six years of his reign and 'Ali till the battle of ʿAṣabā." Another capital article of Khāridjī heterodoxy is the absolute rejection of the doctrine of justification by faith without works. They push their moral strictness to the point of refusing the title of believer to anyone who has committed a mortal sin and regarding him as a mu'tadd (apostate); and their extreme wing, represented by the Azrākīs, says that he who has become an infidel in this way can never re-enter the faith and should be killed for his apostasy along with his wives and children. Of course all non-Khāridjī Muslims are regarded as apostates. Here we have the principle of istīrād (religious murder) which we find applied from the beginning of the Khāridjī movement, even before it had been formulated in theory, and which the primitive examples of Abū 'Ubāda's word of war of the Azrākīs. This ferocious principle forms a strange but illogical contrast with the spirit of tolerance shown by the Khwāridjī to non-Muslims and which in some of their schools goes so far as to recognise as equal to Muslims in every way those Jews or Christians who will pronounce the ʿashādā with the modification: "Muḥammad is the Apostle of God to the Arabs and not to us." The tendency to the levelling of the Arabs and the Mawāli (which already was a result of their attitude to the problem of the imāmate) was pushed so far by one of the theorists of Khāridjī doctrine, Yazīd b. Abī Anīsā (founder of the Fāṣidīya), that he says that God will reveal a new Kūrān to a prophet among the Persians and that he will find a new religion for them, divine in the same sense as Judaism, Christianity and Iṣlām, which will be no other than that of the Šābiʿīn mentioned in the Kūrān.

The same Puritanism which characterises Khāridjīsm in its conception of the state and of faith is found in its ethical principles: it demands purity of conscience as an indispensable complement to bodily purity for the validity of acts of worship; one of their sects goes so far as to remove Sīra xii. from the Kūrān (Sīra ʿAṣaif) because its contents are worldly and frivolous and make it unworthy to be the Word of God. If, on the other hand, they seem to be less strict than the orthodox in the punishment they inflict on adulterers, for whom they do not allow Stoning, this is due simply to the fact that they do not recognise the authenticity of the famous verses added by Ḥumaydī to the primitive text of the Kūrān (cf. Noldeke—Schwally, Gesch. d. Qorānts, i. 248—252).

Outside of general principles and a few particular cases, the law and dogmatics of the Khwāridjīs are not known to us in their totality except for the Ḫabīya, whose survival to the present day has preserved in its integrity their religious tradition. The Ḫabīya represents (as does the ʿSufrīya on the other side) a comparatively moderate school and their present views, in dogma as well as law, have been to some degree influenced by other Muslim schools. Attention has recently been drawn (C. A. Nallino, R. S. O., vii. 455—460) to the very close connection between the dogmatics of the Ḫabīya and of the Muʿazzila. It may also be supposed that it was the latter which, in certain points at least, received a stimulus from Khāridjīsm. What seems beyond doubt is that, as Wellhausen points out, Khāridjīsm played a very important part in the development of Muslim theology either directly or by the impetus which it gave to reflection on the problems of the faith. Although Khāridjīsm seems to us an essentially popular movement in its origins, we must be careful not to think of it as devoid of intellectualism. On the contrary, the very radicalism of its theories must have exercised an attraction on many cultivated minds, much as similar doctrines have done in other times and countries. It is particularly at the time of the early ʿAbbasīda, under the influence of and at the same time in opposition to the refined and sanguine culture of the period, that we find many scholars and men of letters who were thought to cherish Khāridjī views, without this preventing their frequenting high society and enjoying the favour of the court. The best known of these Khwāridjī suq waṣa was the famous philos-opher Abū ʿUmar b. Muḥannā [q.v.], regarding whose fanaticism, in conversation at least, a rather piquant anecdote is recorded by Ibn Khallikān (i. 107 of the 1310 edition; the poetic quotation should be corrected from Amālī of al-Murtada, iii. 88—89). Poetry and eloquence were also cultivated among the Khwāridjī, which is explained by the fact that the majority of their leaders, especially in the early days, belonged to the Bedouin element in the military camps of Kūfa and Bāṣra. Collections were compiled of the Kāhēb pronounced by the Khāridjī leaders, and what survives of them, besides giving an excellent idea of their views, gives us a fairly high opinion of their oratorical talent. We also possess numerous fragments of their poetry (which had also been collected in particular davāns), especially of those of ʿIsār b. Ḥīţān [q.v.] (who is at the same time considered one of the founders of the Khāridjī sīkḥ). A long list of Khāridjī orators, poets and jurists was prepared by Dāhīh, Bayān, 1313 A. H. edition, i. 131—133, ii. 126—127.

The wars of the Khāridjīs had been recorded from the beginning of Arabic historiography in several works which have not come down to us in their entirety; we know, however, the substance of the more important among them, the authors of which were Abū Mīkhnaf, Abū ʿUbaīda and al-Maḏāmi from the extracts which have been preserved in the historical sources given below.

Bibliography: Sections I—II: al-Mubarrad, al-Ḵwāṣil, ed. W. Wright; passim scattered throughout this work, in no sequence or order, are abundant literary ad historical references to our subject; they have been translated by O. Rescher, Die Khāridjīkentenkapitel aus dem Kāmil, Stuttgart 1922; al-Ṭabari, ed. de Goeje, i. 3341 sqq., ii. passim; al-Bāḏawī, Anisū al-ʿAbrāf, R. S. O., vi. 488—497 (résumé and specimens of the text for the period of the caliphate of ʿAli; enate: ibid., p. 925); do., ed. Ahlwardt, p. 78—96, 125—151 (for the period of the caliphate of Abū ʿAbd al-Malik); al-Maṣʿūdī, Mūḍī, ed. Paribé de Meynard, vols. iv.—vi.; passim; L. Cautan, Anjāli dell'Iślām, ii. 541—556, x. 76—151. 168—195, and passim (translation by the author of this article of the historical texts for the period of the caliphate of ʿAli and of other material relating

(G. LEVI DELLA VIDA)

Khwārizm or Khīwa, a country on the lower course of the Amu-Daryā (q.v.). Being a fertile delta area, Khwārizm must from the development of civilisation in Central Asia; in spite of the objections made by Noldeke (Z. D. M. G., lvi. 434 sq.), J. Marquart’s view (Erānīshār, Berlin 1901, p. 155) that “the much contested Aryanemvaçeṣṣ, the home of the Awestā, is identical with Khwārizm,” has much in its favour. According to Herodotus (ii. 117), the valley of the river Akes, which was of international importance, before Persian rule belonged to the Khwārizmīs, from which it may be deduced that the ancient Khwārizm was even then of some importance in the history of Central Asia. According to Hekataios (Fragm. 172 and 173), the land of the “Chorazmians” lay along the Parthia; the capital is called Chorasmia (Χοραζημία) according to Herodotus (vii. 66). Parthians and Chorasmians formed one division in the army of Xerxes under a common leader. Whether, as Herodotus (iii. 93), says, Chorasmia was combined to form one satrapy not only with Parthia but also with Sogdiana and Aria, is more than doubtful.

In the time of Alexander the Great the Khwārizmīs were no longer subjects of the Persians but paid a king of their own; how and when the Persian yoke was cast off is not known. According to Arrian (iv. 15), Alexander received in Bactria in the spring of 328 a visit from the Chorasmian king Pharasmanes, who appeared with a train of 1500 horsemen. The latter is said to have claimed that his territory stretched to the west as far as Colchis on the Black Sea. Curtius (viii. i. 8) only mentions an embassy from the Chorasmian king, whom he calls Phrataphernes.

Nothing is known of the later political history of Khwārizm down to the eighth century A.D., and the geographical situation is equally uncertain. According to Ptolemy, the Chorasmians lived on the east bank of the Oxus, which corresponds to the situation of the later capital Kāthī (q.v.) or Kāt (the modern ruins of Shāhīv Abābī Wālī); on the other hand the oldest Chinese name (given in the *Annals of the Later Han*) for Khwārizm, Vue-kien, suggests the town of Gurgāndī (now Kunya-Urgench). According to the native tradition given by al-Bīrūnī (Albr., ed. Sachau, p. 35), Fir or Fīl, the citadel of Kāthī, was not built till 616 of the Seleucid era (304 A.D.). The statements of al-Bīrūnī and the later notices lead to the conclusion that the later Muhammadan idea ( Ibn al-Âthīr, ed. Tornberg, ixi. 267) of an ancient Khwārizm on the Balkhān near the Caspian Sea is not in keeping with the facts.

What al-Bīrūnī tells us about the beginnings of civilisation in Khwārizm 980 years before the Seleucid era (1292 n.c.), of the coming of Sīyūsh and the founding of the rule of his son Kākhusrāw 92 years later (i.e. 1200) and regarding the descent of the local dynasty from this hero of the national epic is, of course, quite legendary. His statements regarding the genealogy of this dynasty cover the period from 304 to 995 A.D. We are told what princes ruled in the time of Mūhammad’s mission, and which was installed by Kūtaib b. Muslim after the conquest of the land about 93 (712). The son of this ruler is called Śawūshfīr. In the Chinese annals of the Tang dynasty (T’ang-shu) an embassy sent to China in 751 by Śhao-še-fen, the king of Khwārizm, is mentioned (E. Chavannes, *Documents sur les Tarse aux provinciaux*, St. Petersburg 1903, p. 145); this agreement confirms the reliability of al-Bīrūnī’s account; very improbable on the other hand is what he tells us (cf. cit., p. 36, 2 and p. 48, 18) of the massacre of scholars and priests and the burning of books. His references to the calendar and the festivals of the Khwārizmīs show that in Khwārizm down to the viiith and among the Zoroastrians to the xith century A.D. a very ancient Iranian culture had survived. These Zoroastrians were at that time (i.e. in 1000 A.D., when the Chronology was written) no longer zealous adherents of their faith, and had only some knowledge of the external rites of their religion. Besides Zoroastrians there were also Christians in Khwārizm; the latter belonged not to the Nestorian Church like most Christians in Persia and Central Asia, but were Greek Orthodox (Melkites; cf. al-Bīrūnī, op. cit., p. 288, 13). Adherents of other religions, e.g. Jews, are not mentioned, although Khwārizm appears in the well-known “list of cities” (on which see Grundr. d. iran. Phil., ii. 118, and Marquart, Erānīshār, p. 7) as a foundation of prince Nares, son of Zevedegird 1 (399–420) and his Jewish wife. Whether, as K. Inostancev., *Zurn. Min. Narr. Prokotch*, 1911, No. 2, p. 293 sq.) assumes, the Aḥbār mentioned by al-Ṭabarí (ii. 1237, 17) were Jews, is to say the least, doubtful (cf. the expression Aḥbār al-Naṣīrā in al-Ṭabarí, i. 840, 14). An idea of the Iranian dialect spoken in Khwārizm may be gathered from the expressions relating to the calendar, names of festivals, etc., given by al-Bīrūnī; a few words are quoted in other sources, like gānu hewawra, meaning “cattle纵横” in al-Īṣākhīrī, p. 301; ṣeṣen meaning “bread” in Vākht, ii. 458, 15; from Ibn Paḏīla, Khwārizmī is described by the Arabs as a particularly unintelligible language for the inhabitants of other countries (al-Īṣākhīrī, p. 304 below; al-Muqaddasi, 335, 9). In the viith (xith) century written documents in this language still existed (al-Baihāqi, ed. Morley, p. 842).
In the history of the conquest, mention is made, in addition to the strongly fortified capital (like al-Bârûnî, al-Tabari also mentions three fortresses) of the town of Ḥazarâsp and of Khûmijdîr not mentioned again later, where a brother of the king ruled. After the conquest, according to al-Bârûnî, only the regal title (ḥâkîyâ) remained in hereditary possession of the native princes; the real power (sâlîyâ) sometimes was in their hands and sometimes in the hands of others. In 110 (728) mention is made of a rising of the people of Kurdish (near the Sea of Aral) (al-Tabari, ii, 1525). In Gurğândj (Arabic Dürdûjânya) arose a separate kingdom independent of the Khârârizmshâh; nothing is known of the genealogy of these chief and the origin of their rule. The statement of Ibn Fadlân, misunderstood by Yakût (ed. Wüstenfeld ii, 484, 13) only shows that Gurğândj no longer belonged to Khârârizm by 922. In 385 (995) the ruler of Gurğândj, Mâmûn b. Muhâmmed, succeeded in overthrowing the old dynasty, placing its lands under his rule and thereby restoring the political unity of Khârârizm. The title Khârârizmshâh passed to the ruler of Gurğândj.

Mâmûn died in 387 (997); he was succeeded in turn by his two sons, 'Ali and Mâmûn; an Arabic inscription of the latter has been found in the ruins of Gurğândj (recording the erection of a minaret) of the year 401 (1010/11) (published by N. Katânow, Zapiski vost. otdu. arch., nskh., xiv, 015 sqq.). The rebellion of this king's army when he had Suljan Muhâmmed's name introduced into the khâla on the latter's demand, his assassination and the resultant conquest of Khârârizm by Muhâmmed in Safrâ, 408 (July, 1017), are fully dealt with by al-Bâhêkaši (ed. Morley, p. 834 sqq.) following a lost work of al-Bûrânî (cf. W. Barthold, Turkestan ii, 289 sqq.). Rule over Khârârizm, with the title of Khârârizmshâh, passed to Aântûsh, who was appointed by Muhâmmed; on him and his sons to the fall of this dynasty in 432 (1041) see the article Aântûsh. The victor, Shâh Malik, ruler of Dîjand, was overthrown two years later by the Seldjûk prince (this is the right pronunciation in Muhâmmed Kâshâghârî, Dinwan Lâhîîrî Türk, i, 371, where the Arabic spelling Seldjûk does not correspond to the Turkish pronunciation) Çağûrî Beg [q.v.]. Khârârizm remained under the sovereignty of the Seldjûk dynasty till the death of Suljan Sandjâr (q.v.) in 552 (1157) with a few interruptions during the reign of this.

A new dynasty was founded in Khârârizm in the last years of the 12th century A. D. by Kûsh b. Din Muhâmmed [q.v.] to whom the administration of the country had been entrusted, first by the governor of Khursâ san and later by Suljan Sandjâr. On his son Afsâz, the founder of the power of his house, see the article. Afsâz remained till his death, in name at least, the vassal of Suljan Sandjâr and had also to pay tribute to the Kâr-Khâjî [q.v.]. Under the next rulers Ilrâsan (1146—1172), Tekêsh (1172—1200) and Muhâmmed (1200—1220) Khârârizm lost the position of the main power of a great power. The last ruler of Persia of the Seldjûk line, Toghurî, fell in battle against Tekêsh in 590 (1194). Henceforth the Khârârizmshâh could regard himself as the successor of the Seldjûk Suljâns in their dominion over Western Asia, and even assert such claims against the caliph himself. The yoke of the Kâr-Khâjî was only finally cast off by Muhâmmed's victory over the last Gûrkhân in 607 (1210).

Muhammad's empire stretched from the right bank of the Sir-Daryâ to the mountain passes between Irâz and the Tigris valley; in the south his suzerainty was acknowledged even in the Arabian peninsula (in 'Umân). The capital of Khârârizm was probably occupied by the Muslims, and in 604 (1209), the Muslims occupied the city. The rise of Khârârizm, for the first and last time in the history of the country, to the position of a first-rate Moslem power, is probably connected with the development of its wide trading connections, already mentioned as early as al-Istákî (B. G. A., p. 304 sqq.). Muhammad's attempts to utilise these commercial connections for his political advantage led to a war between him and Cîngiz Khân (q.v.) and the fall of his empire. Gurğândj, abandoned by all the members of the dynasty, fell in Safrâ, 618 (April, 1221), after a stubborn defence; the whole population is said to have been massacred or drowned in the waters of the Âmût-Daryâ.

After this, Khârârizm belonged for over 140 years to the kingdom of the Golden Horde, only the southern parts with Kâsh and Khîwa belonged to the Caghatâi empire (q.v.). Gurğândj, called Urgenç by the Mongols and Turks, was rebuilt on another site some years later after the conquest (Ibn al-Azharî, ed. Torberg, xii, 323), and is described in 1333 by Ibn Batûtâ (ed. Defrémery and Sanguinetti, iii, 1 sqq., and in 1340 by Baduâlî Pekgolotti (in H. Vule, Cathay and the Way Thither, ii, 279 sqq.) as a populous and splendid commercial town; it was probably the most important emporium on the land route from Eastern Europe to Eastern Asia. Arts and learning flourished in keeping with its economic prosperity; in this respect Khârârizm was "the rendezvous of the most distinguished men in the world" (ma'âjam' al-'âsînî jâihan, in 'Abd al-Razâkî Samârâkîndî, Mu'âza al-Sâ'dîn, MS. of the University of St. Petersburg, No. 157, fol. 738). The teaching of the Mu'tazîlî brought to Khârârizm in the 9th (xîhît) century (cf. I. Goldzâher in Islam, iii, 220 sqq.) had numerous adherents there as late as the second half of the viîh (xivîh) century, when there had long been no Mu'tazîlî left in Western Asia. (On the Mu'tazîlî in Khârârizm cf. Ibn Batûtâ, iii, 8, and Ibn 'Arab-shâh, Cairo 1285, p. 18; there also on the excellence of the musicians of Khârârizm). The buildings of this century surviving in the ruins of Old Urgenç are among the finest in Central Asia, notably the tomb of Tûrâ Beg Khânîm (mentioned by Ibn Batûtâ, iii, 4, 9, 11), the wife of the governor Kâthî Damûr. The Kâshî Sarâî in Kâsh at a later date was built for Timûr by Khârârizm craftsmen (mudâsilânî Khârârizmî; see Mu'âza al-Sâ'dîn, i, 73).

Shortly after 1360 there arose in Khârârizm an independent dynasty known as Sîfî of the family of the Küsgat. These rulers struck small anonymous gold coins bearing only the inscription al-mulk lîl-Sîfî. The earliest of these coins are of the year 756 (1363/4), the latest of the Khâns of the Golden Horde of 762 (1360/1). The founder of the line, Husain Sîfî, took Kâsh and Khîwa from the Caghatâi, whereupon Timûr declared war on him; only after several campaigns did Timûr
succeeded in 1379 in conquering Khârîzım. During the wars between Timür and Tökhânî, the Khârîzımids were allied with the latter; coins were struck in Khârîzım as early as 785 (1383/4) with the name of this Khân. In 1388 Khârîzım, where Tökhânî had left a prince of his own house and a representative of the native dynasty, Sulaimân Şöfi, was reconquered by Timûr. The capital Urgenç (frequently, like Kâth before it, called Khârîzım after the country), was sacked and levelled to the ground, and barley sown on its site. Khârîzım never recovered from the blow. In 1391 Timûr had a part of the town in the "Kâth's quarter" (this quarter was considered the property of the Caghatàî Khâns) rebuilt but the town remained limited to this quarter.

In the ixth (xvth) century Khârîzım was sometimes in the possession of the Khâns of the Golden Horde and sometimes under Timûrids. A member of the native dynasty, Ulûmân b. Muhammad Şöfi, is mentioned in 868 (1464) as a vassal of Khân Mustafà. The town of Wâriz was founded by this Khân below Urgenç, but Khârîzım seems at this time to have lost any importance in the social and economic life of Central Asia. Under the Timûrid Sultan Husun, Cîn Şöfi is mentioned as governor of Khârîzım; in 911 (1505) the country passed to Shâhânî, the founder of the Ózbeq kingdom in Mâ warâ'-al-Nahr (cf. the art. BUKHÂRÎ),

In the year 916 (1510) after Shâhânî had fallen in the battle of Marv, Khârîzım became united to Persia for a short time; soon afterwards the Persian governor was driven out by Şarraf Şöfi, but the latter could not hold out against the Ózbeq conqueror. A separate branch of the line of Dîjâtî, only remotely connected with the conquerors of Bukhârâ and Sâmarqând, now established themselves in Khârîzım (according to Abu 'l-Ğiûzî, ed. Desmaisons, St. Petersburg 1871/74, text p. 197, as early as the year of the Sheep = 1511; the year of the Hijra as given there is certainly wrong). The rule of this dynasty lasted till 1106 (1694/5). Only two rulers of Bukhârâ, Ubâd Allah b. Muhammad in 1538 and 'Abd Allah b. Iskandar [i. v.] in 1593 and 1595/98, above, succeeded in incorporating Khârîzım in their kingdom for short periods. Civilisation among the Ózbeqs in those days was in Khârîzım at an incomparably lower level than in Mâ warâ'-al-Nahr. It is a significant fact that the Khân Abu 'l-Ğâzi (1645/53) had to write the history of the land himself as none of his subjects had the necessary education to do so (Abu 'l-Ğâzi, text, p. 2). Even the holders of the most important civilian offices in the state, the viziers (later called Mîktûr) and the Kuskaçan, were only allowed to attend ceremonial gatherings standing, while the military leaders and shâhiqs had definite seats allotted to them (âtûn). This ancient home of civilisation had become a brigand state; as a result the caravan road through Central Asia lost almost all importance, as may be judged from the report of the only west European to visit Khârîzım at the time, the Englishman Anthony Jenkinson (1558). The name of the country had previously been transferred to the capital (first to Kâth, then to Urgenç); now the country is usually called after the capital, first Urgenç, later Khârîzım.

Khîwa (Khîva) (older form Khiwâk; the pronunciation Khiwâ mentioned by Vâlgût is also in keeping with the spelling of the geographers of the ivth [ixth century]), was probably, like Kâth, a pre-Muhammedan settlement. In Khîwî's time the people of Khîwa were Shâhs. While the Khârîzımids as a rule were elsewhere Hanafis, Fâhîwan-âtî Mahmûd (d. 722 = 1322) whose tomb is mentioned by Abu 'l-Âla (text, p. 260) is still regarded as the local saint of Khîwa. Khîwa first appears as a capital in the second half of the reign of 'Arab Muhammed (1603–1623); when the left arm of the river dried up (cf. above, ٣١٢٩٢). Urgenç must have become gradually deserted; in 1645 a new Urgenç arose about 20 miles N.E. of Khîwa; the inhabitants of the old commercial city were settled there, and their descendants made the new Urgenç the most important centre of trade in Khîwa. A new Wâriz arose at a later date farther down the river, also on the left bank. The ancient capital Kâth on the right bank had also to be abandoned on account of the drying up of the channel that affected it. The Khân Anûshî (1663–1687) had the modern Kâth or Kâtreb built on the site of the old bank of the river about 20 miles below New-Urgenç. In the year 1692 (1687) the Shâhâbîd canal was made by order of the Khân (see the map, one of the most important canals of modern Khîwa after the conquest Mezhîed the Khân had taken the title Shâhî). In the xixth (xxith) century the principality of the Khân of Khîwa is frequently called Besh-Kala ("five fortresses"); the names of the towns which make up the five are differently given. The "Island" (Turk. Aşâ Tur, i. e. the delta area proper of the Sea of Arab, which takes its name from them; cf. ٣١٩٥) is also separated politically from Khîwa.

After the extinction of the dynasty the Inaḳ (i.e. the senior of the tribe and military chief) of the Kungrat tribe was generally the real ruler. The throne was occupied by descendants of Cingize Khân, summoned from the steppees; their rule was only nominal and with a few exceptions they were soon sent back home again and replaced by another prince; ‘Abd al-Kâsin Bukhârî (ed. Schefer, Paris 1876, text p. 79) calls this custom "playing at khâns" (khânbaşî). Peter the Great's attempt to subject Khîwa to his rule had no success. Nâdir Shâh conquered Khîwa in 1740 but the Khân whom he installed there could not hold his throne. From the same period we have several descriptions of Khîwa also by Western Europeans (G. Thompson among others in Hanway, An Account of the British Trade on the Caspian Sea, London 1762, i. 240), and Russians (Glâdîkhew and Murawin, Geograf. lexicon (1849 and 1850). In 1740 the military offer Naizîrov made a plan of the town of Khîwa (Geogr. fæ., 1849, p. 200). In 1842 T. Fr. Russer surveyed the modern town (Naturewissenschafliche Reise durch die Kritigensteppe nach Khîwa = Beiträge zur Kenntnis des rусischen Reiches, vol. x., St. Petersburg 1848, p. 120): the difference between these plans is very considerable and suggests that the town had a very different appearance about 1842 from what it had a century earlier, and perhaps was not even on the same site. This is connected by Sawelyew (Geogr. fæ., 1849, p. 167 sq.) with the alleged destruction of Khîwa by Nâdir Shâh; but it can be proved that the town was on the same site as before in the years immediately following 1740. In 1747 a medrese of 'Arab Muhammed Khân is mentioned. On the other hand Khîwa was almost completely destroyed shortly before 1770 by the continual raids of the
Turkmans (of the Yomut tribe); only 40 — according to another account, 15 — families are said to have been left (MS. of the Asiatic Museum, 590 ob. f. 55b). In 1770 the Inaḳ Muhammad Amin succeeded in conquering the Turkmans and restoring the prosperity of the town and country. The destruction of the old and the foundation of the new Khiwa ought probably to be connected with this event.

In 1804 the Inaḳ Iltużer, the grandson of Muhammad Amin, assumed the title of Khan. When he fell in 1806 in the war against Bukhara, his brother and successor Muhammad Rahim (1806—1825) again placed a Cingird on the throne for a short time, but in the very same year took the title of Khan for himself. By the sucession of the Alar country in 1811, the political unity of Khwarzim was restored and was only broken for a brief period again by rebellions. In 1822 the Turkmans in Marw rebelled against Bukhara and submitted to the Khan of Khiwa. Under Muhammad Rahim's son Allah Kuf (1825—42) the principality of Khiwa attained its greatest extent. It stretched from the mouth of the Sir Darya in the Sea of Aral (about 46° N. Lat.) to Ka'fis Mawr on the Kusht (35° 30'). The ancient Urgene was restored in the same reign. The Russian campaign against Khiwa in 1839—40 was unsuccessful, but the Khan had soon afterwards to fulfil all the demands of the Russian government, although Khiwa at this time entered into negotiations with England. In the official history of Khiwa the English appear as "section of the Russian people whose land lies north of the Russian Empire" (MS. of the Asiatic Museum, 590 ob. f. 566b). During the following years Khiwa had to fight against Bukhara (to 1845) and against the Turkmans. The Khan Muhammad Amin (Madamin, 1846—55) fell fighting against the latter in 1855, as did his successor "Abd Allah in the same year. To the time of Muhammad Amin belongs the most important building in modern Khiwa, the blue minaret over 160 feet high (picture in Fr. v. Schwarz, Turkestän, Freiburg i. B. 1900, p. 205). Saiyid Muhammad Rahim Khan's reign (1864—1910) saw the conquest of Khiwa by the Russians (1873) provoked by the intrigues of the Russian government of the Khan. Only a portion of his former possessions (East of the Amu-Darya) was left to the Khan, and even in these he was to consider himself the "obedient servant of the Emperor of all the Russians." The Khan of Khiwa was later given the title of "Highness" but his position was never equal to that of the Emir of Bukhara (cf. above, i. 783a). Saiyid Muhammad Rahim and his successor Khan Asafidżar (1910—1918) several times appealed for help to the Russians against the Turkmans. During the negotiations between Russia and the Turkmans of Marw, Khiwa made an attempt to act as intermediary (1881—83) in the hope that Marw would not be united to Russia direct but handed over to the Khan of Khiwa as a vassal of Russia. During the fighting of the Revolution period, Khiwa was again been ravaged several times by the Turkmans. After the deposition and assassination of the Khan Asafidżar by the Turkmans Džumáid Khiwa, Saiyid Abd Allah (1918—1920) was chosen ruler; after the deposition of this Khan and the banishment of Džumáid, a "Republic of Khwarzim" was founded, only nominally allied to Russia.

Khiwa in the sixteenth as in the xvith or xvirth centuries was again a nest of robbers, but nevertheless, in contrast to those earlier centuries, more was done than in Bukhara for the promotion of culture and social progress. The development of the country was facilitated by the building of great canals; there were more bridges on the main roads than elsewhere in Turkestän. Khan Saiyid Muhammad Rahim founded a splendid library and made it also accessible to Russian students. The history of the country which was compiled for the government before the Russian conquest surpasses in fullness and reliability anything written in Bukhara or Khokand. Little has yet been done by the Russians for the exploration of the country, its history and its present conditions, although many features have survived which may be looked for in vain elsewhere in Turkestän. In place of the villages in a street usual in Turkestän, the landowner's house stands in the middle of his piece of ground a was usual among the original inhabitants of Turkestän, the Tadjik. The driver (arkabac) sits in the vehicle itself as in Kasghar and not on the horse as in Tashkent, Khokand, etc. The canals are given in the Turkish dialect of Khiwa as among the Turkomans the obviously Aryan names arma and yap ("great and little canal"); the buildings surviving among the ruins of old Urgene are among the oldest and most beautiful in Turkestän and have not yet been fully described.

On the histories mentioned there (especially following the MSS. of the Asiatic Museum, 590 ob and 590 od) composed by order of Ittzer and his successors cf. also Milianos statistique x 231; the titles are given. The first work, Firdaus al-wilāli, was begun by Shir Muhammad, called Musin, by order of Ittzer and interrupted by the death of the Khan in 1806, when the author had not yet come down to Nądish Shāh; the work was afterwards being continued by order of Muhammad Rahim Khan down to 1512; the author was then ordered to translate the Kaʾwat al-Safā of
Mirkhawand into Turkish and died in 1244 (1828/9) before the completion of this work. The history of Khiwa was not resumed till 1255 (1839/40) by order of Allâh Kull by the nephew of Mawını, Muhammad Ridâ, called Ağahi; the history of the country was afterwards brought down to 1872 by this same Ağahi under different titles (each reign being dealt with in a separate work).

(W. Barthold)

AL-KHAWARIZMI, MUHAMMAD B. MUSâ; in al-Tabarî (ed. de Goeje, iii. 1385) al-Khwârizmî is still called al-Madjarî (the descendant of a magian) and al-Kutrubulli (living in or coming from Kutrubull, a district west of the Tigris near Bagdad). The accounts of his life are very scanty and unreliable in as much as we do not know in many cases whether the references are to him or to Muhammab b. Mâsû b. Shâkr (cf. H. Suter, Nachträge zu "die Mathematikher" etc., in Abhandl., zur Gesch. der math, Wissensch., 1902, xiv., note 19, p. 158). We do not know the year of his birth and the date of his death is uncertain. According to H. Suter, he died between 220 (835) and 230 (844); according to C. A. Nallino, after 232 (846/47). He flourished in the reign of al-Ma'mûn, was one of his astronomers, and probably took part in the measuring of the degree in his reign. He used to retire into al-Ma'mûn's library to study books. According to al-Tabari (op. cit.), al-Khwarizmi was one of the astrologers whom al-Wâhiq sent for in his last illness to foretell the result of it. They promised him a long life but he died soon afterwards. Al-Khwarizmi's labours were devoted to mathematics, geography, astronomy and history. He wrote a Kitâb al-Ta'arîkh which is given as a source by al-Masûdî and al-Tabari probably took it from it a passage about an event in the reign of al-Ma'mûn in 210 (825/826) (see C. A. Nallino, al-Huwârizmî etc., p. 12). His works, which are in part important and original, reveal in al-Khwârizmî a personality of strong scientific genius.

The writings of Al-Khwarizmi were composed before the period of great activity in translating from the Greek, although al-Hâdîjî populated his contemporaries for his life. In his achievements in algebra therefore al-Khwarizmi is particularly dependent on the work of the Hindus, Persians and the school of Gundissâpûr. Greek sources were secondary for him. It was probably rather different with astronomy and geography. A list of the writings of al-Khwarizmi is found in the Fihrist of Ya'qûb al-Nâdîm (p. 275) and in Ibn al-Kifî (p. 286). In the Fihrist Sanad b. Alî comes immediately after al-Khwarizmi. Karpinski (op. cit.) believes, probably rightly, that the works entitled al-Hisâb al-funûnî, al-Djamâ' wa 'l-Ta'arîkh and al-Djamâ' wa 'l-Mu'âalâa attributed to Sanad are really by al-Khwarizmi.

His most important mathematical work is the so-called Algebra, Hisâb al-Djâbr wa 'l-Mu'âalâa (according to J. Ryska "Processes of Calculation for Integration and Equation"). Here we have not an algebra in our sense but an introduction to applied arithmetic based on numerous examples worked out. At the same time the book contains very varied matter: a. processes of integration and equation, the simplest forms of equations; b. surveying and mensuration; c. testamentary regulations for division of inheritances. The book was translated into Latin by G. of Cremona, R. of Chester and others (see Bibliography under Rosen and Kar-
We know nothing about his book on sundials (al-Rukbāna) except that he wrote one.

Al-Khwārizmi also dealt with astronomical questions from the practical side; for example, according to a story of Abū Maṣḥar, he investigated how far the conjunction at the time of Muhammad’s birth indicated his future as a prophet (Hamza al-Ifsahānī, Tārīkh, ed. Gottwald, Lib., vii., Ch. iv. (text), p. 153 sqq.; transl. p. 123).

Al-Khwārizmi further prepared an atlas of maps of the heavens and the world at the instigation of al-⊤-māʾūn, probably with other scholars. To this belongs the Kitāb Sūrat al-ʿArḍ ("The Work on the Shape of the Earth") preserved in manuscript in Strassburg, or, as Abū l-Ḥasan calls it, Kitāb Rasīl al-Ruḥ al-Muḥīṭ ("The Book of Drawing of the Inhabited Quarters of the Globe"). C. A. Nallino has already shown that this is the text that accompanied the maps. In preparing the maps — in the two editions — Ptolemy’s Geography was used but edited and enlarged in a very independent way.

He also prepared a map based on al-Khwārizmi’s statements (cf. J. Rusk’a, Neue Beiträge zur Geschichte der arabischen Geographie, in Geogr. Zeitschr., 1918, xxiv. 77—81).

genealogical succession cover the period from 616
A.D. to the end of the dynasty in 1286 A.D. (cf. A.M.). Of these rulers Shāwushāf, whose father was a contemporary of the conqueror Kutaiba b. Muslim, is certainly identical with the ruler Shao-shen-fen, mentioned by the Chinese, who sent an embassy to China in 751 A.D. (E. Chavannes, Documents sur les T'ou-Kiue occid., p. 145); on the other hand, the Khwarizm-shāh 'Abd Allah b. Ashkām mentioned by Ibn al-Attar (ed. Tornberg, viii. 310) under 332 (943/944) is not named in al-Biruni's genealogy. We have coins of the years 348 (959/960) and 366 (976/977) of the Khwarizm-shāh Aḥmad b. Muḥammad, the father of the last prince of this dynasty, Abū 'Abd Allāh Muḥammad (see A. Markov, Inventarny Katalog Muslim. drev. Imp. Ermitaze, p. 295 and 975).

The northern part of Khwarizm with its capital Gurgandād [q.v.] was politically separate from the kingdom of the Khwarizm-shāhs, a fact which is not mentioned by the Arab geographers, and was therefore not known to Yākūt, so that the references in Ibn Faḍlān [q.v.] were not understood by him (Yākūt, Muʿjam, ii. 484, and Baron Rosen in Zapiski, xv. 59). The Amir of Gurgandād, Abū l-Abābūs Maʿmūn b. Muḥammad, succeeded in conquering the southern part of Khwarizm and transferring the title of Khwarizm-shāh to himself and his house (385 = 995). He thereby became the founder of the second dynasty of the Khwarizm-shāhs. Maʿmūn died in 387 (997) and was followed in turn by his sons Abū l-Ḥassan 'Ali and Abu l-Abābūs Maʿmūn II. To the latter belongs the foundation inscription (mentioned above, in vol. ii. 184) at Gurgandād of the year 401 (1010/1011) in which he is described as Khwarizm-shāh. On the negotiations between Maʿmūn and the Ghaznavid Maḥmūd (see above, i. 155) and the murder of Maʿmūn II by his soldiers (Wednesday, middle of Shawwal, 407 = March 20, 1017) see W. Barthold, Turkestān etc., ii. 289 sqq., following al-Hāfiẓ, ed. Morley, p. 539 sqq. His young nephew, Abū l-Ḥārith Maḥmūd b. 'Ali, was elected to succeed Maʿmūn but by ینār, 410 (July, 1017), Khwarizm was incorporated in Maḥmūd's empire and the dynasty ended. The title Khwarizm-shāh then passed to the Amir Altūntād, appointed governor of Khwarizm by Maḥmūd, and there arose a third equally shortlived (to 1041) dynasty. On Altūntād and his two sons (above, i. 322 sqq. Although after the death of Altūntād (1032) the title Khwarizm-shāh was transferred to Saʿīd, son of Sulṭān Maʿṣūd b. Maḥmūd, and Hārūn b. Altūntād was only to govern the land as his representative (khalifat al-dar) (al-Balḥaḵī, p. 439), he is called Khwarizm-shāh by the same historian in another passage (p. 499). Towards the end of the fifth (10th) century a governor of Khwarizm with the title Khwarizm-shāh is again mentioned, namely Iktīfa b. Ḥaqqār (cf. W. Barthold, Turkestān, ii. 346; J. Marquart, in Abh. Göttingen, New Series, vol. 13, i. 48 sqq.). The same title was given about 490 (1007) to his successor Kuṭb al-Dīn Muḥammad b. Anūshāfedīn (Ibn al-Attar, x. 181 sqq.; al-Dīwān, Ṭāhirī-k Dīhān-Ǧuḥā, ed. Mīrzā Muḥammad, ii. 3), the founder of the fourth and most brilliant dynasty of the Khwarizm-shāhs. On the foundation of the power of this house by Atṣaf see this art. Under Takaš (1172–1200) and Muḥammad (1200–1220) the dynasty assumed the position of a great power after conquering Persia and Central Asia—a position with which the title Khwarizm-shāh was no longer commensurate. Takaš calls himself on his coins Sulṭān, son of the Khwarizm-shāh, and Muḥammad Sulṭān, son of the Sulṭān; but outside his empire even Muḥammad continued to be called the Khwarizm-shāh (cf. e.g. Yākūt, Muʿjam, ii. 249 sq.; where the genealogical statements are wrong); and iii. 234, 13; on the relations of Muḥammad with Ǧīlīz Khān and the resultant destruction of the empire cf. Cinoi Kīn; on Ǧīlīz al-Dīn and the final fall of the dynasty (628 = 1231) cf. above, ii. 242. The governors of Khwarizm under the Mongols do not seem to have borne the title Khwarizm-shāh, nor the princes of the house of Sulṭān, whose independent rule (found ed not before 762 = 1360/1361 and not later than 765 = 1363/1364; cf. Bull. de l'Acad. etc., 1921, p. 212) only continued a short time (till the conquest of Khwarizm by Timūr in 781 = 1379); but later several governors of Khwarizm of this house are mentioned at a later date including Ǧīlīz Sulṭān, under whom the land was conquered by the Obeg in 911 (1505), and Sharīf Sulṭān, who, according to Ḥādīr Rāżī (cf. above, ii. 218), ruled in Khwarizm for a short time (about 917 = 1511) (W. Barthold, Sovremenya ob Arab. khor. etc., p. 85; in the German edition, Nachrichten über den Arab. etc., p. 88, the pertinent remarks are omitted). On the other hand the Amir Shāh Malik, governor for the Sulṭān Shāh Rūkh b. Timūr in Khwarizm from the end of 815 (1413) to his death in 829 (1426), is called Khwarizm-shāh in the Mudanjī-i Fażīḥī (MS. formerly in the possession of the Institute for Oriental Languages; cf. Collections Scientifiques etc., iii. 111 sqq., now in the Asiatic Museum, p. 737). He was followed as Khwarizm-shāh by his son Nāṣir al-Dīn Sulṭān Ibrāhīm, who was driven from his capital by 834 (1431) by the Obeg under Abu l-Khaʾir (cf. above, i. 95 sqq.).

The title Khwarizm-shāh is sometimes given in historical documents and literary works to the kheq rulers of Khivā; but they themselves seem to have laid no claim to it. Abu l-Ghāzī (cf. above, i. 86 sqq.) only gives the title Khwarizm-shāh to the dynasty destroyed by the Mongols (ed. Desmoulin, p. 137); otherwise he (p. 277) only uses the expression Khwarizm-shāh as the personal name of one of his brothers. Even when Anīsha, son and successor of Abu l-Ghāzī (1663–1687), took the title "Shāh" after the conquest of Mughed, the word Khwarizm was not added to the title.

Bibliography: Mirkhound, Histoire des sultans du Khirzām, ed. by Defremery, Paris 1842; al-Dūwaini, Tāhirī-k Dīhān-Ǧuḥā, part ii. (Gebb Memorial Series, XVI/i.); W. Barthold, Turkestān etc., Chap. III. (W. Barthold)

Kharābūt, a town in Turkish Armenia, built on a rock to the north of a great plain in the area bounded by the west and south by the Euphrates, in the north by the Murād Su and in the east by the chain of the Armenian Taurus; the site of the town itself lies in the Antitaurus. From the time of Diocletian this territory formed part of the Armenian districts incorporated in the Roman Empire and from the time of Justinian to the Roman province of "Fourth Armenia" which occupied the banks of the Arasians (Murād Su) and which the earliest Arab geographers still
KHARPUT

knew under this name. This district is often reckoned to belong to the old Armenian province of Sophene. Hübschmann wished to identify it with the district of Anziene (Arm. Handzit; Arabic Hinzit, Yâktî, iv. 993). The identification of Kharpit with Қарқайыр (should be Қарқайыр, Z.D.M.G., xxxi. 449) capital of Sophene (Strabo, xi. 527) previously suggested by Ritter could then no longer be maintained. Lehmann-Haupt, however, has come back to the older view (p. 513). In any case the town can be regarded as identical with "Ziata Castellum", the name under which the Persians are mentioned by Ammianus Marcellinus (xix. 6, 1). Arab writers still know the town by the name of Hisn Ziyäd (Yâktî, ii. 276) probably with assimilation to the well known Arab proper name; in the same way in Syria we find the forms Ziyat (Land, Anecd. Syria, ii. 61, 4) and Hisna el Zâïd (Barthaeus). The form Kharpit is of Armenian origin; it comes from the Aram. Kharberad (or Karberd), which probably continues in any case the Armenian word kerd meaning "castle", although the first element cannot be accurately identified. The Arabs write Khartabt (Yâktî, ii. 417). The form Kharpit (vulg. Arm. K'arp'ut) is found as early as the xivth century in the Byzantine author Cedrenus (ed. Bekker, ii. 419, r3) in the form Xaphtut. This is the present Turkish name but in the time of Ewliya Celebi the tax register lists still had Hisn (sic) Ziyad. Among the popular etymologies given by Ewliya we find Kharbut, i.e. "ass-idol", which the Christians are said to have once worshipped there and which is said to be buried in a monastery on the island in the Lake of Guljak to the east of the town.

Lastly the Greeks and the Karamians call the town Quart-Pierre (William of Tyre) and by other forms. According to al-Dimashḳi (ed. Mehren, p. 190) Hisn Ziyad was the name of the castle only and Khartabt of that of the town.

The town is not mentioned in the three first centuries of Islam. Lying as it did on the frontier between Armenia and Byzantium it must have frequently changed hands. Its situation must then, as later, have kept it in a position of more or less dependence on Diyar-Bakr. In the fourth century Khartabt was still under the Greeks. In 367 (777/778) the Hämâtânid Abu Taghib driven out of Mesopotamia by 'Aḍud ad-Dawla was able to make a stand in Hisn Ziyad where his brother-in-law a vassal of the Byzantines supported him (Ibn al-Athir, viii. 510; Weil, Gesch. der Chal., iii. 25). In the sixth century we find the Urtukids in possession of the town but it is not clear from whom they took it; in 500 (1106) a certain Muhammab b. Djubukh al-Turkmânî is mentioned as lord of Hisn Ziyad (Ibn al-Athir, x. 296). But a little later we find it the residence of the Urtukid Balak (q. v.) b. Bahram b. Urtuk who in 1122 imprisoned there the Crusaders Joscelin and Waleran and in the following year King Baldwin in addition. Some months later (Rab. I 517 = May 1123, according to Ibn al-Athîr), the Armenians succeeded in the absence of Balak in taking the castle and liberating the prisoners. But Balak returning soon afterwards regained his residence (Rajjab 23, 517 = Sept. 16, according to Kamal al-Din), and Baldwin again fell into his hands. On this occasion the great tower of the fortress was thrown down (R. Hist. des Crois., Doc. Arm., ii. 133). Balak was succeeded in the lordship of Khartabt by the Urtukids of Hisn Kaïfa; an inscription of Fakhr al-Dîn Kara Arslân [q. v.] dated 561 (1165/1166) was found in 1899 in the court of the great Mosque (cf. van Berchem, in Abb. G. W. Gott., N.F., ix., No. 3, p. 142 sqq.). After the death of Nâr al-Dîn, son of Kara Arslân, in 581 (1185/1186) his brother 'Imâmûn b. Abû Bakr seized the fortress and founded a collateral line of the Urtukids there, which continued there under the suzerainty of the Aiûyûbs and later of the Seljuks of Kôm. The frontier with the lands of the latter was formed by the Euphrates after the extinction of the Danishmends of Malatia. During this period Khartabt was captured for a brief period by the Sultan of Kâmrân in 625, Liwaiûnî, Dîjânîn-Gûzî, ii. 180, then by the Mongols, after their capture of Amed (1290) but soon afterwards in 631 (1233/1234) took place the conquest by 'Alâ' al-Dîn Kaîtûbîd, a conquest which had been foretold to him by the mother of Ibn Bûbî (Houtsma, Recueil de l. réc. à l'hist. des Seljûq., iv., p. VII, 194). This was (p. 210) a certain Siû-Bâshî of Khartabt who hastened to drive out the Kâmrânîs. But as van Berchem has shown, the Urtukid line must have existed down to the xivth century though it is not clear if they remained at Kharpit (van Berchem, op. cit.). In the troubled period that followed the decline of the Seljuks, Kharpit seems to have been included in the lands of Kâdi Burhân al-Dîn of Siwâw who took refuge there about 800 (1397) during his fight against Kaïa Oţâmân of the dynasty of the Aḵ-Koyunlu (Sâd al-Dîn). According to Ewliya Celebi, Timûr himself was not able to take the town until his return from Asia Minor; after Timûr it was the Dhu 'l-Kadr dynasty that held Kharpit most frequently. Usun Hûsan took it from them temporarily in the reign of Malik Arslân (856-870); it was at this time that Jâṣapha Bârbûro visited Kharpit (Viaggi, Venice 1545, p. 48 sqq.).

In 913 (1507) Shâh Ismâ'îl took the town but soon lost it to Bûykîf Muhammad, general of Selim I who took Kharpit after his reconquest of Diyâr Bakr in 921 (1515) (Rustem Pasha, Târîkhi, ed. Forrer, p. 43; Ewliya Celebi). Henceforth the town was included in the Ottoman empire as capital of a sandjaq in the eyalet of Diyâr Bakr (Hâdîjûl Khalîfa, Dîjânînûmû, p. 439). The sandjaq-beys were usually Kurds.

At the beginning of the xivth century these governors moved their residence from Kharpût to the little town of Mezère lying in the plain near the hill of Kharpit to the S.W. Mezère is written Mezere, as if it were an Arabic word but it seems to be mentioned as early as by Ptolomy in the form Մացար (Hubschmann, o. c.). In the reign of 'Abd al-Medjîd, Râshîd Pasha, after a journey of inspection in Kurdistan suggested Mezère as the capital. He had barracks built there. Under 'Abd al-'Azîz, Mezere definitely became the residence of the governor and Kharpût-Mezere became officially known as Ma'mûret al-'Azîz in honour of the Sultan. This name, which was given it by the Wâlî Ismâ'îl Pasha was next extended to the whole sandjaq and in 1296 (1879) Ma'mûret al-'Azîz became the name of a new wilâyet formed in that year with Kharpût-Mezere as its capital. The wilâyet was composed of the sandjaqcs of Kharpût-Mezere (including the old province of Sophene as a merkez-kadî), and beyond the Euphrates the kadâs of 'Arabgîr, Eghin and
Kabūn Ma'den, and those of Malāţia and Dersim. The rock of Kāharūt rises to a height of about 1200 feet above the surrounding plain. The upper part is occupied by a mediaeval castle, at one time Balak's residence. The castle has only one gate: its walls have several inscriptions not yet published (Lemmann-Haupt). The town itself is also a fortress (dāgh kafta) but its ramparts have been for long neglected. It lies in the Ulū Dījānī as the largest mosque and also an Arsālānī Dījānī, it is probably the latter that has the inscription mentioned above. The population of Kāharūt-Mezere was estimated about 1900 at 28,000 inhabitants (in 1835 Brant put it at 9,000) with a majority of Muslims (Turks and Kurds) and a considerable minority of Armenians. There was an important American mission there which took an especial interest in Armenians of whom a great many had become Protestants. There were also Syriac Christians. The Armenians of Kāharūt suffered very much from the massacres of 1895 and during the war of 1914—1918 so that the Armenian element must now be very small. Ewliya Čelebi says the principal industry was saddle-making. The town is also noted for its manufacture of silks and the cultivation of silk in the districts has diminished (Cunnett). The surrounding plain is well watered and very fertile and at the beginning of the sixth century there was even talk of overcrowding. The nearest port is Kerešnāi [q.v.] but the great road to Şamsūn via Siwās and Amasia is more used. The roads to Dīyar Bakr and Malāţia are also very old.

(L. Massignon)

KHARRUBA (the seed of the carob-tree, Cena
tonia Silvica L.), synonymous with ḫāyā. This term is frequently found on Egyptian glass weights of the first and second centuries A.D. usually to give the weight of a copper coin (e.g. fāls of 25, or 30 or 35 kāhrenum etc.). The weighing of well preserved glass weights gives an average weight of 0,196 gr. (3 grains) for the kāhrenum, i.e. rather more than a gold ḫāyā. In Tunis the word was applied to a copper coin down to quite modern times. For further information see the article ḫāyā.

(E. V. ZAMBUK)

KHĀRSĪNI (Kāhrūsīnī) is given as the seventh metal by many cosmographers, etc. in addition to the usual six, gold, silver, copper, iron, lead and tin; it is called mercury by the alchemists. As is evident from the statements of al-Būrī (q.v.) and al-Kāzī, the famous physician and alchemist, Arabs were not acquainted with it itself but at most with articles made from it, and perhaps even these they only knew by hearsay: mention is made especially of hard arrow-heads, harpoons, looking-glasses, and shells made of khārsīnī. The mineralogist al-Ghaffārī connected it with a meteorite. According to W. Hommel (Ziehr. f. angewandte Chemie, xxv. 100 [1912]) it is certainly not zinc, as has been suggested, but a hard lead, i.e. a composition of lead, a good deal of antimony and small quantities of ores, copper, iron and tin. This composition possesses the physical qualities ascribed to khārsīnī. The Arabs, however, credit it with further marvellous (including healing) powers. In the Ain-i Akbari (transl. Blochmann, i. 40) Ahcēnīsī is given as the description of Khārsīnī. ( Cf. E. Wiedemann, Beiträge z. Gesch. der Naturwiss., v. 403; xxiv. 80, 86 sqq. in Sitz.-Ber. d. Physik. Medizin. Soc. in Erlangen, xxvii. 1905; xlii. 1911; further literature is also given there and a series of references to manuscripts.)

Bruggens, Zur Chemie bei den Arabern, do., xlii. 1911, p. 86. Further literature is given in these articles and a number of notes added. (E. WIEDEMANN)

KHARTABĪR. [See KHĀRMUT]

KHĀRTUM (A.), "an elephant's trunk" (de
dscription of the narrowing spout of land between the two riverine villages of the capital town, seat of government, trade centre of the 15 provinces of the Sudan under the Government and of the Governor General, who holds his appointment under the British Government with the approval of the Plufer of Egypt, is situated on the left or south bank of the Blue Nile, which joins the White Nile about one mile down stream; it has a river frontage of two miles, is 1250 feet above the level of the Mediterranean, in 15° 36' N. Lat. and 32° 32' E. Long.; by rail it is 432 miles from Port Sudan on the Red Sea, and by rail and river it is 1345 miles from Cairo.

Across the river (here about 700 yards wide) is Khartūm North (population 16,000) with the dock
cyard, civil prison and military barracks. Omdurman is some two miles down stream on the left bank of the Nile proper, with a population of 60,000.

Before the conquest of the Sudān in 1899 by the Khedive Muhammad 'Ali of Egypt, Khartūm was a small native village on the main road from the north to Sennāf. This road, leaving the Nile at Shendi 100 miles north of Khartūm, led direct
Khartum — Khashabiya

to Soba, across the desert, and then southwards along the right or east bank of the Blue Nile.

Khartum was selected as their base by the Egyptians on account of its position at the junction of the two principal waterways. It became the capital town in 1823, but building in brick was not begun until 1839; as the centre of government and trade activities it became also the centre of the slave traffic.

In 1862 Sir Samuel Baker left Khartum to discover the sources of the Nile, and again in 1870 he went south to attempt to stop the slave trade, in response to pressure put upon Egypt by the Powers in Europe, and to open up the territories of the South. Here too came General Gordon in February, 1877, to be Governor General of the Equatorial Provinces, a post he vacated in October, 1876. With considerable reluctance he returned in February, 1877, to be Governor General of the Soudan, but resigned in December, 1879, in despair of effecting any improvement in the administration. When the Mahdist rebellion broke out, Gordon once more returned, in February, 1884, to be Governor General, and taking an active part in the defence of the town against the Dervishes he met his death on the steps of his palace on January 26, 1885, the British relief force arriving two days afterwards, too late to be of any assistance.

Khartum was abandoned by the Dervishes in favour of Omdurman, and was re-occupied after the defeat of the Dervish forces on September 2, 1898, by the British and Egyptian armies under Lord Kitchener. On the re-conquest of the Soudan the rebuilding of the town was at once commenced, a new palace of three stories being erected on the foundations of the old one, and in the extensive gardens still flourishes a rose tree known as Gordon’s from its association with him.

Khartum has been reconstructed on a plan designed by Lord Kitchener with a view to future development and military requirements. A series of barracks for native troops have been built at intervals along the old earth works used during the siege. The barracks of the British garrison are situated at the east end of the town, fronting the Blue Nile and adjacent to the bridge which carries the railway line from the north into Khartum.

The railway runs southward along the Blue Nile for 170 miles, and then turning west eventually crosses the White Nile and passes through the gum gardens into Kordofan.

The river front of Khartum extending for some two miles, with its conspicuous fringe of date palms, a distinctive landmark in the flat and treeless country, is reserved for official buildings and residences, with few exceptions. An embankment wall along a considerable part of it protects the bank from erosion by the river, which rises during high Nile to some 30 feet and has a swift current. Along this wall runs a continuous treeshaded public road bordered on the inner side by well kept gardens. Behind are situated the banks, the headquarters of the trading companies, shops, the native market, and residences; further inland the building regulations are relaxed to enable Europeans and better class natives to occupy less expensive houses. The poorer natives live in villages outside and to the south of the line of encircling barracks. A fine mosque, inaugurated by the ex-Khedive Abbas Hilmi in December, 1901, was built of local stone with funds from Egypt.

The Anglican cathedral was consecrated in January, 1912, by the bishop of London. There is a Greek church, a Coptic church, a Roman Catholic church in the Austrian Mission, a temporary church in the American Mission, and other places of religious worship. Gordon College, built and endowed with funds raised by Lord Kitchener, provides advanced education for natives of the Soudan in Muhammedan law and houses a training school for schoolmasters, as well as instructional workshops. There is a government elementary school and various mission schools. A first class civil hospital affords medical and surgical help for patients from all parts of the Soudan and has a high reputation amongst the inhabitants. There is a small zoological garden. Electric light was first used in 1906 and an excellent water supply laid on in 1909; steam tramways and ferries are now being taken over (1925) by a group of English firms who will also build a bridge to Omdurman.

The population of Khartum, about 23,000, is mixed. British and Greek subjects form the largest European groups. Syrians and Egyptians have migrated from the North, but the greatest majority of the inhabitants consists of natives of the Soudan, Arabs from the northern provinces and Blacks from the South.

Al-Khashabat (plur. of al-khashaba, pole), was the name given to the light-houses in the Persian Gulf near ‘Abbādān: they are mentioned in al-Khwārizmi’s Mafāštī al-Ulīm (ed. v. Vloten, p. 124) as columns placed in the sea, on the tops of which lamps were lit at night. According to Mā‘īr ibn Khūsraw (Safar-nāme, ed. Scheter, text p. 90, transl. p. 246), they consisted of four columns of teak which rose 60 feet above the sea; there was a platform on the top with a little house for the watchman. The latter lit the lamps which were surrounded by glass to shelter them from the wind. They served as guides to the ships and were also used to signal the approach of pirates. Places at which these light-houses stood are given in Bibl. Geogr. Arab., iv., Gloss., p. 225, and in E. Wiedemann, Über Leuchtefuni bei den Muslimein, Arch. f. Gesch. d. Naturwissenschaft. u. d. Technik, ii. 1909, 151—4, and A. Mez, Die Renaissance des Islam, 1922, p. 479. * (E. Wiedemann)

Mukhtar's order and released Muhammad b. al-Hanafiya [q. v.], who was imprisoned by 'Abd Allah b. al-Zubair [q. v.], are called Khazabiyah (al-Tabarï, et. cit., ii. 693, 4 sqq.; Ibn Sa'd, Ta'khirî, ed. Sachau, v. 74, 16 sqq.; cf. 76, 15; Ibn al-Athir, al-Kamil, iv. 206 sqq.). They themselves apparently called their cudgels kafir-kubrāt (from Persian čab, wood, club) "clubs for unbelievers" (al-Tabarî, et. cit., ii. 694, 13; Ibn al-Athir, op. cit., iv. 207, 7 [variant]); these weapons are afterwards found also with the partisans of Abû Muslim [q. v.], (al-Dinawarî, et. al-Khbar al-Tawârî, ed. Caven, p. 350, 30 sqq.; al-Jâhîz, 93, 21; G. van Vloten, Recherches etc., Verd. K. A., Amst., Afd. Letterk., i, No. 3, 1894, p. 67), and in the civil war in Baghdad in 251 (865) they were distributed among the plebs (al-Tabarî, et. cit., iii. 1586, 13, 1587, 4; 1589, 7; Ibn al-Athir, op. cit., vii. 99, 9; al-Dîhilî, Ta'likh Khasî'î, ed. van Vloten—de Goeje, p. 11, 9) mentions the kafir-kubrāt as weapons of the Turks.

The remark in Ibn al-Athir's chronicle (op. cit., iv. 207, 13) that the liberators of Ibn al-Hanafiya bore cudgels in order to avoid the use of swords in the harâm, is as improbable as is the interpretation which connects the name Khazabiyah with the wood piled up by Ibn al-Zubair beside the prison of Ibn al-Hanafiya with the threat to have him and his fellow-prisoners burned.

With reference to a hadith of 'Abd Allah b. 'Umar in which the performing of the ḥablât behind the Khazabiyah is mentioned, the latter name was explained as denoting people who reverently kept the pole or tree-trunk (khshasha) on which 'Aqib b. 'Ali [q. v.] had been executed. But, as Majd al-Dîn Ibn al-Athir (loc. cit.) observes, this explanation is chronologically untenable.

According to an observation made by Ibn Hazm (al-Faqîh et al-Limal wa l-Aswâq 'an al-Nahi, Ms. Leiden 4809, f. 138b infra; cf. F. Friedlander, The Heterodoxies of the Shiites according to Ibn Hazm, New Haven 1909, i. 63, note 1), the Khazabiyah regarded the bearing of iron weapons as not allowed till the expected Mahdi had appeared.

The fact that "Revenge for al-'Usayn!" (yâ la-ta'rayt al-'Usayn, c. g. al-Tabarî, et. cit., ii. 694, 14; 14) was the rallying cry of the Khazabiyah is possibly intended to supplement this name by al-'Usainiyah, which is graphically only slightly different; the latter is, however, to be retained in places like Ibn 'Abd Rabib, 'Abd al-Farîd, Cairo 1317, i. 190, 17 sqq. and Ibn Badrân, Sharî' Kātib 'Ibn 'Aqîdîn, ed. Dozy, p. 187, 12-14).

Thus al-Khazabiyah was another name for the Kaṣāsîyya [q. v.] and then was applied to the adherents of the doctrines which were current among the latter, like that of the return (ra'yâ'a, q. v.) and that of metempsychosis (tanâmîsh, q. v.). The poetical representative of these doctrines, Kudhayyir, is called a Khazabi and is said to have been gained for the Khazabiyah by the poet Khidrî al-Asadî (al-‘Abbânî, viii. 33, 16, 20-24, 34, 20; xi. 47, 29 sqq., where Khidrî is to be read instead of Khadîfî).

According to Muhammad b. Ahmad al-Khwârizmi (Mafâth al-‘Ulûm, ed. van Vloten, p. 29, 3 sq.), the name al-Khazabiyah was used for a group of the Zaidiyah [q. v.]. Known as Surkhâbîya alter a certain Surkhâb al-Tabarî of whom nothing seems to be known; it might be possible to think of one of the Surkhâb who played a part in Tabaristân in the time of Hasan b. Zaid [q. v.] (cf. Ibn Is-fandyi, Engl. transl. by E. G. Browne, Gibb Mem. Ser., ii. 1, Leiden—London 1905, Index.) It must be left undecided whether they were called Khazabiyah after their weapons or perhaps on account of Kaisâni doctrines which asserted themselves among them. The same statement occurs in Abu l-Mâ‘âlî, Bayân al-Adwânî, in Christomathie proem, ed. by Ch. Schefer, i, (P. E. L. O. V., 2nd Ser., vii., Paris 1853), p. 157, 48 sq., where Surkhâb is to be read instead of Surkhâb.

According to a statement given on the authority of Abû l-Lâ‘în (apparently Ibn al-Mu'âsîrî), al-Khazabiyah was also the name of a section of the Djihiyyah [cf. the art. Dîhah B. ‘Awâlam], which maintained that Allâh does not speak and that the Qurân is created (L. 'A., i. 343, 9; T. 'A., i. 234, 25).

AL-KHAŞĪBI. [See Ibn al-Khâṣîbî.]

AL-KHAŞĪBI, ABU l-'ABBĀS AḤMAD B. ‘UBAAD ALLĀH B. AḤMAD B. AL-KHAŞĪBI, A VIŻIĒR. After the deposition of Abu l-Kâsim al-Khâṣîbî in Ramaḏân 313 (Nov. 925) (see IBN KâKÂN, 3) al-Khâṣîbî, who at that time was secretary to the mother of the Caliph al-Muqtadîr, was appointed vizier. But as he neglected his official duties and made himself generally hated for his extortion, he was deposited on the advice of the chief of police Muḥsin in Dhu l-Ka‘da 314 (Jan. 927) and ‘Alî b. Ja‘f (see IBN AL-Dâ‘î), 2 appointed in his place. Till the latter could reach the capital, ‘Ubaid Allâh b. Muhammad al-Kawâdhî acted as his deputy. In 318 (930/931) the other vizier Ibn Makhâḏî [q. v. 2] entrusted al-Khâṣîbî with the government of Fârs and Kermân.

Al-Khâṣîbî was also the name of the vizier who succeeded Muhammad ‘Ubaid Allâh in Dhu l-Hijjâja 321 (Dec. 933) and held office till the deposition of the Caliph al-Kâhir; in Ibn al-Athîr (viii. 195) and Ibn Khalîlîn (iii. 394) however, his name is given as Abu l-'Abbâs Aḥmad b. ‘Ubaid Allâh b. Sulaimân al-Khâṣîbî. Al-Khâṣîbî died in 328 (940).

KHAŞSEKÎ (Arab. khâşa: “private” with Turkish suffix ki), a term applied to anything belonging to the domains, service or the palace of the Sultan of Turkey. The Khâṣseki were the guards of the serail, a body of 300 junior officers chosen among the bajtâmî; 60 of them formed part of the imperial retinue, as a bodyguard; they wore a uniform of red cloth, were armed with a dagger (kshâdârî) and carried a baton in the hand; their commander was the bajt-khâṣseki. The khašseki-agha was the lieutenant of the bajtâmî-
Khāṣṣekī — Khāṭa

bashi. The khāṣṣekī-bashi, who is not to be confused with the preceding, was an officer of the corps of bālṣadji and acted as receiver general of the revenues that came from the pious endowments of Mecca and Medina. He wore a large bonnet of red cloth.

Khāṣṣekī was the title given to the Sultan's favourite. In the early days of the monarchy down to Ahmad III (1115 = 1703), the wife of the Sultan who gave birth to a prince was honoured with the title khāṣṣekī-sultanī, while those who only had daughters were called khāṣṣekī-kulīn. In 1705 (1647), contrary to the rule followed by the house of 'Othmanī, the debarced Sultan Ibrāhīm, several of whose consorts bore the title Khāṣṣekī, married one of the latter, Tellī-Khāṣṣekī, and she received the name Shāh-Sultanī.

Khāṣṣekī-jamāt 'mosque of the favourite', at Constantiople, built by Kharrem-Khāṣṣekī (Rose-lane) in 945 (1538) with fountains, soup-kitchen (simāret), a school founded in 946 (1539) and a hospital built in 957 (1550). The building originally had only one dome; a second was added by Ahmad I. in 1201 (1612). These edifices are in the Awret-Bāzār (Forum Arcadianum) at Stambool. The Khāṣṣekī hospital at the present day is reserved for women.

Hellert, x. 74. (Cl. Huart)

Khāṭa (A.), a mistake, which is made in thought speech or action — a fault which one has is called 'sit', the opposite of sawāb, the correct; hence in the field of knowledge: error; in that of action: omission, failure, all this, of course, unintentional; from the last meaning develops that of wrong which one commits, transgression; whether this is to be regarded as unintentional or — as in khat'a and khat' — deliberate (sin) is a disputed point with the lexicographers. Khāṭa and khat' (the latter is found only in the Kūfī so that it is hardly classical) are synonymous (or phonetic variants?). Khāṭa is sometimes regarded as an infinite of khat'a used as a substantive (which it originally was and still is), sometimes as a substantive from akhēda (which it has become through linguistic usage), and sometimes as belonging to both. The lexicographers have the most diverse opinions regarding the more accurate definition of the meaning of these two verbs, within the sphere of ideas above outlined. Khāṭa and khat' are exceedingly rare in classical poetry (e.g. Abu l-Atālahiya, ed. 1888, p. 120, i: "sin" [parallel with duḥū]; also Kurān, xvii. 33: "sin"), as a variant of khat'; iv. 94: "transgression"); more frequently only the verbal forms khat'a and akhēda are used as synonyms.

The use of khat' as a technical term is in keeping with the general use of the word; the principal uses of it are as follows:

1. Error in logic (opposite sawāb), synonymous with khat', the "invalid" (opposite haḳḳ); the former pair of concepts ought to be used in questions of iṣṭiḥād [q. v.] and the latter in questions of fiḳh [q. v.]; this may be the result of the corresponding use of the word in the Kurān), so that Islām and the other religions are contrasted with one another in haḳḳ and khat'; opposite views in the fiḳh of the fiḳh (see the article fiḳh), as sawāb and khāṭa; but there is only one verbal form for each, aṣbaḥa and akhēda, which points to the artificiality of this distinction, and in reality the rule is often not observed; in other branches of learning also khāṭa and khat' are used promiscuously, as indeed are sawāb and khat' also. The works which deal with the uṣūl al-ḥaḳḳ (see the art. uṣūl) discuss the question whether the mudātahid [q. v.] mutlaḳ can err. In the orthodox community the opinion has prevailed that the mudāṭahid can err and in cases of difference of opinion only one can be right at a time, as is the traditional point; the Mu'tazilis [q. v.] asserted that every mudāṭahid is right, and even celebrated orthodox teachers held this view, e.g. Abu Yūsuf, Muḥammad b. al-Hasan al-Shāhībīn, Ibn Suraicī, al-Maẓāmi, al-Ash'ārī and his school, al-Bākiliyy, al-Ghaẓālī; Abu Ḥanifa adopts a middle view. The champions of the orthodox view believe, in keeping with this, that Allah has already come to a definite decision before every iṣṭiḥād and that the correctness or otherwise of the decision of the mudāṭahid results from its agreement or not with that of Allah; those of the Mu'tazila assume either different decisions by Allah which coincide with those of the individual mudāṭahid's and are valid for them and their muṭaḍallīs [q. v.], so that all differing decisions of the mudāṭahid's are equally justified, or they consider one decision more justified than the others and believe that Allah has taken no decision in such cases but "if He did do so", would express quite a definite one: this supposed decision by Allah is then compared with those of the mudāṭahid's and the mudāṭahid who agrees with it is considered in the right in every respect; but those which differ from it are considered in the right with respect to the basis, the iṣṭiḥād (iṣṭiḥādān iṣṭiḥādān), as the mudāṭahid has endeavoured with all his power to find the decision, in the wrong with respect to the result, the decision of itself (iṣṭiḥādān kāmanān). The representatives of the orthodoxy view, who are essentially in close agreement with this form of the Mu'tazili view, make the same distinction (the opinion is rejected that the mudāṭahid who makes a mistake is completely in the wrong); the other Mu'tazili view, however, is in sharp contrast to this. But this difference only exists in questions of the derivation of legal rules from the uṣūl al-ḥaḳḳ (fi l-ḥaṣrīyyī) and only in the case where no clear decision is given in the uṣūl; if there is one, but it has not been regarded by the mudāṭahid, he is, of course, wrong. In the domain of the uṣūl al-dīn, of kalām [q. v.], particularly in reason abductions (fi l-ḥaṣrīyyī), according to the general consensus, only one view can be right in a case of differences of opinion. Only a few Mu'tazilis, as whose representatives Abu l-Hasan 'Abd Allah al-'Anbari and al-Dājżārī are cited, asserted that here also in doxographies every mudāṭahid (the word is used in a wider sense, meaning everyone who does all in his power to solve a problem) is right; while al-'Anbari adds so long as he can be still described as a Muslim, and al-Dājżārī without limitation. Tradition on this point is no longer certain, as is apparent in differences in detail and in a certain irresolution; in this Mu'tazili teaching, however, — as in the polemics regarding the mudāṭahid —
The meaning of 'khata' come into consideration so that it is doublets correctly explained that by "being right" is not meant agreement with the actual facts, but that the maqāṣid has fully fulfilled the task imposed on it and therefore cannot be punished (while according to the orthodox consensus every non-Muslim is doomed to the pains of hell eternally), that that to which his ijtiḥād leads him is the right for him by Allāh’s decree itself. This ambiguity in terminology must have contributed to the ambiguity in tradition. That, taken purely logically, several differing views could be right at the same time has never been asserted. — The maqāṣid in the wrong is not punished for his error and is not considered as being in a religious error (dīnī), but is usually excused and is rewarded as he has done everything that is demanded of him if he has really used all his energy for the derivation of the legal rule; if he has not done this he is punished for his error; others say that every error of a maqāṣid is a sin; but this view is rejected. All this holds only of the maqāṣid’s of the Sunna, those of the "twelver" Shi’is are infallible.

2. Unintentional action (opposite 'amūd; this comes from mushaf, p. 94 sq. (cf. the art. KATA, section ii. i; passages like ii. 286 and xxxii. 5 may have also influenced); this is of interest here in so far as it is illegal; it may be more accurately defined as an act contrary to law, in which the intention of committing an illegal act is lacking, while the action itself may be deliberate; any negligence is left quite out of the question in the juridical appreciation. The Mu’tazilis asserted that one could not be punished by Allāh for it, for punishment is only conceivable for a deliberate illegal act; orthodoxy on the contrary teaches that, while khata is not a sin (tashu‘), any negligence, however, is something deliberate, and the khata, as its result, is liable to be punished (it is regarded as belonging to the 'aswār muktasaha, happenings only indirectly intended, in themselves not deliberate), for which man can equally be made responsible, but Allāh in his mercy will overlook the punishment in the next world; the khata is thus considered as an ameliorating — often even exonerating — circumstance in the infliction of punishment in this world (shukha; q. v.); it cannot be punished by hadād (q. v.). But not all of Allāh’s rights are dropped: anyone who, contrary to the prohibition, kills an animal in the haram (q. v.), the sacred territory of Mecca, whether with 'amūd (deliberately) or from khata' (unintentionally), has in the opinion of all four madhāb’s (q. v.) to make the prescribed atonement; Dā‘ūd al-Zahiri alone in this case also considers khata as an excuse. This is doubtless connected with what is ultimately a pre-Islamic idea, that Allāh has an especial right of ownership to the haram, its plants and animals (cf. Gaudefroy-Dembynes, Le Pléniéreur à la Mekke, p. 7, 10).

It follows that an unintentional infraction of this right of property is to be atoned for like an intentional one; (the substance of this is also found in the following difference of opinion: Mālik and Ahmad b. Hannāl do not require a special compensation if the animal has an owner — who, of course, must be compensated — i.e. does not belong to Allāh; Abū Ḥanīfa and al-Shāfi‘i demand it in every case, so that they extend their area of application). In ḥala there also is a full liability for any injury done to another. Here ḥala (q. v.) is a special case: its application is excluded when khata is present; instead the amūd (q. v.) is to be paid and the ḥalāfa (q. v.) to be performed. For further details see the article KATA, Section i. 5, 6, where the variation of 'excuse' in the meaning of an unintentional act are given. From them it will be seen that this terminological use of the word is based on the two meanings "error" (in the case of khata' fi 'l-ḥaṣād) and "failure", "accident" (in the case of khata' fi 'l-ṣahād) and is no more uniform than the uses dealt with under i.

Bibliography: The dictionaries: their statements are collected in Lane, Arabic-English Lexicon, v. i, 761; on its use as a technical term see Dictionary of the Technical Terms used in the Sciences of the Muḥannafs. Bibli. Indica, Old Series, i. 401 n. 1; Habershon, Resümations, ed. G. Flugel, p. 104; for further details the works on Ṣuṣār and the Fikhi-books are indispensable. See also the art. KATI.

(I. SCHACHT)

KHAṬĀ‘, the "sinners", pseudonym (tashā‘i) of Shāh Ismā‘il (q. v.). Of his Persian poems we only know so far the single verse quoted in the anthology compiled by his son Šāh Mīrzā (q. v.) and some other lines. On the other hand his Turkish Dīwān is known from several manuscripts, although these are rather scarce and differ considerably.

E. G. Browne (Persian Literature in Mediaeval Times, p. 12—13) has discovered the curious fact that the founder of the Safavid kingdom wrote mainly in Turkish while his rival Šūlṭān Selīm used Persian for his poems. Khaṭā‘ is now rightly regarded as one of the precursors of the literature of the Turkish dialect of Ardabīlijī. His language, however, judging from the oldest Farā’i manuscript, is rather artificial; alongside of the true Ardabīlijī vocabulary we find parallel forms from Eastern Türkī: galiyar, ḥaylār, the accusative of stems in consonants: in-γu-γu-γu.

From the point of view of poetry, Khaṭā‘s work is only mediocre; his images are isma’īlī and his lyrical themes monotonous. On the other hand the autobiographical allusions are very interesting in which Ismā‘īl poses as avenger of the blood of his father or as protector of the "family hearth" (khamāda‘) of Ardabīl, fulminates against his enemies of Fārs, extols the bravery of his ghulām, qabīl and dārān, and puts forward very bold mystical claims. He identifies himself with Ḥa‘ī and the imām and goes on to proclaim: "I am that agent absolute (FI‘IL muṭlaq) of whom they talk; the sun and the moon are in my power; my being is truly dominus Dei (haft Allāh); to prostrate thyself before me (ṣugā‘) is thy duty morning and evening"... "I am absolute reality (ḥa‘aṣ).... I am the pearl in the sea of truth (ḥa‘aṣa‘)."

The place occupied by Khaṭā‘ in the beliefs of the Ahl-Ḥa‘k (mujal ‘Alī场面 [i. v.]) is very important. Khaṭā‘s verses are frequently quoted by adepts of the sect. The litany known as Khābānīma enumerating the successive manifestations of the divinity runs as follows: "In the person of Khaṭā‘ it spoke Turkish and became the sīr of Turkestān", where this geographical term is said to mean Ardabīlijī inhabited by Turks.

The Khaṭā‘ avatar of Shāh Ismā‘il is important for the study of the occult doctrine of the šafawīs.
which deviates far from the Shi'a canon. It throws a new light on the esoteric foundations of the political power of the Safawids (cf. the sources like the Safvat al-Safā, Sīhilat al-Nashī-i Saḥawīya and the history of the youth of Ismā'īl I published by Sir Ed, D. Ross in J. R. A. S., 1895, p. 249-340). Von Hammer (Gesch. d. Arm. Dichtkunst, ii, 18) mentions a mysterious dervish nūrī Khāṭātī (d. 936/1529) who had gone to Persia to receive from the hands of the Emīr al-Dīn of Dījal al-Dun Rāmī which the Safawī monarch had taken to Persia. V. Hammer quotes four verses from it in translation.

Bibliography: Turk-i Sāmī: MS. of the Bibl. Nat. of Paris, Persian Suppl., No. 1492, f. 17 r.; cf. also S. de Sacy, N. E., ix, Paris Ann. 7, p. 278. The MSS. known of Khāṭātī's Turkish Dwān are as follows: 1. Bibl. Nat., Turkish Suppl., No. 1307 (83 ff.): 253 ghazals', matnāwī ʾī Ḫosrowāyāt (24 batās), another matnāwī identical with that in London (18 batās), a heroic matnāwī (60 verses in mūškābār); the MS. was written in 948, i.e. 18 years after the death of Shīb Ismā'īl; 1 his ibtidāl batās, turn-over No. 995 (the former Scherfer-collection), goes back to the xvith Cent., Contains on 64 leaves: in Turkish 205 ghazals', 9 quatrains, matnāwīs (one of them the Naṣīḥāt-nāma ?), moreover one ghazal and some batās in Persian; 2. Brit. Museum: Or. 3380 "apparently of the xviith century"; cf. Ricu, Cath Turc. MSS. in the British Mus. London 1888, p. 205 sq.: the matnāwī Naṣīḥāt-nīma (168 batās) and the ghazals (ff. 10b-83); 3. Asiatic Museum of Leningrad: Or. 297, copied in 1036, contains the matnāwīs Aḥkām wa-maʾākāhik and the ghazals; 4. Prussian Staatsbibliothek Berlin: Or. Fol. 209, written in 1777, only contains 34 ghazals' (204 batās); cf. Persich, v. (Pers. Handschr.), sub No. 16; 5. Shaikh Hasāin Zāhdī, Sīhilat al-Nashī-i Sāhawīya, ed. E. G. Browne, Berlin 1334/1922, pp. 68-72: 4 poems of Khandānī glorifying the 12 imāms; 6. V. Minorsky, Materials ... sekīʿ Aḥkāmī, Moscou 1921, p. 108-110; dò. Notes sur la secte des Aḥkāmī, in R. M. M. 1922, p. 57, 86; according to Babinger, Zur Geschichte der Schīhawīya, in Isl. xxi, 1922, p. 233, the MS. of Constantinople is preserved in the Umāniya-library; cf. Aḥl Emīr Efendī, Zārir ṭevve-elbāvāt madḫuṣāt, i. 29. (V. MINORSKY)

KHĀṬĀT. The Khāṭāts are a Paṭān tribe belonging to the Karštān division of the Afghans, and live in the North-West Frontier Province of British India and adjacent localities. Their origin is much disputed (see the art. AFGHĀNISTĀN, above, i. 150). At the beginning of the Muhammedan era they occupied the Sulaimān Range and the northern part of the plains between the Jumna and the Indus. The history of the Khāṭāts was written by Kushtāl Khandānī, a renowned chief of the tribe in the time of the emperor Avarangāz. Akora, Shāhāzgār, Kālābāgh and Makhad are their chief seats. They are warlike and for centuries have been at feud with their neighbours and with one another; active, industrious and good cultivators, they are also great carriers and traders. The Khāṭāts are all Sunnis and speak the western dialect of Pashto.

Bibliography: See the art. KHWĀT. (R. B. WHITEHEAD)

KHĀṬĀM, KHĀṬĀNI (I. murr), seal, signet, signet-ring, the impression (also khatm) as well as the actual seal-matrix; it is applied not only to seals proper, engraved in incuse characters with retrograde inscriptions, but also to the very common seal-like objects with regular inscriptions of a pious or auspicious character; for the latter which are amulets and further readily distinguished from seals by the absence of a personal name see the article TAŠĀMĀN; indeed anything with an inscription stamped upon it may be called khāṭām. Here we are only concerned with seals in the strict sense of the word. The word khāṭām is said by Noldeke, Mandaische Grammatik, p. 112 to be of Aramaic origin, and in this he is followed by Frankef, Aram. Fremde., p. 252, who also recognizes a loan word in karkās, seal-clay.

The part played by the signet-ring in the east cannot be better illustrated than by the following quotation from Lane (Modern Egyptians, 1860, p. 31). Describing the dress of a Muslim Egyptian he says:

"On the little finger of the right hand (it is allowable to wear it on a finger of the left hand) is worn a seal-ring (khatim), which is generally of silver, with a cornelian, or other stone, upon which is engraved the wearer's name; the name is usually accompanied by the words 'his servant' (signifying "the servant, or worshipper, of God"), and often by other words expressive of the person's trust in God, etc. The Prophet disapproved of gold; therefore few Muslims wear gold rings; but the women have various ornaments (rings, bracelets, etc.) of that precious metal. The seal-ring is used for signing letters and other writings; and its impression is considered more valid than the sign-manual. A little ink is dabbed upon it with one of the fingers, and it is pressed upon the paper; the person who uses it having first touched his tongue with another finger, and moistened the place in the paper which is to be stamped. Almost every person who can afford it has a seal-ring, even though he be a servant".

The use of seals dates from remote antiquity in the east and they have never been supplanted by the spread of a knowledge of the art of writing and the use of the signature as has happened in the west. In the east the seal takes the place of the signature and it is the former that gives validity to a document even if the latter is also used. The seal is also much used as a guarantee that property will be kept intact and thus takes the place of locks and keys. Goods are simply roped up in a packet and the knots sealed with the owner's seal, a plan which to Chardin, for example, appeared more reliable than the western system owing to the practical impossibility of counterfeiting a seal. It is also used to stamp property as a mark of ownership (e.g., books, carpets, jewelry) and in this way corresponds to a coat of arms in the west. The possession of another person's seal is evidence that the latter has delegated his authority. There is abundant evidence of these usages in the east from very early times. Pharaoh, for example (Gen. xii. 42), gives Joseph his signet,
as a sign of authority, just as the Sultan of Turkey did his grand vizier. Jezzebel (J. Irons, xxii. S.) forms a letter in Abû Hâim’s name and seals it with his seal to give it validity. The books of Esther and Daniel give similar examples of the power of the Persian king’s seal. Herodotus (i. 195) tells us that every Babylonian carried a seal and the abundance of seals, usually cylindrical in form, that have survived from ancient times in Mesopotamia, illustrates this statement. Seals of the Sassanian period still exist in large numbers, whether made for mounting in rings or pierced for suspension. In South Arabia also the Himyarites have left us numerous specimens of their signs.

No seals of the pre-Muhammadan Arabs are known. The earliest Arab seals come from Egypt with papyri and belong to the period soon after the conquest. Whether we accept or not the story that only seventeen men in Mecca could write in the time of Muhammad, we must suppose that seals were in common use in this important commercial centre as in other parts of the east. Tradition in any case has a certain amount to tell about the Prophet’s khâbat. Al-Buḫârî, Sahîh (Bûlûk 1926), vii. (Ihâq) p. 48, says that the Prophet wished to write to the Byzantines. He was told that they would not read his letter unless it had a seal so he adopted one of silver with the inscription Muhammad ra’sûl Allâh. According to al-Maṣûdî, he adopted this ring in Muharram of the year 7 A.H. The Prophet is also said to have originally worn a khâbat of gold, but gave it up when he forbade the wearing of gold rings and silk and brocade (Buḫârî, loc. cit.). Women did not observe the prohibition of gold rings and ‘Aṣâfa for example wore them (ihâq). The Prophet wore his signet on his right hand and used to take it off when he went to the priy (al-Tirmîdî, Sahîh Bûlûk 1449), vol. i, Ihâq, p. 324). Opinions differ as to the proper hand and finger for the ring and there is no established rule. Later stories illustrate the Prophet’s disapproval of metals other than silver for signet-rings. He is reported to have said that a brass ring savoured of idolatry, that an iron one was emblematic of souls condemned to eternal fire, while words could not express his horror of a gold ring; meeting the wearer of one, he cast upon him a terrible frown and turned away as if he had encountered a dog or an idolat. The Prophet’s seal was handed on and used by his successors who had however also their own seals, under ‘Othmân lost it in a well at Arîs, or Zemzem, or according to others in the Tigris near Maysûl. The Prophet’s interdiction has been generally observed and it is exceedingly rare to find signet-rings of the more precious metals or mounted with the more valuable precious stones, upon which there was no embargo.

The earliest known seal of a Muslim is that of ‘Amr b. al-‘As, conqueror and governor of Egypt whose signet was a bull (Rainer, Führer, etc. No. 556). Whether this is due to local influence or the representation of an animal was not unusual with the pre-Muslim Arabs it is impossible to say. Other Arab seals bearing animals are known of this period, but the rigorous avoidance of images of living things was soon applied to seals also, for we soon find seals in Egypt of the Muslim type, although as late as 85 A.H., we find the governor Kurra b. Sharîk using a wolf (Rainer, Führer, No. 593). The seals of Abû Hâim b. Vahyât (No. 572) and of the head of the Treasury Râshid b. Khâlid “who trusts in God” (No. 577) are already of the style that became stereotyped. A notable seal from Egypt is that of the tax-collector Nâjîd b. Muslim which bears his name in Greek and Arabic (No. 580). Bilingual seals are again found in Syria and Asia Minor in the tenth century (cf. Schlumberger, op. cit., and Halîl Edhem, op. cit.). Here also under Byzantine influence we find double-sided impressions of seals in lead (bulut); of these the most notable is that of the Kakoydî ʿAli al-Dawla of 430 A.H., with a horseman on the obverse (Halîl Edhem, No. 30). Another remarkable seal from the same region is that of the Hamândî Muhammad b. Sa’d al-Dawla Abu ʿI-Mâlî Sharîf with obverse a bust of St. Theodore and his name in Greek characters (op. cit., No. 31).

The materials of these early impressions are the same as in later times, a special kind of clay (karras), or lead, appended by cords to the documents as in the mediaeval west also. When the seal is stamped on the documents itself, it is done with a special thick kind of ink and the paper is moistened before receiving the impression; red wax is also used where the climate permits it. In the mediaeval Europe, there are instances recorded in the east of bullae of the precious metals, silver and even gold for very special occasions (Reinnaud, op. cit., i. p. 112).

Charles White (op. cit.) deals very fully with the use of seals among the Turks and the guild of engravers in Constantinople. The latter have, he says, a special quarter in the bazaar called after them hatakalar tarzi. The members of the guild are Muslims (in contrast to the dealers in stones who are usually Jews) of fair education conversant with Arabic, Persian and Turkish. A few can decipher the Kufic character. Their training is a long one. Apprentices after a good education take lessons from the best calligraphers of the day and then serve seven years with a master-engraver. When their indentures have expired, they become journeymen (kalfâ), until they can acquire a business of their own and be admitted into the guild as master-members (meta), the number of whom is limited to fifty. Their shops are regularly searched by the police lest they be tempted to put their skill to illegal uses such as the engraving of false coin-dies. Such great care is taken to ensure the genuineness of a seal that the trade are forbidden to engrave two seals exactly the same for the same person. When a seal is lost the owner has some trifling alteration made in the new one, such as a change in an ornament or the date, so that the forgery can be detected if his first seal should fall into evil hands.

The Stambul engravers date the origin of their art in the time of the Caliph ʿOthmân and say that the first engraver was a certain Muhammad al-Hijdâji who engraved seals for ʿOthmân and ʿAlî bearing their names with the additional epithet ʿabd Allâh; the rings were of silver and the stones bloodstone.

White’s account of the seals of several of the dignitaries of the Ottoman sultans follows d’Ohsson. The Sultan has three seals of different sizes all of emerald set in gold with the same inscription, the ushâbî [q.v.] and a religious legend. The first is a small seal always carried by the Sultan and handed to his secretary as required. The second is somewhat larger and is entrusted to the grand
treasurer of the harem, who uses it for all matters relating to the harem — the Mughal Emperor Akbar similarly had a special seal for all documents relating to the harem. — The third imperial Ottoman seal is the seal of state confided to the grand vizier of the day, who is supposed to keep it in his bosom day and night. The head of each department of state has also his own seal for matters relating to his office.

Persons of distinction do not usually wear signet-rings on their fingers. Great dignitaries have a confidential seal-bearer (mukhdar) who carries the signet in a small bag in his breast pocket and presents it when required inked for the stamp or clean if wax is needed. People of humble rank carry their seal in the breast pocket or suspended round the neck. The impression of the signet stands for a signature although for documents of importance the latter is also necessary. In the case of the Sultān, the seal used and the presence or absence of the signature vary with the importance of the document, as does the format of the latter.

Chardin's account of the seals used by the Shāh of Persia is similar. There are three seal-keepers (mukhdar bakhsh) but they only affix the seals, which are kept in a box in the palace sealed with the king's own seal. Friday is the usual day for sealing documents; the mukhdar prepares the seal and paper and makes the impression on a sign from the Shāh who does not usually do it himself. There are three great seals, used for military, civil and foreign affairs, and two small seals used for the palace accounts etc. The same inscription is in the centre of the three large seals, bandah Shāh wiliyaat Sulaimān ast 1080 (A.H.); the small seals have din in place of wiliyaat. One of the large seals has a quartain round it and another has the names of the 12 Shi‘a Imāms. At the king's death his name is erased and that of his successor engraved on it. Of the general use of seals Chardin observes that it would not be easy to steal one as they are worn round the neck and only taken off in the bath; they are also worn on rings. It is rarer to find a seal counterfeit than a signature in Europe. The seal engravers used a drill and a small wheel with emery.

Abu l-Fadl in the A‘imār-ib Akbari devotes a special chapter to the Emperor's seals, which are used in the three branches of the government — “indeed every man requires them in his transactions”. (Here we may note that English officials in India in the xviiiith and xixith centuries found it necessary to have a seal with their names in Persian characters.)

At the beginning of his reign, Akbar had a circular seal bearing his name and those of his ancestors back to Timur in the rī‘āda characters; later he had a simpler one with his name only in the nasarātīb character. The former was at first used for letters to foreign kings and the latter (known as munk) for home affairs but the distinction was not maintained. A second seal used for judicial business was lozenge-shaped (mukhrāb) and bore an appropriate verse in praise of justness, round his majesty's name. For other business a small square seal with the legend Allāhu Akbar, jalla jalaalu was used and the harem as already stated had its own special seal.

The great figures of Muslim tradition had of course their seals. That of Sulaimān b. Dā‘ūd ibn Dā‘ūd was particularly famous and plays an important part in many of the stories of his miraculous exploits.

It was held in particular awe by the djinns. Djamshid, the Solon of Persia, according to Sa‘īdi, was the first person to wear his signet on the left hand. In Firdawsī's story of Sasānp I's escape from captivity in Rūm, he reveals his return by sending an impression of his signet to the grand mobed.

Coming to more historical periods, we have a record of the seal impressions of all the early caliphs (e.g. in Mṣa‘ūdī, Kitāb al-Tamkh, under each caliph; collected by Hāmmer-Purgstall and von Mörr); specimens of the seal impressions of several early Caliph still exist; (cf. Hāili Edhem, op. cit.). Timūr's seal bore his special mark, three small circles arranged in a triangle, and the motto custodi rustum and an impression still exists in the Bibl. Nationale (de Sacy, op. cit.). Jonville mentions a ring of "moul fūn or" bearing his signet which was among the presents sent to St. Louis by the Shāh-ī Djudāl. Specimens of the seals of Sultāns of Turkey and other high Turkish dignitaries are given by Hāmmer-Purgstall (op. cit.). Of these the most remarkable is the original seal of Sultān Muṣṭafā II of 1106 A.H. found on the battle field of Zenta (1697) where its bearer, the Grand Vizier Elnas Meljened Paşa, was killed. A special medal was struck by the Austrians to commemorate this trophy. The tughra is a feature of the imperial Turkish seals; it is said to be an imitation of the impression of the hand, because Urukhan's sign-manual was a impress of his hand in red ink. Timur is also said to have used this primitive signature and we know that he was not illiterate. The tughra is also traced back to the Prophet himself.

Muslims have followed the example of the Prophet in having simple inscriptions on their seals. Sometimes the name alone is used, sometimes it is accompanied by a brief pious inscription, often indicative of humility; if the owner have the name of a person mentioned in the Qur'an, the reference is frequently worked into the seal inscription. The name is given in a simple form and titles are as a rule avoided in keeping with the general decorousness of the signet; for examples of real legends see Reinaud and Hamburger's work. In later times in Persia and India seals became much more elaborate and the seal of a minor official of the Moghul court of the end of the xviith century often has several lines of hombastic inscription and forms a striking contrast to the seal for example of the great Sinan Paşa, five times Grand Vizier of Turkey with its modest inscription O God Thou art full of mercy, pardon poor Sinān, son of 'Ali'.

The commonest materials for rings are silver or copper; and if a stone is mounted in it with the seal, it is one of the less valuable stones, corselet, garnet, jacinth, agate, coral; the turquoise is not uncommon and one often sees them carved as amulets with inscription inlaid with gold. When not worn on a ring the seal is mounted on a handle and carried in a bag; sometimes the stone itself is pierced for suspension and worn round the neck. The shapes of Arab seals vary, oval is naturally the commonest but they are also square, hexagonal or octagonal; round is not common except for the largest sizes.

The art of the seal engraver was at its best, like that of calligraphy, in the xviith and xixith centuries. Its decline in the xixith was followed
by the practical extinction of the art in the sixteenth century. Many of the few practicing engravers have been preserved. Altun at the court of Timur was reckoned a master of his art. Abu l-Fadl gives the names of four masters of the craft at Akbar's court, each of whom was a specialist in a particular branch.

KHĀTHAM, an Arab tribe (the name is triptite although in several European editions of Arabic texts we find it wrongly vocalised as a diphtote). They inhabited, at least from the sixth century A.D., the mountainous territory between al-Tā’if and al-Nadjarān along the caravan route from Yemen to Mecca. Historiographical theory on the migrations of the tribes which is bound up with their genealogical systematization, makes these settle at the time of the separation of the sons of Ma’ādīn in the mountains of al-Sarat [q.v.], from which the Azd are said to have driven them at the time of the migration of the South Arabian tribes after the burning of the dam of Ma’ārib, to the lands they occupied in historical times (al-Bakri, Mu’addīn, ed. Wustenfeld, p. 28, 38, 41–42 = Wustenfeld, Die Wohnsitze u. Wohnungen d. ar. Stamme, Ath. G. W. Gutt., v. 1845, 59, 58 = Muṣafalṭṣṭāt, ed. Ilyal, p. 113–114, 118, following Ibn al-Kalbī; Yaḥūt, Mu’dīn, ed. Wustenfeld, i. 404; ii. 326–327; Wustenfeld, Register z. d. genealog. Tabellen, 130–131). According to this theory the Khātham (like the Badjilā [q.v.] who figure everywhere as their brethren) were part of the Ismā’īlī tribes, their descent being Khātham b. Anmār b. Nīzār (Ibn Hīshām, Sīrāj ed. Wustenfeld, p. 49, 15–50, 51; Ibn Kūṭaibā, Ma’dīn, ed. Wustenfeld, 50, 18; [Pseudo-]Balkhi, ed. Furt, iv. 110–111, who all attribute this view to the genealogists of the Mu‘ādar). But another theory connects them with a branch of the Saba according to the genealogy: Aftal, son of Khatam b. Anmār b. ‘Irāsh b. ‘A’īr b. al-Ghawth (the latter is also the father of the Arab tribes) of mostly pure Saba. Khātham b. ‘A’īr b. al-Ghawth (Ibn al-Kalbi, Dīnanār al-Ma’āzīn, MS. of the Escorial, fol. 442r–119v, who is followed by Ibn Durāzī, Iḥrāq, ed. Wustenfeld, 301, 1–310; Ibn Kūṭaibā, p. 50, 1–50; Ibn Hīshām, p. 50, 3–5; Aṣćaḥi, xv. 154, 18; Wustenfeld, General Tabellen, 1–13; Hamdānī, Dīnanār al-Arād, ed. Muller, p. 116, 11, gives the isolated genealogy: Khātham b. Ra’bā b. ‘Amīr [†] and Ibn Kūṭaibā, p. 50, 16 makes Ammār the son of Saba’i, cf. Reiske, Prima rerum, p. 133). These contradictory statements seem to indicate that, like so many other tribes, the Khātham do not represent an ethnic unit but rather a confederation of clans of different origins. This seems also to be deducible from the etymological of their name, which connects it with the verb ṭakḥāth vita “to smear oneself with blood” on the occasion of a pact of alliance (on this custom cf. J. Pedersen, Der Eid bei den Semiten, p. 21–22, 25–26 and the authors he quotes). Other etymologies which make Khātham the name of a mountain or of a camel are not worthy of consideration (Ibn al-Kalbi, fol. 120r–121v = Ibn Durāzī, 93–94, 4 from below; Hamdānī, ed. Freytag, 72, 375, 1, 395, 56). In any case we always find the Khātham associated with tribes of the south either in alliances made on the occasion of expeditions (e.g. al-‘Āğiha, i. 17, xii. 47 sq.; xviii. 35–36) or during the ridda (al-Tabarī, 94: i. 1855 sq.), or latterly in the grouping of the tribes stationed in the military camps of Baṣra and Kufa (al-Tabarī, i. 2495, 3174; ii. 122; but ii. 1382, r., we find them also grouped with the Kinaān, Kays ‘Alkīn, Muzaina and even Kuraish, all tribes of the north under the general denomination Aḥl al-Alīya. It seems that at this time [101 A.H.] the territorial principle had prevailed over the ethnic one). Their principal clans were the Shahrānī, Nāhīsh and Aklūb, the latter according to the South Arabian genealogy was of another origin (Aklūb b. Rab‘a b. Nīzār) and was late in entering the tribe (cf. al-Bakri, p. 53 ult.–54 sq.).

We have no authentic information on the Khātham for the remote period in the history of the Arabian peninsula (the identification proposed by Blau, Z.D.M.G., xxii. 658; xxiii. 561, note 6 with the ‘Arṣaṣura Adramite of Uranios and Pliny who are to be distinguished from the Khaṣsarī of Hadramawt, is quite untenable). From the sixth century we find them inhabiting along with other tribes of diverse origins, the district of Bishā, Turabi, Dijarrā, Tabīla; this last was the centre of the cult of the God Dhu ‘l-Khaṣaṣa (on him see Wellhausen, Reise, p. 45–48), whom the Khātham like the Badjila, Daws, Bahitla etc. worshipped (Yaḥūt, i. 791; ii. 461, 703; iv. 62, 567 = Aṣćaḥi, xi. 152), 578, 15 sq., where there are numerous references to the neighbours of the Khātham and to the assassination of the part of the territory of Bishā at the end of the first century A.D. to some members of the Omayyad and Hashimi families; Hamdānī, 135–136; Ibn al-Kalbi, Kitāb al-Asmān, 34 sq.).

Among the numerous guerrilla wars in which the Khātham were involved (cf. Aṣğhī, vii. 119; xii. 47, 51–52; xiv. 25; xviii. 35–36; Naṣṣābī, ed. Bevan, 46; Yaḥūt, ii. 735, 16; iv. 56, 16–17;
Hamadani, 170, 21, the best known is that of Faif al-Riḥ in which their chief Anas b. Mudrik (or Murdiqa) allied to the greater part of the Madhīḥidi, defeated the Banū Ṭamir b. Saʿa`a commanded by ʿAmir b. al-Tufail [q. v.] who lost an eye in the battle (Naṣāʻid, 469–472; Ibn al-Atṭīq, ed. Tornberg, i. 474; 72d, ed. 1293, iii. 102–103; Dārūn of ʿAmr, ed. Lyall, Introd., p. 82–93, Nos. 1, 11. [= Muṣafadāt, ii. ed. v., 111, xii, xxv, xxvii, Suppl., Nos. 1, 19]. Anas b. Mudrik famous also as a poet was the hero of another enterprise of the Khṭḥʿām like that against the Banū Dūṣḥam (Aḵṭān, i. 17) and that in which he killed the famous poet-brandict Sulāk b. Sulakā (Hanūsa, 415–416; Aḵṭān, xviii. 137–138; Ibn Ḥumayd, Kit. al-Shīr, ed. de Goeje, 217). The biographical notes on Anas, who lived for several years after the introduction of Islam, have been collected by the author of this article in Caentī, Annālī dīll Islam, x. 499–500 (year 40 A. H., § 347). The position of the Banū Ṭamir of the Khṭḥʿām enabled them to play a part in the Abyssinian expedition against Mekka. They tried to oppose Abraha's advance but beaten by him, they were forced to guide the enemy's army as far as al-Tā'if (see the sources collected in Nadke, Gesch. d. Pers. u. Araber, p. 206–217). The spread of Islam at first left them indifferent (no heed need be paid to the story in al-Tābari, i. 1079–1080, of the Khṭḥʿām kāhīna of Tabālāh, Fāṭima bint Mūr, who saw a "divine" light on the face of ʿAbdallāh b. ʿAbd al-Muṭṭalib, the future father of the Prophet. The only interesting feature of the story is that it was conferred on the kāhīna). Their first relations with Muḥammad were certainly hostile (Wāʿūs, transl. Wellhausen, 387; al-Tābari, i. 1730–1731), but they ultimately sent him an embassy and recognized him and accepted a letter from him which declared all the blood-feuds previous to Islam abolished (Ibn Saʿīd, i. 2, 34, 78; Annālī dīll Islam, ii. 330, year 10 A. H., § 28, cf. also § 23, p. 326–327). On the death of the Prophet, only a section of them rebelled (Annālī, ii. 573–574, 581, 585, year 11 A. H., § 87–88, 98-104). The destruction of the sanctuary of the Banū al-Khṭḥʿām by ʿAbdallāh b. al-Ruṣayd must have broken their resistance along with that of other tribes who were grouped round this turbulent centre (al-Tābari, i. 1985 sq.). During the wars of conquest we find them in the army of Syria (Ibn ʿAṣīkīr in Annālī, iii. 588, year 15 A. H., § 602, cf. also al-Tābari, i. 3287, 111, 3408, 8–17) as well as in those of the ʿIrāq (al-Tābari, 2188, 11–12), and as we have seen, they formed part of the tribes quartered at Baṣra and Kūf. Several Khṭḥʿāmī women were married to Kūraishīs. One of them played rather an important part in the early history of Islam: ʿAmmā bint ʿUmar is one of the first women converted to the faith of Muḥammad, who took part in the emigration of the first Muslims to Abyssinia. She was successively the wife of Djaʿfar b. Abī Ṭālid, Abū Bakr and ʿAli, which gives special prestige in Muslim tradition (Ibn Saʿīd, viii. 205–209 and cf. Annālī dīll Islam, x. 231–236, year 38 A. H., §§ 269–292). Her sister Salmā was the wife of Ḥamza b. Abd al-Muṭṭalib (Annālī, loc. cit., § 285), Ibn Saʿīd, viii. 209); a daughter of Anas b. Mudrik, Asmāʾ, was the wife of Khālid b. al-Walīd (Ibn Ḥudayr, Iyāb, Cairo, viii. 6, N. 39; Annālī, ix., year 37 A. H., § 412, x. 499). The Khṭḥʿāmī poets were few in number; the most notable is Ibn al-Dumaynīn (Aḵṭān, xv. 151–157; Ibn Kūtaibah, Kit. al-Shīr, p. 458–459, etc.), who flourished probably at the end of the first or at the beginning of the second century A.H. and who is famous for the sanguinary revenge he took for his wife's unfaithfulness.

The Bibliography (besides works quoted in the article): Ibn al-Kalbī, Qismhat al-ansāb, MS. of the Escorial, fol. 124v–127r, of which Ibn Durand, Ishkāk, ed. Westenfeld, 304–306 and 13H, ed. 1293, i. 78–79 are resumés. (G. LEVI DELLA VIDA)

KHṬṬĀ (plur. Khṭṭāyā and Khṭṭāʾīn, sin), synonymous with ḏḥun. The root ḏḥ- has the meaning of stumbling (in Hebrew: Prverbs, xix. 2), committing an error (ṣḥṭṭaʿa is said e.g. of the Bowman whose arrow misses the aim); see the art. Khṭṭā. The definition of ḏḥṭṭaʿa is "a sin committed on purpose"; that ḏḥṭṭaʿ (see Sura xvii. 33) simply "a sin", whereas ṭḥɔm is applied to heavy sins. Probably these theological distinctions belong to the Islamic period only; it seems doubtful whether the pagan Arabs were acquainted with the term ḏḥṭṭaʿ at all. It occurs in the dīwān of Kās b. al-Ruṣaydāt, ed. Rhodokanakis, N. 18, vs. 3, p. 129, in the sense of fault, defect (kind communication from F. Krenkow). It is only in accord with the general character of the Kurʿān that this book does not contain an elaborate theory of sin; frequent are, however, the passages in which the consequences and forgiveness of sins is spoken of. Allāh, al-Ru ṣaydāt, al-Ruṣaydāt, through the preaching of His Apostles and Prophets, calls men unto forgiveness of sins (Sura xiv. 11; xlv. 30; lxxi. 4, 6). Who avoids heavy sins and immoral deeds will find plenty of forgiveness with his Lord (Sura lii. 33), who forgives sin and accepteth repentance (Sura xxi. 2); He is the best of forgivers (Sura vii. 154); He forgives sins totally (ṣḥṭṭaʿan; Sura xxxii. 54).

This is the general aspect of forgiveness of sins in the Kurʿān. Further details are also given. Ṣura Mūsā says: "O my Lord, I have wronged myself (ṣalāmu naṣīrī, forgive me", Allāh forgives him (Sura xxxvii. 15; cf. Sura xxxviii. 24 [Dāuḍ, etc.). But he who dies as an infidel or as a polytheist will not find forgiveness (Sura iv. 51, 136; xlvii. 36; κνὰρ [q.v.] is forgiven, however, when it is done away with (Sura viii. 39). But he who "is enveloped" by his sin will remain in Hell for ever (Sura ii. 75).

This is a mild view; it agrees, on the whole, with the position of Judaism and Catholicism on this point. But it is not to be forgotten that Allāh remains free: "He spareth whomsoever He pleaseth and punisheth whomsoever He pleaseth" (Sura iii. 124). The mild attitude regarding sinners taken by the Kurʿān is kept on by Islam. Yet the doctrine of sin, the distinction of light and heavy sins as well as their punishment were the object of serious controversy in early Islam.

The distinction between light (ṣḥṭṭaʿ) and heavy (khaṭṭaʿ) sins could be maintained in accordance with passages from the Kurʿān such as Sūra xii. 35, where the term khaṭṭaʿ is already used. Christian dogmatics have certainly exercised influence, as may be seen from the doctrine of the (seven)
capital sins which occurs in Ḥadith: “The Apostle of Allah said: Avoid the seven capital sins (mubākharāt). When he was asked what they are, he answered: Polytheism, sorcery, killing those who may not be killed except for a lawful reason, spoiling the possessions of orphans, usury, fleeing from battle against the enemy, and abusing heedless, faithful muḥṣamāt” (Muslim, Ḳāfīn, tr. 144; al-Bukhārī, Waqīyāt, bāb 23). In other enumerations of the capital sins there are deviations from this scheme; theology and ethics maintain the view that there are sins heavier than those enumerated in the tradition just mentioned. Al-Nawawī in his commentary (v. 170) cites a passage from Ḥaḍīth Muhammad b. ‘Abd al-Salām the contents of which are the following. Whosoever wishes to know whether a sin belongs to the class of the light or to that of the heavy ones may compare its character with the character of the capital sins. If it is lighter than the lightest of capital sins, it belongs to the light ones; in other cases it belongs to the heavy ones. Who e.g. disdains his Lord or throws the Kur‘ān into the fire has committed one of the heaviest sins, though the law does not characterize it as such. Likewise, if a man should lay hold on a woman in order to give his companion opportunity to violate her, or if he should detain a man in order to give his companion to kill this man, such a deed would bear a much more sinful character than the spoiling of the possessions of orphans, though the latter figures among the capital sins. In the same portion of his commentary al-Nawawī speaks of the strongly deviating opinions concerning the distinction between light and heavy sins. He cites the saying of Ibn ‘Abbās: “Everything which Allah has prohibited, when perpetuated, is a heavy sin.” And other theological authorities have said: “Every action contrary to the law is a heavy sin with a view to Allah’s Majesty.” Yet the great majority of the theologians are unanimous in making a distinction between light and heavy sins. Although they recognize the view just mentioned to be right with respect to Allah, yet there is a gradation with a view to sins considered by themselves. Accordingly the law calls light sins those which are atoned by the five salahs, by the ṭawfīq of the Ḥaḍīth, etc. But how can light sins be distinguished from heavy ones? Several answers to this question are given. According to one view, every sin which is mentioned in connection with Hell, with Allah’s anger, curse or punishment belongs to the heavy ones. Another view: Every sin committed without signs of fear or circumspctation or with levity belongs to the heavy ones; but sins due to slips of the tongue, to a relaxed control of the passions and the like are to be reckoned among the light ones. Such contradictory definitions induce Abu ‘l-Ḥasan al-Wāḥidī to state that there are certain sins that are called heavy by law, others that are called light, and others that are not distinguished with either of these epithets. Prudence therefore commands men to avoid all sins lest he prove to have committed one of the heavy ones. — The ‘ulama’ say: Persevering in committing light sins makes them heavy; and on the authority of ‘Umar and Ibn ‘Abbās the sentence is handed down: “No sin is heavy if forgiveness is asked, no sin is light if the transgressor perseveres in it.” Thus far al-Nawawī.

This theory concerning light and heavy sins and their forgiveness, which may be called representative of the views of orthodox Islam, was not shared by two sects of so divergent tendencies as the Khārijīs [q.v.] and the Mu‘tazilīs [q.v.]. Both hold the position that the consequent of heavy sins will be eternal punishment. This position is connected with the question concerning the relation existing between faith and works. While orthodox Islam, theoretically at least, emphasizes the value of faith, these sects lay stress upon works as the criterion of a man being faithful or not; their most consequent opponents in this respect were the Murdīqis [q.v.]. The line of distinction which orthodox Islam draws between Muslims and Kāfir is quite different from the right by the Khawārijīd and the Mu‘tazīla, so as to add to the damned also the Muslims who were guilty of heavy sins. The echo of the fervent debates between the parties is still heard in the commentaries on the Kur‘ān. Al-Baidāwī comments upon Sūra ii. 75 (see above): “The ‘enveption’ mentioned here can only refer to ‘Kāfīr; consequently those who have committed heavy sins do not fall under the verdict of this verse.”

Verses like Sūra xxxix. 55: “Allah forgives sins in their totality” and Sūra ii. 284: “He forgives whomsoever He pleaseth and He punisheth whomsoever He pleaseth”; prove that punishment of sins is not necessarily that heavy and that light sins are also pardoned (Fakhr al-Dīn al-Rāzī, Ma‘ṣūfah al-Ghāib, ii. 82). Al-Baidāwī (see also Fakhr al-Dīn al-Rāzī, v. 455): “It is not true that for the forgiveness of sins tawḥīd [q.v.] is necessary; this is only required for shirk [q.v.].” Still, however strong this assertion may be, Fakhr al-Dīn al-Rāzī does not fail to declare in his commentary on Sūra xxxix. 54: “Perhaps He will pardon sins in general and perhaps He will punish in Hell for a time and pardon afterwards.”

Al-Zamakhshārī, who was a moderate Mu‘tazīlī, combats such views. Commenting upon the words “He pardones whomsoever He pleaseth” (Sūra iii. 124) he remarks: “On account of tawḥīd, for He is not disposed to grant forgiveness except to those who repent.” And he fulminates against the interpretation of the verse which is put into the mouth of Ibn ‘Abbās: “He grants heavy sins to whomsoever He pleaseth and He punisheth whomsoever He pleaseth on account of light sins”; words, indeed, to bring a Mu‘tazīlī to despair. As is to be expected, the orthodox view of heavy sins being pardoned is also to be found in Ḥadīth. The Prophet said: “Dā‘īrī visited me and cheered me with the assurance: Any member of thy community who dies confessing Allah’s unity will enter Paradise.” I said: “Even if he has committed adultery and theft?” He said: “Even if he has committed adultery and theft!” (Muslim, Ḳāfīn, tr. 153). Al-Nawawī remarks in his commentary on this tradition: “This is a locus pro bana for the opinion of the Sunnites that those who have committed heavy sins will not suffer everlasting punishment in Hell and that they will be taken back from Hell if they have entered it: and that they finally will enter Paradise and remain there for ever.” All this is elaborately treated in the traditions on intercession (see the article Shajā‘a) where it is stated anew that Muhammad intercedes also on behalf of grave sinners and that through his intercession they are allowed to leave Hell.

Innumerable are the traditions in which Muḥammad mentions forgiveness of sins on account
of good works of every kind. In some of these traditions the qualification occurs: “except heavy ones”; this clause represents the common orthodox view (see above) that light sins are repaired by good works of every kind, that heavy ones require īstiqfār and that ẓhīk requires tawbah (q. v.). Ẓhīk, polytheism, is consequently the heaviest sin; the lightest is the so-called ḥadīth al-nafs, i.e. sinful thoughts which do not issue into result. It is even said that some of these thoughts are taken in the computation of sins on the Day of Resurrection. The idea is expressed in the following tradition: “The Apostle of Allāh said: Allāh does not take into account what the members of my community think as long as they do not pronounce it or carry it out” (Muslim, Imān, tr. 201–208). This tradition, which also occurs in other forms, is another proof of the mild attitude taken by orthodox Islam towards sin, an attitude which forms a counterbalance against the severe doctrine of kādar (q. v.). The tradition just mentioned and the attitude from which it arises are the more remarkable because Muslim theologians were strict proponents of the intention (cf. the art. Niyā). On the other hand, scrupulousness regarding sinful thoughts is highly praised. Once Muḥammad’s companions said to him: “We find in our inner selves thoughts which we would have scurped to pronounce.” He said: “Do you find them really?” They answered: “Yes”. Then he said: “This (scrupulousness) is pure faith” (Muslim, Imān, tr. 209). In this connection also the following hadīth may be mentioned. “Anas said: Verily, you do things which, in your eyes, are more significant than a hair is thick; but in Muḥammad’s lifetime we considered them as capital sins” (al-Bukhārī, Rāzīq, bāb 32). Finally one tradition must be mentioned which could be called a step in the direction of the attitude of Khaḍījī and Muʿaḍzīs regarding heavy sins. “The Apostle of Allāh said: Who commits fornication is not a believer at the same time, nor is he who steals or drinks wine” (Muslim, Imān, tr. 100; cf. tr. 101–105; cf. al-Bukhārī, ʿUbudī, bāb 1, 6, 20 etc.). Al-Nawawi in his commentary is anxious to prove that the words “is not a believer” do not imply a total, but only a partial lack of faith, and he states that “the ʿaṣūrāt of the people of the truth” is that those who commit fornication, theft, murder or any sin considered as one of the ʿaṣūrāt, except ẓhīk, are not for this reason infidels; no, they are believers lacking in faith; if they repent, their punishment is abolished and if they die persevering in heavy sins they are left to Allāh’s pleasure: if He pleaseth, He forgiveth them and maketh them enter Paradise at once; and if He pleaseth, He punisheth them and maketh them enter Paradise afterwards. — Similar views and their opposite lie also at the bottom of the much debated question whether faith is liable to increase and diminution.

In ethical and mystical literature we find a more systematic and elaborate classification of the sins; cf. Abū Ṭalīb al-Makki, intro. to al-Ṭūlānī, i. 85 sq.; al-Ghazālī, Iḥyāʾ, vol. iv., book ii. (on repentance). Abū Ṭalīb recognizes four classes of sins, a division which was borrowed from him by al-Ghazālī. Those of the first kind are called rabbādiya, sins such as haughtiness and pride, boasting, arrogance, love of praise, love of life, ambition, despotism; those of the second class are called satanic (ţartinayya); it comprises such sins as envy and deceit; those of the third class bear the epithet of “animal” (bāhinayya); these are avidity, covetousness, rage and lust; the fourth class comprises those sins which remind of the nature of the beasts of prey (tabū’īya), such as wrath, fighting and murder. Al-Ghazālī rejects the view of those who do not recognise a practical difference between light and heavy sins. He mentions the enumerations of heavy sins varying from four and eleven, and cites Abū Ṭalīb al-Makki’s view that “there are 17 heavy sins, four in the heart, to wit: polytheism, persevering in sin, despair of Allāh’s compassion, and ʿinān min māʾṣer; four in the tongue, to wit: false witness, abusing the muḥṣīn, false oath, and sorcery; three in the belly: drinking water and intoxicating drinks, spoiling the goods of orphans, and usury; two in the genitals: fornication and polygamy; two in the hands: murder and theft; one in the feet: fleeing from battle; one in the whole body: dishonesty regarding the debts of others.”

The mystics, notwithstanding such classifications, see sin in a more general light. It is man as such who is a sinner. It is necessary for him to know Allāh in His highness and to know himself in his baseness. For the soul is like a mirror disfigured by rust, which has to be cleaned and polished, so as to be able to reflect the higher world. This polishing process dominates the life of the mystic and gives rise e.g. to the muḥāṣaba, the daily examination of one’s self with a view to sins committed and to the means to avoid them in future (Iḥyāʾ, vol. iv., book viii.; cf. Aḥmad Palacios, La Mystique d’al-Ghazzâlî, M.T.O.M., viii. 90 sq.). It is this consciousness of sinfulness which lies at the root of the mournful attitude of the mystics and which has inspired so many sayings expressing their fear to appear before Allāh after death (cf. R. Hartmann, Al-Kescha’ir’s Darstellung des Sufismus, p. 11 sq.).

Two deviating attitudes regarding sin taken by the mystics have still to be mentioned: that of the Iḥšāsīya and that of the Malānātiya. The former have turned their back to the via purgativa of the mystic and maintain that the fetters of law and morals have no longer to be borne by him who participates in true mystic life. For a full description see the art. Taṣawwuf. — The Maḥmūdiya (q. v.), on the other hand, start from the conception that the mystic has to avoid all that may confer on him the praise of mankind and their admiration. They therefore do not shun actions which expose them to general reproval or disdain, actions which in their case are not the outcome of their indulging in sinful inclinations and which, without the purpose of incurring blame, would lose nothing of their sinful character.

(A. J. Wensing)}
absolutely definite but practically is that the ša'îr uses the poetic form while the khašî expresses himself in prose, often, however, also in ṣadu (cf. Dāhîjī, ṣ. cit. i. 159); his speech is introduced with annî bă’dus (al-Hârîrî, ed. de Sacy, 1822, p. 42). According to Dāhîjī, there were a few khašîbû who were also ṣâhra (i. 27).

In the Ḡāsîliyya the ša’îr is said to have been more highly esteemed than the khašî but when the numbers of poets gradually increased and the latter’s art declined and they became beggars, the khašî got more prestige (i. 136; iii. 227). The khašî is also associated with the story-teller, the kâfî, and with the ʿashâba al-ḥāłkar wa l-ṭalā’ûr (Dāhîjī, i. 167 sq. and passim); the office was sometimes hereditary in the same family. The khašîbû did not form a gild or caste; they were the men who had the ability to be spokesmen. They appear not only at the head of a waṣfî to negotiate as representatives of their tribe, as we know from the Ṣîra (cf. Goldhârī, Abânî, zîr arb. Phîlî, i. 20), but, like the poets, they were also the leaders in the war of wits with the enemy (muṣâfahâra). The khašî had to be able to extol the glorious deeds and the noble qualities of his tribe and to narrate them in perfect language and to be able likewise to expose the weaknesses of his opponents. He had therefore to be faṣîh and know how to employ bâlaţâha and in this way to overcome his opponents (cf. The Mufâsî- dâsilâyât, ed. Lyall, xcii. 22 sq., xcvi. 9; al-Ḳûţâni ed. J. Barth, xiv. 20; Ibn Kâs al-Ruḳtáyât, ed. Khodakansak, S. B. A. Wk., 1902, xlv. 19; Kamî, ed. Wight, 20, 15 sq.). Lampons give the following characteristics of a poor khašî: his pronunciation is bad, he turns over and fro, stammers, coughs, strokes his beard, twists his fingers, a sign of cowardice (Ḥanâša, ed. Freytag, p. 659, verse 5; Kamî, ed. Wight, p. 20, 7, 15 sq.). It is in keeping with the character of the ancient Arab khašî that he is included among the fighting knights and nobles (al-Ḳûţâni, ṣ. cit.; Dāhîjī, i. 134 sq. 172, 11), indeed, khašî itself is used as a name for a brave warrior (Dāhîjî, i. 129). When the khašî makes a public appearance his insignia are lance, staff or bow (al-mâkkâtîn), just as a man taking an oath carries tokens of masculine honour; he often strikes the earth with it (cf. al-Ḳûţâni, xxvii. 6; Labîd, Dwîmân, ed. al-Châlîdî, 7, 15 [p. 27], 9 sq. [p. 45]; Dāhîjî, i. 197 sq., iii. 3 sqq. 61 sqq.).

In the earliest days of Isâm the khašî retained much of his old character. “The prophet came forward as a khašî” after the conquest of Mekka (Ibn Ḥîṣâm, ed. Wustenfeld, p. 823, 3 from below) and spoke publicly with ceremony and authority. But the khašî now became solely an address to the Muslims, not a part of the war against the enemy and muṣâfahâra was no longer part of the activities of the Muslim khašî. But it is quite in keeping with the nature of early Isâm and with that of the Arab khašî that the ruler himself was spoken of and that he not only made edifying speeches from the minbar as khašî but also issued orders, made decisions and pronounced his views on political questions and particularly questions of general interest. This was the case under the first four caliphs and the Umayyads (cf. Dâhîjî, i. 190), and the governors appointed by them also acted as khašîbû (e.g. al-Yâsîbî, ed. Houtsma, ii. 318 infra); Dâhîjî, i. 179 middle, etc.); the local governors appointed by the latter were also entrusted with the control of the minbar and of the ṣalāt (al-Tâbârî, ii. 929, 1 sqq.). Diatribes against and curses on the enemy were part of their minbar speeches, e.g. the curses on “Ali and occasionally on Ṭalhâ and ‘Abbâs” (Dâhîjî, i. 165). Khaṭîb was therefore still synonymous with “hearer” in the political sense. A poet of the Khâwarîj says: “There will be no peace as long as there is a khaṭîb from the minbar of this world” (Dâhîjî, iii. 135). An inheritance from the ancient Arab spokesman is the staff or lance which the Muslim khaṭîb holds in his right hand during the ḡâhiba, a custom which provoked the scorn of the Persians (Dâhîjî, iii. 135). But the close connection between the khaṭîb and divine service gave the Muslim khaṭîb a specifically religious character. After the conclusion of the wars of the first generations, this element became more predominant and in the time of the ʿAbâlîsîs, as early as Hârîn al-Ḳalîfî, the caliph left it to the ʿâdsîs to deliver the sermon at the service while he himself was simply a listener (Dâhîjî, i. 161). But in theory the leaders of divine service in the great mosques are representatives of the caliph (cf. Ibn Khâlidî, Muḥaddîmî, Cairo 1322, p. 173).

The Egyptian Fâṭiμīs still occasionally preached themselves (behind a veil), namely 3 times in the month of Râḏânî and at the great festivals (Ibn al-Tâbârî, ed. Jyûnbîlî, ii. 482—486; ed. Popper, p. 331 sqq.; al-Mâkhrîzî, Khiṭṭat, Cairo 1334, ii. 322, 327, 329). On this occasion his highest dignitaries stood on the steps of the minbar (cf. op. cit., p. 327, 329), while on the other hand the râis of a district often stood on the minbar if the khaṭîb was preaching, while a custom which testifies to the original high rank of the khaṭîb, but was later condemned by strict authorities on morals (Ibn al-Ḥalîjî, Khiṭṭîb al-Madâhîlî, Cairo 1320, ii. 74). Special khaṭîbû were everywhere appointed. There were three of them in Cairo during the earlier Fâṭiμî period (for the ‘Ahrî, Ibn Ṭûlîn and al-Azhâr mosques); cf. al-Mâkhrîzî, Khiṭṭat, ii. 348 sq., as a rule it seems to have been the holy office of a kâfî; cf. op. cit., p. 224, 8 infra. On the Ḥâl al-Qâdrî, a special khaṭîb pronounced the khaṭba on a minbar with 9 steps in the sanctuary of Ḥusain in Cairo, while the chief kâfî conducted the ṣalât; the khaṭîb on this occasion was given a silk robe and 30 or 50 dinârs (al-Mâkhrîzî, Khiṭṭat, ii. 224 sqq.). On other occasions also the khaṭîb received a robe of honour (op. cit., ii. 387 infra). The khaṭîb usually was also the conductor (imâm) of the Friday ṣalât at which he preached and, according to Abî Ḥanîfa and an attribution of Mâlikî, he must actually do so unless there were special reasons for a deviation from the rule. The daily ṣalât’s are as a rule conducted by other imâm’s (al-Mâwîrdî, al-Mâkhrîzî al-Sulâmî, ed. Enger, p. 181, 3 from below) and according to al-Shârîfî and Mâlikî, the Friday service with khaṭba can only be held in one mosque in each town, if the size of the town does not make it impossible, while Abî Ḥanîfa has no such rule. The khaṭba was therefore delivered, for example, in Cairo after the end of the Fâṭiμî period in the Ḥâkim mosque only, because Saladin appointed a Shâhî chief kâfî. This state of affairs was altered by Baibars when he appointed a Ḥanâfî chief kâfî (al-Mâkhrîzî, Khiṭṭat, iv. 53). Abî Ḥanîfa on the other hand allows divine service
in which a khatib takes part only in a large town (miṣr), in which the ruler or his deputy is present in person. The other schools are less rigorous on the point. But the Imām-khatib of the Friday service is, according to the other schools also, in theory the representative of "the highest Īmām". Several Īmāms can be chosen, if necessary with their exact functions defined. According to al-Mawardi (p. 172), the Sulṭān appoints the Īmāms of the larger mosques, in keeping with the theory of their representative character. But, according to al-Kalqashandi (Ṣuḥḥ al-Ārāfā, Cairo, iv. 39), each mosque under the Mamluks had its own khatib while the Sulṭān only concerned himself with the larger mosques. The office of khatib of the important mosques was a very distinguished one. Thus, according to Ibn 'Abd al-Zahir, the Shafi'i chief ījāba himself was khatib of the great mosque in the citadel of Cairo (cf. P. Rasseh, Zentralblatt für islamische Wissenschaft, 1894, p. 92) and it was regarded as a special distinction, anxiously coveted, when Saladin after the conquest of Jerusalem chose the ījāba Muḥy al-Din Abu 'l-Maṣlālī to act as first khatib in the Aqsā mosque (Ṣuḥḥ al-Din, Khatib al-Rawdatān fī Akhār al-Dawlatān, Cairo 1288, ii. 108 sqq.). The document confirming his appointment under the Mamluks is further evidence of the khatib's dignity (cf. al-Kalqashandi, ib. ii. 222-223; al-Unari, Khatīb al-Tārīf bi 'l-Mustashfa al-Širīf, Cairo 1312, p. 126 sq.). He is the natural authority to whom new converts announce their conversion to Islam (Ibn al-Hāʾidjī, Khatib al-Madīhāl, p. 79); the people touch his robe li 'l-habbūr, etc. (al-Shārānī, Khatib al-Miṣrīn, i. 169). According to al-Mawardi (p. 185), the khatib ought preferably to wear black clothes, according to al-Ghazālī, white, while the first mentioned would be bid'a (ījāba), Cairo 1322, p. 131, to f. 6 sqq.). His insignia are al-ṣalātīn, the "two things of wood" i.e. the minbar and the staff or wooden sword which he has to hold in his hand during the sermon, according to the Fīhī books also. According to the law of 1911 applied to al-Azhar, art. 59, every one who has passed through the second of the three divisions of the institute can become a khatib. While in al-Azhar itself only one khatib is appointed (al-Zayyiātī, Taʾrīkh al-Azhar, Cairo 1320, p. 207), there were in 1909 in the mosque of the Prophet in Medina 46, in Mekka 19, khatibān; besides their deputies. They enjoy certain foundations and the office is on the whole hereditary (al-Batūnī, al-Kišla al-Ḥāṣibiyā, Cairo 1329, p. 101, 242).

Pride of the office of khatib, the waḥīf exercised the function of an elevating preacher, when he pleased (cf. A. Mez, Die Renaissance des Islāms, 1922, p. 318 sqq.).

Biography: I. Goldziher, Der Chatib bei den alten Arabern, W. Z. K. M., 1892, vi. 97-102; C. Snouck Hurgronje, Islam und Phonograph (Tijdschr. Bat. Gen., 1900, xliii. 401-404 = Verspreide Geschriften, 1923, ii. 426 sqq.); C. H. Becker, Die Kanzel im Kultur des alten Islām, Noldeke-Pietschsfift, i. 331-351 = Islamstudien, 1924, i. 450-471; also, Zur Gesch. d. islamischen Kultur, in Ḥadīth, 107, iii. 372 = Islamstudien, i. 472-509; T. W. Jumell, Handbuch des islamischen Geistes, 1910, p. 87-89; E. W. Lane, Manners and Customs of the Modern Egyptians (Every Man's Library), p. 84; the Fīhī-books under Salāt al-Jumā'īn and al-Sha'īrāt, Khatīb al-Miṣrīn, Cairo 1329, i. 164-171; Ibn 'Abd Rabīhī, Al-Tārīkh al-Farātī, Cairo 1321, ii. 128 sqq. A few references are taken from A. Fischer's lexico-graphical collection (Joits. Pedersen) on Al-Khatib al-Baghdadi, whom as al-Khatib al-Baghdadi, was born on the 24th Dju'ādād, 392 (1002) at Darzidān, a large village on the west bank of the Tigris below Bagdad. The son of a khatib (preacher), he began his studies very early and spent his youth travelling in search of ḥadīth. In this way he visited Baʿṣa, Nishāzpā, Isfahān, Hamādān and Damascus. Finally settling in Bagdad, he held the office of a khatib there and this was the origin of the name al-Khatib al-Baghdādi by which he is known to posterity. His profound erudition in the matter of tradition gained him great fame and authority in his new abode; one of his biographers says that preachers and teachers of tradition used to have to submit the traditions they had collected to his expert opinion before quoting them in their sermons and in their lectures. On the other hand al-Khatib seems to have suffered from the hostility of the Ḥanbalīs, who were numerous and powerful in Bagdad at this period. His preference for the Shafi'i-school, after having been at first a Ḥanbālī, his theological opinions which were quite uncompromising in their Ashārahīsm, attracted to him the hatred of the pupils of the Imām Ṭāhirī who were enemies of all bold theological speculation. He succeeded however in spite of the opposition of the Ḥanbalīs and thanks to the protection of the Caliph al-Ḵāzm and the vizier Ibn al-Muṣlim in opening a course of lectures on ḥadīth (tāḥīṣ) in the mosque of al-Manṣūr. It seems, that retaining a bitter resentment for the cunning shown him, al-Khatib never lost an opportunity in his lectures and writings of making malicious insinuations against Ṭāhirī b. Ḥanbal and the Ḥanbalīs and even attacking them openly. He was on this account accused by later generations of taʿṣṣub (legal and theological bias) and there is a body of polemical literature against him (cf. Hāʾidjī Khāliṣa, iii. 632). When the successful rebellion of al-Baṣṣṭrī brought about the ruin of Ibn al-Muṣlima, al-Khatib fled to Damascus; arrested by order of the Fāṭimid governor, he only narrowly escaped execution by a precipitous flight to Shīr and Aleppo. Returning to Bagdad after the Sālājūks had restored order there, al-Khatib, "ḥāfīz of the east", died there a year later on Monday 7th Dhu'l-Ḥijja 643 (1071) in the same year as Ibn 'Abd al-Barr, "Ḥāfīz of the west". He was buried in the presence of a vast concourse beside the tomb of the venerated Bīshr al-Haffī.

Al-Khāṭīb's work was considerable: according to his biographers about a hundred treatises. The most celebrated of his works is the Taʾrīkh Bagdadī, a repository of scholars of tradition living in Bagdad; the geographical, topographical and historical introduction, which precedes the bibliographical collection has been abbreviated and partly published and translated into French by G. Salmon and utilised by G. Le Strange, British Embassy to Bagdad in 1917. J. K. A. S., 1897, p. 35-45; edition of the text . . . ; mention should also be made of his Kifāya fi muḥrīṣ waṣīf 'ilm al-risālāwīyā and his Taṣṣīṣ al-ʿilm, on which see the

The Encyclopaedia of Islam, II.
This latter meaning is probably derived from the earlier meaning of the lines which a diviner (kāf) drew in sand and from which he prognosticated the happy or unlucky issue of an undertaking about which he was consulted. For this purpose the diviner accompanied by an acolyte drew with utmost haste, so that he could not possibly remember the number, a quantity of lines in the sand. Then he slowly wiped out two lines at a time, while the acolyte recited the words: “Ye two sons of Ḣyān, hasten with the explanation!" If in the end two lines remained it was a sure sign of success, while one line meant disappointment. This being ancient priesthood was prohibited by Islam, but another mode of divining survived for a long time: and may be practised to the present day. The diviner in this art of khaṭṭ made only three lines in the sand and then used scraps of barley or date-stones which he flung upon the lines, and from the way they fell upon the lines he prognosticated the good or evil result of the enterprise (cf. Ibn al-ʿAbīr, Niḥāya, i. 303; Liṣān, ix. 157-158).

Further khaṭṭ means essentially "handwriting" i.e. the Arabic script with its development and various styles; so we find it used in a verse of Imr̩ al-ʿKās (ed. Alwātī, 63, v. 1): "I like the writing of the Psalm on Yamanite palm-leaf". Similarly ʿAbd Allah b. ʿAṣama (Mufādhiyyat, ed. Lyall, 114, v. 5) says: "Just as the ink is moved about in the writing from the inkstand". Later poems contain the mention of khaṭṭ for writing more frequently and the verse of the Islamic poet al-Ḥagamī (ed. Cairo, p. 26, 7) may suffice: "As in Taimā a Jewish rabbi writes Hebrew with his right hand and then draws straight lines across (the parchment)". From this verse it becomes clear that not only Arabic writing, but any script is named khaṭṭ.

In modern language the word khaṭṭ is used for manuscript copies of books in opposition to printed books. The history of the development of the Arabic script need not be enlarged upon here as the subject has been dealt with in an earlier article (cf. the art. Ar̩ábī, above, vol. i). The secretaries (kāṭib, q.v.) developed a science about the correct formation of the letters, while necromancers in their turn invented a science by attributing special virtues to certain combinations of letters (cf. Tāghkūrī Ṣāda, ed. Iḥādarābād, i. 75-80; al-Kalqasāndī, Sūb al-aʿlā, iii. 2-171, and elsewhere; and for the supposed mystical interpretation of writing principally the books of the Ḥurūfīs). Cf. further the art. Khaṭṭ-i Ḥumayūn.

(From Krenkow)

**Al-Khaṭṭ**, a strip of coast on the Persian Gulf. The Arab geographers are not agreed as to its exact extent. While Yāḥyā limits the name to the coast of al-Bahrain and ʿUmān, which is also apparent from the mention of al-Kaṭīf, al-ʿUkkair and Ḥaṭar, al-Bakri says definitely that al-Khaṭṭ is the whole coast between ʿUmān and al-Baṣra on the one side and Kāţma and al-Shīr on the other. This difference of opinion is probably the result of the variation in extent of ʿUmān and al-Bahrain in the wider sense of these terms in course of time.

There are in any case authors who allot al-Khaṭṭ to either the one or the other territory. Al-Khaṭṭ in Ḥamād b. Muḥammad al-Ḥerawī, for example,
is simply a collective name for the villages in 'Umān, while Ibn al-Anbārī uses al-Khattī as the name for the coast of al-Bahrāin. In contrast to these wide applications of a fairly general term there is a narrow one, according to which al-Khattī was a particular settlement on the coast which belonged to the 'Abd al-Kaṣī. A. Sprenger has adopted this view, which was held by al-Ḥallūqī and others, and there is much in favour of locating al-Khattī preferably in the Gulf of al-Bahrain. The place was in any case noted as a market for the famous Khatti sailing-ships imported from India and sold to the Beduins. The name al-Khattī seems to be old. If A. Sprenger is right in connecting it with "regio Attene" and "Chateni" in Pinen, Nat. Hist., vi. 28, 147, and the "Atta vicus" in Polyb, the name dates back long before the Muḥāmaddan period.

(KHATT-I HUMAYUN, "imperial rescript," an ordinance referring to the organisation of the Ottoman empire, promulgated by the Sultan. The exact date of the act is unknown. It is primarily applied to the Sultan's fatwā written by the sovereign himself at the head of the document; later when the charge of the tughrā [q.v.] was left to a official called nishapūrī, the term was wrongly extended to the whole document itself. The expression is synonymous with khattī sharif but the usage in Ottoman administrative law is to apply the latter only to the khattī sharif of Gulkhān, a constitutional charter granted by Sultan 'Abd al-Majd (Shahān 26, 1255 = Nov. 3, 1839), while the former is generally applied to the khattī humâyūn of the first third of Djujudlā 11, 1272 (Feb. 18, 1856). The latter addressed to the grand vizier Muhammad Ahmad 'Ali Pāshā and obtained by the united action of French and English diplomats at the end of the Crimean War. By this document, the Sultan acknowledging that this subjects were united among themselves by cordial bonds of patriotism (sewandāzāt), an expression that appears for the first time here but did not catch on) declared he would maintain the guarantees promised by the charter of Gulkhān for the security of persons and property without distinction of class or cult, as well as the privileges and immunities enjoyed by non-Muslims; he accorded authority to repair churches and other buildings belonging to the various communities, put an end to the use of insulting appellations in administrative documents (for example of the term rījā, applied to tributaries); proclaimed all his subjects eligible for public offices; instituted mixed tribunals composed of Muslims; announced the coming codification of penal and commercial law, and better organisation of the police, the application of recruiting to non-Muslims with the right of buying oneself out, the reorganisation of the provincial councils, the right of foreign possession to landed property, reforms in the levying of taxes, the making of banks, roads and canals. This law remained in force until the constitution of Mīḥat Pāsha in 1876.

Bibliography: T. X. Bianchi, Khaththī humâyūn (1856) at the end of the Nouveau Guide de la conversation, 2. (Cf. III ART) KHATT-I SHARIF. [See KHATT-I HUMAYUN]. KHATTĀBIYĀ, name of a sect reckoned among the Shi'ite extremists (gūlārā), called after Abu l-Khattāb Muhammad b. Abū Zainab al-Asādī al-Adīdī, who is said to have issued the imperial (humâyūn) of the deity in the Imām Dja'far al-Sādīq (83–148 = 702–765) and afterwards in himself. He obtained a following in al-Kūfah, where he was attacked by Isā b. Musā, who was governor for some years till 147 = 764/765; he armed his followers with stones, reds and knifes, assuring them that these would prevail against the enemy's swords and lances. This promise proved deceptive; his followers, to the number of seventy, were slaughtered, and he himself was captured in Dār al-Rizāq on the bank of the Euphrates, impaled, his trunk afterwards burned, and his head sent to Baghādī. This disaster did not terminate the existence of the sect, some of whom maintained that neither Abu l-Khattāb nor his followers had been really killed, the appearance having been delusive. Their numbers are computed by the best informed writer about 300 A. H. at 100,000, their location being the Sowād of al-Kūfah and Yaman; they had, however, no power or force. There is a brief allusion to their doctrine in Ibn Kutāhah's Ma'rīf, which is somewhat earlier, and in the work of al-Muṭahhar b. al-Ṭibīrī, who is some fifty years later, but they seem to have done nothing which attracted the attention of the historians. After Abu l-Khattāb's death his followers are said to have transferred the imamate to Muhammad b. Ismā'īl b. Dja'far al-Sādīq, and are thus to be reckoned among the Ismā'īlīs.

The statements about their specific doctrines are scanty and to be accepted with caution. They held, it is asserted, that Muhammad transferred the prophetic office from himself to 'Ali on the Day of the Pond; and it would seem that Abu l-Khattāb must have asserted that similar transference had taken place from Dja'far to himself. Both Sunnī and Shi'ī writers maintain emphatically that Dja'far repudiated the claims made for him by Abu l-Khattāb, whose relation to him seems to have been similar to that of al-Mukhtar b. Abī 'Usaid to Ibn al-Hanafiyya.

Of his other doctrines the best attested is that he taught absolute ruthlessness in dealing with opponents. Men, women and children were all to be massacred, his argument being the same as was employed by the Aṣārīs. False witness was lawful in dealing with them. Al-Muṭahhar asserts that in consequence the evidence of members of this sect was not accepted in the courts.

The later heresiologists know far more about the sect than do the earlier. With al-Muṭahhar the Bazīghtā are a separate sect, but al-Shahrastānī makes them a subdivision of the Khattābiyya. The latter writer makes another subdivision, the 'Uma'iriya, who figure in 'Abd al-Kāhir's work as a subdivision of the Djanāhiyya. Al-Shahrastānī also treats the Mu'ammariyya as a branch of the Khattābiyya, but Ibn Ḥazm evidently regarded them as
independent. By the time of al-Makrit the number of subdivisions had reached fifty, and Abu i-L-Khatib's father's kunya was variously given as Abū Ṭhaˤr and Abū Yaʕil, probably through misreadings of the name Zainab. The seed is charged with preserving the whole of the moral law as well as the whole ritual of Islam. Transmigration also appears among their supposed tenets. Since the seed appears to have left no literature, it is difficult to check these statements.

(D. S. Magnus)
is a reference to its territory in the inscription Glaser, 119, 5 and a clan of the name is mentioned in Glaser, 204, 7. All these passages justify the suggestion that the tribe of Khawāl was already settled in this region in the first millennium b.c. where it still — in part at least — dwells in the land between Ṣanʿa and Mārib, which al-Hamdānī calls Khawāl al-ʿAlīya and which with Dī Ḫurra was one of the great granaries of the Yemen, where Ḫurra, barley and wheat in particular flourished exceedingly. The Khawāl tribe now belongs to the great tribe of Bākill which can put about 80,000 armed men in the field. The traveller E. Glaser wrote in the 1860s. The Arab genealogists give as the eponymous hero of the tribe Khawāl b. ʿAmr b. ʿAbd al-Ḥāfīz b. Murra b. Udad b. Zaid b. ʿAmr b. Gharib b. Zaid b. Ḫulkān b. Sāla. Some say the ancestor was Khawāl b. ʿAmr b. Ḫāfīz b. Ḫulkān, after whose ancestor they are also called Khawāl Khulqā. The distinction between the Khawāl al-ʿAlīya and the Khawāl Khulqā is, however, not genealogical but rather regional; for the former also belong — at least according to Nashwān — to Ḫulqā. The distinction comes from the fact that originally the whole tribe of Khawāl was settled in Mārib and Šīrīḥ but in the course of time a portion of them migrated to the highlands east of Ṣanʿa and received the name Khawāl al-ʿAlīya, while the remainder stayed in Mārib and not till a later date did a new migration take place to the region of Ṣaḍa, which is still the most important town of the northern Khawāl territory. As early as C. Niebuhr was the time there were two districts of this tribe which were, as they still are, under independent Shekhs. The last named according to Niebuhr 4 days journey from the port of Ḥali halfway between Ṣanʿa and Mecca, which according to E. Glaser extends W. and N.W. of Ṣaḍa, is Zaide. Ḥamdānī's statement is worthy of note, that here pure Arabic was spoken only in the highlands while in the valley and al-Káid and a good part of the town was the usual lingua franca. The name Khawāl in this particular area is still associated with two other features, the peak of Khawāl (Umr Khawāl), a mountain top, which can be seen from the Ḥijābl Tukhlah, and Bait Khawāl, the name given to the summit of the Ḥijābl Ḥaḍr. In Khawāl of Ṣaḍa, Niebuhr only mentions the villages of Akabat el Muslim (ʿAṣhabat el-Muslim), Heidān (Ḥāidān), ed-dāḥhār and Suk ed sjamma (Ṣūk el-Ḥumā), the golden mine at Ṣuq al-ʿAmr, which belonged to the Banū ʿAbd al-Māʾmar b. Zurāra b. Khawāl, probably — with other considerations — induced A. Sprenger to connect Khawāl with the Biblical Hawila. Niebuhr also had already done this. In Khawāl of Ṣanʿa Niebuhr mentions the villages of Beit Roeds (Bait Ṣaḥṣa), Tannaim (Ṭannīm), Beit el Kibis (Bait el-Kibis), Beit el-Numa, Seijān (Šeyān), Suradje (Ṣurādje) and Berres (Harrāsh). In Shabān of the year 10 A. H. (Nov. 631 A.D.) env. 1000 in Muḥammad al-Medina and professed Islam on behalf of their tribe. They were instructed in the teaching of Islam by the Prophet himself and promised to destroy their idol ʿAmr Anas, then received the usual gift of honour of 12½ ounces of silver and returned home. After the death of the Prophet they at first joined the general movement of apostasy, but ʿAṣhab b. Munaḥa whom the Caliph Abū Bakr sent against them with an expeditionary force, succeeded in regaining them for Islam in the course of the year 11 A. H. (632 A.D.). Politically they were on closer terms with the government in al-Medina than the other tribes of the Yemen, which was probably the result of their relations with the Persian rulers in ʿAmr. They afforded shelter to the two Persian princes Djughaš and Fairūz who were driven out of ʿAmr by the rebellion of the Arabs under Kāls b. ʿAbd Yaghūth b. Mākhrit and supported them till help came from al-Medina.

Members of the tribe of Khawāl after their lands were finally opened for Islam after the submission of the Yemen in 13 or 14 A.H., played an important part among the Southern Arabs who took part in the conquest of Egypt and settled there. We frequently find Khawāl in important positions in Egypt; in Old Cairo (al-Fustāṭ) they gave their name to a quarter, and the name generally is not rare in the papyri and on Arab tombstones in Egypt.

2) the name of a village near Damascus. One of the most distinguished of the companions of the Prophet is buried there, ʿAbd al-Rahmān b. Mīṣkham Abū Muslim al-Khawāl.

2) Yākūṭ, Muḥammad, ed. Westenfeld, ii, 499; Mārāṣid al-Īṭilaʾ, Leiden 1852, i, 375; ʿĀzīmuddīn Ahmad, Die auf Südarábien bezügliche Angaben nachw. im Sans. al-Ulūm, p. 76.

KHAYĀL, MIR MUḤAMMAD TĀṢĪ, of Ahmadābād in Gujrat, a writer of a collection of tales in 15 volumes entitled Būfānī Khayāl, composed in Persian prose between 1742 and 1756, at the
KHAYALI, also known as Bekâr Memi, an important Turkish poet of the time of Sulaiman the Great. Like the poet Lâli he belonged to the little Rumelian town of Wardar Yeniğesi. Like Sheikh Glâbi, he was precocious and developed his poetic talent very early. As a boy he was in the service of the Haideri dervish and mystic Iâba'îbî Mest, by whom he was introduced into mysticism which left traces in many of his poems. In the wanderings of his master, he came with him to Constantinople where he was removed from the influence of this dervish by the intervention of the authority. His poetical abilities ultimately won him the favour of the Deftedar Iskandar Çelebi and then that of the Grand Vizier Frenk Ibrahim Pasha, who introduced him into the circle of poets around Sultan Sulaiman. The Sultan granted him his favour and confidence: he became one of the intimates of the Sultan, the highest honour that could be attained by an Ottoman poet. After the execution of his patrons (Iskandar was hanged in Baghdâd in 1535 and Ibrahim strangled in the Serai in 1536), with the declining influence of the once powerful poet-favourites, Khayâl fell upon evil days, as he had never been able to save the presents and other tokens of favour with which he had been overwhelmed, but he was finally given a mandâj by the Sultan and the title of Bey. He died in 964 (1556—1557) in Adrianople where he was buried.

Khayâl, who was of an amiable friendly character and throughout his life retained a dervish-like humility and frankness, just as he retained his membership of the Haideri order, was one of the best poets of his time. None of his contemporaries surpassed him in poetic vigour and diction. His language is, however, now antiquated. He only worked in the lyric field (khasâl, kûšidâ). Careless of the fate of his work as of this world's goods, he left the task of arranging his strongly mystical poems into a divân to another. His son 'Umar Bey (d. 1010) was also a poet.

The play spread from Turkey to non-Turkish lands. It seems to have established itself with special fineness among the Greeks and down to quite modern times (notably in Athens, the Piracus and Salonika). In the same way it was very popular among all classes in Rumania.

KHAZAR, a people of uncertain origin; on their relation to the Bulgars and the rise of the Khazar state see above, i. 78c, where also the alliance between the Khazar and the Byzantines in the war against Persia in 627 is dealt with. In spite of the successful issue of the war for the Byzantines it is not recorded that their empire was increased at the expense of Persia; but the Caucasian lands taken at this time by the Khazars were not reconquered by the Persians and the Khazars were only deprived of them by the Arabs. Al-Baladhuri's statement (ed. de Goeje, p. 194) that the old capital of Arran, Ka'wawlak, Arab. Kabala (cf. the art. Arran), was also called Kharazan is important. On the ravaging of the countries of the Caucasus by the Khazars cf. A. Manandian, Beiträge zur palästinischen Geschichte, doss. Leipzig 1897, p. 39 sqq., following Moses Kalankatuač; ibid., p. 30 sqq., from the same source, on the alleged conversion of the Huns, i.e. the Khazars, to Christianity by the Albanian bishop Israel in the time of the Armenian Catholikos Sahak III (677-703); in this connection we are given some information regarding the pagan conceptions of the Khazars and the worship of their supreme deity Tengri-Khan. The "capital of the land of the Huns" there mentioned, Varačan or Varadjan, is, according to Marquart (Osterröpische und Ostasiatische Streifzüge, Leipzig 1903, p. 16), identical with Balandjara, where, according to al-Mas'udi (Tanzil, ed. de Goeje, p. 62, 16), in earlier times the capital of the Khazars was, according to Marquart on one of the streams that form the Kösi-su (Sulak). Al-Tabari relates the conquest of Balandjara and the fortresses in this region by the Arabs in the year 104 = 729/730 (Ibn al-Atihir, ed. Tornberg, v. 117) al-Bai'da (the "white city") is first given as the capital; according to Marquart, this is a translation of the name given in the earliest Arabic source (Ibn Rusta, ed. de Goeje, p. 139, 14; al-Gardzi in W. Barthold, Oseto e poekadze v Srednyuyu Asiyu, St. Petersburg 1897, p. 95) for the west side of the later capital Itil (at the mouth of the Volga); Marquart proposes to read the name Sarghishar (Turk. "yellow city"). According to Ibn al-Atihir (v. 160), Marwan b. Muhammad advanced as far as al-Bai'da in 119 = 737. Ibn al-Atihir only records the flight of the Khazar king from this town; according to al-Baladhuri (p. 207), he concluded peace with Marwan and declared himself ready to adopt Islam, whereupon Marwan confirmed him in his kingdom. A section of the Khazars was settled by Marwan between the river Samur and the town of Shahbārūn (cf. above, i. 943). In spite of this, the Arab kings were not firmly established on the Volga nor even in Daghestān (q.v.); even in the 15th century the rule of the Khazars reached almost up to the walls of Derbend (cf. the article DAGHESTAN). The Khazar kingdom was able to assert itself as a great power against the Byzantine Empire as well as the Caliphate. The emperor Constantine V Copronymus (741-775) married a Khazar princess; the Emperor Leo IV (775-780), the son of this marriage, was known as "the Khazar". About the same time the governor of Armenia, Ya'izir b. Usaid al-Sulami, is said to have married a daughter of the Khazar king at the request of the Caliph al-Manṣūr (754-775) (al-Baladhuri, p. 210). The Armenian Levond (Russian translation, by K. Patzhasin, St. Petersburg 1862, p. 92; cf. Marquart, op. cit., p. 5) connects the invasion of Georgia and Armenia by the Khazars in 147 (764/765) with the death of this princess; the leader of the Khazars is given by him as Radji Tarkhān; in al-Ya'kūbi (Turīz, ed. Houtsma, ii. 446) Kās (in the MS. Halis) Tarkhān, in al-Ṭabarān (ii. 328, 4) Astakhān al Khawārizm. There was therefore a Khawārizm at the head of the Khazar force that invaded Muslim lands while at a later date in the body-guard of the Khazar king there were Muslim soldiers from Khawārizm, who had bargained for the right "to remain neutral whenever the Bey of the Khazars waged war against Muslims" (Marquart, op. cit., p. 5, from al-Mas'udi, Murūjūd al-Dhabab, ii. 10). The frontier provinces of the caliphate were raided by the Khazars for the last time in the reign of Hārūn al-Rashīd in 183 (799); this invasion also is said by al-Ṭabarān (iii. 647 sqq.) to have been brought about by the failure of a proposed matrimonial alliance between the daughter of the Khazar king and the Barmecide Fašl b. Yahyā (cf. above, i. 665 and ii. 36).

It was in the reign of Hārūn also that, according to al-Mas'udi (Murūjūd, ii. 8), the conversion of the Khazar king (the -bārūn) and of the nobles to Judaism took place; cf. the discussion of the sources in Marquart, op. cit., p. 5 sqq., and the alleged letter of a contemporary and subject of "King Joseph", since published by S. Schechter (The Jewish Quarterly Review, New Ser., iii. 181 sqq.); following him, P. Kokowcow, Żurn. Min. Nar. Prosw., 1913, Nov., p. 150-99 sqq.). We have again later an account of the conversion of the Khazars to Christianity (the missionary journey of the Slav apostle Constantin or Cyril between 851 and 863; cf. Marquart, op. cit., p. 13 and 22) and two reports of their conversion to Islam. According to Ibn al-Atihir (vii. 418), the Khazars and later their king were converted to Islam in 539 (948) in order to defend themselves with the help of the Muslim Khawārizms against an attack by a Turkish people; this story, which we find as early as Ibn Miskawayh (H. F. Amedroz and S. Margolithous, The Eclipse of the Abbasid Caliphate, Oxford 1920-1921, text ii. 203, transl. v. 223), is undoubtedly taken from the last work of Thābit b. Sinān and we must agree with Fr. Westberg (in Żurn. Min. Nar. Prosw., 1908, March, p. 6) in referring it to the known campaign of Svyatoslaw (cf. above, i. 789). What al-Mu'addasī, ed. de Goeje, p. 361, 1, tells us about the adoption of Islam as a result of the campaigns of al-Ma'mūn does not refer, as Marquart (op. cit., p. 3 and index) supposes, to the Caliph Abd al-Malik bin Marwan, al-Mu'addasī’s carefulness is not shown in the particular figures he gives, and he shows, to the ruler of Gūrgānd (Arab. Jurjānī) and afterwards (after 995) of all Khawārizm, Abu 1-'Abbāṣ Ma’mūn b. Muhammad. In neither case is the story the change of religion historical. Al-Baladhuri's story (p. 203; Marquart, op. cit., p. 413) of the rebuilding of the town of Shamlor (Arabic Shāmkūr) with the name al-Mutowakkiliyya by Boghā the Elder (cf. Boghā al-Kabīr) is more important;
he is said to have settled Khazars there who had come to him "from an inclination towards Islam".

The danger which threatened the Khazars as a result of the movements of peoples in the 9th century caused the embassy to the emperor Theophilo-
(829–842) and the building of the Khazar fortress of Sarkel on the Don by the Greek Petronas. This story in Constantine Porphyrogenetos (De admin. imper.ъ, Chap. 42) is connected by Marquart (op. cit., p. 28) with Ibn Kusta, p. 143. 1 Ibn Khârîncheh's story (ed. de Goeje, p. 162 sq.) of the alleged murder of Sulaiman al-Tardjumân is quoted by Marquart (op. cit., p. 476) as proof of that "the Khazars were on friendly relations with the Caliphs at this time," but it should be pointed out that the Caliph there does not communicate direct with the Târkhân, king of the Khazars, but through the intermediary of several Caucasian princes. About 240 (855/856) the Canar' (Arab. Şanarî), who had fled before Bogha, applied for assistance to the kings of the Byzantines, Khazars and Slavs (al-Ya'kûbî, Târîkhî, ii, 598; transl. in Marquart, op. cit., p. 413 sq.). The attitude of the Khazar ruler was equivocal on the occasion of the raid made by the Russians on the lands on the Caspian Sea recorded by al-Mas'ûdî (Murȗd, ii, 18 sqq.; new transl. in Marquart, p. 330 sqq.). Various suggestions have been made regarding this date, which is not definitely given; according to Westergaard, Zânî. Min. Nar. Prov., Feb., 1908, p. 386), the raid did not take place till 925 but this is probably too late. The Russians were allowed a passage through Khazar territory on condition that they gave half their plunder to the Khazar king; on the way back they were fallen upon and almost wiped out — with the approval of this ruler who "could not prevent it," although he had informed the Russians of the danger awaiting them — by his Muslim mercenaries and the inhabitants of İtil, Muslim and Christians. Whether the more important Russian raid of 332 = 943/944 (cf. the art. Bar- 
Dâ'â') was undertaken by agreement with the Khazars or against their will is not recorded. Accor-

1. The most important source of revenue was the import and export of foreign goods, the land is said to have produced no wares of its own (Ibn Hawkal, p. 283, ii adds: "with the exception of isinglass."") Even the material for clothing was not prepared in the land itself but imported from Gurkân, Tâhâristân, Adharbâjî, and Kûm. Judaism was the predominant religion because the Khâkân, the viceroy, the prince of Samandar in Dâghestân who was related to the latter, and the high officials all professed it; in numbers, however, the Jews were less than the Muslims and Christians. In Īlû there were over 10,000 Muslims, a principal mosque, fifty minarets and 50 mosques. In the year 310 (922) the king received a report that in a Muslim country a synagogue had been destroyed (the name given in Yâkût, ii, 440, is not clear; cf. Marquart, op. cit., p. 447 sq.). He therefore had the minaret destroyed and the muâdhdîn killed. He left the mosque itself unharmed for fear that all the synagogues in Muslim lands should be destroyed.

On the extent of Khazar power in what is now Russia, on the campaign of Swjatowslaw and its con-
sequences see above, i, 789. Earlier (in the ninth century) even Kiev was subject to the Khazars; in this connection the author of the oldest — com-
posed about 1095 (according to the critical edition by A. Shakhmatov, Introduction, p. xxiii) —

Russian Annals observes that in his time the Khazars were under the rule of Russian princes (A. A. Shakhmatov, Priez vremenshch bêt, Pet-
rogad 1916, p. 17). In any case it is evident from the annalists that they did not consider the Khazar kingdom destroyed even by Swjatowslaw's campaign; in the legend of the attempts by the adherents of various religions to convert prince Vladimir, "the Khazar Jews" are also mentioned as foreigners not subject to the Russians (ibid., p. 104). The original home of the Khazars on the lower Volga and in Dâghestân was not conquered by the Russians at this time; the subjection of the Khazars mentioned by the annalists can only refer to a part of the Crimean peninsula and the peninsula of Tâman opposite it, where lay the Russian princely principality of Tmutarakan' first mentioned in 1022. This region may well have been the "Khâzar" which was conquered by a fleet sent by the Emperor Basili II in alliance with the Russians in January, 1016; its leader is called Sven, Greek Sfen-
gos, said to have been a brother of "King" Vladimir (according to Cedrenus, 464; Migne, Patrolog. Graeca, vol. cxxii), the Khazar king (arkhân) of this region was Georgios Taulos, apparently a Christian (Taulos is the Turkish title Çâr). In 1022 the ruler of Tmutarakan' was Matiaslav, a son of Vladimir (Shakhmatov, op. cit., p. 186); in the next year Matiaslav, in alliance with the Khazars, undertook a campaign against his brother Yaroslav. The Khazars are mentioned for the last time as neigh-
bours of Tmutarakan' and intervening in the civil confusion in this principality in 1035 (ibid., p.

253). The Muslim sources give us no information regarding the end of the Khazar kingdom. Ibn al-Athîr (ix, 279) makes the Kürd Fadlûn, ruler of Gandja (q.v.), make a raid on the Khazars in 421 (1030) and be attacked and slain by them on the way back. This was Fadlûn b. Matıs, a member of the Shaddâd dynasty; cf. above, i, 461 and ii, 129b

and see E. Schau, Ein Verzeichniss mukammellas-

nischer Dynastien (Abhandl. der preuss. Akad. d.
Wissensch., 1923, philol.-hist. Kl., Nr. 1, Nr. 22). According to Marquart, this is the last mention of the Khazars in Ibn al-Athir and in history generally (W. Bang and J. Marquart, Ostasiatische Geschichtskunde, Bd. 2, Leipzig: defending the kgl. Geschichts- und Wiss. zu Göttingen, phil.-hist. Klasse, N. F., vol. xii., Nr. 1, Berlin 1914, p. 56). But a raid from Gandja against the Khazars is very improbable on geographical grounds; the Khazars are probably mentioned here in error for the Georgians or Abkhaz, as in al-Bundari in Rec. des textes relatifs à l’histoire des Scythes, ed. Houtsma, ii. 31, 31. Similarly (confusion with the Ghuzz or Kiptchak) is probably to be explained the mention of the Khazars in Khâfânî about 1175 (cf. above, i. 943). In the xiiith and xiiith centuries the town and country of Sâkân (q.v.) or Sâkshen are mentioned north of the Caspian Sea, probably on the Volga. J. Marquart, op. cit., agrees with the suggestion of Fr. Westberg ( Bull. de l’Acad. des Sciences, St. Petersbourg 1899, p. 291) that Sâkshen is the site of the former Khazar capital but rejects the view of the same scholar that the Sâkshen are simply the Khazars under another name. According to Abû Hümîd al-Ghanmî (in Dorn, in Méll. asiatiques, vi. 710), the distance between Bulghur and Sâkshen was 40 days’ journey; on the other hand Sâkshen in the viith century in Ma’mûd Kâshghâri (Dîwân Lughât al-Turk, Constantinople 1333 = 1914—1915) is identified with Sauwar, only two days’ journey from Bulghur (cf. above, i. 788).

**AL-KHÂZINÎ, ABû DîJAFAR AL-KHURASÂNÎ (al-Brûnî adds the names Muhammâd b. al-Husain; we sometimes find al-Khâzinî instead of al-Khâzinî), born about 349 (960), was, according to his countrymen, one of the greatest Muslim astronomers. He belonged to Khurasân and conducted observations for Abû l-Faqîl Ibn al-A’mid († 359 = 969/970), a vizier of Rukn al-Dawla (326—366 = 932—976). He was better known by the kunya Abû DîJafar than by his own proper name. Like most students of mathematics, he dealt with all its branches. In arithmetic he dealt with numerical problems and problem sources in Archimedes which leads to a cubic equation (see E. Wopcke, L’Algèbre d’Omer al-Khayyâmi, p. 2 sq.; cf. also Hâджî Khâlîfâ, Nî. 3996); he also wrote a commentary on the first ten of the first hundred of Euclid which deals with division (Hâджî Khâlîfâ, Nî. 1070). Cod. Leiden Nî. 992 contains two problems from his book of tables of planes.

Cod. Leiden Nî. 1014 gives a geometrical problem; on one connected with the problem of parallels cf. G. Jacob and E. Wiedemann, Zu Omer-i-Chajjám, in Islam, 1912, iii. 56.

One of Abû DîJafar’s principal fields of research was astronomy. In the Kitâb al-Athâr al-‘Arabic, he gave a description of marvellous instruments of observation (Hâджî Khâlîfâ, Nî. 1122 and 987). This work is also mentioned by al-Akâmî, Irâhât al-Kâsîd and in Ibn Khaldûn’s Prolegomena (French transl., i. 111; cf. E. Wiedemann, Beitr. IX: Zu der Geschichte der Astronomie, in the S.B.P.M.S. Erlangen, 1906, xxxviii. 190). The same book probably also deals with an instrument for measuring the altitude of the sun (J. Frank, Über zwei astronomische Instrumente, 2. Das Instrument mit dem Dreieck (von al-Khâzinî), in the Zeitschr. für Instrumentenkunde, 1921, xii.)

199 sq.) and a ring 8 ells (about 13 feet) in diameter with which, according to al-Nawawî, he ascertained the obliquity of the ecliptic for Ibn al-A’mid with the help of a number of scholars. He found a smaller than his predecessors had done (Cod. Leiden, Catalogue, Nî. 1066, fol. 59).

Mention is often made of a work highly praised by Ibn al-Kifîf, “The Book of Tables of Planes” (Zîd al-Safâ‘îh for the astrolabe), which consists of several ma‘âlîn’s with a long introduction. In it, according to al-Bûrûnî (al-‘Îthâr al-Bûkîyî, p. 326; Chronologie, p. 322), there is probably an explanation of the progressive and retrograde movement of the spheres. It is perhaps a part of this work that is mentioned by al-Bûrûnî (Kitâb l-Ishârî etc., Cod. Leiden, Catalogue, Nî. 1066, fol. 679) as “On the Differences in the Ascentions (ma‘âlîn) for Equal Arcs etc.”. Possibly it is identical with the work quoted by Nasîr al-Dîn in his Kitâb Shâkîl al-Kâtî, (“Book on the Figure of Transversals”) viz. Mâjâlî Dîwânî Mâ‘îl al-Mu‘ayyîl al-Dîwânî wa l-Mâjâlî ‘l-Kurât al-Musâkîhîn (”partial investigations into some of the partial inclinations and of the ma‘âlîn in the spheres recta”) (Traité du quadrilatère, ed. and translated by Alex. Pacha Caratheodory, 1891, text p. 115, transl. p. 150).

The following were probably mainly theoretical cosmological works: 1. al-Madîkâl al-Athîr fi l’Iin al-Nuﬁîm (“the great introduction to astronomy”) (see al-Bûrûnî, al-‘Îthâr al-Bûkîyî, p. 123; Cod. Leiden, Catalogue, Nî. 1323); in it Abû DîJafar also discussed questions of chronology and gives methods of determining the sign of Mu’arram. 2. Sîr al-İhâmîn (Hâджî Khâlîfâ, Nî. 7140). In one of these two writings Abû DîJafar probably dealt for the first time with Ibn al-Hai’ham’s theory of the structure of the world mentioned by al-Khârîjî. In it he apparently relied on the hypotheses of Ptolemy, which Thabit b. Kûrra had translated (cf. Hâджî Khâlîfâ, Nî. 13,124). Abû DîJafar also evolved a form of the world which differs from that with the excentric sphere and the epicycle; in it the distance between sun and earth is also given, and the sphere of the difference in its rotation. He thus gets two regions on the earth, a northern and a southern which do not differ in heat and cold (al-Bûrûnî, al-‘Îthâr al-Bûkîyî, p. 259; Chronologie, p. 249).

Like almost all astronomers, Abû DîJafar also dealt with astrology; he was learned in the doctrine of tasâyyîs.

Abû DîJafar was also interested in philosophical problems, as is evident from a commentary on the beginning of the work of Aristotle on the heavens by a certain Abû Zâid al-Balkhî, who wrote to Abû DîJafar (Ibn al-Kifîf, p. 40). 3. Bibliography: H. Suter, Die Mathematiker der Araber, etc., Nî. 4, Ya‘qîb al-Nâhim, al-Fihrist, p. 266 and 282; Ibn al-Kifîf, p. 396.

(E. Wiedemann)

**AL-KHÂZINÎ, ABû ‘I-FATH ‘ABD AL-RAJMÂN AL-MANŞîR AL-KHÂZINÎ (AL-KHÂZINÎ), flourished about 500 A.H. (end of the xiiith and beginning of the xiiiith century). A pretty full account of him is given in the work of a certain al-Baihaqî (see below) and isolated references are given in his “Sîndjîrî Tables” (zîdî) and his Kitâb Mîzân al-Îjâma. Abû al-Khâzinî was a Greek slave brought up in the service of Abû al-Khâzinî al-Marwazî in Merw and received an education in geometrical and philoso-
phical knowledge worthy of his talents which enabled him to compose the books mentioned below.

He later became associated with the Sultan of Kharurán, Mus'ul al-Lama' Abú Hārij rád al-Sanjar b. Malik-shāh b. Alp Arslān (511-557); he had previously been governor of Kharurán for the twenty years 491-511). Al-Khāzīnī enjoyed the favour of this prince and his nobles; at the same time his style of life remained as exceedingly simple and modest, as that of al-Burānī.

Two works of his are known and have survived:

1. Al-Dājī al-Mu’tahar al-Singarī. This book of tables gives statements of the positions of fixed stars for the year 509 = 1115/1116 and also for oblique ascensions and time-equations for the latitude of Merw (37° 40'), which was in Sanjar's kingdom. This work was used by C. A. Nallino in his al-Battenī Opus Astronomicum; cf. e. g. vol. i, p. lxvii., and the Index.

2. Kitāb Miṣān al-Hikma (finished 515 = 1121/1122); its contents are discussed in the articles Al-Karaṣṭūn and Mizn. Al-Baihakī says that he rediscovered the book; a passage from it is mentioned in a manuscript in the India Office.

Bibliography: Zähir al-Dīn Zaid al-Baihakī, Ta'īšik ʿHubānāt al-Islām (Berl. MS.; Ahlaward, Catalog. Nos. 10, 105), contains the life of al-Khāzīnī (E. Wiedemann, Repr. XXV, Einige Biographien nach al-Bisṭānī, No. 103, in the S. P. M. S. Erleg., 1910, xliii. 73); H. Suter, Die Mathematiker und Astronomen der Araber, No. 293 and Appendix, p. 226. A considerable part of the Kitāb Miṣān al-Hikma is published by N. Khaiukoff, Analysis and Extracts of the Book of the Balance of Wisdom etc., in J. A. O. S., 1859, vi. 1-128. Other parts have been edited by me in Beitr. XV, Über Bestimmung der Zeitbestimmung von Legierungen, in the S. B. P. M. S. Erg., 1908, xl. 105-152; Beitr. XVI, Über die Lehre von der Schwemmen, die Nibelungen und die Konstruktion des Qasrāfīn, ibid., 1908, xl. 133-159. Here also the parts published down to the present day are discussed again; also Beitr. XXXVII, Über die Staudenwage, ibid., 1914, xlvii. 27-38; Beitr. XLVIII, Über die Pathe des Wechseln von al-Šāzīnī und über die Lehre von den Proporziomien nach Burānī, ibid., 1916, xlvii. 1-15; E. Wiedemann, Über die Kenntnisse der Muslime auf dem Gebiet der Mechanik und Hydrostatic, in Archiv für Geschichte der Naturwissenschaften, etc., 1910, ii. 394-398; do., Über die Welt von Eidelsteinen bei den Muslimen, in Archiv, 1911, ii. 345-358.

Al-Khazāndī is the name of the tribe who with their brother-tribe al-Aws were occupying the region of al-Madinā and farther north to Kūbara and Tāmā at the time of the beginning of Islam. On account of the important part which they played in the successful rise of Islam both tribes are designated by the honorific name of al-Ansār "the Helpers". It is the unanimous statement of genealogists and Arab antiquarians that the Khazāndī, together with the Aws and the Ghassānīdīs in Syria, migrated from South-Arabia at a very early date and in that reason for their emigration from their ancient homes is given in the burst of the dam at Mā'rib the exact date of which cannot be determined; it can be approximately dated in the fifth century of the Christian era. The genealogies of the divisions of the tribe are fairly well established because the different clans were registered in the Misūrān introduced by the second caliph 'Umar b. al-Khaṭṭāb, as they were entitled by their help to Islam to the second category of pensions allotted by the Dīnār. As regards the earliest names in their pedigree: al-Khazārdī b. ʿAmr al-Anṣārī b. Thalāha b. ʿAmr Mazuṣākiya, which they share with al-Aws, we may be more sceptical. When the tribes of al-Aws and al-Khazārdī in their migration reached Yathrib, which later received the name of Madinat al-Nabi, they found settled there a number of Jewish tribes among which the Banū Ḳainākār, Ḳuraṣa, the Nadīr and nearly twenty more clans are known by name. The latter possessed in Yathrib and its neighbourhood over 70 castles, named Afīn (plur. of Afīn), which formed one of the distinctive features of the city and which granted the inhabitants a measure of security not known in any other town of Arabia. If we had not the repeated affirmation of Arab antiquarians that these buildings were constructed by the Jews, we might think that they were built on the model of similar buildings in the Yemen and introduced by the immigrants. The Khazārdī settled at first on the outskirts of the town like the Aws, but as their numbers increased more rapidly than the resident Jewish population of the town, they soon asserted their power and made themselves masters of most of the Afīn. The immediate cause of their first war with the Jews is stated to have been that a prince of the Jewish family Zuḥra, named al-Kaṭṭāt, intended to enforce the jūn primae noctis with a bride from the tribe of al-Aws for which the prince was slain by the brother of the bride. (That the name al-Kaṭṭāt is fictitious is apparent; it is nothing but the Greek word κητατος). The consequence was that the allied tribes asked and received help, either from the Ghassānīdīs in Syria or from Yamanitēs from South-Arabia, and by treachery murdered many of the most prominent Jews. Being now in possession of a large portion of the town, the allied tribes fell out among themselves. The peculiar formation of the town, consisting of a number of detached settlements with castles between them, made it possible for such warfare inside the township to continue for a long time, and as neither al-Aws nor al-Khazārdī were very numerous, each in turn made alliances with the nomadic tribes in the country surrounding Yathrib. The Khazārdī were stronger in numbers and to equalise this the Aws made alliances at various times with the tribe of Sulaim and were generally also assisted by the Jews; it was only after the fight at al-Buʿūṣīn in which the Khazārdī were heavily defeated that something like equilibrium prevailed in Yathrib. However, the intermittent fighting between the two tribes and murders with the consequent retaliation continued. The momentous change was brought about by the Hijrat of the Prophet from Mekkah to Yathrib where he arrived at the suburb of Kubā' on Rabī' I 12 (Tuesday, June 29, 622) and engaged the hitherto antagonistic tribes to assist him in his struggle against his fellow-citizens of Mekkah. We get a fair estimate of the number of fighting men in each of the two tribes by the list of participants in the battle of Badr, for Ibn Sa'd in his Tabākāt (vol. ii/ii) gives us the names of 63 members of the tribe of al-Aws and 175 names of those drawn from al-Khazārdī. With the whole community accepting Islam, the Jewish
element in Yathrib soon lost all importance and the clans of Ka'b and al-Naḍhr were practically exterminated. Though the early converts from Mekka were always held in higher estimation, the Anṣār during the remainder of the Prophet's life were the mainstay of his power and it was not unnatural that upon his death, when he had not appointed a successor, the Khazrajī felt by their numerical superiority that they were destined to be heirs of the State created by the Prophet and it was only due to the timely interference of 'Umar that the choice for the ruler of the State did not fall upon Sa'd b. 'Ubāda. That the latter felt that he had been unjustly deprived of a position which was rightly his is proved by his irrec- cusable attitude after his rejection and his removal from al-Madina to Hawrān, where he died in the year 15 (637).

The Khazrajī were divided into a number of clans of very unequal numerical strength at the time of the Prophet. The most numerous were the Banu 'l-Naḍhr, while the other clans were approximately in the following order: al-Ḥarith, Dujājam, 'Awf and Ka'b. It was also from the ranks of the Khazrajī that the poets of the Prophet derived their origin, namely Ḥassān b. Thābit [q.v.], Ka'b b. Malik and 'Abd Allāh b. Ḥafram. During the rule of the Umayyads, descendants of the early followers of the Prophet continued to hold prominent positions and most of them were strong supporters of the Umayyads with the notable exception of 'Abd al-Nūman b. Ḥašīr [q.v.] who as governor of Hijāz unsuccessfully took the side of 'Abd Allāh b. al-Zubair and lost his life. We also find numbers of the tribe of al-Khazrajī among the early settlers in Egypt and the descendants of 'Abd Allāh b. Ḥafram. The century men of note in Muḥammadan Spain; they were settled principally in Saragossa in the North. If we come to consider the large amount of immigrants from al-Madina and the South of Arabia to Egypt we may not be far from the truth in assuming that the last years of the Khazrajī, from their South-Arabian origin, had also influence upon the Arabic dialect of Egypt and that they pronounced the letter ḏīm, unlike Eastern Arabs, hard like ǧ.

Bibliography: Ibn Sa'd, Tāhāt; ed. Sachau, iii.; al-Samhūdī, Khulāṣat al-Wafā; Mekka 1316, p. 73 sqq. (this work is useful for fixing with much detail the ancient settlements of the Khazrajī in Yathrib); A. J. Wen- sink, Mohammad en de Joden te Medina, Leiden 1908; Kowalski, Divān des Kays ibn al-Khatīb, Leningrad 1943; H. Lammens, Médine à la veille de l'Islam, Louvain 1933; dealing with the life of the Prophet and the early history of Islam. Wüstenfeld, Tabellen and Register; al-Kalqāshādī, Nihāyat al-Arab, Baghdād 1332; al-Nuwardī, Nihāyat al-Arab, ii. 316–317.

AL-KHAZRADJĪ, DIYĀ' AL-DIN ABU 'L-ḤASAN ALI B. MUḤAMMAD B. YUSUF B. 'AFF AL-KHAZRADJĪ AL-SAʼIDĪ, belonged to a family which was originally native to Granada; he was born at Bagha (Priego de Córdoba) about 590/1194, and established himself at Alexandria where he often met Ibn Rašīd (who mentions him in his Risāla) where he died about 619/1220, or 627, or according to others as late as 650 (1252–1252). One of his commentators, al-Zam-
1914. The new ruler then assumed the title of Sultan, which was replaced by that of Malik after the protectorate had been abolished on February 28, 1922. The title of Viceroy often applied to the Kedives in European literature was already used in Muhammad 'Ali's time.

The following members of the Khedivial dynasty have ruled Egypt under the suzerainty of the Sultan of Turkey:

Muhammad 'Ali (1805—1848)
Ibrahim (1848 (June—November)
'Abbas I (1848—1854)
Sa'id (1854—1863)
Isma'il (1863—1879)
Tawfiq (1879—1892)
'Abbas II Hilmi (1892—1914).

They were succeeded by:
Husain Kamil, Sultan, 1914 (Dec. 19)—1917 (Oct. 9).
Ahmad Fu'ad, Sultan from 1917 to 1922, King (as Fu'ad I) since 1922 (March 16)

Genealogical tree of the most conspicuous of the numerous members of this dynasty:

Muhammad 'Ali (1769—1849)

Ibrahim

Tusun

Isma'il

Sa'id

Abd al-Halim

Ahmad (m. 1858)

Isma'il (m. 1850—1895)

Mustafa Fadil (m. 1875)

'Abbas I (1813—1854) (m. 1876)

Tawfiq (1852—1892)

Husain Kamil (1852—1917)

Ahmad Fu'ad I (born 1867)

'Abbas II Hilmi (born 1874)

The firman of 1841 regulated the order of succession according to seniority in Muhammad 'Ali's family; by the firman of 1866 this regulation was replaced by the right of primogeniture limited to the descendants of Isma'il Pasha. A decree of April 13, 1922, has recently settled the order of succession of the kings of Egypt.

Though really of Albanian origin, the Khedives have always been regarded in Egypt as Turks, nor can they be said to have become a really national dynasty. The remark has been made that its various members have exhibited as many different types of character (Hasenclever, Geschichte Aegyptens, p. 199). The first five of them ruled with the absolutism of Oriental despots, but after the English occupation they had much less opportunity of developing an attitude of their own. The ties which bound this dynasty to Turkey always have remained strong enough to make it possible that, soon after the Turkish revolution of 1909, an Egyptian Prince, Sa'id Halim Pasha, could become Grand Vizier in Constantinople.

During the Khedivial period Egypt has been what is generally called 'Europeanised', viz. a great many technical, juridical, economic and social institutions have been introduced. The same thing has happened, during the same period, to other Muslim countries and with the latter Egypt shows the common feature that the models after which the western institutions have been fashioned were nearly all French, but the particular form of the 'Europeanisation' of Egypt—its revival under a nearly independent dynasty, the marvellous development of its economic productivity and its weakening to a point which brought the country under the control of a European Power—was quite different to the corresponding process in Turkey, Algiers and other Muslim lands. At the same time Egypt has remained the chief centre of Muslim civilisation and education and its rapidly increasing population now amounts to half the Arabic-speaking world (Massignon in R.M.M., livi. 75 sqq.). The main point of view from which in the following lines the condition of Egypt since the beginning of the nineteenth century will be traced is the way in which this Muslim country has reacted to the process of 'Europeanisation' and the results which have been the outcome of it.

I. Political History.

We can distinguish four periods before the war of 1914: 1. from the French expedition to the final installation of Muhammad 'Ali (1798—1805),

2. Muhammad 'Ali's reign until the end of his period as one of the Great Powers (1805—1841),

3. up to the English occupation (1841—1882) and

4. the occupation period until the English protectorate (1882—1914).

One of the chief motives for the French expedition against Egypt was the wish to prevent England from such an enterprise. During the eighteenth century France's commercial interest in Egypt had always been far more important than England's, but since this country had concluded a commercial treaty with the usurper Ali Bey [q. v.] and obtained in this way admittance for British vessels into the Red Sea for the Indo-Egyptian trade, the interference of England in Egyptian affairs had become a political danger. The geographical position of the country has destined it to become the first object of European political interests, as soon as the consolidation of colonial power in India could no longer be content with the sea route as the only line of communication. In France the idea of taking possession of Egypt had been
discussed throughout the eighteenth century, but the traditional good relations with Turkey had been one of the reasons that prevented its execution. Finally it was due to the initiative of Napoleon Bonaparte, seconded by Talleyrand, that the French Directory decided in favour of the expedition on March 5, 1798. As to Turkey, the unusually energetic measures taken by the Porte in 1768 against `Ali Bey proved too late; even at Constantinople, there had been a presentation of the coming events. In Egypt itself nothing indicated that a foreign invasion by a European power was seriously apprehended.

The French fleet, consisting of about 400 ships and a landing-force of 35,000 men, commanded by Bonaparte, landed near Alexandria on July 21, 1798. Alexandria was occupied without difficulty and the French immediately began their march on Cairo. The resistance organised by the Mamlûk Beys Murâd and Ilâshim near Embââle on the Nile was soon broken in the battle of the Pyramids and on July 24 the capital was occupied. Murâd Bey fled to Upper-Egypt and Ibrâhim into the Delta. The panic that for a moment had overcome the inhabitants of the capital soon disappeared, but they were far from showing confidence in the French "liberators" and "friends of Islâm", as the French soldiers had been styled in a proclamation. Bonaparte soon had to adopt more severe and more Oriental methods against revolts of the populace. A month after the landing the destruction of the French ships in the bay of Abû Kîr by Nelson (August 1) completely changed the character of the French enterprise and was the first of the blows struck by England, resulting in the final evacuation. The Porte, though reluctantly, declared war on France in September, but not before the middle of the next year (1799) did Turkish troops appear in Egypt. In the meantime the French had established a regular administration in the country. The Egyptian, however, maintained their ironical attitude towards the actions of the French, as well towards their zealous respect of local religious customs as towards the scientific investigations of the scholars accompanying the expedition. Besides, they soon were disappointed when they saw that the French also demanded the payment of land-tax, and the Muhammadan majority naturally did not like to see that the foreigners made a large use of the native Christians (Copts, Greeks, Syrians) as subordinate officials. On October 21, 1798, a rather serious revolt broke out in Cairo, which was only suppressed on the following day after a bombardment of al-Azhar. In order to prevent the invasion of a Turkish army, Bonaparte undertook in February, 1799, his famous expedition to Syria. Having failed to take `Akka, defended by Djaizâr Pasha [q. v.], he had to retreat in May. A month after his return the first Turkish troops (among whom was Muḥammad `Ali as an officer in the Albanian corps), transported by English ships, landed at Abû Kîr (July 14, 1799). They were utterly defeated and on August 2 Bonaparte took their last refuge, the fortress of Kéréb. After Bonaparte’s departure (August 22) the French maintained themselves another two years under Kléber (murdered in June, 1800) and Menou, but in August, 1801, their last resistance was broken by the allied English and Turks and they had to evacuate Egypt.

Apart from the immediate political results — the destruction of the Mamlûk power and the return of Egypt to Turkey — the results of the scientific work of the French expedition (centralised in the "Institut Egyptien" founded by Bonaparte on August 21, 1798, in Cairo, v. Brébier, L’Egypte de 1798 à 1800, p. 65—80) published in the eight folio volumes of the Description de l’Égypte (cf. the Bibliography) were enormous. The researches on the "present state of Egypt" constitute the basis of all modern studies of Egypt (e.g., the elaborate researches made by Lepère on the possibility of a canal between the Mediterranean and the Red Sea). The immediate influence, however, of the French on the cultural development of Egypt was almost nil. The gap between Eastern and Western civilisation was too wide to allow of any tangible results during the first period; this impression is given very strongly by reading al-`Abâbîr’s account of the foreign occupation.

After the departure of the French army, a struggle began between the Turkish authorities and the Mamlûk Beys who wanted to regain their ancient power. The Mamlûks were protected by the English; after Murâd Bey’s death their most important leader became `Uthmân Bey Bardîš. The Turks on the other hand naturally wished to take advantage of the opportunity to fasten their grip on the country, but their administrative methods and the inability of the successively appointed wâli’s to withhold their own troops from mutiny, for want of money, gave to Bardîš and partly a temporary advantage. His protectors, the British, had left Egypt in March, 1803, but one of his chief supporters was Muḥammad `Ali with his Albanian regiment. His aid enabled Bardîš and the old Ibrâhim Bey to maintain themselves in Cairo, while the wâli’s of the Porte exercised authority only in certain parts of the Delta. A last Turkish wâli, Khusraw Pasha, could reside for some time in the Cairo citadel, but finally Muḥammad `Ali, by his ever increasing influence, removed him.

After the rather negative results of the foregoing five years the second period proved to be of enormous importance for the country. From a political point of view the most notable effect of Muḥammad `Ali’s reign was that he gave Egypt a dynasty of its own. Although what Muḥammad `Ali did for the country was only a means of realising his own ambitions, the history of Egypt has been deeply influenced by his measures. He was determined to stamp his own mark and to settle the fate of the dynasty itself. They may be summed up as follows: firstly, the mobilisation of the national forces of the Egyptians themselves and secondly the introduction of European instructors and methods. From a cultural point of view it may be remarked that from the beginning of Muḥammad `Ali’s reign until the English occupation Egypt was much more exposed to Ottoman-Turkish influences than ever was the case before; personal and independent as the régime of the viceroy may have been, these administrative methods and the taste of himself and his surroundings were impregnated by the traditions of the Ottoman Empire (as an instance may be cited the so-called Alabaster Mosque built by Muḥammad `Ali in the Citadel of Cairo in Constantinople style). The great expansion of Muḥammad `Ali’s power between 1833 and 1840 was one of the natural historical consequences of Egyptian political power which always has implied the annexation of Syria (see the art. Égypte); Muḥammad
Ali's Great Power policy itself, however, was not very important for Egypt. The conquest of the Sudan was of far more direct and future profit for the country. In 1841, at the end of this period, closed by the Imperial Visit of Ramil II 2, 1857 (May 23, 1841), Egypt's international position was quite changed. To outward appearances it had become again a Turkish province, but in reality the fact of the intervention of four great European Powers (except France) showed the beginnings of political dependence upon Europe and especially upon England. The occupation of 'Aden by the British in February, 1858, was already a clear symptom of the new situation. Muhammad 'Ali was always fully aware of this fact (Cromer, Modern Egypt, i. 16). He remained himself a staunch friend of France, though this friendship proved to be of little avail to him. But as long as he reigned he was able to avert foreign intervention from Egyptian internal affairs; it is for this reason that he never gave his consent to the piercing of the Suez Isthmus.

The last years of Muhammad 'Ali, and the short reign of Ibrahim (q.v.), belong, with the reigns of 'Abbas, Sa'id and Ismail (cf. these articles), to the third period. During this period Egypt became more and more detached from the Ottoman Empire and it was drawn more and more into the sphere of European politics and economics. No territorial expansion took place except in the South (Abyssinian war in 1872; acquisition of Sawankw and Musawwa from the Porte in 1865). Egypt's relations with Turkey in this period were rather of a personal character, inasmuch as the Khedives sought to gain special favours from the Sultan in return for an increase of the tributes. But whenever the Ottoman government tried to exercise real influence on Egyptian affairs — as in the beginning of 'Abbas's reign — the results were illusory. Even the Sultan's prohibition of Ismail's contracting new loans without his assent could easily be ignored. The Egyptian army was only theoretically a part of the Turkish army (Egyptian troops, however, participated in the Turkish wars against Russia) and it was only due to special circumstances, that, in 1875, the Sultan had an opportunity of deposing Ismail. In the meantime the viceroys reigned with unlimited autocratic power after the traditional Oriental fashion. With the exception of 'Abbas, who showed himself an enemy of Western civilization — especially in his French form in, they encouraged the introduction of European arts and sciences and institutions. The result was that Egypt became more and more "Europeanised" than any other Musulman country. It is well known that all these works, far from increasing the prosperity of the country, brought about its financial ruin. The cause has to be sought not so much in the proverbial but much exaggerated prodigality of Isma'il as in the system that prevailed in the execution of the reforms. This system was based on the careless Oriental administrative methods, the disastrous effects of which were doubled by the readiness shown by the Europeans in granting financial facilities. Moreover, many of the European agents were no more than unscrupulous adventurers, whose only aim was to get an enormous indemnity for alleged breaches of contract by the Egyptian government. A great many public works remained uncompleted on account of difficulties of this sort. The first result was an ever increasing floating debt (the beginning of which is very clearly depicted by von Kremer, ii. 28). The main difficulties, however, were brought about by the different loans contracted in Europe by Sa'id and Ismail (1862, 1864, 1866, 1868, 1872); they grew to an extent which cost Isma'il his throne. The greater part of the bondholders of the debt were French and, to a less degree, British. So France and England, the ancient rivals in Egyptian affairs, became the leaders of the foreign intervention; representatives of both these countries took part in the "Dual Control" over the revenues and expenses of Egypt since 1876, interrupted only by the period in which an Englishman and a Frenchman were ministers (August 28, 1878—April 5, 1879). France's financial interests were unquestionably the greater, but England was already by far the more influential by its trade and by its political situation; moreover the British occupation of Perim in 1857 and of Cyprus in 1878 strengthened England's position considerably. Still, up to the English occupation of 1882, Egypt's formal relations towards other countries were nearly those of an independent state, limited only by the capitulations and, since 1876, by the mixed jurisdiction (see above). The Khedive was able to conclude treaties with other powers (except purely political); at the opening of the Suez canal (1876), Isma'il was treated as the equal of the European sovereigns who came to attend the ceremonies. As the European personnel in the Egyptian administration increased, however, the influence of the French and English consuls became gradually considerable.

The condition of the people of Egypt had become more favourable in the beginning of this third period, especially after the abolition of the state monopoly. But the sellâh's profit little by the favourable economic circumstances and, especially after 1876 when the heavy and ruinous taxation began which was the only means whereby the government could meet its obligations, there again a period of profound misery which was only to end towards 1890. This unsatisfactory situation was one of the causes of the first nationalist movement. This movement had originated in the indigenous middle classes, which had already come into existence under Muhammad 'Ali; by European as well as Oriental influences (Ismail al-Din Afghani) these classes had gradually become an important factor in social life, although, for the time, orthodox religious circles still stood aloof, as the modernist views of the first nationalists and their sympathy with Freemasonry were antipathetic to them. The nationalists criticised Isma'il's financial policy, his favourisation of European elements in the country and his predilection for the Turco-Circassian class to the detriment of the native Egyptians. The treatment of the indigenous element in the army especially had excited their irritation (the army was set up in the Sudan and against Abyssinia in 1875 consisted exclusively of sellâh's). Public opinion began for the first time to manifest itself in 1877. In that year the nationalists published some newspapers (a.o. Miṣr and al-Watan) and the device of Miṣr li 'l-Miṣriyin was heard for the first time. Notwithstanding repressive measures, the nationalist papers published sharp criticisms of the government;
a special subject of their criticisms was the participation of Egyptian troops in the Turco-Russian war. The “coup d’état” of April, 1879, which caused the fall of the ministry of Nūbār Pasha with the two European ministers was the first palpable result of the nationalist action (it seems even probable that the nationalists encouraged the deposition of Ismā‘īl) (M. Sabry, La Gîtîrîe etc., p. face). A still more serious question in Egypt was the movement in the army against the Turco-Circassian officers, which finally led to open revolt and, as a consequence, the occupation of the country by British troops.

This military movement, the revolution of ‘Arābil and his friends, opens the fourth period of modern Egyptian history. In the two preceding years, after the accession of Tawfīk Pasha [q. v.], the new Khedive and his ministers had tried to execute a more or less nationalist programme, but, when ‘Arābil had come with his claims of army reforms, the conviction of parliament and of a constitution, they soon came to feel that reforms in France or intervention as the only possible salvation. Thus the absence of a really strong and able power in the country — for ‘Arābil’s party was weak through inexperience and incompetence — had made possible the intervention of England. The chief cause which made it desirable for England to get a strong position in Egypt was the geographical situation of this country on the route to India. This desirability had much increased since France had taken possession of Algiers and Tunis and after the opening of the Suez canal, which it was in England’s interest to keep free from powerful foreign influence. The British policy in Egypt had no parallel in France, whose political interests were less engaged, shrank back from the responsibility at the last moment; Egypt’s history after 1882 shows how England has assumed this responsibility.

Theoretically, the international position of the country remained unchanged after the occupation; Egypt now enjoyed a double suzerainty, a financial tutelage, a threefold jurisdiction, a foreign military occupation and was the scene of the clash of two civilisations. The British policy had in the first place to face what Lord Cromer calls “Internationalism”, meaning by this term the intervention of other powers in special administrative affairs on the basis of former agreements. Only in 1904, the year of the Anglo-French agreement, did England practically get a free hand in Egypt. The man under whose direction the position of the English was consolidated in the Nile valley was Lord Cromer, British Consul-General from 1883 to 1907. Notwithstanding his comparatively modest official function, Cromer became the most powerful man in Egypt. He governed by the system of “governing the governors of Egypt”; his chief aids were the British advisers in the different ministries. It certainly was an advantage for Egypt that its interests had now become too important to be trusted by one man. Thus England succeeded by a new loan guaranteed by the great Powers and by very severe measures in the interior in putting the finances on a sound basis, so that in 1904 the power of the “Caisse de la Dette” could be considerably limited, so as to give back to Egypt its financial liberty. The public debt, it is true, was not much less in 1914 than in 1882, but the economic prosperity of the country had greatly increased (see 3). As to Turkey, its influence on Egyptian affairs became ever less. The sending of Ghāzī Ahmad Mukhtar Pasha in 1885 as Turkish High Commissioner had no political results, though the unofficial panislamic propaganda carried on by the Pasha was considerable at the time. The Sultan’s attempts in 1892 and in 1906 to assert his authority on the Sinai peninsula were complete failures. During the Turco-Italian war in England did not even allow Egypt to send troops to Tripoli. On the other hand Turkey could not sympathise with the nationalists, the Young Turks (many of whom had found an asylum in Egypt during the Hamidian régime) after 1906, even less than Sultan ‘Abd al-Ḥamīd. France’s opposition to the English occupation was more infulential on account of the strong French sympathies in the country. After ‘Abd al-Ḥamīd Hilmi’s accession a revival of French cultural influence took place, against which the English occasionally had to take measures (deposition of Nāṣir Pasha in 1894). It was from France that, until 1904, the nationalists always hoped for support. The position of the Khedives was of no political influence; ‘Abd al-Ḥamīd was no more successful in his nationalist attitude in the first years of his reign than later on in his entertaining good relations with Constantinople.

The Sudān, the possession of which had been most important for Egypt’s prosperity and its international position, theoretically was, like Egypt, a province of the Ottoman Empire; by a firman of 1841 Muḥammad ‘Ali had been granted the governorship over these regions “without hereditary” right. But, since the revolt of the Malāḥ Muḥammad Ahmad [q. v.] and especially the taking of Kharṭūm (January 26, 1885) had interrupted the Egyptian domination, the Sudān affairs were entirely directed by British policy; the same is true of the reconquest; the nominal chief of the Egyptian army was the Khedive, but after the reorganisation of this army in 1883 all higher ranks were occupied by British officers. After the reconquest (1898) the English policy did not allow the return of the Sudan to Egypt; by the Anglo-Sudanian treaty of 1899, an Anglo-Egyptian condominium was established in the Sudān. In this treaty the rights of the Porte were not taken into account and the Khedive, though the Sultan’s vassal, acted as an independent sovereign. The consolidation of the British power in the Sudān, on the other hand, has strengthened considerably England’s ascendancy over the Nile valley.

After ‘Arābil’s defeat the nationalist movement was crushed for the moment and until the end of Lord Cromer’s days it never became again a political factor of importance. During that time a new generation grew up and found a leader in the young Mustafā Kāmil Pasha [q. v.; died on February 10, 1908, at the age of 34], who founded in 1899 the paper al-Līla and became in 1907 the first president of the National League (al-Ifṣāh al-Waṭanī). This second generation of nationalists stood likewise under French cultural influence. Intellectually they were much better equipped than their predecessors: when they began their renewed campaign of “Egypt for the Egyptians”, they showed much moderation and rejected revolutionary ideas. After Lord Cromer’s replacement
by Sir Eldon Gorst (1907—1911) the attitude towards the nationalists became one of the chief problems of British policy. In 1906 the incident of Denshawai had proved that anglophobia was still widely spread and, though the culprits were punished in an exemplary way, the new British representative adopted a much more conciliatory attitude towards the nationalist aspirations. But this new policy had not the desired results: in 1909 freedom of the press had to be restricted again and al-Azhar had to be closed for some time on account of the anti-English demonstrations of the students. Then happened on February 20, 1910, the murder of the Coptic Prime Minister Būtros Ghāli Pasha (one of the members of whose cabinet was Sa‘d Zaghul) by a young Muḥammadan nationalist. This event brought about a breach between the Christian and the Muḥammadan element, in the nationalist party, which soon threatened to lead to serious disorders. In the same year the General Assembly rejected the prolongation of the Suez canal concession after 1968. So, with Gorst’s retirement and his succession by Lord Kitchener in 1911, the British policy made place again for a stronger rule which lasted until the declaration of the English protectorate over Egypt on December 18, 1914. Next day ‘Abbās Hilmi was declared to be deposed and replaced by his uncle Ḥusnān Kāmil as Sūlṭān. A fatwā of the Shāikh al-‘Ālī of Constantinople declared the new ruler to be a traitor to the cause of Islam whom it was obligatory to fight and who deserved death (text in Jacob, Hilljöch für Vorlesungen über das Osmanisch-Türkische, ii, Berlin 1871, p. 460). DURING THE WAR EGYPT WAS MERELY A LINK IN THE STRATEGIC ORGANISATION OF THE BRITISH EMPIRE. From November 6, 1914, the country was at war with Turkey, but the defence of Egyptian territory was only in British hands. The sittings of the Assembly were suspended and martial law was proclaimed. The result of the war was the definite loosening of the ties with Turkey by the Treaty of Lausanne (May 25, 1923), to which Egypt, however, was no party. A much more important consequence of the war was the renewed growth of nationalism. Several causes had combined to incite opposition against the British protectorate, such as the heavy requisitions imposed on the people and the growth of the number of British officials. The Wilson principles too stimulated the Egyptians to claim political independence. The nationalists, this time, were supported by a much greater part of the population than before; the Copts had joined them again and even the circles of al-Azhar encouraged the nationalist propaganda. Its leader became Sa‘d Zaghul Pasha, before the war Minister of Justice and at that time known as a man of moderate political views. The indifference, however, which the Egyptian claims met in London caused the Egyptians to abandon moderate measures. A struggle of three years followed between them and England in which nationalists made use of disturbances (breaking-up of railways, anti-European outbursts), passive resistance (strikes, boycotting of the Milner mission) and the discrediting of the English administration. The British used military force (martial law was maintained) and deportation (Zaghul twice); at the same time Bolshevik agitators and partisans of the return of the former Khedive ‘Abbās Hilmi were at work. Finally the English government changed its attitude: it declared the British protectorate abolished and recognized Egypt as a sovereign and independent state (February 28, 1922). The settling of some important points, however, remained reserved (e.g. the defence of Egypt and the Sūlṭān question) Though by this attitude on the part of the English government the difficulties seemed to have been solved, this was not the view of the nationalists. The events after February, 1922, have shown that the struggle between the Sūlṭān to full independence and British intervention in Egyptian affairs has in no way become less violent and less dangerous for the peaceful development of the country.

2. Government and administration. After the departure of the French the number of Mamlūk Beys had been completed again to twenty-four, but the shock their government system had undergone by the occupation had deprived it of all power of resistance against the strong will of Muḥammad ‘Alī. The French occupation had lasted too short a time to permit the establishment of new governmental traditions. For tax-collecting the French had been compelled to make use of the existing institution; their chief innovation was the creation of a distān in Cairo composed of ten shāikh’s (with careful exclusion of representatives of the Mamluk class) to look into matters of government. Bonaparte was provided with a Kethkudā (Kikhya in Egyptian Arabic), as had been the custom with the Turkish pasha before.

As has always happened before when Egypt got a strong ruler, the government system of Muḥammad ‘Alī became again extremely centralised. All feudal powers were abolished (massacre of the Mamluks), the only great vassal being the viceroy himself who reigned in the name of the Sūlṭān. The character of his reign was still very Oriental and very “Turkish” at the outset. But the way in which this absolutism collapsed was no longer Oriental; Egypt did not fall back again into the hands of a number of feudal chiefs. For the country became ever more interwoven with European interests, which at last, though allowing the survival of the Khedivial dynasty, put the government into the condition of a constitutional monarchy, in which, however, the check to absolutism was not formed by a representative body of the people, but by the representative of a European government.

The relation of vassaldom towards the Porte has in practice never bound the hands of the viceroys in matters of interior administration, not even since the firman of May 23, 1841, the dispositions of which have theoretically formed the base of Egypt’s juridical international position up to 1914 (Turkish text in Ahmad Lutfi, Turāki Dūrūt-ı ʿAlīye-i ʿOthmānīye, Constantinople 1902, vi, 140; French text in Noradoughdian, Recueil, ii, 335). Its provisions for the interior administration are only: the application of the Khaṭṭ-ı Şerif of Guilkhāne (1839), the paying of a tribute from the revenue (fixed at 50,000 purses in a separate firman of the same date and raised to 150,000 purses or 750,000 Turkish pounds in 1866), the coinage in the Sūlṭān’s name, the reduction of the army to 18,000 men (this limitation was removed in 1873), the viceroy being authorised to
confer military grades up to the rank of colonel, and the prohibition of the construction of men-of-war without special permission. The firman's after 1841 only contained slight modifications and the one of June 8, 1873, resumed all former dispositions. The firman's granted to the Khedive Tawfiq and 'Abbas Hilmi on their accession contained nearly similar provisions.

Muhammad 'Ali's general government was made up of a system of divān's and mahfil's (the members of which were appointed by himself), forming together the central government. The most important was al-Divān al-Khilāfi in the citadel of Cairo, presided over by the kāiffa; it was at the same time a supreme court of judicature (Lane, i. 130). Besides there was a Mahfil al-Mashura (general government), a Mahfil al-Lükhālāna, a Mahfil al-Turāth, a Divan al-Tudjāri, etc. All these bodies had occasionally juridical and executive power. The gharīfa jurisdiction was exercised by a Ḥanafite kāfi, sent every year from Constantinople, in the mayyama of the capital. There was also a council of 'ulama', but this more national element, which had exercised a considerable influence in the time of the French occupation, soon lost its influence under Muhammad 'Ali. The number, the names, and the attributions of the different divān's were, however, far from stable (see Zaidān, Maṣbaḥat al-Sharī', i. 24). Sa'dī Pasha changed three of the divān's into ministries (uwāra) under a wāzir, viz. the ministries of Foreign Affairs, Finance and War, and the place of the kāiffa was taken by a kind of chancery called Muṣīra; the working system in these bodies was still very imperfectly established (cf. the description by von Kremer, ii. 9 sqq.). Ismā'il created the Ministries of Interior, Marine, Public Instruction ('Ali Mubārak Pasha), of Public Works and Commerce (1876), the central direction being given by a Mahfil Khuṣayyī. The wāzīf administration did not yet form an independent ministry. Although in the beginning this Khedive succeeded in keeping a strong hand on government, the different personalities of the ministers began to exercise influence; especially towards the end of his reign, when for a short period even two Europeans were members of the cabinet of Nebhār Pasha. At the same time a number of high European officials in Egyptian service had obtained influential positions in different departments. In 1866 Egypt had been granted a kind of representative body (Maglis Niyyābi, opened November 25, 1866) elected by the communes, but as this ger of an Egyptian Parliament possessed a limited power of advice and was convened only once a year, it did not yet play a role in the government. Only after 1879 did this Mahfil become a real parliament "with an opposition".

The constitutional régime inaugurated by Ismā'il in 1878 by his declaration that henceforward he would reign by the means of responsible ministers did not last long. After his deposition it was hoped that the Khedive Tawfiq — who gave a constitution on February 7, 1882 — would be able to work with his parliament, but these hopes were annihilated by the 'Arabi revolution. England, after the occupation, interfered in government matters through the mission of Lord Dufferin, whose well-known report was presented in February, 1883. It was followed in May of the same year by a new Organic Law, which restored the full legislative power to the Khedive, instituted a legislative council of 30 members and a general assembly which was an enlargement of the first body but with very limited powers. This system worked for 30 years; it enabled the English to direct the government of Egypt by means of "advisers" in the different ministries. In 1913 the two bodies mentioned became one single legislative assembly with consultative function, consisting of the cabinet ministers, 66 elected and 17 nominated members; this assembly, however, did not meet, after martial law had been proclaimed in 1914. Finally, after the declaration of Egypt's independence (February 28, 1922), a commission of 30 members was charged with the elaboration of a constitution, which was promulgated by the king on April 19, 1923. This constitution has established in Egypt a representative parliamentary, monarchial government. In outward appearance almost everything that could suggest that Egypt had ever had anything other than European traditions had vanished.

Muhammad 'Ali's reorganisation of the provincial administration began in 1813 and consisted of a reduction of the number of provinces (see the art. EGYPT, § 22) and the establishment of a highly centralised administration. In 1840 the number of provinces (muṣīriya) was only seven: Buḥaira, Manṣūfia, Daḫaliyya, Sharḳiya (besides the governorships of Cairo and Alexandria) in Lower Egypt, and Bani Suwāf (including Fayyūm), Minya and Ismā'īl in Middle and Upper Egypt. Each province was governed by a muṣīr; it was subdivided in markāz's each under a muṣīr, these again into nāhiyā's under a shaikh al-balad (whose title and function were taken over from the preceding period). In each nāhiyā there was an official called khawfī for agricultural matters, a sharīf for the tax collecting and a śabīd or maḏā'īn, who was a deputy of the kāfi. The muṣīriya were always "Turks". The khawfī's and the sharīf's were all Copts; most of the other officials were indigenous Muhammadans. Under Muhammad 'Ali's two successors the centralising control slackened and abuses entered freely. Then Ismā'il proceeded to a new division of Egypt into three great sections: Al-Bahari, with the muṣīriya's of Buḥaira, Dīja, Kalyubiyya, Sharḳiya, Manṣūfia, Gharbiyya and Daḫaliyya; al-Wustāni, with Bani Suwāf, Fayūm and Minya, and al-Sa'ād [q. v.] with Asyūt, Dīja, Kenā (Kennel) and Ismā'īl (Ezzeen). Besides these, there were the governorships (muḥafazāt) of Cairo, Alexandria, Damṣūq, Rashid (Rosetta), al-'Ariš, Port-Said, Suwāf (Suez) and Sawākin. The existing subdivisions were maintained; only over each nāhiyā there was put an 'umā, who was to be assisted by the shaikh al-balad; both were chosen by the inhabitants. The function of khawfī was abolished on account of the greater agricultural autonomy granted to the provincial representative bodies (cf. 3). Each markāz and each muṣīriya got such a haṭa' niyyābiya composed of notables. It was after the fashion of these bodies that in 1866 the Maglis Niyyābi was created in Cairo (see above) A no less important innovation was the replacement of "Turkish" muṣīriya by native ones; it was some time before the population became accustomed to obeying high officials chosen from their midst. The administrative system described is maintained in its main features up to the present day.
As in former centuries, the administrative system was closely connected with the land policy. Muhammad 'Ali abolished nearly all full property of the soil. All arable lands were distributed by his cadastral administration (จำรุประณี) among thefellahs (each getting 3—5 feddans), who were to be only usufructuaries. They could in no way dispose of the soil and had to pay kharāqī. Then land was called kharāqī. The taxes were collected by officials (see above) and the taxation system (စ္စ္စာ) was abolished. The former tax-farmers were indemnified by being allowed to keep as usufruct the tax-free ground (called ဗ်ဖြ) which they had already possessions under the Mamlik, and by an annual rent. In course of time this ဗ်ဖြ land has returned to the public domain as kharāqī or has become full property (milk). Also other kinds of exceptional private property (ရိုး) entered gradually the category of kharāqī. A new kind of lands were those called ဗ်ဖြ, uncultivated lands given by Muhammad 'Ali to notables and high functionaries for them to cultivate. The ဗ်ဖြ were free from taxes and could not be sold. Under the same conditions, large properties were granted as ṣubḥ (from Turkish şubh) to the members of the vice-regal family and some high functionaries; these became under Ismā'il the great d'īrā administrations. Now all the categories of land enumerated have gradually become full property. The limitations to the property rights of holders of kharāqī lands have been abolished by different laws, especially the mukābala law (see below). So there has been an evolution from a state in which nearly no private property existed at all to the present situation where milk property has become the rule. Foreigners have officially been allowed to possess landed property in Egypt only since the Turkish law of June 10, 1867, but Muhammad 'Ali had already given ဗ်ဖြ lands to several foreigners; still the portion of Egyptian soil actually possessed by Europeans is rather small. The Egyptian property law is now to be found in the Egyptian and the Mixed Civil Codes. As to the original waqf land, a considerable part of it had been confiscated by Muhammad 'Ali and now belongs to the milk category.

The financial administration of Egypt is better known than any other branch of government through the elaborate investigations made by European experts, beginning with the report of Mr. Cave in 1876. The collection of the chief revenue, the land-tax (cf. 3), always brought with it many abuses, especially the collection in advance under Ismā'il in order to meet the exigencies of the public debt. The mukābala law of 1871, changed many times and abolished in 1880, was a curious example of financial policy, as it exempted those who paid six years in advance for ever from the half of their future tax obligations. Another important branch of revenue, the custom duties, were still farmed to mulāzāms in the beginning of the 19th century. Since European officials have been introduced in the financial administration, these revenues have come in more regularly. A feature of financial administration under Ismā'il has also been the amalgamation of the administration of the Khedive's own domains (d'īrā saniya) with that of the government.

The first impulse to the reorganisation of jurisdiction was given by the institution of the mixed tribunals in 1876, obtained by 'Abdu Pasha after laborious negotiations with the Powers. As in Egypt, the jurisdiction of the foreign consulates had increased far beyond the limits laid down by the capitulations — as a result of the inactivity of indigenous jurisdiction — a reform had become an imposing necessity. After the creation of the mixed jurisdiction, consular jurisdiction was limited to processes between foreigners of the same nationality and penal jurisdiction over civilians and nationals. The mixed judges were to be Egyptian officials, but as the majority were subjects of the different western states possessing capitulations and as the mixed tribunals were given competence to judge even the Egyptian government, they assumed the character of a foreign power in the government, a very clear symptom of Egypt's "Europeanisation". On the other hand a serious resistance of the Pasha had to be overcome, as Turkey did not like to see the official establishment of so independent a jurisdiction in one of her provinces. By a formula of 1872 (Notadounghein, min. 349), however, the authorisation was given by the Sultan. Seven years after the institution of the mixed tribunals, there were organised new indigenous tribunals after the same pattern, by the decree of June 4, 1883, replacing the jurisdiction of the administrative authorities and their dawān. The codes applied by the two kinds of jurisdiction are nearly identical and fashioned chiefly by the French codes. The new indigenous codes were likewise published in 1883 (the penal code and the code of criminal instruction were renewed in 1904). On the penal code that existed under Sa'id Pasha and was a very confused compilation, see von Kremer, ii. 52—66. The jurisdiction of the personal statute of Muhammadans is reserved to the mukābala of the Hanafite mukābala, which were reorganised by a decree of 1897 (and later on again in 1909 and 1910). There exists, however, a codification in articles of the Hanafite law on marriage, tutelage and successions, made for the information of the judges of the mixed courts; a French translation of this compilation, in 647 articles, has been inserted in the recent edition of Egyptian Codes and Laws by J. Watelet and R. G. Brunton (Brussels 1920). The Arabic text was published in Cairo in 1917. Kadri Pasha, late minister of Justice, had also codified, for educational purposes, the dispositions of Hanafite law concerning property and obligations (Arabic edition, Cairo 1909), but, unlike the Turkish Medjelle, these codifications of Muhammadan law have no exclusive authority with the Egyptian mukābala's.

The different Christian communities have their own jurisdiction in matters of personal statute.

3. Economic Development

The great economic creations of Muhammad 'Ali were the introduction of cotton cultivation and his monopoly system. These, supported by his highly centralised government system, procured him the means of pursuing his vast political schemes. In itself the economic system was quite Oriental, but, in two ways, it brought about relations with Europe. Firstly the viceroy sought to apply European methods and for that purpose brought European experts to Egypt, secondly the products of agriculture were sold to Europe and the commercial relations with Europe thus created had again most important consequences after the monopoly
system had been given up under 'Abbās I. Free commercial relations then developed between the European buyers and the Egyptian cultivators, nearly always by the intermediary of other elements. This change, however, was accomplished under conditions which have proved highly prejudicial to a sound and independent development of the country. Firstly, European ideas of credit were introduced into a country which had known only very limited credit operations. The European merchants and their auxiliaries began to give large advances on the payment for the expected crop; the inevitable consequence was that the peasants got into debt and that the merchants lost their money. Here we see, on a lower plane, exactly the same symptoms that brought about the heavy debt burden of the state itself, due to exaggerated confidence in the prosperity of the country. The Egyptians evidently did not know how to use credit, as their economic traditions had not made them acquainted with the accumulation of capital. Secondly, the imports from Europe brought wares of a kind of which the population stood in no great economic need, but which were nevertheless bought in large quantities. In the first place mention may be made of cotton manufactures that came chiefly from England. So, notwithstanding the increased production, the country was not able to enrich itself; on the whole the population remained poor and in debt, as was the treasury. But indissoluble economic and financial ties had been formed with Europe and particularly with England. A glance into the import and export trade about 1850, as given by von Kremer, is enough to show how much England was commercially interested in Egypt and explains why it was England which, when the financial and economic crisis came, undertook the most active intervention resulting in the military occupation. After 1882 Egypt became economically still more dependent on England by the extension of cotton cultivation, though, on the other hand, English control prevented the country from falling back again into a state of unproductiveness. So here again we see how the work of Muhammad 'Ali created possibilities the profits of which, as in so many other Muhammadan countries, have not been reaped by Egypt's population itself.

A thorough investigation of the Europeanisation of Egyptian economics has not yet been written (as was done e.g. for Turkestān by Reinhold Junge in his book Das Problem der Europäisierung orientalischer Wirtschaft, dargestellt an den Verhältnissen der Sozialwirtschaft von Russisch-Turkestān, Weimar 1915). So, after the foregoing sketch, we shall point only to a few prominent features and figures.

Egypt has not only remained an almost exclusively agricultural country, but it has developed its agrarian character to an extent which has surpassed all former estimates. In the Mamluk time the country had produced scarcely enough ‘heatre for its own livelihood; it was Muhammad 'Ali who, in his typical centralising way, gave a power to the reawakening of Egypt's productive strength. The cardinal point was the care for good irrigation, very much neglected in the previous centuries. The French had only had time to make a thorough study of the existing canal system; a thorough study of the existing canal system; then Muhammad 'Ali took up the problem energetically. He wasted many thousand lives in the improvement and digging of new canals, the best known of which is the Maṭmāliya canal from Alexandria to the Rosette arm of the Nile. His irrigation works not only brought about a territorial extension of agriculture, but he created for the first time the possibility of perennial irrigation by canals containing water during the whole year. Besides, he entrusted the control of all irrigation works and the distribution of the water to special officials (the khāṭebs, see 2), leaving no liberty to the peasants themselves. This canal digging activity was continued by Ismā'īl (the Ibrāhimiya canal in Upper Egypt and the Maṭmāliya canal, linking the Nile with the Suez canal). In his reign the centralised control of irrigation was superseded by the local and provincial councils, acting under the supervision of government engineers, but at the same time abuses in the water distribution by the local authorities became frequent. This situation only improved when, after 1882, English officials were charged with the control. Care for the irrigation system was based on the first principles of the English administration; from the loan of 1884 an amount of £ 1,000,000 was reserved for this purpose, while all other expenses had to be reduced for lack of money. The results of this policy have entirely fulfilled the expectations. It was also by English engineers that the barrage of the Nile near Dīzā — already begun under Muhammad 'Ali by French engineers — was finished. This work was followed by the famous dam of Aswān (finished in 1902 and raised in 1912), which had already more than agricultural significance, as it made it possible to hold up, within a certain measure, the water necessary for the irrigation of the country below. The same applies to an even greater extent to the huge dams projected after the war in the Blue and the White Nile above Khartūm for the irrigation of the Sūdān (the first was opened in 1926); during the post-war disturbances in Egypt England's power over the Nile waters became one of its most powerful means of coercion in the struggle with the nationalists. In Egypt itself the irrigation administration is now almost entirely in the hands of Egyptian officials. Apart from the care for banks and dykes the felāhīs themselves still apply for the greater part the primitive irrigation methods of the šāhrā and the šārāf, while only on the larger estates modern machines have been introduced.

Besides the care for irrigation, the cultivable soil has also been extended enormously by Muhammad 'Ali's land policy (see 2). Further, he exercised by the monopoly system a decisive influence on the direction in which agriculture has developed. He succeeded in centralising the entire production in his own hands and of disposing of it freely; the peasants were no more than day-labourers who were obliged to sell their products at fixed prices to the government and to pay likewise their taxes in kind. Notwithstanding this prevention of all personal initiative, the peasants made still worse by the corvée and the conscription — the viceroy was able to force the agriculturists to produce larger quantities and so to increase the surplus destined for export. Wheat always had been the chief agricultural product of Egypt; in 1821 Muhammad 'Ali introduced cotton cultivation not without having to overcome the passive
resistance of the population. At first there was planted an indigenous wild cotton (Mako); in 1828 Sea Island seed was introduced. This cultivation soon developed to an enormous extent, the area of the cotton land increased proportionally much more than that on which cereals were grown. The difference was, however, that the bulk of the cotton crop was destined for export and the cereals — wheat, barley, maize (dau-ra) and rice (in the Delta) — for home consumption. After the abolition of the monopoly system the same development of agriculture prevailed and after the occupation the English — for many years previously already the chief purchasers of cotton — increased the cotton cultivation to a still larger extent. Between 1883 and 1908 the cotton growing area was doubled (from 800,000 to 1,640,000 feddan); cotton then covered a larger area than cereals. After that time a period of stagnation set in; during the war the cultivation of cereals had even to be encouraged (in 1919 the proportion was: cotton 1,573,000 feddan and wheat 1,274,000 feddan); it was even forbidden to plant more than one third of the cultivable area with cotton.

Another agricultural product introduced by Muhammad 'Ali was hemp, which had to provide the cordage for the ships of his fleet. Sugar-cane was likewise a new product, and was first planted by Isma'il on his domains in Upper Egypt (since 1867). This crop has not produced such remarkable results as the cotton. Among the ancient crops flax has much decreased: so has the formerly flourishing tobacco culture, which was entirely prohibited in 1890. After the war, experiments have been made to introduce this crop again. Apart from the produce in kind, agriculture provides also important revenues to the treasury in the form of the land tax. This tax has always constituted the bulk of the government revenue and has weighed heavily on the fellah class. Muhammad 'Ali levied the land tax in kind; those who failed to pay for more than three years lost the land granted to them. Afterwards the fellah's had to pay to the crown and under Isma'il they were often obliged to have recourse to usurers in order to fulfill their tax obligations; sometimes the government itself called in the aid of money-lenders to that purpose (as in 1878; Croner, i. 38). Later the Agricultural Bank rendered the same services, the results of which was in many cases sale of property by decree. The so called 3g feddan law of 1912, prohibiting the pledging and sale by decree of landed property of less than 5 feddan has proved to be only a partial improvement.

Industry remained of as little importance to Egypt as in previous centuries. The petty native industries (spinning and weaving looms, pottery, forgery, etc.), just as they had developed under mediaeval conditions, still existed in the beginning of the 19th century. Muhammad 'Ali included these too in the monopoly system; those who worked on their own account were punished in a drastic way (Lane, i. 149). At that time the ancient guild organization still existed, although it had decayed considerably after the Turkish conquest (see Thorning, "Turkische Bibliothek", xvi. 80). During the 19th century, however, the competition of the imported European wares caused a still greater decline; in 1850 the guilds were officially abolished, though up to the present day this archaic form of production has survived. Among the new industries should be mentioned the factories for sugar crushing in Upper Egypt and the flourishing cigarette industry in Alexandria (since 1873), which now works only imported tobacco. Cotton is but little worked in Egypt itself: there exist, however, spinning factories (Fidairat Nationale d'Egypte). Nearly all new industries (also brewing, soap, confectionery, rice processing mills) are in the hands of Europeans. They first employed European workmen, who have now been gradually replaced by natives. The latter have already learned the European forms of syndicalism.

The traffic possibilities have kept pace with the economic development. Next to the ancient traffic route, the Nile and its arms, the new big canals have rendered possible the extension of inland navigation. The Suez Canal, though lying entirely on Egyptian territory, has hardly any importance for the Egyptian trade. During its execution (1859—1869) Egyptian labourers were employed and the vicerey, Said Pasha, by furnishing half of the capital of the society, had created, at least for his dynasty, the possibility of future profits. But after Isma'il had been obliged to sell, in 1876, his shares to the English government, the now considerable profits of the exploitation are of no benefit to Egypt. As, after 1908, the canal has to return again to Egypt, the Egyptians have done what they could by refusing in 1909 the prolongation of the concession. Besides, the canal has put Egypt under other international obligations. The Suez canal treaty of October 29, 1888 (ratified by England in 1904), declares the canal to be open in peace and war time to all kinds of ships and charges, with the control of its execution the representatives at Cairo of the different contracting countries. But England, as occupier, has always taken all measures for the defence of the canal, especially during the war, when a Turco-German offensive was threatening from that side. After the declaration of Egypt's independence the defence of the canal has remained one of the points of dispute between England and Egypt. In the overland traffic railways now take by far the first place, as the canals make other land routes superfluous. Railway building was begun under Abbas Pasha in 1852 and in Isma'il's reign the greater part of the Delta system and in Upper Egypt the line up to Aswān were completed. Only after the occupation was this last line continued up to Aswān, but between Aswān and Wādī Halfa, where the extensive Sudan system begins, there is no railway communication. During the war a line was built to al-Kantara on the Suez canal which communicates with the other new line coming from Yūfā. The Egyptian railways have been subjected until 1904 — as a consequence of the financial difficulties — to a special international administration. Since Isma'il's reign the railway service is managed by Egyptian officials and engineers.

If, finally, anything proves clearly the new orientation of Egypt's economic — and in consequence cultural — orientation, it is its foreign trade. The commercial relations which the country, depossessed in the beginning of the 19th century, still were the remains of the great trans-sea century Indian products that had flourished in the trade of the Middle Ages, but was limited at the time to the products of the Sudān and South Arabia. Under Muhammad
‘Ali’s system of government trade or monopoly, Egypt, for the first time since antiquity, began to produce again for export. This system, however, gave much offence, as well to the Muhammadians who were treated less favourably by the viceroy than the European merchants, as to these merchants themselves. England even declared in 1858 an commercial treaty with Turkey directed against the economic policy of Muhammad ‘Ali. Under Sa‘id Pasha the export of cereals was still more important than that of cotton, but since his successor cotton has been leading; at that time it was particularly the civil war in America that had caused a great increase of the cotton export of Egypt. Since the middle of the century the chief purchaser of raw cotton has been England, which country, accordingly, was then already the most interested in the maintenance of cotton cultivation. By the development after 1852 Egypt has become, after America and India, the chief cotton exporting country of the world. The export figures are easily accessible in the literature on the subject; they are based chiefly on the custom-house statistics of Alexandria. Not so well known, however, is the manner in which trade has developed since the abolition of the monopoly system. Probably the foreign purchasers used mostly the services of intermediary agents, Syrians or Copts. It seems that methods were often adopted which had a detrimental influence on the development of trade, especially as in the form of advances to the peasants or the purchase in advance of the crops too great risks were taken, with the consequence that both producer and buyer suffered loss. The export of cereals has been much less constant than that of cotton (between 1910 and 1920 the proportion was about 1:9); there have been years (as in the war when wheat had to be imported. Among the exported industrial products sugar and cigarettes are the most important.

The import from abroad consisted and consists for the greater part of cotton goods and textiles from English factories, next coal (from Turkey), iron, tobacco, machinery. After England the chief importers before the war were Turkey, France and Austria (clothes and fæces). These European imports soon became indispensable to the population and have contributed in a large measure to the material side of Europeanisation.

It is clear that, since the beginning of Egypt’s commercial development, England’s part in it has been greater than that of any other country. Before the war this part was 37 1/3% while in 1919 it was nearly 60%. With a few exceptions, the Egyptian trade has always shown a favourable balance of trade; it is difficult to determine how the country has profited by this circumstance. A great part must have been used for the public debt obligations. In any case the riches which have flowed into the country have found a very unequal reparation, for the peasant class is still poor and indebted. And next to the rich landed proprietors (especially the Turco-Egyptian Pasha-class; see 4) the Europeans too are in a more favourable position, as the capitulations liberated them from all taxation, while the import tax allowed by the capitulations was never more than 5%. The inland trade too was monopolised under Muhammad ‘Ali; he forced the fellâh’s to buy iron, him at high prices the grain which they had been obliged to sell at a much lower rate. For Sa‘id’s time the inland trade has been described amply by von Kremers (ii. 212 sqq.). Here, notwithstanding the intrusion of European commercial methods, many ancient features have still been conserved. A special mention should be made of the ilâdâr system, which is still very lively (as at Cairo in Khan al-Khalîli), though the old charm of bazaar life and the quality of the wares are no more what they used to be.

4. Population

The rapid growth of the population of Egypt since the beginning of the 19th century clearly shows that the conditions of life have considerably improved. From the time of the French occupation to Sa‘id’s reign the population has nearly doubled (from 2,460,000 to 4,476,440), if the estimates can be relied upon. The increase has continued in the same proportion until the end of the century (in 1882: 6,813,919 and in 1907: 9,734,495), to diminish a little after that time, the figures being 11,287,359 for 1907 and 12,750,918 for 1917. As the cultivable surface is comparatively small (33,607 K.M.², according to K. M. M., liii. 119), the density of population is considerable.

Actually about 92% of this population constitutes the homogenous indigenous basic element whose tongue is Arabic. To it belong the cultivating class (the fellâh’s) and the native townsmen. About 93% of these are Muhammadians; the other are Christian Copts (854,778 in 1917). The non-indigenous element is composed of Turks, Oriental Christians and Jews, and Europeans. As in other Mohammedan countries the differentiation of religion and race corresponds to an analogous differentiation in social function.

The fellâh’s, the real native stock, live in villages situated on the Nile and on the canals in much the same primitive conditions as centuries ago. Muhammammad ‘Ali’s economic measures impoverished them extremely and since the days of Isma‘il the fellâh’s have often been the object of the commiseration of European authors on account of the heavy taxes imposed upon them and the brutal and abusive methods of the tax collectors. But the steady increase of the population in those days proves that, hard as their plight may have been, conditions of life were more favourable to them than in foregoing centuries. The Egyptian peasant always has shown a traditional aversion to tax paying, if not urged by the kurâbîs, while, on the other hand, their inability to accumulate capital has kept them as a whole in an inferior condition. When Muhammad ‘Ali began to form fellâh regiments, their dislike to military service made them often try to escape by self-mutilation; still the fellâh’s have proved good soldiers if conducted by able officers e.g. in the Südân campaign of 1897.

During the 19th century the settled population of several parts of Egypt still reckoned themselves to belong to Arabic tribes. The lowest class of agriculturists have no property at all and work as labourers on the larger estates. Next come the smaller proprietors (under 50 feddân). The best situated is the class of the shâîk al-hadâd’s (see 2), the ‘squatters’, as Lord Cromer calls them.

The khedivial period has been most important for the indigenous element, as it has allowed them gradually to take a larger part in the public life and the administration of the country. In the
previous centuries the natives had supplied almost exclusively the ranks of the ‘Iłmā; since Muḥammad ʿAlī—who still only admitted the “Turks” to higher positions—a kind of middle class had begun to be formed, and under Saʿīd—who has the reputation of having been a friend of the fellāḥ— their rise in the ranks of the army and the civil administration was encouraged. So towards the end of Ismāʿīl’s reign something like a public opinion (for the greater part turchophobe; see 1) was born. Some of the most conspicuous representatives of this native Egyptian intellectual class were ʿAli Pasha Mubārak [q. v.] and the mathematician Muḥammad al-Falaki [q. v.]. One of the concessions to the indigenous element was also the substitution of Arabic for Turkish as the official language under Saʿīd Pasha. These beginnings of nationalist development, however, had mainly been stimulated by European influence and had no root at all in the conscience of the masses (see 1). Only the revived nationalism of the 20th century seems to have been understood by a larger class of the V. The fellāḥs, however, have been only reached by nationalist propaganda as far as they live in the neighbourhood of the towns.

The four orthodox Muḥammadan rites are officially organised. The dominant madhhīb is that of al-Shafiʿī and a part of the inhabitants of Upper Egypt are Mālikīs. As, however, since the Turkish conquest, jurisdiction has always been exercised according to Ḥanafi law, the latter madhhīb is now nearly always followed in all not purely ritual actions. The hajja ḥ obligation has been performed during the last years by an average of 16,000 Egyptians. Besides the official Sunni festivals there are celebrated a number of local festive days according to the ancient Coptic calendar, which has survived as the agricultural calendar of the fellāḥs. The celebration of these days has corresponded from time immemorial to the annual return of certain natural occurrences, in the first place the movement of the Nile. Very famous was the big festival of the opening of the Khālisel in Cairo [q. v.] in August. Many feast days are connected with Muḥammadan saints whose mawlid are celebrated (e.g. Shāik Ḥasan al-Badawi in Tanṭā, Shāik Bāyiʿmī in Cairo). The number of mawlid’s is immense; many saints are even anonymous. Most places where they are venerated must be pre-Islamic holy places. A very full description of Egyptian popular religion and local uses is to be found in the Khiṣāṭ Liqādat of ʿAlī Pasha Mubārak (esp. part xvii—xxii; cf. Goldziher in W. Z. K. M., iv. 351). The most widespread mystical congregations are mentioned in the same work (iii. 129; also R. M. M., lii. 123). Since 1550 these congregations are under the authority of the Shāik al-Bakri who, since 1811, is at the same time Naqib al-Asfār. The “Turkish” element of the population, though numerically far inferior to the indigenous, has occupied the foremost place throughout the period of Muḥammad ʿAlī’s dynasty. The dynasty itself was the chief representative of this class, together with the high officials in the army and the administration. They were the bearers of Turkish political and cultural tradition, but, as to their origin, were composed of all non-Arabic elements of the Ottoman Empire. Those of Circassian descent were already numerous from the Mamluk period on-ward. Until the English occupation the number of “Turkish” families was occasionally supplied from other parts of Turkey. Apart from being the ruling class, the Turkish Pasha were also, by the favour of the viceroy, the great land proprietors (see 2). Many of these “Turks”, however, have become acclimatised in Egypt (‘Omrīr call them Turco-Egyptians) and have shown sympathy with the nationalist movement. The Prime Ministers Shārīf Pasha [q. v.] and Ryād Pāḥa (in the days of the ‘Arabi movement and immediately afterwards) are typical examples of this kind. The “Turkish” grandees have been for two or three generations the most sophisticated part of the Egyptian Muḥammadans and appear to be for the greater part agnostics.

The nomads inhabiting Egypt are now about 600,000 in number. They consist of pure Arabs in the Sinai peninsula, in the Delta and in Upper Egypt. The Berber tribes of the Libyan desert have been arabised, except those living in the Sinai oasis, Autochthonous tribes in Upper Egypt are the Abīlde and the Bedū (see these two articles). During the Khedival period the government has always been strong enough to protect the population against the raids of these Bedūns.

Muḥammadan is also the negroid element whose social position is that of slaves. Slavery had been an acknowledged institution in Egypt up to 1877, when, by an Anglo-Egyptian convention, the slave trade was forbidden on Egyptian territory. A new slavery convention of 1895 made interference with personal liberty a criminal offence, and art. 3 of the constitution of 1923 guarantees individual liberty to all Egyptian subjects. Practically slavery subsisted much longer and may not yet have wholly disappeared. The severe measures against the slave trade, however, have made the import of fresh slaves from the Sūlān nearly impossible. Most of the negro slaves were females; the other were eunuchs. The influence of negro blood on the racial characteristics of the Egyptians during the 19th century is still noticeable. White female slaves (manāṭī) were still imported in the first half of the century from the Caucasus and from Abyssinia.

Of the other foreign Muḥammadans the alumni of al-Azhar form a noticeable part. Muḥammadan, from North Africa and Syria are the most numerous among them; occasionally they enter the corps of the Egyptian ‘ulamā’. The Shīʿites only consist of a small Persian colony in the towns, amongst whom even Bāṭānī are to be found.

The call for the emancipation of Muḥammadan women in Egypt was raised at the end of the 19th century by Kāsim Amin (d. 1908), an Egyptian of Kurdish extraction, who in 1899 by his book Tahri il Marʿa and, some years later, his Al-Marʿa L-Qidāda (dedicated to Saʿīd Zaghlí) raised strong opposition and equally strong sympathies. Feminism has also been defended by Muḥammadan women themselves, as MalakḤifī Naṣīf (born 1856; she wrote Nīṣāṭ under the pseudonym of Bahṣīṭ al-Bādīyya). It was likewise strongly supported by some very able Christian Syrian women (see Oriento Moderno, v., N. 11). A result of this movement was the progress of female education (see 5 and Martin Hartmann, Die Frau im Islam, Halle a. S. 1909).

The Copts (see the art. Kipt), with the exception of the Coptic remnants in Upper Egypt, form a lower
middle class living for the most part as handicraftsmen in the towns and supplying the government with lower administrative functions. Lane estimated their number to be 150,000; so that their proportional increase has been greater than that of the Muhammadans. With the latter the Copts—though Christians—have many institutions in common: circumcision and the veiling of women; the formerly obligatory dark-coloured turban and clothes have only been maintained by the Coptic clergy. In Muhammad ‘Ali’s time the lower technical functionaries in the provincial administration were Copts (see 2). Other notable Copts of his time were quite influential—as they had been likewise in the days of the Mamluks—such were Mu’allim Djirgih al-Djewhari (d. 1811) and Mu’allim Ghalli (d. 1821). They held the function of ra‘is al-kuttab but at times had to suffer from the Pasha’s despotic rule. Dj. Zaidan gives their biographies after a Tarikh al-‘ummar al-Qaṣīya by Ya‘qub Bey Naghla Rūfi‘a, Batrous Ghalli Pasha (born 1847, murdered 1910) was the first Coptic Minister. His assassination put an end to the collaboration of the Copts with the Muhammadan nationalists (see 1). Asyūt is nowadays the great Coptic cultural centre.

The Armenian community in Egypt is small and consists for the most part of shop-keepers. In the 19th century some notable Armenians have occupied high positions in the government. The most conspicuous are Boghos Bey, a former tax-farmer who became a councillor to Muhammad ‘Ali (Mas‘āhir al-Shark, ii. 226), and Nilōr Pasha, several times prime Minister before and after the English occupation. These intellectual Armenians have been an important medium for the spread of French cultural civilisation.

Syrian Maronite Christians (Aklwīn) have been in Egypt since the Mamluk time; in Imāmī’s time they became the most useful element in the reorganised administration by their knowledge of languages and their aptitude for assimilating European procedure (Cromer, ii. 217). They hardly ever entered the higher offices. Other Syrians have immigrated to make their fortune by trade, and sometimes to be ruined again as a consequence of the economic difficulties of the time. A typical instance of this kind is Amīn Shamīl (1828–1897; biography in Mas‘āhir al-Shark, ii. 169); he was a Syrian immigrant, gained and lost enormous wealth in the cotton trade and ended his life as a prolific writer and publisher adapting himself to circumstances in a remarkable way. Syrians are to be met everywhere as the promoters of modern intellectual life in Egypt, as publishers, journalists and authors; they are found likewise among the first nationalistic propagandists (e.g. Salīm al-Na‘īṣāsh; see the Bibliography). Some of their characteristics have made them, as a class, especially hated by Muhammadans.

The Greeks form a transition to the European element. Their significance for Egypt is exclusively economic; an enormous commercial activity is displayed by the Greeks in Alexandria. Greeks of the lower classes are everywhere to be found in Egypt as bakūls and occasionally as usurers. As elsewhere in the former Turkish Empire the Greeks in Egypt keep to their particular Greek form of western civilisation.

The Jews are half natives and half foreigners; their number towards the end of the century was about 30,000. They nearly all live in Cairo and Alexandria and are largely engaged in banking business. They played a part—not unlike that of the Syrians—in the first nationalist manifestations of 1877. One of them, James Sanu, with the pseudonym Abū Nazara, founder of the first Arabic theatre in Cairo, published in 1877 a kind of paper in vulgar Arabic in which he criticized the Khedive. Subsequently he was expelled (Sāhīb, L. G. C. Gen., etc., p. 127). Since 1840 there have been Jewish schools in Cairo.

The steady increase of the number of Europeans is more a consequence than a cause of Egypt’s “Europeanisation”. Many Europeans are only foreigners by their passport and constitute the well known class of Levantines, prospering under the immunities still granted to them by the capitulations. The Europeans who have served the Egyptian government in the execution of reforms and technical works have had belonging to different nationalities: French (de Seve—Sulanman Pasha, the creator of Muhammad ‘Ali’s nizām-troops; Clot Bey, the inspector of the medical schools; Ferdinand de Lesseps, and others), Swiss (Dor Bey and Maunzinger), Austrian (Slatin Pasha in the Sudan; Blum Pasha, financial adviser under Ismā‘il) and English (Baker and Gordon as governors of the Sudan). An influential class is formed by the foreigners who, though theoretically Egyptian officials, hold or have held functions in institutions such as the mixed tribunals and the Debt Administration, and especially the high British officials in the ministry and other departments (after the occupation). The cultural influence of the English cannot be said to have been considerable as yet. Even the knowledge of the English language is less widespread than that of French, in accordance with the traditional preponderance of the French form of European civilisation in the country. Lastly, mention has to be made of the numerous European adventurers who came to Egypt in the days of Sa‘īd and Ismā‘il and, by pretended schemes of commercial or technical enterprises, tried to extort money from the too careless viceroyals.

5. Education, Science and Literature

Education continued during the 19th century along the traditional Muhammadan line, while, on the other hand, a European system of education was introduced by Muhammad ‘Ali. It has not yet been possible to fuse the two systems into a whole.

The ancient Arabic kuttab have continued to exist all over the country until the present day, without any government control (except as far as they were paid from workk’s administrated by government) until the law of 1876, which introduced arithmetic. The other pole of religious Muhammadan instruction is represented by al-Azhar [q.v.], which institution, after having been neglected by Muhammad ‘Ali, has been an object of the solicitude of the later Khedives. In 1924 the number of students at al-Azhar was given as 10,287, of whom 9,758 Egyptians (lecture delivered in August, 1924, by Muhammad Abū Bakr Ibrāhim On The University of al-Azhar, published at Cairo). Other mosque universities organised on similar lines as at Azhar are those of Alexandria, Tanjah, Duslik and Dimyri. Besides, there exists in Cairo a special school for the training of kadi’s.
The Egyptian University (al-Jumla' al-Miyā'a) was founded at Cairo in 1908 by means of large subscriptions and gifts and was started under the presidency of Prince Ahmad Fu'ad Pasha, afterwards King. During its first years only courses on literary and historical subjects were organised, given by Egyptian and European teachers and by European Orientalists expressly invited to that purpose (the lectures have been published at Cairo). This University has sent in the last years groups of young Egyptians to different European universities with the object of appointing them after their return university teachers in Cairo. In 1924 this university passed under government administration; since that time several projects have been elaborated for the extension of its organisation and activity (Oriente Moderno, v. 110, 434). As was to be expected, the new university has encouraged research the results of which have not seldom been in strong opposition to the spirit of orthodoxy prevailing in al-Azhar.

Apart from the already mentioned educational establishments the many foreign schools, among which the missionary schools — first American Missionary school in Cairo in 1855 — in Cairo and Alexandria, sometimes subsidised by the government (as under Sa'id Pasha), have equally exercised an influence on the intellectual education of the Egyptian upper classes.

The introduction of printing into Egypt is closely connected with the educational programme of Muhammad 'Ali; the printing-press which the French had brought with them for their own use has left no traces. About 1821 the first printing office was founded in Bilâk; it began to produce Arabic and Turkish books for the newly opened government schools. Already in these first years began also the important activity of printing and publishing classical works of the Arabic, Turkish and, to a less extent, Persian literature. One of the first works printed seems to have been the grammatical treatise al-Adā'imiyā (in 1230/1824; see Zirker, Bibliotheca Orientalis, i., Leipzig 1846, p. 19), used in al-Azhar (von Kroner, ii. 285). The greatest printing activity of this kind began about 1850, not without encouragement from Europe; this productivity, to which so many European literary catalogues bear witness, has been, however, more to the profit of Oriental studies than to the scientific and literary development of Egypt itself (Brockelmann, G. A. L., ii. 471). The same can be said of the "Bibliothèque Khediviale" founded in 1870 by 'Ali Pasha Muḥārak. The origin of printing in Egypt is also connected with that of the press, since in 1828 the official newspaper al-Walā'ī al-Miyā'ī began to be printed on another press in the Citadel. About 1875 the printing office at Bilâk (belonging to the Dā'ira Simiyā, as were also the paper factories at Bilâk) was still the most important; besides this establishment there were a few private printing and lithographic shops in Cairo and Alexandria. After 1876, however, printing has gained enormous importance by the services it rendered to the then beginning development of the Arabic press, mainly by the initiative of energetic Syriacs and under the influence of the first nationalist movement.

The Arab press which was to be more important for the intellectual development than the printing of books — see the art. 'Arabīs (especially on the press movement of 1878: M. C. A. C., viii. 546 f., pr. 1882).
Sabry, La Génese etc., p. 127). The great Muḥammad political paper al-Muḥājir ceased to exist in 1915, while al-Mekkattum and the nationalist organs have continued (K. M. M., iii. 124).

The religious Muḥammad Arabic literature, so far as it is a continuation of the tradition of previous centuries, has produced only a few remarkable figures and those only in the first half of the 19th century, the most conspicuous being al-Badjūri (q.v., d. 1861). A very important branch of Muḥammad literature was, however, the literary activity of Muḥammad ‘Abdūh [q.v.] and his school, who initiated a theological modernism in Islam. While following the methods of old Islamic science but with independent interpretation of the holy texts, they tried to prove that Islam is still a living world religion and in no way opposed to modern civilization. A great many of Muḥammad ‘Abdūh’s articles have appeared in the review al-Manār (published since 1897 by the Syrian Sayyid Rashīd Riḍā). Though obviously these modernist views — styled by Goldziher “Kulturwahabismus” — have originated under the influence of the introduction of modern civilization, it cannot be said to have come under the influence of western thought itself. It has met with strong opposition from the conservative circles of al-Azhār, the press organ of which is al-iṭḥāb.

Poetry (as literary form) has never abandoned the classical Arabic forms, and although some poets have earned renown in their time (e.g. Shaikh Muḥammad Shihāb al-Dirās, 1757–1858; see von Kremer, ii. 294), modern Egypt does not seem to have produced a generally acknowledged famous Arabic poet.

The other branches of literature have abandoned by a more or less gradual process the old forms and the old style for Western literary methods, the models of which had been made accessible by an extensive activity in translation. The first works translated were French scientific books for Muḥammad ‘Alī’s schools; since Sa‘d Pasha’s reign a great many European scientific and belletristic works have been translated; e.g. the translation of French historical and travel works by Rifā‘a Bey al-Tahštawī (1801–1872) have much contributed to the spread of knowledge of European literary methods. Prose writing has seldom been used for the composition of novels and plays after European fashion. But there has sprung up an extensive semi-scientific literature on political and social questions, to which belong e.g. the works of Muṣṭafā Kāmil and the other nationalist literature; also the treatises on feminism mentioned in 4. This literature has been published partly in the daily press and the numerous periodicals, partly in books; a large part has been contributed by Syrians and Jews.

In contemporaneous historiography the work of al-Dibbarī [q.v.] holds a prominent place; it was composed in the traditional style of historical writing. Later books on Egyptian history, such as Farīd Bey’s history of Muḥammad ‘Alī and Ilyās al-Ayābī’s history of Egypt under Ismā‘īl (see the Bibliography), follow the methods of European historiography and use European sources. The same applies to the important historical and biographical works of the Syrian Dīrījī Zādān.

In ‘Alī Pasha Mubārāk’s Khiṭāf Lajīdāda we may see — as was the intention of the author — a continuation of the typical Egyptian tradition of Khiṭāf literature; next to Lane’s Modern Egyptians it is a chief source of information on Egypt and its population in the 19th century. We may include in the same class the various descriptions of travels, particularly those on the pilgrimage to Mecca, as the work of al-Battānī (see Lammens in R. M.M., No. XXXVIII) and the account of different ḫaṭfī’s (1901, 1903, 1904, 1908) by Isḥāq Rifā‘a Pasha al-Liwā‘ in his book Mir‘āt al-Haramain (2 vol., Cairo 1344/1925).

It should not be left unmentioned that all through the 19th century a considerable popular literature has continued to exist in the vulgar dialect, in the poetical form of muwāla and raqī‘ūl and in the form of prose ballads or sīyara, describing the deeds of ancient Arab more or less Egyptianized heroes as ‘Abī Zād, ‘Antar and others. An endeavour to introduce the vulgar Arabic of Egypt into literature was made by Muḥammad b. Uṣūlm al-Dhālī, who translated, between 1880 and 1890, some works of Rūqain and Mūṭi‘i into Egyptian Arabic; they, however, found no favour with the educated public. An unsuccessful propaganda has been made about 1896 by an American for the introduction of the Latin alphabet to be used for a new popular literature in one of the vulgar dialects of Egypt. Even Orientalists such as M. Hartmann were convinced at the time that an undertaking of this kind might succeed (Z. A., 1898, p. 277 sqq.).

The ancient Oriental shadow-plays, that have continued a waning existence in Egypt up to the present day, have been studied by Praher and Kahle. In their present form these shows were revived by the Algerian Ḥasan Kāshkāsh in the second half of the 19th century (see the art. EJHAYAL-T WILL). The occurrence of the Turkish Kara-Goz play is mentioned by Lane (ii. 113).

Khidr Beg, an Ottoman scholar and poet, the first judge of Constantinople. He was born on the first of Rebi I, 810 = 6th Aug. 1407 at Sîvînîja, the son of the local judge Ilyâfî al-Dîn and belonging to a famous family which traced its descent from Khûtja al-Nâr al-Dîn. On the conclusion of his studies, which he conducted mainly under Mollâ Mîrza Yâkîn, whom his daughter afterwards married, he became a judge in his native town and later Mudarris. He was next appointed professor in Brussa, then judge in Ainogol and finally called to a teaching appointment in Adrianople and after the capture of Constantinople was appointed its first judge. His sons were the Mufrî of Brussa, Ahmad Pasha (d. 911 = 1495, buried with the Zeinûlis in Brussa), Sinân Pasha (q.v.) and Vaqîb Pasha, judge of Brussa (d. 891 = 1486; buried in the mosque of Mollâ Fârînû), all three distinguished for intellectual gifts and considerable literary attainments. Khidir Beg himself was a great authority on Muslim learning and had a wide knowledge of the literature of the three great languages of Islam. He composed a homiletic poem in Saint verses, al-Nînîya fi 'Akhbâr' (Stambul 1258, 32 fol. [cf. J. A. Ser. iv., Vol. iii., 1854, p. 222]), which has been often commented upon (e.g. by Dâ'ûd b. Muhammad al-Kâshî, Cairo 1297, 87 fol.), and a number of other, mainly poetical works. Khidir Beg died in 893 = 1458/1459 in Stamboul where he was
buried in the Eiyyûb cemetery. He founded the little mosque of Hadîdî Kadîn; cf. Hâgû Husein, Hadîdî al-Darawûmî, i. 85, sq. (with biogr. notes), cf. thereon J. v. Hammer, G. O. R., ix. 62, No. 158. On his tomb cf. Hadîdî al-Darawûmî, i. 218, 7. The village of Kâhkî, opposite to Stambul on the Asiatic side, where Müllî Khîdr Beg had great estates, still bears his name ("the judge's village").

(FRANZ BABINGER)

KHîDR KHÂN, Saiyîd, of Dîhî, founder of the Saiyîd dynasty (1414—1451), was the son of Malik Sulaimanî, adopted son of Mardan Dawlat, one of the amîr's of Pirzâr Tughluk. Khîdr Khân succeeded to Mardan Dawlat's sif of Multan, but was expelled in 1396, during the usurpation of Nasrât Shâh at Dîhî. When Timûr invaded India in 1398 Khîdr fled into Mewât, but after the capture of Dîhî waited on the conqueror and received from him a grant of the fiefs of Multan and Dîpâlpûr, where he remained independent during the remainder of the troubled reign of Mahmûd Tughluk. On Nov. 12, 1405, he rebelled and slew, on the banks of the Satlaj, Mallû (Hûlî Khân), Mahmûd's minister, who was attempting to recover Multan, and having extended his territory towards Dîhî, formed a party in the capital. In 1412 he unsuccessfully besieged Mahmûd in Dîhî, but returned in 1414, after Mahmûd's death, and besieged Dâwlat Khân Lôdi, who had been acknowledged by the amîr's, at Dîhî as their leader, but surrendered the city on discovering a plot to admit the besiegers. On June 4, 1414, Dâwlat Khân was imprisoned in Hîşirî Firûzâ and was shortly afterwards put to death. Khîdr Khân, exiled from the royal title, and contended himself with that of Rûyêtî Âlî ("the Exalted Standards"). He is said to have remitted tribute to Timûr's son, Shâhrûkh, to whom he owned allegiance.

He first recovered the revolted provinces of Kotreh (Rohilkhand) and the Gangetic Doab, and in 1416 he asserted his authority in Gwalior, suppressed a rebellion of Turks under Taghân Râsî in Sirhind, and relieved Nâgâwar which was besieged by Aûmûd I of Gudjarât. In 1417 he completed the suppression of the rebellion of the Turks and in 1418 and 1419 was engaged in restoring order in Kotreh. In the latter year a rebel who pretended to be Sârang Khân, Khîdr's ancient enemy, who had expelled him from Multan, appeared in Mâtiwâra, but was defeated near Rûpar and fled to the mountains, and in 1420 was put to death by Taghân Râsî. Later in the same year it was again found necessary to send an army into the Doab and Kotreh, and Taghân rose in rebellion in the Sirhind district. In 1421 Khîdr Khân led an expedition into Mewât and to Gwalior, whence he returned by way of Iâwâ. Here he fell sick and returned to Dîhî, where he died on May 20, 1421.

KHIL'A (an Arabic word derived from khila' "to divest oneself of one's robe"), a robe from the wardrobe of the sovereign, which he no longer wears and which he bestows, as a gift, on the person whom he wishes to honour (syonym Âshrafî, pl. tahârîh, Ibn Khallîkân, transl., iv. 117; Abu'l-Fâkhr, Amânah, v. 5; Mâturidi, Khâtîf, quoted in History of the Mamelukes, part 4, p. 70, note 1; Shânîb al-Dîn, Mâslîk al-Abâr, in N. E., xii. 376). This garment is of course rich and sumptuous and of great value. It is also given as a sign of investiture to an official. Sometimes a sum of money is given instead. Thus it was that in Turkey the name khil'a-l-bcha, "the price of a robe of honour", was formerly given to a certain sum of money distributed to the officers of the Janissaries on the Sultân's accession (Barber de Meynard, Dictionn. turc., i. 709). The kings of Persia used to send a robe by a special messenger to governors of provinces whom they wished to honour and who wore it on special occasions. In return the latter treated the messenger handsomely and heaped presents upon him. In Central Asia these are made of cloth of gold of the Indies, of Kashmir shawls, of silk of all colours. At the distribution, the individuals who receive this favour put on the khila' (Pers. and Turk khâl'at) over the clothes they are wearing.

In Egypt, under the Mamelûks, these robes of honour were arranged in classes (menzûl, mertebe), according to the rank of the individuals for whom they were intended, and who formed three classes, (1) men of the sword, (2) men of the pen, i.e. officials in the civil service, (3) scholars. A sword enriched with gold was added to the present, taken from the siyâkh-khâne (arsenal) and a horse fully caparisoned, covered with a kânîshkh (Pers. kânîshkh covering) of gold and brought from the ri'kâbkhâne (royal stables). Fuller details will be found in the Mâslîk al-Abâr quoted by Quatremère in L'Histoire des Mamelouks, part 4, p. 72 sqq., note and in Gaudefroy-Demobynes, La Syrie à l'âge des Mamelouks, Paris 1923, p. lxxxix sqq. — On the use of these robes as a sign of authority cf. G. Meloni, 'Alcuni temi semanticî, in: R. S. O., iii., 1910, p. 533 sqq.; F. W. Buckler, Two instances of Khil in the Bible in Journal of Theological Studies, xxiii. (1922), 197 sqq. — For India, especially Lahkhan, see Mrs. Meer Hassan Ali, Observations on the Mameluns of India (1832; 2nd ed. 1917), p. 149; F. W. Buckler, The political theory of the Indian Mutiny in Transactions of the Royal Historical Society, v. (1922), 81 sqq.

KLHILA. [See KHALILA.]

KLILÁL. [See SIMAK.]

KLHILD. [See KLHILD.]

KHÎRKA (A.), "rag", hence "a mystic's coarse woolen robe", because it was originally made up of pieces (syonym murâbâ'a). "It is the inner
flame (jāla) which makes the Ṣūfī, said al-Hudūwī, not the religious dress (ṣamāmai). This dress was the outward sign of the vow of poverty taken by the Ṣūfī; it was originally as a rule blue, the color of the Sufi mystics; however, did not like to wear a special costume, saying that if a distinctive mark of this kind was adopted for God’s sake, it was useless, for God knows best what is; and if it is for the people, one cannot escape from this dilemma — either the vocation of the dervish is true and then it is pure ostentation, or it is pretended and it is hypocrisy. Nevertheless the distinctive dress was generally adopted. It could not be obtained by the novice until the expiry of the three years necessary for his education. The investiture of the muwaḍd with the khirba by his tutor (Shaikh, Pir) had a ceremonial character. The donning of the robe, in the Subrāwāndi’s ‘Awwārī al-Muṣirī, is the tangible sign that the man is entering upon the way of truth, the symbol of his entrance upon the mystic path, the sign that he is abandoning himself and putting himself entirely in the hands of the Shaikh”. There are two kinds of robe: khirāk al-irāda (robe of good-will), which one asks from the Shaikh, being fully conscious of the duties which this investiture imposes on one and of the passive obedience to which one commits oneself in accepting it; and khirāk al-tābārak (robe of benediction) given ex officio by the Shaikh to persons who come to him. It would be useful to cause to enter upon the mystic path, without their realising the significance of the investiture. The first is naturally much superior to the second and distinguishes the true Sufis from those who only resemble them in external appearance.” (E. Blochet, Études sur l’ésotérisme musulman in Mus- ston, X, 1909, p. 176 et suiv.).

**KHIRKA-I SHERĪF,** the “mole mantel”, the name given to the mantle of the prophet (r. BURDA) venerated as a relic and kept in Constantinople. The day for visiting it is a fast day (the 15th Ramadān of each year). It was formerly kept in a special chamber of the sarai, where it was preserved in a chest of medium size covered by a green velvet cloth with a broad fringe of gold and silver. The ceremony of the pilgrimage was performed in the following manner. On the appointed day the ministers, the ‘ulamā, the generals of the janissaries and of the other troops, notified on the evening before by letters carried by the caṣlū, assembled before midday prayer in front of the gate of bliss (Gūb al-Sūfāda), the second gate of the sarai; the ministers and the ‘ulamā seated themselves on the right, the soldiers on the left and awaited the arrival of the grand vizier. The latter, as soon as he had been informed of the arrival at Ayā-Soṭṭāa of the Shaikh al-Islām, brought by the Ra’is al-Kuttah, proceeded thither with the functionaries of the Porte. Together they all performed midday prayer and proceeded thereunto to the imperial palace. After having passed by the ‘arḍ-ṣuqay and having obtained permission to proceed, the pro-

cession entered the chamber of the khirka sherīf. The first and the second men of the Sultan seated themselves before the chest containing the relic and each recited an ‘aṣr (thank) of the ‘Inān. The Sultan, in person opened the chest and authorised those who were with him to place their forehead (jān zamuk) on the relic, i.e. the grand vizier, then the Shaikh al-Islām and the other dignitaries, after which each one returned to his place, where he remained standing. The shaikhs (heads of religious orders) placed themselves before the chest, said prayers (iḥdhā’) and placed their foreheads on the relic. They went out with the same ceremony and mounted their horses outside the orta-kirāf (the middle gate). This fête was an occasion for distributing pastries called baḥlūs to the janissaries and to the other troops. The relic is a mantle with large sleeves, a white mohair camel. After the reception was finished, the grand vizier and the general of the silbikār wiped it with a piece of muslin (dhihād) and gave this muslin to their followers. Then they washed in a goldet of gold the spot where the forehead had been placed and dried the wet spot by fumigations of aloes and of ambergris.

In 1265 (1849) the mantle was moved to a mosque specially built for it by the Sultan Wāliye, the mother of the Sultan ʿAbd al-Majīd. This monument called Kharba sherīf Qamīs stands in Stamī in the Veni bāghi quarter, to the west of the mosque of Fatih on the south slope of the fifth hill. Situated in the middle of a large garden enclosed by a railing of iron, it is a type of construction unique in Constantinople and marks the tendency to follow European models; for it is the application of ironwork to the construction of religious buildings. It is an elegant octagonal building surmounted by a cupola and flanked by pavilions to which it is joined by glass galleries. A beautiful border of iron runs along the roof. A fluted minaret supports a light balcony of hammered iron.

**KHITA.** [See KARA KHITĀIL]

**KHITĀN (A.), circumcision. According to the Liṣān al-ʿArab, s.v. kh-t-tn, the term is exclusively used in connection with the circumcision of males, whereas in the case of females khafid is the proper word. If this statement should be exact, the expression al-khitānī “the two circumcised parts” (viz. that of the male and that of the female) would be a dual a potiori. This expression occurs in the tradition “If the two circumcised parts have been in touch with one another, qatni is necessary” (Bukhārī, Qatni, bāb 28; Muslim, Haid, trad. 88; Abū Dīlākī, Tahār, bāb 81, 83).

Some words connected with the root kh-t-n denote the father-in-law, the son-in-law, the daughter-in-law (khṭān, khṭānā), or marrying (khṭthin). Some of these words must have belonged to the primitive Semitic language, as they occur also in the same or cognate forms in North-Semitic languages. We shall have to discuss the relation between this class of ideas and circumcision below.

Circumcision must have been a common practice in early Arabia. It is mentioned, not in the Kurān, but in old poetry (I am indebted to F. Krenkow’s
kindness for references to the Divine of the Hudhali's, to Farazdaq and other poets) and in hadith. The early language has also a special word for "uncircumcised" (agiral, Hebrew 'ard). In hadith is said that Ibrahîm was circumcised in his 80th year (Bukhârî, Abu'ûṣ, bâb 8, Muslim, Fâqîlî, trad. 151). This tradition is based on the Biblical report. Ibn Sa'd has preserved a tradition according to which the patriarch was already circumcised at the age of 13 (Tabâkî, 1. 24).

This tradition is apparently a reflex of the practice of circumcision in the first centuries of Islam. We may confront it with the statements concerning Ibn 'Abdâ's circumcision in hadith. According to some traditions (Ahmad b. Hanbal, i. 273) he was 215 years old when Muhammad died. In other traditions it is said that he was already circumcised at that time (Bukhârî, Isâdînâm, bâb 51; Ahmad b. Hanbal, i. 264, 287; Ta'âla'î, No. 2639, 2640).

Circumcision is mentioned in hadith in the story of the Emperor Heraclius' horse-scorpion (Bukhârî, Fad' al-Wabî, bâb 6). Heraclius read in the stars the message of "the king of the circumcised". Thereupon an envoy of the king of Ghassân arrived who reported the news of Muhammad's preaching of Islam. This envoy appeared to be circumcised himself and he informed the Emperor of the fact that circumcision was a custom prevalent among the Arabs.

It is further recognised in hadith that circumcision belongs to the pre-Islamic institutions. In the traditions which enumerate the features of natural religion (al-shifa'), circumcision is mentioned together with the clipping of nails, the use of the toothpick, the cutting of moustaches, the more profuse length of the beard etc. (Bukhârî, Lidhâ, bâb 63; Muslim, Tâhârâ, trad. 49, 50; Tirmidhi, Adab, bâb 14 etc.). Perhaps circumcision of females is implicitly understood here. In a tradition preserved by Ahmad b. Hanbal (v. 75) circumcision is called sunna for males, honourable for females. Circumcision of females is also testified by the nickname ibn musâsit al-huṣûr, i.e. "son of the woman who circumcised females", which is given some Makkans.

There are differences between the several madhâb's concerning rules for circumcision. Instead of giving a survey of the different views it may be sufficient to translate the passage al-Nawawi in his commentary on Muslim, Tâhârâ, trad. 50 (ed. Cairo 1283, i. 328) has devoted to the subject, also because it contains a description of the operation.

*Circumcision is obligatory (fadîl) according to al-Shafi'i and many of the doctors, sunna according to Malîk and the majority of them. It is further, according to al-Shafi'i, equally obligatory for males and females. As regards males it is obligatory to cut off the whole skin which covers the glans, so that this latter is wholly demunated. As regards females, it is obligatory to cut off the smallest part of the skin in the highest part of the genitals. The sound (gâfîl) view within the limits of our school, which is shared by the large majority of our friends, is that circumcision is allowed, but not obligatory in a youthful age, and one of the special views is that the wâli is obliged to have the child circumcised before it reaches the adult age. Another special view is, that it is prohibited to circumcise a child before its tenth year. The sound view according to us, is that circumcision on the seventh day after birth is mustahbî (recommendable). Further there are two views regarding the question whether in the "seventh day" the birthday is included or not".

The treatment of circumcision has not a prominent place in the books of law. More important, however, is the value attached to it in popular estimation. "To the uneducated mass of Muslims" says Snouck Hurgronje "as well as to the great mass of non-Muslims, both of whom pay the greatest attention to formalities, abstention from pork together with circumcision, have even become to a certain extent the criterion of Islam. The exaggerated estimation of the two precepts finds no support in the law, for here they are on the same level with numerous other precepts, to which the mass attaches less importance" (De Islam, Baarn 1912, p. 30; Vierjr. Geschiften, i. 402; cf. iv/1, 377). In Java circumcision is generally considered as the ceremony of reception into Islam and therefore sometimes called nijamakî-slam ("rendering Muslim"). Apart from this term many other words denoting circumcision are used on Java (o. J., iv/1, 205 sq.).

In A t e h i n circumcision of infidels only is considered as the ceremony of reception into Islam (Snouck Hurgronje, The Achenees, i. 398). The importance attached to circumcision appears also from the tradition according to which Muhammad was born circumcised (Ibn Sa'd, Tabâkî, ifi. 64). In North Africa a child born with a short foreskin is considered as a blessing (Douût, Moriskhe, Paris 1905, p. 353).

At M a k k a, where the rite is called ta'âlûr, children are circumcised at an age of 3—7 years, girls without festivities, boys with great pomp. On the day preceding that on which the rite will be performed, the boy who is clad in heavy, costly garments, is paraded through the streets on horseback, several footmen walking on both sides in order to prevent him from falling and to refresh him by means of a perfumed handkerchief. He is preceded by men with drums and duffs who accompany the alâ'ik's song by others. Nearest to the boy goes an elderly black handmaid of his father's, hearing on her head a brazier burning with charcoal, resin and salt. The second part of the procession is formed by the boy's poorer comrades, equally on horseback. The procession passes through the main streets during the time of 'asr and comes back to its starting-point a little before sunset. The female members of the family pass the evening with their friends; the party is enlivened by female singers.

Next morning, at sunrise, the harbâr performs the operation. The foreskin is pressed together by means of a thong, the boy lying on his back, while his mother tries to divert his attention by sweets. A plaster is applied to the wound which usually is healed in a week. The operation is followed by a breakfast for the nearest relatives. It is to be observed that Hajramites who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronje, Mekeâ, ii. 141 sqq.).

In Egypt boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his
attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kerekh is used to cover a part of his face in order to avert the evil eye. As in Makka, he is preceded by musicians. The foremost person of the procession is usually the servant of the barber (who performs the operation), who bears his haal, a case of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking-glass and brass, and its back with a curtain. It is to be noted that the Copts also circumcise their boys (Lane, Manners and Customs of the Modern Egyptians, Chapter on Infancy and Education).

D’Ollson in his Tableau de l’empire ethiopien, Paris 1787, i. 231 sqq., describes circumcision as practised in Turkey under the heading “Circumcision, sunnetath”, a designation which is also reflected in the word sunnet-jifi for the barber who performs the operation. It takes or took place in the presence of the imam of a mosque who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate 20 of D’Ollson’s work shows children dressed for the ceremony, plate 21 adorned victims who are slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even to the other courts of Europe. D’Ollson gives in a translation of Mârâd’s III letter of invitation to the dignitaries on the occasion of the circumcision of the crownprince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Dartt, Morsâkch, p. 351, at Algier a stone knife was used for the operation. Nowadays this custom seems to be no longer known. It reminds us of Joshua v. 2 sqq. where it is said that the Israelites at their entering the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife of the operation (Wilken, p. 212).

In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the ceremony.

On Java circumcision of boys is often combined with the khatem- or katanam-ceremony. On the different designations of circumcision in this part of the Archipelago cf. Snouck Hurgronje, Verstrekte Geschriften, iv/1. 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (14–15 years) than in circles which are in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (tarup) is made before the house or pendopo, and a small room (kobongan) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are offered to several categories of awe-inspiring beings. Festivities such as nayang, toyahtan, dagangan precede or follow the ceremony. The dagangan always takes place in the preceding night and follows upon katanam, the performance of some chapters of the Kurâän by the boy.

On the day preceding circumcision a procession is held in which the boys are either conducted by their relatives, or are placed in a kind of car which have the forms of nago’s or other animals. They wear the bridgroom’s dress, and are hung with gold and diamond ornaments, the visible parts of the body being besmeared with harch. It occurs also that the boy wears the hadji’s dress. Just as in North Africa poor parents have their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a santri who has many children; a circumstance which is expected to exercise a wholesome influence on the boy’s marriage. For further details see Snouck Hurgronje, Verstrekte Geschriften, iv/1. 205 sqq.

Girls are not always circumcised on Java. The ceremony is called suna (sunna), whereas the Sundanese denote it by gusaran “filing of teeth”; a fictitious filing of teeth takes place the day before circumcision. Girls are circumcised on Java at an age varying between 2 and 8 years. During the last decades the ceremony has been, covered under a mysterious veil in some circles. Parents, however, who cling to the adat, do not share this tendency.

In Atchin boys are usually circumcised by the mudim (probably = muddâdhilân) at the age of 9 or 10 years, immediately after finishing their Kurâän study. The operation (for details see Snouck Hurgronje, The Achahinese, i. 399 sq.) consists in a complete circumcision; in some parts of Java it is rather an incision. The boy here also has to diet himself. In Atchin the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with the ceremony. The father of the boy vows, e.g. to arrange a Rapa’s-performance or to visit a sacred tomb. In this case the boy, dressed as a bride, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Girls are circumcised in Atchin soon after the peuron (the ceremony of taking the child from the house into the open air for the first time), consequently at a very young age. The operation is performed without any further ceremonies; even the father does not know when his daughter is to be circumcised.
In the literature on the subject different views regarding the origin, the original signification and the gradual extension and modification of the rite are to be found. For several reasons it seems unnecessary to review these opinions here. An exception may, however, be made for Wilken, who bases his opinion partly on that of Ploss, and for van Gennep (Les rites de passage, Paris 1909, spec. the fourth chapter).

According to Ploss the rite was meant as a chirurgical operation, serving to remove or to prevent phimosis, as it was believed that this anatomical deviation and perhaps the foreskin in general, was an impediment to the sexual function. Consequently the operation could take place at any age before marriage. Ploss' theory seemed to find support in the reports of some travellers (Wilken, loc. cit., p. 224 sqq.). Wilken combines this view with an extension in the religious direction. If the aim of circumcision was the promotion of fecundity, the rite became a religious one, because begetting children was a precept of religion among many peoples.

Ploss' and Wilken's theories do not regard, as may be seen from the short résumé just given, the circumcision of females. According to Wilken the rite is in this case originally nothing but a chirurgical operation serving to prevent abnormal deviations of the genitals.

These theories are open to several objections. The conjecture of a different meaning of the rite in the case of males and females, can only be admitted if a common explanation appears to be impossible. Further the rite is practised among peoples who do not know of a connection between sexual intercourse and the birth of children. Another objection regards Ploss' and Wilken's method as such. It may be observed that an enquiry into the origin and development of widely spread rites such as the one in debate, has scarcely ever led to satisfactory results, because such rites, if they may have originated from one clearly definable idea at all, sooner or later have become receptacles of other more or less cognate ideas, a process which has covered them under such a mass of tangle-wood that it is no longer possible to find a thread of evolution.

During recent years ethnologists have, therefore, given up the genetic method, in order to return to the descriptive one, hoping thus to be able to set the important sides of the rites in the best light. This method has been applied to sacrifice by Hubert and Mauss, to circumcision by van Gennep.

In his Rites de passage van Gennep has shown that a great many rites may be described as rites of transition from one state of life into another one. Circumcision must be placed on the same level with the first shaving of the hair (caška), the filing of teeth, with initiations of various kinds, etc.

This point of view accounts for many of the features of circumcision mentioned above. It accounts for the fact, that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repeated; that its shows a deeply rooted connection with marriage; that it is considered as the act of reception into a religious community;
that it is sometimes preceded by a bath; that
ceremonies take place, which show a striking
similarity with bridal processions and so on.

(A. J. WENSINCK)

KHYWA. [See KHYWARIZM].

KHLOT, an Arab tribe of Northwestern
Morocco. Its name in literary Arabic Kḥalt
has become Kḥlot in the vulgar dialect by
regular metathesis, but the primitive form of
the word is found in the adjective Kḥalti fem.

Khlutiya.

The Kḥlot who came into North Africa with
the Filāšī invasion in the fifth (eleventh) century
formed a part of the group of mixed Arab ele-
ments, known as Djuṣham from the name of the
ancestor of one of them. According to Ibn Khal-
dūn and other Muslim historians, the Kḥlot were
the Banu T-Muntāk. In Little Africa, the Djuṣham
spread through Central Maghrib, settled there and
took part in all the fighting which devastated
Barbary. After the Almohad conquest, they tried
to rebel but were cruelly put down. A little later,
the Banū Ghanīya, rivals of the Almohads, had
no difficulty in getting them as allies after the
taking of Bagāg [q.v.]. But the Almohad Caliph
al-Manṣūr, victorious over his enemies, punished
their Arab allies and transported the Djuṣham and
Riyāḥ Arabs to Morocco to the coast of the
Atlantic. The Riyāḥ were settled in al-Ḥabat and
al-Gharb, the Djuṣham in al-Tamesnā (the present
Shawia), a country which had been empty since
the extermination of the schismatic Berghwāta by
the Almohads. Al-Manṣūr thought he would settle
these tribes permanently and make them auxiliaries
for the djīhād in Spain. His attempt was doomed
to failure.

Under the successor of al-Manṣūr, the intrigues
of the Almohad Shāikhs found excellent allies
among the Djuṣham (Kḥlot and Sufyān) and the
jealousy between the Kḥlot and Sufyān aggravated
the internal dissensions still further. In 621 (1224
A.D.) the Kḥlot took the side of the pretenders
al-Māmūn against the Caliph al-Adīl supported by
the Sufyān. In 625 (1228) al-Māmūn was pro-
claimed Caliph. In 630 his son al-Rashīd succeeded
him but he was forced to take strong measures
against the chiefs of the Kḥlot on account of
their robberies and other misdeeds. The Kḥlot
rebellied and took the side of the pretender Yahyā
b. al-Nāṣir. The Sufyān made their peace with al-
Rashīd. They attacked the Kḥlot on the banks
of the Unn al-Rabī' and wrought terrible carnage
among them. The Kḥlot in return proclaimed Caliph
the pretender Ibn Hūd from al-Andalus.

But al-Rashīd pursued and routed them, took their
chiefs prisoners and beheaded them (635 = 1237/
1238). Weakened and compelled to submit, the
Kḥlot took part in the expeditions of the Caliphs
but their rivalry with the Sufyān was not ex-
tinguished and proved fatal to the Almohads. In
640 (1248) at the siege of Tamzesdakt held by
the Ẓiyānī pretendent Yaghmūrsān, the rivalry
resulted in the death of the Caliph al-Sa'id and
the defeat of the Almohads.

The rise of the Marinids in Morocco again made
the Kḥlot feel the hand of the conqueror. Sulṭān
Abū Thābit took steps to punish them for their
brigandage (707 = 1308), but they used their
help to destroy the power of the Riyāḥ Arabs.
The Kḥlot, installed in the latter's territory, in Aẓghār
and in Ḥabat formed part of the makhzan [q.v.]
of the Sulṭāns of Morocco, contracted matrimonial
alliances with these rulers and furnished them with
governors of provinces, ambass-adors and councilors.

Vassals of the Marinids, the Kḥlot passed into the
service of the Banū Waṭṭāṣ, their successors. It is
even claimed that intermarriage between them and
Bū Hassān, the last Waṭṭāṣ Sulṭān, prevented them
from taking the side of the Sa'dīan Sherifs on
the latter coming to the front.

The Sa'dīan Sherifs at first had no dealings
with the Kḥlot, in spite of the importance of this
tribe which, according to Leo Africanus, could put
into the field 12,000 horsemen and 50,000 foot-
soldiers. But the important part played by the Kḥlot
in the Moroccan victory over the Portuguese at
Wādit Makhāzin made them admit them partially
into the Makhzan of the Sherifs. But the plunder-
ing and undisciplined spirit of the Kḥlot made
them dangerous to any regular authority. During
the decline of the Sa'dīan dynasty, the marabout
pretender al-‘Ayyāshī [q.v.], who wished to make
them take the field against the Christians of Larache'
could not subdue them and was assassinated by
them in 1048 (1638/1639).

Under the Filāšī Sherifs the Kḥlot took the side
of the petty chiefs of Northern Morocco who had
made themselves independent under cover of the
rivalry between Isḥāq and his successors after
conquering them deprived the Kḥlot of their posi-
tion as a makhzan tribe and encouraged the settle-
ment in this region of heterogeneous Arab elements,
the Ṭīlk and Badāwā groups who could only
disturb and weaken the older occupants of the
land. At the present day these groups have each
their īkā'ids who keep a jealous watch on one
another; any attempts made by the Kḥlot against
the Moroccan authorities have for a long time
been uniformly unsuccessful.

The territory occupied by the Kḥlot is now
about 50 miles in length from N. to S., and 20
in breadth from E. to W. It is bordered on
the N. near Asīla by the Wāḍī Salem, the tribe of
Banū 'Araš and the Wāḍī 'Ayyāshā; on the E.
by the tribe of Banū Gorfet, and of Ahī Şarif;
by the S. E. by the Jībial Şarṣar; in the S. by
the Gharb. In the W. from Asīla to Larache, the
Kḥlot are cut off from the Ocean by the narrow
territory of the Sāḥīl; from Larache they stretch
along the Atlantic as far as the marshes of Mar-
ḍja Żarka.

Bibliography. One could quote here all
the works dealing with the history of N. W. Africa
from the second Arab invasion. M. M. Michaux-
Bellaire and Salmon in Archives Marocaines,
iv., v., vi., Paris 1905-1907, have given a very
full account of the territory, ethnography, ad-
ministrative organisation, political position and
divisions of the Kḥlot in their article on Les
Tribus Arabes de la voûte du Lekhous.

KHODABEND. [See UZJAI'r].

KHODJĀ (Pers. Khoja), name of a com-
munity of dissenting Muslims, mainly to be
found (a) in the Panjāb; (b) in Sind, Kāshān,
Kabūsār and the Western Coast of India; (c) in
Zanżībar and on the East Coast of Africa; (d) in
scattered groups under the name of Māwānis or
Mawānis in the Hindu Kūsh region and the North-
west frontier of India, in Afghanistan, in the
Khānātes of Central Asia, in the hill districts of
Eastern Persia and in the Persian Gulf District.
The numbers enumerated in India at the Census of 1921 (Census of India 1921) were:

The Pandjāb Khodjas do not own allegiance to H. H. the Āgha Khān, but hold religious beliefs similar to those held by the Bombay Khodjas (Census of India 1901, xvii. 150 sq. They are, like the Bombay Khodjas, converted Hindus, who are usually engaged in commercial occupations, keep accounts in Hindi and follow Hindu customs. Allied to them are the Parācīs of whom there are about 4,000 in the Pandjāb. The Pandjāb Khodjas derive their origin from Ḥājīdī Ṣayyīd Sadr al-Dīn, who came in the 15th century as an Ismāʿīlī preacher from Khurāsān and lies buried in Trinda Gorōdī in the Pūshkārī of Gōhērīn in the Bābāwulārī State. He presented his doctrines to the Hindus in a form which would appeal to their Hindu traditions. He is reputed to have been the author of the Das-Avṭār, in which the incarnations of Viṣṇu are described as leading to Islam. The first nine incarnations are treated as a Hindu would treat them. The tenth incarnation (Skr. nīkālāngka, "unspotted") which the Hindus expect in the future is described as having materialised in the unrevealed Imām of the Ismāʿīlīs. Both the Das-Avṭār and Sadr al-Dīn's hymns are used up to the present day by the Pandjāb Khodjas as well as by the Āgha Khān's Indian followers and their offshoots in East Africa. For practical guidance the Pandjāb Khodjas look to Ḥājīrī and Čāhīrī sects and other Pās, whose religious beliefs are not, however, necessarily identical.

The Khodjas of the Bombay Presidency and their offshoots in East Africa form a much better organised community and are in direct touch with H. H. the Āgha Khān. Their religious ideas are in origin the same as those of the Pandjāb Khodjas, but their living contact with the Imām in the person of the Āgha Khān has isolated them from the influence of Muslim religious orders. Secessions have taken place from their ranks from time to time, but notably in the seventh decade of the 19th century, when a section of them attempted to declare the whole community Sunnī, and more recently, in 1901, when a small number under the leadership of men educated on Western lines declared themselves to be Iḥnā-Ashbīrīya [q. v.] Shīʿīs (what may be called the orthodox school of the Shīʿa's faith). They have built a separate mosque and made a separate burial ground in Bombay (called the Ārām Bāgh), but they maintain social intercourse with the main body of the Bombay Khodjas.

The Khodjas are mainly governed by customary law. The Bombay High Court has held (1847) that the Muslim law of succession does not apply to them and that, as under Hindu law, their females are excluded from intermediate succession (Sarjān Mīr Alī's case; cf. Sir Erskine Perry, Cases Illustrative of Oriental Life and the Application of English Law to India, London 1853, P. 110).

The Bombay Khodjas have a tradition of an

**KHÔDJA EFENDI**

**SA'D AL-DIN B. HASAN DIJAN B. HĀFIZ MUHAMMAD B. HĀFIZ DIJĂM AL-DIN AL-ISFAHĀNI,** usually called Khōdja (Sa’d ed-Din) Efendi, a *famous* Ottoman historian and Shākh al-Islām. He was born in 943 (1538—1539) in Stambl, the son of a certain Hasan Dijān, who immigrated from Persia and served as a chamberlain to Sultan Selim I during the last seven years of his reign. Hasan Dijān told his son all sorts of anecdotes of the life of the Sultan which Sa’d al-Din worked into a *Selīm-nāme* and then added it as an appendix to his famous history (ii. 221—401) (cf. Pertsch, *Viert. Hist. Berl.* p. 241, No. 121; Flügel, *Die ..., Hss.* in Wien, ii. 210, No. 987; thereon J. v. Hammer, *G. O. K.*, ii. p. vi. 10; ii. 634; iv. 203, 59 and his *Letters sui mii orientali in Bibliotheca illyrica*, viii. [1826]; the *Selīm-nāme* was translated (without the introduction) into German by H. F. v. Diez, *Denkmäler aus Astan*, i. 26—502 [Berlin 1111]. Sa’d al-Din was called the law, became an *ulemā* early in 963 (1555—1556) *mawlawi* of the famous jurist Abu l-‘Abbās al-Qāsimī, in Muḥarram 981 (1573—1574) tutor (khōdja, whom his popular name, the one by which he is still generally known) to the heir-apparent Murād, then governor of Mahgīs. On the accession of Murād III in December 1574 he remained his trusted adviser and retained the rank of Khōdja-i sultānī, tutor to the Sultan, under Murād’s successor Mehméd III. In Shāhān 1006 (1598—1599) he became Shākh al-Islām and died in this office two years later in Stambl on 12 Rabī‘ I, 1st October 1600 (3rd October 2, 1599), just as he was preparing to celebrate the birthday service of the Sultan (menāb) in the Aya Sofia. Four of his five sons, some of whom attained high rank (Mehmed [cf. Sidīqī-i ‘otūm-i, iv. 144] and Mehmēd As’sad [cf. ibid. i. 330 sqq.], became Muftis, ‘Abd al-‘Āzīz [cf. ibid., iii. 338] and Sālīh [cf. ibid., ii. 200 sqq.]; ‘Āṣir, Mas’ud, died young as “guardian” [cf. ibid., iv. 365 sqq.]) bore their father’s coffin to Ayyāb, where he was buried in the school for the recitation of the Kurān.

Sa’d al-Din was the author of the famous Ottoman history known as the *Tādī al-Tawārīkh* which, although not written by the imperial command (S. was not the so-called imperial historian, *Waṣīk Nāsīr*, 303, cf. a work *тур. озм. Gesch.*, i. 241), is still generally regarded as an authoritative source for Ottoman history and not only consigned all earlier chronicles of the house of Īshānī, called Tawārīkh-i Ali ‘oṭāmānī into oblivion, but even made them appear contemptible (cf. Ḥâfīz Khaṭlā, *‘Alī al-zunnār*, ii. 112, No. 2158 and J. H. Mordtmann in *I.,* x. 160). The work dealt with the history of the imperial Ottoman house from its foundation to the death of Selim I (d. 21. ix. 1520), copying from the earlier historians and written in a style often bombastic and extravagant. The work which was finished in the reign of Selim II (1566—1574) and was strictly speaking intended as a supplement to the Persian *Mīrzā al-Dīn Abūl-Hajjāf Muḥāfiz al-Dīn Muḥammad al-Lārī, d. 972 = 1568* which Sa’d al-Din translated into Turkish (MS. in Vienna, cf. Flügel, i. 80, No. 845), was dis-segmented and read in numerous manuscripts until it was made generally accessible in a printed edition in 1279 (1861) in two large volumes (586 and 619 pp., large 800, cf. *F. A.*, 1863, ii. p. 262). MSS. of the book often beautifully produced (e.g. one in the Vatican) are common in European libraries. The most important and most useful for a future critical edition may be mentioned: Berlin, No. 213; Dresden, No. 386; Leiden, Cat., iii. 27; London, Rieu, *Cat. Turk. MSS.*, p. 51 sqq.; Mailand, Ambrosiana, No. 245; Munich, No. 76—81; Oxford, *Cat. No.* 1 and 4; Paris, Nos. 63—70; S.-Petersburg, Univ.-Biblioth., No. 1 and 2; Cat. von C. S. Leinemann, p. 21; Rome, Pius V, cod., *Historiæ Turcicæ*, a splendid MS. formerly belonging to the Swedish Queen Christina (cf. J. v. Hammer in *Bibl. vat.*, xvi. 35, 115 and P. Horn in *Z.D.M.G.*, ii. [1897], p. 45 sqq.; Uppsala, No. 245; Venice, Bibl. Naz. Marciana, No. 30, 85, 3 and 134; Vienna, Nat.-Bibli., Flügel, ii. 244; Konsular-Akademie, A. Kraft, *Die ..., d. or. Ak.*, No. 263. — The book found early recognition in the West and parts of it have been frequently translated: cf. W. Seaman, *The Reign of Sultan Orchan*, London, 1852; V. Bratutti, *Chronica dell’ origine e progressione della casa ottomana composta da Sadino Turco*, part. i., Vienna 1649, part ii., Madrid 1652 (cf. *W. I.* [1910], p. 110 and *I.*, xii. [1923], 226 sqq.); Sa’d al-Din’s Annals Turcici notae ad Muram I. Turrici et Latiue curiâ Fr. Kollar, Vienna 1755, fol.; incomplete, cf. Pertsch, *Viert. Hist. Berl.*, p. 243, note and *W. I.* [1910], p. 125 sqq.; parts transl. by J. H. Garcin de Tassy in *F. A.*, iv. 347; vii. 306, 340; ix. 152; *The Capture of Constantinople*, ed. J. E. W. Gibb (with a biography of Sa’d al-Din), London 1879.

A MS. of a French translation of the Tādī al-Tawārīkh was prepared by Antoine Golland in 1710; the MS., the first volume of which seems to be lost, is preserved in the Bibliothèque Nationale Paris as MS. anc. fds. fr. 6074.

Sa’d al-Din’s son, Mehmēd As’ad Efendi, is said to have continued the history written by his father; cf. Brit. Mehmēd Tāhir, *‘Uthmānī múlūfīt*, ii. 22 sqq.; *Imsīye Sāhānīs*, Stambul 1334, p. 426 sqq.

sons Meḥmed and Meḥmed Asʿad, ibid., p. 426 sq.; resp. 436 sq.); preface to the edition of the Tādqīq in Fardmānī; also Gibb, History of Ottoman Poetry, i. 164, 165, 205—208 and his The Capture of Constantinople, London 1879, preface. (Franz Babinger)

KHŌDJA ILL [See KHOJA ILL.]

KHOI (in Arabic Khōwāyī), a town in Persia in the province of Aḏharābād, on a plateau 70 miles W. N. W. of Tabriz; population from 20,000 to 30,000. Its territory is irrigated by a water-course which rises in the mountains of Samarqand and flows into the Aras; the town is surrounded by gardens which produce, amongst other fruits, figs, and a superior quality of peaches called pavdužangi, "pears of the Prophet". At the present day cotton is cultivated in the neigbourhood.

The bazaars are large and busy. In former days a material called Khadīqīya was manufactured there. Now socks of knitted or woven wool are made here. The present defences (earthworks) were built at the beginning of the 19th century by General Gardane's expedition. The town was in part destroyed by the earthquake of 1842. It was near Khoi that Shāh Islam I lost the battle of Čaldīrān against Sulhān Selim I in 920 (1514).

KHΟKΑΝΔ, Arab. Khuwākānd, later written Khojand (which is given a popular etymology, Ḫoǰān = kanda = town of the boar), a town in Farghānā, cf. above, ii. p. 64, 66 where see also for the other spellings and the foundation of an independent Ozbek kingdom with Khojand as capital in the twelfth (eighth) century. The accession of the first ruler Shahrūkh was followed by the building of a citadel; another citadel later called Eski ʿarda was built by his son, ʿAbd al-Karīm (d. 1746). ʿAbd al-Karīm and his nephew and successor ʿĪsā Bātir are several times mentioned in te history of the Atūṭ Muhammad Ṭabarqānī, afterwards Khān of Bukhārā (d. 1759, cf. i, p. 782; Muḥ. Wāfā Karmānī, Taḥfūt al-Khānī, M. S. of the Amur. Mus., c. 581, especially fols. 33b sq., 145b sqq.). When the Kalmyk empire was destroyed and the frontiers of the Chinese empire advanced up to Farghānā (1758), ʿĪsā Bātir also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J. Klaproth, Magazin Asiatique, i. (1825), pp. 81 sqq. from the Tāi tīng yi tūng ī, ʿĪsā Bātir later was a member of a coalition of Muhammadan rulers of Central Asia, which applied to Ṭāhir Shāh Durrānī (cf. i, p. 169, 202 sqq.), the ruler of Afghanistan, for help against China. The alliance brought no further results, although Ṭāhir Shāh in 1763 appeared in Turkestan at the head of an army and occupied the territory between Khojand and Tashkend (at the same time an irrigation of the land of the Kara-Kirgiz was made from Khojand, Klaproth. op. cit., p. 83), but he had to retire again on account of the claims of his enterprises in other directions. ʿAbd al-Karīm's grandson, Nār Bāta Beg (probably reigned 1188—1213 = 1774/5—1798/9, cf. L. Zimin in Protokoll Türk. Krūka Lyūm. Arbūzōlī, xviii. 102, and Walidow, ibid., xx. 112 sq.), was also nominally under Chinese suzerainty.

To the early years of this reign belongs the journey of the Russian sergeant, Filipp Yefremov, who was taken prisoner by the Kirgiz in 1774 and sold in Būkḥārā and in 1782 returned to Russia via India and England. According to his Travels (F. Yefremov, Stranstroevye v Būkhistorii, Khivës, Persi w Indi 2 (St. Petersburg 1794, p. 59 sq.), Nārātāa was already entitled Khān "by the Chinese," was allied with China and at enmity with Būkḥārā. No mention is made of prominent buildings in the capital (the Medrese Mir was built in the reign of Nārātāa); on the other hand, a high pillar (apparently a minaret), said to be over 280 feet high in the market-place in Margūnān, is described. According to Filipp Nazarov (see below), this "tower" was visible for a distance of 50 verst (over 30 miles). Nārātāa's two sons, ʿĀlim and ʿOmar, are the real founders of the state and city of Khojand as we later know it. The chronology of these reigns (1213—1237 = 1798/9—1821/22) is not sufficiently established; even the year in which ʿĀlim was assassinated and ʿOmar raised to the throne is variously given in the sources. According to the Tārīkh Shahrūkkī (ed. Pantusow, p. 106) ʿOmar died in the year 1237 = 1821/22 (in the cyclic reckoning the year of the horse = 1822 is given); according to Nalivkin (Russ. original, p. 101; French translation, p. 124), who here follows another source (the Muntakhab al-Tawārīkh of Ḥakim Khān), ʿĀlim was not murdered till the spring of 1232 (i.e. 1817, not 1816 as in Nalivkin); on the other hand Nalivkin himself in another passage (Russ. orig., p. 185; French transl., p. 228) puts the building of the chief mosque of Khojand by ʿOmar Khān in 1231 (1815/16). The Russian interpreter Filipp Nazarov, who was in Khojand in the winter of 1813/1814, calls the ruler of Khojand Amir Wallamī (Zapiski o niektorých narodovských Srednye Azii, St. Petersburg 1821, p. 50 sqq.). This is probably for Wali al-Nīmā, not Wali Miyānī, as in Klaproth, op. cit., p. 43. The ruler at this time was only twenty-five years of age; this statement can only refer to ʿOmar, not to the much older ʿĀlim; according to ʿAbd al-Karīm al-Būkḥārī also (ed. Scheher, p. 102), this embassy and the capture of it (the murder of the Khojand envoy by a Russian soldier in Petrovolsk) both took place in the reign of ʿOmar Khān.

According to ʿAbd al-Karīm, p. 99, ʿĀlim had already been killed in 1224 (1809), which cannot be right, as we have a document of his dated Dūmādī I, 1225 (June 1810) (Protokoll Türk. krūka Lyūm. Arbūzōlī, iii. 165, sqq.). The change of ruler must therefore have taken place between 1810 and 1813.

In the oldest known document of his reign, dated 1213 (1798/9), ʿĀlim still regards himself as the representative of an un-named Khān; later he appears as an independent ruler with the title Khān or Amir; after the conquest of Tashkend, his power was as great as that of the Amir of Bukhārā. In ʿOmar's reign in 1814 (so Nazarov; not so late as 1819, as in Nalivkin, Russ. orig. p. 110 sq.; French transl., p. 134 sq.), the town of Turkestan with the parts of the Kirgiz steps
In spite of the great extent of his kingdom, the authority of the Khan was not firmly established; his vicious life and cruel rule had aroused general discontent. Naṣr Allāh, Amir of Bukhārā [q.v.], is said to have been asked by people in Khōkand itself to put an end to the rule of this blood-thirsty and godless tyrant. The Khōkand army was completely defeated; the capital itself was taken by the enemy (for the first time since the foundation of the kingdom); Madalī was killed while trying to escape (1258 = 1842). The conquerors were driven out again in the same year and Shīr ʿAlī, a cousin of ʿAlī and ʿOmar, was placed on the throne; but down to the Russian conquest domination of peace was never restored for any length of time. The reigns of Shīr ʿAlī (1842–1855) and his sons Khudayar (1845–1858 and 1865–1875) and Malī (1858–1859 and 1879–1882) and several short-lived rulers were a period of continual confusion and bloody fighting, notably between the Uzbek and the Kipchak tribe and the "Sarts", i.e. the native population. Khudayar, who was still a minor, was raised to the throne by Musulmān Kūli, the chief of the Kipchak; the Kipchak drove the Sarts out of their houses in the capital and took possession of the canals in the country; the Sarts were only allowed the water necessary for their fields on payment of a fixed sum. In 1269 (1852) Musulmān Kūli was overthrown by Khudayar and put to death; the land again passed to the Sarts. Malī then relied on the support of the Kipchak and restored to them the lands taken by the Sarts. Banished pretenders usually took refuge in Bukhārā. Under these circumstances Naṣr Allāh was able to advance as far as Khujand in 1275 (1858), his successor, Shīr ʿAlī, in 1279 (1862) and again in 1282 (1865) to occupy Khōkand itself. The struggle against foes at home and abroad was waged with mediaeval cruelty. Madalī's father-in-law, Muhammad Sharīf Aṭā'llī, governor of Tashkent, was bound to a horse's tail by order of Khan Shīr ʿAlī and dragged across the steppes; after the capture of Ura Tūbe by Khudayar in 1265 (1848) a tower of skulls (kelle-mimār) was erected of the heads of the enemy killed.

In spite of all this, the kingdom retained its former extent down to the Russian conquest. The Russian troops had been in contact with the troops of the Khan of Khōkand since 1850 on the upper course of the Sir Darya, about two hundred miles from the mouth and in the north-east since 1860 between the Ču [q.v.] and Ili. All these regions were still under the governor of Tashkent, who was also responsible for the maintenance of agriculture; the governor Mirzā Aḥmad (1853–1858) is said to have carried out irrigation works from the town of Turkestan to the valley of the Ču. It was only shortly before the Russian conquest in 1865 that Tashkent passed into the possession of the Amir of Bukhārā. From 1866 the kingdom of Khōkand became limited to Farghāna and remained nominally independent within the boundaries of the latter, even after the treaty with Russia in 1868. To this period belongs the digging of the Ulugh Nahr canal (Middendorff, Einblicke in das Fergana-Thal, St. Petersburg, 1881, Appendix, p. xxi) and several buildings (the urdu or palace of the Khan, frequently repurposed, e.g. in F. v. Schwarz, Turkestan, p. 412, and better in W. Masalski, Turkestanskiy Kril', St. Petersburg, 1913, p. 701 and 703; the
Medrese Häkım Ayin and M. Sultan Murad Beg, built by the mother and the brother of the Khân, reproduced in M. Ostroumov, *Islamovoljčenije*, p. 184) were erected at this time.

After the deposition of Khân Khudâyâr by a popular rising and the new troubles thereby provoked, the remainder of the kingdom was incorporated in Russia as the "territory of Farghâna". Khâqand still continued to be the largest town (113,636 inhabitants, according to the census of 1911) under Russian rule and the most important trading centre in the territory; the newly founded town of New Marghelân, later Skobelew, now called Farghâna, was the residence of the governor.

The last time Khâqand played a part on the political stage was in 1917, when an "autonomous government of Turkestan" was formed there; in the next year the victory of the Red Army put an end to it.

**KHÔL.** (See KHÔM.)

A people of northeastern Tunisia. Khûmiria has as its boundaries, to the north the Mediterranean sea, to the west the Algerian frontier, to the south the Wâdi Ghezala, a tributary of the Medjërda, to the east the country of the Nefta and the Chiâbia. The area of this region is about 350 square miles. It is a country with a very hilly surface, occupied by a mountain mass stretching as far as Algeria. Although the average altitude hardly exceeds 3,000 feet, these heights cut by deep ravines and steep gorges, give to the country a very rugged aspect. Khûmiria is for the natives "the mountain par excellence, Djebel Djëbaliye. The sandstone formations which constitute the subsoil are favourable for arboriculture. The forests of cork-oak and of Zèan-oak occupy here an area of a hundred thousand hectares. The rainfall here reaches 66 inches a year. The water filtering through the sand-stone reappears on reaching the impenetrable marl as springs and flows towards the valley of the Medjërda and especially towards the Mediterranean. Agriculture can scarcely be practised except in the alluvial plains of Tabarka. Everywhere, besides, a border of dunes stretches between the coast and the forest, and partly arrests the waters coming from the interior. Deposits of zinc, of lead, and of iron have been recognised at different points.

The population of Khûmiria is about 6,500 individuals. The natives called Khûmir or Khûmair are divided into 4 tribes: Khûmir of Tabarka, Atfâsa, Tâdamka, Sellûk. The rearing of animals, oxen, sheep, and goats is their means of livelihood. Only those who live around Tabarka devote themselves to agriculture. The women manufacture coarse cloth, and household utensils in common pottery. Lastly numbers of natives are employed by the administration for the exploitation of the forests of cork-oak. The Khûmiris are settled, or half settled. They live in huts or gourbis of branches, usually situated on the slopes of the mountains or in the neighbourhood of the river. Some of them have retained the use of tents. Near Tabarka there is also a small colony of Ziwâwa, the descendants of Kabyls of the Bougie district, settled at this place in the xvith century by the Bey Hammuda. They cultivate vegetables and fruit, live in stone houses, and enjoy a comfort much in excess of the other natives. The Europeans, who are few in number, are found in the centres of Ain Drahem [q.v.] and Tabarka [q.v.].

The Khûmir may be regarded as the descendants of the Sansâdja, who occupied the northern coast of Tunis and of the province of Constantine at the time of the Muslim conquest. This primitive stock has been reinforced by other Berber elements, driven from the centre towards the north after the Filali invasion, and finally by northwards.

In spite of their Berber origin, the Khûmir have for a long time been arabised. They have given up the use of the Berber language which has only left traces in their dialect and have given themselves an Arab descent. They claim, indeed, as their ancestor, a certain Khûmis b. Amor, of Arab origin, whose descendant Sidi 'Abd Allâh b. Djemâl, is said to have established himself near Ain Drahem. According to another tradition this personage is said to have attached himself to the tribe of the Hîmir or Kamir, who at the time of the conquest, had passed from 'Irak into the extreme Maghrib, from which 'Abd Allâh is said to have migrated into Tunis some centuries later. The different Khûmir tribes are said to be descended from the sons of Sidi 'Abd Allâh, whose "Marabot" is still at the present time the religious centre of this district. Twice a year in spring and in autumn, a much frequented Zerda is celebrated there. It has also been held that the Khûmir had for a long time inhabited the south of the Regency under the confederation of the Shabia, and that after the destruction of this confederation in the xvith century they fled for refuge into the mountains of the north.

In the shelter of their forests and of their mountains, the Khûmir retained until the end of the nineteenth century an almost complete independence. Their political organization was very rudimentary. They did not possess Kâdîs and their disputes were brought before the djâmâ'a. The tribes were often at strife with one another; they, however, sometimes formed federations to combat the populations of the valley of the Medjërda, or to resist the attacks of the Beys. The latter, under whom they nominally were, never could make them pay the taxes. Installed in the island of Tabarka, the soldiers and the officials of Tunis found themselves forbidden access to the country. The Ziwâwa settled on the coast by Hammûda, in order to prevent the incursions of the mountainiers, were content
to receive the pay which was granted to them, but refrained from entering into conflict with their dangerous neighbours. The Khimir, on their side, lived mainly by brigandage at the expense of the Tunis tribes, or of the Algerian tribes of the western frontier. The Beys of Tunis showed themselves powerless to put down these depredations. Acts of violence multiplied under the government of Muhammed al-Sadok. Thus the French government decided in 1881 to themselves to punish the guilty ones. This was the origin of the Tunis expedition which aimed at the establishment of the French Protectorate. The operations against the Khimir were very brief. At the end of the month of April, 1881, a column from Algeria under the command of General Delbecque penetrated into Khumiria from the west, while a detachment disembarked at Tabarja; on the 8th May the column occupied the marabout of Sidi 'Abd Allah b. Djemal and, on the 13th, 'Ata Draham. By the end of the month the conquest of the Khimir was achieved. The construction of a fortified post at 'Ata Draham assured the final pacification of the country. Since then the almost complete tranquillity has never ceased to reign, and Khumiria is to-day the region of Tunis where the fewest thefts and crimes of violence are committed.

Khorāsān (Country of the “rising sun”, from khur “sun” and ašan “rising”); P. Horn, Grundriss der iran. Etymologie, N°. 233; Grundr. der iran. Philologie, vol. i, 2nd part, p. 175; Wis a Kāmin, p. 119; cf. Yaḵša, s. v.; opposed to khorārān the “west”); a vast country to the east of Iran, comprising the lands situated to the south of the Amūdārya (Djīān) and to the north of the Hindū-kush (Paropamisus), but embracing also politically Mā-warā' al-Nahr (Transoxiana) and Sīdījān (Sakastana). Under the Šāhānṣāhs Khurāsān, classified under the fourth clime, was part of Erānšahr; it was administered by a ḫavābaḵ, who held the title pāḏagpān and by four marāṣfān, each governing a fourth of the territory: 1. Malḵ-i Ḫᵛorāsān; 2. Balḵ and Toḵtāzān; 3. Herāt, Būḥāndeh, Bādghīs, Sīdījān; 4. Transoxiana (Ibn Khordadbeh, p. 18). This province yielded a revenue of 37 million dirhems. To the Arab geographers this country had for its boundaries on the east, Sīdījān and India (including Wakkikhān), on the west the desert of the Ghuzz and Ljudjān; on the north Transoxiana (Mā warā' al-Nahr) and on the south-west the desert of Persia, and the canton of the Kūmis (Irāḵ-adjamī). The principal towns were: Nāsābār, Merw-Shāhjān, Herāt, Balḵ; other towns: Ťūs, Nāz, Abīward, Sarakhs, Aṣfūr, Bādghīs, Djudjān, Bāmilī; Ghurājān and Toḵtāzān were also included amongst them. At the present time the province of this name includes less than half of ancient Khurāsān; the rest of the country, to the east of a line starting from Sarakhs in the north and running directly to the south and passing half way between Meshhed and Herāt, belongs to Afgānistān; the region which extends from Merw to the Oxus is Russian territory. Meshhed has remained the capital of this shrunken province. The chain of mountains which runs along the southern border is from 11,000 to 13,000 feet high. Water is scarce in this province. The country offers the appearance of a group of oases, watered by intermittent rivers and by wells situated along their subterranean course. The population is sparse and mixed. At the time of the Muslim conquest Forestieri, Badghīš and Būšān were put under the authority of a chief whom Ballāḏūrī (p. 405, 1, 12) calls Žīmīn “the great”. Herat in particular was in the territory of the Ephtalite Huns (īratīt, Ballāḏūrī, p. 403, 15; Tabarj, 1, 2885) so that the last Persian territory to the north was marked by the district of Marw al-rūd, under the command of a Marzdān called Bāḏhām. In the year 31 (651–652) an army, which set out from Fārs and from Khūzestān, and was put under the orders of Dāhiḵ b. Kās whose surname was al-Ānuf, by the command of ʿAbdallāh b. ʿAmīr b. Kuraīz, invaded Khorāsān by way of Fahlī (Pahlīwān whence the Parthians originally came), conquered Toḵtāzān and brought about the capitulation of the inhabitants of Balḵ (cf. Sebībī, p. 137). According to Ibn Kūtaiba (Muṣṭaddas, p. 293), the inhabitants of this province were converted very quickly to Islam; at all times arrogant and unruly, they were often rebelled against the central authority. During the civil war between ʿAli and Muʿāwiyah, the Arabs were driven from Nāsābūr (Tabarj, i. 3249, 3350; Ballāḏūrī, p. 408) and the Chinese installed a Turk as governor of Toḵtāzān; ʿAli sent Kulaḏ b. Kaʿīs in 37 (657) to bring the inhabitants of Nāsābūr to submission (Dinawarī, p. 163).

As soon as Muʿāwiyah was the undisputed master of the Empire, he appointed ʿAbdallāh b. ʿAmīr b. Kuraīz governor of Baṣaṭān and bade him reconquer Khorāsān; the latter in the year 42 (662) named Kās b. al-Baiḫāmīs as his lieutenant, but in the year 43 (663) he sent ʿAbd al-Raḥmān b. Samuʿa, who had already governed Sīdījān under the Caliph ʿOṯmān, to reconquer Balḵ and Kābul. The first of these two towns was retaken in the year 51 (671) by al-Raḥīm b. Ziyādīy. In the year 90 (708) the Khurāšān Nāṣir of Bādghīs rebelled, took the yagbaḵt (yagbaḵt) of Toḵtāzān prisoner but in the following year was conquered by ʿOṯmān. The Muslim army was about to death. It was in Khorāsān that ʿAbū Muslim and the ʿAbbāsid propaganda recruited the troops which overthrew the caliphate of the Omayyads. Aḥādīth, without doubt made up after the event, claims that the Prophet declared: “When you see the black flags coming from Khorāsān, go to meet them, for in their midst you will find the Mahdi” (Muṭṭahar b. Tāhir al-Makdisī, Livre de la Création, ed. Huart, ii. 156). An attempt was made to find in this an indication of the coming of the resurrection; but even by the time of this author it was explained by the revolt of ʿAbū Muslim (op. cit., ii. 157). The internal disputes between the insurgent Arabs had for a long time fomented disorder; the ʿAzīz representing the Yemenites, the Tamīm and the ʿAbd al-Kās of the race of Mojar
fought for supremacy; the first seemed to triumph with the family of al-Muhallab, which remained for a long time in power. Naṣr b. Saiṣṣār had called the attention of the Damascus caliph to the 'Abbāsid movement without obtaining re-inforcements. When Abū Muslim, gathering around him the Sā'īfs, established a camp not far from Merw, he was then able to intervene successfully in the battle fought by Naṣr in the streets of this town against Ibn al-Karmāni and to put Naṣr to flight (443 = 745). The whole country was soon afterwards conquered.

Khorāsān really recovered its independence with the foundation of the Tahirid dynasty by Tahir b. al-Husain, nominated in 205 (829) governor of the eastern regions by the Caliph al-Ma'mūn. It was joined to his possessions in Sijjistān by 'Amr b. al-Layth al-Saffār in 283 (896), then it was annexed to Transoxiana by Ismā'īl al-Samānī in 287 (900); it was occupied by the Sūjan Mahmūd b. Subuk-takīn al-Qhazawī in 354 (994). Toghrilbēk the Selekū seized Naisibūr in 429 (1037) but the inhabitants revolted in 430 (1038) while the Sūjan Mas'ūd reconquered Khorāsān, but only for a short time, because Toghrilbēk finally captured the city and its castles in the following year. On the death of the Sūjan Sandjar in 552 (1157) the Ghuzz recommended their incursions and devastated anew the country, a part of which recognised the authority of Allâb al-Mo'ayyad, the slave of Sandjar [q.v.]. Anarchy and brigandage favoured the expeditions of the Khwarizmshāh and of the Ghurids, and the country finally remained in the hands of the former. The conquests of Chinghiz-Khān completely destroyed their independence in 617 (1220).

At the death of the Mongol Khūn Abī Sa'īd in 536 (1330), Khorāsān saw the dynasties of the Kert and the Serbedrīr [q.v.] give a certain life to the country up to the time of the campaigns of Tīmūr (783 = 1381). It was the centre of the empire of his son Shāh-Rukh, Shāheb-Khān Orbek conquered it in 913 (1507) after disputing its possession with Shāh Ismā'īl I. With the exception of Naisibūr and of Meshed, it was incorporated into Afghanistan by Ahmad Shāh Abdālī after the death of Nādir-Shāh about the year 1160 (1747). In 1249 (1833) Kämān defended Herāt against Abbās Mirẓā, the son of Fath 'Alī Shāh, who was supported by Russia and concluded with England, who had sent an expeditionary force to occupy the chief towns of Afghanistan, a treaty which was signed by Lieutenant Pottinger. In this treaty he recognised the sovereignty of Shāh Shudja [q.v.]. From this time Khorāsān has remained in two sections, the boundary of which starts from the Hârt-rūd at Sarakhs and runs from the north to the south, on the east side of the Persian province of Sijjistān as far as Lake Hāmūn.

Khorāsān (Band), a Tunisian dynasty. The establishment of the Banū Khorāsān in Tunis was a consequence of the Hīlālī invasion. Irritated because the Zirid Sulṭān al-Mu'izz did not protect them against the brigandage of the Arabs, the inhabitants of Tunis in 451 (1059) asked the Ḥammādīd sovereign of al-Kal'a to send them a governor. This prince chose for this office Ḥādī al-Ḥaḳḳ b. Ḥādī al-ʿAzīz b. Khorāsān, a personage originally from Tunis according to certain authors, but belonging, according to Ibn Khaldūn, to a Ṣanḥādī tribe. Ḥādī al-Ḥaḳḳ gained the support of the inhabitants by his good administration, and succeeded in putting an end to the plunderings of the Arabs by signing a treaty with them. But he had to fight the Zirids who wished to recover Tunis. Besieged by Tānim b. al-Muʿizz, he was forced to recognise him as sovereign. On his death (488 = 1095) his power passed to his son, Ḥaḥī b. ʿAzīz, and after him to his grandson, Ṭākim. This prince was, according to Ibn Khaldūn, the most notable representative of his dynasty. He put to death his uncle Ismā'īl, got rid of the council of shāiks, which Ḥādī al-Ḥaḳḳ had associated with him in the government, and ruled as an absolute monarch. He surrounded the castle and concluded a treaty with the Arabs, to ensure the provisioning of the town and the security of travellers. He constructed for himself a palace and surrounded himself by men of letters. The Zirids, however, had not disarmed. They supported Ṭākim b. Ṭākim, the chief of the Arabs, who were installed in the ruins of Carthage, which Ṭākim had attacked and obliged the governor of Tunis to submit to their demands (510 = 1116/1117). Four years later the Ḥammādīds, not wishing to allow their authority to be lessened for the benefit of the Zirids, came in their turn to besiege Tunis. Ṭākim saw himself forced to recognise the sovereignty of the Sūjan of Bougie. He kept, however, the government until 522 (1128). At this time he was deprived of power, imprisoned at Bougie and replaced by a Ḥammādīd official. After an interval of twenty years, the Tunisians having expelled their governor, the Banū Khorāsān regained their power. ʿAbd Allāh b. Ḥādī al-ʿAzīz was chosen by them as Amir (543 = 1148/1149). He died in 552 (1157) while the Almohads besieged the town. His nephew ʿAli b. Ḥādī replaced him, but at the end of five months, had to capitulate and make his submission to ʿAbd al-Muʿīn. Sent to Marrākesh with all his family, he died during the journey.

he might be able to begin excavating. Khorsabād is mentioned by Yākūt as Khurustābād, a village with good irrigation. The form given by Yākūt would seem to be in opposition to the derivation from Khorsabād, which is supported by Oppenheim. Yākūt mentions in this neighbourhood a town in ruins, which he calls Šarʿan, a dependency of Nainawā (Nineveh) where it is believed treasures were to be found. Šarʿan ought very probably to be corrected to Şarghūn, the form under which the name of the Assyrian king Sargon II (who died in 705 B.C.), the founder of this Assyrian capital, has survived.

The village was situated on the highest summit of a group of artificial mounds. The excavations were begun in 1843 by Botta, French Consul at Mosul, and were continued and completed from 1851—1855 by Place. The Assyrian town, Dūr-Šarrukin, was in the shape of a rectangular parallelogram with corners facing the four points of the compass. The palace of Sargon was on the southwest side, and the great temple was built on both sides of the northwest wall of the town. The antiquities which were discovered were transported to the Musée du Louvre in Paris.

KHOSRAW. [See KHOSSREW, KOHUS, KUSA, KISSA.]

KHOSREW, Molla, a famous Ottoman jurist, whose real name was Meḥmed b. Fīrūz b. Ali. M. Khoşrew according to one statement was of Turkoman (tribe of Warsak) descent and born in the village of Karghan (half way between Siwās and Tokat), according to others, however, he was of "Frankish" descent and the son of a "French" nobleman who had adopted Islam. According to Saʿd al-Dīn his father was of Rōm (Rūm) descent. Khoşrew became a pupil of the famous disciple of Taftāzānī, Barhān al-Dīn Ḥādīr of Herat (cf. Islam, xi. 61 and Saʿd al-Dīn, Tāḏī al-Tawārīḵ, ii. 430), and received a teaching post in the Shāh Malik medrese in Adrianople; in 848 (1444) he became kādī of Adrianople and later kādī-asker of Rumelia. On the death of Neyrīrbeg [q.v.], the first kādī of Constantinople, he succeeded him and was at the same time muḍarris at the Aya Šoḥā. Feeling hurt at Mollā Kūrān [q.v.] being promoted over him, he went to Brusa in 856 (1452) and built a medrese there. In 874 (1469) he returned to Stambul by command of the Sultan, became Şahīkh al-Islām and died there in 885 (1480). His body was taken to Brusa and buried in the court of the mosque founded by him. He also founded a mosque in Stambul, which bears his name (cf. Hāfiz Huseyn, Ḥādīkāt al-Dīnawārī, i. 201; J. von Hammer, G. O. K., i. 88, N. 428).

Molla Khoşrew was a celebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as an author. His two most important works are the often annotated Durūr al-Ṯukkām fi Sharḥ Gharār al-だったので, a dogmatic work Mīrāt al-Wṣāṣīl fi Ḳim al-Wṣāṣīl (printed Cairo 1262 and Stambul 1304). On others works by him cf. J. von Hammer, G. O. K., i. 589 sq. and Brockelmann, G. A. L., ii. 226 sq.

KHOSREW BEG, also called GHAZI KHOSREW, Ottoman governor of Bosnia.

Khoşrew was the son of the governor of Bosnia (869/870), later of Skutari (Albania) Našūf Beg, who had married a daughter of Bāyezid II in 894 (1489) (cf. Die altm. anonymen Chroniken, ed. by F. Giese, Breslau 1922, p. 122, 5, i. col.; cf. also J. V. Hammer, G. O. K., ii. 302, and Szīqīl-i ʿothmānī, i. 555, s. v. Našūf Beg). He is therefore sometimes called Sultanazāde. Thanks to his connections, Khoşrew Beg was appointed governor of Bosnia at quite an early age in 924 (1518) and then transferred in 927 (1521) in the same capacity first to Skutari (Albania), later to Semendria (Smederevo, Serbia). In 932 (1525) Khoşrew returned to Bosnia, was later temporarily disgraced, dismissed, but restored again to office. He lived in Serajevo [q.v.] where he died in 948 (1541/1542) and was buried in the mosque built by him in 937 (1530). One of Ghażi Khoşrew's sons was called Maḥmūd.

Ghażi Khoşrew Beg attained fame for his numerous conquests in the frontier lands of Turkey, notably in Bosnia; but he also ravaged Hungarian territory with his raiding parties (cf. J. von Hammer, G. O. K., iii. 189), when he plundered and occupied the country round Eszék and Pozega. Ewwīya Čelebi gives the number of his conquests as 170 fortresses, no doubt with the usual exaggeration. Ghażi Khoşrew however is still more famous, especially in his own district, for his rich endowments which Ewwīya Čelebi probably with less exaggeration puts at 300. In Serajevo alone his charitable foundations are many numerous. Besides the mosque which bears his name, he built opposite it a medrese, also baths for men and women and a bazaar with 90 roofed shops, a koḵ-ḵān with 60 roofed store-rooms. In a foundation grant (wakīf-nāma) of the year 938 (1531) the various foundations are detailed. The property which Khoşrew left for the maintenance of his buildings and for public kitchens was enormous. In money, gold and silver vessels and jewels alone, it amounted to 3,000,000 dirhems, an enormous sum for those days, which although the foundation has been reduced in course of time to less than a quarter of its former size, still yielded an annual income of £ 2,500 a few decades ago. The estates and the house-property of the endowment still exist. Khoşrew Beg therefore created himself in Bosnia a permanent memorial of gratitude and remembrance in the hearts of the people, who everywhere revere him as a saint and great benefactor.
KHOSREW BEG — KHOTAN

Peetz, Die ottomanischen Statthalter von Bonn (ibid., ii., 344 sqq.), based on the Sānāie of Bosnia for 1295, gives the tenures of office by Khosrew Beg as 924/927 and 938/949 and his successor Hasan or Mīkhālzāde [q. v.] Mehmēd. — The splendid letter of renewal, yards long (Muḥarrar-name) of Sulṭān Osman II for the foundations of Ghāzi Khosrew Beg dated 1290/927 (1618/1619) is in the Stischische Landesbibliothek in Dresden (cf. H. O. Fleischer, Catalogus codl. miss. err., Leipzig 1831, p. 47, No. 320, 2) and still awaits editing and publication; Kitāb Dāwūd al-Muṣīlih, Stambul, n.d., p. 8 sq.

(FRANZ BABINGER)

KHOTAN. There are two places of this name in Afghanistan. One is in the Oxus basin, near Andarab, in what is now called Afghan Turkistan, and is on the borders of Badakhshan. It lies S.E. of Balkh, S.S.E. of Haibak, N. of Kābul and Čārikār, and at the back of (i.e. north of) the the Salin Kābul river. It is not very well known, and is seldom marked on the maps, but was of importance in old times. Vākūt (Barber de Meynard’s translation) calls it “le chef lieu d’un petit pays fertile et boisé”, and it is several times mentioned in Bābur’s Memoirs. He spells it Khwāst, and it seems to be identical with the Khūst of Kāzwīn and the Khāsh of other writers. In S. Zain’s translation of Bābus “Memoirs” it is called Khošt-i Badakhšān. Two of Bābur’s daughters were born at Khost, one of his chief wife Māhām, and the other daughter Dīlār Bēgām. Evidently Māhām was closely connected with Khost. Her brother Muhammad ‘Ali Taghani was a Miḥrāzāda of Khost, and Bāyarzīd Bīyāt in his Memoirs, called the Tārīkh Hamayn (I. O. M. No. 223 of Ethē, p. 262), mentions that Hamayn (Maham’s son) visited his maternal grandparents at Khost. We also find Bābur making special mention of the place when sending presents from India (see the Tabakati-i Bābur of his ecclesiastical judge S. Zain, who notices that the people of Khost were distinguished for piety). This seems to point to Māhām’s family, for she was descended from the famous saint Ahmad Dījām. Vākūt says that Khost was the birthplace of an early Māhām (Barber de Meynard, p. 219). Ibn Baṭṭūta also speaks of the many cells of religions in the Hindu Khos. It is probable that Khost has been ruined by the Turcomans and Uzbeks. For references to Khost see Guy Le Strange, The Lands of the Eastern Caliphate, p. 410 and 417, Tārīkh-i Rashidi, translation, p. 103 and note, Vambéry’s Shāhūnāmeh, Canto 63, p. 360, and Khwāst Khan, i. 615, where there is an account of Dījāt Singh and his Rādpūts gaining a victory over the Uzbeks at Khost, and of their erecting a wooden fort there, as timber was plentiful. See also Bābdāgāhina, ii. 403; the year was 1645 (1655 A.D.).

The other Khost is a valley in the S.S.E. of Afghanistan, and borders on the Pashtur district. The inhabitants are warlike and have given trouble by making raids into British territory. See Raverty’s Notes on Afghanistan, p. 75; Clement Markham in Proceed. Geog. Society for 1879, p. 49; the Official Report of the Second Afghan War, London 1908, and The Times of March 28, 1914.

There is a third Khost in Balṣīstān, 35 m. E. of Quetta, which is the seat of a coalfield (Imperial Gazetteer of India, iii. 338 and vi. 306). Khwāst in Persian means an island, and so may have the same import as Andarāb.

(H. BEVERIDGE)

KHOTAN, a town in Chinese Turkestan. In the oldest Chinese records from the 2nd cent. A.D. the town is called Yu-tien for Yü-t’an; this is the name still given to the ruins of the pre-Muhammadan town, the most eastern part of which lies 5 miles west of the modern town. Later the name is written Khotaun and Ho-tan (cf. E. Chavannes, Documents sur les Tchünke [Tarco] océaniques, St. Petersburg 1903, p. 125). The Indian name Kustana or Kustanaka “breath of the earth” in Chinese transcription Kiua-sa-tan-na is explained by Sir Aurel Stein, Sand-buried Ruins of Khotoan, 1903, p. 402, as a learned etymology of the native name. On the ruined site of Yü-t’an and its surroundings cf. especially M. A. Stein, Ancient Khotoan, 1907, p. 190 sqq. As Stein shows, old Buddhist places of worship are now revered as the tombs of Muslim saints. The oldest dated Buddhist monument found by Stein in the site of the town is of the year 269 A.D. (Sand-buried Ruins, p. 405); but Buddhism must have been disseminated in Khotoan much earlier. The oldest documents and writings are in an Indian dialect in which Stein now, in contradiction to his earlier opinion, sees not the language of the native population but a literary language which arose under the influence of Indo-Sythic domination (M. A. Stein, Ruins of Desert Cahlai, 1912, i. 290 sqq., 386 sqq.). Later we find instead of this in Khotoan and east of it the native Aryan language called “language II” by E. Leumann, which is Iranian in grammatical structure but has a vocabulary much influenced by Sanskrit, cf. Z. D. M. G., ixi. 648 sqq. and especially E. Leumann, Zur nord-östlichen Sprache und Literatur, Strassburg 1912, p. 29 (the language seems “an almost indiansed Iranian just as English is a romanised German”); whether this language had already been driven out by Turkish in pre-Muhammadan times, is not certain. In contrast to Kāshgar and the northern part of the modern Chinese Turkestan, Khotoan is not mentioned in the Hudud al-‘Alam (MS. of the Asiatic Mus., f. 144) in the description of Turkish tribes but their lands, but under China; in the frontier-land between China and Tibet and was under the rule of a separate prince who called himself suzerain of the Turks and Tibetans” (ażam al-türk wa ‘l-Tubut). On the other hand according to Gardizi (in Barthold, Odet o pišduke v Srednyavuyu Asiyu, p. 94) the town of Kai (?) fifteen days’ journey from Khotoan on the road to China was under the rule of the (Turkish) Tughughuz. According to Gardizi the people of Khotoan were Buddhists but he also mentions a Muslim cemetery north of Khotoan and two Christian churches in the town itself (neither Christian nor Manichean relics have so far been found in the ruins).

Islam spread much later in Khotoan than in Kāshgar and was brought thither by force of arms. Ibn-al-Athir gives as the conqueror of Khotoan Kādir Khan Yusuf who died in 423 (1032) of whom we have coins struck in Kāshgar and Yarkand from the year 404 (1013–1014) (A. Markow, Inventarny Katalog etc., p. 192 sq.) Khotoan like Kāshgar was later under the rule of the Yek-Ḵāns (cf. above, ii. p. 465) and the Kara
Khotan (ii, p. 728); on the conquest of the country by Kuchik, the ruler of the Naiman and the persecution of Islam instituted by him, see ii, p. 739. According to Djuwaini (Tārīkh-i Miḥān Gūshā, ed. Mīrza Muḥ. Kazwinī, i. 49 and 52 sqq.) he had the Imām ʿAlā al-Dīn Khotani nailed to the door of his medrese. Nothing was known of this martyr by the time of Ḥaḍar Mīrza (cf. ii, p. 232 sqq.); his tomb was also unknown (Tārīkh-i Rauḥūdī, transl. E. D. Ross, p. 298). There was therefore no native historical tradition in Khotan; the references to Khotan in the Arabic and Persian geographical works are extremely scanty; even the site is wrongly given by Ẓāmīn (D. S. Margoliouth, Gibb Mem. Series, f. 189b) and by Yākūt (ii. 403) who follows him.

In the xvi-th century Khotan according to Marco Polo (ed. Vule-Cordier, i. 188 sqq.) was under the rule of the Emperor of China, not like Yarkand under the rule of prince Kaidī (cf. above, i, p. 848). Khotan later seems to have regularly shared the political history of Kāshghar and other towns of this region, belonged like Kāshghar in the xvii-th century to the state of the Khodja’s (saints), had to submit to Kalmuck and later to Chinese rule, after the events of 1280 (1863–1864) to the rule of the invader Yāqūb Beg and returned after his death (1877) to its allegiance to China. On a history composed in Khotan quite recently (finishing on 15th Shaban 1311 == Feb. 24, 1894) dealing with events since 1280 (1863) cf. Bulletin de l’Acad., etc., 1921, 209; and see also the section on the Khodja of Khotan in the Tārīkh-i Emēnīya, ed. Pontosow, p. 161 sqq.

In the modern town the silk industry, much cultivated here from the earliest times, still survives. The number of inhabitants is very variously given; according to Kornilow, Kāshghariya, Taštīkent 1903, p. 275 only: 15,000; according to G. and P. Sykes, Through deserts and oases of Central Asia, London 1920, p. 246: 50,000.

Bibliography: In addition to the works mentioned in the text see more especially: E. Bretschneider, Med. Researches from Eastern Asiatic Sources, ii. 47 sqq., 246 sqq.; M. Hartmann, Chinesisch-Türkistan, Halle 1908, p. 93 sqq. — On the rule of saints in Islam and the relation of Khotan to this see M. Hartmann, Islamische Orient, Berlin 1909, i., p. 195 sqq. and ibid. (W. Barthold).

Khubaib b. ʿAdī al-Anṣārī, one of the first martyrs of Islam. The main features of his story common to all versions are as follows: After the battle of Uhud (on the chronology see below) a small body of ten of the Prophet’s followers was spied out and surrounded between Mecca and Ṭisam by 100 (or 200) Liḥyānīs who belonged to the Hudhail. The leader of the hard-pressed little band, ʿAsim b. Thībit al-Anṣārī (according to others the leader was al-Mardāḥ), loudly refused to yield. He and six others were killed whereupon Khubaib, Zaid b. al-Dāthina and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mecca and sold. Khubaib fell into the hands of the Banu l-Hārīth b. Āmir b. Nawfāl b. ʿAbd Manīf who on the expiry of the sacred period took him out of the Ḥaram to al-Taʿām, bound him to a stake and killed him with arrows (ṣabrac) in revenge for al-Hārīth whom Khubaib had killed in the battle of Badr. Before he was tied to the stake, Khubaib asked for time to perform two rakāʿas which was a sunna for martyrs, comparable to the last prayer of Christian martyrs. Khubaib is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body as Allāh was able to bestow his blessing even upon his severed members. Kūfīn formules uttered by him besides these verses have also been handed down in which he appealed to Allāh for vengeance on his enemies. Those present are said to have shown great trepidation at this curse of the dying man; it is related that Abū Sufyān hurriedly pressed the little Muʿāwiya to the ground to protect him from the consequences of the ill-omened words; and Saʿd b. ʿĀmir cried to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death ʿĀṣim prayed to Allāh asking him to communicate news of the event to his Prophet in Medina, which actually happened. His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wāṣikī, p. 155, however, Muḥammad received news of the event at the same time as that of Bīr Maʿānī; and according to Ibn Ḥishām, p. 641, it was not ʿĀṣim but Khubaib, who prayed to Allāh asking him to cause Muḥammad to be informed. — According to al-Zuhri and ʿUrwa (see the latter’s brief account in al-Wāṣikī, p. 156) the ten men were sent out as a ẓarjā to spy upon the Meccans; according to Ibn Ḥishām, p. 63 b, al-Wāṣikī, p. 157 and Ibn Saʿd, ii/ii. 39 sqq.: ii/ii. 33 sqq. ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like that which has been woven round the drama of Bīr Maʿānī, which happened at the same time. Al-Wāṣikī tells us under the year 6 A.H. that Khubaib was not yet at that time a prisoner among the Meccans (p. 227). The only certain chronological statement that can be made is that the event took place after the battle of Uhud as ʿĀṣim fought there. In the official ʾIṣra, the incident is recorded under the name Yawm al-Raḍī and put by Ibn Ḥishām in the year 3 and by al-Wāṣikī in 4 A.H.

The figure of the protomartyr Khubaib lent itself readily to embellishment. The daughter of al-Hārīth (according to others Mawṣīya, a client of Hudjair b. Abī Ḥādī) in whose house he was kept a prisoner, saw him one day eating grapes, although those could not possibly be obtained in Mecca. — When his martyrdom approached, he asked for a knife with which to remove the hair on his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when Khubaib noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. — The verses above mentioned, which he is said to have uttered at the stake have grown in Ibn Ḥishām to a whole poem. The same author (p. 644 sqq.) gives the lament for him. For how his corpse was taken from the ʿUrāfah and swallowed up by the earth, see Taʿbari, i. 1436 sq: Ṭāba, i. 862.

Bibliography: al-Zuhri’s or Abū Hurairah’s tradition in Aḥmad b. Ḥanbal, Munad, ii. 294
KHUDAWENDIGAR (p.), derived from Khu-
dawend, signifying master, lord, prince, and often used in literature to denote God. In the
history of the Ottoman Empire this word was:
1) the surname of the Sultan Murad I (1360–
1389, q.v.) and 2) the name of the sandjak and
later of the williyyet of which Brusa was the capital.
The earliest Ottoman chroniclers do not yet give
this surname to Murad I (generally called Sul-
tan Murad Ghazi, see e.g. Anonymous Chronicle,
ed. Giese). It does not appear until the xviiith
century (as Soy al-Din; see Harmer, G. O. R.,
i. 107). But the title of Khunkär is
found amongst the earliest historians (v. 'Ashik
Pasha Zade, Ta'rikh-i, Constantinople 1332, p. 68)
and is generally considered as an abbreviation for
Khudawendigar ("Ali, Khan al-Akhbar, v. 16;
Ferheng-i Shafüri, s. v.; Sani, Kamos-i Turki, i.
589; Nadji, in his Lughat, derives it however from
kunkur, "bringing happiness"; see also J.A.,
2nd Series, xv. 276, 572). The title of Khunkär
is given to all the Ottoman Sultans, at least until the
xvith century, along with that of Pâdishâh. The historian Ibn Iyas says that the Egyptians
were amazed at this strange title borne by Selim I
(see Barthold in Isl., vi. 393). But Khunkär is
also given as a title to several great men of
religion and mystics, especially to Djâal al-Din Rûmi,
who is often called Mollâ Khunkär. The title of
Khunkär derived from Khudawendigâr seems then
to belong to the same category as that of Pasha,
which is probably derived from Pâdishâh (see
Giese in Z.S., ii. 262) that is to say both these
titles originated in the atmosphere of mysticism
which surrounded the origins of the Ottoman
Empire. The surname of Khunkär in its primitive
and literary form Khudawendigar then became
attached more especially to Murad I (see however
below), in the same way as the words pasha and
pâdishâh have each had their special development.
Khunkär (Constantinople pronunciation kunkäb) is
also found amongst geographical names such as
Khunkär Iskelesi, etc.

2) After the conquest of Brusa by Orkhan, the
town with its surrounding districts, was given as
a sandjak to Prince Murad Beg; 'Ashik Pasha
Zade, p. 43, says that the sandjak was called
after him, Beg Sandjâghî. But the later historical
tradition had it that the sandjak and later the
williyyet of which Brusa became the capital, were
called Khudawendigâr after the surname of its
first governor (see Hâджî Khalifa, Djihan-Numâ, p. 656).
Ewliya Celebi, however, says that from
his time (1630) Brusa was the capital of the
province of Anadolu and the residence of the gover-
nor (hâkim) who bore the title of Khudawendigâr
(Const. ed., ii. 70). It is then probable that the
origin of the geographical name Khudawendigâr
does not go back exclusively to Sultan Murad I,
but that it is derived from a title borne by the
high official who had his head-quarters at Brusa.
The religious buildings in the town of Brusa
bearing the name of Khudawendigâr such as the
Djâa'i Khudawendigâr or Ghazi Khunkar Djâ-
mişî (Ewliya, ii. 14; Cuinet, La Turquie d'Asie,
v. 127) and the Medrese-i Khudawendige (Ewliya,
ii. 17) are however connected with Murad I.

AL-KHUDJANDI, Hâmid b. al-Khîr Abd
Ma' another died about 391 (1000). He lived in
al-Raiy in the time of the Buyid Fakhr al-Dawla
(366–387 = 976–997); he gave the latter's name
to the sextant (not the sextant in our sense) which
he made (al-tinds al-fakhrî). This consisted of two
parallel perpendicular walls A and B 12 feet apart,
which reached 30 feet above the earth and 30 feet
below it (reckoning an ell at 18 inches). At the
south end and perhaps also at the north end of
the south wall was a dome with an orifice. Around
the latter a sextant with a radius of 60 feet was
described, which was formed by the formerly
polished surface of the wall erected between the
two walls. The sextant reached from 30 feet below
the earth's surface to the latter and every 10'
was marked. The rays passing through the orifice
were caught on a white plane which moved along
the circle. The greatest altitude of the sun was
thus obtained. Al-Khudjandi calculated with the
sextant the plane of the ecliptic in 384 (994).
As cloudy weather prevailed, the observations
which were made in the days before and after the
culmination of the sun in Cancer and Capricorn had
to be approximated for the calculation of the
ecliptic. By careful calculation and interpolations,
it was successfully done. The plane of the ecliptic
proved slightly different from earlier calculations
in 23° 31' 21". This figure differs by 15/4 minutes
from the true value then in use. From al-Biruni
we learn in the Mas'udi Canon that al-Khu-
djandi's value was falsified by the fact that the
instrument used for one of the two calculations
had been damaged. Al-Khudjandi explains at great
length that, as the astronomical values are variable,
there is no fundamental reason against a vari-
ability of the plane of the ecliptic also.

Al-Khudjandi also constructed the instrument
called al-'ala al-qamâla, "the comprehensive
instrument" (cf. J. Frank, L' une deux astronomie
arabe: Almanac, Zeitschr. fur Instr. Kunde,
1921, p. 193–200). It is a universal instrument,
filling the place of both astrolabe and quadrant,
but at first could only be used for one latitude.
Hibat Allah b. al-Humain al-Badi' Alu 'l-Kâsm
al-Asturlabi made it applicable to all latitudes

(E. Wiedemann)
KULUM, name of a place, situated 2 marsha (10 farsak) to the East of Balkh, on the road to the frontier of Badakshàn. Ibn Khurdamdib calls the station halfway between Balkh and Kholm, Waðå. A. Bures reckons a distance of 40 miles from Kholm to the ancient city of Balkh; the mediaeval geographers give the following distances from Kholm to Simindjân, Waralz (or Warwálz) and Bahará respectively: 2 days (Iṣja-khtí and Mukaddasset; acc. to Yâkût: 5 days); 2 days; 6 farsak (Ibn Khurdamdib; the extract from Ibn Dâ'far's Kitâb al-khârîjî gives 7 farsak, and notes besides 3 farsak from (sawâx) to Kholm).

The height of the place is said to be 1,800 feet above the sea (Ritter, Erdkunde, viii. 11). The river of Kholm, āb-i Kholm or Kholm-rûm seems to be the Artamis of the ancients (Pauly-Wissowa, Realenz., 2, ii. 1305). Ibn Khurdamdib (p. 33) mentions a nahr al-Dirâghân in the neighbour- town of the place; can this be the same as the Kholm-rûm? The fall of the river of Kholm amounts to 60 feet in each mile. On the upper course of the river of the village of Dâb is situated; the stream itself runs into the West of and parallel to another water-course, the Ghibi, to join the Oxus after passing Hâiakbâh and Kholm. Herewith may be compared the description in Bures' Travels (iii. 176): "Heibuk and Khooloom stand on the same rivulet, the water of which is dammed up on certain days, and allowed to run on others. The gardens on its banks are rich and beautiful, and among the fruit-trees, one again meets the fig, which does not grow in Câlool".

The town of Kholm is reckoned by the geographers to Tûkhrâstan, or, in a wider sense, to Khorâstan (cf. Yâkût, Mâ'djam, iii. 518: Tûkhrâstan is min navâhí Khurâstan). Al-Idrîsî seems to consider Kholm as a locality belonging to Badakshàn (Géographie d'Édrisi . . . , p. P. A. Jaubert, 1836, i. 474). The town belonged to the "mudîn laînat bi l-tâmîm" (Ya'shib, ed. de Goeje, p. 288); its dependencies were numerous (Mukaddasset); we find mention of Khârânjân (Ya'sib) and "Muzar" (Burnes; Mâzâr?). The climate is, according to the mediaeval authorities healthy, but breezy during the summer; the place was inhabited by Arabs from the Azd, Tamîm and Kás, who had settled there at the time of the conquest. Two theologians, Abu l-'Awdâq Sa'd and Ummân al-Khalîfî were, according to Yâkût, natives of Kholm.

As regards pre-Islamic times, it has been supposed, that the Aornos mentioned by Arrian, Anab., i. 29, was in the neighbourhood of Kholm, but this cannot be proved (comp. Grundriss der Iran. Phil., ii. 474, ann. 5; Pauly-Wissowa, Realenz., 2, i. 2659). Next, the Chinese traveller Huen Tsâng mentions the kingdom of Hu-lin (Kholm): it measures, according to his account, ± 800 li in circuit; the circumference of the capital is 5 to 6 li. There were more than 10 Buddhist monasteries, and above 500 monks. To the West of Hu-lin was Fu-ho (Balkh); but, though this identification seems to be correct, the transcription, according to Worans, "seems to require an original like Bokhar or Bokhara, the name of the country which included Bâchâ". Comp. S. Beal: Si-yu-ki: Buddhist Records of the Western World (Popular Edition), i. 43; Th. Watters: On Yuan Chwang's Travels in India (1904), i. 106, 109. Later, Kholm sometimes is mentioned during the struggles which the Muslims waged against the Turks of Central-Asia, e.g. in the year 785 (1380) in the war of Kutulâg b. Muslim with them; in 119 (737), when Abdallah b. Abdallah was in the field against the Khabzan, the latter tried in vain to take the town. Kholm is also met with in the assessment-list of 'Abd Allâh b. Tâhir of the years 211/212 (826/827-827/828): it is noted there for the sum of 12,300 dirham. On these data comp. Marquart, Erânisîêr, p. 82, 218 sg., where the authorities are given. In 268 (881/882) the rebel Ahmad b. 'Abdallah al-Khâjudjâni, after beating the army of Ablr Tâla, the general of 'Amr b. l-lâîf at Sarkhás, defeated him a second time near Kholm (Ibn al-Álbûlûk, vii. 209).

In the beginning of the 6th century, Kholm is described as having a mixed population consisting of Tadjjik's, Uzbek's and Kabûl's. Under the reign of Kiti'd Ali Beg (an Uzbek prince of Balkh, nominally tributary to the crown of Kabul), the town, then an important place, was liable to be harassed by the nomads of its neighbourhood. Because of this, the seat of government, which seems to have been at Kholm, was transferred to the locality of Tâsh Kurgân, situated on a distance of ca. 2 English miles from it. When Moorcroft visited these regions (1824), another calamity had also befallen Kholm. The year before, Murâd Beg, the prince of Kûnduz, had forced the inhabitants to migrate to Kûnduz, such compulsory removals being not uncommon during his reign. Since that time, Kholm proper has decayed, and its place has been taken by Tâsh Kurgân. This Muhammed Murâd of Kûnduz had held a command of minor importance under 'Ali Beg, but after the death of the latter, Murâd attained so much power, that he became in reality an independent ruler in the regions north of the Hindû Kush. New Kholm (Tâsh Kurgân) had, at the time Bures travelled there, some 10,000 inhabitants; it was the frontier town of Murâd's state. The sons of 'Ali Beg, in their turn, had become vassals of Murâd, and he settled in his name over the district, whose capital was Kholm, and which contained moreover Hâiakbâh, Chûrî, Andarâb, Talîkân and Ha'irá-Imâm.

KHUMĀRAWAIH B. AHMAD B. TULUN, born in 250 (864) was appointed by his father Ahmad his deputy in Egypt as early as 269 (882). Before his death, while on a campaign in North Syria, Ahmad at the request of his generals, dismissed Khumārawaih as his successor and died shortly after in al-Dirā al-Kaḍā'ī 270 (May 884). His older son Shāhīd had previously rebelled against him and was regarded as cruel and unjustly arbitrary. On his deathbed Ahmad had shown an inclination to make peace with Muwaffak, the all-powerful brother of the reigning Caliph al-Mu'tamid; the latter had readily considered the proposal. The negotiations however were interrupted by Ahmad’s death, for only his great prestige had induced his enemies to consider peace negotiations on a basis of his appointment as governor in Egypt and Syria. When the negotiations fell through, two partisans of the Caliph, Ibn Kindīdā’, who had previously been appointed governor of Damascus, and Abu ‘l-Sādīq, the governor of Northern Mesopotamia, went with their troops to Syria and sought Muwaffak’s support, which he promised them. The governors of Damascus joined them and handed over Antioch, Aleppo and Hims to Ibn Kindīdā’. Khumārawaih now sent troops to Syria who put down the rebellion in Damascus and advanced as far as Shāizar [q.v.] on the Orontes. The winter forced the two parties to go into winter quarters. Al-Muwaffak’s son Ahmad now arrived in Syria in command of the Caliph’s army. Ahmad along with Ibn Kindīdā’ attacked the quarters of the Egyptian army, inflicted a severe defeat on them so that they fled to Damascus; driven out of this city they retired to Ramla. Ahmad however now quarrelled with the Caliph’s two generals and was left with only 4,000 men. Khumārawaih had in the meantime reached Ramla from Egypt with a large army (70,000 men it is said). The armies met on Shawkāl 16, 271 (April 6, 885) in the famous battle of al-Tawrāhīn (north of Jaffa). Khumārawaih, who had never been in battle before, did not resist for long but fled back to Egypt with the majority of his army. Ahmad’s troops then fell upon the camp and were plundering it when a body of Egyptian troops that had been kept in reserve attacked them. Ahmad thought that Khumārawaih had returned with his troops and fled precipitately to Damascus. When the governor shut its gates against them, the troops went on to Tarsus in Southern Asia Minor. A great part of the army had already been taken prisoner and carried off to Egypt. On this occasion Khumārawaih showed his extraordinarily fair and peaceful character. He gave the prisoners the choice of returning to the ‘Irāq without a ransom or of settling in his kingdom. Ahmad returned to Mesopotamia.

One of his own generals rebelled against Khumārawaih but was defeated by him, as he had now regained his personal courage and he was also able by his bravery to conquer Ibn Kindīdā’ who had taken up arms against him. He now began negotiations with Muwaffak and in 273 (886) was recognised for a period of 30 years as governor of Egypt, Syria and the marches against Asia Minor and Armenia for a trilling tribute. In 273–277 (886–890) there was again fighting between Khumārawaih and rebel governors, which ended in Khumārawaih’s victory and also restored as suzerain of Mesopotamia. In Najdāb the year 279 (Oct. 892) the Caliph al-Mu’tamid died and was succeeded by Muwaffak’s son Ahmad, with the title al-Mu’tadid. The latter confirmed Khumārawaih in his office and the latter became ambitious to be closely related to the Caliph. He offered him his daughter as a daughter-in-law, but the Caliph married her himself. To attain his end Khumārawaih had to make enormous financial sacrifices. The dowry of the princess is said to have been 50,000 dinars.

On this occasion there was a contrast between the rich provincial governor and the poverty of the central government which represented the Caliph was striking. It was impossible for the latter to collect money from the provinces as the independent governors kept all the revenues for themselves and paid only a moderate tribute to him. It is related that when the princess came to Baghdad, the Caliph and his chief eunuch sought for candlesticks in order to receive her in a fitting manner. The chronicler records that he could only collect 5 silver and gold plated candlesticks and then heard that the princess was accompanied by 150 servants each of whom carried a gold and silver plated candlestick. He then said to the chief eunuch: “Come let us go and hide ourselves, lest we be seen in our poverty”. The princess Kaṭ al-Nadā’ was noted for her wit and beauty and must have ruled the Caliph as the anecdotes show. Once when the Caliph entered her room, she said: “Alas, my father is dead”. Asked how she knew, she said: “Itherto when you came to me, you sunk on your knees and touched the earth with your forehead to greet me, but now you say simply "good day".”

Khumārawaih’s extravagance in daily life and on the occasion of the wedding of his daughter naturally did great harm to the finances of the lands he governed. As an example of the boundless extravagance, which he displayed in the maintenance of his court and in the erection of costly buildings, the palace is mentioned, in the court of which he erected a basin of quicksilver supported by pillars, to alleviate his insomnia. He lay on cushions, filled with air on the surface of the quicksilver, and tied to the pillars, and was gently rocked to sleep by their motion on its surface. It was a particular misfortune for Egypt that Khumārawaih fell a victim to a plot while still young. He learned that his favourite wife was deceiving him with one of her servants and the latter, to escape punishment, resolved to kill his master. He and several conspirators fell upon him and killed him. On the whole he procured a period of peace for his lands. Egypt itself was spared from war during his reign. Nevertheless as a result of his extravagance the country was so injured that his sons who followed him steadily lost power. The family of the Tūlūnids had ceased to reign by 292 (905).

Becker, Beiträge zur Geschichte Abyssiens, ii. 149–153 and 182–192; also Ibn al-Athir, Kamil, viii. passim, s. Index; Weil, Geschichte der Chalifen, ii. 432–434, 458, 481; Quartemere, Mémores géographiques et histo rigues sur l’Egypte, Paris 1811. i. 462–473 (translation of the chapter al-Kaṭā’ī from the Kitab of Makriti, where details of his life are given and Ibn Khallikān, transl. de Slane, i. 498–500). (M. SOBERNHEIM)
KHUMBARADI, in Turkish "bombunder", a body of regular troops formerly in the Ottoman army. It was composed of 300 men provided with military sieves; the Count of Bonneval became the chief (January 24, 1732) with the title of Khumbaradlı-bey, in the reign of Sultan Mustafa III, began to enroll it by 300 paid men. The force was increased to a thousand men by Sultan Selim III, latterly it was commanded by an Englishman named Ingliz-Mustafa. It was disbanded in the reforms. This body was included in the kapu-bülün, "slaves of the Porte," and thus attached to the personal service of the Sultan. It was treated, as one would say to-day, of the Imperial Guard.

(CL. HUART)

KHUMIR. [See Khimair.]

KHURDADH (Ab), the name of the third month of the movable Persian solar year, also the name of the sixth day of each month. The 6th Khurdadh as the day on which the name of day and month were the same was called Khurdadhan. To distinguish the day Khurdat seven months after Khurdat, the former was called Khurdat-rus ("day of Khurdat") and the latter Khurdat-mak ("month of Khurdat").

(M. FLEISNER)

KHURRAM (KZ "joyful"), the name of the favourite (kahşetki) of the Ottoman Sultan Sul-tan Su-laiman I, the Legislator, better known in European historians by the name of Roxolana. She was a slave of Russian origin ("altra donna di nazione Korsia, giovine non bella ma grassiata") in the report by Pietro Bragadin (1520), Marin Sanuto, xii.), who was the mother of the three sons, Sultan Selim II, princes Murad and Mahummad and one daughter, Mihrimah Sul-tane. She was anxious to secure the succession to the throne for her eldest son and is accused of having brought about the execution (960 = 1553) of Mustafa, eldest son of Sul-tanm by a Slav girl. It was owing to the superiority of her brain and courage that she was able to remain the Sultan's trusted adviser till her death in 965 (1558); but her genius for intrigue urged her to crimes; she brought about the overthrow and execution of two grand viziers, Ibrahim Paşa and Ahmad Paşa. Her son-in-law, Rustum Paşa, by birth a Croat, was through her efforts appointed grand vizier in 951 (1544). She was buried in the türbe specially built for her in the court of the Sulaimanlı Mosque in Constantinople. Several pious foundations and charitable buildings were built or instituted at her expense in Constantinople; these were the imperial mosque, the hospital, and the school of the Kḥāşetki in the Arvat Bazár quarter.

Khurram-Bēgum was the name of the wife of Mirza Sul-tān, son of Khan Mirza, son of the Timurid Sultan Abū Sa'id, ruler of Badakhshān, died at Lahore in 997 (1589). Khurram is also the name of an alleged king of Djişān, hero of the chronicle of Land al-Dun Asr and of its imitation the Kitāb al-Dun asr of Nādir (Gibb, Ottoman Persia, i. 379 sqq.)

Mirzā Khurram was the proper name of the Moghad emperor Shah Djişān, to which he bore his accession in 1037 (1628).

Pahlavan Khurram Khurssan, a general of the Mughal army, contributed to placing Shah Shuja' on the throne, appointed governor of Isfahan, after the deposition of Sultan Zain al-Abīdīn. He held office till his death (Hamdullah Mustawī, Tarikh-i Guang, ed. Brown, i. 704, 712, 731: Deforche, Monogra fie sur l'histoire des Mughals, ii. 1, 33, 1844—1845: Khurram, Bibl., i. 17, 158; al-Urdu, i. 422)

Bibliography: Pecci, Tarikh-i Guang, ed. 1283, i. 425; Hāfiz Husain Efrīmī, Islāhāt, al-Durānī, i. 17, 158; J. von Hammer, Hist. des Emp. ott., ii. transl., v. 329, 468, 538; vi. 99, 485; viii. p. 19. (CL. HUART)

KHURRAMABAD, capital of the province of Luristan with 6,000 inhabitants, situated in 33°32' N. Lat. and 45°15' West Long. (Greenwich) about 4700 feet above the sea-level between Isfahān and Kirmāshāh on the river of the same name. On an isolated ridge of rock between the town and the river lie the ruins of a castle Dīz-Sīyāh, "black castle," in the middle ages the residence of the governor, with annexes called Falak al-Aflak which at the beginning of the 18th century were the residence of the governor of Luristan. At the foot of the old castle is the modern residency, built about 1830 with commodious courts and gardens. Opposite the town are the ruins of the ancient Sanāk with a monolith, the inscription on which dates from the time of Maḥmūd, grandson of Malik Shīh. The town was visited by J. Rich and H. Rawlinson. The town is not mentioned by the older Persian geographers; on the other hand Yāḳūt and others knew two places of the same name near Kair and near Balkh.

KHURRAMIYA, a sect whose name is derived by Samāni from the Persian word khurram "agreeable", on the ground that they regarded everything that was agreeable as lawful; but it is more likely to be derived from Khurram, a district of Ardabīl, where the sect may have arisen. According to Mas'ūdī, Murādī, vi. 186, they came into prominence after the execution of Abū Muslim of Khurāsān in 136 A.H., but while some of them denied that he was dead and foretold his return "to spread justice in the world", others maintained the "immaculate" of his daughter, Faţīma, whence they got the names Muslimiyā and Fatimiyā. One Sanbādī started a rebellion in Khurāsān, demanding vengeance for Abū Muslim, but this was suppressed within seventy days. They are next heard of in the reign of Ma'mūn, when Bābak the Khurrami rebelled against the Muslim government and entrenched himself in Badshāh (sometimes in the dual Badshāh) "a village between Ašḥarābād and Arzūn"; he maintained himself from 201 till 225, when his fortress was taken by Afgān, an officer of Mu'taṣim; he was himself captured and sent to Sāmarra, where he was put to death, displaying marvellous fortitude under torture (Nihāyār al-Muṣjam, p. 75). His daughter was taken into
Khurramiya — Khuriyan-Muryan

Mu’tasim’s harems (Irfqal al-Arib, i. 369,7). Many odes of both Abi Tammâni and Buhuri are devoted to eulogizing the conquerors, who are said to have served the cause of Islam. In Mas’ûdi’s time (352), members of the sect were to be found in Kâf, Isháqi, Abúlharâmîn, Barjâd, Bu’âd, and in Masâbahdân. Shortly before Masâbahdân was taken, the fortresses held by them were stormed by ‘Alî b. Bu’âthi (afterwards ‘Imâm al-Dawla, 321 a. h.; Miskawâlhi, i. 278); and about 40 years later they were in possession of some fortresses in the neighbourhood of Tiz and Mukran, which they surrendered to ‘Aṣâd al-Dawla’s agent, ‘Abî b. ‘Alî (ibid. ii. 321).

The best account of their doctrines seems to be that furnished by Mu’tahhar b. Tâhir, who states that he had met members of the community in their homes, Masabhdân and Mihirdân-Kadak. It is as follows (Livre de la Création, ed. Huart, v. 30): “They are divided into various sects and sorts, but all agree on “return” (i.e. transmigration), asserting, however, that names and bodies are changed. They maintain that all the Apostles, though their codes and religious systems differ, are inspired by one spirit; that revelation never ceases; and in their opinion every adherent of a religion is in the right, so long as he hopes for reward and fears punishment. They do not approve of defaming any person or harming him, provided he shows no desire to injure their own community or attack their system. They strenuously avoid bloodshed except when they are in open rebellion. They highly esteem Abû Muslim and curse al-Manṣûr for having put him to death. They frequently invoke the divine favour for Mahdi b. Ferâ, owing to his being the descendent of Abû Muslim’s daughter Fatima. They have Imâms to whom they have recourse in legal matters, and Apostles who go on circuit among them, and whom they call by the Persian name Firîshkâh (Angel). Wine and liquors are in their opinion more fortunate-bringing than all other things. The basis of their system is Light and Darkness. Those whom we have met in their homes Masabhdân and Mihirdân-Kadak were found by us to be most scrupulous about cleanliness and purity, and most anxious to win people’s favour by spontaneous acts of kindness. Some of them, we found, permit promiscuity where the women consent, and indeed the enjoyment of anything craved by the natural mind provided no injury results to any one therefrom.”

Ijâkhîn (p. 203) similarly says of them “they have mosques in their villages, and they read the Qur’an, only it is asserted that secretly they hold no religious dogma but lawlessness” (Iba’). Probably then they differed from the Sunni Muslims in their theory of the Imamât, which they supposed to be inherent in the family of Abû Muslim, whereas their practice of promiscuity (if true) was similar to the Shi’it muta’. Further, believing in the continued existence of Abû Muslim and in supposing his daughter to inherit his rights they resembled various Shi’it groups.

Since the member of the sect who attracted most attention was Bâbak, we should have expected to learn something of his doctrine, and indeed a special history of this person by Wâkid b. ‘Amr al-Tamâmî is quoted in the Fihrist; it is a string of fables, translated by Fligel in Z.D.M.G., xxii. 531 foll. This writer agrees with Tâbari in assigning him a predecessor named Džawâidân. ‘Abî al-Kâhir (Farîk bain al-Farîk, p. 252) asserts that the followers of Bâbak make the founder of their religion a prince of theirs who lived in pre-Islamic times, called Sharwân, whose father was the Zanj, whereas his mother was the daughter of a Persian king. This would serve to be another form of a story told by Ibn Isfandiyâr (transl. E. G. Browne, p. 237) that one Sharwân of the house of Bâw (called by Tâbari, iii. 1295, 5: Sharwân b. Su’llâh b. Bâw) was the first person who took the title “King of the Mountains”. He adds that they have a feast on their mountains which is marked by gross licentiousness; but for all that they ostensibly maintain the ceremonies of Islam. The attempts made to connect them with the old Persian Mazdakites are probably without historical basis.

(D. S. Margoliouth)

Khursâd II, ippâsh-kadh of Tâbarîstân, the last prince of the line of Djilân Şâh which ruled this province for 116 years; he was the son of Dâdî Mîhr b. Farrukhân and had the title of Fârghwâr Marzbân; he was descended on the female side from the Nahâbîda (Arm. naha’pa “patrician”) of Sîl and reigned from 122 to 150 (757-767). His paternal uncle, Sârûya, the regent of the kingdom, wished to hand over the power to him when he attained his majority; he was prevented from doing so by a conspiracy amongst his own sons, and Khursâd was not able to reign until he gained a victory over his cousins at Kaşr-i Dâdûkân, between Tammîshâ and Sârî. He repaired the castle of Kisa and built a fortress called Se dîle (cf. Sadir near Hira); he established an army and built a caravansarai. After the assassination of Abî Muslim, Sombîdî handed over his treasures to the care of Khursâd when he rebelled against the Caliph al-Manṣûr. After his defeat he wished to take shelter with Khursâd but he was assassinated on his way by one of the cousins of Khursâd, Tûsî, in revenge for an insult. The Caliph demanded that the treasure should be surrendered to him but Khursâd refused, consenting however to pay tribute. Thinking of the large sums that Tâbaristân might yield him, al-Manṣûr determined to conquer it; the town of Amâl surrendered; Khursâd fled with women and children; he came to a place called 3î’âsha Kargil Dîz, called by the Arabs Kaš’al-ta’î, “the citadel of the vault”, while he himself went to raise troops in Gilân and Dailâm; the garrison of the fortress having been decimated by plague gave itself up to the invaders. Khursâd in despair poisoned himself and Tâbaristân passed under the sway of Islam. The date given by Tâbari and Ibn al-Athîr, 141 (758), is wrong. The last coinage known of Khursâd II belongs to the year 145 (765) corresponding to the year 114 of the era of Tâbarîstân.

Khuriyan-Muryan, the name of a group of islands in the bay of the same
name on the south coast of Arabia, consisting of Hellâniya, Karzawt (Karzawt or Akarziawt), Sûdâ (Swaidiya), Djebelija and Hâski. The first of these alone is inhabited; but the number of dwellers on it has greatly diminished in spite of the facts that the inhabitants of Sûdâ had all migrated to it. Vegetation on Hellâniya is also scanty; a few marine shrubs, some scattered tamarisks and mimosas here and there enliven the monotonous landscape. In the centre of the island a peak rises to a height of 3,900 feet above sea level. In front of it in the west lies a high plateau. The water is usually brackish, the best being found in a well dug by European sailors. The same is true of Swaidiya. Djebelija is quite waterless and desert and inhabited only by seafowl so that the island possesses extensive deposits of guano. Djebelija was once inhabited as a few tombs on it show. The most westerly island of the group is Hâski, which is only 20 miles from the coast and is commanded by two peaks 400 feet high; it also is devoid of water and vegetation but occupied by numerous flocks of pelicans and goosanders.

This group of islands which was early identified with the seven successive islands of Zenobios, formed the frontier mark between the kingdom of the Parthians and the kingdom of Hadramût, so that the Parthian frontier should be located in the innermost corner of the Khûryân-Mûryân Bay or in about 56° 45' E. Long. (Greenwich). The inhospitality of the land made the inhabitants dependent on the sea and they naturally became a race of fishermen. Idrist (d. 1164) already knows that the inhabitants of the Khûryân-Mûryân islands, who were then politically under al-Shîrîn, were very poor in winter and only managed to make a moderate livelihood in the safing season. They used to sail to Umân, 'Aden and the Yemen. Their main source of revenue was tortoise shell which they traded to the Yemenis and occasionally very beautiful amber, for which they sometimes got very high prices. Idrisî calls the bay containing the islands Djâvan al-Hâshish (Bay of Herbs). It was the Portuguese who first directed the attention of Europeans to the islands. In 1503 the Khûryân-Mûryân islands were discovered by Alfons d'Albuquerque. As the Curia-Muria islands they continually appear in Portuguese sources, while Swaidiya appears as Sodî Hâski as Asquî and Karzawt as Rodondo. The islands later passed into the possession of the Sultan of Mâskat, who ceded them to the English on July 14, 1854.

KUSSHAL KHAN, warrior and poet, forebear of poets, father of fifty-seven sons, was the famous chief of the Khataś [q.v.] tribe of the Pathânns during the reigns of the Mughal emperors, Shâh Djahân and Awrangzêb. Born in the year 1622 (1613), he succeeded his father as chief in 1590. His father's fief was confirmed to him by Shâh Djahân together with the charge of protecting the royal road from Atak on the Indus to Peshâwar. After the death of Shâh Djahân he fell under the displeasure of Awrangzêb and was confined in the fortress of Gujrat for seven years. While in captivity, he wrote many of his poems. On release Kusshâl Khan returned to the Khataš country, of which Akora was the chief town, and later on we find him in alliance with the Afridis waging a determined war against the Mughals. Affairs at Peshâwar became so serious that Awrangzêb appeared on the scene in person and for about two years remained encamped at Atak. The Pathân confederacy was broken up and Kusshâl resigned the chiefship to his eldest son. He died in the seventy-eighth year of his age. From all accounts he was a voluminous author of poetry and prose in Persian and Patho. His poetry is of the patriotic and popular type.

KHUSHKADAM AL-MALIK AL-Zâhir SAIF AL-

DIN AL-Nâzîrî (so called from his first master), Sultan of Egypt and Syria, reigned from 865-872 (1461-1467). He was the first Sultan to come from the Sultanate of Rûm (in Asia Minor) which however many also say of Balbars II [q.v.] and Sultan âdûn (696-698 = 1296-1298). Purchased as a slave by Sultan Shaikh [q.v.] he was enrolled in the corps of Dîmâhrs [q.v.] Under Shaikh's son Ahmad, who reigned only a few months, he became a member of the bodyguard (khâštî) and only in the reign of Sultan Câmaîsa [q.v.] did he become an amir of 10 Mamlûks in 846 (1442) and râs nawâba (leader of a company). In 850 (1446) he became command-er of 1000 Mamlûks in Damascus, in 854 Hâzîd al-Hûdâyîd (president of the military court) in Cairo. Three years later under Sultan Inâl he was War Minister and in 860 (1456) he commanded an expedition against the prince of
Karaman'ın daha çok毁灭没有 meeting his troops. Inil's son Ahmad (see under INAL) appointed him Ataheğ. The Aşırfiya (Sultan Ashraf Inil's Mamulüs) were however dissatisfied with Sultan Ahmad, conspired against him and offered the throne to Dinim, the governor of Damascus. The Zähiriyen (Sultan Zahir Çakmak's Mamulüs) however preferred Khusbirdadam. They therefore hurried to elect the Ataheğ Khusbirdadam Saltan before Dündim's arrival, took Ahmad prisoner and sent him to Alexandria. When Dündim later arrived in the vicinity of Cairo, there was nothing left for him to do but recognise Khusbirdadam and return to Damascus. As he did not feel safe for long there he sought refuge with Hasan al-Tawil, Saltan of the White Sheep Turkomans, where he was murdered not long afterwards. Another influential amir of the Zähiriyen, the governor of Dijidda, Dündim, to whom the Saltan owed everything, was murdered by his orders. He thus deprived the Mamulük corps of their leaders and was able to play one corps against another. The Mamulük were also weakened by the campaigns against Cyprus, which were a result of Inil's policy. The latter had supported king James against his sister Charlotte who in turn expected help from the Knights of St. John of Rhodes. The governor of Tripolis was entrusted by Inil at the end of his reign with a campaign against the Queen, but on account of the change on the Egyptian throne only engaged in it for a short time. The amirs, who had been sent with a corps to Cyprus to support James soon returned on account of the disturbances which broke out after the assassination of Dündim. Only one of the amirs with a small body of troops was left in Cyprus. The capital Famagusta had surrendered to James, who was now master of practically the whole island and thus the longer required the assistance of the Egyptians, who had acted arrogantly and impudently towards him. To get rid of them he had them attacked in the rear by the people of Famagusta and then fell upon them himself. To the Saltan he represented the massacre as a rising among his subjects, of which he was quite innocent. Queen Charlotte revealed the truth to Khusbirdadam to get his assistance and also gained his favour by slamming a ship that had been captured by the Knights of Rhodes, but the Saltan was glad to live at peace with James, especially as the latter paid him regular tribute. He was in close alliance with his vassal, the Saltan of the White Sheep (Hasan al-Tawil), because the latter had to rely on the help of the Egyptian Saltan in his continual struggle with the Saltan of the Black Sheep and the governors of Aloulustin of the house of Dhu T-Ghadir.

Hasan, whose relations with the Ottomans Saltan Muhammad II were also not of the brightest, therefore all the intrigues and fighting, Muhammad II had overthrown Hasan's relative, the Byzantine emperor of Trebizond. Hasan in turn along with Khusbirdadam supported Isikak, ruler of Karaman, who was at war with the Ottomans. He and the Saltan fought against the princes of Dagh and Rustam, successively against their rival for the governorship, Shish Suvor, who sided with the Ottomans (see KISIR). Although it never came to actual fighting between the two Saltan's, there was always a latent enmity. While Khusbirdadam was able to keep the Mamulük of his predecessors in check, his own Mamulük committed countless outrages on the people. The Saltan's finances were always in a muddle: he endeavoured to secure money by the sale of offices as well as by visits to his subjects (cf. KISIR). The Saltan fell ill in 872 (1457) and died in ten days. He was not really a great ruler but he was able to keep Egypt at peace. During his reign Egypt was spared epidemics. He was averse to reforms and adhered strictly to the old customs in contrast to the turbulent Khusbird. Bibliography: Ibn Iys, Bulik 1311, ii. 70-84; Well, Geschichte der Chalifen, v. 240—315; Muir, The Mamulük or Slave Dynasty of Egypt, p. 163—171.

KHSURAW [see AANSIRWAN, KISIR, FAHRIZ.] KHSURAW, AL-MALIK AL-RADM ABU NAṢR B. ABU KÜLŽ, A Buṣíy. After the death in Lijumula 1440 (Oct. 1448) of Abu Kuldilj [q.v.] Khusraw Firuz (var. Khusraw Firuz) was recognized as Amir of the Ṭālẖ and his brother Abu Mansūr Fūlāḏ Saltan seized the town of Shiraz. Soon afterwards Khusraw Firuz sent an army under Abu Sa'd Khusraw Shīr, who was also his brother, against Shiraz: the town had to surrender and Abu Manusir was taken prisoner (Shawwal 1440 = March—April 1449) but released after some time. In 1444 (1140/1140) he reconquered Shiraz and seized a part of al-Ahwāz but in Rabī II of the following year (Aug.—Sept. 1050) Khusraw Firuz invaded al-Ahwāz and soon conquered 'Askar Mukram. In Muharram 443 (May/June 1051) al-Ahwāz was invaded by Abūs and Kords. After they had sacked Surak, they were put to flight by the troops of Khusraw Firuz. The latter then invited 'Askar Mukram, because Abu Mansur in alliance with the Kurd chief Hazārasp intended to march on Tusar. Khusraw Firuz succeeded in anticipating him and when the advanced patrols met, Abu Mansur and Hazārasp had to withdraw. After a bloody battle Khusraw Firuz also took Kāmāhrūs, while Abu Sa'd took the two towns of Iṣṭaḵār and Shiraz. In the meanwhile Abu Manusir had applied to the Saljuḳ prince Toghril Beg: the latter sent him reinforcements and after two days' battle Khusraw Firuz had to retire to Wāsit (end of Rabī II = Sept. 1051). In 444 (1052) his troops conquered Başra: the governor there, Abu Ali also his brother, saved himself by flight and went to Iṣṭaḵār to Toghril Beg. Khusraw Firuz then invaded the town with Hazāra in the following year Abu Mansur again became lord of Shiraz and drove out Abu Sa’d; in Muharram 447 (April 1055) a Dilmāhi chief named Fūlāḵ seized the town and drove out Abu Mansur. Although Fūlāḵ declared he would submit to Khusraw Firuz and Abu Sa’d, they did not trust him and Abu Sa’d joined with Abu Mansur and marched on Shiraz. After a long siege Fūlāḵ had to fly, and the two brothers occupied the city in the name of Khusraw Firuz. In the same year the Buṭayl dynasty was overthrown. Under the pretext of making the pilgrimage to Mecca, Toghril Beg asked permission to enter Baghdad, which was granted him by the Buṭayl al-Khālid. On Kāmārub 22 Dec. 155; the Buṭayl was read in Isfahan and three days later he made his coronation entry into the capital. But as the people of Baghdad rose against the foreign troops, Toghril Beg in spite of the Caliph's protests had Khusraw Firuz
arrested as the alleged foment of the strife. He died a prisoner in the citadel of al-Raiy in 45
(1058/1059).

(K. V. Zettersten) Khusraw Malik. [See ii. 157.]

Khusraw Pasha, the name of two Turk
ish grand viziers.

1. The Bosnian Khusraw Pasha, grand vizier
under Murad IV. Brought up in the imperial
palace by the dervish of Shahrizor and of Agha
of the Janissaries (from 1035/1624) and later
in Radjab 1036 (March—April 1627) he received
the rank of Wezari-i Khubeh-shikhan. In November
1627 after the failure of the grand vizier Khalil
Pasha [q. v.] to subdue the rebel Abuza Pasha at
Erzerum, a council called by the Sultan decided,
the proposal of the Sheikh al-Islam Yakhya
Efendi, to depose Khalil and to appoint Khusraw
Pasha as his successor. The latter was a "novus
homo", and his rank was not yet sufficiently
high. He was therefore at first nominated wali of
Diyar Bakr and at once he left the capital. The
great seal of the Empire was only sent to him
when he was at Inišik (Shirvan 1037/April 1628). The
campaign had been well planned and the new
grand vizier arrived at Erzerum before Abuza ex-
pected him. The latter surrendered after a fourteen
days' siege (18th September) and he returned with
Khusraw Pasha to Constantinople along with the
Persian general Sham Khan who had been taken
prisoner. The victorious entry of Khusraw into
Constantinople (9th December) — celebrated by
a hafta of the poet Nefi — was followed by the
pardon of Abuza (afterwards nominated Wali of
Bosnia) and by a period of absolute power of
the grand vizier; he reigned by terror, relying for
support above all on the troops of the Sipahis
and the Janissaries, to whom he guaranteed anew
the promise of privileges which, a short time before,
had been abolished. At this time the young Murad IV
had not yet sufficient power to counterbalance
the influence of his grand vizier. The latter again
left the capital — never to return — in July 1629
as serdar of a new military expedition, against
Persia. Radjab Pasha, the future grand vizier,
remained as Kātim-maşāfi at Constantinople. The
Army went to Aleppo, Diyar Bakr and Mousul,
where the inundation of the country caused by
torrential rains, forced it to wait for seventy days
until the end of January 1630. Great military
preparations were made for the capture of Baghdad
but in the meanwhile Khusraw Pasha himself
marched eastward. He crossed the two Zāb's and
advanced upon Shehrizor [q. v.] while the Kurd
chiefs came and offered submission to him. Then
after sending several bodies of soldiers against
Lower Mesopotamia he advanced to the Persian
general Zainal Khan who was at Hamadan.
Zainal Khan tried in vain to reconquer the castle
of Mihribān (on the Hamadān road) taken by
Noghāi Pasha, beglerbeg of Aleppo, by the orders
of Khusraw; the loss of this battle cost him his
head. The grand vizier arrived in person at Mih-
ribān on the 5th May 1630; thereafter he destroyed
Hassanabad and arrived on June 10th before
Hamadan. This town which had been abandoned
by its inhabitants was completely sacked. Khusraw
Pasha still continued his advance as far as Davrizin
(on the Karzin route); he then turned hew towards
Baghdād, the goal of the expedition. He passed
by the Derteng defile and by Kayır Shahr [q. v.]
and arrived on the 6th September before Baghdad.
The siege began a month later. Hājījī Khalīfā
was present as a scribe in the Ottoman army and
he describes the siege in the Fedālike (p. 299).
A general assault took place on the 9th November
but had no result so that Khusraw had to retire
on Mousul leaving garrisons at Hilla and several
other places. At Mousul where he arrived on
December 12th, he learnt of the capture of Sheh-
rizor by the Persians; soon the Turkish garrisons
left in the neighbourhood of Baghdad were also
put to flight. Khusraw then retired to Mardin in
order to spend the winter there; the following year
was passed in inactivity, due to the indecision
of the grand vizier and the discontent of the
Sipahis and the Janissaries. The Münasibât of
Feridun (li. 179—188) contains four documents
issued by the Sultan and addressed at this time
to Khusraw to testify that he was pleased with
him and to encourage him. But at last the Sultan
was convinced of the lack of capacity of the
grand vizier; he deposed him (25th Oct. 1631)
and nominated in his stead the former grand vizier
Hādīz Ahmad Pasha [q. v.]. A čüşh was sent to
and bring back the seal of office; near Malatia
he overtook Khusraw who complied immediately
and went to Tokat. His dismissal was, however,
the signal for a general revolt of the troops in
Constantinople as well as in Antiochia, a revolt
which very soon cost the grand vizier his life
(10th February 1632) and nearly led to the over-
throw of the Sultan himself. The rebellion was
secretly fomented by Khusraw and Radjab, who
was created grand vizier sometime afterwards.
Murad then commanded Muratşah Pasha, wali of Oezakow,
to see to the execution of Khusraw. Muratşah,
appointed wali of Diyar Bakr, went to Tokat, and
took the steps necessary for overcoming the re-
sistance of Khusraw Pasha. The latter resigned
himself to his fate and was strangled on the 29th
Shirvan 1041 (March 21st, 1632). His head was
sent to the capital where the rebellion could only
be quelled after the execution of Radjab Pasha
(30th May).

Khusraw Pasha left behind him the reputation
of a man, courageous but bloodthirsty and intriguing.
All opposition which he encountered was stifled
in blood; the roads by which he passed were
marked by a series of executions. This strategic
capacity is severely criticised by Naîma (i. 495)
because he wasted his time and his troops in
making minor conquests before attacking Baghdad.
His name is given to a bāgh which he had build
on the great road between Eski Shehir and Khoyen
(see Taeschner, Das anatolische Wingenetz, i. 102
and the map). Bibliography: The principal sources are:

2. Muĥammad Khusraw Pasha, a states-
man and a grand vizier in the reigns of the Sultans
Maḥmūd II and ʿAbd al-Madjid. He was by birth an Abkhazian slave and served first in the enderian as servant of the Câlîsh Bâshî Saîd. In 1206 (1792) he left the palace as mîhârîâr and bayâşa to his compatriot Kûdîc Huseyn Pâsha, and later became Inspector and directly in charge of the Kûdîc's household. He gained promotion quickly in his military and administrative career and became in 1800 mîteqârî of Kârâ Hisâr. He accompanied the Turkish fleet which in March 1801 landed in Egypt under Kûdîc Huseyn Paša and afterwards became commandant at Alexandria. In September of the same year he was appointed wâli of Egypt, after having been raised to the rank of vezîr. Khusraw Paša made his ceremonial entry into Cairo in January 1802, and immediately began military operations against the Mamlûk boys. But his inexperience and avarice, which had caused him to dismiss his own troops, brought about his failure. The Mamlûk gained ground and the wâli was not able to maintain his authority over the Albanian troops, under the command of Tâhir Paša and Muḥaṃmad ʿAli. The latter encouraged the revolt of these troops and on the 3rd May 1803 Khusraw was forced by them to leave Cairo and to entrench himself in Damietta. At first he fought with success against the Albanian troops who were now allied with the Mamlûk, but in July 1803 the allies commanded by Muḥaṃmad ʿAli and Oğlûm Bey Bardis took Damietta and Khusraw was taken a prisoner to Cairo. Meanwhile the Porte had replaced him as wâli by ʿAlî Pasha Djezaîrîli. An attempt to escape from Cairo failed. On the 13th March 1804, the Albanian troops beat the Mamlûk in their turn and Muḥaṃmad ʿAli proclaimed Khawwâr once more wâli of Egypt, but two days later through the influence of the relatives of Tâhir Paša who had died in the meanwhile, the arrangements of Muḥaṃmad ʿAli were upset. Khusraw was taken to Rosetta where he was given leave to embark for Constantinople. From this Egyptian period Khusraw always had an inveterate hatred for Muḥaṃmad ʿAli, whom he considered, not without reason, as the principal author of his failure.

Thereafter Khusraw Paša began a long career as wâli of a great number of vilâyets; from the beginning of 1812 to 1817 he was Kapadâni Paša and again from December 1822 to February 1827. During this last period he took part in the taking of Missolonghi (April 1826). When the news of the massacre of the Janissaries reached him, he had all the Janissaries in the fleet thrown into the sea in order to show his zeal for reforms. On May 9th 1827 he became Sen-Aşker at Constantinople, an office which he kept until 11th November 1836. During this time his power was unlimited. Although he had little education (he never learnt either to read or write) no one was more in favour with Sultân Maḥmûd than he, on account of his great zeal for reforms. It was he who was the first to present the Sultân with a body of troops trained according to the European method. Moreover as minister of police, he was able to maintain perfect order in the capital in spite of the troubled situation in the Empire. The population knew him and feared him under the name of “Topal Paša”. “He was the very genius of intrigue of Turkish officials” (Rosen). He assembled around himself a large clientele of dependents amongst whom some gained the position of dâmid, for example his adopted son Khalîl Paša. Von Moltke, sent in 1835 to Constantinople as instructor of the new Turkish troops, has given a description of the Sers-Aşker who, by this time, had attained a considerable age. He was an old man, very active, with a red face and white hair (there is a portrait in the Taşkîb-i Lutfî, vol. viii., Constantinople 1328, p. 86). He had, however, a disastrous influence on the operations of the Turkish armies against the Egyptian troops of Muḥammad ʿAli. By his jealousy he thwarted the plans of the Turkish generals Ḥusayn Paša in Syria (April 1832) and Rasjîd Paša (battle of Konya, 21st Dec. 1832) so that the failure of the Turks must be largely attributed to him. In the period of upheaval which followed, he took very little part in the diplomatic affairs which he never showed a very definite sympathy either with Russian influence or with that of France. The fall of Khusraw in November 1836 was ultimately due to the influence of the conservative party, and also to the plague which had been ravaging Constantinople during these last years. He returned, however, to the head of the Government in March 1838 as chief of the cabinet with the title of rêîî-i şârâ and rêîî meqâlî-i wâli; in this cabinet the young Rasjîd Paša was minister for foreign affairs. His ministry continued until the 23rd of June 1839. In this time Khawwâr was able to maintain tranquillity in the capital even at the time of the death of Maḥmûd II, which took place on June 30th 1839. Thus on the accession of the young Sultan ʿAbd al-Madjâd, Khusraw was the person indicated to fill the office of grand vizier, an office which was re-established after having been temporarily abolished. The situation of the Empire was at this time very critical because of the defeat of the army and the loss of the fleet which had gone over to Muḥammad ʿAli. During this time Khusraw was the soul of the resistance to the viceroy, his ancient enemy, but he took very little part in the diplomatic negotiations with the Powers, negotiations the object of which was to save Turkey. It was Rasjîd Paša who directed foreign affairs and who took the initiative in the proclamation of the famous Khawwâr-i şârîf of Gülâmî on November 1839. Khusraw was not the man to appreciate such a measure and played a very passive role during the ceremony. Little by little the intrigues of Muḥammad ʿAli at Constantinople seconded by Khalîl Paša who had become Sers-Aşker succeeded in undermining the position of the grand vizier; the Sultan dismissed him in June 1840 and banished him to Roboto. At the end of a year, however, the conservative influence was re-established in Constantinople, so he was recalled and he held the office of Sers-Aşker again from January 1846 to December 1847. Finally he retired for good, and this, the last Turkish grand vizier of the old school, died on the 13th Djamâdâl-Ìl 1271 (4th March 1855) aged nearly a hundred years, without leaving any children. He was buried in a special nûbe at Fiyûb; at this place there is also a library which he founded. During his life-time he had amassed enormous wealth. Many of his old slaves and servants rose to positions of high dignity in the civil and military service.

Bibliography: Djawdat, Taşkîb-i Lutfî, Constantinople, 1303, vii. 104, 111-113, 150, 154,
(3) Ghurrat al-Kamāl, the poems which were written during the 34th to the 43rd year;
(4) Bahīya-ỉ- Naḵeya, select remnants or poems of old age.

Selections from the preceding four divān’s have been lithographed with the title of Kulliyāt-ỉ-Amīr Khūṣrū in the press of Naval Kishore, Lucknow.

(5) Niḵūyat al-Kamāl, a collection of Ghazals (lyrical poems) and Ribāt’s (quatrains);
(6) Misfāḥ al-Fuṣūḥ, a poetical account of the campaigns of Dījal-al-Dīn Firūz Shāh II during the first year of his reign, i.e. from his accession, 689 (1290), to his return to Delhi in 690 (1291);
(7) Maṭla’-ỉ-Awrār, a moral and religious poem, written in imitation of the Makhzan al-Awrār of Niẓām;
(8) Shīrīn wa-Khūṣrū, an imitation of Niẓām’s Khūṣrū wa-Shīrīn;
(9) Maḏnūn wa-Laila, an imitation of Niẓām’s Laila wa-Madīnayn. It has been lithographed, Calcutta 1244, Lucknow 1286;
(10) Aʿīna-ỉ-Sikandari, a counterpart to the Iskandar Nāma of Niẓām;
(11) Ḥaḍīṯ Bilāḥ, a poem on the loves of Bahram, written in imitation of Niẓām’s Hafṣ Pasūr;
(12) Kīrān al-Sāʿdāin, a poetical account of the meeting of Sulṭān Muʿizz al-Dīn Kauably and his father Naṣīr al-Dīn Bughrá Khān, Sulṭān of Bengal, which took place on the bank of the river Ghūrā in Oudh, 688 A. H.; lithographed, Lucknow 1259;
(13) Ṣuhār al-Sīrāḥ, a poetical description of the court of Kublā al-Dīn Mubārāk Shāh, with an account of the principal events of his reign;
(14) Dwawrānī Khiḍr Khān, a poem on the love adventures of Khidr Khān, son of Sulṭān ‘Ala’-ỉ-Al-Dīn, with Dewal Rānī, the daughter of Rā Khān of Gujrat.
(15) IʿḌaʿ Khūṣrāwī, a work on rhetoric, lithographed in the press of Naval Kishore, Lucknow.

In 1914 an attempt was made under the guidance of the late Nawwāb Ḥājī Muhammad Isḥāk Khān, the then secretary of the M. A. O. College, Aligarh (now Aligarh Muslim University) to publish well edited texts of the Kulliyāt Khūṣrū, but, owing to the death of the Nawwāb, only Nos. 9, 10, 11, 12 and 14 of the above list could be lithographed.

(M. Hidayat Hosain)

Khusraw Shāh. [See ii. 157.]

Khusraw Shāh, eldest son of Dāhānγīr by the daughter of Rādījī Bhagwān Dās, was born at Lahore in 1587. He was a favourite with his grandfather, Aklār, who perhaps wanted him to make his successor. He rebelled against his father in the first year of the latter’s reign, was defeated and imprisoned. He made a second conspiracy in Afgānistan, and this having been detected, he was, with one interval, kept in confinement for the rest of his life. He died at Asīrgarh nearBurhānpūr in the Deccan in 1622, and was in all probability murdered by Shāh Dāhān. His sister had her body buried in the Khawb Bāgh at Ullahābād. His two sons, Dāwār Bākhsh, otherwise Dūlīdān, and Gārshāpān, were put to death at Shāh Dāhān’s accession. See Amāli-ỉ-Sālih (still in MS.), Dāhānγīr’s Memoirs (O.T.F.) vols. i. and 2, R. A. S. F. for 1907.

Khusrū, Abū ỉ-Ḥasan Amīr b. Amīr Saif al-Dīn Mahmūd Shāmīlī, born in India 651 (1253). His father was a Turk of the tribe of Lāḍīn, emigrated from Hazāra, near Balkh, during the reign of Dīngīz Khān, to India and settled at Pātāyā where he married the daughter of Imām al-Mulk, a great nobility of the court of Delhi. Khusrū lost his father at the early age of nine and was brought up under the care of his maternal grandfather. He was very intelligent and had great love for study. He was fortunate in enjoying the favour of several successive kings of Delhi: (1) Muḥammad Sulṭān b. Sulṭān Ghīyāb al-Dīn Balbān (664–686 = 1265–1287); (2) Sulṭān Muʿizz al-Dīn Ka(skbūd (686–689 = 1287–1290); (3) Sulṭān Dījal-al-Dīn Firūz Shāh II b. Dījal-al-Dīn (689–695 = 1290–1295); (4) Sulṭān Muḥammad Shāh I, ỉ-Ala’-ỉ Al-Dīn (695–715 = 1295–1315); (5) Sulṭān Mubārāk Shāh I, Kūṯ al-Dīn (716–720 = 1316–1320); (6) Sulṭān Taḡḥlāk Shāh I, Ghīyāb al-Dīn (720–725 = 1320–1325) and (7) Sulṭān Muḥammad II b. Taḡḥlāk (725–752 = 1325–1351).

Khūṣrū was a pupil or votary of Niẓām al-Dīn Awiyya (d. 725–1324) for whom he had the greatest respect and sincerest devotion; and it is said that when he was accompanying Ghīyāb al-Dīn Taḡhlāk Shāh in his march to Bengal, the news of the demise of his spiritual leader reached him. On hearing it he hastened back to Delhi, gave up the royal service and distributed all he had to the poor, and took up his abode at the tomb of the saint, and died six months after in Delhi. 725 (1325).

He is the author of the following works:
(1) ỉ-Thāḥīf al-Sīrāḥ, the poems which were composed from the poet’s 15th to 19th year;
(2) Wāṣṭ al-Ḥayāt, the poems which he composed from his 20th to 34th year;
p. 40), one of the early Shāfi‘ī doctors, may be given here. a. One of the conditions for the validity of the Friday-service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the khātib must be in a state of ritual purity; his dress must be in accordance with the prescriptions; he must pronounce the two khutba’s standing and sit down between them; the number of auditors required for a valid dīwān must be present.

Regarding the sermon itself are obligatory: the hāmda, the salāt on the Prophet, admonitions to piety in both khutba’s, prayer (dū‘a) in behalf of the faithful, recitation of a part of the Kur‘ān in the first khutba or, according to some doctors, in both. It is commendable (żuna) for the khātib to be on a pulpit or an elevated place; to salute the audience when directing himself towards them; to sit down till the adhan is pronounced by the mu‘addhin; to lean on a bow, a sword or a staff; to direct himself straightforward to his audience; to pray (daw‘a) on behalf of the Muslims; to make his khutba short.

b. Regarding the khutba’s on the days of festival the same author says (p. 42) that they are like those of the Friday-service, except in the following points: the khātib must open the first with nine takbir’s, the second with seven. On the ‘id al-fitr he must instruct his audience in the rules for the salāt al-fitr, on the ‘id al-adha in the rules for the sacrifice of this day. It is allowed to him to pronounce the sermon sitting.

Regarding the khutba’s of the service during an eclipse, al-Shirāzi (p. 43) remarks that the preacher must admonish his audience to be afraid, and in the service times of drought he must ask Allah’s pardon; in the opening of the first khutba nine times, in the second seven times; further he must repeat several times the salāt on Muḥammad as well as isṭighfār, recite Sūra lxvi. 9, elevate his hands and say Muḥammad’s dū‘a (which is communicated by al-Shirāzi in full). Further he must direct himself towards the kibla [q.v.] in the middle of the second khutba and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point out the relation between the Muḥammadan pulpit and the judge’s seat in early Arabia. This explains why the khātib must sit down between the two khutba’s; it explains also why he must lean on a staff, sword or bow; for these were the attributes of the old Arabian judge. It is not easy to see why the khutba precedes the services on Friday, whereas on days of festival and the special occasions salāt comes first. Hadrath tells us that Marwān b. al-Hakam was the first to change this order of things by pronouncing the khutba before the performance of the salāt on the days of festival (e.g. Bukhārī, Tārīkh, bāb 6 and especially the pathetic picture in Muslim, Tārīkh, trad. 9).

It is also said that Marwān was the first to hold the khutba on these days on a pulpit, the old custom being a service without minbar or adhan. According to other authorities (cf. Muslim, Imam, trad. 783, and al-Nawawī’s commentary) the khutba before the salāt was an institution going back to Ummān or even to Umar. The common opinion of traditionists is, however, that it was an innovation due to the general tendency of the Umayyads to favour their own dynastic interests rather than those of religion. If this opinion should be right, the innovation as well as the holding of the khutba in a sitting attitude, may be looked upon as an endeavour to go back to the pre-Islamic judicial rites concerning minbar and khutba.

Regarding the prayer on behalf of the faithful (dō‘a li ‘l-munimin) it must be observed that in this prayer before the Friday-salāt it has become customary to mention the ruling sovereign. The history of Islam is full of examples of the importance which was attached to this custom, especially in times of political troubles, the name mentioned in this dū‘a betraying the imām’s political opinion or position. Though it is not prescribed by law to mention the ruler’s name, the suppression of the name at this occasion exposed the khātib to suspicion on the part of the ruler. In countries where Muslims live under non-Muslim rule, it was a pracise that the worldly prosperity of the ruler may expose the khātib to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgonje, Islam und Phonograph, p. 13 sq. = Verspr. Gesch., ii. 430 sq.; do., Mr. L. W. C. van den Berg’s boevening van het Mohammedansche recht, in Ind. Gids, v/f. 809 sq. = Verspr. Geschriften, i. 214 sq.).

Several of the characteristics of the khutba prescribed by the doctors are also found in hadith. The khutba’s of Muḥammad usually begin with the formula amma bā‘dum (Bukhārī, Dajmā‘a, bāb 29). Side by side with the hāmda, the khutba (Muslim, Dajmā‘a, trad. 44. 45) the shāhāda occurs (Ahmad b. Hanbal, ii. 302, 343: “A khutba without the shāhāda is like a mutilated hand”). In a large number of traditions it is stated that Muḥammad used to recite passages from the Kur‘ān (e. g. Muslim, Dajmā‘a, trad. 49—52; Ahmad b. Hanbal, v. 86 sq., 88, 93 etc.). The khutba must be short, in accord with Muḥammad’s saying: “Make your salāt long and your khutba short” (Muslim, Dajmā‘a, trad. 47). Just like the salāt the khutba must be right (to the purpose, Muslim, Dajmā‘a, trad. 41). The audience must be silent and quiet; “who says to his neighbour “listen”, has spoken a superfluous word”, Bukhārī, Dajmā‘a, bāb 36). The two khutba’s pronounced by the standing khātib, who sits between them, are based on Muḥammad’s example (Bukhārī, Dajmā‘a, bāb 27; Muslim, Dajmā‘a, trad. 33—35; Ahmad b. Hanbal, ii. 91, 98). During the adhan Muḥammad used to sit on the minbar; the iskāma was spoken when he had descended (in order to hold the khutba standing); this order was observed by Abū Bakr and Umar (Ahmad b. Hanbal, iii. 449 bis).

Neither the term khutba nor the verb khataba in their technical meaning occur in the Kur‘ān. Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the salāt which is mentioned (Sūra lxii. 9—11). It would be wrong to conclude from this silence that the khutba did not yet form a constituent part of worship in Muḥammad’s time. Still, it is not probable that the different kinds of service were accurately regulated from the be-
gining. Ḥadīth has preserved descriptions showing that Muhammad’s ḥuṭba often did not have much to do with the regular sermon of later times. ʿAbū Dā‘ūd, Kātāb al-tādhīb, bāb 13: Muhammad had sent ʿAbū Dhājm b. Ḥudżāfa as a collector of the sakār to the clan of Lāṭih. When a man made difficulties concerning the payment of sakār, ʿAbū Dhājm knocked him on the head. Then his clan sent people went to Madina and laid before Muhammad a claim on retaliation. After a discussion they agreed upon a blood-fine to a certain amount. Then Muhammad said to them: to-night I will hold a ḥuṭba and propose to my people the amount you have agreed. At night Muhammad pronounced his ḥuṭba saying: These men of Lāṭih have come to me in order to claim retaliation. They did not accept several proposals, but finally have agreed to such an amount. Do you agree with it? They answered: No. Then the Muladhjirūn were angry with the embassy of Lāṭih, but Muhammad persuaded them not to importune them. Finally they received a greater amount after Muhammad had agreed on it with them in a second ḥuṭba. —

This kind of ḥuṭba apparently is a sample of the addresses of the early Arabic rulers to their people and has scarcely anything to do with a sermon. Still, it is not possible to distinguish between the two; it may appear from the following traditions. In a tradition on the authority of Abū Sa‘īd al-Khudrī it is said that Muhammad on the days of festival used to open the service with the ṣalāt; then he pronounced the ḥuṭba “and his ḥuṭba usually consisted in the command to participate in some mission or expedition” (Ahmād b. Ḥanbal, iii. 56 sq.). A similar statement is to be found in Muslim, Ḥājin, trad. 9: “When Muḥammad had concluded ṣalāt on the days of festival by the tahām, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement, he gave his orders on it; he used also to say: give alms, give alms, give alms; ... then he went away. This state of things lasted till Marwān.etc.” This is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muḥammad’s time. Yet, it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Marwān, who had even a minbar built on the musalla. The following instance refers to the Friday-ḥuṭba: “Abū Rāfī‘a says: I addressed the Prophet while he pronounced the ḥuṭba, saying: Oh Apostle of Allah, I am a stranger who wants information concerning his religion which he does not understand. Therefore upon the Apostle of God abandoned his ḥuṭba and came to me. Then a chair was brought (it seems to me that its legs were iron); the Apostle of Allah sat down on it and began to teach me what Allah had taught him. Then he finished his ḥuṭba” (Muslim, Djam‘a, trad. 43). This tradition, interesting though it may seem, betrays the tendency to accentuate the absence of a minbar. Other traditions of this type give an equally simple picture of the Friday-service, e.g. those in Muslim’s chapter, Djam‘a, Nos. 54—59, which represent Muḥammad pronouncing his ḥuṭba, when a man enters. Muḥammad at once directs him the question: Have you performed the two rakʻa‘ēs? Apparently the tendency is to show that Muḥammad laid so much stress upon the two non-obligatory rakʻā‘ās that he even interrupted himself in his ḥuṭba in order to accentuate their importance.

However uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service on Friday and the days of festival arose only after Muḥammad’s lifetime. This order reposes on three elements: the early-Arabian ḥuṭba, Muḥammad’s sunna and the example of Jews and Christians.

In his study on the history of Muḥammad’s worship C. H. Becker has endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the mass on the other. The main features of his position are the following. The first ḥuṭba corresponds to the first part of the mass (“Vorlesung”). Adhān and ḥuṭba are an echo of the responses between the deacon and the priest who administers the mass. The obligatory recitation of the Qurān corresponds to the recitation of the scripture. Concerning the second ḥuṭba’s he states: this duality is subject to ḥuṭba on the part of the fajr’s; it has found its way to the service on the days of festival coming from the Friday-service. The second ḥuṭba corresponds to the sermon and the general prayer.

This view was combated by Mühn who found in the Jewish liturgy features corresponding The Apostles and the recitation from the Prophets (second ḥuṭba). It is perhaps impossible to decide the question; probably the example of the Jewish as well as that of the Christian liturgy have exercised influence on the final constitution of the Muḥammadan service.

Instead of a history of the Muḥammadan sermon which has not yet been written, a few notices only may be given here. Muḥammad’s first and second ḥuṭba in Madina are in Ibn Ishāk’s Sīra (ed. Wustenfeld, p. 340). It may follow here in translation, not because of its being considered as genuine, but as a standard specimen. “The Apostle of Allah praised Allah and said: Amma bā‘adhahu, My people, provide for yourself (by good works), accept instruction. By Allah you will be thunder-stricken and everyone of you will have his cattle without shepherd. Then his Lord will say to him, speaking without a dragonman and without a screen: Has not my Apostle come to you? He preached to you and I provided you with money and gave you abundance. What have you provided for yourself? Then you will look to the right and to the left, without perceiving anything (which can aid you); then you will look before you, but not perceive anything besides Hell. Therefore, whoever will be able to avoid Hell, even though it were on account of a piece of a date (given as alms), he should do it, or on account of a good word, if he should not possess a date. For good deeds are rewarded ten, nay even seven hundred times. May peace and God’s mercy and blessing be upon you.”

Muḥammad’s last sermon is communicated by Bukhārī’s collection, Djam‘a, bāb 29; his emotion when he preached is described in Muslim, Djam‘a, trad. 43. An accurate description of the Friday-service with a translation of two ḥuṭba’s in Lane, Manners and Customs, Paisley and London 1895, p. 99 sqq.
A collection of sermons ascribed to 'Ali is in the former Royal Library in Berlin; among them is a khatba without the letter alif.

As the office of the khatba was a regular function, the khatba became to the khatib what a calligraphic document is to the professional scribe; the one displayed his art in flourished initials, the other in rhymed prose. Collections of sermons are often arranged following the calendar, viz. four sermons for every month and additional ones for the days of festivals, the Prophet's birthday, and his Ascension; see Ahlwardt, Verzeichnis der arab. Hs., iii., p. 437.

It is customary to hold the khatba in Arabic. This rule has often been broken in Turkey.

KUṬṬAṬ, a district on the upper course of Amū-Dāryā between the rivers Pandj and Wakhkh, called Dārjāb and Wakhshāb in the middle ages; on the situation cf. also i., p. 339 sq. The pronunciation of Kuttal is given by Yakūt (Mudjam, ii. 402); for the frequently used plural form we have evidence for the pronunciation Kuttālān in the lampoon preserved by Tabari (1492, 1494 and 1602) on the reverses suffered by the governor Asad b. 'Abd Allah (d. 120 = 738). On the other hand in later Persian poetry the pronunciation Khatlān or Khatlān is required; the same pronunciation is given by the Persian lexicons (e.g. in Vullers, Leicon, s. v.).

Hulbuk, the capital of the rulers of Kuttal, must be sought to the south of the modern Kulab, according to the data given in the geographers; the largest town of Kuttal, Munk (so in the geographers; in Sharaf al-Dīn Yāzdī, Zafar-Nāma, Ind. edition, i. 38: Münk), must have corresponded approximately to the modern Balūjān, although we already find the latter mentioned in the Zafar-Nāma (i. 83). Yakūt (B. G. A., i., vii. 292) says the "largest town of Kuttal" is Washūljān, the modern Faizābād which really lies outside of Kuttal (west of the Wakhsh). Kuttal was a district specially noted for its sermons (cf. B. G. A., i., vii. 292, and the other sermons, p. 180).

The pre-Islamic titles of the rulers of Kuttal, Kuttālān Sāhī and Shir Kuttālān (B. G. A., text, p. 40), seem to have been no longer used in the Muslim period. The last battles of the Arab conquerors mentioned in Tabari (ii. 74) are of the year 133 (750/751); the king (mulk) of Kuttal had to leave his country and go first to Farghāna then to China. The Chinese accounts of the title granted to the king of Kuttal in 752 (E. Chavannes, Documents sur les Tract aux centraux, p. 168 and 216) are thus explained. A genealogy of the "later rulers of Kuttal" has been compiled by Marqurt (Erinskiār, p. 302); in his opinion the kingdom of Kuttal later became divided into several small states; but in the time of the Sāmānids a ruler Ahmad b. Dja'far is mentioned as amir of Kuttalān (Gardizi in Barthold, Turkestān, i. 9, account of the events of 336—337 = 947/949).

Maljudādi (B. G. A., iii. 337, e) also mentions among the rulers from whom the Sāmānids received no taxes (kharāb) but only presents (ra'ādāt), the amir of Kuttal.

After the fall of the Sāmānids, Kuttal belonged to the empire of the Ghaznavids (see ii., p. 154) and being on the frontiers was exposed to frequent raids from the land of the Ikik-Khāns (cf. ii., p. 405). Under Sulṭān Mas'ūd (1030—1041) claims to the suzerainty over Kuttal were made, notably by 'Ali Tegin [q. v.] (Baihaki, ed. Morley, esp. p. 348); a separate ruler of Kuttal is not mentioned at this period. On the other hand in Ibn al-Athīr (s. 22) in the account of Sulṭān Alp Ar-lān's campaign of 1060 (1064) an amir of Kuttal who had put himself up in his fortress (his name is not given) is mentioned; it was only after a long siege, in which the amir himself was killed, that the fortress was stormed. In another passage (s. 155) Ibn al-Athīr tells of a campaign by the lord (jāhīb) of Kuttal, Ibn Shadījā, Farukhshāh in Rādjab 553 (Aug. 1158) against Tirmidh; this ruler is said, like the Sāmānids before him, to have claimed descent from the Sassanian Bahram Gōr (cf. i., p. 586). There is no further mention of a native dynasty in Kuttal after this. It probably belonged to the kingdom of the Ghūrids (ii., p. 161—164); we are definitely told of this district of Wakhsh on the lower course of the river of the same name (Tabakāt-i Nisīrī, transl. Ravy, p. 426) Among the many smaller principalities into which the Ghūrid kingdom broke up, the kingdom of Wakhsh is mentioned (ibid., p. 436 and 490; Nesewi, ed. Houdas, p. 39; cf. W. Barthold, Turkestān etc., ii. 400).

In the second half of the xv. century Kuttal was one of the many small Turkish-Mongol kingdoms into which Caghatāli empire had broken up (cf. i., p. 197); by command of Timūr the king of Kuttal, Kai-Khusraw was put to death for treacherous negotiations with Khwārizm (Sharaf al-Dīn Yāzdī, Zafar-Nāma, Ind. edition, i. 243). Kuttal later was one of the dependencies of Ḥīrār (cf. ii., p. 316); when in 903 (1497/1498) the Beg Khosrow Shāh had seized dominion over Ḥīrār, he granted Kuttal to his brother Wali Beg (Bābur-Nāma, ed. Beveridge, fol. 57); Wali Beg was killed in 910 (1504/1505) by Shālān, the founder of the Özbek kingdom (ibid., fol. 225). Under the rule of the Özekgh the name Kuttal for the region was changed to Hābūb. The district of Kuttal is mentioned as late as the Bayr al-Aṣrār of Mahmūd b. Wali (begun in Rabi' II 1044 = Sept.—Oct. 1634, cf. Zapiski, etc., xxv. 233) (Ind. Office MS. 560—575, fol. 228a and 238a); the name Kulab is already used in the history of Khān 'Ubid Allah (1702—1711); the work was begun in his lifetime (F. Teufel in Z. D. M. G., xxvii. 243, cf. esp. text, p. 29).

(W. BARTHOLD)
KHUZA’A. This name of a South Arabian tribe, a branch of the large tribe of Azd. The genealogists with few exceptions are unanimous in tracing their pedigree through ‘Amr, surnamed Luhayi b. Rabha b. Huragha b. Marzaqya and they agree further that they, together with the other branches of the Azd, left South Arabia at a remote time and wandered with them to the North. When they reached the territory of Mekka, most of their kinsmen continued their journey, the Ghasst to Syria, Azd Shubaita to Omam, but Luhayi remained with his clan near Mekka and thus separated (inekha’ada) from the remainder of the tribe. The city of Mekka and the sacred territory was at that time in the hands of the tribe of Djurhum and we may fix the time approximately in the fifth century of the Christian era, though Arab antiquaries, by assigning exceptionally long lives to some of the chiefs, date their arrival near Mekka several centuries further back. According to the same antiquaries the Djurhum had allowed the sanctity of the sacred territory to lose much of its splendour and in addition by extortions from pilgrims had caused the pilgrimage to have fallen greatly into disuse. The leader of the Azd, Thala’aba b. ‘Amr, had asked from the Djurhum permission to stay in the sacred territory till his foragers had found suitable pastures-grounds elsewhere. This permission the Djurhum would not grant and as Thala’aba said that he would stay, whether they allowed it or not it came to fierce fighting which lasted several days and ended in the utter defeat of the Djurhum. Only Muqadda b. ‘Amr al-Djurhummi who had held aloof from the fighting was allowed to leave the city, peaceful and founded a new settlement with his family and followers at Kana and Holy, where his descendants still resided in the third century of the Hijra. Having become the masters of Mekka and the sacred territory, they permitted the descendants of Isma’il, who were few in numbers and had taken no share in the quarrel, to remain peacefully among them. The very next year of the conquest brought epidemic fevers to the new population and according to some historians it was not till this time that the other clans of Azd migrated further afield. With a view to establishing a legal claim to the custodianship of the sanctuary, no doubt, Rabha b. Huragha b. ‘Amr married Fuhaira the daughter of ‘Amr b. ‘Amr al-Harith b. Muqadda, who had been the last ruler of Mekka, and thus became the richest man in the city. From this latter account it becomes almost evident that the two tribes lived for some time together in Mekka and that the rise of the Khaza’a was less violent than is generally concluded from the first account. There can hardly be any doubt that here the same process occurred as it happened continually, that the tribes outside a town by gradual pressure upon the more peaceful and prosperous town-dwellers became in time the masters of the situation, only to suffer the same fate a few generations later. Rabha is credited with having re-introduced the rites of the pilgrimage, especially by caring for the welfare of the numerous pilgrims who visited the sanctuary, but he is also credited with having been the first to order and place the idols round the Ka’ba and especially with having brought the idol Hubal from Hit in Mesopotamia, which with other idols still existed at the time of Muhammad. Rabha’s and his descendants remained custodians for a very long time (Arab historians mention 300 and 500 years — which figures must be highly exaggerated). The last ruler was Hulail b. Hubayya b. Salil b. Ka’b b. ‘Amr, who gave his daughter Hubayla in marriage to Kusa, the head of the small clan of Kuraish, a branch of the tribe of Kinana. Hulail when he grew old made it a practice to give to his daughter or his son-in-law the keys of the Ka’ba to perform such duties as were the privilege of the custodian of the sanctuary. When Hulail died he left his office to his daughter and his son-in-law, but when the latter wanted to claim this right, he was strongly opposed by the whole of Khaza’a, who forcibly took the keys of the sanctuary from Hubayla. Kusa who had many friends among the Kinana who were settled in the vicinity of the sacred territory as also among the Kuda’a, came to an arrangement with his friends that at the next pilgrimage-period and upon the termination of the rites of the pilgrimage it should come to open quarrels with the Khaza’a, and in the end it resulted in fierce fighting in which many were slain. To settle the dispute both parties agreed to submit to the judgment of Ya’mar b. ʾAwf al-Kilabi. Both parties were invited to meet at the portals of the Ka’ba and when Ya’mar had ascertained the number of slain of Khaza’a to be greater than that of the partisans of Kusa he gave judgment in favour of the latter. He was in consequence given the custodianship of the sanctuary and with it the rule of the city of Mekka, while the Khaza’a were permitted to reside with the Kuraish in the precincts of the sacred territory. Thus the end of the rule of the Khaza’a was also the commencement of the rule of the tribe of Kuraish [q. v.]. Another less heroic account, however, tells us that Kusa bought the custodianship from Abi Qubah, the last ruler of the tribe of Khaza’a, for a goats skin of wine; this is the account also given by Ibn al-Kalbi in his Kitab al-Mutqazib. With the advent of Islam we encounter the names of a number of persons belonging to the tribe of Khaza’a, and as the conquest of Egypt and the West was principally accomplished by warriors recruited from Western Arabia it is not surprising that we find descendants of the tribe of Khaza’a prominent in the newly conquered lands, especially in Spain.

That there was a great deal of confusion in the genealogies of this tribe is evident from their being at times not classed among the South Arabian tribes at all, so e.g. the Kabi ‘Iyad gives the genealogy: Khaza’a b. Luhayi b. Kama’ b. al-Yas Muqadd, which Suhaili in his commentary of the Sira tries to explain by saying that Huragha b. Thala’aba married the widow of his father Kama’, who was also the mother of Luhayi, in which way the genealogy is correct both in deriving their origin from North and South Arabian tribes. As regards the divisions of Khaza’a there is a great amount of divergence, some genealogists mention the clans of Ka’b, Mulaih, Sa’d and Sa’il, while other know only ‘Adiy, ‘Awf and Sa’d.

The great number of names of men who claimed descent from this tribe must make us believe that they were more numerous than we should conclude from the comparatively few names mentioned as companions of the Prophet, and it may be that by the time of the rise of Islam they
had gradually been pushed by the more energetic Kurish into the surrounding country out of the precincts of the city of Mecca itself.

**KHŪZĪSTĀN,** the land of the Khūz (Husayni), Kevvāz of Ptolemy, a province of Persia corresponding to the ancient Susiana, now officially called "Abūbīs, the country of the Arabs" because its desert plains have been overrun by the nomadic tribes of the Ka'b (Bedouin pronunciation Ca'b) and of the Banū Lām. The present boundaries of the province are, to the North, the mountains of the Zagros chain; to the West, the Kūkh [q. v.]; to the South, the river Dīrāh or Tāb and a line drawn across the desert from the confluence of the Kūrūn [q. v.] and of the Khur with the Shat' al-Arab [q. v.]; to the East Kurdishtān. The chief towns are Shushṭar (Tustar of the Arabs), the seat of the governor, Dīzful, Hawizā (Sūk al-Ahwāz, "the market-place of the Qatammad"), Rām Hormuz, Muhāmmarna, Behbeshā; the most inhabited of these cities, namely Feli, Bahluli, Kāhgheldi and Mānası, is under the Sāmānids this province included in those of the South (Nīmūz), the Christians who inhabited it formed an ecclesiastical province called Bēth Hūzayy; the capital was Bēth Lūddā, later called Gundishāpur. Conquered by the Arabs in the year 19 (640), it was defended by the Satrap Hūmmūzān, who, after the capture of Sūk al-Ahwāz (Hāmza Iṣfāhānī: Hūdijštān-wādāj), and his defeat at Rām Hormuz by Iṣkāsha, was besieged in Shushṭar for 6 months and gave himself unconditionally to the Caliph 'Omar. It was occupied by Mu'izz al-Dawla Ahmad b. Buwayh before the capture of Bagdād in 334 (945) and during the reign of the Mongol Ilkhan Ābāka it was given as a fief to the Aṭtādeq of Lūristān, Yūsuf Shāh J, as a reward for having saved him from a sudden attack of the Dailamis. It was for some time occupied by the Ottomans after the battle, which was lost by the armies of Shāh 'Abbās I in front of Bagdād in the year 995 (1587).

For Arab geographers Khūzīstān has for its boundaries, to the West, the canton of Wāṣīf and Dīl al-Raśīb; to the South, the shore of the sea from Shatt al-'Arab to Mehrūbān; to the East, Fars and 'Irāk-Adjamī (the boundary is marked by the Tāb); to the North, the course of the Kerka and the mountains of the Lūr. Important towns were: Sūk al-Ahwāz (capital), Sūs, Gundishāpur, Tustar, 'Askar Mokram, Rām Hormuz, Dawrāk (later Ţīb, Korkūb, Djobbī, Hitān Mahī). Climate warm, air unhealthy, particularly for strangers, rivers numerous, soil fertile (dates, wheat, barley, rice, sugar-cane). Population ugly and of bad character; inhabitants quarrelsome and greedy, copper-coloured, slight figure, beard scanty, hair bushy. Probably they were the residue of the negrooid tribes of the region. They still spoke at the time of the Arab conquest a peculiar language (kūzhī) which was neither Indo-European nor Semitic — perhaps it was the remains of the language of the Anzatis or Elamites; the remains of it are said to be preserved in the patois of the Dīzītān. After the wars with the Romans the people of Khūzīstān were transplanted there in the reign of Shāpūr I; the magnificent band of Tustar was built by the prisoners of war taken after the disastrous expedition of the Emperor Valerian. Industry developed in the country under the influence of the workmen carried off from Byzantine territory. At the present time the country is ruined; a few inhabitants maintain themselves in a few large villages; the plains provide pasture for bodies of nomads.

**KIAYA.** [See KEKHUHAD]  
**KIbla,** the direction of Mecca (to be exact, of the Ka'bah itself, the place between the water-spout [mizāh] and the western corner), which has to be observed during the salāt.

I. From very early times the direction at prayer and divine service was not a matter of choice among the Semitic peoples. There is already an allusion to this in I Kings, viii. 44 and it is recorded of Daniel (Dan., vi. 11) that he offered prayer three times a day in the direction of Jerusalem (which has remained the Jewish kibla to this day). As is evident from the names of the quarters of the heavens, the whole life of the Semitic peoples was turned eastwards. The Essenes prayed in the direction of the rising sun and the Syriac Christians also turned eastwards at prayer (Ancient Syriac Documents, ed. Cureton, p. 24, 62; Acta Martyrum orient., ed. Assemani, ii. 125). It may therefore very well be assumed in agreement with the tradition that Muhammad appointed a kibla at the same time as he instituted the salāt. It is certain that in the period immediately following the Hijāja the direction taken by the Jews was also used by the Muslims.

Tradition places the alteration in the kibla to 16 or 17 months after the Hijāja, in Radelj or Shāhīn of the year 2, probably rightly, for in this period we have the important change in Muhammad's attitude to the Jews. Disappointed at the slight success of his preaching among the Jews of Yathrib, he began to turn more and more to the old Arabian tradition and make the religion of Ibrāhim the basis of all monotheistic religions. The Ka'ba was brought into prominence as a religious centre and the Ḥadījī began to be talked of as a Muslim rite. At the same time a beginning was made with the eviction of the Jewish tribes of Yathrib. The alteration in the kibla is a not unimportant fact in this series of events and this train of thought. The Ḥadījī vers. ii. 156 sqq., refer to this: "Thus are the kiblas among the Pagans: Say: "What has induced them to abandon their former kibla? Say: to Allah belongs the east and the west. He guides whomsoever he pleaseth"
unto the right path. Thus have we made you an intermediate community, so that ye may be witnesses for mankind while the Prophet is a witness for you. We only appointed your previous kibla to distinguish him who follows the Prophet from him who turns back on his heels. Verily this is a grievous sin from which he is free who is guided by Allāh, but Allāh will not allow your faith to be of no avail for He is gracious and kindly to man. We see how thy face turns to all the quarters of the heavens so we will cause thee to turn to a kibla pleasing to thee. Turn then thy face toward the holy masjid; turn your face to it wherever you are. Whatever signs thou wert to give to the people of a scripture, they will not follow thy kibla’ etc.

The importance placed by Muḥammad himself upon the change is clear from these words. It is not necessary to assume with the tradition that it was brought about by scornful remarks of the Jews regarding Muḥammad’s dependence on the prescriptions of their religion (so Ṭabarī, ed. of Goeje, i, 1280). In other traditions, the new kibla was of Irābāt (Ṭabarī, Ǧafṣir, i, 378, ii, 13). Here we have a glimpse of the real truth of the matter, namely the connection with Muḥammad’s new politico-religious attitude. According to one tradition (Buḫārī, Ṣahīṭ, B. 32; Ǧafṣir, Sūra 2, B. 14) the revelation of the above quoted verses from the Kūrān was communicated to the believers in the morning slāt in Kūhā; according to another story Muḥammad had with a portion of the community performed two rak‘ās of the Zuhur-ṣalāt in a mosque of the Banū Salīma, when he turned round to the direction of Mecca (Baijāwī, on Sūra II, 139). The mosque received the name of Mosqīd al-ʾKiblātayn, the mosque of the two kiblas.

If it may then be considered established that Muḥammad and his community turned towards Jerusalem at the slāt during the early days of the Ḥijrā, the question still remains what was his kibla before the Ḥijrā. In Tradition two answers are given to this question and a third deduced by harmonising the other two. According to one, Muḥammad in Mecca observed the kibla to the Ka’ba (Ṭabarī, Ǧafṣir, ii, 4; Baijāwī, on Sūra II, 138); according to the other story the kibla had always been Jerusalem (Ṭabarī, Ǧafṣir, ii, 3, 8, ed. of Goeje, i, 1280; Bālāḏūrī, Futūḥ, p. 2.) according to the third (Ibn Ḥīṣām, p. 190, 228) Muḥammad in Mecca was careful to have the Ka’ba and Jerusalem in a straight line in front of him at the slāt. The first view is influenced by the theory of the “religion of Ibrāhīm” for al-Ṭibrīzī also makes Ṭabīb al-Muṭṭalaḵī already know that Ibrāhīm appointed the Ka’ba as kibla (Ḫūmāsā, i, 16). If the second opinion had not an historical basis, one does not quite understand how it could have arisen, for Tradition does not like to acknowledge Muḥammad’s dependence on Jewish practice. This view is therefore, in my opinion, the most probable. It is further mentioned as a distinguishing peculiarity of Bara’ ʾb. Maʿrūr that even in the period before the Ḥijrā he would not turn his back on the Ka’ba (Ibn Ḥīṣām p. 204); this tradition would lose its point if the old kibla had been in the direction of the Ka’ba. Besides these traditional views, others have been put forward in recent years. According to Tor Andrae, Der Ursprung des Islam und das Christentum, Uppsala and Stockholm 1926, p. 4 (cf. Buḫārī, Muḥammad’s Life, p. 212) the original kibla was to the east. Andrae bases his view not on the material of Tradition but on the general agreement between early Muslim and Christian religious usages. Schwally said that the Jerusalem kibla was introduced into Mecca, it is true, but not as a specifically Jewish institution, perhaps a Jewish-Christian one (Gecke der Voraus, i, 175, note k).

The direction of the kibla was, or is, not assumed at the slāt only and with the points of the toes (Buḫārī, Ṣalāt, bāb 28; ʿAḏāb, bāb 131; Nasrī, Sukhr, bāb 25; Ǧafṣir, bāb 96), but also at the dīwān (Buḫārī, ʿAḏāb, bāb 24), at the ʿirām or ʿirām (Buḫārī, Ḥadīṯ, bāb 29) and after the stone-throwing at the central ʿIjārā (Buḫārī, Ḥadīṯ, bāb 140–142); the head of an animal to be slaughtered is turned to the kibla and the dead are buried with the face towards Mecca (Lane, Manners and Customs, Paisley and London 1899; Snouck Hurgonje, Verspr. Geesk., iv/v. 243; v. 409).

The name of the Ḥajj in it is forbidden to turn towards Mecca when relating nature (Buḫārī, ʿIḥāf, bāb 11; Muḥammad, al-Ṭahāra, trad. 61; Nasrī, Taḥāra, bāb 18–20). On the question whether it is allowable in doing this to turn one’s back to Mecca and thus in some parts of Arabia be facing Jerusalem no unanimity prevails (cf. Buḫārī, ʿIḥāf, bāb 14; Ḥanūṣ, bāb 4; Ṣalāt, bāb 29; Muḥammad, Ṣalāt, trad. 59. 61 sq.; ʿAḏāb, bāb 4); one should not expectorate in the direction of Mecca (Buḫārī, Ṣalāt, bāb 33),

The observance of a kibla is given in old traditions along with the performance of the slāt and ritual slaughter as a criterion of the Muslim: The Prophet of God said: “The command has been given me to fight the people till they say: There is no god but Allāh; when they say these words, perform our slāt and slaughter in our way. Their blood and their property shall be inviolate for us”; etc. (Buḫārī, Ṣalāt, bāb 28; cf. ʿAḏāb, bāb 12). One of the terms to which the orthodox community is Ahī al-Kibla wa ʾl-Ljamiḥa. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus kibla (pronounced ʾibla) means in Egypt and Palestine, south, in the Maghrib, east.

In the mosques the direction of the slāt is indicated by the Miḥrāb [q. v.]; in classical Ḥadīth, this word does not occur and kibla is used to mean the wall of the mosque towards which one turns. At a slāt outside a mosque, a ʿutara [q. v.] marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the kibla (Lane, op. cit., p. 228). — It should be noted that many mosques are not accurately but only approximately orientated (according to the ḥība). It sometimes happens that this error has been later corrected by the drawing of lines or the stretching of threads. This is, for example, the case in many mosques of the Dutch East Indies where the faithful at the slāt take their direction not from the miḥrāb but from such indicators (information kindly supplied me orally by Prof. Snouck Hurgonje).

The laws relating to the kibla are here given very briefly only and according to the ʿAḏāb school as laid down in al-ʾṢūrūṭī’s Kitāb al-Ṭarnāb (ed. Juynboll, p. 20). The adoption of a kibla is
a necessary condition for the validity of a şalát. Only in great danger and in a voluntary şalát on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the ikbál, rubá’ and sunğúd. One should turn exactly in the direction of the kibla, and one who is near it can do so with certainty, and one who is remote as nearly as he can judge. According to others, in the latter case only the general direction (dira) is obligatory. Outside of Mecca one turns towards the mihrab within a mosque; when not in a mosque one follows the direction of reliable people; only a man who is in a deserted region is allowed to ascertain the direction for himself by means of certain indications. For details of the laws see the Bibliography.

Querry, Droit Musulman, Paris 1871, i. 56 sqq.); al-Khalili, Muḥājirat, Paris 1900, p. 16 sqq.; (A. J. Wensinck). II. In terms of astronomical geography the direction of Mecca in any particular spot Ω is identical with the tangent, at the point Ω on the circle Ω M (fig. 1). It will form with the meridian southwest which holds for by far the greater part of the Muslim world. Once during the day as a rule the shadow of the pointer falls upon the kibla or on its prolongation beyond the foot of the style, which is called mihrāb, shabkī or shatī'. The mawṣūjt (caller of the hour) made this moment known from time to time by calling aloud, and in the same moment every other shadow pointed to Mecca. The shadow itself was called gīl before the zawāl and fāt in the afternoon. For large towns (e. g. Cairo) Muslim astronomers calculated the daily altitude of the sun for the moment at which it came into the direction of the kibla on its daily course.

Every Zādī of any size (book of tables, from the Persian zād, Arabic z̲īd [chord because the tables of sines or chords were the same]) deals with the calculation of the kibla. Arabic literature is not very rich in special tracts dealing with the ascertainment of the kibla. If the difference between latitude and longitude of the place in question was not great, a method of approximation, known even to the early Arab astronomers was used which gave results, sufficiently accurate for practical purposes. We find this method already used by Al-Batānī (929), Ibn Yūnūs (1009) etc. The process is as follows: the difference between the longitude of Mecca and that of the place in question is counted off westwards on the Indian circle (i.e. on a horizon circle) starting from the south point and eastwards from the south point (i.e. the two equal arcs S A and N B on fig. 2) and the two points thus reached A and B are joined by a straight line A B. Similarly the difference of the two latitudes is measured southwards from the west point and from the east and the two points thus found are joined by a straight line CD which cuts A B in K. A straight line from the centre of the circle Ω of the circle gives the direction of the kibla.

There are in Arabic literature numerical formulae for the finding of the angle α (inhirāf) by this method of approximation. For Cairo Ibn Yūnūs gives:

\[ \phi_1 = 30^\circ; \quad \phi_2 = 21^\circ; \quad \phi_1 - \phi_2 = 9^\circ. \]
\[ \lambda_1 = 55^\circ; \quad \lambda_2 = 67^\circ; \quad \lambda_2 - \lambda_1 = 12^\circ; \]
\[ KG = \sin (\lambda_2 - \lambda_1); \quad OG = \sin (\phi_1 - \phi_2); \]
\[
\sin \varepsilon = \frac{\sin (\lambda_2 - \lambda_1)}{V \sin^2 (\lambda_2 - \lambda_1) + \sin^2 (\phi_1 - \phi_2)}
\]
\[
\sin \varepsilon = \frac{12}{15}; \quad \varepsilon = 53^\circ,
\]
while he finds by the exact rules of spherical trigonometry \( \varepsilon \) to be \( 53^\circ 17' \). — The Persian astronomer Ali Shih Olai al-Munafidjim deals in this way with the case of Hamadan. He puts:
\[
\phi_1 = 35^\circ 10'; \quad \phi_2 = 21^\circ 40'; \quad \phi_1 - \phi_2 = 13^\circ 30';
\]
\[
\lambda_1 = 83^\circ; \quad \lambda_2 = 77^\circ 10'.
\]
(reckoning the longitudes from the "Fortunate Isles"); \( \lambda_1 - \lambda_2 = 5^\circ 50' \). From the construction of the figure we get \( \varepsilon = 23^\circ \), while worked out exactly by spherical trigonometry \( \varepsilon = 22^\circ 15' \). We see then that this approximating method of calculating the direction of the kibla is very useful for small differences of latitude and longitude but of course breaks down when this is not the case. Fig. 2 gives the construction for Hamadan.

In contrast to this approximate method Ibn Yusus in ch. xxviii. of his al-Ziyd al-Kabir al-Hakimi ("The Great Hakimi Tables", Oxford, Hunt. 331) gives quite an exact method of finding the kibla and by three different methods, of which the first is very remarkable inasmuch as the transcription of the text of Ibn Yusus gives us in modern language the cosine and sine equation of spherical trigonometry. The author shows that:

\[
\cos \Omega M = \cos X = \cos \phi_1 \cdot \cos \phi_2 \cdot \cos (\lambda_2 - \lambda_1) \pm \sin \phi_1 \cdot \sin \phi_2
\]
and
\[
\sin \varepsilon = \frac{\sin (\lambda_2 - \lambda_1) \cdot \cos \phi_2}{\sin \phi_1} (\text{fig. 1})
\]

If the two latitudes \( \phi_1 \) and \( \phi_2 \) refer to different hemispheres, the product \( \sin \phi_1 \cdot \sin \phi_2 \) is negative hence the double sign in the cosine equation. The other solutions go back to the division of any spherical triangle \( \Omega MP \) into two right-angled triangles.

An exact and mathematically interesting calculation of the inhiraf of the kibla is given by Abu 'l-Wafa (d. 998) in his Almudjizat (MS. 2494 Paris) for the city of Baghbad. He finds \( \varepsilon = 13^\circ 49' 9'' \). Abu 'l-Wafa's method of ascertaining the kibla (by the rule of the shadow) is very similar to that which had previously been made known by the Persian mathematician and astronomer al-Fadl b. Hātim al-Nairiz (d. 922/923), except that he found for the inhiraf of the kibla at Baghbad \( \varepsilon = 29^\circ 7' \) which is remarkably far out.

A next study of a purely constructive but exact method of ascertaining the kibla was given by the important Muslim mathematician Hasan b. al-Husain b. al-Hasith (d. 1059). It is as follows: the circle \( ABCD \) (fig. 3) with centre \( H \) is described on a horizontal wooden plane with any radius. Two diameters are drawn at right angles \( AG \) and \( BD \). From \( A \) cut an arc \( AC \) equal to the latitude of Mecca \( = \phi_2 \) on the circumference of the circle, which represents the horizon of the place for which it is desired to ascertain the kibla. Similarly the arc \( GR \) at the other end of the diameter is made equal to the latitude of the place \( \Omega = \phi_1 \). Finally the arc \( AN = \lambda_2 - \lambda_1 \) indicates the difference in longitude of the two places in question. The perpendicular \( CT \) is then dropped on \( AH \) from \( C \) and with the radius \( HT \) an arc is described from the centre \( H \), which cuts \( HN \) in \( E \). \( EF \) is then drawn at right angles to \( AH \). On the radius \( HK \) section \( HK \) is cut \( = CT \) and a perpendicular to \( HK \) erected at \( K \) and \( KM \) made \( = FH \). From \( M \) the perpendicular \( MQ \) is dropped on \( BH \) and \( FS \) is cut off \( FH \) so that \( FS = MQ \). The angle \( EFS = \varepsilon \) is the inhiraf of the kibla.

The proof of the correctness of this construction is given in our author by transferring the area of the triangle pole — Mecca — place (\( \Omega \)) in the plane of the horizon of the place \( \Omega \) for which the kibla is being ascertained. The correctness of Hāthami's construction can however be easily proved as follows. If the radius \( HA \) of the circle be taken as \( = 1 \), the following are the successive equations yielded:

\[
H T = \cos \phi_2; \quad F H = \cos \phi_2 \cdot \cos (\lambda_2 - \lambda_1) = KM,
\]
\[
C T = \sin \phi_2 = HK; \quad H L = \frac{HK}{\sin \phi_1} = \sin \phi_2.
\]
\[
K L = HK \cdot \cot \phi_1 = \sin \phi_2 \cdot \cot \phi_1,
\]
\[
M L = KM - K \lambda = \cos \phi_2 \cdot \cos (\lambda_2 - \lambda_1) - \sin \phi_2 \cdot \cot \phi_1
\]
\[
EF = \cos \phi_2 \cdot \sin (\lambda_2 - \lambda_1).
\]

It further follows from the two right-angled triangles \( H K L \) and \( L M Q \) that:

\[
M Q = HK; \quad M L = HK \cdot \frac{\sin \phi_1}{\sin \phi_2} \cdot \sin \phi_1
\]
\[
\cos \phi_2 \cdot \cos (\lambda_2 - \lambda_1) \cdot \sin \phi_1 - \sin \phi_2 \cdot \cos \phi_1
\]
\[
= \cos \phi_2 \cdot \cos (\lambda_2 - \lambda_1) \cdot \sin \phi_1 - \sin \phi_2 \cdot \cos \phi_1
\]

Finally
\[
\cot \varepsilon = \frac{FS}{EF} = \frac{M L}{H L} = \frac{\cos \phi_2 \cdot \cos (\lambda_2 - \lambda_1) \cdot \sin \phi_1 - \sin \phi_2 \cdot \cos \phi_1}{\cos \phi_2 \cdot \sin (\lambda_2 - \lambda_1)}
\]

or
\[
\cot \varepsilon = \frac{\sin \phi_1 \cdot \cos (\lambda_2 - \lambda_1) - \cos \phi_1 \cdot \tan \phi_2}{\sin (\lambda_2 - \lambda_1)}.
\]
but the latter formula is simply the well known cotangent equation of spherical trigonometry, applied to the spherical triangle \( \Omega P M \) in fig. 1. This formula at once gives the angle \( \alpha \). A full discussion of all possible cases of the situation of the place \( \Omega \) with reference to Mecca cannot be entered into here; the author gives no numerical examples.

The ascertaining of the azimuth of the kibla, as given by al-Biruni (d. 1048) in al-Kanun al-Mas'idi (Berlin, MS. Orient. 275, Mašala 5, chap. 6, f. 129v) is a similar geometrical nature to the above, as already given by Ibn Haitham, mentioned above, although of course much shorter. The late Arab astronomers, so far as we can judge, had made no progress beyond those of the middle ages in their kibla calculation. We know the process followed by Muḥammad b. Muḥ. b. 'Umar al-Djaghminī (d. c. 1345) in his Mulakhabhāt; it is the approximative method already known to us. The Samarqand astronomer Ulugh Beg used spherical trigonometry for ascertaining the kibla.

To the sixteenth century belong two pamphlets dealing specially with the direction of Mecca, namely one by Maimon Cens (d. 1544/1545) entitled Rihāla fi Takhkīs Sana'at al-Kibla (Constantinople, Library of the Aya Sofā, 2628) and the other by Khalil Ghans al-Din Ajmat al-Naṣīb al-Halabi al-Shāfi'i (d. 1564/1564): Fi 'l-Takhkīṣ al-Kibla (Cairo). These two works begin with various horizon operations (jamāl ofakhya) such as ascertaining the four cardinal points, the azimuth etc., after which comes the trigonometrical calculation of the kibla. In the first of the above mentioned treatises the already often mentioned approximative method is again explained (for the kibla of Constantinople).

In modern times the kibla has become a subject of orthographical studies. Thus J. I. Craig repeatedly mentions a "Mecca retro-azimuthal projection", the object of which is to make a map in which the true direction of the kibla can at once be read for any point on it. On such a map meridians are taken to be parallel equidistant straight lines. If one combines with this quality of retro-azimuthal accuracy in defining the distance from the centre in such a map in addition to the azimuth of the kibla, the shortest distance of every place from Mecca could be read. C. Schøy has published a sketch of the map, in which of course the straightforwardness of the meridional lines is dropped.

A table of plans with the corresponding inābiyyī of the kibla is given in the Gotha MS. Arab. 1483, which is a fragment of the astronomical tables of Ibn al-Shāhīr (d. 1375/1376).

(C. SCHøy) al-KIBRĪT, Sulphur. It is numbered by al-Kazwini among the oily bodies along with quicksilver, the various kinds of tar, naphtha and ambergris. Other writers include it among the ethers, the evacuating bodies, with the two kinds of sarūlāk (sulphide of arsenic, orpiment, and realgar), salamnamicac and quicksilver. Among the Arabs they used them in Pseudo-Aristotle, three kinds of sulphur are distinguished, the red of fine quality, the pure yellow, and the white; the latter would be the so-called "bath-sulphur" which smells of sulphuretted hydrogen. Red, probably quite mythical, sulphur is said to be found in the west in the vicinity of the sea and to be very rare. A man possessing unique qualities is therefore called "red sulphur". Flowers of sulphur were obtained from ferrous sulphide by roasting. The important uses of sulphur are for explosives in fireworks and for the colouring of metals. One series of metals becomes black with sulphur, e.g. lead and silver; sulphur silver is used in niello inlaying; the quicksilver also becomes black at first but on being heated red (cinnabar). Sulphur had many uses in medicine (cf. Ibn al-Baitār, al-Kazwini etc.).

In its natural state sulphur is found in three forms; all these were known to the Arabs. 1. In gypsum, chalk beds etc. Lumps of sulphur occur; in this form it was exported from al-Ǧurūr in the land of the Jordan (al-Mukaddasi, p. 184); it was also found in this form in Persia, Balūṭūn and in Sicily. 2. It is found in volcanoes, extinct as well as active, e.g. on Etna, Demwend etc.

3. It is obtained from sulphur springs; for example there are hot sulphur springs at Dawrāk al-Furs in Khuzistān, at which yellow sulphur is found (Guy Le Strange, The Lands of the Eastern Caliphate, 1905, p. 242. Information on the occurrence of sulphur in the east is given in C. Hintze, HANDbuch der Mineralogie, part i, 1904, p. 80 and 87; B. Dammer and O. Tietze, Die nutzbaren Mineralien, part i, 1913, p. 93; O. Stutzer, Die wichtigsten Lagersäiten der "Nicht-Feuer", i. 1911, p. 251).

Among the alchemists sulphur has numerous epithets (cf. J. Rüsch and E. Wiedemann, Reiter- lv., Alchemische Dicknamen in S B P M S, Etr., lv., 1924, p. 17–36). It is described as the yellow, red, or white bride, or wax. Its colouring properties procured it the name of the "enlumining spirit" (al-rūh al-tābiḥ). The asphyxiating smell
of burning sulphur gave it the name of al-ḥamādāk (the asphyxiator); it was also called the “fetter of the escaped” (guard al-dagās) i.e. of quicksilver which corrodes with sulphur to form solid cinnabar. Some other epithets are given in Shams al-Din al-Dimishki (op. cit.) e.g. “cuckoo bomb” (ādāf al-dūkā); “sea-bird” (ṭair al-bahr); “pomegranate seed” (ḥabel al-rumānā); “liquid yākūt” (ışyākīt al-dīgās) etc. See M. Bethelous, La chimie au Moyen Âge, ii; al-Tāghrīb in Kitāb al-Liṣawār al-naḍir fī Sināʿat al-Iklīr (Berlin, Ahlwardt’s Katalog, No. 18361).

According to the natural philosophers sulphur is composed of atoms of water, air, and earth. Mixed and exposed to great heat they become coherent and form an oil which on cooling down becomes solid.

According to the teaching of the alchemists, sulphur along with quicksilver plays the main part in the formation of the most varied substances, especially metals. Here however sulphur and quicksilver are only general terms which have nothing to do with ordinary sulphur or quicksilver.

KIBT, the Copts, the name given by the Arabs to the Christians of Egypt. According to Arab writers, the word is derived from the name of a king of ancient Egypt, Kibti, who is said to have been a descendant of Noah. It was thought in Europe that this word derived its origin from the town of Coptos or that it was a corruption of Jacobites. One Coptic manuscript alleges that the Greeks called the Egyptians Copti because they had their children circumcised. It is now generally agreed that the word Kibti is a corruption of Agiuptos [Kalkashandi, i, 222; iii, 413; transl. Wüstenfeld, p. 119; Maqrizi, ed. Wiet, i, 69, 82; Vansleb, (Novellae) Relation, p. 6; Quatremer, Recercures sur la lang. et la lit. de l’Egypte], p. 30—32; Égypte, (collection Unis.) pittoresque, iii, 104; Macaire, (Hist. de l’Égl. d’Alexandrie), p. 5—6; B.L.E., 1894, p. 20; Butler, Copt. Church, i, 370; Lane, Manners, ii, 274; Stern, Copt. Gramm., p. 1; Steindorff, Copt. Gramm., p. 2; ibid., ii, 5.

The Copts and the Arab Conquest. When the Arabs conquered Egypt in 640, for nearly twelve centuries the country had been under foreign domination. Egypt had ultimately sunk to the level of a colony administered by the prefects of the Byzantine Empire. The people of the Egyptians for their part, nourished by bondage, must have increased to such a degree during the Byzantine period that it restored to the natives the feeling of their lost nationality.

Under the caliphate of Umar and, somewhat against his desire according to Muslim tradition, the Arab army conquered Egypt [Maqrizi, ed. Wiet, iii, 141—159; x, 14—39; (Cataan), Islam (French), p. 210—220, 237—228, 240; Rev. historique, cxxv. 273 sqq.; Diet. d’arch. (chrét.), iv, 2474—2476; ibid., ii, 6]. It seems little likely that the Arab general Amr b. al-‘As wished to confront the Caliph with the fast a mumpīs [Cataan, Annali, iv, 85—86: ibid., i, 339; ii, 5]; for the opposite view: J. Maspero, Origine, de l’Égl. byzantine, p. 9; Rev. historique, cxxiv, 309—310. Indeed the conquest of Egypt took place at a moment when the Persians, crushed two years previously at Kādīsya, were unable to create any diversion and when the Byzantines, cut off from Egypt by the Arab occupation of Palestine and of Syria, were unable to come to its assistance.

The Greek army in Egypt was defeated, because the rôles of police which it had played, had not prepared it for war and because, moreover, it was unexpected. In the sixth century a certain number of high officials were of native origin. The native population, long exposed to humiliating treatment by the Byzantines, did not render them assistance in this new conflict, and the Greeks could not even count upon their neutrality [J. Maspero, Origine, p. 5, 16, 42—43, 49—50, 83—84, 95; Ameine, Actes (d. Martyrs), p. 3; Rouillard, Administration civile (de l’Égypte byzantine), p. 15, 164, 193; J. Maspero, Hist. (de) Patricarches d’Alexandrie), p. 39. The manifestations of Egyptian nationalism, which date from the fourth century, took an unexpected development after the council of Chalcedon, in the absence of a well-defined Jacobite dogma, there are good grounds for thinking that the Egyptians were Monophysites, because their bishops had founded the doctrine and Severus of Aphrodisias says that the Chalcedonian thesis had not been able to penetrate into a certain convent “because all the monks there were Egyptians” [Patrologia Orientalis, i, 498; cf. J. Maspero, Hist. Patr., p. 16—17, 24—25, 49—51, 53; Annali, iv, 65—86]. In fact the Egyptians almost welcomed the Arabs as liberators. “It was no little advantage for us”, writes Michael the Syrian (transl. Chabot, iii, 413; cf. also p. 222), “to be delivered from the cruelty of the Romans, from their malice, from their anger, from their cruel zeal against us and to find ourselves at peace” (cf. Annali, iv, 85; J. Maspero, Hist. Patr., p. 250; Basset, Mélanges (africains et orientaux), p. 2), The same writer (ii, 432—433), who, although late, is habitually well informed, definitely asserts that the patriarch Benjamin gave up Egypt to the Arabs in return for a promise given that the latter would grant the Jacobites their churches. The bishop of Nikiou, always very accurate in the facts which he recounts, records strange deflections amongst the native leaders, and declares that certain garrisons refused to fight against the Muslims and even rendered them assistance [Johannes of Nikiou, transl. Zobdenberg, p. 357, 559—561, 563, 570, 573, 585; cf. Ibn al-Hakam (ed. Torrey), p. 58—59, 73; Eutychius (ed. Cheikho), ii, 24; Abu Saliha, p. 80; P.O., xi, 563; Maqrizi, ed. Biliak, ii, 492; Macaire, p. 231—234; J. Maspero, Orig., 126, 131—132; Rouillard, admin. civile, 220 sqq., Rev. historique, cxxv, 303—304]. Indirect evidence is also furnished by the numerous qubūtih of the Prophet in which
he recommends the Muslims to treat the Copts well (Maqrizi, ed. Wiet, i. 99). The historical romance Fateh al-Rahmani, also shows that the troops which resisted were mainly Greeks, that the enemy contingents comprised Arab Christian elements and that the natives were often disloyal (transl. Goltier, p. 58, 85, 89, 95, 105—106, 128—129, 154, 191).

The war of the Copts enabled them to find an excuse for their conduct. They already regarded Alexander, Diosclitan and Theodore as their companions, they boasted of having received numerous prophets, they had put forward the hypothesis that Jesus must have been born in Egypt, they held that their church had been founded by Saint Mark, an assertion which remains to be proved, that their country had furnished the first martyrs, before St. Stephen (J. Maspero, Hist. Patr., p. 26, 108; Abū Ṣalīḥ, 108 20—21, 47; Maqrizi, ed. Wiet, iv. 2, 126; Amélineau, Actes, p. 15—14, 30, 38, 103 sqq.; J. A., 1887, i. 24—26; Dist. arch. i. 1098—1101). Muhammad is believed to have ordered the Arabs to be kind to the Copts because one of the names of the Concilium of the Prophet, were Copts (Ibn 'Abd al-Hakam, p. 2—4; Sahih, i. 12; Maqrizi, ed. Wiet, i. 97 sqq.; Muhammad ibn al-Camal, iv. 279, 316; v. 310). Finally the conqueror of Egypt was preceded for his mission, because, in the course of a former journey, he had been present in Alexandria at the games in the circus and the ball, which, thrown at hazard, was to point out the future sovereign of the country, fell upon him (Maqrizi, ed. Wiet, iii. 125—128; Mustakhib al-Muharrar, i. 241—242; this without denying the existence of such divinatory proceedings: Michael the Syrian, iii. 57; R. M. M., iv. 85; Huart, Père antique, p. 60).

Another factor, the help of neighbouring Arab tribes of Egypt, also played a part, but it is impossible to estimate its value. A number of Arab tribes led a nomadic life on the coast from the Red Sea, from Sinai up to the Thebaid, and it has been noted that Strabo describes Koptos as a town under the Arabs (J. Maspero Organ., p. 13, 66; Lesquere, L'armée romaine, M.F.A.O., xii. 426—427; ibid., ii. 7).

The Islamisation, its Progress and Causes. The Arabs imposed upon Egypt a treaty, of which Tabari claims to give the accurate text (Tabari, i. 2588; cf. Kalkashandi, xiii. 324; Bibliotheque des Arabiens, ii. 168—170; Lane-Poole, Egypt (in the middle Ages), p. 7; Clermont-Ganneau, R. A. O., v. 156—194; Butler, The Treaty of Misr in Tabari), which must be compared with the similar treaties concluded in other countries (Abū Yūsuf, Kitiab-al-Kharaib, transl. Fagnan, p. 108 sqq., 195, 214 sqq.; Yākūt, i. 858; Kalkashandi, xiii. 357—359; Sauvage, Hist. de Jérusalem et d'Hébron, p. 36—41; Annali, ii. 349—352, 792; iii. 22—23, 221—222, 381—382, 562; iv. 40, 43, 354; v. 459—460; vi. 178, 237; J. A., 1852, i. 101—102, 1894, ii. 222—223; Goldziher, Dogma et loi de l'Islam, p. 29, 30; Mustafar, Cairo 1285, i. 134—135; Mich., xii. 609, 615, 674—672; B. I. F. Q. A., iv. 211; Muir, Caliphate (1915) p. 134 sqq.). The Christians of Egypt were treated like the other non-Muslims (ābi al-dhimma) of the growing Arab Empire. They had to pay a personal tax (dirāya), fixed in Egypt at two dinars for each adult male, in recognition of which they enjoyed the protection of the Muslims (āhiq). This statement is found throughout the Arab literature, but the papyri show it is inaccurate, in as much as the tax was proportionate to one's fortune (Rev. historique, cxx. 280). In a word, this régime was at first the prototype of the modern protectorate; the Muslim government assured the Christians of protection for themselves and for their property; those who did not receive a share in the distribution of the dirāya were not obliged to give military service.

The treaty in Tabari omits two important articles in the other treaties: the rules laid down in regard to dress and the question of religious buildings. The situation of the Christians in Egypt will be here examined in detail in chronological order, but for the sake of clearness it is better to examine these two questions separately.

The alleged edicts of 'Umar forbade the Christians to adopt in their garments and in their turbans the same colour as that of the Muslims; they had to wear a distinctive distinguishing a distinctive piece of material (qafir) as well as the belt called sa'ād (J. A., 1852, i. 111, 115; Butler, Copt. Church, ii. 103—104). It seems, however, that such a regulation was really much later and owes its origin to Harun al-Rashid (J. A., 1894, ii. 175; below ii. 169; cf. however, Lane-Poole, Egypt, p. 27). But the most celebrated edict, and one that is recorded by the historians of Egypt, emanated from Mutawakkil (Yaḥyā, Hist., ii. 594; Eutychius, i. 59; Tabari, iii. 1399 sqq.; Abū Sahl, f. 52; Kalkashandi, i. 256; iii. 366; Maqrizi, Būlāk, ii. 494; Renaudot, Hist. Patr. Alex., p. 293—300, 608—609; Lane, Mannur, ii. 298; Lane-Poole, Egypt, p. 391; Lammens, La Syrie, i. 137). These measures were revived by al-Hakim, who made them more severe; by Badr al-Din Ali in 479 (=1085), by the caliph Zāhir in an ephemeral fashion; and lastly by Shīrkuh (Yaḥyā al-Antākī, ed. Cheikho, p. 187, 195, 202—203; Ibn al-Ajīrat, s.a. p. 398, 411; Kalkashandi, xiii. 359—360; Yaḥyā, Dirāṣāt, ii. 247; Maqrizi, ed. Būlāk, ii. 286—288, 495—496, 507; Blouet, Hist. d'Egypte, p. 101, note; Quatremère, Mem. (sur l'Egypte), ii. 447; Wustenfeld, Fait et Mémoire, p. 189; Renaudot, p. 493, 519, R.O.C., xii. 196). We only know of one Ayūbid decree (Renaudot, p. 587), but in 700 (1301) Muḥammad b. ʻAbd allāh al-Mālik al-Nāṣir, at the instigation of an African, vigorously enforced the ancient ordinances (Kalkashandi, xiii. 377—387; Maqrizi, Būlāk, ii. 489—499; Quatremère, (Hist. des sultans) Mamlouk, ii. b. 117 sqq.; Ibn al-Isf, i. 143; Renaudot, p. 602—603; Lane, Mannurs, i. 300; Lane-Poole, Egypt, p. 301; Alī Pāshā (Mubārak, Khiṭṭāt), i. 32; ii. 101; J. Maspero, Hist. Patr., p. 378). The Copts however freed themselves by paying a sum annually which in 709 (1309) aroused the wrath of Ibn Tajmiya (Z. D. M. G., iii. 559—560). The decree was not long in force since it was necessary to revive it in 721 (1321), in 755 (1356), in 820 (1421) and in 854 (1450) (Alāʾ b. ʻAbdallāh, ed. Pappi, p. 186; Ibn al-Isf, i. 201; Sakhāwī, (Ṭābīn mushakhn), p. 306; Dory, Hist. des noms de vêtements, p. 28; Quatremère, Mem., ii. 246—247, 260; Dict. arch., iv. 2479). From these successive revivals it can be concluded that these regulations quickly fell into disuse (Gaudin and Mombay, In Syriac, lxxxvii. 95). The Ottoman govern-rons revived them once more (Alī Pāshā, i. 57; Djaburt, French
transl., iii. 275; iv. 208—209; Muhammad ’All is said to have abolished them in 1807, and it was in vain that subordinate officials attempted to re-establish them in 1816 and in 1817 (B.I.F.E., 1900, p. 133—139; Djaharti, ix. 247—248, 266). The Coptic clergy have kept to the present day the custom of wearing black turbans.

The question of religious buildings received more attention from the Muslim rulers. The conditions laid down by ’Umar are Draconian: The Christians are forbidden to build any new church or any convent and it is further forbidden to rebuild edifices which had fallen into ruins (F. A., 1852, i. 110; Mafriqi, ed. Wiet, v. 117, ii. 761). In practice, in return for a money payment the Christians were allowed to repair their churches and their convents and even erect new buildings. On their settlement in the country the Muslims converted some churches into mosques; this was the regular practice under the Umayyads in the whole Muslim Empire (Caetani, Chronographia, p. 1056, 1175; van Berchem and Strzygowski, Amida, p. 51—52; Thiersch, Phares, p. 212). The Christians of Egypt had earlier installed certain churches in temples of the Pharaohs (Dict. arch., iv. 2455 sq.). Even when they built a completely new mosque, the Muslims took the materials from the churches, especially the columns (P. O., x. 512—515; Mafriqi, ed. Wiet, iv. 6; Durembourg, Gnomina, ii. 151, n. 4); this was in the eyes of the Muslims the right of the conqueror. It seems, however, that the legal theory of "new churches" scarcely dates back to the second (viii-th) century, for during the first century the Christians could build and restore as they desired (Eutychius, ii. 41; P. O., iii. 268; v. 24, 42, 119; vii. 399—400; xi. 606; Abu Sallih, fos 23, 29, 53; Mafriqi, Bu’akr, ii. 492; Renaudot, p. 178, 179, 184: Marcell, Egypt, 28; Lane-Poole, Egypt, 26; B.I.F.A.O., i. 143; Chronographia, p. 520, 589, 618, 758, 775, 825—826, 939; ibid., ii. 8). This liberal official attitude was not in accordance with the sentiment of the mass of the people and a permit to rebuild in 117 (735) caused a riot (Mafriqi, ed. Wiet, iv. 155). Numerous Christian buildings were destroyed in the course of the struggle against the last Umayyad (Abu Sallih, fos 60, 76). But these acts of war. Under popular pressure the year 170 (786) the governor ’Ali b. Sulaiman ordered the churches founded since the Muslim conquest to be destroyed, a measure resinded by his successor after a consultation of jurists (Kindt, p. 131—132; Abu Sallih, fos 23; Mafriqi, ed. Wiet, v. 117—118; Bu’akr, ed. iv. 493; 511; Lane-Poole, Egypt, p. 32); and building on the finest scale went on again, in spite of the protestations of the people (Eutychius, ii. 58; P. O., x. 418—419, 460; Kindt, p. 554—555; Ibn Sa’id, ed. Tallqvist, p. 32—33). With the Fatimids a great era of prosperity opened for the Coptic churches and the convents,—except under al-Fakih, which will be discussed later. Besides, the decision really rested with the Christians who at last obtained the government offices (P. O., iii. 387—388; v. 561; Yahya, p. 186, 229, 231—234; Abu Sallih, fos 17, 24—25, 27, 30—37, 39, 41—42, 44, 48—50, 61—62, 66—67, 69, 78, 81—82; Ibn Muyassar, p. 79; Ibn Du’mkawk, iv. 78—79; Mafriqi, Bu’akr, ed., ii. 283; Renaudot, p. 370; Wustenfeld, Fatimidien, p. 131; Lane-Poole, Egypt, p. 119, 170). More strict in regard to the Copts, the Ayyubids began by despoiling the churches of a part of their revenue, and while authorising certain restorations, they did not hesitate to do away with buildings which annoyed them. Besides, the wars with the Crusaders brought about the ruin of many churches. It is from the Mamluk period that the ruin of the convents dates (P. O., xi. 617; Abu Sallih, fos 7, 27—28, 33, 38—39, 45, 50, 81—82, 88, 90; Blachet, Hist. d’Egypte, p. 518, 559—560; Marcell, Egypt, p. 28; Amelina, Acta, p. 222; ibid., ii. 44). But the real catastrophe dates from the reign of Malik Nasir Muhammad b. Kaldan; after being withheld in 700 (1301) the mob rushed to attack the Christian buildings, and a general demolition of the fortresses and churches in 721 (1321): sixty churches were demolished and according to Muslim writers many convents were henceforth deserted (P. O., xiv. 459; Mafriqi, ed. Wiet, iv. 208—209, note: Bu’akr ed. i. 511—517; Quatremere, Mamm الصين, ii. 179 sqq.; Sakhawi, p. 73; ’Ali Pasha, i. 98—101; vii. 74 sqq.; Quatremere, Mémo., ii. 225—239; Lane-Poole, Egypt, p. 301, 310—312; Kromer (de l’Orient chrétien), xxii. 393: Dict. arch., iv. 2476—2482; Lane, Mommsin, ii. 300—302; ibid., ii. 8). Churches were again demolished in 755 (1354) and a large part of their revenues was confiscated. In the course of the nineteenth century the regulations of the Caliph ’Umar are said to have been at different times solemnly revived (Mafriqi, ed. Wiet, i. 296; Bu’akr ed. i. 490—500; Sakhawi, p. 36—40, 124—125, 145; Ibn Lyds, i. 206—207; ii. 35; Bull. Soc. Géogr. d’Egypte, xii. 79; ’Ali Pasha, i. 38; B.I.F.E., 1907, p. 167). Under Ottoman rule the authorities permitted the restoration and even the foundation of churches, although amongst Muslim legal circles less liberal doctrines were still upheld until the beginning of the nineteenth century (’Ali Pasha, vi. 84—85; Djaharti, iv. 20; v. 218; viii. 246).

After elucidating these two points, we can now review in chronological order the main events in the history of the Copts under Islam. The chief concern of the Caliph was to make no change in the administration of Egypt. He appointed a governor general sometimes the position was held by two officials, the one undertaking the political administration, the other carrying out the religious duties. The governor had under him two subordinates, a prefect of police and a kadi. The military occupation was reduced to a certain number of posts (ribaḥ or mākhū) scattered along the Mediterranean coast and on the desert frontiers of the Delta. Under ’Abd al-Aziz b. Marwan (65—86 = 657—705) there were 30,000 men. The country remained divided into pagarchies called ābāra, transcription of ṣūra; at its head was the šahīb al-būrā, translation of ṣāfāwūk; the subordinate officials also bear Greek names; these are the ḥalāj (avvōrdakos) the maqāī, the origin of which is not known for certain, the ḥulayfā (yavros).— Cf. Ibn ’Abd al-Hakam, Glos., 48, 58; Kindt, p. 414—419; Mafriqi, ed. Wiet, i. 114, 323; Bu’akr ed., ii. 259; Michael, ii. 35; J. Maspero and Wiet, Matrimmions (pour servir à la géogr. de l’Egypte), p. 170—171; Dict. arch., iv. 2836; Ill., ii., 254—255; 304 sqq.; xxv. 95—96; Bell, Ḡārīd. Papyr. xxvii. 477, xxxv., xxxv. 15, 65, 78, 447; W. Z. K. M., xi. 114; Z. A., xx. 76; Kilo, ii. 206—209; B.I.F.E., xi. 155—161. The absolute impossibility which the Arabs found of governing by means of their own is sufficiently established by the papyri. The
Arab occupation lived by the institutions which it found in Egypt and allowed itself to be administered by Copts who were supervised and docile. According to the papyri and the authors, all the provincial officials were Copts during the first hundred years of the occupation until the end of the Umayyad period (P. O. v. 5, 9—10, 12, 18, 48, 57, 64; Makrīzī, ed. Wiet, i. 249, n. 3; Michael, ii. 475; Lane-Poole, Egypt, p. 15; Annali, v. 319—455; Chronographia, p. 253, 296, 758, 911, 1091, 1112, 1164; Muir, Caliphs, p. 167; Pap. Schott-Reinhardts, p. 21, 27, 37, 42; P. E. R. Mitt., i. 6—7; Bell, Ahr. Pap., p. xxxiiii; Z. A., xx. 72—75, 77; Id., ii. 245—246, 257—258, 271, 361, 364—365, 381; J. Maspero and Wiet, Matériaux, p. 10—12, 172, 229; Monneret de Villard, Sculpture ad Ahdās, p. 23; ibid., ii. 8, 12—15). The fiscal organisation was also modelled on the Byzantine, without regard for the rules otherwise laid down by the Muslim doctrine. The Christians, old men, women and children excepted, had to pay from 40 dinhars to 4 dinars, to provide for the upkeep of the army, corn, oil, honey, cloth and to procure a lodging for a period of three days for every Muslim. The Coptic officials continued to collect the Annona corn which was sent to Medina (Makrīzī, ed. Wiet, i. 322—323; Bib. d. Arabians, ii. 178; J. Maspero, Organ., p. 112; Becker, Beiträge z. Gesch. Aegypt., ii. 84—85; Pap. Schott-Reinhardts, p. 42 sqq.; Bell, Ahr. Pap., p. xxxii sqq.; Id., ii. 251—252, 271, 277—278, 282, 382, 384; J. Maspero and Wiet, Matériaux, p. 85; Chronographia, p. 241; J. A., 1886, i. 440; Bourdon, Anc. cahaux, anc. sites et ports de Sace, p. 6 sqq.; M. L. Egypte, vi. 337). At the very first the Copts were happier than under the Byzantine régime; the exiled bishops with the patriarch at their head once more took possession of their sees. They lived in such peace that they played no part in the grave events in which the Muslim troops of Egypt participated — the assassination of ‘Uthman, the duel between ‘Alī and Mu‘awiyah, the rivalry of Ibn Zubair. The Arabs did not persecute anyone on account of his religious ideas (P. O., i. 495—497; v. 12; Renaudot, p. 160; B. E. E., 1885, p. 340—361; Annali, v. 4). It would, however, be wrong to extend this observation to the Umayyads and especially to contrast the toleration of the Umayyads, “who did not seek to make proselytes”, with the spirit of persecution which is said to characterize the ‘Abbasids (Dict. Arch., ii. 2829, 2841). No doubt the Jacobites had cause to rejoice at being given back the churches formerly confiscated by the Melkites; besides, although it did not compensate for the losses, the adhesion to the Monophysites must be noticed of a few Melkites, with the object of escaping the double djisya which was imposed upon them by Kurra b. Shariq’s principal adviser, naturally a Jacobite (P. O., i. 341; Quatremercès, Méid., ii. 39; Id., ii. 364; Chronographia, p. 1091). It is, however, stated in accurate texts that the Umayyad governors were not always kind to the Copts (P. O., v. 13—16, 54—57, 60—61, 68, 75—76, 86, 92, 98—99; vi. 217—234; Abū ʿAllāh, fol. 83—84; Chronographia, p. 1024, 1091). It is necessary to add that it was a question of taxation which became more and more severe and not of religious persecution in the narrow sense of the word. Besides, the Copts, with very rare exceptions which will not be noted, were never put in the position of having to apostatise to save their lives, and we do not find throughout the whole history of Muslim Egypt a single measure that can be compared with the persecution of Diocletian. It shows contempt for historical statements to oppose Byzantine toleration to Muslim fanaticism (M. F. O. R., i. 109; Muir, Caliphs, p. 362—363). Finally it may be mentioned for this first period that Christian annals were compiled in the monasteries, and that the monks took good care to describe as persecutions measures which deprived them of the advantage of remaining a privileged class (Marcel, Égypte, p. 33). Under the Umayyads as well as under the ‘Abbasids the Christians enjoyed liberty of worship. The governors only took care to have their Coptic lessons and prayers translated for them in order to be sure that they contained no insults to Islam. The bishops were allowed to meet in councils; the government watched over these councils, especially in the case of the election of a patriarch. It enquired also into the relations which the clergy were allowed to enter into with a foreign power. The Christian writers praise the liberalism of the Caliph ‘Uthman; but at this time the fiscal system was well established and applied without favour (P. O., i. 24, 28—29, 34—37, 51, 56, 68, 73—75, 194; x. 371; Renaudot, p. 190; Chronographia, p. 825, 864, 952, 1337, 1340, 1472; Rev. histor. xcviii. 283—284). We shall now give a chronological exposition of the measures which were passed. In the year 70 (689) the religious problems on the outside of the churches were destroyed. Since the monks at first had been exempt from the djisya, many Copts assumed the robe in order to escape the tax. But these monks, according to the testimony of Byzantine authors, possessed considerable wealth. From before the year 86 (705) the monks were subjected to a tribute and forced to pay one dinar a year (P. O., v. 51, where the absurd must be corrected and its translation "translated"). This edict promulgated by ‘Umar II whose tolerant spirit is specially mentioned by Christian authors, was renewed by ‘Umayr b. Isma‘il in the same conditions. In 87 (706) Arabic became obligatory for all administrative offices. Some years later Kurra b. Shariq, whom the Muslims revile as much as the Christians, impoverished the churches to such an extent that the priests had to use chalices of glass and wooden dishes. It was the same governor who appears to have seen to it that the lower ranks of officials were Muslims, but the measure was not made general until the year 100 (718). The Caliphs Walid and Yazid II renewed in the year 95 (714) and 104 (722) the order to suppress religious emblems. In 109 (727) immediately after the first revolts of which we are going to speak, the government settled in the eastern region of the Delta 5,000 Arabs of the tribe of Kais. Finally in the year 112 (730) in order to obtain a better return from the taxes and following the example of what had been done in other parts of the Muslim Empire a general census of the population was taken (Talhawi, tr. Zotenberg, iii. 229; Abū Yusuf, tr. Fagnan, p. 64—65; Kindi, p. 69, 76—77; P. O., v. 24, 62, 64, 67, 70—73, 1(531,919),(661,957); xvii. 679; Michael, ii.
The Copts endeavoured by every means to escape from this tax. When it was useless to take refuge in the monasteries they decided to quit the villages where they were registered and to settle in other districts where, being not so well known, they had a chance of escaping the tax. This movement of fugitives (σκαλάντια) was general and every effort was made by the government to thwart it. No one was allowed to go out of his native district without being furnished with a passport, a measure which has wrongly been represented as vexatious; the delinquents were to be branded with a red hot iron (P. O., v. 64, 69-70; [Pseudo-] Denys, tr. Chabot, p. 123-124; Renanot, p. 199, 201; Marcel, 456, p. 37; Roillard, Admin. civile, p. 6, 9, 115, 171; B. I. E., 1880, p. 10-11, 100; Lane-Poole, Egypt, p. 27; Dict. arch., ii. 2829; id., ii. 257-258, 269-270, 273-276, 279, 367-369, 378-380; Pop. Schot-Reinhardt, p. 40; Beck, Akadem. Pap., p. xx., xli., xliv., xlvii., xlii., xx, xxv.-97; xviii., 139 sqq.; Chronographia, p. 1025, 1211; B. I. E., 1908, p. 107; M. F. O., xi. 150-160).

Finally the Copts decided upon open rebellion for fiscal reasons. Blood flowed in Egypt, principally on the Delta, for more than a century. The first insurrection took place in 107 (725). Revolts followed in 121 (739), 132 (750), 135 (753), 150 (767), 157 (773). Lower Egypt was then convulsed by risings which have nothing especially Coptic about them — it must be said in passing — show already the numerical weakness of the Christian element. They lasted from 194 to 211 (809-826) and were a repercussion of the struggle for the Caliphate between Amin and Ma'mūn; the chief part was played at Alexandria by the Spanish Arabs exiled from Cordova (Kindi, p. 73-74, 81, 94, 96, 102, 116, 119; P. O., v. 76, 188-189; x. 427-428; Michael, ii. 500-501; Makrizi, ed. Wiet, i. 333-334; iii. 181-185, 201-207; Bu'llāk, ii. 492-493; Ibn Rāḥib (ed. Cheikho), p. 126; Renanot, p. 226 sqq., 251 sqq.; Bib. des Arabians, ii. 191-192; Quatremère, Rech., p. 153-159, 197-198, 201-212; Lane-Poole, Egypt, p. 29-31, 35-36; Becker, Beiträge, ii. 109, 115, 120; Dict. arch., iii. 2829; J. Maspero and Wiet, Matériaux, p. 31, 42, 47, 59, 76, 99, 103, 130, 209, 217; Chronographia, p. 1107, 1151, 1524; Caetani, Cron. generale, i. 65, 88; ibid., i. 32).

The Coptic risings begun under Umayyad domination cannot then be put down to any particular brutality of the ʿAbbāsids; the governors of the new dynasty were led to regard the natives as rebels. The ʿAbbāsids increased the burden of taxation, but not especially on the Copts, since it was on this account that the Arabs revolted in the Delta in 78 (794), 156 (802), 191 (807) and in 214-215 (829-830). At this latter date, the Christians of the central part of Lower Egypt called ʿA-bmirī, entered into the struggle. The physician Ibn Rīḍūn at Dīmashq remarks upon their ferocity and their stupidity. The conduct scandalised the Christians themselves, and the Coptic clergy strove in vain to calm their unruliness. The Caliph Maʾmūn, at the time in Syria, was induced to come to Egypt; very liberal, he charged an ecclesiastical of his suite, the patriarch Denys of Tell-Mahīr, with the task of obtaining by kindness the submission of the rebels. The ʿA-bmirīs would not yield; they were crushed by Aṣḥān and a large number were massacred. A number of survivors, including women and children, were transported to the region of Baghbaḍ where some of them covered themselves with glory fighting against the Zarqāʾ (Kindi, p. 190-192; Enycch. ii. 26). The usurpers were completely exterminated in 486-490; Ibn Rāḥib, p. 129; Michael, iii. 76-84; Makrizi, ed. Wiet, i. 293, 334, 337-340; iii. 3, 7, 141, 186; Bu'llāk, ii. 494; Renanot, p. 272 sqq., 279 sqq.; Quatremère, Rech., p. 156-161, 170-174; Bib. des Arabians, i. 256-257, 263; Lane-Poole, Egypt, p. 35; Becker, Beiträge, ii. 120-121; Mittheilungen L'agir, l'Ethiopien, i. 96; R. O. C., xiv. 279; J. Maspero and Wiet, Matériaux, p. 24, 43-45). This was the last rebellion of the Copts: "From that time they were in subjection throughout all the Egyptian territory, and their power was definitely crushed. None of them had the power to revolt or even resist the Government; the Muslims were the majority in the villages" (Makrizi, ed. Wiet, i. 334-335; Bu'llāk, ii. 1; ed. ii., p. 494; Quatremère, Rech., p. 198).

Denys of Tell-Mahīr has left a very severe judgment on the Coptic clergy. He is indignant at their ignorance and rages against the simony which flourished everywhere (Michael, iii. 80; Bibl. d. Arabians, i. 257-258). The Coptic bishops retorted that the simoniacal practices were necessary for the recovery of the wealth of the church, hard hit by taxation. It is a fact that one of the first ʿAbbāsids governors condemned certain bishops to work at the Arsenal because they refused to give up their sacred vessels (P. O., x. 374). This policy of an excessively severe system of taxation succeeded in emptying the monasteries. It is striking to note that the monastic inscriptions cease in the tenth century (Dict. Arch., iii. 2830, 2841). However in purely religious matters the government remained tolerant. The Christians were allowed to enter the mosque to bring a law-suit before the Kāḍī. In 169 (785) a Copt who had insulted the Prophet was only put to death on the reasoned opinion of the imām Mālik who was consulted at Madīna (Kindi, p. 382, 390-391).

Before the coming of the Fatimids there were two attempts to gain independence, which are worthy of note here; those of the Tābanīdīs and of the ʿAlīshīdīs. Ahmad b. Ṭūnūn imprisoned the patriarch Michael III because he did not pay a fine. Here again there was no religious persecution properly so called. For this dynasty as well as that of the ʿIkshīdīs seems to have taken into account Christian public opinion, from which they gained support against Baghbaḍ. It is
well known that Khumār Awaith [q. v.] ennumerated with art took pleasure in visiting the convents; it is reasonable to believe that the Copts knew how to profit by this. Under the Ikhsidids the influence of Christian officials appears. The government did not make peace for nothing during the popular troubles which burst forth at Fustat in 349—350 (960—961) on the news of the victories of Nicephorus Phocas. On the contrary a rescript from the Caliph dated 313 (925) had already prepared a pacification throughout the whole Muslim Empire, by deciding that the giyya would not be imposed upon the bishops, monks and necessary laymen. The Ikhsidids honoured by their presence the public celebrations of Christian festivals. A contemporary Muslim traveller, Mas‘ūdi does not appear to be shocked by this (Appendix to Eutychius, ii. 292; Abū Yusuf, tr. Fagon, p. 185; P. O., xvi. 242; xvii. 717, 779—780, 782—783, 799; Abū Sallih, fo. 49—50; Mursālik al-abhār, i. 563; Makrizi, ed. Wiet, iv. 231: Būlāk ed., ii. 152—153, 494; Renaudot, p. 324; Marcel, Egypte, p. 83; Schlumberger, Nicéphore Phocas, p. 125; Lane-Poole, Egypt, p. 66, 85—86; Becker, Beiträge, i. 62).

This attitude of the Ikhsidid government is confirmed by the edict imposed by the first of the Fatimid caliphs, Mu‘izz, who forbade these public rejoicings. This ostracism endured for only a short time and from the accession of his successor A‘zīz, Christian ceremonies recommenced with more pomp than in the past. Thus it was during the time of the Fatimid and with An eclipse under Hākim. The favour which the Christians enjoyed is attested by one of their first acts, the transfer to Cairo of the office of archbishop. A‘zīz had a Christian wife whose two brothers he himself appointed archbishops of Jerusalem and of Alexandria respectively. Being liberal, he encouraged controversies between Christians and Muslims and he refused to prosecute renegade Muslims. The resentment in Muslim circles must have been terrible. It explains and in part excuses the exasperation of Hākim who pursued the Christians with his hatred with the direct object of abating their growing influence (see the definite statement of Makrizi, Būlāk, ii. 31, 495). But it must be remembered that Hākim was a ferocious persecutor. He threw to wild beasts the patriarch Zachariah, to whom, according to Christian chronicles, they did no harm; this act of brutality was perhaps committed at the instigation of a monk. He prohibited the celebration of Christian festivals, forbade the Christians to possess slaves, to have Muslims in their service; he seized the property of the Church and he caused a considerable number of crosses to be burnt. Then he passed on to the destruction of the churches with such rage that he is said, — but this is without doubt exaggerated by Muslim writers — to have destroyed between the years 401 and 405 (1014—1016) no less than thirty thousand churches in Egypt and in Syria. He had decided upon the exile of all the Christians, but the decree was rescinded before it could be put into action. A measure of general dismissal of the Christian functionaries resulted in a complete check. In spite of everything the judgments of the Synagawe (on this Caliph are not malevolent (P. O., iii. 289). Zahir inaugurated his reign by a measure of justice authorising the Christians to return to their religion, who bewildered by the madness of Hākim had become converts to Islam (for a condemnation to death see however Yahya, p. 238). Under the Caliph Mustansir, the vizier Ya‘qūb made the Christians submit to numerous vexations; he ordered the closing of the churches and the incarceration of the patriarch Christodoulos, under the pretext that the latter had instigated the King of Nubia not to pay the agreed tribute to Egypt. These incidents which were terminated by a heavy fine inflicted upon the patriarch were perhaps not quite unconnected with the fall and the putting to death of Ya‘qūb. Under the Caliph ‘Amil, who liked to be entertained by the monks of the convent of Nāxya in the suburbs of Cairo, the tendency is to liberalism. Credits were provided in the budget for Christian ceremonies. Towards the end of his reign a monk Abū Nadjāḥ played the part of a kind of prime minister to him; this monk who assumed the arrogance of a grand seigneur had the effrontery to go even into the mosque and insult the Muslims; this action cost him his life. Hāfuq, who like his predecessor, loved a sojourn in the monasteries, had as his vizier an Armenian Christian, Bahram, who received the title of saif al-islam, the "sword of Islam". However of Muslim councilors of the Caliph, he accepted all his commands. Bahram, all powerful, made a large number of Armenians come to Egypt and contributed to the restoration of many churches. The Muslim revolt burst forth and overthrew the minister, his successor Riḍwān favoured a violent reaction against the Christians, driving them from the administration, bringing about confiscations, ordaining even summary executions. But the country was to be troubled by the rivalries of ministers who fought for power with armed force and the Christians suffered from this state of affairs neither more nor less than the Muslims. It is in this sense that we must interpret a very touching Coptic document, the; inscription of the jar found at Dār al-Nūn, dated 872/1256 (Ann. du Serv. des Antiquités, i. 117—119; B. F. A. O., iv. 75; Dict. arché, i. 1707—1710; ii. 2866; Crum, Coptic Monuments, no. 8104). The incident which commemorates should not be regarded as a persecution of the Christians, any more than we would charge the government with the plundering of the convents of Scete and the massacre of the monks in the region of the Fātimid Mustansir (Ibn Ribih, p. 128; Renaudot, p. 443; Quattremer, Mem., ii. 400). Churches and convents were destroyed wherever there was fighting and naturally Christian buildings were not spared in the burning of Fustat by command of Shāwar [q. v.], who had a church restored at Kyū. The Ghuzz troops who accompanied Shirkūh quarrelled with the Fātimid, negro, Turk or Armenian troops and then the Copts; just as the soldiers of Shirkūh [q. v.] violated the tomb of Shenoudi at the White Convent. The History of the Patriarchs records the execution of a monk who refused to apostatise. This can hardly be an isolated case at this time (Yahya, p. 195—197, 203—205, 235—236, 239; Ibn al-Kallânis, p. 66—68; Abū Sallih, fo. 25: 43: 47, 61—66, 81—82; Ibn Ribih, p. 135—136; Ibn Muyassar, p. 71—72, 78—79, 82, 84: P. O., iii. 288, 350—357; Kalâba-an, viii. 280: Makrizi, ed. Wiet, iv. 226, 228—229, 231—234, 240; Būlāk ed., i. 357; ii. 286—288, 495—496, 507; Abū ‘Iḥmaṣ, ed. Popper, u. 63, 101; Renan, ibid.
They were indispensable in the management of business and some Muslim writers had the courage to recognise this, while deploring their arrogance. 

In order to satisfy public opinion, the government from time to time decreed their dismissal, and a month after the decree, the Copts whom they found indispensable, resumed their offices. These periodic dismissals took place in 678 (1279), 682 (1283), 700 (1301), 712 (1321), 755 (1354), 822 (1419), 825 (1422), 852 (1447) (P. O., xvi. 777; Ibn Fadl Allah, Tarif, p. 63; Kalkashandi, viii. 36; Makrizi, ed. Wiet, ii. 88, 93, 110, 111; Bûlûk ed. ii. 42, 75, 85, 90, 237, 391, 497-498, 507; Quatremère, Sultans mamelouks, iii. 5, 123, 124; ii. 8; iii. 135, 179, 213; Abu l-Mahasin, ed. Popper, vi. 319, 400, 450, 456, 464, 468, 559, 665, 718, 724, 819-820, 823; vi. 160, 269, 272, p. 277, 578; Sakkhâwi, 215; Ibn Iyâs, ii. 93, 201, 268; ii. 48-49, 67, 80, 171, 197, 255; Ali Fâshî, ii. 27; vi. 40; Marcel, Égypte, p. 173; Quatremère, Mêm., ii. 223-225, 242, 247, 261-262, 288; B. I. F. A. O., i. 126-127, 175, n. 4; R. O. C., xiii. 196; Gaudemay-Demobynes, La Syrie, xvii.; Wiet, Les secrétaires de la Chancellerie, extrait de Müh. R. Basset, 22; C. I. A., Jerusalem, i. 334-335; ii. 132; ibid., i. 683, 846.

The government during normal times maintained courteous relations with the Coptic Patriarchate, on whom the Mamlûk chancery bestowed pompous titles. He forbade him to enter into secret engagements with the Negus of Abyssinia. There were incidents in regard to this in 826 (1423) and in 852 (1448) (P. O., xvi. 443; Kalkashandi, xi. 85, 100, 395-405; Sakkhâwi, p. 210; Abu l-Mahasin, ed. Popper, vi. 572).

At the same time popular manifestations forced the government to take more serious measures than a simple dismissal of officials. Besides, the most severe measures were continually passed with the object of exciting a ransom; for the Christians were more especially molested at times of financial crisis for the government. One single incident stands out as worthy of attention. In 700 (1301), a date often already cited, the Mamlûk government caused the greater part of the churches to be shut throughout the whole of Egypt. It excepted the town of Alexandria, perhaps in order not to provoke foreign interference, for the Mamlûks also suffered by this order and two ambassadors sent by the Byzantine Emperor and the King of Aragon, obtained the re-opening of some of the churches (P. O., i. 567; xii. 356, 477; xiv. 449; Makrizi, Bûlûk ed. ii. 849-1-32, 130, 292, 399; Quatremère, Sultans mamelouks, ii. 180; Renadouf, p. 604-605; Quatremère, Mêm., ii. 223-224, 257; Ibn Iyâs, ii. 35; Marcel, Égypte, 165; J. A., 1887, ii. 210; J. Maspéro, Hist. Patr., p. 378).

The Muslim writers relate the story of the sacrifice of a virgin thrown into the Nile to obtain an abundant harvest, a custom which the Muslims had abolished (Sakkhâwi, p. 12-13; Lane, Mammers, ii. 229-230; Bull. soc. Khédive. de. Geogr., vii. 158-159; J. Maspéro and Wiet, Matériaux, p. 216-217; Chronographia, p. 242).

It is hardly likely that the Christians had retained a human sacrifice, for which, besides, there is no evidence in classical texts (Maspéro, Hist. des peuples de l'Orient, i. 24, n. 2; Frazer, Myths, ii. 38-40; no analogy with sacrifices following military expeditions: Amelineau,
Actes, p. 80, n. 4). Special mention is made among the Christians of Egypt of a liturgical rite to secure the rise of the Nile (Dict. Arch., iv. 2561—2562). In the Mamluk period the Christians had still retained the custom of throwing into the Nile a little casket containing the finger of a martyr. This ceremony which gave rise to abuses, forbidden from 702 to 738 (1303—1337) was definitely suppressed in 755 (1354) and the Church of Shubra-Dammanhûr, where the festival took place in a suburb north of Cairo was destroyed (Idem, Descr. de l'Afrique, transl. 178; Matilik al-’Ahir, i. 361; Maqrizi, ed. Weit, i. 292—296; Bulak ed. ii. 500; Quatremère, Sultans mamelouks, ii, b. 213—214; Renautot, 606; Sakkâwi, p. 12; Ibn Yâsîn, i. 206—207; B. I. Egypte, 1907, p. 167—168; B. I. F. A. O., i. 176).

The Jacobite patriarchate in 1442 signified its adherence to the Council of Florence of two centuries after a fruitless attempt at reunion with Rome attempted by the Patriarch Cyril III. The Coptic Church was united to Rome for a century and a half by very loose bonds and it appears as if the most of the people did not trouble about it, in spite of the correspondence exchanged between the Papacy and the Patriarch of Alexandria, and its spirit of the Council of Memphis in 1582. In any case it was to regain the support of the Ottoman Pâshas that the Coptic Church dropped all relations with Rome (Renautot, p. 611—612; Macarius, p. 298, 309, 303 sqq., 323—326, 336; B. I. Egypte, 1904, p. 197—211; Machirch, x. 534—540; Bussearion, xxxiii. 133—161).

Under the Ottoman Pâshas, the financial administration remained largely in the hands of the Copts. Christian popular festivals, especially in the country, were held with the approval and even with the participation of the Muslim elements. This period saw the avanizis flourish, about which the archives of the convent of St. Saviour of Jerusalem give so many particulars (Castellani, Catalogo dei firmari, Jerusalem, 1923). The Copts had to endure these fines inflicted on the slightest provocation, and this resulted in the closing of the churches until the fines were completely paid. The first governors exacted the payment of the special imposts due from tributaries. In the first half of the xviiith (xviith) century the assessment of the dîziya was even increased. Then we come to a period of anarchy, where “nothing happened worthy of being recorded except irritating and arbitrary acts of the Emirs” (Djabarti, v. 208, 218). These troubles had economic reactions which affected the whole of Egypt, but it does not appear that the Copts suffered from them more particularly (Vansleb, Relation, p. 93, 110, 189—190; Bib. d. Arabisants, ii. 9—10, 12—13, 19; Marcel, Egypte, p. 234; Djabarti, ii. 10, 114—116; iii. 132, 157; iv. 144, 208—209, 217—221; v. 13, 23, 217—218; Savary, Lettres sur l’Egypte, i. 302; Ali Pâshâ, vi. 84—85; Ch. Roux, Les origines de l’expé. d’Egypte, p. 41—43; B. I. Egypte, vii. 166—167).

Ryme says that on the arrival of the French, the Copts were “poor, brutalized and engaged only in the most ignoble callings”; they were “tax-collectors, spies, managers of the business affairs of the Mamluks” (Egypte, Un. pitt., ii. 27 sqf). Bonaparte did everything to prevent the Muslims from thinking that he favoured the Christians, who had nearly been massacred at the landing of the French. To “secure himself the friendship of the people” Bonaparte forbade Christians to wear white turbans or to break the fast of Ramadan in public. After the revolt in Cairo the Muslims tried to put the blame on the Christians, who had not always been prudent. After various derogations the French administration created a system of taxation which “almost enabled them to do without the Copts”. The latter assisted in pointing out the inconveniences of it. Besides, Copts had already been enrolled in the French army (Egypte, Un. pitt., ii. 148, 152, 189, 193, 199; Djabarti, vi. 15, 26, 36, 40, 56, 58, 93, 95, 97, 119, 151, 175—178, 208, 210—211, 214, 216—217, 253, 255—256, 259, 267, 297, 306; vii. 30, 48, 220—221; B. I. Egypte, vii. 8).

The departure of the French made Muslim reprisals inevitable but an official circular ordered that the Christians were not to be molested in whom “it was excusable to have joined the French”. The Copts were again employed as tax-collectors, but it must be noted that the government was still able to extort money from them, and that in 1230 (1815) the poll-tax was again levied (Djabarti, viii. 38, 42, 46—48, 52, 56, 77, 177, 300, 306, 308, 318, 320, 393, 397, 405; viii. 149, 201, 283; ix. 17, 87, 89, 91, 111, 113—114, 166—167, 180, 184, 297; Maceiri, p. 397—372).

This exhibition shows the rapidity of the islamisation of the Copts. The energetic suppression of the first revolts weakened the power of resistance of the Christians, who from the third (ninth) century no longer had a majority in Egypt. According to the text of the treaty made after the Arab Conquest, there were six or even eight million Christians subjected to taxation; as women, old men and children were exempt from it the lowest figure would give 24 millions as the total number of inhabitants in Egypt, which is excessive. The reassessment of the year 112 (730) is said to have given five million Copts liable to taxation, a number which we also consider greater than the reality. In practice the poll-tax collected under Mu’awiyah (41—60 = 661—680) five million dinârs, a figure which was reduced under Hârûn al-Ra’îşid (786—809) to four million and a half, but still a little later to three millions. Besides, at the end of the first (viiith) century the governors wished to put an end to the conversions which were impoverishing the Treasury, and if the Caliph ‘Umar II had not been opposed to it, the new converts would have had to continue to pay the dîziya. Anxious to adhere to Islâm the Copts sometimes even tried to attach themselves to Arab tribes; a legal scandal on this point made some stir (Kindi, p. 397—399, 412—415). In this connection we may go back to the preceding paragraphs and reflect that each government measure of any importance brought about conversions en masse. We may recall the tragic visit of Marwân II, when 24,000 conversions were made, the great persecution of Hâkim, the dismissals of officials under the Mamluks; in 721 (1321) in a single day in the town of Kâlibâ 450 conversions to Islâm were registered. Nothing can better show the diminution in the number of Copts in the Mamlûk period than to give that in the number of episcopal see. The Council of Alexandria in 320 brought together almost 100 national bishops; at the end of the seventh century there were still over sixty. In the xivth century there were only 40 sees (Ibn ‘Abd al-Ḥakam, p. 70, 87; Euty—
From their marriages with native women were born delicate children, and the race was already persecuted, as far as the third generation. Without insisting too much upon its importance we note in regard to this fact an Arab saying which attributes a special fecundity to Coptic women. To sum up, agreeing with Masson and all the Orientalists, we estimate that 92% of the Egyptian population is of Coptic origin. On this particular point we know nothing so erroneous as the chapter devoted to Egypt (p. 520–528) in *Races et l'Histoire* by Eug. Pittard (Idrist, *Désert de l'Afrique*, tr., p. 193; Ibn Mayyassar, p. 1–2, 34, 79; *B. L. F. A. O.*, ii. 34–36; Kalâshândi, i. 203 sqq.; iv. 67–72; Ibn Khaldûn, *Hist. des États et des Empires*, i. 9–10; Majrûz, ed. Wiet, i. 13, n. 12, 214, n. 13; ii. 43–46; iii. 251; iv. 193, 83; Bulûk ed., i. 4, 12, 14; Quatremerè, *Mém.*, ii. 84 sqq., 190–219; Wustenfeld, El-Mabûs's *Abhandlung* ab. die in Ägypten eingewand. ar. Stämme*; Blochet, *Hist. d'Égypte*, p. 106–140; Quatremerè, Sultans mamelouks, i. a, 40–41; ii. b, 187 sqq.; Abu l-Mâlik, ed. Popper, vii. 81–82; Volney, *Voy. en Égypte*, i. 73 sqq.; Marcel, *Egypte*, p. 234; *Egypte, Un. Pitt.*, ii. 27–28; iii. 47, 103–115; *Bib. d. Arabisants*, ii. 24–25; Clot Bey, *Après sur l'Égypte*, i. 158 sqq.; Lane, *Mamers*, i. 31–32; Becker, *Beiträge*, ii. 192–193; Lane-Poole, *Egypte*, p. 28–29; *C. A. A.*, ii. 722–723; d'Harcoët, *L'Égypte* et ses États, *S. O.*, i. 85 sqq.; *M. F.* lvi. 12, 26, 75–77; ibid., i. 1, 842; ii. 4, 544).

Summing up the stages of the Islamisation of the Copts in a few lines, we may say that the Christians were no longer in the majority by the third (vith) century, two hundred years after the Arab conquest and it can be estimated that by the viith (xvith) the Christians were barely, as in our times, a tenth of the total population of Egypt. It remains to account for the causes of this strangely rapid conversion of a race which had been able to recover on many occasions, whom the persecutions of Decius and Diocletian had not subdued and whom the Byzantines were never able to settle. On the part of the Muslims, however, persecutions, in the sense understood in Roman times, were extremely rare. It is undeniable that there were martyrdoms which cannot be explained away; but the vast majority of the executions ordered by the Government show a particular characteristic on which it is necessary to insist. The Muslims have never wavered on two points; the death penalty was ordered in the case of a public insult to the Muslim religion and in that of a public insult from Islam to Christianity. This observation must, for Egypt, be applied to the majority of European monks martyred in Egypt; the latter were, besides, in the eyes of the government, more or less suspected of espionage. That the church should honour them as martyrs is to be expected, but it would be wrong to call this persecution. Indeed the records of Egyptian martyrs, which contain innumerable lists for the Roman period, are exceedingly poor for the Muslim period and Christian epigraphy furnishes no further light (*P. O.*, i. 653–636; iii. 436; xvi. 203–205; vii. 578–580, 754; Abu Sâlih, *Luk.* 84–86; Majrûz, *Bulûk*, ed., i. 493; Renoudot, p. 426–427, 564–565; Maillet, *Désert de l'Égypte*, ed. 1735; p. 93 sqq.; Quatremerè, *Mém.*, ii. 251 sqq.; *B. L. F. A. O.*, 1855; p. 553 sqq.; *J. A.*, 1887, i. 83 sqq.; Lane-Poole, *Egypt*, p. 27–28; *B. L. F. A. O.*,
The Copts had not been able to bribe their masters to obtain the withdrawal of the edict, which dismissed them from office (Yūkī, Ḥadīth, ii. 247; Makrizi, ed. Wiet, i. 335; ii. 24; Quatremère, Sultana mamelouks, ii. 66, 179, 221; Bib. d. Arabians, ii. 184, 192; J. Maspero, Hist. Patr., p. 140, 178; C.I.A., Egypte, ii. commentary on No. 589; M.I., Egypte, vi. 144).

The Coptic tax-collectors who seemed to aveange on the poor Arabs the fact that the Coptic nation alone was liable to poll-tax used a secret system of keeping accounts in order to make themselves indispensable. It was in vain for example that Napoleon tried to do without them. Muhammad Ali definitely suppressed this secret method of accounting at the same time as he imposed a check upon their embezzlements (Bib. d. Arabians, ii. 19; Volney, Voy. en Egypte, 1825, i. 64, 176; Egypte, Un. pitt., iii. 7, 160; Djabirîf, viii. 240, 242–243, 248, 275–278; ix. 88–89, 121; R.I.E., 1859, p. 285 sqq.; Macaire, p. 360 sqq.).

This general attitude of the Copts has not been without influence upon the verdicts of Muslim writers; for example one should read the opinions quite devoid of favouritism of the physician Ibn Rishwân and the Spanish traveller Umayya b. Abd al-Azîz; in his travels in the west, in their turn, very severe upon the Copts.

It may be recalled here that the word Kibît was even in Turkish used as an insult and applied to mountebanks (Nuwarî, i. 923–924; Makrizî, ed. Wiet, i. 193, 206–207, 215, 215; Bûlûkî ed., i. 340; Kalkashandî, iv. 43; Quatremère, Mamelouks, ii. 6, 247; Clot bey, Aperçu sur l'Egypte, ii. 132 sqq.; Lane, Manners, ii. 273 sqq.; Butler, Copt. Churches, i. 334–336; Basset, Mêlanges africains, p. 286–287; Actes du Congrès de Gêogr. du Caire, iv. 245–247; d'Harcourt, L'Egypte et les Egyptiens; Vansleb, Relation, p. 41–43; R. M. M., xx. 125; Isambert, Itin. de l'Orient, Egypte, p. 153, 178–184).

One last question arises: Has this wholesale conversion of the Copts to Islam had any economic consequences? It has been said that the Muslims of Egypt were not productive, relying upon the undoubted fact that the industrial centres were largely peopled by Christians. The question is difficult to decide. It is stated that at the Mamlûk period the greater part of the native industries had perished, and special mention is made of the disappearance of centres of the weaving industry which the early historians and geographers mention: Akhûm, Ashshûmân, Asyûtî, Bahâwâ, Dabik, Damietta, Tinnis, Tûnâ. It cannot however be believed that a simple change of religion could make the artisans abandon their occupations, and it is necessary rather to blame, after the terrible economic crisis of the reign of the Fâtimid Mustaṣûr, the excessive and exorbitant taxation of the Aïyûbids and especially of the Mamlûks. The Copts, moreover, had made themselves famous by a particular industry which has not yet completely disappeared; the ship-building yards were at the beginning of the Arab occupation prosperous to such an extent that on the establishment of an arsenal at Tunis, the governor of Egypt, Abd al-Âzîz b. Marwân sent 3,000 Copts there. A recent enquiry has shown how much the technical language of the boat-builders of the Nile still owed much to the secret method of the ancient national language (Bell, Aphr. Papyr., vii. 147 sqq.).

J. Maspero, Organ., p. 59; Z. I., xvi. 147 sqq.;

The Arabisation. The Arab occupation gave new life for a period to the Coptic language, a victory without result, since the Coptic language was monopolised and superseded by Arabic. At first the administrative offices continued to be conducted in Greek, as we shall show in detail later on. But in regard to geographical names we see a somewhat curious nationalist phenomenon. Greek place-names, especially the capitals of pagarchies disappeared completely and were replaced by transcriptions of the former Greek names. The Greek names only remained for places founded by the Greeks (Fustat, al-Iskandariya). This revenge of the Copts on the Greeks was final since at the present time numerous place-names are still based on the Coptic names (Champollion, *L'Egypte sous les Pharaons*, i. 267, 38 sqq.). At the same time, the Scripture lessons which were read in Greek in the church services and explained in Greek in the church services were henceforth only read in Coptic until Arabic commentaries became necessary. In the same way Christian epigraphy became Coptic, while it had been Greek up to the sixth century (Quatremeré, *Rech.*, p. 15; *Dict. arch.*, iii. 2821).

In the year 87 (706) the governor 'Abd Allah b. 'Abd al-Malik ordered administrative documents to be drawn up in Arabic (Ibn 'Abd al-Hakam, p. 128; Kindi, p. 58—59; Mâkri, ed. Wiet, ii. 57—58; Quatremeré, *Rech.*, p. 200; *Bib. d. Arabians*, ii. 196; Becker, *Beiträge*, ii. 130—131; *Chronographia*, p. 949, 1024, 1056—1057, 1110; Chassinat, *Pap. médical*, p. 6). We now give some facts deduced from an examination of papyri. The first bilingual papyrus in Greek and Arabic dates from the year 22 (643). There is another of 57 (677), the last of 101 (719). But the protocols of these papyri remain bilingual down to 101 (720). Alongside of them are papyri written wholly in Greek of which the latest are dated 164 (780). The first papyrus composed wholly in Arabic is dated 90 (709). The Arab government readily accepted communications in Coptic but does not seem to have used it regularly (Becker, *Beiträge*, ii. 131, 145; Pap. Schott-Reinhardt, p. 28—29; Bell, *Aphr. Papyri*, xlv., 417; Z. A., xx. 68—104; xxii. 137—154; F. E. P. Mitt., i. 6, 50; Ist., ii. 245—283, 359—384; iii. 132—140, 369—373; iv. 87—120, 313—314; W. Z. K. M., xx. 139 sqq.: *Chronographia*, p. 254, 809, 911, 951, 1112, 1181, 1226, 1623; Ker., *hittorius*, exx. 276; Corp. *pap. Kritteri*, iii. a. 22; A. 2). The first inscription in Arabic found in Egypt is painted on a house at Antinoe dated 117 (735) (C. I. A. Egypt., i. No. 513; ibid., i. 388). It is probable that some Arab writers learnt the Coptic language — the case of the Kadi Khair b. Nu‘am (120—128 = 738—746) cannot have been isolated (Kindi, p. 349, note; J. E. A. S., 1910, p. 778). The patriarch Michael (728—752) had a petition sent to the governor 'Abd al-Malik b. Marwân (132—133 = 750—751) written in Coptic and in Arabic (Quatremeré, *Rech.*, p. 32—33); but he himself did not know a word of Coptic, for he required an interpreter to converse with the Caliph Marwân II (Quatremeré, *Rech.*, p. 337; Chassinat, *Pap. Médical*, p. 6).

In 145 (762) at Fustat the Coptic language was generally understood (Ibn 'Abd al-Hakam, p. 30; Kindi, p. 113). During his sojourn in Egypt (217 = 832) the Caliph Ma'mûn was accompanied by an interpreter, whose services were by no means unnecessary (Ma'ârîz, ed. Wiet, i. 340; Quatremeré, *Rech.*, p. 43—44). The Patriarch Joseph (821—850) addressed the bishops who had become Muslims to their accusers in Coptic and some of the Muslims understood his discourse (J. O., x. 525; Quatremeré, *Rech.*, p. 34). The clergy in the ninth century had learned Arabic well, for a Muslim, who wished to be converted was instructed by a priest who expounded to him in Arabic the Coptic text of the holy scriptures (Quatremeré, *Rech.*, p. 34—35). Let us note in passing a Christian stele in Coptic and Arabic, dated 625 A. M. = 909 (Ann. du serv. des Antiquités, xii. 285—286). The Coptic medical papyrus published by Chassinat (M. I. F. A. O., xxxi.) frequently employs Arabic terminology, transcribed in Coptic characters and in some places in Arabic script. It was written between the ninth and tenth centuries by an author who used both languages with facility and a note might even lead us to suppose that he was more familiar with Arabic than with Coptic. He frequently gives the preference to Arabic terminology over Greek or Coptic, quotes numerous Arabic physicians, and even uses an Arabic translation of Galen, although he knew Greek (Chassinat, *Pap. Médical*, p. 4). On account of certain transcriptions, Chassinat would date about this time the alchemical fragments which Stern put to the xiiith or even as late as the xivth century (ibid., p. 5). But according to Mu'âzad (about 325 = 935) the Christians of Egypt still spoke Coptic (Mu'âzad, p. 203), which is confirmed by popular Coptic poetry of this period (An. Bolland., xl. 244, n. 3). The celebrated passage in Severus or AsçmâAIN is well known. "I have begged the assistance of Christians who have translated for me the facts which they had read in Coptic and in Greek into Arabic, which is now spread to such an extent throughout Egypt that the greater part of the inhabitants do not know Greek and Coptic". This statement is absolutely accurate on the first point, as we possess in Coptic the biographies of patriarchs that Severus has faithfully translated (P. O., i. 115; Quatremeré, *Rech.*, p. 35; Ladeuze, *Ciboriiat pachomian*, p. 69; F. E. G., i. 110; Chassinat, *Pap. médical*, p. 5). Thus in the fourth (tenth) century the Coptic clergy wrote in Arabic when they wished to be understood; this is especially the case in regard to Severus and Eutychius (Becker, *Beiträge*, ii. 131; ibid., n. 7). It is from the same period that an Arabic text written in Coptic characters dates (B. I. F. A. O., i. 1 sqq.; Chassinat, *Pap. médical*, p. 1, 23). Besides, the Coptic language began to be corrupted; this is the case with a document relating the persecutions of al-Hâkim (Quatremeré, *Rech.*, p. 247 sqq.). It seems however, too much to assert that in the xiiith century, or perhaps earlier, Coptic was no longer written (D. Arch., iii. 2821). The geographer Bakrî (d. 1084) even states that around Tripoli in Barbary certain groups still spoke Coptic (Bakrî in Quatremeré, *Rech.*, p. 293). Athanasius of Kûs prepared in Arabic his grammar of the Coptic language, but noted that from his time two dialects the Buhairic and the Saïdic were still used (Quatremeré, *Rech.*, p. 20—21). Mawhûb b. Maṣûr, the continue
of Severus of Asmûnain, still used biographies written in Coptic (ibid., p. 37; Renaudot, p. 418). Abû Sâlih, who records a Coptic inscription dated 1043 says that in the sixth (sixth) century educated men among the clergy still knew Coptic (Abû Sâlih, f. 43, 45; this was so in regard to the patriarchs Cyril II (1075–1099) and Gabriel II (1132–1145) who wrote as elegantly in Coptic as in Arabic (Renaudot, p. 407, 501; Quatremerâ, Rech., p. 292; Butler, Copt. Churches, ii. 84). The latter translated into Arabic the liturgical books (Michael, iii. 235; Renaudot, p. 467). The investiture of the patriarch Macarius (1101–1127) was celebrated in Greek, in Coptic and in Arabic (F. O., i. 231; Renaudot, p. 488). The heretic Mark b. Kanbar (d. 1166) to spread his doctrine expounded the Holy Scriptures in Arabic from the Coptic text (Abû Sâlih, f. 95 194; Makrizi, Bulak, ii. 496; Quatremerâ, Rech., p. 36; Graf, Ein Reformurscher innerhalb der Kopt. Kirche im zwolften Jahrh.).

At the end of the xiith century a converted Jew became fluent in the Coptic language (Renaudot, p. 525; Quatremerâ, Rech., p. 36–37). Abû Sâlih mentions that in his time at Esna Egyptians marched in front of wedding processions even Muslim ones, and chanted formulae in Sudic Coptic (f. 102; Quatremerâ, Rech., p. 43). We have already noticed the Coptic inscription of Dâd al-Aṣwân, dated 1156; we may here note that the tombs opposite al-Aṣwân dated 1173 which refers to the expedition of Turâną Shàh into Nubia (Dict. Arch., ii. 2879).

These two texts support a remarkable way a passage in Abû Sâlih who says that in 554 (1159) Coptic was still being studied (Abû Sâlih, f. 45). The story of the martyrdom of John of Phanadjoit which dates from the beginning of the xiiith century clearly marks a decline, for we find many Arabic words in it (Quatremerâ, Rech., f. 401; B. I. E., 1885, p. 356; f.d., 1887, i. 120–121; B.L.F.A.O., i. 113 sqq.; Chassinat, Pap. Médical, p. 6; Am. Bolland., xl. 245). The translation of the sacred books was continued and while the services were always celebrated in Coptic, the lessons were explained in Arabic (Villecourt, Observations littéraires, repr. from Le Museon, xxxvi. 49–50, 65, 111–112). Perhaps the clergy no longer understood Coptic; the patriarch Michael V (1165–1166) was not able to read either Coptic or Arabic (Renaudot, p. 514; Quatremerâ, Rech., f. 37–38).

The latest Coptic inscriptions are of this date, those of the White Convention in the xiiith century; those of the painter Mercury, one of which is dated 1301 at the Red Convent, the other 1318 at the Convent of St. Simeon; and lastly the bilingual inscription (Coptical and Arabic) on a rock between Aswân and Kûmm-ombo, dated 1337 (Dict. Arch., iii. 2870–2871, 2878–2879; J. of Thol. Stud., v. 554–555; M.F.O., v. 133; B.L.F.A.O., vi. 3–4; Monneret de Villard, Les Consuls préx de Schôh, i. 28 sqq.). While an ecclesiastical diploma was in 1256 prepared entirely in Arabic, an ordination diploma of 1363 was still written in Arabic and in Coptic (Ann. du Serv. des Antiquités, xi. 177–185; Proc. of Bibl. Arch., xx. 270–276).

The latest in date of Coptic manuscripts is of 1393 (Stern, Copt. Gramm., p. 2). The decline is quite complete and it is clearly wrong to say that towards the end of the reign of the Mamlûk Sûlân, an order was made to close the Coptic schools and that the teaching of the Coptic language was forbidden (Égypte, Un. pitt., iii. 159). At no time indeed does such a measure seem to have been taken. We may note here that Abyssinia has "received in a very singular fashion the imprint of Arabicisation by means of the Arabic literature of the Christian Copts in Egypt" (R.M.M., liv. 95).

The celebrated passages of Makrízí are well known which declare that in the majority of monasteries of the district of Asyût, Greek and Coptic were both known and that Coptic was still spoken. Some people naturally have been led to say that this assertion is an exaggeration. In our opinion one can go further; it is probable that Makrízí quotes on this occasion an early writer, Shâhûshîf for example (d. 390 = 999); it must not be forgotten that Makrízí is a contemporary who often does not give his sources (Makrízí, Bulak, ii. 507; Quatremerâ, Rech., p. 42; Dict. arch., iv. 2481, 2486; Lane, Manners, ii. 282; Steindorff, Kopt. Gramm., p. 2; R.O.C., xiii. 192, 194; Ladeuze, Cînâb. pâkânîn, p. 69; Chassinat, Pap. Médical, p. 6). — Chassinat holds that the copy of the Théothikes, a Coptic text written in Arabic characters, can scarcely be of an earlier date than the xivth or xvth century. It is also evidence that Coptic had been completely neglected for, in order to learn the pronunciation, it was necessary to have recourse to the Arabic alphabet (B. F. A. O., v. 91 sqq.; Chassinat, Pap. Médical, p. 23–24).

There remain to be noted certain isolated facts which show that a few Copts, until the middle of the last century, still used the ancient national language (Vansleb, Relation, p. 363: Quatremerâ, Rech., 44, 293; Dict. arch., iii. 2822; iv. 2486; R.M.M., livii. 177; Égypte, Un. pitt., iii. 117; Rech., f. 37–38). Spiritual care which the Coptic clergy took of their collections of manuscripts reference can be made to the work of Hyvernat (Rev. biblique, x. 442–428).

In brief a rude blow was dealt to the national language from the time that the Arabs firmly established the use of their own language in government offices. The conversions en masse which had taken place from the first century induced the new Muslims to learn the language of the Kurâñ. Step by step the regime of a military occupation to that of a colonisation, and, doubtless, this was the principal factor in Arabicisation. The necessity of buying and selling to the townspeople forced the Copts to learn the Arabic language, and even to write it. The Coptic language survived for several centuries, losing ground in each generation, ended by quite disappearing from everyday life, being restricted to the church services and was not understood by the people at least from the xivth (xvith) century (ibid., ii. 7). The vocabulary embellished by G. Maspero may be the latest document of spoken Coptic (Romania, xvii. 481–512; Chassinat, Pap. Médical, p. 36).

It is quite natural that a certain number of Coptic words have survived in the Arabic of Egypt, but it is wrong to think that Coptic grammar has in any way influenced Egyptian Arabic (Z. D. M. G., i. 653–656; Stern, Kopt. Gramm., p. 5–6; B. F. A. O., ii. 212–216; and the authors quoted in B. F. A. O., iv. 33–38).

Christinn Literature in Arabic.

Literature in the Coptic language consists almost
entirely of religious works, translations of the Old and New Testament, and Lives of the Saints for the most part translated from the Greek. This literature has been roughly handled by J. Maspero, who admits however that Greek had supplanted Coptic amongst the educated circles of the Christian population and that Egypt produced works of value in the Greek language under Byzantine rule. Coptic literature proper did not have the time to develop, and after having lived in translations, perished without producing a single original work (J. Maspero, *Hist. Patr.*, p. 17—18, 24, 27, 33; 51; *B. I. F. A. O.*, iv. 194—195).

Coptic literature, confined to the liturgy and to the moral education of the people consists of ecclesiastical works, lives of saints and of pious individuals, which were compiled in the monasteries and which we must deal with as with some of them are translations or adaptations of them in Arabic.

It has the faults and merits of a popular literature. The short stories of the lives of the monks in their convents, with their familiar apparitions, in which demons and even Christ appear frequently and often in a burlesque fashion, have in every way a very infantile character. In this literature always written for edification and for an uneducated class, the marvellous always plays a prominent part — the marvellous of a quite naive kind, and it is surprising to note to what extent miracles, clumsy imitations of those of the proponents, are admitted however this Coptic literature, the *Lives of Shenouda*, Pakhomios, Pisanitos, and of Victor, some of them are the best. These are panegyrics, not chronicles or biographies. It is convenient to place here the Arabic Jacobite Synaxary, published in the fifteenth century by Michael of Malidji, of which a contemporary recasting has been recently republished under the title *alm Amin al-Salih*. Certain quotations from the liturgical and ecclesiastical texts enable us to pass in review the old writers who enjoyed popularity among the Christians in Egypt. The latter translated into Arabic the canons, sermons and homilies of St. Athanasius, of St. Basil, of Ephraim the Syrian, of St. Epiphanius of Alexandria, the canon of St. John of Constantinople, the sermons of Cyril of Jerusalem, of Gregory of Nyssa, of Gregory of Nazyanze, numerous treatises and homilies by St. John Chrysostom, treatises by St. John of Damascus etc. (B. I. F. A. O., i. 20; Ladeuze, *Cénot. pakhômien*, p. 84 sqq., 116; Anal. Bolland, x. 91—113, 127—154; Haase, *Alchitris. Kirchgenese.*, p. 115).

Without producing a writer of the class of Firdawsi, the Copts have left us a history of ancient literature, but it was the Muslims who wrote it: Ibn Abi al-`I`i may, in his *Fat`l `I`mir*, Mas`udi in his *Mu`alib al-dhahab*, and notably in his *Ahbâr al-Salam*, later Ibn Wasi` Shih, so often quoted by Makrî. We know also these legends from the *Égypte de Marâdi fils du Géphîthi* (Ottâl. b. `Affî) and the anonymous *Alêkik al-Mâlîkîs*. G. Maspero has clearly brought out that the documentation of these works was mainly Coptic (*Journ. des Savants*, 1899, p. 69—86, 154—172, 277; *Kle*, ii. 20).

Nevertheless the Christians in Egypt produced a certain number of historians of note who do not make a bad show by the side of the Muslim annalists. They are very valuable for the history of their own country, and much use of their works has been made in this article. The first in date, *Eutychius* (263—328 = 877—940), in Arabic *Sâb`d b. al-Bârîk*, the Melkite patriarch of Alexandria, wrote, besides medical treatises, a history which extends from the creation of the world to events contemporaneous with the author. Mas`udi praises his work, in which important sources have been utilised. A continuation of his history written by one of his relatives, *Yahyâ b. Sâb`d al-Antiki* deals chiefly with contemporary events in Egypt and in Syria. An account of the years 328—425 (940—1034) is given there. The first Jacobite is *Severus b. al-Mu`ajjâs*, bishop of Ashmûnain about the year 958. He was a very fertile writer, since, according to Abu `l-Barakat, he composed twenty-six ecclesiastical and apologetic treatises, amongst which a *History of the Councils* and a *Refutation of Eutychius* are well known. But the most precious work is in our opinion his *History of the Patriarchs of Alexandria* which was continued by the deacon *Mawhûb b. Mansûr* (about 1087). Although an Armenian, Abû `Sâli`, cannot be omitted from this list, since he wrote in Egypt from native sources, especially Muslim ones. His *History of the Monasteries* contains information of every kind, geographical, archaeological, historical and ecclesiastical. With the help of this book compared with Muslim works, it is possible to estimate the favour which the Christians enjoyed at the Fatimid court. Towards the end of the thirteenth century, *Ibn al-Râhib* (Abî Shakîr Bûrus) produced a general chronology which starts from the creation of the world; he also wrote a *History of the Councils* and a lexicographical work. His contemporary, *Makri*, (George) *Abî `l-Vâsir* wrote a general history, following the method of nearly all Arab writers. So far the second part, which, after summarising *Tabari* as a beginning, deals with events following Islam, is the only one known; in the first, the author made use of Eutychius, Agapius of Manbûd, and different Greek writers. Al-Makín, an official at the court of Baibars I, a descendant of officials in the service of the Ayyûbids, died at Damascus in 672 (1274). His work was continued until the year 750 (1349) by Mafâdjal b. Abî `l-Fâdjal`, who belonged to a family of ecclesiastical writers. His history, *al-Nâhâf al-raddad*, which owes much to Nuwayzî, is as to the part still unpublished, very like the anonymous history published by Zettelstein, *Beitr. z. Gesch. der Manbûdken*. Lastly we must note Abû Dhakîn, who wrote in the eighteenth century, *a History of the Copts* (Graf, *Reformversuch*, p. 2, 17—18, 25; *Machr.,* xii. 488—492, 495; Mas`udi, *Tambîh*, p. 154; Ibn Abî Uṣaihîa, ii. 86—87; *P.O.*, xii. 345—354; Haase, *Alchitris. Kirchgenese.*, p. 30—31, 33; Graf, *Christ.-ar. Lit.*, p. 40—46; *R. O. C.*, xiv. 385;

Besides these, the Arabic Christian literature in Egypt possesses philologists of the first rank. They appeared at the time when the Coptic language, no longer in everyday use, ran the risk of being no longer understood by the ecclesiastics. Nourished on Arabic culture, these writers took for their models Arabic grammarians. An analysis of all these works, grammars or "scalsae" (in Arabic *sulam*), has been ably made by P. Mallon, whose conclusions are here summarised. The first in date is the Coptic grammar of *Athanasius* of *Kiš* who lived in the IXth century. The *scala* must have existed at that time; *Sulpicius Severus*, who wrote in the middle of the thirteenth century, wrote his own to take the place of the older ones, which through endeavours to be complete were too voluminous. Confined to the liturgy, it is arranged in a detestable manner, for it classifies the words according to the order in which they occur in the sacred books; it is entitled *sulam kanāsit*, the *scala ecclesistica*. John wrote in addition to the grammar to which he gave the name of "preface", *muqaddimah*. At the same period lived three brothers, all famous, the sons of *al-Assāl*, one, *Abū l-Faḍ'il*, known for his *Collection of Canons*, the second, *Abū l-Faḍ'il*, an expert, under whose name, which greatly resembles in method that of John of Semennīd; the third, *Abū l-Ishāq*, the author of the *Sulam muqaddah*, a *scala* in which the words are arranged according to their rhymes after the manner of the Arab dictionaries. The grammars of *Ibn Kāṭib Ḳaṣar* of *John of Kālyub* and of *Ibn al-Dhuḥairī*, who lived probably in the second half of the IXth century, are still in existence. They were immediately followed by *Ibn al-Raḥīm*, already mentioned as a historian; his *Preface* is very inferior to the preceding ones (M.F.O.B., i. 111—136; ii. 213—216; v. 57—90; Quatremer, *Rec. de V. 192*—211; Villermard, *Observations Liturgiques*, repr. from *L. Musion*, xxxvi. 3—4; Mallon, *Gramm. Copte*, p. 5—7; Macaire, p. 300).

The authors of these dictionaries were not the first, but amongst the whole group of lexicographers, who have just been mentioned, the great personality of *Abū l-Barrak ĸ Bābār*, stands out. He was the first of Christian writers in Egypt to be known in Europe, thanks to Kircher, who published his *Sulam Kabr*, or *Scala Magna* and to Vansleb who reproduced his *Lamp of the Darknesses* in his *Histoire de l'Eglise d'Alexandrie*. These are his two chief works of this ecclesiastic whose literary activity lay in the first half of the fourteenth century. In addition he collaborated in a *General History of the Mamlūk* of *Emir Baḥbur al-Dawādār* whose secretary he was. *The Lamp of the Darknesses* is an "encyclopaedia of the ecclesiastical sciences, containing in dogma, religious history, liturgy and discipline, all that a Coptic priest could wish to know". This work contains very valuable lists; those of the seventy disciples, the patriarchs of Alexandria, the saints of the Coptic year, and, above all, an important bibliography of Arab Christian authors (Dict. de Thél., Catholique, viii. 229—229).

The greater part of Arabic Christian literature was intended to be read to the people during the service, and its form shows signs of this. They are somewhat analogous to the sermons of the Middle Ages, written in a macaronic style, addressed to an illiterate audience, to whom Latin was not known. Let us add that from this result have been translations from Greek and Coptic, often word for word, and that the Arabic phraseology is clumsy. But it is a matter for astonishment that the editors of Christian manuscripts have thought that they must keep faults of orthography, which the Muslim copyists as well as the Christian ones had made and have thrown the blame for them upon the author. The result has been deplorable and with only rare exceptions, the editions of the *Patrologia Orientalis* and of the *Corpus scriptorum christianorum Orientalium* are almost unintelligible. Another inconvenience is that the results of these erroneous estimates of the Christian writers (Z. D. M. G., li. 453—471; B. I. F. A. O., iv. 140; Amélineau, *Actes*, p. 9; R. O. C., xxii. 383—384).

Bibliography for the literature:

[The author owes several essential references to the kindness of M. M. Noël Aimé-Giron and H. Munier. He expresses especially his thanks to Mr. W. E. Crum who in view of this article undertook long and fruitful researches.] (G. W.)

**Kiḏam** is said (1) of anything which is antecedent to another in time (*takādīm*, opp. *ta'ālāh*); (2) of the temporal, newly arisen, which no time has preceded; (3) of the absolute, i.e., in its nature without beginning (*kiḏam* in this sense is usually synonymous with *azal*, *azaliyā*; but some, e.g., Dīlī, *al-Insān al-Kāmil*, B. 30, endeavour to show that there is a subtle distinction). In the (3) sense, according to orthodox belief, the name al-*Kiḏam* can be applied to God alone. The question whether God's thought in relation to the (not yet) created world can be conceived as a simple relation or is a concrete part of his eternal prescience and the world is thus eternal in God was answered differently.

It was the custom in philosophical language to talk of the eternity of the real world. If the creation of the world was not denied, an eternal creation was taught and God called the first cause and the world eternally caused as a whole. In this reasoning one could appeal to the multiplicity of meaning of the conception "eternity" in Hellenistic tradition especially to the Aristotelian distinction between *πρότερον* and *υπότερον* (cf. Categ., 142, 26 sqq. and *Metaph.*, 1018b, 9 sqq.). Thus in general a distinction was made between a temporal (*zamān*) and an essential (-*hāl*) priority and posteriority but 3 to 6 varieties were distinguished, viz.: in addition to an order of precedence in time, one in order of place (*swāba*), in rank (*ṣawār*), in nature (*ṭab*), in causality (*tawlab*), and in knowledge (*ilm*).

Bibliography: Dictionary of the Technical Terms, p. 1211 sqq.; cf. the article *Khālaq*.

(T. J. De Boer)
KIFT (KUFT, KÂFT, the old KERTH), name of a place in Upper Egypt, nowadays insignificant (according to Baederker, Egypt, it has 8934 inhabitants only), situated under 26° north lat., on the east bank of the Nile, but at a certain distance from the river, where the latter comes nearest the coast of the Red Sea. This situation explains a certain importance of the place in antiquity, when it was an emporium where the wares coming from India, Punt, Arabia Felix, were directed to the North. Its commerce with India is still mentioned by Yakut who speaks also of the surrounding orchards. The territory was a sāhaf belonging to the Aṣhāf (‘Alids) and the inhabitants were Shī‘ites.

Traditions on the origin of Koptos are to be found in Makrizī’s Manawī’s.

AL-KIFT, nisba of a family of officials of pure Arab origin, several members of which filled high offices under the Ayyūbids. The honorary title al-Kādi al-Ahmūd was borne by ‘Abraham b. ‘Abd al-Wajhīd, whose son Yūsuf, afterwards al-Kādi al-Asraf, was born at Kift on Muḥarram I, 548 (March 29, 1153). He succeeded his father in the administration of his native town, but had to leave it in 1172 (1176/1177) on account of the rising of a Fātimid pretender. After filling several offices in Upper Egypt, he was summoned in 1183 (1187), after the conquest of Jerusalem, to Saladin’s court in the field, to assist his vizier al-Kādi ‘l-Feḍlī. When, on Saladin’s death, his brother al-Malik al-‘Adl deprived his nephew of his inheritance and occupied Jerusalem in 1192 (1196), al-Kift, along with other officials, left this town in 1202 and went to Ḥarrān, where he entered the service of Saladin’s son Asraf. But he soon decided to leave Syria and under the pretext of the pilgrimage went to Mecca, thence to the Yemen, where the Aṭṭāb b Suṣūr, the guardian of the minor Ayyūbid al-Nāṣir, gave him the vizierate in 1205. But he soon gave up this office and died in retirement at Dīn Dījil in Yemen in 1244 (1227).

His son ‘All, born in Rabī’ I or II of 568 (winter of 1172) at Kift, followed his father and grandfather in the official service, but his inclinations were rather towards scholarship. After studying in his native town and in Cairo, he went with his father to Jerusalem, where he was able for several years to gratify his inclinations. But his father had to leave Jerusalem, and he could not have stayed much longer, certainly not till 608, as Ya‘qūb, ‘Irshād, v. 4855, says. But the son went to Aleppo, where a patron of his, the former governor of Jerusalem and Nābulus, Fāris al-Dīn Mū’āmmal al-Kāsīrī, had become vizier to Saladin’s son al-Malik al-Ẓāhir Ghaðī. The latter took him into his service as secretary and he received thanks for careful administration of the i‘lās. After the death of his patron on Ramadan 13, 610 (Jan. 26, 1214), the Sultan appointed him his khāzīn. Although he would have preferred to devote himself to study, he had soon to take over the reorganisation of the Dīwān. After al-Ẓāhir’s death on Dūmād 22, 615 (4th Oct. 1216), he retired into private life, but had again to return to the head of the Dīwān in Sāfār 616 (April, 1219) and held this office till the end of Dūmād 31, 628 (April, 1231). He then already had the title al-Kādī ‘l-Akrām al-Wāzīr, as his protegé Ya‘qūb tells us in his Ma‘tādīm al-Bul‘dān, iv. 152, a passage written before 624 (1227). After five years’ leisure he again took on the office of vizier in 633 (1236) and held it till his death on 13th Ramadān, 646 (Dec. 31, 1248).

Before affairs of state entirely took up his energies, he had displayed considerable literary activity. In the Irshād, v. 4854, Ya‘qūb gives a list of his works written before 620, some, however, not quite compiled by then; this list was copied almost word for word by al-Safādī [q.v.] in his al-Wāfayāt (ed. Fleischer, in Abūlfeid’s Historia antitulonica, p. 234), and al-Kutubi borrowed it from him with minor corrections.

His historical works are all lost: they included a history of Maḥmūd b. Sūhākhtīgīn and his sons (qawānīnī) in al-Kutubi corrupted to waḥaṣyat, not recognised by Süsheim, Prolegomena zu einer Ausgabe der im Brit. Mus. zu London verwahrten Chronik des seldschuqischen Reichs, p. 31, No. 2) and a history of the Seldjūks from the beginning to the end of the dynasty, which must have been of considerable value. Of his works on literary history, only the posthumous work on poets with the name Muḥammad has survived to us (see de Slane, Cat. des Mss. Ar. de la Bibliothèque Nationale, No. 3335). Of his history of the grammarians we have only the synopsis by al-Dāhabī (d. 1248 = 1347) in the latter’s autograph, see Cat. Cod. Ar. Bibl. Acad. Lugduno-Batavae, ed. de Goeje and Th. W. Juybhn, ii. 26, No. xxvii. The most valuable of his works for us, the Kitāb Ḥijār al-Ulāmaw b. Akhṭār al-Hāfīzī, our most important source for the history of the exact sciences and Hellenistic tradition in Islam, has only survived in a synopsis by Muhammad b. All al-Zawzant, made in 647 (1249), see Ibn al-Qiftīs Tarīḫ al-Ḥukamā, auf Grund der Vorarbeiten Aug. Mülλers, ed. by J. Lippert, Leipzig 1903, repr. Cairo 1326.

KILÂB b. Râbî‘a, an Arabic tribe which was one of the principal branches of the large tribe of ‘Amr b. Sa‘āda. Their original homes were in the Ḥima Ḍariyya which corresponds roughly to the country North and South of the present Wâhâbî capital al-Riyâd. This district was considered one of the best in Central Arabia and we are told that the Kilâb occupied nine tenths of it. At a much later time than the rise of Islam they wandered North into the confines of Syria where they gained possession of the towns of Hit, Ḥalab and others and where their rulers were known as the ‘Abî Mirdâs [q. v.]. A large tribe like the Kilâb was divided into many clans and the whole tribe was divided into the following clans: 1] Dja‘far b. Kilâb with four divisions: Mâlik, al-‘Ayyaṣ, Khâlid and ‘Utbâ. 2] ‘Abî Bakr b. Kilâb with three divisions: ‘Abd, Ka‘b and ‘Abd Allâh. (3) Mu‘âwiya al-Djabîrî with thirteen divisions of whom five had names used for the lizard: Dâbîb, Mu‘âdib, Djamîb, Husâîl, Hîsl, ‘Amr, Anas, al-Awâr, Zufâr, Unais, Mâlik, Râbî‘a and Zuhair. Shâmîr b. Shu‘aîbîl who killed al-Husâîn at Karbalâ‘ was a member of the division of al-Awâr. 4] ‘Abî Kilâb with four divisions: al-‘Aqam, Ka‘b (one of the principal clans of the whole tribe), Tarîf and ‘Abî ‘Aqâl. 5] Ra‘bî‘a b. Kilâb with three divisions: Budjâr, ‘Ubâbîd and Nufail. 6] Al-Ashâb b. Kilâb the divisions of which are all derived through Wâbîr and of which seven are mentioned by genealogists. 7] ‘Amr b. Kilâb with two divisions: Nufail and Abî Åwî. 8] ‘Abî Allâh b. Kilâb with three divisions: ‘Amir, ‘Amir and al-Samûr. 9] Ru‘âs b. Kilâb with three divisions: Budjâr, Budjârî and ‘Ubâbîd. 10] Ka‘b b. Kilâb with four divisions: ‘Abî, Wâhâb, Râbî‘a and Åwî. The most prominent clan in the time before Islam was the Banû Dja‘far, who were powerful enough to have under their protection for a long time the tribe of Ghânî and also gave support to the tribe of ‘Abs in their long struggle with the Banû Ḍuhâyân. The most remarkable deed recorded of the tribe of Kilâb was their signal defeat of the confederate tribes of Ḏuhâyân and Asad in the battle of Djabalâ, where they with other ‘Amir tribes secured a signal victory which is reckoned as one of the three great battles in the time of paganism of which Arab authors have any record. We find notices of old settlements in the first centuries after the Hijra, but they were quite submissive to the governors sent to them from al-Madina or Damascus. In the year 231 Hijrî al-Kabîr was forced to capture 1500 of their men as they by that time had reverted to their ancient Beduin life of making predatory raids upon the neighbouring country.

Among prominent men who came from this tribe the poet Labîd [q. v.] is probably the best known, but it is astonishing how few of them are recorded as translators or scholars.  

**KILÂT-I NÂDÎRî (strictly Ka‘âtî),** a town in Persia (Khurâsân) on the Russo-Persian frontier to the north of Meshed and to the north-east of Sarâkhî.

It is a natural fortress perched on a spur of the Kara-Dagh mountains. When Arghânî rebelled against the election of Tâkûdar Ahmad as Mongol Ukhân, he took refuge after his defeat, in this fortress (680/1281), the entrance to the west of which is still known as Darbend-i Arghânî (it is also pronounced Arghawânî, probably by a popular etymology). It was besieged by Tamerlane which attacked it fourteen times without success. The conqueror withdrew, leaving troops to blockade it and it surrendered finally after a pestilence. This was the first place which Nâdir shâh, who had begun as a brigand, made his centre of action; later he built a palace there and a treasury for the spoils of Delhi.  

**Bibliography:** Mirzâ Mahdi-khan, Tawâhid Djâhan-kogâl Nâdîrî, Bombay, 1822, p. 18; Waṣâfî, quoted in d’Ohsson, Hist. des Mong., lii. 504; P. M. Sykes in *Journals of the Royal Geogr. Society,* December 1906, do., *History of Persia,* i. 185, 201, 341, 359 (photograph of the treasury of Nâdir-shâh). (Cl. Huart)

**KILÂD AL-BAHîR, a fortress and small town at the narrowest part of the Dardanelles.**

The reader is referred to the article *Ka‘le-i Sulṭâniye* when the fortress on the Asiatic side opposite Kilâd al-Bahr is dealt with, and here only the minimum necessary is given. The castle of Kilâd al-Bahr was planned and armed along with the Asiatic fortification in the years 1462/1463 by Ya‘qûb Bey, sandjak-bey of Gallipoli, by order of Meḥmûd II (*Krâînobulâ, ed. C. Müller, book iv., chap. 14 and book xv., chap. 3; cf. also: Châlkbakendîsî, ed. I. Bekker, p. 529, sq and J. v. Hammer, G.O.R., ii. 73). Suleiman the Great in 1598 (1551) renewed the fortifications which had fallen into decay in the interval and they were fundamentally remodelled and extended with those of *Ka‘le-i Sulṭâniye* in 1699/1700 (1659/1660). The further history of Kilâd al-Bahr is practically the same as that of the Asiatic fortress of *Ka‘le-i Sulṭâniye* [q. v.] 1500 years away. The ancient picturesquely situated fortress of Kilâd al-Bahr with its old round tower was strengthened in later times by the addition of the modern fort of the same name with an adjoining battery, the small earthworks of Yeni Mehdijîye and the large earthworks of Namâzgâh. Behind the old tower of the fortress lies the insignificant old settlement of the same name on the slope of a hill, which suffered a great deal during the fighting in the Dardanelles in the Great War.  

**KILIDJ ALAYI** (r.), the "ceremony of the sword" also called tašlid al-sa'i or tašlid-i qemşir. It was the ceremony of investiture of the Ottoman Sultan, which took the place of coronation. The ceremony generally took place shortly after the kariq, or homage to the new Sultan. The latter, leaving his palace went by large with great pomp to the faubourg of Ayivos. Here he disembarked and went to the türbe of Abū Ayıyūb al-Anşarī [q.v.], accompanied by the Shāhīk al-Islām, the Kādī Asker, the Grand Vizier, the Naḳb al-Aşḥāf and a limited number of other high dignitaries. In the türbe the Shāhīk al-Islām after a short şalāt of two rakʿa proceeded to the ceremony of girding on the sword (in Turkish, ḥilāş keşmətlik). After it, the Sultan returned on horseback through the town, always entering by the Adrianople gate. Tradition had it that the new sovereign should visit the great mosque and the türbes which contained the tombs of his ancestors.

This is how the ceremony is described by d’Ohsson (Tableau de l’Empire Othoman, i. 305 sqq.; ii. 256 and von Hammer (Der ers. Reiches Siedlungsgeschicht, vol. ii. for Türküssi Zade Muḥammad, i. 484). This description differs little from those we have of the middle of the xvith century (Ricaud, État présent de l’Empire Ottoman, Paris 1670, p. 10, 19) and from the way in which the Ḧilāş alaşı was performed in the xixe and xixe centuries. In the xixe century the part of the Shāhīk al-Islām was taken by other dignitaries such as the Naḳb al-Aşḥāf, in 1255/1839 at the accession of Ābā al-Mādjd (cf. Āḥmad Luṭfī, Ta’rīkh, vol. 1, Constantinople 1302, p. 51) and later the Čelebi Efendi of the Mewlewîs at Konya (cf. Čelebi). On the last occasion on which the ceremony took place, in August 1918, after the accession of Muḥammad VI it was the Shāhīk of the Sanûsîs who performed the rites (cf. the detailed description by Rāsam Aşhrāf, Ḫelâfetân araṣinda, Constantinople 1334, p. 34 sqq.). Several Sultans did not have the ceremony performed, such as Muṣṭaqfā II in 1695 and Muṣṭaqfā V in 1876 (Othman Nuri, “Abī al- İslām ve-devari Sultanları, Constantinople 1327, i. 91 sqq.).

The origin of the custom of Ḧilāş alaşı is obscure. Tradition, as recorded by d’Ohsson, says that Abū Shams al-Din, the holy man who discovered the tomb of Abū Ayıyūb performed the ceremony for the first time in the case of Muḥammad II. But nothing of this is mentioned in the Turkish historiographers (cf. especially Ewliya Čelebi, Seyahatname, i. 401). These rather give one the impression that the essential part used to be the pious visit made by the new Sultan, first to the türbe of Abū Ayıyūb and then to the türbes of all the other Sultans since Muḥammad II (cf. e.g. Selaniki, Ta’rīkh, p. 132 for Muṣṭaqfā III in 1575; and Na’ma, i. 195 for Āḥmad I in 1604). The first Sultan for whom the ceremony of the sword is definitely recorded seems to be Muṣṭaqfā I in 1617 (Na’ma, i. 320; Peçevli, ii. 361). It must be concluded that in any case no such importance was attached to the ceremony in the early centuries as in later times. The ceremony itself however no ancient tradition; d’Ohsson (i. 306) makes it go back to customs followed by the Maṇliḳ Sultans of Egypt, who were gilt with the sword by the ‘Abbāsīd Caliph. Such a ceremony is described for example by al-Kalkashandī (Ṣuḥāb, iii. 285 and 286, according to Gaudefroy-Demom-

bynes, La Syrie à l’Époque des Mamelouks, p. 24). In Egypt the Sultan was at the same time robed by the Caliph in a black ḩaja [q.v.]; this ceremony therefore has many points of resemblance to the formalities practised by the Caliphs of Baghdād when they wished to honour and recognise the services of their great vassals, such as the Būyids and Seljuḳs. Only in the ‘Abbāsīd period we find no mention made of the sword (cf. Ibn al-Ṭabarī, viii. 286). It is certain therefore that the ceremony of Ḧilāş alaşı rests on a very ancient tradition; it is moreover interesting to note how the Shāhīk al-Islām [q.v.] here has in any case assumed the office formerly exercised by the Caliphs. As to the sword itself, it is described by von Hammer (i. c.) as "the sword of the Prophet", while Āḥmad Luṭfī (i. c.) describes it as the sword of the Caliph Ĕmar al-Ĥārāṣ. These statements can only be based on a pious fiction. It is further to be noted that the expression tašlid al-sa’ai originally means putting the belt of the sword around the neck, which seems to go back to ancient Arab customs (cf. al-Sharîfī’s dictionary, Aḥrab al-Maḥārī, p. 1029). (J. H. Kramer)

**KILIDJ ALI PASHA. [See OCHIALY.]**

**KILIDJ ARSLAN,** the name of several Seljuḳ rulers in Asia Minor.

1. Kilidj Arslan I, Sulaiman was, according to Matthew of Edessa (ch. 225), not born till after his father had overthrown Sharaf al-Dawla (478 = 1085) but this seems hardly credible as he left an eleven year old son at his death in 1107. It is certain however that he was still very young when his father fell in battle with Tūtuṣ (479 = 1086). This explains why he played a subordinate part in the war with the Crusaders, so that Christian chroniclers do not once mention his name but always talk of Solimanius or of the Sultan. Only a short time before he had returned to his father’s capital Nicaea, for after Sulaiman’s death the administration of Asia Minor, Anjīk, Edessa and Iliab was re-arranged by Malikşah and the young Kilidj Arslan was taken by him to Baghdad. After Malikşah’s death in 485 (1092) Kilidj Arslan was granted permission by Barkiyaruq to return to Asian Minor and according to Byzantine sources he married a daughter of the powerful emir of Smyrna, called Tsaches, which did not please the Greeks so that they set about — and with success it is said — estranging him from his father-in-law. When the Crusaders advanced on Nicaea, Kilidj Arslan had been clever enough not to allow himself to be shut up in the fortress, but took part in the battles later fought between the Turks and Crusaders, although, as already mentioned, he not but rather Turkish emirs, notably Danishmand (Tanismanos) held the command. The relationship between the Seljuḳs and the Danishmandiya was already not of a friendly nature although for some time they united against the common foe. They were quarrelling about the possession of the town of Malatya, where an Armenian named Gabriel was ruling under the suzerainty of Tūtuṣ. Kilidj Arslan was actually besieging the town, when the Crusaders advanced and when he had retired for this reason Danishmand ravaged the country round the town. Gabriel therefore appealed for help to Bohemund but when the latter hurried up he was taken prisoner by Danishmand and Malatya had to surrender to the latter. (1101). The attempts of other Crusading armies
to relieve him failed and the only course left for the Christians was to purchase his liberty for a very high ransom. Kılıç Arslan, as the Christian chroniclers tell us, claimed a portion of the ransom for himself, which gave rise to a new quarrel with Danışmand to the great vexation of the Muslims, who knew how much the cause of Islam suffered thereby. When Danışmand died in 1106, Kılıç Arslan seized the opportunity to get possession of Malatya by a treaty. At the same time he also became master of Maiyafarıkîn, appeared with an imposing army in front of Edessa but when he could do nothing there he went to Harşın where he fell ill. He therefore returned to Malatya and there received an invitation from the people of Mösül to help them in their struggle with the Seljuk ruler Muhammad or more accurately his general Djawali Saka'û, who at the latter’s command had taken prisoner the rebellious lord of the town Djakarmish. Kılıç Arslan heeded the appeal and appeared in 1107 in Mösül, established himself on the throne there and had his own name mentioned in the kütya instead of Muhammad’s. He returned at once, after leaving his son Malikşah under the guardianship of an emir in the town, to resume the struggle with Djawali, who had in the meanwhile received help from Ra'wân of Damascus. On a hot summer’s day (June 3, 1107) the two armies met on the bank of the Khabir, but it was very soon apparent that Kılıç Arslan had lost the day. He threw himself in his heavy armour on horseback into the river, but the horse sank beneath this burden and Kılıç Arslan was drowned. The body was afterwards recovered, taken to Maiya-farîk and buried there in a specially built kübo. His son Mas'ûd’s wish to move it to Konya was not carried out.

Bibliography: See the article SELJKUS.

2. Kılıç Arslan II, b. Mas’ûd, reigned from 1155—1192. In the lifetime of his father he was appointed by him lord of the towns conquered in the southeast of Asia Minor and succeeded him on his death, thrusting aside his two brothers. He also succeeded — but only after several years — in putting an end to the Danışmandid dynasty in the peninsula and securing sole supremacy for the Seljuks. We cannot go into the details of this struggle here, but only mention that a member of that dynasty, Dhu ’l-Nun, brought a much more dangerous enemy, the famous Nur al-Din, against him. He was not on good terms with the latter even at the beginning of his reign because they could not agree about the possession of several places in the south-east of Asia Minor. Therefore when Dhu ’l-Nun, after Kılıç Arslan had seized his lands appealed to Nur al-Din, the latter was quite ready to take up his cause. He invaded Asia Minor with an army, occupied Marash, Kaisum, Behisni, Marzabân and even Siwâs (1173) Kılıç Arslan then began negotiations for peace, for which Nur al-Din was not disinclined in view of his continual war with the Christians but he insisted on rather harsh conditions and made Kılıç Arslan the repayment that he could not consider him a Muslim in view of his friendly relations with the Byzantines. But the peace was concluded, although the garrison sent to Siwâs remained there till Nur al-Din’s death in 1174. Kılıç Arslan thereupon seized all the towns which the Danışmandids had previously held, with the exception of Malatya, where a member of this dynasty held out till 1177 when Kılıç Arslan was able to capture this much contested town after a four months’ siege.

The relations between Kılıç Arslan and the Byzantines were by no means always of a friendly nature. The Turkish emirs in the frontier lands used to harass the Christians from time to time whenever the opportunity occurred, e.g. in 1159, when Manuel hurried back to Constantinople from Cilicia by forced marches, so that Kılıç Arslan, who was considered personally responsible went to Constantinople in person and was entertained in regal fashion by the Emperor (probably in 1161). Long negotiations were carried on in which the relations of the Seljuk to the Danışmandids were also discussed. Nevertheless the conduct of the Turks continued later to give rise to many complaints and when Dhu ’l-Nin, after his protector Nur al-Din had died was in Constantinople, the Emperor Manuel, who in any case had unwillingly seen the Seljukus obtain sole supremacy in Asia Minor to the disadvantage of the Greek policy dividetempora, resolved to undertake a campaign on a large scale against Kılıç Arslan. The latter was cunning enough to avoid a direct encounter with his impetuous and chivalrous opponent, but when the latter was encamped at Marioskephalon (Pass of Cardak) the Turks suddenly fell upon him and inflicted a disastrous defeat on the army (572 = 1176). Kılıç Arslan duly trumpeted his victory throughout the Muslim world as evidence of his ardent zeal for the faith, sent a portion of the booty to the Alhâsid caliph and was celebrated as a hero of the faith by poets such as Ibn al-Ta’âwîdî. An enterprise against Nîksar at the same time in the interest of the Danışmandids was equally unsuccessful and a nephew of the Emperor Andronicos Vatatzes fell in it. Henceforth the Greeks left the Turks in peace.

Some time afterwards Kılıç Arslan quarrelled with the all-powerful Şâlah al-Din, first about the ownership of the fortress of Ka‘bân, which Mas’ûd had conquered but had lost to Nur al-Din. When Kılıç Arslan was preparing to occupy the town, Şâlah al-Din sent troops thither under the command of Taqû al-Din ‘Omar b. Shâhînshah, who drove out the Turks, because Kılıç Arslan had no wish to involve himself in a war with Şâlah al-Din for the sake of a not very important fortress (575 = 1179/1180). Soon, however, the conduct of the Ortukid of Hisn Kaïfa who had married a daughter of Kılıç Arslan named Seljûka Khatûn, gave rise to further disagreement between the two rulers. Kılıç Arslan was incensed against Nur al-Din Muhammed (the Ortukid) because he neglected his daughter for a songstress, so that Nur al-Din out of fear of the wrath of his father-in-law appealed for help to Şâlah al-Din. The latter ordered Kılıç Arslan to leave Nur al-Din alone and when Kılıç Arslan refused to do so Şâlah al-Din himself marched with a force on Ka‘bân, but was dissuaded from continuing the war by the representations of the able periwan of Kılıç Arslan, Iklîyâr al-Din Ihsan. As to the Seljuk princess, it may here be mentioned that she later came to Baghdaad and died there in 586 (1188) as we know from an epitaph which Niebuhr copied in his journal.

If Kılıç Arslân had good fortune in all these matters, grave disasters overtook him and his kingdom at the end of his life; firstly the passage of the Third Crusade, in which even his capital
Konya was occupied in 1190, and secondly the quarrels of his numerous sons. The latter, nearly a dozen in number, if we include a few other relations, had each received from Kilidj Arslan rule over a certain town and its territory and when their father became old and weak conducted themselves as independent rulers. One of these, Kutb al-Din Malikshah, lord of Siwās, was able to arouse Kilidj Arslan's suspicions of the Parwana who had been Kilidj Arslan's greatest support, and had him murdered (1183). He then forced his father to instal him as heir to the throne, and henceforth acted as if he were sole ruler. The aged Kilidj Arslan escaped from his tyranny and sought refuge with another of his sons, and finally reached his youngest son Ghiyāth al-Din Kaikhusraw at Burglu where he fell ill and died (August 1192) Ghiyāth al-Din had the body brought in a litter to Konya, giving out that his father was ill, thinking that in this way he would himself gain possession of the Seljuk capital, which he did do for a time (cf. the article KAIKHSURAW). He had his father's body interred there and the tomb of the man still exists.

Bibliographie: see the Art. SELJÜGS.

The Chronicle of Michael the Syrian is particularly important here, as the author was personally acquainted with Kilidj Arslan.

3. Kilidj Arslan III b. Rukan al-Din Sulaiman had homage paid him as Sulīn after the death of his father in 600 (1203) but had to give way only a few months later to his uncle Ghiyāth al-Din Kaikhusraw.

4. Kilidj Arslan IV b. Ghiyāth al-Din Kaikhusraw II is better known by his laṣab Rukan al-Din. He has already been dealt with in the article KAIKTSīSI (cf. ii., p. 637) down to the time when his brother, joint Sulīn with him, sought refuge with the Greek Emperor (659=1261). Henceforth he was sole Sulīn but the real power lay in the hands of the Parwana Mu'in al-Din Sulaiman [q, v.]. When he became inconvenient to the latter he was treacherously put to death by order of the Parwana (664=1266).

KILLIZ, a town in Northern Syria between Halab and 'Aintab. It was apparently already known to the Assyrians, for a cuneiform inscription (Harper 1037, Brit. Mus. K. 13073, obs. 3) mentions a town Klizi-si. In the Roman period the town was called Cilissa sive Urmaggianti (Itin. Ant., ed. Pinder-Parthey, p 84). It must have been quite insignificant in the middle ages; it is mentioned in the rising against the patriarch Dionysius of Tellmahre in 817 A.D. (Killia should be read in Barhebr., Histor. eccles., ed. Abbeleos-Lamy, i. 339, 342, for Kalas or Scheles and in Michael the Syrian, ed. Chabot, Chron. syr., iii, 23, for Haltf). Kutb calls Killiz (as he writes it) a village of the nahiye of 'Araz; almost all the other Arab geographers do not mention it. The modern town has about 20,000 inhabitants including 15,000 Muslims (Cuinet 1891); the Arabs still call it Killiz and the Turks Xiz. According to M. Hartmann, the ancient Killiis was at the modern Tarzime Khân (1 hour's journey W.S.W. of the modern Killiis) where large stones are still found; while tradition still says that the little garden ilez bagheth (20 minutes east of Killiis) to be the old site of the town or of a part of it, as the name Killiz is supposed to survive in Ilezi and there are traces of an old site here.

AL-KILY, the salts (alkali, soda and potash) obtained from the ashes of different plants, especially those which belong to the salicaceae and allied families; it often means the ash itself and the lye obtained from it. Among plants special mention is made of al-hamd which therefore cannot here be sorrel. The best ash is said to be that of al-hūrūd which is defined as al-wadhanā. 'Usnān originally means saltwort but now it seems to be identical with arthrocnemium glaucum or anabasis articulata or seidlitzia rosmarinus. Hurd and uṣnān seem to be often nomina generis, even in old Arabic. Seeetan in several passages in his Reisebeschreibung (e.g. vol. iii., p. 68) mentions the obtaining of alkali but always from saline plants (the reference is therefore to soda).

Al-kily usually means sodium carbonate, soda, as the saline plants contain sodium salts. But another carbonate is also obtained, potassium carbonate (potash); for example, al-Rāzī in the Kitāb al-Āsrār mentions a salt of ashes (milh al-ramād) which is obtained from oak ashes. In alchemical works ashes of poplar trees and figtrees etc. are mentioned. There is also a salt of al-kily (milh al-kily) or ash from less, it is the ash of tar tar; we also have tartar = potassium carbonate (see Berggren, op. cit., p. 441).

A sharp distinction between soda and potash was not possible. Different ashes yielded different amounts of both which could only be distinguished at best by the taste and therefore with little certainty. In place of al-kily the Muṣafa al-Ulum (ed. van Vloten, p. 259) speaks of milh al-kily. According to J. J. Hess in Nedjd it is called dilsu, i.e. kiltu.

On the preparation of kily the Tādż observes that certain plants are burned in a moist condition and the ashes sprinkled with water (i.e. leyd) and that this lye is precipitated to al-kily (probably by steaming).

Al-kily, i.e. the lye, is primarily used for washing. According to alchemical works lime can be added to this lye, it then becomes stronger and more suitable for soap-making. The ancient Egyptians, Greeks and Romans used the ashes obtained in this way for cleaning and washing and had no soap (cf. against the contrary view the very full discussion by Blümner in Pauly-Wissowa, Real-Encyclopädie, 2 s. Sei.), On the other hand the Arabs made and used soap probably usually the hard soda-soap. The kali-soap made from potash is soft soap. Ibn Duraid (321 = 933) is the first to use the word, Ibn Abī Mansūr Muwaffak.
several times in his work (composed in 668—977), Principles of Pharmacology; K. Kobert, Historische Studien, iii., 1893, p. 1—278) mentions soap (jābūn) and also the hard kind. We learn through al-Mustāmi that the soap (al-rakīḥ) made in Rašqā was a dry soap (read di̇āf) like bees-wax. It was made into cubes so must have been firm (cf. Dozy, Suppl., i. 874*). A full description of the manufacture of soap in Tripolis in Syria is given by L. Rawolffen (Aegentliche Beschreibung der Reise, etc., Laugnungen 1852, p. 38/39). Seaeed was burned there, hard potassium soap was obtained; one could stamp it or walk upon it. Whether kali or soft soap was made or not is not certain.

Al-kīlī is also used in the manufacture of glass; it brings sand to the melting point, purified it and makes it easily take a coloured glaze. Al-şamāk (al-sadajjūdur) use it: only sodium carbonate could be used for glass-making as the glasses of potash are very difficult to melt and part. That many ancient glasses contained potassium is natural. The al-kīlī obtained from al-hurūd is used by the dyers and is called šīlī al-qalāawān, the šīlī of the dyers; the name šabb al-šīfīr is connected with this, the alum of saffron and the passage in the Tādī; it is a grain with which one treats saffron as with alum. The reason for this statement is that alum is used in many dyers as a colouring matter; this is not however the case with alkali carbonates; they are used in saffron to dissolve the dye-material which is practically insoluble in pure water.

From what has been said above it will be clear that it is not correct to call soda (alkali) after the Arabic word al-kīlī. Medical and other uses are discussed in al-Kaswīnī, Ibn al-Bājīr etc. It should further be noted that the accurate botanical identification of the different plant-names is extremely difficult.

(K. WIEDEMANN)

KİMĀR (usually written: Kimak; and wrongly vokalised: Kaimak), name of a Turkish people on the lower course of the Irti. Ibn Khuradadhbih (text in B.G.A., vi. 28 and 31) mentions a road thither (80 or 81 days) from Tarāz (now Awdīyātā) or Kuwītā, seven farāhakt distant, and Gardżāz (in Barthold, Oktet o polevicatev Srednyazju Azji, p. 82 sq.) fully describes another route from Fārāb (Otrār) (via Jenikand, the modern ruins called Dānākent south of the mouth of the Sr-Darya). According to Muḥādassī and Mādīsī (B.G.A., iii. 274) a portion of the Kīmāk at the end of

the ivth (xth) century were already dwelling in the immediate neighbourhood of the Muslim territory in Tūrkestan. The historical importance of the Kīmāk lies in the fact that there sprang from them the later very numerous people of the Kīp-čāk (called Kumān in Europe and Polovtšy by the Russians), originally only a tribe of the Kīmāk. From the viith (xith) century (the mention in Idisī naturally comes from written sources) the name of the Kīmāk disappears and is not again mentioned in the Mongol period. Cf. also J. Marquart in Osttürkische Diatletstudien, 1914, index, s. v Kīmāk; on the pronunciation, p. 89, note 1.

(W. BARTHOLD)

KİMĀR, games of chance. The Kurān prohibited games of chance, under the name of maʾṣūr, at the same time as it forbade wine (ii. 216; v. 92); these arc, it says, a great sin. The pagan Arabs gambled a great deal, say the commentators and staked in play their families and their property. Zamakhshāri interprets maʾṣūr by kīmār, and applies this name especially to the lottery with arrows. There were ten inscribed arrows; a victim was divided into ten parts; the arrows were drawn by lot and to each of them corresponded a part; or sometimes twenty-eight parts were made, one part was allotted to the first arrow; two to the second, three to the third and so on up to the seventh; the three last arrows got nothing and paid the cost of the game. This lottery was practised chiefly in Mecca. According to a tradition of the Prophet, the prohibition also applied to kūbaṭaṭ (dice): “These accursed dice belong to the maʾṣūr of Persia”; and according to a tradition of ‘Alī (s.a.) they were back-gammon. According to Ibn Sirīn, it is extended to everything in which there is a stake or a bet (šāhtar).

As regards chess, it should be noted that certain forms only of this game, and these the less usual, necessitate the use of dice and can be regarded as games of chance; back-gammon, on the other hand, is always played with two dice (see ʿIbraṭ). The Persian dictionary of Vullers also classifies among the kīmār horse-racing, because betting takes places on it. It was in favour in the time of Arab paganism up to the beginning of Islam and under the Omāyads. The historian Mašʿūdī quotes about this a curious and ancient piece of poetry (Mašʿūdī, viii. 377).

Cards are called amongst Orientals “the leaves of fate”, warāk al-kīmār or kīmār bākāh; their origin or at least their diffusion, is more recent than that of the games which we have mentioned. The Arabs have never taken to them; but the Persians were great lovers of them and painted beautiful packs (for example a Persian pack of cards bought by Prisse in Egypt and bearing sabres, crowns, helmets and other signs, “Magasin Pittoreque”, 1846, xiv., p. 365). The use of cards was known in Italy at the end of the fourteenth century, and spread throughout Europe during the fourteenth century. It is said without any good reason to have come from the Arabs. The use which is made of cards for fortune-telling is not without an analogy in the proceedings of geomancy, an ancient superstition in vogue in the north of Africa. We must recall in this connection the opinion of Ettelāʾ whose work is the authority on cartomancy. This student of magic attributes to the Egyptians the invention of checked
cards, which he calls the book of Thoth; this “book” composed of 78 sheets of gold bearing hieroglyphics was the only thing which escaped from the fire of the library of Alexandria in the time of ’Omar; it passed afterwards from the Arabs to the other nations, who received it at the same time as the books on philosophy. Cards are certainly connected with the Chinese games played with tablets bearing figures or symbolical or moral characters which are grouped by families; such games were known in China from the twelfth century.

The Persians have always had gaming-houses which they call kimâr khâna (kimâr is also found with the simple k). The new ruler of Persia, Rizâ Khan, had them closed on his accession (Nov. 1925). “This world — says the poet Sauzeni wishing to express the sentiment of the uncertainty of fate — is the gambling-house of the gods.”

AL-KIMIYÂ, alchemy.

Introductory. The name. In modern chemistry, by a qualitative analysis of the substances occurring in nature the elements composing them are ascertained and by a quantitative analysis their proportions are obtained. From these elements the substances themselves and countless others can be built up by a synthesis; this is done as a result of theoretical considerations which are based on observations. They enable the elements to be combined and their formation to be ascertained in keeping with the facts and even the structure of atoms to be investigated. These purely scientific investigations then lead to inquiries on the obtaining by technical means of practically important substances and the manufacture of corresponding new substances.

In kimiya, alchemy, one starts off on the other hand from theories propounded a priori and isolated facts often wrongly interpreted and endeavours to manufacture precious metals and jewels, either by mixing in a suitable way bodies that occur in nature or by applying an elixir to them. If the study of kimiya was at first less fruitful for the development of knowledge than that of astrology, this was because the latter was able to use the achievements of a very advanced branch of knowledge and was able to advance by means of its investigations, while this was not the case with kimiya. It was only from its study and practice that methods of work developed and a more thorough knowledge of the substances occurring in nature and those obtained from them, was obtained; and this knowledge was later put to scientific use. It formed the starting point for the science of chemistry, especially when analytic methods of separation became more generally known.

Kimiya is in Arabic not primarily an abstraction but means a substance, the means by which the transmutation of metals is affected; it is therefore synonymous with ikâr. The word is usually derived from kam-it or kem-it, the black (A. Wiedemann, Das alte Ägypten, Heidelberg 1920, p. 14); according to H. Diels (Antike Technik, Leipzig 1920, 2nd ed., p. 123), it comes from kûmr molten metal. In the Miftâh al-’Ulwâ’ (p. 256) it is derived from kâmâr, to conceal, while according to al-Safadî, it comes from the Hebrew and is composed of kîm and yâ, according to him the word means that this science comes from God.

Kimiya thus comes also to mean a method by which one endeavours to obtain something, e.g. in kimiya al-’Aṣâ’ir, k. al-ghawîr, k. al-kalâb, i.e. means by which fortune or advantage is attained or hearts are moved (Hîdijdi Khalfa, ed. Flügel, v. 285); in this sense it is found in the titles of works by Arab mystics.

Alchemy itself is called san’at al-kimiya, san’at al-’Aṣâ’ir, ilm al-’Aṣâ’ir, al-iksmâ or briefly kimiya or al-’Aṣâ’ir. Other names are the science of the stone (haḏfar), of the key (mifṣâr). It is also known as the science of the balance or of the scales (mizân or mawâṣa‘); a much used work of Dâhir b. Hâyân, one of the first in this field, is called Kitâb al-Mawâṣa‘, while one of the last prominent alchemists, al-Dzhidjâki (d. about 1350), also wrote a work on Ilm al-Mizân (Berlin, Verz., No. 4185). Kimiya does not get this name, as might be thought, because scales are used in it but because in its problems the relations and considerations of the right measures and proportions of the lower world, of the elementary qualities to one another and of the lower to the upper world are discussed. Only when a correct equilibrium is attained can the desired results (see Berlin, Verz., No. 4185) be obtained. Just as the body is only sound when its qualities, its humors, are in the right proportions to one another, so it is with the precious metals. The alchemist is called kâzâmi (kawâsî, kând, cf. Dozy, Suppl.), kimiya’s (ibn al-Kifî, b. al-’Aṣâ’ir, ed. Lippert, p. 138, 20), san’â’i (Fikrist, p. 351), ikârî (Ain-’Akbari, text, p. 35, 4).

Alchemists and their writings. Just as in the middle ages alchemical knowledge was sought in Enoch, Homer, in the Greek myths, etc., so, according to Muslim writers, God taught Adam the science and he taught his sons: Abraham, Joseph (here = Enoch), David, Solomon and Kowâ, who however had got his knowledge from Moses possessed it. Muhammad and the Caliph ʿAlî were said to have been acquainted with alchemy (E. Wiedemann, Beitr. z. Gesch. der Naturwissenschaften, xiil.).

The Arab alchemists relied very often on works which were ascribed to Greek authors and as usual these included many pseudepigraphic works. We may mention Hermes Trismegistos, Ostanes, Zosimus, Krates, Democritus, Cleopatra, Maria, Apollonius of Tyana, Aristotle, also Pythagoras, Archimedes, Euclid, Ptolemy etc. A list is given by M. Steinshneider in the Z. D. M. G., l. 356 (1895). — Some of the Arabic texts ascribed to such authors have been published by Bertelot (sp. cit.). The knowledge of these writings was probably in part disseminated through the Syrians; indeed it is recorded that the teacher of Khalid b. Yânîzd to be mentioned below was a monk named Marînîs and translations were prepared for him by Iqîfân al-Kadîm.

In Arabic literature a large number of Muslim alchemists and their works are cited. The list is however not nearly so long as that of the astronomers and astrologers, who played a very different and scientific part and therefore were generally noticed.
The *Fihris* probably gives most names (p. 351); according to Stapleton, al-Kāthi quotes a few works with an appreciation of them; M. Berthelot (iii. 41 sq.) has given a number of names and books from al-Wāfi fi Tadbir al-Khams of Muhammad b. Aḥmad al-Maqmūli; al-Dijāfī makes al-Wāfi the most important to him in the introduction to his al-Maṣūḥ fi Ilm al-Maṣūḥ, "Lights of the Science of the Key" (Leiden, Cod. 935); finally there are numerous references in the section Kāshf al-Żamān on alchemy in Hūṣūdī Khāṣīf; the writings quoted at the end of it (in Flügel's ed., v. 284) are in any case those most read in his time. It is remarkable to find among them one by Ibn Sinā (Mirʿāt al-ʿAṣfāʾ, "Mirror of Wonders").

We now give a list of the best known Muslim alchemists with one or more of their principal works:

Khālid b. Yaẓīl, an Umayyad prince (d. 85 = 704); to him is erroneously ascribed *Firdaus al-Mīkma* ("Paradise of Wisdom") (Brockelmann, Gesch. der arab. Litt., i. 67) [see below].

Djābir b. Haiyān [q. v.] who is not identical with the Geber who wrote in Latin — Berthelot distinguishes them as Djābir and Geber — is the author of numerous works; a number of them have been published by Berthelot, *cf.* cit., iii.; but according to some he was a mythical personage. J. Ruska however has shown that he was by no means mythical [see below] cf. Brockelmann, i. 240 sq.

Ibn al-Wahshiyya [q. v.] (c. 870) wrote, in addition to al-Falāṣīf al-Nabāṣīyya, which contains some interesting information along with a good deal of nonsense, and is probably really from the pen of Ibn Tābiʿ al-Zayyāt, alchemical works, which were used for example by Shams al-Din al-Dimashqī in his *Cosmography* (Brockelmann, i. 242).

Abū Bakr Muhammad b. Zarkariya al-Rāzi (Rhases), the celebrated physician (c. 258 = 900), wrote, besides alchemical works the *Kilāb al-ʿArūr* (Brockelmann, i. 233 sqq.); this is now being edited by J. Ruska.

Ibn Umaiya al-Tamusī (eighth or tenth cent.) wrote the *Mīṣāṭ al-Mīkma al-ʿIṣnān* (cf. Leiden, Cat., No. 1274; Brockelmann, i. 241 sqq.);

Al-Farabi [q. v.], the famous philosopher (d. 330 = 950), wrote: "On the necessity of the art of alchemy, i.e. the *Elixir*" (Brockelmann, i. 210 sqq.).

Maslama b. Aḥmad al-Maqriti (d. 398 = 1007), also distinguished as a mathematician and astronomer, was the author of the *Taḥkāl al-ʿUmam* (Brockelmann, i. 243).

Muʿayyid al-Dīn al-Tughra b. (d. about 515 = 1122), the famous vizir and poet often mentioned by Ibn Khaldūn (b. *Sīra*), wrote for example the *Kīlāb al-Ansār wa l-Māfṣīf*; then *Mafṣīf al-Raḥma* and *Anwār al-Mīkma*, Paris, No. 2414, probably also al-Djuwār al-Munīr fi Ṣanʿat al-Iṣkār, Berlin, No. 1036.

According to Gildemeister he was the *Artephius* of the west (Brockelmann, i. 247 sqq.).

Abu ʿl-Ḥasan b. Muʿāṣar b. Arafāt Raʾis (d. 593 = 1197) is the author of the *Shudūr al-Dhahab,* the "gold-splange", which was often annotated (Brockelmann, i. 496).

Abu ʿl-Ḥasan Muḥammad b. ʿAbd al-Dīrāj al-Simwā (c. 700 = 1300?). From his pen comes the *Aḥsan al-ʿArūr fi Zirāʿat al-Dhahab,* on which al-Dijāfī wrote a commentary (Brockelmann, i. 496 sqq.).

Ali b. Aidāmīr b. ʿAlī al-Dijāfī (c. 1342) writings and commentaries were much used later as is evident from the numerous manuscripts that still exist. They all move in mystically speculative channels (Brockelmann, ii. 135).

Abu ʿl-ʿAṣba b. Tamnām al-Dīrāj (d. 762 = 1360/61) (Brockelmann, i. 524).

Unfortunately we still lack a compilation for the alchemists such as H. Suter has prepared in a masterly fashion for the Arab mathematicians and astronomers. For those who were also physicians the works of Wāṣentfeld and Leclerc on Arab physicians and Arab medicines give much information. For the earliest history of Arabic alchemy it is of great importance that J. Ruska has shown that the stories of Khālid b. Yaẓīl, b. Muʿayyid and Djiʿāf al-Sāliḥi are simply legends, at least so far as they are concerned with their part as alchemists and with the latter as teacher of Djābir b. Haiyān; on the other hand Djābir b. Haiyān, as is becoming more and more evident, was in reality the great founder of Arab alchemy and al-Rāzi his most important successor (Ruska and Holmyard).

The theories of the Alchemists. The formation of minerals, following Aristotelian views (c. e. g. the very lucid account in the *ʿAyn al-Akkāri*, text i. p. 33—36, transl. i. 38—41). So also the writings of the *Aḥsan al-ʿArūr* (Brockelmann, i. 233 sqq.) was imagined to be somewhat on the following lines. Under the influence of the heat of the sun watery particles rise into the heavens, which are cold and moist, out of the water which is moist and light. When they mingle with the air, which is hot and dry, vapours (bukhār) are formed; out of the earth which is hot and dry there arise from the same cause particles which, mixed with the air, form smoke (dukhan). Bukhār and dukhan thus together contain the four elemental qualities (cold, hot, dry and moist). Their mixture over the surface of the earth produces clouds, wind, rain, snow etc. and under it earthquake, springs and minerals. The bukhār is regarded as the soul of the substance. According to their quality and quantity different bodies are formed, including jewels; according to many alchemists the astrological constellations play a part in this. If bukhār predominates in the mixture, and the warmth of the sun produces a contraction after the complete mixture, quicksilver is formed, if both are present in almost equal quantities, a viscous, fatty, moist substance is formed; if this matures, particles of air emanate from it unless cold brings about a contraction. This mass is inflammable. If there is a small preponderance of dukhan, sulphur is formed, red or yellow, white or grey; in other cases we get zarnāk and naphtha. The substances thus formed, quicksilver, which is also called the mother, and sulphur which is also called the father of the seven bodies (metals) are their sol component.

Differences in the kind of body are due to differences in the purity of the components, to the mixture being made in a particular way, and to
the components affecting each other in different ways; the heat in the deposits may change, cold may supravene etc. — The components are found in the purest form and in the proper proportions first in gold and then in silver; this is less the case with the other metals which were therefore described as diseased gold and silver; tin is considered as leprous silver and quicksilver as apoliotic silver.

When the alchemists however speak of sulphur and quicksilver, they frequently do not mean the substances usually known by this name. Thus Dżābir distinguishes (Berthelot, op. cit., iii. 207) an eastern and a western quicksilver; but what he means by these is not clear from his statement.

The opinions just outlined vary much in individual points of detail but must have been assumed in principle by all Muslim scholars, without essential alteration; for example al-Akṣāfī briefly defines alchemy as follows (E. Wiedemann, in the Journ. für prakt. Chemie, Ser. ii., vol. xxvi., 1907, p. 106): — the doctrine of alchemy is a science by which one endeavours to take their quintessences from minerals and to give them qualities which they did not have.

The Arab scholars were however divided into two groups, one of which assumed the possibility of a transmutation of metals and the other denied it. The former took up the position that the metals and minerals likewise differ only in their accidental qualities, i.e. that they belong to a new and that it is possible, although difficult, with the means at man's disposal, to make the corresponding changes. To this school belong al-Fārābī and the alchemists above mentioned. As evidence for the possibility of alchemy numerous phenomena that had been observed were adduced, notably the continually asserted cases of spontaneous generation, according to which animals were produced from the most different inanimate objects (cf. E. Wiedemann, Die Lehre von der generatio spontanea, Naturwissenschaftliche Wech-enschrift [N.F.], xv. 381, 1916), and the hatching of hens' eggs in incubators in Egypt, or the manufacture of glass from soda and sand, the dissolving of stone (probably with vinegar, cf. O. Rescher, Der Islam, 1919, ix. 120 who quotes a passage from al-Balādhūrī), the manufacture of bronze from copper and ʿūṣiydā burned with coal, reduced zinc oxide, the dyeing of glass by adding various materials. From these processes bodies are frequently produced which bear no similarity to the original substances.

The opportunists of alchemy regard the metals as being different in their essential qualities — as not belonging to the same new; it might be possible to imagine the transmutation of a metal in theory but it could not be carried out for fundamental and practical reasons. Ibn Sinā (Hādżī Khalīfa, op. cit.) gives as reasons as follows: "Even if it was possible to stain silver with the color of gold etc., in such a way that something was taken from or added to the dyed body, I do not see from this the possibility of transmutation of metals. For probably the things observed do not correspond to the fundamental qualities which settle the nature of the body but are accidental things, only necessary to characterise the body. But the fundamental qualities are unknown; one can therefore not look for them, produce them or destroy them". Other writers emphasised that the time available to alchemists for their researches is too short, for very long periods of time have passed in the interior of the earth during which the elements etc. were being cooked sometimes under the influence of certain constellations, until they were transformed into precious metals (cf. al-Dżāhirī, who also wrote a work on al-īzāmī ʿarif, Journ. für prakt. Chemie, loc. cit., p. 73).

One of the most notable opponents of alchemy was al-Kindī [q.v.] whom Muḥammad b. Zakariyā al-Rāzī attacked with unseemly vigour (E. Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, i.).

Even in the xivth century and later when Muslim learning had considerably declined and it must be assumed that criticism had become much weaker, alchemy was still vigorously attacked. This is seen from a section in the Cosmography of al-Dimashki (d. 727 = 1327), who devoted some time to the refutation of alchemy (ed. Mehren, text, p. 58, transl., p. 64). The ardent alchemist al-Džaldakī considered it necessary to add to his commentary on al-Mukabara a chapter entitled: "On the possibility that the accident may disappear, which has entered into the specific kind (maw') that the body again assumes its specific kind by art, otherwise, on the proof that the art, its practice and the certain proof for it is beyond all need and finally on the refutation of him who ridicules it and says it is useless" (Leiden, Cat. Or., iii. 204). The great historian Ibn Khaldūn (op. cit.) also vigorously attacks alchemy and its representatives (see Wiedemann, Beitr. zur Gesch. der Naturwissenschaft, i.).

This refusal to have anything to do with alchemy was largely due to the repeated failures of the alchemists, which brought scorn and ridicule on their heads, and vigorous attacks on the pernicious study of alchemy. Ibn Khaldūn observes that it was usually poor people who studied alchemy, Ibn Sinā, who denied the reality of the elixir, possessed great wealth, while al-Fārābī who believed in it was one of the most unfortunate of men and did not always have sufficient food. — Abīd al-Laiyf says: "Verily, most men have been ruined by the work of Ibn Sinā and by alchemy." — There are two proverbs: "Three things cannot be attained by three things: youth by age, health by medicine, and treasure by al-ākimīyyāt" and "He who studies astrology is not secure from poverty". To conclude, al-Safadi gives very sorrowful remarks on alchemy and the fruitless endeavours of its followers.

The alchemists however consolved themselves with the reflection that at any rate the knowledge of alchemy had once existed but had later been lost, but it would certainly be found again (see E. Wiedemann, in the Journ. für prakt. Chemie, Series ii., vol. xxvi., 1907, p. 123: Ibn al-Fāqīh, ed. de Goeje, B. G. A., v., p. 205; Vākū, ed. Wustenfeld, iv. 264; al-ʿIzzānī, ed. Wustenfeld, ii. 164).

Among the alchemists we must carefully distinguish the men who were convinced of the possibility of the transmutation of metals, and went about their task in good faith and the swindlers. The serious students were in part philosophers who derived their doctrine of the elixir by pure deduction from Aristotelian views; of these the most notable was al-Fārābī. Others enlivened simple assumptions with mystic, gnostic, neo-Platonic etc. ideas and then wrote works of
which it may be said to be very doubtful whether the authors themselves understood them. As the latter admit, puzzling expressions are deliberately used, but these vary from school to school, simply, we are told, to prevent the masses and the rulers from making gold artificially, which would be very harmful. Each successive writer seems to try to surpass his predecessor in obscurity and the commentaries do not make the originals any clearer. It is often difficult to understand how intelligent beings could have written such things. They claim to have acquired their knowledge, as was indeed common among Muslim scholars, on distant journeys. The study of alchemy has had one undeserving result, in as much as the representatives of the mystical movement in Islam studied alchemy e.g. Ibn al-'Arabi (d. 1240) who called gold and silver the “great names” (see al-Dimashqi, op. cit., text, p. 51, transl. p. 56). To this school may be said to belong more or less the Pseudo-Khālid b. Yazid, Ibn al-Wahhâbiya, Ibn Ùmail al-Ṭamimi, Ibn Arfa’ ʿArif’s, al-Djâlibi, Abu ‘l-ʿKâsim al-ʿIrâqî and others. Many of these men, however, made experiments, at least, according to al-Ṣafâdi, the Imam al-Ḥarâmain (al-Ḍuwâlî) was burned to death by a jet of flame. Another group of alchemists describe experiments in their works, but it is not always certain whether these were actually made or whether they are purely imaginary; the latter is of course always the case when a real elixir is said to have been made and its effects even described. Of this nature are the works of Ḏijâr bi. Ḏiyât, the Kitâb al-Aṣrûr of al-Râzî, that of al-Tughrâ’s, al-Djâlib al-Ṣurî, etc., that of al-Kâthî and the Arabic writings on which are based the works of the western scholar known as Geber. Frequently as in al-Râzî the arrangement in these books on alchemy is such that the substances and apparatus are first described and then the various experiments are detailed, arranged according to the methods of treatment like sublimation, calcination, dissolution, etc. and not as with us according to the substances investigated; we thus see what great stress was laid on method.

Whether the alchemists ever had any laboratories on a large scale with a staff of assistants is not yet known, but their workroom was probably very like those often described later, as they required special arrangements for many purposes which could only be set up in a special room. At any rate this was the case with alchemists who worked for princes, who frequently employed an alchemist just as they had a court astrologer. The unsuccessful efforts of two may there be mentioned; al-Ma’mûn (198–218 = 813–833) said to an alchemist ʿUṣūf ʿUtub, who had had no success: — “Alas for you: there is nothing in al-kimyây”! The latter replied in excuse that the druggists swindled him whereupon the Caliph declared himself satisfied. Others did not fare so well, as is shown by the story, whether true or not, that Abû ʿṢâliḥ Mandûr b. Ṣâhid, a ʿAmmârî, beat al-Râzî so severely that he blinded him. It is more probable that, as al-Baḥrâkî records, his eyes were affected by the vapours which arose in the preparation of the elixir and that he had himself treated by a physician for a large fee. He thought that this the he was true al-kimyây and became himself a physician, al-Masûdî also talks of grave injuries caused by vapours (see E. Wiedemann, Beitr. Zur Gesch. der Naturwissenschaften, ii. 547). They resulted in loss of hearing or sight, and loss of colour in the face (in heating vitriol for example sulphuric acid escapes). Poisonous vapours are also mentioned by other writers (E. Wiedemann, op. cit., xxv. 127).

Alchemical swindlers. Alongside of these alchemists who are to be taken seriously, appeared a great number of swindlers who took advantage of the credulity of high and low to make money easily. In North Africa, according to Ibn Khâlid, it was particularly students of law and theology who used to deceive the people of the villages in this way. These swindlers either claimed they could make gold out of material but without ever producing it, or they brought gold into contact with the stuff to be transmuted into the apparatus itself, or they fastened it to the lid of the crucible with wax, or they coloured ordinary metals either with sulphide or by preparing coatings for them, so that they looked like gold. A series of illuminating stories is given by al-Djâlibi (E. Wiedemann, Journ. f. prakt. Chemie, loc. cit., p. 82 and E. Wiedemann, Über das Goldmachen, etc.). One is a delightful story of how the so clever al-Malik al-ʿĀdîl Nûr al-Dîn Zanjî (554–569 = 1146–1173) was swindled. The great Mughal Sultan Akbar q.v. fared no better when he allowed himself to be introduced to alchemy by bigotted jugglers, the Yogi, and publicly exhibited gold made by himself (Ishâq b. al-Blochmann’s translation of the ʿĀʾīn Akbarī, i. 201).

These swindlers naturally did a great deal of harm to the prestige of alchemists in general, so much so that according to al-Kazwînî (ii. 98) they were the lowest grade of students.

Methods of solving the problem of alchemy. It was thought that the solution of the alchemical problem might be reached by one of three ways (cf. E. Wiedemann, Journ. f. prakt. Chemie, loc. cit., p. 105, from al-Akînî). Whether and in how far they were ever really systematically prosecuted, research has not so far been able to ascertain. The methods were the following:

1) A start is made from the view above mentioned, that all metals have arisen out of sulphur and quicksilver which were heated in the earth as described. The alchemists proceed similarly, but in place of these two bodies many others are also taken, of which they suppose that they contain the fundamental materials and endeavour to increase the heat on account of the shortness of the time available beyond that prevailing in the earth. 2) They go back to the mutual (of course quite unknown) relation of volume and weight of the components and combine the metals so that a body is formed which in weight and volume is like the desired metal. In this process heed must be paid to the balancing of the qualities. These two methods, so far as their principles are concerned, may be called scientific, although they were hardly so in practice. 3) The third method starts from the view that the ignoble metals are diseased precious ones. A remedy was prepared which was called elixir (al-ḥisâr) or al-farrîr, i.e. the fugitive (cf. E. Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, ii. 549): it was also called from its material the “honoured stone” (al-khâjähr al-mukhram); in place of the stone there
was also a "substitute (būdal) for the stone", out of which a more deeply hidden elixir is obtained; there was also a substance similar to the stone and its substitute. The elixir etc. also contained healing virtues to a high degree.

The most fabulous stories are told regarding the elixir's power to attain desired transmutation or the elixir is said to turn 60,000, 300,000 or 1,200,000 mithkāl into gold, — or even as much as is between heaven and earth (cf. Ḥādījī Khālīfā, op. cit., p. 276) (cf. also the statements in O. Rescher, Der Islam, ix. 33).

That kimiyā was practised down to modern times is shown for example by the statements in Snouck Huregronje (Mekkā, ii. 215, and E. W. Lane, Manners and Customs of the Modern Egypt-Egyptians, London 1860, p. 264). There is also a play by Faith "Ali Aḥkāmzāde "The Alchemist" (cf. G. Jacob, Türkische Volksliteratur, Berlin 1901; see also Barbier de Meynard, Journ. Asiatique, Ser. viii., vol. i. [1886], p. 5).

The substances used. The substances used by the alchemists are given in their writings: varieties of the individual bodies are detailed, for example a whole series of varieties of sulphur is given and of kinds of mārkašḵāštā, etc. In many cases we are at the same time told which are the good and which the bad varieties.

The Mafāthiḥ al-ʿUṯūm distinguishes, as is usual in other books: 1) metals: gold, silver, copper, the two kinds of ṭaḏīṣ (lead and tin), bārdīnī for al-ḥadīd al-ṭaḏī, usually hard lead; quicksilver is sometimes given in place of the latter; 2) evaporating substances (rīḥā): sulphur, sirīnīkh (realgar and orpiment), nūḏḏāḏīr (usually sal ammoniac but also ammonium carbonate), quicksilver; 3) all other mineral substances (in the Mafāthiḥ al-ʿUṯūm called drugs).

Al-Rāzī divides the substances into first animal, mineral (ebraḏāl) and vegetable drugs. The mineral are divided into the 7 bodies (metals), 13 stones (including precious stones etc.), 5 vitriols, 6 kinds of bārdīs (kinds of cathartic drugs etc.), 11 salts. The animal are hairs, brains, eyes etc. Only a few vegetable substances are used by him, namely usamān (alkali plants) and cinquefoil, chaste-tree, (būlud kūsh, vitex agnus castus), its fruits and an antieroticum. Al-Tūghrātī gives a similar division; only he divides the stones into four groups, the reason for which is not quite clear.

Al-Kāšī divides into metals and 12 stones which latter include sulphur, sirīnī kh and nūḏḏāḏīr. Al-Dimashḵī deals successively with quicksilver, sulphur, metals and then the minerals which include mythical stones and a few drugs.

Al-Kazwīnī classifies the substances he deals with into metals, stones and oily substances.

A very peculiar division with regard to the preparation of the elixir (see Stapleton and Azo, op. cit.) is the following: Quicksilver, sal ammoniac etc. are spirit of sulphur, sirīnī kh etc. are souls; gold, silver, iron, maghdīsīmān (as well as bones, copper and brass in the later manuscripts) are parts of the spirit, two parts of soul and one of body. An elixir which contains no spirit or no soul or no body is useless. Soul and spirit may however give colour even if body is absent; but this disappears on smelting. If all three are combined it is permanent.

The alchemist separates the substances he uses a great number of epithets (cf. E. Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, x. 82) by which he refers to them in his works which makes it unusually difficult to understand them. The metals are called after planets to which they are subordinate. Mercury thus belongs to kharṣīnī. In the MSS. the name is often replaced by the sign of the planet. But the metals have countless other names. For sal ammoniac we frequently find nūḏḏā (eagle).

The works on jewels, drugs etc. are of alchemical but also of purely chemical interest. A number of Arabic sources with as full references as possible are given in the articles quoted in the Bibliography.

Apparatus used. We know a good deal about the apparatus used by Arab alchemists. In the first place we have lists of the apparatus used, sometimes with descriptions, e. g. in the Kābār al-Asrār of al-Rāzī, in the Mafāthiḥ al-ʿUṯūm, in the work of al-ʿAḏīrī, in al-Qaṣwār al-Manāḥir of al-Tūghrātī, which frequently agrees with the Kābār al-Asrār text published by Betheloth, op. cit. Information is also given in various passages, especially about distilling apparatus. The apparatus used is essentially the same as that used by the Greeks; a furnace for example is called, although perhaps without reason, the furnace of Zosimus (Gotha MS., No. 1349).

The apparatuses were used for heating are of course numerous. Various forms and names were given to the furnaces. The draught was regulated as required; its strength was judged by a leaf thrown into its current. The bellows were used to kindle the fire, but there were also furnaces with a self-acting draught. For special purposes, such as the treatment of glass, the manufacture of precious stones, the furnace was of a suitable form. For melting either an ordinary crucible was used or one crucible above another; in the latter case the upper one was perforated in the bottom. The molten metal in the upper crucible flowed into the lower one and the slack was kept back. Tongs etc. were used to pick things up; an alchemist complains that he very often burned himself in using them but without obtaining any results. Moulds were used for casting. To hold the substances to be heated one sees both old and new fits (alud al-taḏ īlāḥā) a longish pumpkin closed with a lid were used. The capital (anīk, al-dubā) was put on the still. Thus the alembic (q. v.) is made and if the still is closed at the end it is called "blind", if it is open and has a spout, still and capital together correspond to our retort and are used for distillation (teḵfīr). A kāḥila, our receiver, is then placed over the end of the spout. Al-Rāzī and al-Tūghrātī frequently point out that the vessels to be heated must be of uniform thickness and have no flaws, or they might easily burst. The kūrbises etc. were heated either on an open fire or in the hot air rising from one or in the steam rising from boiling water or a water bath.

To solder and polish the places where different parts of the apparatus are joined, clay of wisdom (of philosophy ʿin al-ḥikmā) was used, which was made of pure fermented clay, usually mixed with finely chopped hair and salt. There are numerous recipes for its manufacture. Different kinds of clay are given the names of the planets (Gotha MS., No. 1344). The outside of the vessels to be heated, as was still the custom with us in the sixteenth century, were also covered with clay to distribute the heat evenly and thus diminish the danger of explosion.
To break up substances the mortar (híma) and pestle (dákš) were used and for grinding them a hard, flat slab (siláyá) and a grindstone (fíh). Processes used. In their experiments the alchemists used a large number of processes, which again had many variants. The following is a list, of course not quite complete, divided into eight groups; it is taken from al-Khájarízi (Máshelf al-Ulum), Hadjíli Khâsha and alchemical writers.

1) Tadbir, the treatment of bodies in general.
2) Suká, grinding etc.; tafsil, breaking into pieces, mísád and tarísid, mixing; 3) hál and tahil (dissolving) are probably synonyms. These mean methods by which the body is either dissolved in our sense of the word or simply divided into very fine particles. Varieties are dissolution in corrosives, in dung (i.e. in a moderate heat), in moisture, by pounding with the pestle (dákš), by boiling, with the blind anbík (i.e. at a high pressure and temperature), with cottonwood and the anvil (the substance is wrapped in a roll of cottonwood and beaten on the anvil), by dripping (ta’tívr). Many alchemists distinguish the following varieties of hál: the substances are dissolved as usual or they are hung up in a sieve-like bag and the steam rising from water dissolves them (cf. al-Kâtí and al-Tughrí). taspíl, suspension, by which the substance is divided into fine particles in water; tashkíya, spraying, tashfiya and takhtís, cleaning and filtering.

4) ikíma, solidifying (over the fire without anything being burned); tashkíya, stewing (in oil) etc. or dry; to’kíd and perhaps also mutúbad, to solidify; the following varieties are given: with dryness, with the bottle, the kettle, burning (dáfí which plays a great part generally; bottles for burning are for example mentioned), with the blind anbík; tadýtís, a kind of tadjísid, changing into bodies. 5) sákab melting; itisíná, allowing to flow from the upper to the lower erasable. 6) takfír, allowing to drip, distilling and filtering; tajíd, sublimating; tajjíma „stoning“; a kind of sublimating. 7) takhírima, certification, making softlike wax; taklá, calcination; tajlé, to turn into dust; taimá, amalgamating. 8) I do not know the meaning of tajjí, „balancing“; takhírik, “strangling”, which is connected with certification.

Weighing was, of course, a process of special importance and frequently used; for it must have been very soon recognised that substances could not be mixed in any proportions one pleased. They must always occur in the proper proportions (on weighing see the article Mízán). Statements on the proper proportions are not very frequent. In the Máshelf al-Ulum we are told that to make cinnamon, one should take 1 part quicksilver and 1 part sulphur; the proportion calculated from the atomic weights is 209:32. It should be noted however that for the reaction to take place smoothly a considerable superfluity of sulphur is necessary. Another interesting quantitative statement (Yákut, ii. 139) is to the effect that 1 part of silver is obtained from 100 parts of lead in the making of litharge. Al-Kâtí gives a long list of the smallest quantities of all the different substances that the alchemists use (op. cit., p. 57 sqq.).

Synthetic and analytic methods. There were no general methods to produce definite bodies; a whole series was however obtained artificially, e.g. verdigris from copper and vinegar, white of lead from lead and vinegar, cinnamon from the heating of lead, also litharge, iron rust from iron, etc.; in these cases it was known that the substances concerned must contain the metal. It was the same when copper was obtained from minerals found in nature such as the varieties of malachite (Dáhmat, al-Dímean, text p. 83, transl. p. 97).

There was no analysis in our sense of the term. But there were a large number of rules for the chief of police (muftásáb) by which he could tell the apparently very common adulterations. Thus mineral adulterations of indigo were ascertained by burning. There are writings on this subject by Abú ’l-Fa’túl al-Dámí, Ibn Rassam and al-Nabúbáwí (E. Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, xxii. and xl.). Gold and silver are tested for purity by the touchstone or by purely chemical methods.

Technical processes. Very little has so far been accurately learned regarding chemical technical processes. A few indications may suffice here. In the first place we do not know much about the methods by which the metals were actually obtained. Gold was got by washing; in some places it was dissolved by quicksilver, the latter of course being regained by distillation (see E. Wiedemann, op. cit., xxv. 83). Quicksilver was obtained by distillation from cinnabar (either out of iron or retorts by the addition of splinters of iron) (E. Wiedemann, Journ. fur prakt. Chemie, op. cit., p. 111). On the manufacture of steel and especially its damascening, the providing with aríná, there are a series of works, e.g. one by al-Kíndí. According to a modern Oriental writer, Thábit (al-Máshirí, 1900, iii. 577 and 700), damascening is said to depend on the presence of titanium in the metal; but these statements are as a rule of an empirical and thumb nature (E. Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, xxv.; L. Beck, Gesch. des Eisens, vol. i.).

For a series of artificially prepared inorganic substances see above.

The methods of obtaining different scents from plants were very highly developed. These were especially cultivated in Persia and in Damascus and followed the processes of the ancients. In the district of Shíráz, special taxes were levied on the buildings in which rose-water was prepared (E. Wiedemann, in Diergarte, Beiträge, p. 234). The scents were partly extracted from the flowers or leaves by means of cold or hot oil and fat and then subjected to further processes. A great variety of oils, — olive, sesame, etc. — was used in the process (cf. Ibn al-Bárár under dhun). Water was poured on the different substances and they were put in retorts. These retorts were arranged around a shaft in circles, which were placed above one another in tiers. Hot air from a fire or steam from hot water heated the retorts. The steam developed in the retort carried off the sweet scented ethereal oils and was precipitated with them into a receptacle (pictures in al-Dímean, Nukkáh al-Dámí, text, p. 194; E. Wiedemann, in Diergarte, op. cit.).

The important sugar industry, about which we possess fairly full information will be dealt with in the article Sukkar (cf. E. A. von Lippmann, Geschichte des Zuckers, Leipzig 1910; E. Wiedemann, Beitr. zur Gesch. d. Naturwissenschaften, xii., iii., iv.) and the glass industry under zadásí. 

1015
On the manufacture of the usual inks, sympathetic and gold inks, of lacquers and jordans, and of cements, a number of works exist which still await editing; so far as I can ascertain, they contain purely practical rules.

A very great part was played by the processes by which drugs, pearls, jewels, etc., were imitated. This was done to a very great extent as we know from al-Khāzīnī’s Maṣāḥ al-Ḥikam. Many of the processes given by the different authors are simply pure inventions. Of particular interest are the statements by al-Djawbari in his Kāṣf al-Awrār (cf. E. Wiedemann, op. cit., xxxiii. and Mitt. d. Gesch. d. Medizin d. Naturwissenschaften, 1910, ix. 386) and those in the handbooks prepared for the muḥāṣbiūn.

A proper history of Kīmiyā and an account of its place in Muslim culture will only be possible when we are much better acquainted with the works of its representatives than at present, and also have a better idea of the sciences connected with chemistry, pharmacy, knowledge of drugs, etc., mineralogy, etc. As to chemistry a start has to be made almost from the beginning, as has been done by J. Ruskā and E. J. Holmyard. It is important that the processes described should be translated into modern technical terms as Darmstädter endeavoured to do for the Latin Geber.

Catalogues of the Libraries, especially that of the Berlin Library. The Sulṭáníya Library in Cairo is also said to be very rich. There are also the alchemical writings themselves so far as they have survived. The Latin translations of Arabic works on Kīmiyā are not here quoted (on them cf. M. Steinschneider, Die europäischen Übersetzungen aus dem Arabischen bis Mitte des 17. Jahrhunderts in Sitzungsber. d. K. Akad. der Wissensch., Vienna, Philos.-hist. Kl., exlix., 1904 and cli., 1905).

takh, Kitab al-`Illu al-Mukta`azab, etc., 1923, 53 p., text and transl. 57 p.; do., A Romance of Chemistry, Journ. of the Society of Chemical Industry, 1925, xlvii.; do., Chemistry in Islam, in Scientia, Milan, Nov. 1926, pp. 287—396; J. Ruska and E. Wiedemann, Beiträge, xlvii, Arabische alchemistische Dokumente, S.B.P.M.S. Ergl, 1924—1925, 157 p.; E. Darmstadtter, Die Alchemie des Gebirge, Berlin 1922 (translation of works by the Latin Geber with notes important for the Arabíat) (E. Wiedemann) KINÁLIZÁDE, Ar. Ibn al-Hinná (cf. Z.D. M.G., xiv. 544 and Gihb, H.O.P., iii. 199 note) a Turkish family of scholars and poets (cf. J. von Hammer, G. O.R., iii. 736), of which the following are the most important members: L. KINÁLIZÁDE, AL El-DIN ALI B. AMURULLÁH, Ottoman jurist and author, was born in 910 (1510/1511) in Sparta in the district of Hamidí, in Anatolia, in the son of the kâdî Emrullah (Mehméd) who died in 967 (1559) and grandson of Abd al-Kadir Hamidí. He filled jugendships in the following towns: Damascus, Cairo, Brussa, Adrianople, and from Dymmetrica in 978 Oct—Nov 1570 in Constantinople, was appointed Kâdî-lasker of Anatolia in Muharram 979 (May—June 1571) and died on 6th or 7th Ramadán of the same year (Jan. 22/23, 1572) in Adrianople. His brother was the poet Muslími, who was kâdî at Rhodes and elsewhere and is said to have died in 944 (1537). Of Ali's sons mention may be made of Mèhmèd Pehmî Efendi, also distinguished as a poet, who died when only 32 on 28th Shawwálu 1004 and Hasan Celébi (see below), the famous biographer of poets.

Mollá ALI El-DIN ALI was a very industrious writer. He wrote glossaries and commentaries on a series of theological works. He became famous by his ethical work Ahtúd-i ALI written in 972 (1564) for the Beyderley of Syria, Ali Pasha, the original MS. of which is in the library of Rághib Pasha in Stambul (N. 966). This work (cf. Hadíjí Kalaþa, Kafih, i. 203, No. 280) was written (256 + 127 + 52 pp.) in Shawwálu 1248 (Feb. 1833) at Búlak (cf. J. A., 1843, ii. 40, No. 68; Zeuker, i. 1357, where 'alamí is an error for alasting) and besides translated either in full or in parts; cf. the MS. transl. of the Venetian dragoman Giovanní Medun in the Bonn University Library, No. 47 in J. Gildemeister, Katael, p. 114, thereon G. B. Toderini, Letteratura Turcesta, Venice 1877, i. 95 as well as R. Peiper, Stimmen aus dem Moränglanzer, Hirschberg 1850, i. 840, 403 sqq. and do., Das Capitel von der Freiegebitt, Breslau 1848, esp. p. 97, 128. MSS. of the Ethics of Mollá ALI are numerous; cf. Flügel, Wiener Kat., iii. 204 sq.; Pertsch, BirI. Turk. Hst., p. 168 sq., where further details are given.

Another work is his collection of letters (Munshábat, cf. Hadíjí Kalaþa, Kafih, vi. 186) in the five sections of which, in a period in which written was decaying, he gives masterly specimens of the different sections of literary composition. There are MSS. of this work in the British Museum (Rieu, Turk. MSS., p. 94), Vienna, Nat.-Bibli., No. 289 (Flügel, Katael, i. 266 sqq.); Vienna, Konsular-Akad., i. lxxiv. Krafft, Kafih, 28 sq. BIBLIOGRAPHY: The fullest biography is in the MS. Tadklíra of his son Hasan Celébi; ALI, Qulá Shaláž al-mútmánya, p. 164—168; ALI, Kunh al-`Aláb (cf. J. v. Hammer, G. O.R., iii. 755, No. 57); Pechézi, Ta'ríkh, i. 458; Sidjíl-i `othmáni, iii. 501 (with erroneous statements concerning the Kinálizada family); J. v. Hammer, G. O.R., ii. 341, i. 131; do., G. O.R., iii. 736 (also contains mistakes regarding individual Kinálizada's), iv. 603 (where the brother of Mollá ALI, Mollá Abd al-Rahim Kermiti Celébi, mentioned in Hadijí Kalaþa, Fethleke, i. 7 sq. and died in 1000 = 1591, is wrongly given as the author of this or another collection of letters; cf. thereon, W. Pertsch, BirI. Turk. Hst., p. 471 on No. 491); Brusali Mehmed Táhir, `Othmání múellíetleri, i. 400 (with scant list of writings); F. Wustenfeld, Die Geschichtsschreiber der Araber, No. 532, p. 248 sq.

II. KINÁLIZÁDE HASAN CELÉBI, an Ottoman biographer of poets. Hasan Celébi was the son of the Mollá ALI mentioned above and was born in Brussa in 953 (began March 4, 1546), where his father was judge. At the age of twenty he became assistant (mu'assam) to the famous Abú Suud [q.v.], in 975 (1567/1568) professor, in 990 (1582/1583) "guardian" (i.b.), e. müzèdís at the mosque of Mehmed the Conqueror (cf. J. von Hammer, G. O.R., vii. 186), five years later professor at the Suleimánîya mosque, at which his father had once been first muzèdís (cf. J. von Hammer, G. O.R., i. 349). In the year 999 (1590/1591) he became kâdî of Aleppo, then of Cairo, Adrianople and again in 1007 (1598/1599) he went as kâdî to his native town of Brussa, then to Gallipoli, became kâdî of Eiyûb, and in Safar 1011 (July 1602) of Eski Zagrha. He died, the holder of an arpaští [q.v.] on Shawwálu 12, 1012 (March 15, 1604) at Rosetta (Rashíd) in Egypt.

Hasan Celébi achieved fame by his comprehensive dictionary of poets in three sections (jašîf), Tadklírát al-`Alí, a work which according to Hadíjí Khalióa's view (Kasrál, ii. 262, No. 2817) surpasses all previous works of the kind in the beauty of its language and the compactness of its matter. The Tadklíra (finished in 944 = 1536 and dedicated to the great Sa'd al-Din [cf. KHOJA EFENDI], gives biographical sketches of nearly six hundred poets with specimens of their work. This most important work, of which many manuscript reprints exist, has yet not been printed. A definitive edition of this, the best and most comprehensive of all Ottoman anthologies, is urgently desirable.

Wustenfeld, Die Geschichtsschreiber der Araber, No. 547, p. 254. (FRANZ BAEBINGER) KINÁNA B. KHUZAIMA B. MUÐIRKA B. AL-YÁS B. MUĐÁR is the name of a large Arab tribe which had its camping grounds at the beginning of Islám in the territory round Mecca, extending from the Tihama in the South-west of the city, where they bordered on the lands occupied by the real tribe of Hudhail, to the North-east of the city, where their grounds adjoined those occupied by their nearest relations the tribe of Asad of Khuzaíma. They were very numerous and their chief
importance in the eyes of native genealogists lies in the fact that the Kuraish, and consequently the Prophet, derived their origin from this tribe. In view of this fact we have concerning them an abundance of notices of their subdivisions and of men of note who traced their descent from them. While later genealogists name as a rule only six large clans, Ibn al-Kalbi in the Lajmahar al-Nasab mentions the following fourteen sons of Kinānā: (1) al-Nadr i.e. Kaž as considered the ancestor of Kuraish [q.v.]; (2) Nuḍair; (3) Mālik; (4) Milkān (so this name is vocalised in the good MS. of the Lajmahar, while Kalkashaנהndi insists on the pronunciation Mālkan); (5) ‘Amir; (6) ‘Amr; (7) al-Hārīth; (8) Arwān (or ‘Arwān); (9) Sa‘d; (10) ‘Awf; (11) Ghannām; (12) Makrhamu and 13) Djarāwal. All these thirteen tribes are stated to be the offspring of Barra bint Murr, the sister of Tamīm b. Murr, for which reason they are brought into relationship with the large tribe of Tamīm. The fourteenth son of Kinānā named Abd Manāt was a son of al-Dhafira bint Hani b. Balāt of Khulafa for which reason this clan is often reckoned as belonging to Khulafa’s itself. The later genealogists as at the time only mention al-Nadr; Mālik, Milkān, ‘Amir, ‘Amr and ‘Abd Manāt of Most of which they also enumerate subdivisions. No divisions of Milkān, ‘Amr and ‘Amir are mentioned except al-Kaž as a branch of the last named, while al-Nadr as ancestor of Kuraish is dealt with in the article referring to Kuraish. Milkān was divided into the clans Thalaba b. al-Hārīth b. Mālik, with the subdivisions of Firās b. Ghannām b. Thalaba, and Muḥammad b. ‘Amir b. Thalaba, and Fūṣāmīn b. ‘Adī b. ‘Amir. The ‘Abd Manāt were perhaps the most numerous and are split up into a number of clans: (1) Ghifār; (2) Bakr with the subdivisions of Du‘il and Laiḥ; (3) Bil-Hārīth; (4) Muddūd; who were renowned as augurs; (5) Dāmara b. Bakr).

It would be absurd to assume that these names mean actual sons or descendants of Kinānā, but for the early period of Islām they are important as indicating the mutual relationship in which the various clans of Kinānā considered themselves to be and were possibly entered in the Dīwān created by ‘Umar. As with all other Arab tribes the exact knowledge of affiliation of single persons very soon became doubtful and only the descendants of men who had played an important part in the rise of Islām could trace their descent with some degree of certainty. The clans of Kinānā which in later times, i.e. in the sixth century of the Hijra were settled in Upper Egypt near Ḥmmim or in the Western Delta had no knowledge of their origin except that they claimed to be descended from the original stock and had immigrated into Egypt at various periods, the last immigration having been in the vizierate of Bilād b. Risāk (549–556 A.H.). As close neighbours of the sacred territory, the tribe of Kinānā played an unimportant part in the history of the city of Mecca in the time before Islām and the clansmen outside gave the final decision when the branch Kuraish wrested the rule of the city from the tribe of Khuzāya, for it was their chief Ya‘mar b. ‘Awf b. Ka‘b b. ‘Amir b. al-Laiḥ b. Bakr b. ‘Abd Manāt who was chosen to give his final decision which was in favour of Kuraish; and he received on account of his decision the nickname al-Shududhīk “the Crusher” because he crushed the dispute. Their attitude towards the Prophet as a united tribe is not recorded, but one of their clans the Banū Fīrās was among the chief supporters of ‘Ali at Šīfa. The last time Tabarits mentions them in his Anmusr is in the year 230 A.H. when they where in part still encamped near Mecca, but were too weak to resist the depredations of other tribes who had become more powerful. At this time a large section had their camping grounds in the Ḥawrān and near Sākha. Though not important as a tribe, the names of men of note as traditionists etc. are very numerous, too numerous to be mentioned in detail.

KINDA, also called Kindat al-Muluk (the royal kind) was a South-Arabian tribe which, probably not numerous, was settled at the time preceding the rise of Mu’awiyah in the country to the West of Ḥaḍramawt. The Arab genealogists know their descent, but as usual with all South-Arabian tribes it is altogether imaginary. The line of descent is traced as follows: Thaw (i.e. Kinda) b. ‘Uqair b. ‘Adī b. al-Hārīth b. Murra b. Uداد b. Zaid b. Yashdhub b. Zaid b. ‘Arīb b. Zaid b. Khāliḥ b. Sābāh. They appear not to be mentioned in ancient South-Arabian inscriptions and are first mentioned in history in the fourth century of the Christian era. Ḥudjar b. ‘Amr b. Mu’awiyah b. al-Hārīth al-Aṣghar b. Mu’awiyah b. al-Hārīth al-Akbār b. Mu’awiyah. Kinda, called Akil al-Murār, was a step-brother of the Ḥimyarite ruler Ḥassān Tubba and in accordance with the practice of the Ḥimyarite kings, his son ‘Amr b. Ḥudjar was kept by Ḥassān Tubba at his court as a page and at the same time hostage. When Ḥassān Tubba made his expedition into the interior of Arabia and subdued the various tribes settled there, he was dispatched, upon his return to Yaman, his step-brother Ḥudjar ruler of the conquered tribes. Ḥassān Tubba was killed at the instigation of his brother ‘Amr, after an expedition against Djadis, who resided in Yamanā. The latter gave a sister of Ḥassān Tubba in marriage to ‘Amr b. Ḥudjak and when his father Ḥudjak had perished he succeeded him as ruler of the Arab tribes in Central Arabia; he was nicknamed al-Makṣūr. ‘Amr was succeeded by his son al-Hārīḥ who for a short time after the death of the Persian king Kūbād was made ruler of al-Hira but lost this possession upon the accession of Nushārān. After his death the now practically independent kingdom of Central Arabia was divided among the sons of al-Hārīḥ, while his son Ḥudjar retained the rule over the tribe of Asad, Shurayh became ruler of the tribe of Bakr, Ḥangab the tribe of Tamīm and the Rabāḥ, while Salama ruled over Tangib, al-Nāṣir b. Kāsim and Sa‘d b. Zaid Manāt and Ma‘dī Karīb had the tribes of Kais and Kinānā under his authority. They immediately began to dispute one another’s authority which resulted in the first battle of Kūlāb in which practically all Arab tribes took part. This place Kūlāb is difficult to identify: it is said to have been between al-BAṣrā and al-Kuφa, seven days’ journey from Yamanā.
Al-Kindi, Abu Yusuf Ya’qub b. Isḥāq, an Arab philosopher, called the falsāfī al-ʿArab on account of his South Arabian descent, was born probably in the middle of the ninth century A.D. in Kūfa, where his father was governor, and educated in Baṣra and Baghdād, then the great centres of education. He served in various capacities at the ʿAbbasīd court, especially under Mārānī and Muʿtaṣim, as translator or editor of Greek philosophical works, as tutor to a son of Muʿtaṣim, as astrologer, etc. Devoted to the Muʿtaṣili theology of the court, he was affected by the restoration under Muʿawwakkil and his library was confiscated for a time. He was still alive in 870, when he thought he could foretell a duration of about 450 years to the ʿAbbasīd empire then threatened by the ʿIraqis and a conjunction of stars.

Al-Kindi had acquired with tolerable understanding a knowledge of the so-called “ancient”, i.e. mainly Greek learning, as far as it was accessible to him; and all his life he furthered its dissemination in Islām by an industrious literary activity. In the tenth century we find everywhere, especially in mathematics and natural philosophy, the traces of his activities. Of his works very little has survived in Arabic, but many in Latin translations, including some by Gerhard of Cremona. Enough survives with some quotations and bibliographical references to enable us to estimate his position in science and philosophy.

Eclectic in the sense of the later Hellenism, he regarded the Neo-Pythagorean mathematics as the basis of all sciences and endeavoured in Neo-Platonic fashion to combine the views of Plato and Aristotle. He was fond of applying mathematics not only in physics, but also in medicine, e.g. in the theory of composite medicines. He explained the effect of these medicines from the geometrical proportions of the mixture of physical qualities, warm, cold, dry or moist. He was therefore still regarded by Cardan, a philosopher of the Renaissance, as one of the twelve sublimest minds.

Al-Kindi was celebrated in the Middle Ages as an astrologer; he was numbered among the nine judices of astrology, but he dealt not only with what we would call astrological fantasies but with exact astronomical measurements and calculations.

As regards alchemy, much studied in his time, which was defended against him by the physician Rāzi, our philosopher adopted a rather sceptical attitude. Gold and silver, he thought, could only be attained from mines, where nature has brought them into being, and not made by human skill.

Al-Kindi dealt very fully with optics. His principal work, which was much used in the east and west, next to the work of his greater successor, Ibn al-Haytham, is based mainly on the Optics of Euclid in Theon’s recession. In it he dealt with (1) the passage of light in straight lines, (2) the direct process of vision, (3) the process of vision by a looking-glass and (4) the influence of distances and angle of vision on sight along with optical delusions. According to him light takes no time to travel and vision takes place through a bundle of rays which, sent out from the eye expanding in the form of a cone, embrace the object. While the other four senses receive impressions from things, the sense of sight
grasps its object in an active and instantaneous manner.

We also possess him, like his principal works only in a Latin translation, a little work on the cause of the blue colour of the sky, in which it is explained that this colour is not really special to the heavens, but arises from the mixture of the darkness of the sky with the light of the atoms of dust, vapour, etc. in the air illuminated by the light of the sun. A work on ebb and flow, also preserved in Latin, is remarkable because the author tested experimentally the principles of the theory, an erroneous one, however.

Primarily a natural philosopher, al-Kindi also discussed the doctrine of the soul and of the intelligence (nafs). According to him the world as a whole is the work of an externally active cause, the divine intelligence, whose activity is transmitted in many ways from above to the world. Between God and the world of bodies is the world of soul, which created the world of heavenly spheres. The human soul is an emanation from this world-soul. In so far as the human soul is combined with the body, it is dependent on the influence of heavenly bodies, but in its spiritual origin and being it is free. For only in the world of the intelligence (nafs, nafs) is there freedom and immortality. If then we wish to attain the highest, we must turn to the eternal possessions of the intelligence, the fear of God, knowledge and good works.

In al-Kindi’s treatise De Intellectu, edited by Nagy, we meet for the first time the doctrine of ‘āki in a form that is significant of the whole course of Neo-Platonic-Aristotelian philosophy in Islam. Following Alexander of Aphrodisias (De Anima, ii.) a fourfold intellectus is distinguished: (1) which is always in acta; (2) which is in potentia in the soul; (3) which is realised in the soul by the first (3) (so far corresponding to the threefold wūs of Alex. Aphr.: wūnēs, wūkēs, wūnēkēs) and (4) an intellectus demonstrativus. According to a suggestion of P. Duhem’s (Le Système du Monde, Paris 1916, iv. p. 405) by the latter is meant the anima sensitiva, about which the Alex. Aphr. speaks in this context, but which he did not call wūs nor could have called it so. Al-Kindi seems to wish to mean by his fourth ‘ākī the effective participation of the third, just as Aristotle distinguishes between the possession of acquired virtue and its practice, acquired knowledge and mental activity. The fourth would therefore have to be distinguished from the first ‘ākī in later Arab terminology as ‘ākī bi l-fā’l from ‘ākī faṣāl.

AL-ΚΙΝΔΙ, Abū ' Omar Muḥammad b. Yūsuf, an Arab historian of Greece, was born on 10th Dhu l-Hijjād 283 (Jan. 17, 897) at some place not exactly known in Egypt and belonged to the Tudjib, a clan of the Kinda, who had come into Egypt with 'Amr b. al-Āṣ. He studied Tradition under Ibn 'Abd al-Mu'min (d. 312 = 924) and Ibn Naṣīr (d. 302 = 914; q.v.) towards the end of his life he is said to have himself been a teacher of Hādhāb. But his main interest was in the history and traditions of his native land. He seems to have spent all his life in al-Ṭūrūj, where he died on 3rd Ramadan 350 (Oct. 15, 961).

His two principal works are the history of the governors of Egypt (Tarniyat Wulāt Mīr or simply Umarā Miṣr) and the history of the judges of the country (al-Kutb). The former deals with the governors (umarā al-qalāb) and includes the chiefs of police appointed by them (wašt or šābi al-shurta or al-barāḥ) but excludes other higher officials; these bare lists are only occasionally interrupted by brief notes on the domestic and foreign policy of the country. The author brings the history of Egypt down to the death of al-İkhshidī in 335 (946); an unknown author continued it till the coming of the Fāṭimids in 362 (972). Sections of the book were first published by K. Tallquist in Ibn Salīd’s Kitāb al-Magāhirī, Leiden 1899 and by N. A. König in The History of the Governors of Egypt, New York 1908. This is a supplement to his first work al-Kindi where the history of the judges of Egypt down to the appointment of Bakkar in 861 (245). Here in connection with the lives of the judges he not infrequently gives us important legal decisions laid down by them and thus gives us valuable data for the history of Muslim law. Al-Kindi seems to have brought the work down to his own time in a second edition, but this has not survived. Instead of the latter we have two continuations, one by Aḥmad b. ʿAbd al-Rahmān b. Burd to the year 366 (977) and an anonymous one for the years 347-424 (959-1033), the beginning of which therefore covers part of the ground of the original versions; both are rare chronological lists. This work has been edited by R. Gotthelf, The History of the Egyptian Qaidis, Paris 1908. Both works have been brilliantly edited by Rhuvon Guest, The Governors and Judges of Egypt or Kitāb al-Umarā (al-Wulāt) wa-Kitāb al-Qudsh of al-Kindi together with an appendix derived mostly from Rāf al-Iṣr by Ibn Hajar, G.M.S., xii., Leiden 1912.

Of other works by al-Kindi we know mainly
from quotations in al-Maki‘i’s al-Khita‘at and in Ibn Du‘mâk, Kitâb al-Lajnâd al-Gharîb or Asna‘ al-Adnâd al-Ghurabî (2), a K. al-Kahdân wa l-Tarârîsh (1) for the fight against the trench made for Ibn al-Zabîr’s governor Ibn Dja‘lâm for the defence of al-Fusâţ (a), a K. al-Khita‘at, a K. al-Qâhir Masqîd Ahi al-Kâya al-A’sâm and a K. al-Mawâli. A Sirat al-Surî b. al-Hakâm is only mentioned by al-Makrizî. Yâ‘kin in the Irshâd al-Arîb, ii. 156 quotes a history by al-Kindî beginning in 280 (894) and Ibn Du‘mîk (iv. 18, 3) gives him as a source for the event of the year 290 (903). Al-Suyûtî wrongly ascribes to him the short Kitâb Pâ‘ûlî Mîrî, which his ʿOmar composed for the Ikshidîd Kafûr (355—357 = 966—968). It has been edited by J. Osirî (ʿOmar b. Muḥâmmed al-Khârî is related by al-Fâyûmî, udgîvî dîgîvî) in the Bulletin de l’Acadîme Royal de Danemark, Copenhagen 1896, No. 4. But al-Kindî himself did write a larger work with the same title which the son quotes several times, according to Nallûn, Opus Astronom. Al-Battani, ii. 325. Bibliography: in the article; short biographies of al-Kindî are only given in the still unpublished al-Muqâfâ of al-Makrizî and the Ta‘rîkh al-Īlâm of al-Dhahâbî. (C. Brockelmann)

AL-Kindî, Abû al-Masîh b. Isâx, the fictitious name of the author of a celebrated Arabic apologia for Christianity, the Khita‘at ilâ Abûl’lāh b. Isâmîl al-Hâshîmî. Pro- fessing (ed. 1880, p. 47; cf. p. 2) to be a con- temporary account of a controversy held about the year 204 (819) before the Caliph al-Ma’mûn on the relative values of Islam and Christianity, it contains theological statements and a terminology probably posterior to the year 300 (912), for example in particular the allusion to the refutation by Tâbarî (d. 310 = 923) of the thesis of the Ḥanâbal Barbâhârî (d. 320 = 940) on the inscription of the name of the Prophet Muḥâammad on the base of the throne of God. The adaptation to Christian theology of the ideas of the Islamic Kalâm as in the distinction between ǧîfât dîhâr and ǧîfât fi‘l, would make one try to identify this “Kindî” with some Jacobite author with pre- Averroan tendencies, for example with the celebrated Yahyâ b. ʿAdî (d. 364 = 974). The text was used and its author quoted by al-Kindî, under his assumed name of a Nestorian Kindî, “son of Isaac”, addressing to a Hâshîmî “son of Isâmîl.” This apologia, often aggressive in tone, is a very remarkable document. It contains the first known outline of a critical history of the gradual formation of the present text of the Kûrân. The Arabic original, written in Syriac characters (Karshûn MSS.: Paris, Catal. Zöllner, p. 204, 205; Gotha, Cat. Moller, p. 160) was analysed, then translated into Latin about the year 1141 by Peter of Toledo (MSS. Lat., Paris, No. 3305, 3649, publ. in Bibliobib., Acurius, 1543, ii. 1—20) and resurrected in the sixteenth century by Sir William Muir. Bibliography: Dionysius Carthusianus (+ 1471), in Alchoran. Lib. V, Cologne 1523, ii. 70, 255, etc.; W. Muir, The Apology of al-Kindî, London 1882, 59 sqq.; P. Casanova, Mohammed et la Fin du Monde, Paris 1913, iii. 110—122; Khâshîf al-Ghîbî (Shî‘î), Al-Din wa l-Īlâm, 1531, ii. ii., fine; the text was first printed by Ant. Tien in 1880 (London, pr. Gilbert R. Wiwington, Turkish Mission Aid Society, 166 p.). (L. Massigny)

KINKIWAR, KANKIWAR, KANGAVA, a little district with a town of the same name and about 30 villages between Hamadân and Karmînî. The town has about 2,500 inhabitants; in its vicinity is a famous castle, Ǧâr al-Luṣûq or Ǧâr Dûdân, the “robbber castle”; it is said to take its name from the fact that several animals were stolen from the Muslims at the conquest; Tab. i. 2649. Bibliography: B. G. A., i. 195; ii. 256; iii. 393; Barbièr de Meynard, Dict. de la Perse, p. 450—451; Le Strange, Landi, p. 188 sqq.; Faïdîn, Voyage, i. 408 sqq. (J. Ruskâ)

KINNASRÎN, a town in North Syria at the point where the Nahr Kuwâr enters the swampy lake of il-Mâghtî. In ancient times it was called Xârîsh, Chalces ad Belum and lay in μεγάλα Ἀραβία (Diodorus, Bibl., xxxii. 48); perhaps it is to it that the note in Stephen of Byzantium refers, according to which a town named Chalkîs was founded by the Arab Mawûkî. In the late classical period a part of the Syro-Arabian limes was called τὸ Βουτάκις (Malalas, p. 296, s). In this region the Arabs very early immigrated into Byzantine territory; at al-Hîyûr (the later Hîjûr bani Il-Kasîš) in the district of Kînnsrîn in 554 A.D. the Ghassânîl al-Hârîth won a decisive victory over the Lakhmîd al-Mu’dhirî of al-Hûr (Nûdeke, S. B. Ak. Berlin, 1887, p. 18; according to Herzelh, Jahrbuch d. Preuss. Kunst- sammlungen, 1921, xlii. 123, al-Hîyûr is the modern Ǧâr ibn Wardîn). The Syrian name Kenneshrîn (not to be confused with the monastery of Ken- neshû on the Euphrates also written Kennesrîn; cf. G. Hoffmann, Auswege aus syr. Abt. f. pers. Mîrt, p. 161 sqq.) occurs several times in Syriac texts before the Arab period (Wright, Catal. Syr. MSS. Brit. Mus., ii. 537b, 707b; Severus of Antioch, Epist., 37, p. 117 ed., p. 104 transl. Brooks); also in the Talmud (Babyl. Talm., iii. 366, ed. Goldschmidt; Province of Kanneshîrayî). In the last struggle between the Byzantines and Sassanians, the town was taken in 573 A. D. (Michael the Syrian, ii. 312) and in 608/609 A.D. by the Persians. At that time Arab tribes were already dwelling round Kînnsrîn, Halab, Mahbûn, Kushtîn u. V. Vorstiehn, vi. 67: Lammens in M. F. O. B., i. 52). In 637 Abû ʿUbayda took the town (al-Baladûrî, Futâb, p. 137, 139, 144 sqq.). It then became the capital of an administrative district (al-Baladûrî, op. cit., p. 164, 189 sqq.). The Caliph Yâṣîd I in his reforms in the administration of Syria added to the four military provinces already in existence (ṣā‘īd) Filasîn, al-Urdûn, Dimashq and Ḥimṣ, a fifth the djund of Kînnsrîn, which he separated from the djund of Ḥimṣ (Baladûrî, p. 132; following him Yâkût, Muṣ‘ûdîn, iii. 742. Lammens, Le Califat de Yâsid Ier in M. F. O. B., vii. 1914—1921, p. 446 sqq.). Besides its capital, it included Halâb, Anqīkîya and Manbûdî. After the time of Hârîn al-Rasîhid, when the Ǧassîmî were the feudal lords, the djund of Kînnsrîn (in 170/786), the districts of Kînnsrîn, Halâb, Ma‘zâr al-Nu‘mûn, Ma‘zâr Ma‘shûn and Samân (Le Strange, Palestine, p. 36) belonged to it. Various changes in the frontier seem to have been made later. Thus Ibn Khûrîd-dâbbîh (B. G. A., vi. 75; c. 850 A.D.) in addition to the places mentioned and Hîjûr Bani Il- Ǧa‘fâ’.
and Martakhvān also includes the towns of Dulūk and Kābdān in the north, which, according to other authors, belonged to the ʿAbāsīm, and al-Makādisī includes in our district the places of Anṭākiya, Bālūs, Sumaiṣāt, the two Maʿarrā, Manbidā, Bāyās, al-Tinā, Kinnarsīn and al-Suwaydāyā (B. G. A., iii. 54; the list given in i. 154 sq. which is the only one noticed by Le Strange, p. 39 and Gildemeister in Z. D. P. V., vii. 147 is very defective). On the other hand al-Khnāṣira and Kafarṭāb are, probably really, included in Ḥimr (in spite of Le Strange, p. 40) although the former in Iṣṭakhrī's time belonged to the province (ʿamaṯ) of Kinnarsīn (M. Hartmann in Z. D. P. V., vii. 149). Kinnarsīn is no longer mentioned in ancient times to have far surpassed Beotia in importance, later became more and more overshadowed by Ḥalab; the Arab geographers are practically unanimous in saying that it had formerly been a strongly fortified and flourishing town but in their day was already quite ruined, depopulated and had sunk to be a mere village. According to Yāḵūt the inhabitants had left the town on the approach of the Byzantines (351/692); some fled across the Frāt, the remainder were settled by Saif-al-Dawla in Ḥalab. When in 355 (666) Nicephoros Phocas advanced on Ḥalab, the Ḥamāndīn retired to Kinnarsīn but, when he could not make a stand there, he destroyed the town. It was again populated under the Emperor Basil II, burned again in 389 (998). Rebuilt by the Buān 'l-Bašaun of the tribe of Tanūk, it was laid waste again by the Byzantines (422 = 1030) and once more destroyed by Tāḏī al-Dawla, Tūṣān, after the Seldjūk Sulaḵān b. Kūṭūmphī had restored and rebuilt it. Henceforth Kinnarsīn was uninhabited. In the Crusading period it was several times used as a depot for military stores (Röhrich, Gesch. des Königreiche Jerusalem, p. 131, 139, 140). It never seems to have fallen into the hands of the Franks, who wrote the name Canesterry (William of Tyre, xiv. 7). In Yāḵūt's time there was only a khan for caravans and the Sultan's tax-collectors there.

The modern Kinnarsīn, also called Eski Ḥalab by the Turks, still has great ruins of the ancient walls and those of a citadel on an eminence to the north east. A chain of hills in the north of the town is crowned by the sanctuary of Nabi ʿĪs in which fragments of Kafīt inscriptions of the viii th century A.D. have been found.

Kīnṭār (from the Latin centenarius, cf. German Zentner and English hundredweight), an avaricious with weight in the ancient Arab weight system mentioned as early as Kurān iii. 12, 68. Out of the wealth of tradition regarding the amount of weight we may select as the most usual and the one in keeping with its literal meaning, the equation 1 kīnṭār = 100 ratī, which however, is very indefinite. The term kīnṭār is, following its use in the Kurān, chiefly applied to a considerable sum in gold coins (usually 10,000 dinars = 85 lbs.).

On other weights (weqāb and kurr) see KAFĪT.

KiOSK. [See KOSHK.]

KIPČAK, a Turkish people; usually also written Kipcak or Kifčak, the forms Khīpčaq and Khīpşaq are also found. In later popular and learned etymologies (first in Rāshīd al-Dīn, Ḫūnār al-Tawārisī, ed. Berezin = Trud ü. Völ. Mitl. Arkt. Ödçen., vii. 23, later in Abu ʿl-Ghāzāl, ed. Desmaisons, 19) Kipčaq is connected with kipçe or kipçe, and explained as a "hollow tree trunk"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy is said to have been adopted by Oğuz Khan (cf. CHUVIÇ, ii. p. 168) and to have been given a separate territory as a fief. Gardizi (text in W. Barthold, Olcet in polatje v Srednjem Asiyu, p. 82) mentions the Kipčaq along with the İmāk as a division of the Kımak who lived on the Irīšt, although the earlier anonymous author of the Hūdūd al-Ālam (i. 19a) say that the Kipčaq had separated from the Kımak and dwelled to the north of the Pečenegs. Ibn Khordādūbih (ed. de Goeje, p. 31-9) and, following him, Ibn al-Paḵī (ed. de Goeje, p. 329, 9) mention the Kipčaq along with the Kımak as a separate people. Maḥmūd Kāshgharī (i. 273) describes the Yımak (sic) on the Irīšt as a subdivision of the Kipčaq not of the Kımak. In another passage of the same work (ii. 22) we are told that the Yımak are a Turkish tribe (pašė al-türk), the same as the small Kipčaq (wa-ḵhāl al-kipçe-yāvat "indanā"); the Kipčaq themselves thought they were a separate branch (bullum atrakh ūfšaq yūḏūn anfasakun īḏānā kūhā). The Kımak mentioned by Muḥammad (p. 274, 3) at Šawrān must have been Kipčaq. In connection with the name of the Kipčaq from north to south is the appearance (first in the xi th century in the Diwan of Nāṣir-ī Khusraw; cf. Browne, Lit. Hist. of Persia, i. 227) of the name Doḵt-i Kipčaq for Mafṣṣāt al-Chuz, cf. above, ii. 168. The Kipčaq (Khīpčaq) are already mentioned by Bāshaḵb (ed. Morley, p. 91) as neighbours of Khīrārim. According to Maḥmūd Kāshgharī (i. 253 and iii. 23) the dialect of the Kipčaq had the same phonetic peculiarities as the
KIPČAK — KİRÂN

KÎRÂN (A.) is defined by the Mevlefî al-Ulamâ, p. 232 (cf. also E. Wiedemann, Beiträge, Über die Astronomie nach den Mafâthî al-Čûmîn in Sitzungsber.
der physikal. med. Sêc. Érl., xiv., 1915, p. 235) as the conjunction of Saturn and Jupiter if the word is used without any qualification, but if the kîrân of two other planets is meant it is defined by giving the names of the two planets concerned. In the Kitâb Tafhim ii-avîî, and more particularly in Chap. ii. of the last book of the Kâtûn al-Maʃûdû, treating of the kîrânî of the upper planets, al-Bûrûnî, whom we here learn to be a convinced astrologer, deals very fully with this conjunction; according to him Saturn, being nearest the cone of fixed stars, has the greatest astrological influence, then Jupiter which is next and similar to it. From the course of the planets (cf. e.g. C. A. Nallino, al-Battânî, ii. 103, tabula motuum quince planetarum in singulis annis romanis) it is found that if a first kîrân takes place in Aries, the second will be in Sagittarius, the third in Leo and the fourth again in Aries and in cycles of about 20 years; and this occurs after Saturn has passed through eight zodiacal signs, which together form a trinity. But it is not exactly 8 zodiacal circles but these and $2^1/2^2 = 24^1/2^2$; the position of the conjunction shifts by this $2^1/2^2$ between every two conjunctions on the zodiacal circle. After this has happened 12 times, the $2^1/2^2$ has grown to 30° i.e. the size of a sign of the zodiac and the kîrân enters upon a second triplity, beginning with Aries, this is the case after $12 \times 20 = 240$ years. The kîrân which takes place 24 years after the first is called the middle kîrân. If the kîrân has gone through all four triplities which begin with Aries, Taurus, Gemini and Cancer, for which $4 \times 240 = 960$ years are required, then the kîrân again enters Aries. It is then called the great kîrân.

In all observations, geocentric observation is assumed; i.e. the planets go round the earth. According to al-Bûrûnî the word kîrân is especially used for the conjunction of Saturn and Jupiter in Cancer. Here we can only refer the reader to the very full calculations given by al-Bûrûnî. From the same stem as al-kîrân with corresponding meanings come al-kişîrân and al-muqârâna (see C. A. Nallino, op. cit., p. 349). Al-Battânî only uses the term al-ištîmâl for the conjunction between sun and moon. — From the kîrân, or ištîmâl as a technical term of ištîmâl see this article (ii. p. 455).

KÎRT (from the Greek kûptos = seed, grain of corn; the seed of the carob tree, Ceratonia Siliqua L.), a unit of weight in the Mû hammâdân apothecary's measure and coinage.

1. Apothecary's weight. The name and the weight had long been adopted from the Byzantines by the Arabs before Islam. The Constantinian weight system founded by the Arabs in Syria and Egypt and left unaltered by them as follows (the Arabic names are given beside the Latin):

<table>
<thead>
<tr>
<th>Name</th>
<th>Arabic Name</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tael</td>
<td>ته (Teh)</td>
<td>320 grains</td>
</tr>
<tr>

</table>

These seven denominations have survived apart from inevitable variations to the present day. The rafî of this system of about $1/3$ rd kg, its $1/12$ nd part
the valley of the Tekes and to throw these lands open for Russian colonisation. An autonomous territory of the Kara Kyzyl came to be known as Russian Cossacks. In 1526, the region was annexed to the Russian Empire, and the local Kazakhs were subjugated. The term "Kara" was never adopted by the people themselves and is now definitely repudiated.

Until recently in both Russia and Western Europe the name "Kirgiz" meant particularly the Kazakhs; they are sometimes called also "Kirgis-Kaisak" (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cossacks). On the separation of the Kazakhs from the Ozbegs, cf. the articles Agha Khans and Kazakhs. Their whole body of land was long under the rule of one Khân who therefore had a considerable military force at his disposal; Khân Kasim (d. 924 = 1518) was particularly powerful. In spite of several defeats from the Mongols allied with the Ozbegs in the xvith century, the Kazakhs still had a strong nomadic kingdom at the end of this century under the rule of Khân Tawakul, who, during the last years of the reign of Khân 'Abd Allah b. Iskandar q.v., was able to make a successful incursion into Ma warâ al-Naher and even later still held the town of Tashkent. In the xvith century the power of the Khân was extended over the whole country; but about this time Tashkent and Farghâna were frequently in the possession of the Kazakhs, sometimes under nominal recognition of the suzerainty or the Khân of the Ozbegs. At this time the Kazakhs had taken the Kazakhs into three "Hordes" (called by the Kazakhs themselves djuiz "hundred"); the great horde (nûm djuiz) occupied the most easterly, the little (kîhi djuiz) the most westerly part of the so-called "Kirgiz steppes" and between the two the central horde (orta djuiz). Towards the end of the xvith century this division was already an accomplished fact. Khân Tyawka, celebrated as the law-giver of his people (in 1694 a Russian embassy was received by him in the town of Turkestan and in 1698 one from the Kalmucks), still ruled all three Hordes and had a representative in each of them. In 1717 unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1723 the towns of Sirdum, Tashkent and Turkestan were conquered by the Kalmucks. For a short period after this the suzerainty of the Khân of the Little Horde was recognised by the Kazakhs and the agreement doing this was sealed by the sacrifice of a white horse but the treaty had no practical results. In 1730, Abû 'l-Khair negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the xvith century; but it was not until the xiiiith century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirgiz steppes on the Sr Daryâ, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg; regulations for the government of the Siberian Kazaks were published in 1822 and again in 1868. Even after the abolition of the Khân's authority, the descendants of Cingiz Khan or "Sultân" exercised a considerable influence over the people as a nobility (composed of Kazaks called "white bones", âk ëwëçê); their authority has been gradually destroyed by the measures of the Russian Government. The last popular leader of the Kazak, Kencsar, who fought against the authorities in Siberia and Orenburg from 1842, was killed in 1847 in the mountains of Ala Tau; several risings were stirred up down to 1873 by his son Sadik (so-called by the Russians, properly Südük). Another son, Ahmad, later wrote the life of his father Kencsar and of his brother Sadik, entitled: Sultan Kencsara i Sadik. Biografizkiye otkryi sul'tana Ahmeta Kencsara, translated from the Russian by I. T. Smirnov, Tashkent 1885. Review by V. Rosen in Zaïf, iv. p. 122 sq.

The most southern part of the Kirgiz steppes was conquered in the xiiiith century by the Ozbegs of Farghâna and Khiwa and partly colonised; the advance of the Russians in this part was therefore assisted by the Kazaks. After the foundation of the general-governorship of Murkestan (1867) and the general-governorship of the Steppes (1888), Semireyev belonged at first to the latter, but was later again united to Murkestan, the government of the Kirgiz steppes had less unity than before. On the other hand after the revolution an administrative unit was established called at first by the Russians the "Kirgiz Republic" and by the people themselves "Kazakistan"; since 1924 this "Republic" has included a vast territory, little smaller than Russia in Europe, but of course less thickly populated. According to the latest Russian figures before the revolution the Kazak number about 4,500,000 compared with about 500,000 genuine Kirgiz. The present numbers of the population cannot be very different from these. Çulshnikov's (see below) reckoning, by which the Kazaks and true Kirgiz would now be about 8,500,000 together is certainly much too high. In the northern part of the Kirgiz steppes between 1920 and 1923 the population is known to have declined by 21.2%o. According to figures in the official publication Sowetskaia Kirgizia (1924, N° 8—9, p. 4), the population of the "Kirgiz Republic" is 6,536,000 including 4,068,310 Kirgiz (61.3%).

KIRID. [See CRETE].

KIRK KILISE. A town in Eastern Thrace, situated twenty-four miles to the east of Adrianopol,
on the southern slope of the Istranjda mountains, which run parallel to the coast of the Black Sea from the north-west to the Southeast. It was conquered from Byzantium during the reign of Murad I, a few years after the capture of Adrianople and after the great defeat of the Serbians near this town (766). The chronology of the conquest is very uncertain, for neither the early Turkish chroniclers nor the Byzantine mention it. Hadjiji Khalifa (Chronologia Historica, Venice 1697, p. 110) and Sa'd al-Din (Tafi' al-Tawarih, p. 3) say that Murad, after having definitely established his residence in the new palace of Adrianople, commanded in person an expedition in the territory to the east of this town; on this expedition Kırk Kilise was taken, as well as some other places in the region of the Istranjda, such as Wise and Bušar Hisâr. Hadjiji Khalifa places these events in 769; Muncedžadin Bâshî (iii. 295) gives the year 770. The identification made by von Hammer (G.O.R., i, 175) with the ancient Tar podizus (see Pauly, Realencycloå‘pedia der classischen Altertumswissenschaft, Stuttgart 1852, vi. 1605) would appear to be very questionable. Leunclavius Pandectarum Historicarum Taurici, Paris 1650, p. 473) says that the town of Kırk Kilise was the site of the Greeks Sarante Ecclesiæ and that it was, in his time, the capital of the Sandjak of this name. Evliyâ Celebi (v. 79) says that it was the most important sandjak of the vilayet of Adrianople; he gives a short description of the town. It may be concluded therefore, that formerly Kırk Kilise was not a place of importance; under Turkish rule, however, its situation on the route from Constantinople to Shumla and to Prawadia made it gain in importance. As regards the name "the forty churches", the numerical kırk which is found here is also met with in other geographical names (e.g. Kırk Aglaç); it is perhaps permissible to find in this an allusion to the forty saints who play a certain part in geographical nomenclature, both Christian and Muslim (cf. Goldzweig in K.H.R., ii. p. 320).

About the year 1900 Kırk Kilise had about 16,000 inhabitants, of whom Greeks formed the greater part; after them came Turks and Bulgarians. There were eight džâms, one of which is attributed to the Sultan Bayezid I and two tekke. The most important local industry was the weaving of wool. Under the new administrative system of the sixteenth century Kırk Kilise remained the capital of a sandjak in the vilayet of Edirne; the sandjak stretches along the two sides of the Istranjda and contains seven kâdar. All this district is fertile and consists mainly of pasturage, especially to the south of the Istranjda; the rivers, of which the most important is Erkene Şu, all belong to the basin of the Marita. Agricultural products are grain, all kinds of fruit, and especially tobacco and wine. The pasturage is very suitable for the raising of cattle.

After the Balkan War had broken out in October 1912, the Bulgarians occupied Kırk Kilise during the last days of this month, during their advance on Catalja, to which the Turkish army had retired. As a result of the recapture of Adrianople by the Turks Kırk Kilise was restored to Turkey after the war and remained Turkish after the victory of the Turkish nationalists on 30 July 1922 (Treaty of Lausanne 23 July 1923). Kırk Kilise is now, with Adrianople, Rodosto and Gallipoli, one of the chief towns of Eastern Thrace.

Kırk Wazir. [See Şahbâde, II.]

Kırkûk, a town in Mesopotamia, in 44° 25' E. Long, and 35° 25' N. Lat., the largest town in the district bounded by the Little Zab in the north-west, the Djabal Hamrin to the south-west, the Diyâlî to the south-east, and the chain of the Zagros to the north-east, which even in the days of the ancient Babylonian empire and later in the Assyrian empire was much exposed to the raids of the hill-peoples of the north-east, was called under the Sâsânid, Gamarkân (Moses of Khurene) and in Syriac sources Bêth Garmê; the town of Kırkûk is called in these sources Karkhê de Beth Selôkh. The proof of this identification was given by G. Hoffmann (Auszüge aus syrischen Acten persischer Martyrer, Abh. für die Kunde des Morgenlandes, vii. no. 3, p. 267 sqq.). In the history of the martyrs of this town (op. cit., p. 43 sqq.) its foundation is attributed to the Assyrian King Sanherib who had built a bulwark against the Kassites. Seleucas in a later date built a tower in the citadel; henceforth the town bore the name of Seleucus (Selôkh) while the citadel was called Sarbû or Sarbûg (cf. Marquart, Erânahr, p. 21). Under the Sâsânid the town became a celebrated centre of the Nestorians; the Metropolitan of Bêth Garmê had his residence there and it was here that took place the persecution of the Christians under Yezdegird II (438—457) described in the martyrlogy above mentioned.

While the Christians continued to call the town by its old Syriac name, or in Arabic al-Karkhî, (Eliyâ of Damascus in Assemi, Bibl. Or. iii/ii. p. ccecvii.; cf. Hoffmann, op. cit., p. 272) it is not clear what name the Arabs gave it. We find Bâджarna as a kûra of the province of al-Mawsîl in Ibn Khurdâdhîbî (p. 94; al-Baladhûrî, p. 265; Yâkût, iv. 683) but none of the towns enumerated can be identified with Kırkûk. Ibn Khurdâdhîbî (loc. cit.) knows a town Khûnîyâ Şabûr in Bâджarna (a conjecture of de Goeje which applies also to Tabari, i. 840). Hoffmann, (loc. cit.) suggests a connection with the town of Karkhînâ in Yâkût (iv. 257). The identification is made more difficult by the fact that the Arab geographers always describe the road from Baghîdî to al-Mawsîl as following the Tigris; the old road which is also the modern road by Kifri, 'Aţî, Kırkûk and Irbil does not seem to have been much used in the early centuries of Islâm.

In the sixteenth century the region of Kırkûk belonged to the territory ruled by the Begteginid dynasty which had its capital in Irbil [q. v.]. After the death of Mûazzâm al-Dîn Kîkûrî in 1232, the lands of this dynasty passed to the 'Abbâsid Caliphs to be conquered soon afterwards by the Mongols. The name Kırkûk is found for the first time in the history of Timûr by Sharaf al-Dîn 'Ali Yazdî (transl. Pêits de la Croix, Delft 1723, ii. 259), where we are told that after the conquest of the 'Irak, going via Ta'îk (Da'îkka among the Arabs), Carcec (Kırkûk) and Alîun Cuprû (Altûn Kupru) which he left on December 20, 1403. Next comes the rule of the Aks-Cûyulla followed by the
conquest of Mesopotamia by Šīh Ḣusain b. Isā ʿAmīr I in the early years of the xvth century. When finally Mesopotamia and the ʿIrāk had passed into the hands of the Ottoman Sultan Selim I and Sulaimān I, by the first Turco-Persian peace concluded at Amasia (May 29, 1555), Kırkük resumed its former role of an important bulwark against an enemy from the east. It appears also that from this time onwards the desolation of the banks of the Tigris encouraged the development of the ancient commercial and military route between Baghdad and al-Mawṣil (Ewliya Ḍabuli, who, took the road along the Tigris, cf. Siyāḥat-nāme, v. p. 6). Kırkük again was occupied by the Persians after the fall of Baghdad in 1623, but was retaken by Khusraw Paşa (q.v.) in 1630. In 1638 Murād IV passed through it on his way to recapture Baghdad. The real masters of the country however were the local Kurdis chiefs in the province of Ardalan (Hadždi Khalfa, Dīkhan-Nūmā, p. 435). But little by little Ottoman power was established there through the energies of the pashas of the eyalet of Shehrizār (q.v. or Shehrizail). This eyalet contained thirty-two sandjaqs one of which was the sandjaq of Kırkük and this town became the official residence of the Pasha of Shehrizār, after the title of this name was destroyed (Dīkhan-Nūmā, l.c.). In 1732, Nādir Kuli (the future Nādir ʿĀbār) besieged the town in vain; the following year there was a great battle near Kırkük, where the Turks were completely defeated under the grand vizier Topal ʿĀbār Paşa, who was killed in it. In 1743, Kırkük again fell into the hands of the Persians but was restored to Turkey by the peace of 1746. The town remained in the Ottoman empire down to 1918; under the modern Turkish administrative system it was the capital of the sandjaq of Shehrizār (although the site of the old town of this name was henceforth in the new sandjaq of Sulaimānīe) in the province of Mūsul. Kırkük had just been occupied by the English troops when the armistice of 1918 was concluded. It remained under the English and in 1920 passed under the government of the kingdom of the ʿIrāk. It was not till 1926 that it was definitely incorporated in this kingdom after the agreement came to between Turkey and Great Britain regarding the fate of the old province of Mūsul.

The modern town is grouped round an acropolis (baʿāra) about 120 feet high, which forms a little town by itself; on the south and east side in the plain lies another larger quarter. These two are separated from a quarter on the west by the Khasa Čai coming from the north-east and running southwards, under the name Adaima Şu, to reach the Tigris below Sāmmart. The population must now be 20,000 at most. The Turks are the dominant element, or to distinguish them from the Turks of Asia Minor, Turkmans. This Turkish population was probably there long before the conquest by the Ottoman Sulṭāns but it is uncertain whether its origin is to be traced to a Turkish garrison placed there by the Caliphs in the ninth century or to an immigration in the time of the Seldjūqs or Begteginids. In any case the town was always a bulwark of the Ottoman empire and a centre of its culture (cf. Türk Yurdu, 1915). In Turkish the name of the town is pronounced as Kırkük, although the correct official form is Kerkük (Śami, Qanūs al-Iʿlān, v. 3840). The Christians to the number of 350 families (Rapport de la Commission de Mosul quoted in the Bibliography, p. 52), also speak Turkish which they write in Syriac characters; they all live in the citadel. They are “Chaldæan” Catholics (Kirkük is the see of an archbishop or Maṣṭān) and descendants of the old Nestorians, although according to their own tradition they immigrated in the Seldjūq period. Since 1906 they have had a new cathedral. Arabic is spoken mainly by the Jewish population which is quite considerable. Finally there is a strong Kurdish element. The baʿāra was at one time surrounded by a wall; it contains the mosque of Ulu Djamiʿ, an old church, and on the slope of the hill there is a mosque called Mār Daniel.

Quite recently excavations have been begun in the hill which promise to give us information about the history of the town in the Byzantine period. Another Christian monument is the tomb of the martyr Mār Tahma Zagerd, who is known from the martyrlogy above mentioned; this tomb is to the east of the town.

Kirkük is of some commercial importance; it is the market for the cereals and animals raised in the surrounding country and its most important connections are with Baghdad (via Taʿūk and Kifri) and with Mosul (via Alfa Koprū and Irbil). A railway line is being built along this route.

Then there is the eastward road to Sulaimānīyeh and on to Persia. Between Kirkük and Sulaimānīyeh is the land of the Hamawand Kurds, who were redoubtable brigands in the Turkish period. The country round Kirkük is still a little hostile but to the west of the town the Mesopotamian steppes soon begins, mainly inhabited by Arabs. The immediate vicinity produces a great deal of fruit. Here we have the most northerly palms in Mesopotamia. The wealth of sulphur, naphtha, and bituminous products contained in the soil of the whole district of Kirkük has been known and exploited since ancient times. The bituminous springs are specially well-known, two hours north-east of Kirkük, called Bīlāb Gurğur where bluish flames rise out of the ground.

KIRMAN the name of a Persian province and of its present capital. The name of the town was derived later from that of the province. The usual pronunciation is Kirmān, although, according to the tradition of Arab scholarship (Yākūṭ, iv. 263) the form Karmān is more correct; the name, in any case, goes back to the form Carmania, which is found in Strabo (xx. 2, 14), and which in its turn is said to be derived from the name of an ancient capital, Carmania (Ptolemy, Geography, vi. 8; Ammianus Marcellinus, xxii. 6, 48). According to Marqui
The name Carmania placed that of Yitiya, which is found in the inscriptions of the Achaemenids (Beh., ii. 23) and corresponds to the Ohrm whom Herodotus (iii. 93) places in the fourteenth century. In Pehlevi the orthography khor-m-e is found. Legendary Arab historiography (Ibn al-Kalb) derives Kirman from the name of Kirman b. Faludj, the descendent of Japhet, who is said to have settled in this region. Later popular etymology has connected the name with the noun kirm, signifying worm or dragon, and derives it from the legend of Hafsan-Bōghit and the dragon of Kirman in the romance of Ardeshir (see Browne, Lit. Hist. of Persia, i. 145).

1. The Province. From the geographical point of view Kirman is as a whole well-defined. Situated to the south-west of the great central Iran desert (Dasht-i Lūt, or, in the middle ages, Māızat Khurāsān), the province is bounded in the east by the steppes, and the mountains which separate it from Makran, while, from the direction of Yazd to the north-west, and from Fars, to the west, it is also bordered by desert and uncultivated lands. The chief feature which distinguishes Kirman from Fars, is, as Iṣṭakhrī observed (p. 163), that the cultivated part of Fars is an uninterrupted territory while Kirman consists rather of a certain number of fertile and cultivated areas, separated by desert plains through which the villages are scattered. This geographical situation quite naturally leads to the subdivision into five principal districts: that of Kirman to the north (in ancient times Baradust), of Sirdžan to the west, of Djiruf in the centre and of Bam and of Narmar in the east (Makdisi, p. 460). On the south, Kirman is bounded by the sea but this part is of little interest for the province; the only important port, Hormuz [q.v.], is sometimes counted as belonging to Kirman and sometimes to Fars; but this port has often been in different hands from its hinterland. The lords of Kirman have only once extended their domination over the opposite coast of Uman. Chains of mountains stretch across the province from the north-west to the south-east; to the north the highest chain is found which forms a part of the Kahrud and has summits like the Kuh Hasar to the north-west of Bam, with an altitude of almost 15,000 feet. This chain separates the district of Kirman from that of Sirdžan; its continuation towards the south-east is called Disbal Pāriz or Bāriz. Further to the south-west there are other parallel chains. In the middle ages these mountains were inhabited by savage tribes like the Balis (see Bal古典stān) and the Kufs; the latter inhabit the mountainous region to the south of Djiruf, along the coast, on the Makran side. Kirman has no important rivers; the cultivated districts receive their water from the mountains; the most important of these streams is that which flows across Djiruf, called Khalali Rūd (formerly Dīw Rūd) without ever reaching the sea. Thus Kirman contains within itself all the geographical features which are typical of the whole of Persia.

The Arabic geographers, beginning with Yaḥyā, treat Kirman as an independent geographical area (iktimā). They classify three-quarters of its surface amongst the warm regions (gūrān); the cold districts (mūra) are found mainly around Sirdžan (Iṣṭakhrī, p. 165).

From the point of view of traffic, Kirman lies on the great roads leading from Fars to Sīstān and Khurāsān and to India, and on the route for commerce and pilgrimage, which leads from the sea (Hormuz and later Bandar 'Abbās) to the north-east of Persia and beyond. This situation has exposed the province during its history to invasions from all sides: — a circumstance which has made it frequently change its political ownership, and which has been adverse to the development of its prosperity.

At the present day the desert part of Kirman is more extensive than in ancient times; in the first centuries of Islam there were still forests in which lions roamed around Djiruf (Hand Allah Mustawfi, Nasīh al-Kalb, p. 140). Now there are almost no trees except the date-palms which are found in large quantities around the villages and the towns. Irrigation is very laboriously practised by the subterranean khānit. The principal agricultural products are corn, barley, and opium. The higher regions produce in autumn millet, cotton and beetroot. In the āqur or garmār rice and maize are cultivated in summer and the environs of Bam and of Khabū produce ḫamī; besides, all sorts of fruits are found in great abundance — its dates especially are noted. The chief animal products are wool and goat skins (kark) which are used for the manufacture of celebrated shawls. The mineral wealth of Kirman, was exploited in the middle ages. Marco Polo speaks of the turquoise of Kirman, the mines for which have now been abandoned. The mountains contain iron also, which was often extracted from the iron ore discovered in the district of the town of Kāyser (Makdisi, p. 459 and 470 speaks of al-tīṭi āl Marzābān, see de Goeje in B.G.A., iv. 246). Kazvini (i. 172) seems to refer to the existence of anthracite.

History. Under the Sassanids the province of Kirman had been governed by a governor holding the title of Shāh (Ibn Khurāshāhī, p. 17); thus Bahram V was before his accession Kirman-Shāh [q.v.]; the semi-legendary tradition of the Shāh-nāma is also acquainted with a Shāh of Kirman under king Kai Khuršaw (ed. Vullers, iii. 1279).

Baldahūrī, on the other hand, speaks of a marzbān of Kirman (p. 591). Already, before Islam, Arab nomads had immigrated into Kirman and according to Ṭabarī (Nöldeke, Gesch. der Perser u. Araber, p. 57) it was Shāpur I who, after his expedition against the Arabs, had driven out by force the people of the tribe of Bālīr. While admitting with some reservation the historical truth of this, Nöldeke prefers to think there was an immigration of Arabs into Kirman in the period before Islam. The capital of the province at the end of the Sassanian period was Shārdjān (Sirdžan). 640-750. The Arab conquest of Kirman was recorded by al-Baladhūrī (ed. de Goeje, p. 315, 391 sqq.) was begun by al-Rabi' b. Ziyād, who was sent by Ablū Māsū al-Askāri, from 638 governor of Baṣra under the Caliph 'Umar; he conquered Sirdžan and made terms with the inhabitants of Bam and of Anadaghar. Another Arab invasion was made about the same time by the governor of Baṣra, 'Uthmān b. al-Ās al-Thaqafī; he killed the Marzbān of Kirman in the island of Abarkawān (which, however, belonged to Fars). But its pacification was only temporary. In 29
(649–650) Yazdagird fled from Iṣfahān to Kirmān, where the majority of the inhabitants were still loyal. Then ʿAbd Allāh b. ʿAmīr b. Kuraṣī sent Muzdiṣī b. Maṣʿūd al-Sulami with another general to pursue him. The Arab army perished in the snow at Baimard before reaching Ṣhirāḏjān, and Yazdagird was able to continue his flight to Khurāsān, where he met his death (the flight of Yazdagird has perhaps influenced the story of the end of the King Dārā whom al-Maḥmūd al-Vuṭṭār, ibi. 1975, makes take flight and perish in Kirmān). Muzdiṣī, appointed governor of Kirmān by Ibn ʿAmīr, succeeded in last at re-conquering the chief towns as far as the mountains of the Kufs; a counter-attack by the Persians from Hormuz was defeated. The historical data recording the conquests of this period are uncertain. Further information is found for example in al-Yaḵūbī (Kitāb al-Buldān, p. 286). After the conquest many inhabitants fled to Sistān or to Khurāsān or withdrew into the mountains where they for long retained their Zoroastrian creed. The mountaineers themselves kept for three centuries more their independence. This province being at a considerable distance from the centre soon became the theatre of the activities of the Khārīdji. A certain number of the inhabitants had joined as mawālī the Aẓrāḵ Khārīdji who had seized Fārs and Kirmān about the year 693, under the command of Kaṭārī b. al-Fuḍāja [q. v.]; their centre was Khurāsān. They remained there until about the year 699, when the general al-Muhallab succeeded in defeating them, after the separation of the Arab Khārīdji and the mawālī had weakened them. During the succeeding century Kirmān was a hotbed of rebellions and a favourite asylum for rebels. Thus ʿAbd al-Rahmān b. al-Aṣḥāḥ [q. v.] the enemy of al-Ḥadījādī took refuge there for some time after his defeat (after 701). Twenty years later, Kirmān was one of the provinces over which the usurper Yazīd b. al-Muhallab [q. v.] had established his dominion, which came to an end in 720. From this time the Umayyads (of whom we know several coins struck at Kirmān) seem to have exercised a sufficiently efficacious control over the province of Kirmān, which moreover had been exhausted by wars so that it was from here that their last armies set out to face the attack of the partisans of the Ābbāṣīs under ʿAhlād. The principal sources for this period are al-Baladhuri, al-Ṭabarī, al-Yaḵūbī and al-Maṣʿūdī.

750–1041. Under the first Ābbāṣīs Kirmān was not the scene of important events; the provinces had to suffer during this time the incursions of the Zuṭṭ, coming from India, until they were driven out during the reign of al-Muʿtamūsīn. There are Ābbāṣī coins struck in Kirmān in the years 165 and 167. Soon afterwards the province began to play a role, mostly passive, in the different Persian national movements, which gave rise to several dynasties. The first dynasty was that of the ʿAbbāsīs; Yaḵūb b. Lāṭḥ had obtained in 253/862, the governorship of Kirmān from Muḥammad b. Ṭahir, the governor of Khurāsān. Yaḵūb had to quell the opposition of the mountaineers around Dirjāf; he and his brother ʿAmīr seem to have left a favourable impression in the province (Sykes, History of Persia, ii. 16 according to the Chronicle of Afdal al-Dīn), but their reign was too short to leave more permanent traces. ʿAmīr succeeded his brother in 879, and, on his death in 902, the rule of the ʿAbbāsīs, or rather anarchy, was re-established in Kirmān. In 315/926 Kirmān received a new master in the person of Abū ʿAli b. Ilyās [q. v.], a former brigand, from Khurāsān, who looked upon the Šamānids as his suzerains (Maḵdūm, p. 472). He soon found himself in conflict with the Būyīd Ajmad Muḥammad al-Dawla, who attacked him in 935 and took Dirjāf. But Ibn Ilyās who had chosen for residence Bardāsir (the present town of Kirmān) had himself appointed governor for and tributary to the Būyīds. The quarrel which broke out some decades later between Ibn Ilyās and his son al-Vāṣī brought about the ruin of them both and resulted in the occupation of the province by the Būyīds in 357 (968). Soon after the descendants of ʿAḍūd al-Dawla began to fight among themselves for the province and a very confused period followed, during which even the Ghaznavids were for some time masters of Kirmān (Maṣʿūd I conquered it in 1032; see also the article ABU KAḤIYĀR). The Būyīds were the first to fight with energy the mountain tribes of the Kufs and Balus. Sources for this period: al-Ṭabarī, al-Yaḵūbī, Ibn al-ʿAthīr, Ibn Miskawī, Ḥamd Allāh Mustawfī, Tāʾirīḵ-i Gūstā. 1041–1222. The province was able to breathe at last when in 1041 a branch of the Seljūks foundered there a dynasty, which reigned until 1187. For the history of the members of this dynasty see the article SELJŪQIDS, III. The founder was Kāwūd Kaṭārī Arslān Beg, the son of Cāghri Beg. In 440 (1048/1049) he seized the capital Bardāsir and subdued the mountaineers of the Kufs and of the Shabānḵāra [q. v.], a Kurd tribe to the south-west who for some time had been terrorising the garrison of Kirmān. Kāwūd finally conquered the territory of Umān on the other side of the Persian Gulf. He made two attempts to resist the Great Seljūks, Alp Arslān and Malik Shāh; the second attempt cost him his life (466 = 1074) and nearly ended his dynasty. Kirmān prospered most during the long reign of Arslān Shāh (1101–1142) who was also ruler of Fārs, and this state of things continued under his son Muḥammad Shāh (1142–1156). Under the last Seljūks of Kirmān anarchy again reigned until the Ghuzz [q. v.], who came from Khurāsān, completed the desolation of the province. A chief of the Ghuzz, Malik Dinār, got the same in 1185 the ruler of Kirmān, his residence was at Zarand. Soon the turn of the Shabānḵāra came; their chiefs Kūb b. al-Dīn and Nūd b. Dinār took Bardāsir in 597 (1200), to the great joy of the inhabitants. But as the Ghuzz continued to resist under Ağdam Shāh, the son of Malik Dinār, some years of confusion followed; the result of this was that Saʿd b. Zangi, the Atābīk of Fārs, made himself master of Kirmān in 600 (1203). In 607 (1210), the province was conquered in the name of the Khūrāṣmāsh. In 1220 the half-independent governor of Kirmān was Shudūfī al-Dīn Jawzawī, who after the defeat of the Khūrāṣmāsh Muḥammad refused to admit the son of this latter, Ghīyāth al-Dīn, when he was fleeing before the Mongols. Sources for this period: Ibn al-ʿAthīr; Ibn Ibrahīm; Afdal al-Dīn (cf. Bibliography); Ibn al-Balkhī, Fārsnāma; Dwīnāt, Dīthān Gūstā; Ḥamd Allāh Mustawfī, Tāʾirīḵ-i Gūstā; Rāwandi, Ḥabāt al-Sulān. 1222–1502. Soon afterwards in 619 (1222)
the famous Burāk Ḥādījī [q. v.] who was descended from the Kāra Khātātī and was at the time vizier of the already mentioned Ghiyāḥ al-Dīn, drove Shuṭrūṯ al-Dīn out by force and succeeded in playing a political game so cunningly, first against Ghiyāḥ al-Dīn, next against Djalal al-Dīn Ḧwārizmīshāh, and finally against the Mongols, that he succeeded in keeping his power so that Kirmān never knew the terror of the Mongol armies. Burāk Ḥādījī who had received from the Caliph the honorary surname of Kutlugh Khān thus became the founder of the dynasty called that of the Kutlugh Khāns. It remained under the sovereignty of the Mongols until 1303. A notable figure of the dynasty was Turkhān Khātūn, the daughter of Burāk Ḥādījī; she reigned from 1258 to 1282, and contributed to the prosperity of Kirmān by having the kūnār’s dug for irrigation. It was in her reign that Marco Polo visited the “kingdom” of Kirmān; it is evident from his account that at this time the ruler of Hormuz was also the vassal of the Šufīān of Kirmān. The end of the dynasty was brought about by an act of disobedience of the last Kutlugh Khān (1303). The province had several Mongol governors, until in 1340 Mūbarāz al-Dīn Muḥammad Muṣafār, the husband of the last Kutlugh Khān’s daughter, seized Kirmān. He took Shirāz in 1354 and founded the dynasty of the Muṣafārīs. His brother Imād al-Dīn in 1363 succeeded him in Kirmān; some of the buildings of the latter still exist (the Pā Minār mosque in the town of Kirmān). Not long afterwards the province became the theatre for the quarrels of members of the dynasty which was finally exterminated by Timūr in 1393. The Tumīrids who had at times put down rebellious governors (Shaḥkh Uwais in 1408) were followed in their turn in the ownership of Kirmān by the Kāra Koyunlu (about 1550) who soon had to give place to the Ak Koyunlu. As a rule Kirmān was from this time united with Fārs under the governorship of one of the relatives of Cūzīn Ḥasan. Sources: Djawaini; Nāṣir al-Dīn, Sinūf al-Ūlā (cf. Bibliography); Ḥamd Allāh Mustawfi, Taḥrīr-i Guzāra; ‘Alī Yazdi, Sharaf-Nāma; ‘Abd al-Razzāq Samarkandī, Mata’h al-Sal dān; Mirkhwānd, Rawdat al-Safa; Ḫwādanīm, Ḥafiz al-Siyāṣa; Karim Khān Zand conquered Kirmān under the last usurper. It was the overthrow of the dynasty formed by the latter which brought upon the province and especially on the capital, the most terrible catastrophe which it had experienced in its history. The son of Karim Khān, Lutf ‘Ali Khān [q. v.] fleeing before the Kādjar Agha Muhammad Khān had retired to Kirmān in 1794 where a part of the inhabitants remained faithful to him. In the same year the capital had to surrender and Lutf ‘Ali Khān, although he succeeded in escaping to Bām, was betrayed and handed over to Agha Muḥammad. The terrible vengeance of the Kādjar, who according to the authorities, sold 20,000 women and children into slavery and blinded 35,000 male inhabitants, deprived the province of all strength and prosperity; it did not begin to recover until a century had elapsed. — Sources: Khwādanīm and the Persian histories of the Safawid and the subsequent Agha dynasties (see Grundriss der Iran Phil., ii. 586 sqq., 592 sqq.).

From 1794. The Kādjar [q. v.] governed Kirmān usually by governors who belonged to the dynasty. During the years 1830—1841 a certain Agha Khān made many fruitless attempts to free the province from the power of the Kādjar. From this time there were no further notable events in the history of the province. In proportion as Persia became an important element, although passive for the moment, in world politics, Kirmān entered little by little into the sphere of influence of Great Britain. This situation found expression in the Anglo-Russian convention of 1907.

The principal towns and districts. The province of Kirmān is now divided into 19 districts. Three of the five chief towns mentioned by Makdisi (see below): Sirādjan, Djarut and Narmāshīr are no longer in existence and are now only names of districts. Many of the towns and villages named in ancient geographies have also disappeared or have not yet been identified.

The northern part includes the capital Kirmān [q. v.]. On the route from Kirmān to Yazd still stand Zarand and Bāfī and, to the northeast of this route, on the edge of the desert we still have Kūh-banān (the Cobinan of Marco Polo) and Rūwar. Khābīs, a historic site to the east of Kirmān, in a much lower country, is famous for its sites. Māhān (now Māhīn) to the south-east of the capital is noted for the sanctuary of the Sufi Sayyid Nūn ‘Allāh (who died in 1431) built under Shāh ‘Abbās. From the time of Makdisī Māhān was inhabited by the Arabs.

The principal town on the west side was the old capital Sirādjan (often Shirādjan), situated very close to the province of Fārs. This town was larger than Shirāz in the time of Makdisī, but it was destroyed in 1396, after a long resistance against the armies of Timūr. The site is marked at the present time by a limestone rock rising in the plain to a height of 300 feet, called Kāl‘a-i Sāng. This rock, formerly the citadel, has been described by Sykes (10,000 Miles, etc., p. 431 and following), who found some inscriptions there. In the neighbourhood is the village of Sāyiya dāhād. The plain is much more fertile than that of Kirmān and contains many villages.

Bām [q. v.] in the eastern part of the province is still in existence. The road from Sirādjan to Bām passed by Rayfān and Darzān; from this last place a road ran (and runs) to Djarut. Narmāshīr (also Narmāshīr) situated at a short distance from Bām in a south-west direction, was formerly an important market for commerce with India; at the present time the name only marks a district. The village of Fahlādī which is in this district was a fortress in the time of the Afghāns.
Djufirt, formerly the capital of the southern part of Kirmân, occupied a site now called Shahr-i Da'¡iyání. In the time of Marco Polo the town had already been supplanted by its former quarter Kamâdín called Camadí by the Venetian; it was an important market. Basing his belief on a passage in Ídrísi (transl. Reinhard, p. 423) Sykes (of. cit., p. 445) thinks that the earliest capital Carmana must be looked for between Djufirt and Fahlabj; On the road from Djufirt to Hormuz are Bâlâšgird or Guâlishgird, which is still the name of a village.

Population. The inhabitants of Kirmân are described in general as possessing a dark brown colour and a slight physique because of the heat (Išâqêrî). In the garmûr indeed, the summer is very hot and unhealthy (Sykes). The most ancient inhabitants of Kirmân were probably represented in the Middle Ages by the mountain peoples called the Kûfs in the mountainous district of the south and the Bâris (turgâvâres) in Herodotus, iii. 92), in the mountains to the south-east of the town of Kirmân, still called Bâris Kûb. Ma¡âdî (p. 471) says that the language of the Kûfs and of the Bâris was unintelligible. These people were probably exterminated in the course of history or became assimilated from the tribes of the Bûyids and of the Seldjûks with the Iranian element. For the Bâris, who immigrated from the north-west (Bâlishgûrî and Tâbarî do not yet mention them) and who were established in Makrân from the twelfth century see the article BALOČISTAN. As regards the settled population it seems to be of Iranian stock; Strabo already says that their customs and their language are similar to those of the Medes and of the Persians (xv. 2, 14). From the time of the Sâsânis a part of the inhabitants was composed of Nestorian Christians; the bishop of Kirmân was under the authority of the metropolitan of Fârs. The conversion to Islâm was slowly affected; according to Tâbarî the mountaineers had been converted under the 'Abâbûs's; later they showed great sympathy for the Shî'a (Ma¡âдîs). Yâkû (s.w. Kûfî) insists upon the fact that while having no religion, they venerated 'Ali b. Ahi Tâlib. The Islamised population was very much exposed to sectarian influences such as those of the Khrâjîd, and later of the Ismâ'îlîs. From the theological point of view the inhabitants of Shirâdjân belonged, according to Ma¡âdîs, to the akh al-hâdïth and those of Djufirt to the akh al-ra'y. The advent of the Safawîs at last established the official form of Shî'a, ishrâq-æshârîya to which the great majority of the population still belongs. In the xixe century the sect of the Shâkhis (q.v.) gained many adherents in the province of Kirmân, so that it became one of their most important centres. Sykes reckons their number at 7,000. The Bûbîs are a little less numerous. Finally Kirmân is one of the districts where the adherents of the religion of Zoroaster were able to maintain themselves as a community under the spiritual direction of their ancient sacerdotal hierarchy. Tavernier (p. 390) says that in his time (about 1650) their number was still more than 10,000 in the town of Kirmân, after the great emigration to India. They had a temple at a distance of four leagues from the town; they were for the most part wool-merchants. Until the middle of the xviiith century there must have existed at Kirmân a school of dâstûr's whose influence was considerable. According to Khânîkoff there were still 12,000 Parsî families at Kirmân before its destruction in 1794 by Aghâ Muhammâd Shâh. About the year 1900 their number is given by Sykes as 1,700 souls (see also the article PARSî).

The Parsîs of Kirmân, like those of Vazî, speak the archaic dialect called Gâbûrî, which has been studied, e.g. by Houtum Schindler and Browne (cf. Grundriss der Ir. Phil., i. 351 sq. and more recently by O. Mann (Die Mundarten vom Kirmân, etc., ed. by K. Hadank, Berlin-Leipzig 1926). The other dialects spoken in Kirmân do not seem to have ever been specially studied; they belong to the southern group represented e.g. by the dialects of Fâs and of Kshân (see Geiger in Grundriss, i. 2, p. 422). Ma¡âdî remarks that the language of Kirmân resembles that of Khrâjân.

The nomads who form a strong minority of the population of Kirmân are probably the descendants of the Arab, Turkish and Kurd invaders.

The total of the population of the province was estimated at 750,000 about the year 1900 (Sykes).

II. The town of Kirmân situated in the north-east part of the province (30° 17' lat. N. 56° 59' long. E.) has been identified in al-Râfî's map of Iran with the city which Arab geographers call Bardasîr (Yâkût has Bardasîr) or Guwâshîr (see also Ma¡âdîs, p. 460). The two forms might represent the form Beh-Ardashîr, which is, according to Hamza Isfahâni (ed. Gottwald, p. 46) the name of a town built by Ardashîr, the founder of the dynasty of the Sâsânis. The building of the Kala'i Ardashîr, the ancient citadel to the east of the town, which, in the Middle Ages, must have been just outside the gate of the city, is also attributed to Ardashîr. But the town was thought to be less ancient than Bâm and Djufirt (Sykes, following Afdal al-Dîn). A district to the south-west of Kirmân still bears the name of Bardasîr. In the ninth century, when Ibn Ilyâs had just occupied it, it was not yet very large, but in the xixth century Yâkût describes it as the largest town of Kirmân.

The name of the town was given to it as capital of the province of that name. The official honorary name of the town is Dâr al-Amân.

The town is situated at the meeting place of three valleys at a height of about 6,000 feet, 12 miles to the north of the Djüpâr chain of mountains. The surroundings consist almost exclusively of steepes and possess very little cultivated land. Between Kala'i Ardashîr, already mentioned, and the town is a ruined citadel at a lower elevation, Kala'i Dukhtar, which must have been formerly in the town. All the plain to the east and to the south of the town has a large number of remains of buildings. There are found here very beautiful pieces of facynce and other archaeological remains. The town itself is surrounded by a wall of baked clay with four gates. A quarter outside of the walls to the north-east is that of the Zoroastrians, Mahâllâ, Gâbar. The citadel is situated on the western side. Hamd Allah Mustawfi (Nâzâkat al-Kuhûb, p. 140) speaks of a mosque built under ʿUmar b. ʿAbd al-Azîz, but the most ancient mosque is at the present time the Masjîd-i Malik built by the Seldjûk Tûrân Shâh (1054–1096); this mosque was already in ruins in the xvith century, but has been restored. The two other important mosques are the Masjîd-i Dâjân built, according to an inscription, in 1349 by Mubâriz al-Dîn Muñafar
and the Masjd-Pä-Miän, erected by the latter's brother 'Imâd al-Din. A monument destroyed by an earthquake in 1866 was the Gunbad-i Sabz, a building of cylindrical form covered with mosaics of a greenish blue. According to information given to Sykes it was the tomb of one of the members of the dynasty of the Kutlugh Khâns, built in 640 (1242). After the destruction of the town in 1794, it was rebuilt under Fath 'Ali Shâh, but it only began to prosper under the governor Wakil al-Mulk about the year 1860. (A plan of the modern town is given opposite p. 188 of Sykes, 10,000 Miles, etc.). The number of inhabitants increased in the last part of the nineteenth century. Schindler in 1876 gives the figure as 41,170 and Sykes in 1890 as 50,000. To-day the town is peopled mainly by Shûs, next come the Shâhîjs (6,000), the Bûsîs (3,000), and the Zoroastians (1,600). The Jews form a very small group of seventy souls. Kirmân owes its very great industrial reputation to its shawls, but this industry has been surpassed by that of carpets in wool and in silk. The workers are almost exclusively men; Sykes estimates the value of the exports at £40,000 annually. Another important industry is the manufacture of felt.

—(J. H. Kramers)

**Kirmân, Kamāl al-Dīn ābâ'ī Nâşir al-Dīn Mâhâmâd b. 'Alî Kirmânî, known as Kirmânî (the name Kirmânî is a diminutive form from Kirmân; cf. Grundriss der Iran. Phil., i., ii. 185; another instance of this formation, not noticed here, is pîrvû from pîr, Dâjûl al-Dîn Rûmî, *Mathnawî* ed. Nicholson i. line 2169), a Persian poet, born, as stated in the epilogue of his *Gul u-Nawbûr*, Shawkâl 5, 679 (Jan. 28, 1281) at Kirmân. He died at Shirâz, probably in 753/1352; the date 742, given by Dawlatshâh, is erroneous. Men of letters gave him the surname of Nâhîban-i Shâhûrâr (or Nâmahâdîn) (Dawlatshâh, *Tadh-kira*, p. 249; Vullers, *Lesion*, ii. 1301). Biographical details are scarce about him. He belonged to a distinguished family, and seems to have travelled widely. That he stayed some time at Baghdad, appears from the lines from his *Humâyî u-Humâyûn* quoted by Dawlatshâh, loc. cit. Kirmânî was a genûd of Rûkân al-Dîn al-Sammânî (7 353/1345) and lived some time as a mystic in Sûfîâbâd (in Khorasan, cf. Ritter, *Erkundungen*, viii. 396). His first patron seems to have been the Muâfarid ruler Muâbûrî al-Dîn Muâhâmad of Yazd [713/1314 — 759/1358 (deposed), died 765/1364]. Afterwards, Kirmânî was in the service of Amir Shâhîb Abû Bâhshâh (viz. Dâjâm al-Dîn Shâhîb Abî Bâhshâh, prince of Shirûz till 754/1353; killed by order of Muâbûrî al-Dîn in 757/1356). The poet died at the court of Abû Bâhshâh. A son of Kirmânî is mentioned in his *Kâmâlnâmâ* (see below).

Works. Kirmânî Kirmânî wrote a *Khamseh*, in imitation of Niâmâ, as is the case with many of the later Persian poets, and a *Diwân*. The *Khamseh* consists of:

1. *Humâyî u-Humâyûn*, a romantic poem, in the metre of Niâmâ's *Iskandârnâmâ* (i.e. mutâbârî, because it treats of a subject from Irânian heroic tradition). It contains 3203 *dabûts*, it was composed, according to the epilogue, at Baghdad in 732. The prologue contains the madâḥ of the Tâhâan Abû Sa'id and his wazir Chiyyâh al-Dîn Muâhâmad; it states, that the poet was induced to compose the work by the high dignitary Abu 1-Fâţh Majd al-Dîn Muâhâmad. This *maßnawî* describes the adventures of Humâyûn, son of Shâh Hûshang, and his love of Humâyûn, princess of China. Notwithstanding the intrigues of the princess's father, the Faghfrâh, the lovers are united, Humâyûn's father perishing in battle by the hand of Humâyûn.

2. *Nawbûr u-Gul*, a didactic poem in the metre of Khûsrâw u-Shirin, containing 2615 *dabûts*. It was completed in 742 (chronogram), dedicated to
Tādż al-Dīn Ahmad ʾIrākī (a wazīr to the Muẓaf-farīd Muḥārīr al-Dīn), and relates the love-story of Nawrūz, son of king Fīrūz of Khurāsān, and Gūl, daughter of the emperor of Rūm. With the main narrative are interwoven three minor stories, told to the prince to console him in his love-sickness.

3. Kamānīna, on ethics and religion, in the metric of the Ḭakīf Paḵār, composed 744 (chronogram); this year is given as the date of completion of the Khamsa (Rieu, Cat., p. 620). In the preface, the Muslim saint Abū ʾIṣḥāq ʾIrākī of Kāzerūn († 426/1035) is praised; in the epilogue the poet addresses Amir ʾIṣḥāq Abū ʾIṣḥāq, the ruler of Shīrāz, and also his own son Mutḍīr al-Dīn Abū ʾIṣḥāq ʾAlī. The poem is divided into bādī’ī’s, in one of the manuscripts numbered from 1—12.

4. Rawūd al-Awnâr, mystical; a counterpart to the Māziṣan al-Avrūr (Dawlatshāh, p. 251); composed 743 at Kāzerūn, according to the epilogue. It is divided into 20 māḥā’ī’s. The dedication is to Ǧāḥīm al-Dīn Muhâdī b. Ǧīṭīn (killed in battle 748/1345, as wazīr of Abū ʾIṣḥāq of Shīrāz). The Rawūd passes for the first poem of the Khamsa.

5. It seems not to be possible, to determine with certainty which of the other works of Kirkānī should be reckoned as the remaining part of the Khamsa. It may be, that it is the poem entitled Mafāṭīḥ al-Kulūb wa-Maṭāḥīḥ al-Gūdāyīb, which is found in the manuscript No. 332 of the Library of the king of Oudh. This poem, consisting of 28 ʾāʿādī’īs, appears, from the headings given in the catalogue, to treat of religious topics.

After the Khamsa, we have:

6. Gowbarāmā; the aim of this poem, also a māḥā’īw, is the praise of Bahā’ al-Dīn Muhâdī, who was wazīr to the Muẓafarīd ruler, and claimed descent from the renowned Nīṣān al-Mulk. Besides the wazīr, his ancestors are also praised in the work. The date of its composition is 746 (chronogram).

7. Dīwān. Dawlatshāh (or his authorities) say, that the dīwān of Kirkānī numbers 20,000 verses (cf. also Sprenger, Cat. . . . Oudh., p. 472); it contains ʾasīṣa’s, mostly panegyric, e.g. on the Muẓafarīd Muḥārīr al-Dīn and ʾIṣḥāq Abū ʾIṣḥāq; also on the persons, lauded in the Gowbarāmā, and besides on other great men, as for instance Shirwānshāh b. Mintūbīr. A letter to a Shirwānshāh, ruler of Ǧabābān and Shamsākhī, from the part of the great wazīr Rashīd al-Dīn is extant (Browne, Persian Literature under Turkī dominion, p. 83); the person, praised in the Dīwān of Kirkānī may have belonged to the family of Rashīd al-Dīn’s addressees.

Further, the dīwān contains ghastal’s, muṭṭāṭa’āt, rubāʿīyat, etc.

Finally, a tarḏī’ī of this poet (refrain: kih ʿaḏẖān ʾżarrat ast u ma’mā ḍar sat wa ba ma’mā nagh kuni, hama ust) occurs in the Leyden manuscript 274, fol. 463 verso — 464 verso.

The little that is printed of Kirkānī’s poetry will be found in the works, cited in the Bibliography. From these scanty extracts, it is impossible to form a judgment on his merits as a poet; therefore, the opinion of Browne, who had the opportunity of reading a great part of the Dīwān, may be repeated here: “his verse, while graceful and pleasing, lacks any conspicuous distinction or excellence”.

(V. F. BUCHNER)

KIRMANSHĀH, a town lying in a plain among the mountain ranges that border the Iranian plateau on the south-west, now the capital of a Persian province between Kurdistan on the north and Kurdistān on the south. The geographical position of the town is approximately 34° 20' North Lat. and 47° East Long.; the plain is traversed by the Kārā Šū which runs to the north-east of the town in a south-easterly direction, joining the river Gāmāsāḥīb (formerly the Gāmāsāhīb Rūd) farther south; the latter is a tributary of the Kerkhā [q.v.] and the most important water-course of the province.

It was probably in this district that the earliest kingdom of the Medes was established (A. Billerbeck, Das Samtāk Subimnīta und dessen persische Nach-barmächtsaft, Leipzig 1898, p. 162); and here also were the Parthian provinces of Ḡaḏān and Moḏa dān and Moḏa ʾh nātōb (Isidore of Charax, § 4, 5). It was the province called Māth under the Sāsānids (in Moses of Khorenē), and in the early centuries after the Arab conquest, De Morgan wished to identify the ruins of the ancient Cambadene to the north of Kirkānshāh. This town is itself not very old: it was founded in the Sāsānian period and only began to be an important town from the sixteenth century onwards. The older Arab geographers know it only by the name of Karmīn (other forms: Karmīn, Karmīn, Kirmān, Karmān); Māḳdīsī (p. 28) says that it is another name for Kirmānshāh, while Vāyū (iv. 69) regards Karmīn as an arabicisation of Kirmānshāh (Dimāšqī gives the same note with reserve but Ibn al-Fakhrī already explains the first form by the second). Ḥāzīnī (Geography, p. 290) however says that Karmīn is near Kirmānshāh.

To explain Karmīn, Ritter, ii. 374, calls attention to the name of the river Corna in Tacitus (Annals, xii. 13). The name Kirkānshāh seems first to appear in the tenth century, perhaps in the time of the Būyids, but the circumstances are unknown. A very widespread tradition found in Ǧamāl Allāh Mustawī, Nuzhat al-Kulūb, p. 108 makes Ǧibrān IV (388—399 A. D.) founder of the town: this king had acquired the title Kirmānshāh as governor of the province of Kirmān [q.v.]: the chroniclers do record that he founded a town but it was more probably the little town of Kirkānshāh between Yezd and Kirmān (cf. Tabari in Noldke, Gesch. d. Pers. u. Arab., p. 71). Another tradition found more or less explicitly in almost all the geographers attributes the foundation to king Kavāḏī b. Fīrūz (488—531; cf. especially Māḳdīsī, p. 257 sqq.). The country round the town contained and still contains many monuments of the time of the Sāsānian kings; they often resided there and their example was followed by later rulers, e.g. the Caliph Hārūn al-Rashīd and the Būyid ʿAḏḏ al-Dawī, who built a palace there (Māḳdīsī, p. 393).

The new name of the town may perhaps be connected
with this event for it was under Aşud al-Dawla that the Büyids became masters of the province of Kirmān [q.v.].

Kirmān was peacefully occupied by the Arabs after the taking of Ḥulwan (in 640; Bālāshūrī, p. 301). The district of Māh, belonging to the province of Dībāl, was then granted as an appanage to the inhabitants of Kūfah and Bāṣrah. The upper part became Māh al-Kūfah with Dinawar as capital; the lower part was Māh al-Bāṣrah with Kirmānī as its capital (Bālāshūrī, p. 306; Rūḏdānī, p. 222). Dinawar [q.v.] was however a much more important town than Kirmānī (cf. especially Schwartz, p. 479) and the geographers of these times mention it mainly as a stage on the great road Baghadād — Khaṇīkī — Ḥulwan — Kirmānī — Bīsūtūn — Hamadhān. Another important road ran from Kirmānī to Nihāwānd. The town is described in this period as pleasantly situated in a very fertile plain. It was ruled successively by the ʿAbbāsīds, Büyids — in their time it must have formed part of the territory of the Kūr dynasty of the Ḥasanawāhīs [q.v.], although it is not mentioned in the Kūr chronicle of Ṣharaf al-Dīn — and the Sekhūs; in the Mongol period it had sunk to a mere village (Ismāʿīl Kāzvīnī).

The importance of Kirmānshāh began under the Ṣafawīs after it had become a frontier bulwark of Persia against the Ottomans who had established themselves in dangerous proximity in Mesopotamia, especially after the time of Murād IV. The Turks several times occupied it in their wars with Persia, for example in 1650 during Ḥusraw [q.v.] Pāshā’s expedition. It then was a fortified town with a brick wall; see the description in Ewliyā’s Čelebi (iv. 353) who attributes its foundation to Shah Ismāʿīl, which probably means that he fortified it for the first time. After the fall of the Ṣafawīs (1722) the Pāshā of Baghadād succeeded in occupying Kirmānshāh but he was driven out by Askarān Khan. In 1731, the Turks again occupied it to be expelled by the future Nādīr Shāh. The treaties of peace of 1732 and 1736 left Kirmānshāh to Persia (cf. von Hammer, G. O. R., vii. 404 sqq.). In 1754 Mīrza Muḥammad Taḵī Khan became its governor for Nādīr Shāh. He later made himself independent until Karim Khan Zand took the town in 1766 after a siege of two years. Under the Kāḏjarīs Kirmānshāh acquired its importance; in 1790 it had about 6,000 inhabitants (Beuchamps, quoted by Ritter) but by 1810 there were already 12,000 houses (Kinnier, in Ritter). Under the governorship of Muḥammad ʿAlī Mīrzā, son of Fatḥ ʿAlī Shāh, who lived at Kirmānshāh as an almost independent vassal, the town became a formidable bulwark against the Turks. After the Turco-Persian peace of 1823 ʿAlī Mīrzā was sufficiently powerful to annex to his province the large district of Zohāb which ought to have been restored to Turkey. A complete list of the governors of Kirmānshāh under the Kāḏjarīs to 1905 is given by Rabino (see Bibliography). As recently as April 1915 the town was occupied by Turkish troops; they conducted propaganda on behalf of the Central Powers there until they were forced to retire in March 1917.

Kirmānshāh at the present day is rather the name of the province; the town is called more correctly Kirmānshāh. About 1905 it had a population of about 60,000 (Rabino) and owes its prosperity to its position on the great trade route of considerable antiquity (al-dījda in Māḏrīs) from Baghadād to Hamadhān (Kirmānshāhān is 100 miles from each of these two towns); the through traffic is enormous. The same road is used by the Shīʿa pilgrims who visit the sacred places of the ʿIrāq. Kirmānshāhān possesses no ancient buildings; the ramparts have been demolished and the most remarkable building is the arsenal, which is also the residence of the governor, built beside the great Top Mādīn. The town contains a large number of caravanserais; there is not much local industry, the manufacture of carpets having disappeared. The majority of the citizens are Kurds, then come Persians, Turks, Jews and Christians. The surrounding plain is very fertile. Ewliyā’s (loc. cit.) and ʿAbdīgīūr Khallīfah (Dīhānānwaṭ, p. 302) make special mention of the cultivation of saffron.

The province lies between 34° and 35° N. Lat. and 44° 30′ and 48° 30′ E. Long., the capital is almost in the centre, in the western part are Kevin and Kaṣr Shīrīn [q.v.] and in the eastern Asadābād, Kangāwar (formerly Kaṣr al-Luṣūq), Bīsūtūn [q.v.], Nihāwānd [q.v.] and the ruins of Dinawar [q.v.]. It is rich in monuments of the Achaemenids and Šāhīds, which are mentioned with more or less detail by the old geographers, such as the famous sculptures of Taḵī Bustān, three miles east of Kirmānshāh, to which the geographers give the name of Taḵī Bustān from the horse of the king Khusrav and the plateau (dakka) where Khusrav Parwīz is said to have received the submission of the kings of the earth in a hall of audience with 100 columns (cf. also Bīsūtūn).

It is one of the richest provinces of Persia. It exports wheat and rice and grows for its own use, maize, clover, castor-oil and cotton. It has a population of about 300,000 and is divided into nineteen districts (bulūk), many of which are named after the tribes which inhabit them. Rabino gives forty-four names of tribes for the province (cf. also Curzon, i. 557) who are for the most part Kurds. The largest Kurd tribe is that of the Kālūr (mentioned in the Kurdish Chronicle of Šaraf al-Dīn) to the south-west who have given their name to a district. Another important Kurd tribe is that of the Sīdārīs west of Kaṣr Shīrīn. Their southern part is called the Kirmānshāh by O. M. Mann (Die Mandaten der Lusthümer in südlichen Persien, Berlin 1910, p. xxii.) although the Lakk in the proper sense of the word live in Lurīstān. In the south of the province there are tribes of Lurs. The greater part of the semi-nomadic population are ʿAlī Īlahī [q.v.]. Besides the two groups mentioned there are several small tribes of Arabs and Turks which have become allied to the great Kurd tribes.

KIRMAŠT, capital of the Kaža of the same name in Anatolia, 15 miles S.E. of Mikhaldij (cf. J. H. Mordtmann, in Z. D. M. G., lxv. [1911], 101) and 40 miles S. of Brussa with about 5,000 inhabitants, 3,000 of whom are Muslims. The town has 14 quarters with 800 houses and lies on both banks of the Edrenos Cai (Rhyndacus). The origin of the name often wrongly written Kirmasl, which points to a Greek *Κημάστη* or *Κημάστη*, is uncertain, nor is it known what ancient town was here. Perhaps the Kremastis in the Troas (cf. Pauli-Wissowa, ii. 743) mentioned in Xen., Hist., iv. 8, is to be connected with it. In the Byzantine period Aorata is said to have been here where the town of Alexius Comnenus was known as Kirmastis in 1113 by the Saldjiks (cf. Anna Comn., ii. 779 sq.). In any case there is close to K. a Byzantine castle in ruins which resembles that 6 miles farther up the Edrenos Cai at Kesterlek and presumably was intended with similar defences at Ulubad (Lopadium) and Brussa to keep back the advance of the Ottomans. In the town which has 6 mosques, including one large very old one with a türbe and 14 masjdhis, there are ancient remains (sarcophagi, inscriptions on the walls, ornamements) which do not seem yet to have been studied. The history of Kirmast under the Ottomans is quite obscure, as there are no records. Ewlyi Çelebi (v. 290) and European travellers (cf. W. Hamilton, Researches in Asia Minor, i. 77, 80, ii. 93, London 1842) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmast, which did not suffer from the Greek occupation, was recently (1925) renamed Mustāfa Kemāl Paşa in honour of the Turkish President. Kirmast is the birth-place of Seyyid-i Wilayet (d. 929 = 1522 in Stamboul), son-in-law of the historian Aşkül-Paşa-zade (cf. Teşkpropazarzade-Medjidji, Şahkâb’-al-Nu’mânîya, p. 352, 13), known from the Memâdji-i Taqrd al-Arifin (i. e. Sheykı Ebü ‘l-Wefa); cf. Pertch, Türk. HSS, Götta, p. 137, N. 166 and Tornberg, Catal. Uppsala, p. 211, Nò, ccvii.

Two hours’ journey from Kirmast are two hot mineral springs, called Dümüldak and Akardja. Ramsey, Historical Geography of Asia Minor, 155, 437.

FRANZ BABENGER

KIRȘH. [See GHRUSH.]

KIR-SHEHR (Turkish kır-shehrî — "town of uncultivated lands"), a town in Asia Minor, capital of a Sandjak in the province of Angora, 97 miles (33 hours) S. E. of this latter, on a river called simply Irmk, a tributary of the Kizil-Irmak which flows at a distance of two hours from the town and is crossed by the stone bridge of Kezik with thirteen arches (about 120 yards). Its height is 3,290 feet. The houses are scattered among gardens which extend in length to a distance of 10 miles and in breadth to that of 5 miles; these gardens bear in the North the name of Ož, in the West that of Çukur-Cair, in the South that of Deinek, and in the East that of Kandze; it has an abundant harvest of fruit, especially of grapes. The population consists of 8,462 inhabitants of whom 7,794 are Muslims, 651 Armenians and 17 Greeks. There are 25 great mosques (Seldjuk mosque of Qodebe), 19 small mosques, 4 medreses, a civil preparatory school, a secondary school, 2 primary schools, a church. Several Muslim saints are buried there: the poet Ashgul Paşa (d. 733 = 1332), Aghâ Oren, Shaik Sulaiman. In the suburbs is held the fair of Yapralı; it has hot springs: Termey (Tepsi) or Karghan-Kayam, ferruginous, used as a cure for anaemia, a quarter of an hour away; Kara Kürt, sulphurous wells, a cure for nervous disorders, 8 miles away. Manufactures of carpets of wool and mohair (tiftik) for the salah (sadGiljada, q. v.) and for the room (källye), for curtains (perde-luk, cîlek-i gilim), for wallets (kehe), in three qualities: striped (pallâde): the same in a finer quality; kerme, woven mats; chairs, arm-chairs, cupboards of walnut-wood. To the West the mountain of Enbirburnu, in the middle of it facing south the immense cave of Göbek-Kaya.

The Sandjak is divided into four Kažas (Kirşehir) to which are attached two nahiya, of which one is Hâdjid Bektâsh (q. v.), Keskîn (capital Ma’den), Medjidje (capital Boyâli, Kurd village), Awanos (Abanos). It does not include any high mountains; it has a chain of hills called Barani Dag which extends for 14 miles in length in the vicinity of the capital and terminates at Kurte Beli. Millstones are obtained from the hill Alı Korlu. Two lakes, one near the town at Shebili Baghlar, Dib-Siz Gol (the lake without a bottom), and the second in the canton of Medjidje, Yanar Golü, near the village of Yanaroglu, which has given it its name. Total population, 119,535, inhabitants, of whom 116,000, 1,794 Greeks, 346 Armenians. Agriculture is only slightly developed. Roads suitable for vehicular traffic are hardly made completed: towards Cesearea and Angora, 80 miles; towards Ma’den, 40 miles; towards New-Shehir, 55 miles.

KIRTAS (a.), paper. This word is found in the Kur’un (vi. 7) with its plural kârûfû (vi. 91) where they can only mean papyrus. The Egyptians wrote on the kîrûs manufactured from reeds called bârdî (Fikrist, 1. 21). Chinese paper, wûrâc sînu, is made from vegetable fibre, boisk; microscopical examination has indeed shown that this paper is made, not from cotton but from various fibres (J. A. 1925, ccvii., p. 159 sqq.); while the paper of Khao Tung is manufactured from linen fibre, kallûm, by Chinese workmen in imitation of that of their own country (Fikrist, ibid.). More details are found in the article Kâhêhû.

Kaṭāda in Tabari, Taﬁrî, vii. 90, translates kirûs by sâbûa which tells us nothing.

(Fe. HUART)

born at Kufa, died at Râbiyya, not far from al-Ray, about 189 (805). The following dates are also given for his death 179, 180, 182, 183, 185, 193 and 197.

After having studied in his native town, he came to Basra to study with al-Khalil b. A'mad (see this article) who advised him to go and study language amongst the tribes of the Najd, of the Hidjaz and of the Thamama. On his return to Basra he found that al-Khalil was dead and had been succeeded by the grammarians Yunus b. Harib al-Basri, who after several discussions on grammar gave up his place to him. Nevertheless he took up his permanent abode at Bagdad where he taught chiefly Kuranic diction, first in accordance with the method of his master Hamza al-Zayyât, and afterwards he followed a method of his own; he is the seventh badr, and because of that he is counted amongst the seven canonical readers.

Hârûn al-Rashid confided to him the education of his sons al-Amin and of al-Ma'rem. In spite of the opinion of the Imam al-Shâfi'i who praised exceedingly his grammatical knowledge, al-Kisa'i was especially weak in grammar, and his partisans admit that he only latterly concerned himself with this science. In any case he had numerous adversaries, whom he dealt with in a fashion neither honest nor just, notably Shibawaih, al-Yazdi.

Of his numerous works, it appears that we have no more than one, Kitâb fi lâyîn âl-ummâ, "a treaty on the mistakes of the vulgar language", which seems to be the oldest work composed on this subject and was published from the Berlin manuscript No. 7103, by Brockelmann in Zeitschr. f. Assyriol., xii. (1898), 29–46 (cf. below Noldeke, ibid., p. 111–115).

AL-KISA'I, the author of the Kitab Kiqas al-Abnîya, is identified by 'Hadîjî Hâlîsf, i.e., No. 9437 with the grammarians and Kur'ân reader, 'Ali b. 'Hammâ (see the foregoing art.). This identification, first adopted by Herbelot, Bibl. Orientale, 1964, but rightly disputed by

Lidzbarski, following Pertsch and Ahlwardt, in his De prophetis quae dicuntur legendis Arabice (Leipzig 1893, p. 25), was again accepted by Weilhnaus in I. Eisenberg's dissertation, Die Prophetenlegenden des Musâmmad ben Abdallah al-Kisâî (Berne 1898), p. v., on the assumption that the work was not actually by this celebrated scholar himself but had been ascribed to him. The evidence of most manuscripts is however contrary to this view; they sometimes call the author (Abû 'Abdallah) 'Musâmmad b. 'Abdallah, sometimes Musâmmad b. A'mad, sometimes 'Abdallah b. Mu'sîmad (sic). Besides it can hardly be doubted that the author is identical with the author of the Kitâb ad-Dhât al-Malakât (Hâdîjî Khâlfâ, iv. 8075) or simply Kitâb al-Malakât (ibid., v. 10527) whom Hâdîjî Khâlfâ calls Abû Dja'far Mu'sâmâb b. 'Abdallah al-Kisâî, and of the Kitâb Badr al-Dunyâ, whom he mentions by name without the kunya on iii. 991. This latter work is lost but perhaps it was only an independent edition of the first part of the main work, which in the manuscript is sometimes also called Kitâb Badr (Khalîq al-Dunyâ wa-Kiqa al-Abnîyâ). The period in which the author flourished is nowhere mentioned. Contrary to Eisenberg's view (Diss., p. ix.) nothing can be deduced as to this or the grammarians' authorship of the book from the statement of Hâdîjî Khâlfâ, iv. 9477 that Sahî b. 'Abdallah al-Tustari (q.v.) wrote a Multhaqat Kiqas al-Abnîyâ; for Hâdîjî Khâlfâ does not say that this work was the basis of that of al-Kisâî. Al-Thalâabi (q.v.) does not mention al-Kisâî but an investigation of the sources and the relation of the two authors has still to be made, so that nothing can be deduced regarding the age of al-Kisâî. From the whole character of his literary activity one must agree with Ahlwardt in putting the author in the fifth century A.H.; while al-Thalâabi's work grew out of Kur'ân exegesis and is intended for learned circles, al-Kisâî is a typical representative of the class of Muslim; he relates the legends to edify and especially to entertain the reader. He therefore quotes only the oldest authorities, like Kahb b. al-A'hâr and Wahb b. Munabbîb, although he likes to appear scrupulously accurate; but his quotations are not of the slightest value for literary criticism. The work, which exists in numerous manuscripts (to those in G.A. L. i. 350, may be added: Gobha, Perssch. Vers., No. 1893; Brit. Museum, Ellis and Edwards, A descriptive List, p. 34, Or. 5820; E. G. Browne, A supplementary Handbook, No. 1012; Princeton, Littmann, No. 28; Cairo, Fikrist, v. 113; Damascus, Zaiyât, No. 74, 39), being a popular work was not always carefully treated by the copyists, but often arbitrarily abbreviated; it has also been translated into Turkish, s. H. L. Fleischer, Catalogus cod. ms. or. ibid. Dresdensis, No. 128.

KISA'I, Hakim Majid al-Din Abu 'Isâk (or Abu 'l-Hasan) KISA'I, a Persian poet of the second half of the fourth century A.H. belonging to the first period of Persian poetry. He was
born in Meir on Wednesday 26th Shawwāl 341 (March 16, 953) and according to most authorities died in 392 (1002); one source however (Wāliyī, quoted by Ethē), says that he reached a very advanced age. A few of his poems have been preserved in the different ṭadhkīra: they have been published by Ethē (Die Lieder des Kisā‘ī, S.-B. Bayr. Ak., 1874, p. 133–149). These poems illustrate the whole repertory of Persian poets of the time; the best known is the kaṣīda in which the poet gives the date of his birth as above and says that he composed it at the age of 50; this kaṣīda is pessimistic and ascetic in tendency. The ṭadhkīra describes him as a poet who celebrated the family of the Prophet in numerous poems (a ḫifā of this kind is given in Ethē’s article). He is also said to have written kaṣīda’s in praise of the Sāmānids and of Sulṭān Maḥmūd of Ghazna. He must have been a celebrated poet in the Sāmānīd period; the later ṭadhkīra’s however (such as Dawlatshāh) do not mention him.

The Diwān of Nāṣīr-i Khushraw contains several passages in which the latter speaks contemptuously of Kisā‘ī. Ethē (Grundr. d. iran., Phil., ii. 281–282) has concluded from this that Kisā‘ī must have been still alive in the time of Nāṣīr (c. 1040) so that he must have lived to a great age. Ethē further seeks the cause of the antagonism between the two poets in their theological views, Kisā‘ī being a “Twelver” (īkhānī) Shī‘ī and Nāṣīr-i Khushraw a “Sevenner” (ta‘bīya). But Browne (A Literary History of Persia, ii. 160–164) holding that Nāṣīr’s invective is only intended to maintain his superiority as a poet, thinks that Ethē’s conclusions cannot be accepted, even that regarding Kisā‘ī’s age, because there could be nothing astonishing in Nāṣīr-i Khushraw’s attempts to surpass one of the best known poets of the preceding generation.

KISĀ‘Ī (A.), synonymous with ḥuwad, retaliation (“settlement”), not “cutting off” or “prosecution”), according to Muslim law is applied in cases of killing, and of wounding which do not prove fatal, called in the former case kisā‘ī fi ʾl-nafs (blood-vengeance) and in the latter kisā‘ī fi-mā dīn al-nafs.

2. Muhammad takes it for granted that the blood-vengeance of Arab paganism — in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the doer himself, forms the essential feature of the vengeance (cf. Procksch, op. cit., p. 6 and note 5) — is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain: Kur’n xvii. 35; xxv. 68; vi. 152 (cf. Kalti, i. 1); in these passages only the jus talionis can be understood by the right to kill another; already in xvii. 35 the avenger of blood is forbidden to kill any one other than the guilty one; ii. 173 sqq. (before Ramādān of the year 2): “To you who are believers the kisā‘ī is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone pardons anything by his brother he shall be dealt with equitably ... and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In kisā‘ī you have life, you of understanding ...” (the first verse says that a freeman can only be slain for a freeman, a slave for a slave and for a woman only a woman [but probably a slave or a woman for a freeman, but this is not expressly stated and must be deduced], naturally of course only the guilty one and that in all other cases the payment of compensation [diya] takes place. This is an extension of what is presumed in the earlier passages: the treatment of the freeman in relation to the slave is a matter of course according to old Arab views and that of the woman, which cannot be completely explained from them, represents an independent decision of Muḥammad’s based on them [there is quite a different interpretation of the verse in Procksch, op. cit., p. 75 note 5]. The commentators had difficulty in reconciling the passage with later developments [cf. below 4]. Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 [see below]. By “prescribed” is meant not a duty but a rule not to be transgressed; pardon is the abandonment of kisā‘ī with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood-feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved; v. 49 (after the first encounter with the Medina Jews but before the outbreak of open hostilities): “and we have prescribed for them (the Jews) in it (Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and kisā‘ī for wounds; but if anyone remits it, it is an atonement for him (i.e. for his sins)” (this verse of course does not cancel ii. 173). In the years 3 and iv. 94 sqq. there came the distinction between deliberate and accidental killing (of Kalti, i. 1); in this the application of kisā‘ī is excluded; in ii. 190 (before the campaign of the year 6) kisā‘ī is used metaphorically in the sense of retaliation of like with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the Sīra, the records of the life of Muḥammad, are in agreement with this. In the so-called ordinance of the community at Medina, which belongs to the early Medina period it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before the authority — Muḥammad — is therefore required as a condition for the carrying out of kisā‘ī), talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the murderer and can only take an active part against him. Here the kisā‘ī is brought from the sphere of tribal life into that of the religious-political community (ummā) which finds an echo in the law, not however to be taken literally, that believers are one another’s blood-avengers for their blood
spilt for the sake of Allah, but is throughout re-
recognised as a personal vengeance, as is also laid
down in the case of the Medina Jews, no one is
to be prevented from avenging a wound. A
limitation of ījāz, logical from the standpoint of the
ummah, lies in the fact that the believer is
forbidden in the ordinance of the community to
kill a Muslim on account of an unbeliever. On
two occasions when Muslims had killed heathens
who had however treated with Muhammad, he
did not allow ījāz to be made "because they were
heathen" (this does not in any way follow from
the ordinance of the community) and even paid
the compensation himself; his utterance regarding
the possibility of ījāz à propos of the second of
these cases is however illogical. On two occasions,
also for political reasons, he obtained the acceptance
of compensation when the avenger of blood un-
doubtedly had the claim to ījāz, but in one case
he cursed the murderer — again an illogical
attitude. Muhammad in his turn after the capture
of Mecca in keeping with the regulation of the
ordinance of the community, abandoned his claim
to compensation for the slaying of a nephew of
his, which had taken place during the heathen
period. The question remains whether he has laid
down the principle that any blood-guilt attaching
to a Muslim dating from the period of heathen-
dom was to be disregarded (cf. Kātit, i. 2). But
Muhammad also intensified the operation of ījāz
and on two occasions had the murderer executed,
when there were aggravating circumstances, with-
out offering the avenger of blood the choice between
ījāz and compensation; the prescription and exe-
cution of murderers who were also murji‘āt’s (q.v.;
cf. Kātit, ii. 5), is however to be interpreted dif-
ferently; from everything it is clear that Muham-
mad also supervised the carrying out of ījāz.

Taking the evidence of the Kurān and the
Sira together, it is evident that Muhammad did
not recognise the blood-feud, but allowed ījāz
to survive as personal vengeance, only he subjected
its application to certain limitations and endeavoured
to free it from tribal customs of pagan times, all
important in a period when韦 were not unus-
common in character to a punishment. That Muhammad
at the same time, according to the demands of the
individual case, sometimes gave decisions deviating
from his own rules, is intelligible.

4. Among the traditions (hadith’s) that one
must be genuine according to which Muhammad
had a Jew, who had smashed the head of a Muslim
djāriya (slave girl or young woman) with a
stone, killed in the same way, because in this
case there was no question of an avenger of blood.
At a later period when Kurān ii. 173 (cf. above
§ 2) was interpreted in a new way, the attempt
was made to see in it evidence that a man might
be killed as ījāz for a woman, without observing
that the tradition referred to an unbeliever while
the Kurān passage was only concerned with Muslims.
But this Kurānic prescription regarding the
woman was very early neglected and interpreted
differently; it is true that ‘Umar b. ‘Abd al-Azīz
al-Hāsan al-Bawārī, ‘Āṭh and ‘Ikrama are quoted as
representatives of the Kurānic view that a man
cannot be put to death for a woman (Zamakhshari
on Kurān ii. 173) but Sa‘d b. al-Musayyab, al-
Shābi, Ibrahim al-Nakha‘ī and Katāda had held
the opposite view (ibid.) and the latter opinion
prevails in the law-schools without any opposition
(Zamakhshari’s statements on the point are not
quite accurate); at the same time it is remarkable
that traditions expressing the rejected view are
hardly to be found. From the point of view of the
difference of opinion in the law-
schools, the following is important. For the
view that ījāz could be inflicted on several, on
account of one individual, if they had committed
the crime jointly, no unambiguous tradition could
be found. Those who held this opinion had there-
fore to rely on a tradition which does not at all
prove what it is said to, and were only able to
quote in support (alleged) decisions of old author-
ities. Their opponents naturally pointed out this
flaw. The question how the ījāz is to be executed
is also disputed; the champions of the view that
it is to be inflicted in the same manner as the
slaying, quote the tradition mentioned above, while
those who insist upon execution with the sword in
every case rely upon a saying of Muhammad’s. There
are also varying opinions as to whether a man can
be put to death on proof by ḥāṣima (cf. 5 below)
and ancient authorities are quoted for both; the
historical truth is perhaps that Muhammad wished
to apply ḥāṣima in a case of bloodshed and when
he could not be managed, paid compensation him-
self; besides it is said (certainly wrongly) that he
confirmed ḥāṣima as it existed in the period of
heathendom. Among other traditions, mention may
be made of the story that among the children of
Israel there was only ījāz and no possibility of
paying compensation (this is wrongly cited in ex-
planation of Kurān ii. 174) and that Muhammad
granted the blood-avenger’s request to abandon
claim to ījāz, laid great stress on forgiveness,
and even asked him to do so (cf. above 3; in
these historically certain cases, however, his attitude
was influenced by purely political considerations);
finally we are told that he who raises a claim
for blood without cause is one of the men most
hateful to God. Other traditions agree with the
regulations mentioned and still to be mentioned
and need not therefore be quoted, especially as
the hadith’s on this subject are collected in Guillaume,
The Traditions of Muhammad, p. 107 sq.

Summing up the results of the traditions as
the expression of opinion of authoritative circles of
Islam in the early period, we must notice in
contrast to Muhammad’s period the important
change in the treatment of women, which marks
an undeniable advance, just as the request for
forgiveness is evidence of a loftier point of view

5. The ījāz fī ‘l-mafs according to the Shari’ā.
In the cases of illegal slaying noted in the article
Kātit, i. 5—7 ījāz comes into operation, i. e. the
next-of-kin of the slain man, who in this capacity
is called wali ‘l-dam (avenger of blood) has the
right to kill the guilty man under certain conditions.
From what has been said above, it is obvious that
this punishment still partakes for the most part
of the character of personal vengeance; this
is also clearly seen in the regulations — disputes
in points of detail — prescribed for the case
when the avenger in any way mutilates the murderer
and only occasionally the idea of punishment by an
authority for the sake of justice crops up [thus
in all cases of culpable, illegal slaying in which
ījāz cannot take place, ta‘ṣīr intervenes]; the
competent authority is therefore regarded as
the wali of one who has no wali; therefore anyone
who kills a dhammi, mu‘āhad (an unbeliever
connected with the Muslim state by a treaty) or a 

muṣṭaʿmīn (an unbeliever who enters a Muslim country after being given a safe conduct) must, according to Malik, be put to death and the waḥīb has no right to abandon claim to kīṣās. On the other hand, however, it is laid down that anyone who kills a waḥīb slave goes scot-free, but that this point of view is found at all is a step in advance, for Muhammad's decisions in this connection (cf. above 3) were only dictated by the demands of the individual case; in other matters also in certain points we see a looser attitude adopted, at least in some of the decisions. The application of kīṣās the fulfilment of the following conditions are necessary: 1) The life of the person slain must be absolutely secured by the ḥārāʾa; this is the case with a Muslim, dhīmmī and muṣḥāḥad, at least as long as they are in the Dār al-Īslām [q. v.], and Dār al-Ṣūlīḥ [q. v.] (in the case of the slaying of a Muslim prisoner in the Dār al-ʿĪṣrāʾ [q. v.] it is unanimously agreed that there is no kīṣās and for the slaying of another Muslim there is no kīṣās, according to the Ḥanafī school; there are corresponding regulations for the dhīmmī and muṣḥāḥad in contrast to the muṣṭaʿmīn, muṣlīmād and dhīmmī may be inflicted on a muṣlīmād if he kills another muṣlīmād, and Malik makes kīṣās the general rule if anyone kills a muṣlīmād, without the authority of the Imām). This point of view is to be distinguished from the conception of the illegality of the slaying (cf. ʿaṣāʾ, i. 5) although the two ideas have a certain amount in common; the killing of a muṣṭaʿmīn is illegal but there is no kīṣās (apart from the special case just mentioned). 2) The slain man must not be a descendant of the slayer, nor the slave of the slave of one of his descendants, nor must there be a descendant of the slayer among the heirs of the slain man. 3) It is further taken for granted that the man when he committed the deed must be of years of discretion and be in full possession of his faculties. 4) The further conditions are disputed (cf. below). — Any alteration in these relations of the doer after the deed makes no difference to the old blood-guilt (it is however to be noted that the adoption of ʿĪslām by a ḥārūʾ wipes out all previous blood-guilt) with the exception of lunacy (in which case kīṣās cannot be inflicted), nor does, for example, an alteration in the relations of the slain man after the doer has decided on the deed but before it is actually committed (but there are various views on this point). If one of several men who have slain someone jointly cannot be put to death for one or other of the reasons, the others also escape kīṣās; this is also the case if a further reason for killing leads to the action of the slayer. If the slayer dies before kīṣās is carried out, all claim by the avenger of blood ceases according to Abū Ḥanīfa and Malik; according to al-Ṣāḥīfī and Ahmad b. Ḥanbal compensation can still be claimed.

Malik, al-Ṣāḥīfī, and Ahmad b. Ḥanbal further demand, before kīṣās can be allowed, in addition to the conditions mentioned that the slain man is at least the equal of the slayer as regards ʿĪslām and liberty, so that they certainly uphold Muhammad's intentions, while the Ḥanafīs — of course interpreting differently the evidence cited — take no account of this and therefore occupy an undoubtedly higher position. A particular view of Malik's has already been mentioned. According to Malik the slayer can further be put to death, if he has deliberately slaughtered his descendant and this view is also admitted in the Shāfiʿī school. Several may be put to death for the killing of one, according to Abū Ḥanīfa, Malik and al-Ṣāḥīfī, if they have done the deed together, provided the part taken by each was such that if he had acted alone, the result would have been the same (Malik alone excluded ḥasāma [cf. below] on the basis of which, according to him, only a single individual can be put to death). There is unanimity on the point that anyone who has killed several people is liable to kīṣās; on the question whether compensation has also to be paid there are different views.

Kīṣās can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as in another case; in kīṣās fi ʿl-waṣf there is however also the old Arab institution of the ḫamaṣa (cf. ʿaṣāʾ and Goldzieher, Zeitschr. für vergl. Rechtswissen-
schaft, 8, p. 412 sqq.; Wellhausen, Reste arabischen Hadschentums, 2, p. 187 sqq.) which ʿĪslām allowed to survive (cf. above); according to Malik, Ahmad b. Ḥanbal and al-Ṣāḥīfī's earlier opinion, kīṣās can be inflicted on the avenger (but according to Malik on one only) if the ḥamaṣa is performed and the other conditions are fulfilled, according to Abū Ḥanīfa and the later view of al-Ṣāḥīfī, which became predominant in his school, he has only to pay compensation; among the Shāfiʿīs, with the limitation that he may be put to death if in the course of the trial the accusé sweats to his guilt twice with fifty oats each time. If the person entitled to inflict kīṣās does so without previous judicial proof he is punished with taʿzīr.

The execution of kīṣās is open to the avenger of blood and according to Abū Ḥanīfa consists in beheading with the sword or a similar weapon; if the avenger slays in another fashion he is punished with taʿzīr, but not imprisoned. According to Malik and al-Ṣāḥīfī the guilty person with limited killings is killed in the same way as he killed his victim; both views are given by Ahmad b. Ḥanbal.

Kīṣās takes place — among other conditions — only when the next of kin (waḥīb) of the slain man or the owner of the slain man, if he was a slave, demands it; if there are several (equally nearly related) avengers of blood all must express this desire; if one of them remits kīṣās, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The waḥīb, or the wounded man before he dies if the case occurs, is permitted to remit the kīṣās and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations on detailed points and many differences of opinion between the schools of law.

6. Kīṣās fi-mā ḍām al-Nafs according to the Shāfiʿī. If any one deliberately (with ʿamīd, op-

positive ḥaṭṭ; cf. ʿaṣāʾ, i. 5) and illegally (this excludes the wounding of one who tries to murder or injure or rob a fellow-man, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who forces his way into another's house without
permission] has inflicted an injury, not fatal, which could be inflicted on the doer’s person in an exactly similar way (what is meant by this is very fully discussed in the Fikh books) he is liable to kısăş on the part of the wounded man, (except that Mālik makes it be inflicted by an expert), if the conditions necessary for carrying out the kısăş fi ‘l-naṣr are present with the following modifications: according to Abū Ḥanīfa, kısăş fi ‘l-naṣr dīn al-naṣr is not carried out between man and woman or slaves among themselves, but it is according to Mālik, al-Shāfi’ī and Ḍāmīr and Mālik further allow no kısăş fi-nā ‘dān al-naṣr between freemen and slaves. According to Mālik, al-Shāfi’ī and Ḍāmīr and Māḥbūb this kısăş is inflicted for one on several, but not according to Abū Ḥanīfa. A sound limb may not be amputated for an unsound one; if the guilty person has lost the limb, there can of course be no kısăş. In the case where he loses it after committing the deed, there is a corresponding difference of opinion as in the case of his death before the execution of kısăş fi ‘l-Naṣr.

The further regulations correspond to those quoted in section 5.

7. If retribution is not permitted or if the person entitled to kısăş voluntarily renounces his claim, compensation may nevertheless be demanded; for an unlawful slaying, the blood money (diya; q. v.) is to be paid to the next of kin of the person killed, in an unlawful but not mortal wounding, according to the particular case either the full diya or a definite part of it or a contribution defined by the law (arba‘; q. v.) or a percentage of the diya laid down by the judge (the so-called hukūma) to the injured person; all this of course on the supposition that the slain or wounded man was a free man. If he is a slave his value must be made good. If the culprit is a slave, his owner has to pay these contributions for him; he can however escape by handing over the slave (parallels in the Romano-Celtic institution of in nexum dedere; cf. e. g. Girard, Nouvelle Revue Historique, 1887, p. 449 sqq.).

8. Of the regulations of the Shi‘a Fikh books, which need not be gone into fully here as they are essentially the same as the Sunni, we need only mention that among the Twelver Imāmīs, for example, it is taught that if a man has killed a woman, kısăş can be carried out if the woman pays the relatives of the man the difference between the blood-money on each side; an isolated interpretation explains Kur‘ān, ii. 173 in this way. Here we can scarcely have a late effect of the Kur‘ānic rule regarding woman, as similar calculations are also made in other cases.

9. On the practical carrying out of kısăş, cf. Kaṭl, ii. 10, in which we may note that breaches of his regulations are recorded of even the Prophet’s companions.

Bibliography: The Fikh-books; the works already quoted under Kaṭl: the article qīṣāṣ in T. F. Hughes, A Dictionary of Islam. For the Arabic expressions not further explained see the separate articles. (J. Schacht)

Kīṣām. 1) A long island in the Persian Gulf (also called Jawla because of its shape), off the coast of Lārīstan at the entrance of the straits of Hormuz, opposite the port of ‘Akhund. In length it is about 77 miles. It is separated from the mainland by a strait, called Clarence Strait, the breadth of

which varies from one to seven miles. It is composed of rocky and calcareous hills. The latter to the West form an elevation called Kīṣīm Kūh (mountains of Kīṣīm). Vegetation is rare; mines of sulphur and of salt are found here; the population, of Arab origin, amounts to 15,000 inhabitants. It was ruined by an earthquake in 1884. The chief pursuit is coral and pearl-fishing. Idrīsī (in Abu l-Fidā‘, Taḥqīm al-Baladān, ed. Reinaud, p. 373) mentions a great whirl pool in the sea near here; his name that it now bears is that of the capital, a small town with 5,000 inhabitants, situated at the eastern point; an old Portuguese port is still to be seen there; in the Middle Ages it bore successively the names of the Island of the Banū Kāwīn (Iṣṭakhrī, p. 107); Bārkīwān (Ibn Hawāk, p. 183); Ibn Kāwān, Abdārīm, Abdārāwīn (Baṭlīhūrī, p. 386); Iṣṭakhrī, p. 32, 118; Yākūt, iv. 341) from the name of a place still found at the present time on the Northern side. The English founded, at Bāšīdū, the factory of Basadore, soon afterwards abandoned. Other places are Guran and Sūxehe.

2) There was formerly a town of the same name in the upper basin of the Oxus which belonged for a short time to the Yabghū of Tokhārīs (Tabāri, Anwāl, ii. 1590A). It is found in Hiuontsang under the name of Ki-iti-sit-tme, corresponding to a hypothetical Sanskrit name Kiṃsa; it lay four days to the East of Hīwā, identified by Vule with Warwāzī near Ķunduz (J. Marquart, Erzählner, p. 79, 231).

(Ch. Huart)

Kīṣem (A., T.); this word, the Arabic meaning “distribution” of which is a synonym of iṣṭāmūl later came to mean lot, portion and developed as a third meaning “the lot which is destined for every man”. It is this meaning of the Turkish that is best known. In Turkish however kīṣem is not so much an expression of theological doctrines concerning predestination (cf. KADAR) as of a practical fact, it accepts with the signification the blows and vicissitudes of fate. The same sentiment is often expressed among Persian and Turkish poets by the words falak and tarkh to express the irrational and inevitable influence exercised by the spheres.

In Turkish, kīṣem is also another word for the judicial office called kasımlik, especially in the expression kīṣem-i ʾastariye, i. e. the authority charged with the supervision and maintenance of the weaving instituted by the Sultāns (cf. Sāmī, Kānî-ū Türkî, s. v.).

Kīṣrā, the Arabic form of the name of two Persian kings of the Sassanian dynasty, Khusraw [q. v.] has become a general name for all the Persian kings; then it was given a broken plural akṣira (other forms: kūsīr, akṣīr, kāṣīr). The only remaining monument of the town of al-Madā‘in (Seleucia-Ctesiphon) before its recent destruction

The Encyclopaedia of Islam, II.

(Ch. Huart)

KISSA (A., plur. Kiṣas) does not occur in the Kurʾān. The Kurʾānic noun from the root ʿ-ṣ-ṣ, perhaps an infinitive, is ʿaṣaṣ which occurs 5 times: iii. 55; vii. 175; xii. 3, 111; xxviii. 25; and in the title of xxviii. 25. The root does not mean simply “narrate”, as usually translated; but has a particular meaning and usage which have conditioned the whole after use of ʿaṣaṣ. It will be for clarity in this connection to look shortly at the usual Kurʾānic expressions meaning “narrative”, “narrate”. In Muḥammad’s earlier career (for such broad considerations the order of the Kurʾān is sufficiently significant), he used exclusively the root ʿ-ṣ-ṣ; thus ḥadīth (meaning strictly “a new thing”, “news”, “an event” as opposed to ḥadīm) occurs 23 times in all: e.g. lxvi. 3; lxvii. 44; lxviii. 50; lxix. 15; lxxv. 17; lxxviii. 1; ḥaddath, xxiii. 11; xxiv. 4. In lxvi. 3, ḥadīth is combined with root n-ḥ-ḥ which occurs before that only twice: lxxvii. 133; lxviii. 2. In Muḥammad’s later career root n-ḥ-ḥ preponderates by far: stem ii occurs 46 times and stem iv. 4 times, apparently in much the same meaning, but al-Kāghib in the Mufradāt (p. 499, l. 5 from below; Lane, p. 2753a) says that nāḥaḥa is more intensive than ʿaṣaṣ; stem x occurs once; the noun nāḥaḥ occurs in the sing. 17 times and in the plur. 11 times. Of the root ḥaḥ-b the verb does not occur and the 52 noun usages are curiously scattered from Suras ii. to lxvii., with two isolated, and apparently early, in xxiv. 4 (abbāḥar) and c. 11 (khaddir). Of these 52 occurrences 45 are khaddir, “well informed”.

The root ʿ-ṣ-ṣ is much more difficult. Leaving aside ʿaṣaṣ [q.v.] “tale” (ii. 173, 175, 190; v. 49), the fundamental and primary meaning is given in xviii. 63; far-taddā “alā ʿaṣarikāmā ḍaṣaṣ, “so they went back in their foot-prints, tracing them”, in xvii. 10 where the mother of Moses says to his sister, ḥusṭhi, “trace him up”. This meaning persists in all the Kurʾānic usage; cf. the similar development of root t-t-t, “to follow, imitate, recite from, relate a narrative (nāḥaḥ),” Kurʾān, v. 30; xxviii. 2, etc. So ḍaṣaṣ means “he traced out, step by step, the facts in the case of some one or something and (on) he made a statement upon it”. The lexicons all add the explanation “aṣaṣ maḍāḥiḥi which Lane (p. 2546c) renders, “in its proper manner”, perhaps better, “straight on, point by point” (dīn maʿdīn). In Suras ii. the Prophet (mostly), Kurʾān, iv. 162; vi. 57; vii. 6, 99; vi. 102, 121; xii. 3; xvi. 19; xxviii. 12; xxviii. 99; xl. 78; by the Kurʾān, xxvii. 78; by Moses to Shuʿaib of Midian, xxviii. 25; Jacob tells Joseph not to recount his dream (rūyā) to his brothers, xii. 5; Allah tells the Prophet to state the case (fa-ḥaṣṣṣelim-Ṭaṣṣeṣ) to the people, vii. 175; messengers (rūsāl) make a statement of Allāh’s signs (ṣaḥḥa) to the people, vi. 130; vii. 33. It is combined with nāḥaḥ (sing. or plur.): vii. 99; xii. 102, 121; xviii. 12; xx. 99; with ḍaṣaṣ, iii. 55; vii. 57. It might be possible in all these cases to translate roughly “narrate”, but that would obliterate the basic idea in the root of following up traces (ittibāʿ al-ḥadīth, Lisan, viii. p. 341–343) which, in these cases, are ideas and expressions (Lisan, p. 342, l. 4 from below). This is sometimes expressed as a baṣṣān, “explaining”; so, while Balātawi (ed. Fleischer, i, p. 451, l. 19 sqq.) quotes Kurʾān xii. 3 as a following of traces, the Lisan (p. 434, l. 5 from below; p. 432, l. 5 from below) explains as a baṣṣān.

It is significant that in the lexicons the usage for narrating is very subordinate and in the case of ḍaṣaṣ sometimes vanishes. The fundamental ideas in the root are two, “to cut off, shear”, as hair with scissors (not, apparently, in the Kurʾān) and “to follow traces”; the Lisan quotes only traditions and never, āhuwālīd of poetry in illustration of the usage ḍaṣaṣ “alā ishīn ḥaḍar,” he recounted the information to him”. In the Miṣbah the only meaning given to ḍaṣaṣ is ṣaḥīn, amr, “affair”, “matter”, “case” — not ḥadīth or khāṣar. In the Sahih the meanings are (i) amr and (ii) ḥadīth, and the plural ḍaṣaṣ is restricted to the ḍaṣaṣ which is written. In the Lisan (p. 341, l. 5 from below) ḍaṣaṣ is said first to be known (muʿāṣa) and then there is quoted, fi raʾṣa ḍaṣaṣ (“there is a ḍaṣaṣ in his head”), as meaning “the whole thing is merely talk” (al-ṣuṣma min al-kālum); cf. the judgement on ṣaḥā as ḍaṣaṣ, “words”, opposed to ṣaḥīn, “works” (p. 343, l. 2 sqq.; Lane, p. 2526c). Later in the Lisan, p. 342, l. 7 from below) ḍaṣaṣ is given two meanings, amr and ḥadīth, and several traditions bearing on the ḍaṣaṣ (evidently the religious exhorter and storyteller; see below) are quoted. In one he is said to be either an ʿanār, whose duty it would be to exhort his people in his ḍaṣaṣ, using stories of the past, or his appointee — such do not seek gain, or he who does it out of pride and hypocrisy, whose exhorting and talk have no reality in them. Cf. several forms of this tradition and remarks upon them by Muṭrād al-Zabīdī in his Ḥaṣaṣ al-Sāda, a commentary on the Ḥaṣaṣ al-Ghazālī, vol. i, p. 153. In another it said that the ḍaṣaṣ may expect (divine) hatred (maḍāḥ) because he will inevitably add to or take from his stories as he tells them. In these traditions, evidently of late origin, the connection of ḍaṣaṣ with ḍaṣaṣ, “stories”, is taken for granted but others held that the ḍaṣaṣ was so called because he followed ṣaḥā, one story with another in his kālum, here apparently “patter” in contempt (above, p. 671a; Lisan, p. 343, l. 10). From all this it is plain how uncertain was the original meaning of ḍaṣaṣ. Lexicographically the existence of the word is assured and it may be conjectured that, beside ṣaḥā and ḍaṣaṣ, meanings it was originally an im naw, “a kind of tracing out” — but what kind? So in the Ṣaḥih of Muslim, Ṣaḥān, ṣāḥ al-ṣīḥ, trad. 44: ṣāḥ al-ḥadīth bi-kiṣṣiṣirak nakwah ḍaṣṣāḥ, “he carried on, or pursued, the ḍaṣṣāḥ, in his way of tracing it out step by step, just like the ḍaṣṣāḥ of …”. In later Arabic the word had two distinct meanings: (i) “story” mostly of a religious and edifying kind, but used also much more widely and even, in Spanish Arabic, “history”, if we can
trust the Vocabulary of Pedro de Alcalá (Dozy, Supplement, ii. p. 352a. b, under kāṣīṣ and mukāṣīṣ). Cfr. too, “historián” in Redhouse’s Turkish and English Lexicon, p. 1458a); (ii.) “request”, “petition”, “claim”, laid before a superior; a number of examples of this are given by Quatremère in his Sultans Manolbeks, 1, i, p. 256, note 111; there was an official for the purpose of dealing with these called kīṣga-dār; see, too, Gaudevery-Demobhymes, La Syrie, p. 811. This second meaning is almost certainly more original and goes back to the šān, amr of the lexicons. It is worth notice also that kāṣīṣ similarly retained two separate meanings: (i.) the professional reciter of such tales = kīṣa above and (ii.) a police-agent, detective, “tracer”. For the second meaning Dozy (loc. cit.) refers to the Breislau text of “The 1001 Nights”, vol. vii, p. 313, l. 4 from below, derived here from one of Do Sady’s Egyptian MSS., although the printed text of Zoteberg’s Egyptian Recension is quite different (II Calcutta, ii. 246; I Bulaik, i. 506). In the grammatical usage damir al-kīṣa = damir al-šān the meaning šān is explicit; Zamakhshari in the Mafāṣiṣ, p. 54, l. 8 sqq., explains such a prefixed huwa as meaning “the case, and the event, is...” (al-šān wu’t-ladīh...)

In rubrics of Bukhārī’s Sahih kīṣa occurs several times and always apparently in the sense šān or amr, “the matter, affair, case of”; see ed. Bulaik, 3134, iv. 189; v. 72, 129, 171, 172, 174.

In the Fihrist (c. 400 A. H.) kīṣa does not seem to occur; certainly it is not there one of the normal words for “story” in any sense. These are: tarīkh, khabar, hadith, stori, samar, kihārīs; kīṣa in the Fihrist is used only in the exact sense of a verbatim reproduction (see kīṣa, above). Undoubtedly the kīṣa was at work for more than two centuries, but their labours had not reached literary form and recognition.

In a very few years more that had taken place. There are two books with which the word kīṣa is peculiarly connected, the so-called Kīṣa-ṣan-i-nabī (commonly rendered “Stories of the Prophets”) of al-Kisâkî (q.v.) and of al-Thalâbî (d. 427 A.H.; cfr. on both Liddaberski, De prophetis legendis arabicis, Leipzig 1893). Yet in the rubrics of the first book hadith is the word used throughout except of the Kīṣa-ṣan-i-nabī (ed. Eisenberg, p. 45) and there is no mention of kīṣa in the introduction. The second book begins: “This is a book which contains the kīṣa of the prophets mentioned in the Kurān with commentary” and then quotes Qur. xi. 121, “and each (piece of information) we trace out (or give in detail, or explain, naḵṣeta) for thee of the information (anbā’) concerning the Messengers, that by which We establish thy heart”. Five romances are then given which justify, e.g., recanted to Muhammad such records of the past, apparently interest in the kīṣa, for some people, required justification. Therefore kīṣa is used regularly in the rubrics and it is probable that Thalâbî understood by kīṣa-ṣan-i-nabī very nearly, “The Records, or Accounts of the Prophets”, records from the Kurān and from hadīth. While it is plain that Thalâbî was not regarded as a very careful traditionalist (see Murtaḍa al-Zabîdî, Ilkāf al-Sāda, vol., iv., p. 556, but contrast Ahwardi’s judgement on his Kurān commentary in the Berlin Cat., i, 293) yet a gulf still separated him from the utterly unprofessional professional kīṣa who made a living out of the pious gullibility of the masses and drew as freely on their imagination as did the popular entertainers with secular āmār and khurāṣ. It is unnecessary to give details on these as Goldzihér (basing on the Kitāb al-kīṣa of al-Djawi, d. 597 A.H.) has already dealt with them in his Muḥammadanische Studien, vol., ii, p. 161 sqq. (also his Richtungen der isl. Koranauslegung, p. 58 sqq., 61). They began as stirrers up of religious enthusiasm before the Muslim armies, like the poets in the old days, making free use of sajj, or rhymed prose. Thus they naturally became popular exegetes of the Kurān and public homilists, passing into story-tellers for religious purposes. From these the professional class must have quickly developed and it is certainly strange that there is no mention of them in the first Fanz of the eighth Manṣūrī of the Fihrist where the varieties of story-tellers are dealt with in detail. Further, there is only one trace of them in the Amīlān of al-Maīdānī (d. 518 A.H.) in a muwadda proverb, al-kīṣa la wuhusu `l-kīṣa, “one kīṣa does not love another” (Cairo 1310, ii. 51; ed. Freytag, ii. 304, NP. 180). But in the Ḥiyā of al-Ghazālī (d. 505 A.H.) there are a number of references. In Book I of the Ḥiyā, in the section which deals with the perversion of religious expressions, it is pointed how dīkhr and tadhkīr have been twisted by homilists (wuṣṣa) to apply to kīṣa, poetry, stāth (q.v., cf. also Macdonald, Religious Attitude, p. 173) and fīhmāt (overmastering outpourings); Dozy, Supplement, ii., p. 592). Kīṣa are a bid’a and evidently not one to be approved. The kīṣa appeared only in the troublous times (al-fāra) after ‘Emar, i.e., under ‘Uthmān and ‘Ali. ‘Ali excluded them from the mosques but made an express exception of Ḥasan al-Baṣri because of the truly edifying and terror-striking character of his kalām. A madījī for dīkhr may be more edifying even than reciting the Kurān, according to traditions from the Prophet, but such traditions do not apply to the madījīs of the kīṣa who give the name of tadhkīr to their khurāṣ and are occupied with kīṣa which breed nothing but controversies and which are quite different from the kīṣa of the Kurān. So al-Damārī in his Ḥiyā al-Hayawān (Cairo 1313, ii. 170), giving the story from Tamim al-Dāfī about al-fāra, the strange beast in attendance on al-Daddālî in his island, says that Tamim was the first who kīṣa `ala ‘l-nās. So there are kīṣa the listening to which is for edification and there are kīṣa which are the reverse. The difficulty is to distinguish; truth may easily lead to falsehood and the useful to the harmful. A long statement as to which is quoted from Ahmad b. Ḥanbal (ed. with commentary of Murtaḍa al-Zabîdî, Ihlāf al-Sāda, i. 240 sqq.). Again, in the Book on the Ṣādā, in the section which considers how the pious should pass their leisure time on Friday, there is a warning against the frequenting of the kīṣa (i. 277 sqq.). It is worth noticing that the commentator Murtaḍa (d. 1205 A.H.) uses kīṣa, akhībār and kihāyāt quite indiscriminately. So, too, Ibrahim al-Baidāfī in his Ḥāshiya on Abū Shujā’i’s marr on canon law, written in 1258 A.H., speaks of “lying kihāyāt like the kīṣa of ‘Antar and of al-Dalhama” (Cairo 1307, i. 131, 12). But Massignon in his Essai (pp. 141 sqq., 221) has shown that, in spite of this condemnation,
the labours of the mystics of Islam and of the ḥaḍīth among them were what gave to Islam its permanent type as we know it to-day. Their spontaneous movement, preaching to the populace directly in rhymed prose pointed with religious legend, was the first apologetic and catechetical literature of Islam. They naturally shocked the canonical and theological and religious authorities generally. They were sincere and terribly in earnest and the kāfī who worried ʿAlī with holding forth in the court of her chamber until she sent to Ibn ʿUmar who drove him away and broke a stick over his back, may have been like an over-zealous street-preacher with us (ḥiyā, iii. 279). All depended on the character of the men, as the exception of Ḥasan al-Baṣrī by ʿAlī shows. In Ramaḍān the daily preaching in the mosques is still of this character. It cannot, then, be surprising that ʿaṣūṣa has come to be one of the most popular words for "story" and especially for "religious legend". In the index of book-titles in Alhwardt's Berlin Catalogue (x. 493–496) it occurs 216 times; of these 27 are in the form ʿaṣūṣa ḍuṣūrul ... on which occur for the cases from Buḫārī abové. These are mostly religious stories, but quite large portions of the title are non-religious and of the Arabian Nights type. In the same index ḍīṣṭa occurs only 48 times and there are very few uses of ṣaḥīḥ simply as "story".

Bibliography: A has been given in the article. (D. B. Macdonald)

KİŚI (ṣerār, sestatius, sèt, Sester etc.), an Arab measure of capacity for fluids equal to about a pint. In the early period of Islam the use of measures of capacity seems to have been more general than in the later period for in the mounds of ruins in Egypt, we find numerous broken bottles with the official stamp indicating their capacity expressed in kāfat. We get an idea of the volume from statements such as a kāfat of palm oil weighs 18 ʿaṣūṣa, a kāfat of wine 20, a kāfat of honey 27; assuming a troy ounce of 27.886 grammes and taking into account the specific gravity of the liquids above mentioned, we get a value of c. 0.54 litre for the early Arab kāfat (the old French sèt = 0.46 litre). A multiple was the ʿaṣīra (amphora) = 48 kāf (c 25 litre). — Cf. also the article ʿaṣūṣa.

Kiśwa. [See ʿaṣr, ʿAṣhar.]

Kiṭāa (A.), pl. ḥāṭṭ, "piece cut off", "section", means in the geometry of the Arabs (a) a segment of a circle, the part cut off by a chord; (b) a segment of a cone, the part cut off by a plane; (c) a section of any other figure (parabola, ellipse, etc.). From the same verb ḥāṭṭa come three other geographical expressions, ḥāṭṭ (so written in the Dict. of Tech. Terms, ed. A. Sprenger, etc.) or ḥāṭṭ (so in the Cod. Leidens. 339, i, ed. R. Besthorn and J. L. Heiberg, and in the Muḥāfīz al-ʿOlam, ed. van Vloten) = sector of a circle, i.e. an area bounded by two radii and the portion of the arc of the circle between them; ḥāṭṭ better ḥāṭṭ ḥāṭṭ, a line cutting through the circle, i.e. a sector; ḥāṭṭ = section (through a body) e.g. ḥāṭṭ al-makārah al-mustadār = conic section.

Bibliography: Besides the above mentioned works cf. The Elements of Euclid in the recension of Naṣir al-Dīn al-Ṭūsī, Rome 1594, and Traité du quadrilatère, attribué à Nasiruddin al-Ṭūsī, ed. et trad. par Alex. Pacha Cavathoody, Constantinople 1891. (Here quadriiotore is the translation of al-ṣabīl al-ḥāṭṭa where ḥāṭṭa is apparently an intensive form of ḥāṭṭ i.e. "the polysectant figure"). (H. Suter)

Kiṭāb (A., pl. Kitāb) book. With the art of writing the Arabs had taken over from their Northern Semitic neighbours also the words for book and for writing and in the earlier phraseology Kiṭāb means simply something which is written, not necessarily a book and in fact the word is also applied to a "letter" simply. As we do not possess any Arabic book earlier than the Kurān and the only other remains, besides inscriptions on stone, are the poems of early poets to which we may add in some cases the tale or ḥāṭṭa [q. v.] explaining the occasion on which the poem was composed, we cannot be certain whether books existed or not. The word Kiṭāb occurs rather frequently in the Kurān in several meanings but the outstanding meaning is the sacred book containing the revelation of God to his worshippers and in consequence the adherents of the three great religions known to Muhammad, the Christians, Jews and Mazdians are named the "People of the Book" (Aḥl al-Kiṭāb). For the first the Injīl or New Testament is meant, for the Jews probably only the Pentateuch and Psalms, while we do not know whether any book of the Mazdians was known to him at all. However the Kurān knows of another Book i.e. the Book in which God has written the destiny of every man and in which during his life-time all his good and evil deeds are continuously recorded to be brought before him as witness for his reward or punishment on the Day of Judgment. The "Book" most excellence is however the Kurān itself, if it is the revelation of God, and further through falsifications through ill-will or human error and according to its own assertion there is no book in the world equal to it, nor can it ever be equalled, being the true word of God. As the Kiṭāb is the word of God it has also the meaning in the Kurān of "a decree of God" or it becomes the "impression" which God stamps upon the hearts of men; and as anything written down is lasting so God himself has "written" or made incumbent upon himself to have mercy upon men. Finally it means a simple letter or message written to a distant person.

If we investigate the meaning of the word as applied in the verses of the Arabic poets before Islam we find it used in almost all the same meanings, though perhaps we have to be more sceptical when we find the word in the meaning of divine revelation, though ʿAdi b. Zaid, a Christian poet who lived shortly before Muḥammad, uses the verb in the meaning of a destitution (Qambarat al-Aṣfar al-nafirāna, ed. Cheikho, p. 102 ult.), it may be that the poem was attributed to him by a later forger. I am, however, not so confident that such old references to ideas expressed in the Kurān are of necessity falsifications. More frequent are the references in old poems to
writings in a foreign script, and there is every evidence that the ancient poets were at least acquainted with the appearance of manuscript books adorned with illuminated title-pages. In a verse by Ṭūfāli al-Ghanawi (x. v. 3) the poet refers to a written safe-conduct which he calls a Kitāb. At the same time the word appears to have also the meaning of a book as a literary product and though I believe that poems etc. were committed to writing very early, some elapsing time after the Kur'ān had been fixed in writing in book-form before any other works were committed to paper or parchment and it is very difficult to say which Arabic work was first written in this manner. The collectors of the traditions of the Prophet for a long time insisted upon the Ḥadīth being handed down orally, and the same was probably the case with the commentaries of the Kur'ān by Ibn ʿAbbās. This must have been fairly comprehensive and al-Baghawi in the Muṣālim al-Tanţīl states that he received the book through three different channels. The books on the Maghazi or biographies of the Prophet also were very early committed to writing, but as all the earlier works are lost, except in extracts, it is difficult to say that they were books. This may however be certain, that in Dr. of the poet Lahab existed in written copies before the end of the first century of the Hijra from the verse of al-Farazdāk (Naṣāḥī, ed. Bevan, i. 201, 6) where he states that he possesses his poems in a complete book. After this, books were written in the lands of Islam with feverish activity, to which the thousands of titles of lost works found in biographical works bear witness. Finally, one work has had the distinction of being simply called al-Kitāb, namely the great grammatical book of the Baṣrīan Sībīḥ (Shīwahī) and it is certainly the most extensive work of early Islam which has come down to us.

The Arabic lexicographers try to find an etymology of the word from others meanings of the root in the language which can easily be consulted in the existing dictionaries, but it would be vain to seek the derivation there for a word which had been imported from the North with the art of writing. (F. Krekowsky)

KITABKHANA, library, is a Persian word for which we find also the Arabic mahāba, which is applied to public libraries founded and endowed by princes and private individuals for the benefit of scholars, sometimes for those of a special sect or for some particular study. With the zeal for literary pursuits and the ever increasing composition of books, after the period of conquests, men of literary tastes accumulated handsome private collections of books and from the example of the Kūfī philologist Abū Ṭāmir al-Shaḥibānī we can reasonably assume that it was a custom for authors to deposit copies of their works for reference in the mosque of their town or quarter. The earliest record of anything like a public library is connected with the name of Ḥālid b. Yazīd b. Muḥāwiyah who devoted his life to the study of Greek sciences, particularly alchemy and medicine. We are told that he caused such books to be translated, and when an epidemic occurred at the beginning of the reign of ʿUmar b. ʿAbd al-ʿAzīz, he commanded the books to be fetched out of the library (khhāna) to be made available for the people. However, the first public library on a large scale was the Dār al-ḥikma (Temple of Wisdom) inaugurated by the ʿAbbāsid caliph al-Maʾmūn in Baghdād. To make this library as comprehensive as possible he had valuable Greek manuscripts purchased in the Byzantine empire and translated by a number of competent scholars into Arabic. This library contained books in all the sciences cultivated by the Arabs and it flourished till the city was taken and sacked by the Mongols in 656 A.H. Equal in importance was the library of the Fāṭimid rulers of Egypt in Cairo, which contained untold literary treasures and we learn that in the year 435 = 1043/44 the wazir Abu l-Ḵīṣṇi ʿAli b. Aḥmad al-Dājūḏi gave instructions for a catalogue of the books to be made and the bindings to be renewed, and he appointed Abū ʿAwālī al-Kuṭāfī and Ibn Ḥalaf al-Warrākī to superintend the work. This library remained intact till the death of the last Fāṭimid caliph al-ʿĀḍid, when Ṣaḥāb al-Dīn ordered it to be dissolved and the ʿAḏdī l-Fāḍīlī [q. v.] bought most of the books and deposited them in the library of the Fāṭihya Madrasa which he founded, where they were soon neglected and by the time of al-Kālaḵšandī most of them had disappeared. This library is stated to have contained 6,500 volumes of mathematics, astronomy etc. and among its treasures was a globe of copper stated to have been constructed by Ṭolomeis and bearing an inscription stating that it had been acquired by Khālid b. Yazīd b. Muḥāwiyah. The third great library was that of the Umayyad caliphs of Cordova, which was also dispersed after the Almoravid conquest of Spain early in the fifth century of the Hijra. Among the minor libraries was one founded by the Ghaznavi Sultan Maṣʿūd, most of whose treasures were later transferred to Bukhārā. We are frequently told of valuable private libraries which were placed at the disposal of learned men as e.g. in the biographies of al-Ṣūḥi [q. v.] we read of his large collection of books which were bound in tasteful leather-bindings in red and yellow leather. Al-Ṣafādī [q. v.] records in the biography of Ghara al-Nīfmat al-Ṣāḥī that he founded in Baghdad a library of about 350 volumes for the use of students and that this library was shamelessly robbed by the librarian who had been placed in charge. But even earlier reports of Abū Tamīnī, detained by wintry weather in Hamadān selecting from the books, which he found there in the libraries, the contents of his celebrated poetical anthology, the Ḥomūs. A great impulse was given to the foundation of libraries by the wazir of the Saljuḵ Sultan Malikshāh, Nizām al-Mulk, when he founded in Nishāpūr and Baghdād and other places colleges or Madrasa's for public instruction. These colleges were not only endowed with funds for the salaries of the professors, but also provided with the most precious manuscripts of works dealing with the sciences taught at these institutions. When early in the seventh century of the Hijra the Mongols swept over Persia we read that in addition to the loss of human life and the destruction of other valuable property untold quantities of priceless books were wantonly destroyed. The Ayyūbīd amirs of Egypt and Syria emulated the example of the great Saljuḵ wazir in founding colleges, but from a remark of Kālaḵshandi, neither they nor those in charge of the Madrasa's appear to have had a proper conception of the value of great public libraries (Ṣūḥ al-ʿAšrā, i. 467). For the centuries which
follow we still find learned men endowing mosques and colleges with their books, where they were deposited as Ṭabīʾ or inalienable property, but the custodians with incredible dishonesty in most cases not only did not prevent, but actually connived at the loss of most of these treasures. How many a manuscript which once was deposited in these libraries for all eternity has found its way into private hands, or into the large libraries of Europe! In addition to this in most cases a fearful neglect set in soon after the foundation of the library and instead of being the source for enriching the knowledge of students the books became the breeding places of worms. As the control over the guardians of the libraries was rarely as strict as it should be, the books entrusted to their charge fell frequently into such a condition that they could no longer be used without falling to pieces. A striking example are the books which formed part of the Imperial Library of Delhi, now deposited in the India Office in London; though the volumes may contain many a valuable work, worms and long neglect must at least drive the librarian to despair in his task of making the books again accessible to students. In more recent times this state of things has improved; the Khedival (now State) Library in Cairo has led the way in again collecting the treasures in books which have survived several centuries of neglect, and its treasures are available to students who can afford to visit Cairo. Inestimable are the treasures in valuable books deposited in various libraries in Constantinople of which catalogues have been printed, though these are in many cases very inaccurate. Many valuable libraries exist in Madina and in the ʿIrāq and it is occasionally possible to those who possess Muslim friends in those countries to obtain information about rare manuscripts existing there. We also have incomplete catalogues of the Zāhiriyah library in Damascus and the libraries in the great mosques in Fās and Tunis, but as yet it is very difficult for European students to make use of the treasures deposited in these libraries. In India also we find a new era as is testified by the care which is bestowed upon the books preserved in the State-Library in Haiderabad, the Khudābādsh Library in Bankipore, the Library in Ramnāpur and the Molla Feroz Library in Bombay. I have been told by those who have visited the Imām Vahlīya in Șanāʿ in Yaman that his extensive library contains many very ancient manuscripts among which some are as good as lost to the other world for the present. The Shiʿa shrines at Kāhrībaʾ and Nāḏafāʾ have also valuable libraries, but the hope that these together with manuscripts from other centres in the ʿIrāq might be collected into one central State Library is probably very remote. The very fact that continually valuable ancient manuscripts are brought to Europe from the East is a proof that far more ancient manuscripts are preserved than might be expected from the neglect of many centuries, but the excellence of the paper and ink used in early times for writing has preserved many a volume which would have perished, and in addition it is also probable that at the dissolution of the large libraries their contents found their way into private hands from which they gradually reappear. Testimony for this is also that in the East exist many very valuable private collections of ancient manuscripts as e.g. the library of the Saiyid Șār ʿAl-Dīn in Baghdād and of ʿAḥmad Taʾmīr ʿAṣṣā in Cairo, besides others known to us. Unfortunately the owners are in many cases, the two named excepted, very unwilling to give any information about their possessions. As it is more and more realised that the remains of ancient literature, whether Arabic or Persian, should be made accessible, the owners commence by having some of the rarer works made accessible by the press and when the value is fully recognised we may hope that within the next fifty years much may be in the hands of the students which is now guarded in Eastern libraries.

(First Arrangement, administration and use of libraries. In the fourth (tenth) century there were already buildings devoted solely to libraries and erected specially for this purpose. For example ʿAbd b. Ardashīr, the vizier of Bahāʾ ʿAl-Dawla, built in 381 (991) in Baghdād in the Karkh quarter a Dār al-Kutub, which contained over 10,000 volumes (Ibn al-ʿAṭīr, Kāmil, ix. 246; ʿAṣṣā, Muṣjam, i. 799). The geographer al-Muḳaddasi (p. 449) found in Ṣirāṣ a huge library which had been built by the Bayyid ʿAṣṣād al-Dawla (338–372 = 949–982). This library was a separate building and consisted of a great hall and a lower vaulted building along the three sides of which were a series of rooms (khāiziʾ). Along the walls of the central vaulted room and along the side-rooms were cases of carved wood three ells high and three broad, with doors which were let down from the roof. The books lay on shelves one above the other. The cases used in the Fāṭimid library in Cairo were somewhat different (Makhtīr, Kālit, Cairo 1270, i. 409); the bookcases (rufūf) were divided by partitions into separate compartments (jāfīṣ) each of which was closed by a door with hinges and locks. Open cases which also were divided into small compartments, are illustrated in a miniature by Vahlīya b. Maḥmūd of the year 634 (1237) in the Paris MS. of Ḥarīrī (MS. Arduino, 3847), which shows a library in Baṣra (Blücher, Les ex-libris des MSS. orientaux, Paris 1926, Pl. io). Unlike our custom, we find the books lying one above the other in the small compartments, as is still usual in the East. This explains the Oriental custom (which is only occasionally found in the west) of writing a short title of the works on the upper or lower edge. The books were systematically arranged, classified according to the various branches of knowledge. Copies of the Kurʾān had usually a special place; in the Fāṭimid library for example they were kept on a higher level than the others. The various books were often present in several copies; this made it possible not only to lend the same work to several readers but the scholar was also enabled to read corrupt passages at once in a manuscript by referring to another copy. The Fāṭimid library of Cairo for example had thirty copies of the Kitāb al-ʿArab al-Khalī, twenty copies of the Taʾżīk of al-Tabarī and if the figure is not wrong actually a hundred copies of the Dīkhāra of Ibn Durādī. The catalogues consisted either of several volumes in which (probably according to the various branches of knowledge) the titles of the books were arranged, or, as in the Fāṭimid library, a list of the books within was fastened to the door of each room.)
Libraries usually had a director (قاضي) and one or more librarians (خابين) according to the size of the institution, also copyists (خابي) and attendants (فرزس). We find that some of the most celebrated scholars were librarians: thus the historian Ibn Miskawaihi was librarian to the vizier Abu l-Faḍl b. al-Amid in Raiy (Ibn Miskawaihi, Ṭadżārī al-Umam, ed. Amedioz and Margoliouth, Oxford 1921, text, ii. 224, transl., v. 237); al-Shābāni (d. 390 = 1000), the author of the book of monasteries, was librarian of the Fāṭimid library in Cairo under al-ʿAzīz (Ibn Khalīdān, Wafayāt, i. 358).

The books were acquired partly by purchase and partly by the copyists attached to the libraries copying manuscripts. Maqrizi has preserved for us the budget of a library (i. 459); according to this, the Caliph al-Maḥk (386–411 = 996–1020) spent 567 dinars a year (c. £150) on the Dār al-Īm founded by him. This was allotted as follows:

<table>

Libraries were open to everyone free of charge. Paper, ink and reed-pens were supplied by the authorities. Some private libraries even provided for the maintenance of scholars who had come from a long distance. A deposit had usually to be made if books were taken outside the library buildings, at least Yāqūt (Muqaddam, iv. 509 sq.) (d. 626 = 1229) praises the liberality of the libraries in Marw where he always had two hundred and more volumes to the value of two hundred dinars in his house without a deposit. Instructive in this connection also is the waqf document of 21st Ṣafar 799 (Nov. 24, 1396) by which Ibn Khalīdān bestowed his Kitāb al-Ībar on the library of the Dīmāl al-Karawiyyīn in Fās; according to it, this manuscript was only to be lent out to trustworthy, reliable men for two months at most in return for a substantial deposit; for this period was long enough to copy or study the borrowed work; the director of the library was to take care that this rule was observed (Lévi-Provençal in J. A., ccxxi. [1923], p. 164).

But at the same time we find in Muslim lands purely reading libraries. One of these was the library of the Madrasa al-Maḥmūdiyya founded in Cairo in 797 (1395). By the will of the founder the Uṣṭād Dīmāl al-Dān Maḥmūd b. ʿAlī (d. 799 = 1397) no book was to leave the rooms of the Madrasa. The manuscript of the Ṭadżārī al-Umum of Ibn Miskawaihi (Gibb Mem. Ser., vii/6) published in facsimile by Caetani belonged to this library; in the waqf document on the first page of this manuscript dated 15th Shāban 797 (June 5, 1395) it is written: "The above-named donor makes the condition that neither the whole work nor a single volume of it shall be lent from the library either against a deposit or without one".

Nevertheless by the year 826 (1423) when the books were checked, it was found that 400 volumes (exactly a tenth of the total) were missing, whereupon the then director of the mosque was dismissed (cf. Ibn Ḥaẓjar al-Aṣkāliānī in Quatemère, op. cit., p. 64, 70; Maqrizi, Kāfīf, ii. 395).

If we think of the above statements, which are true even of the fourth (tenth) century, it can safely be asserted that Muslim libraries were in every respect centuries in advance of those of the west. There was a general need for public libraries felt in Muslim lands much earlier than in the west.

**KIṬAL** is one of the names of the xviith Sūrā of the Korān.

**KIṬFĪR** is the name in Muhammadan legend of the Biblical Potiphar. Kitfīr is corrupted from Kitfīr like Bilkīs, queen of Saba, from Niskaurl, or as in the Yūsuf legend we have Aïnām or Haïnām from Muppīm, Huppīm. Kitfīr was then further corrupted to Iṣfīr (so generally in Ṭabārī and Ṭahlābī), Iṣṭīn and almost unrecognisably to Kīṭṭīn (Ṭabārī, ed. de Goeje, i. 377) and Kīṭṭīn (Ṭabārī, Tāfṣīr, xii. 98). On the other hand al-Kūsāt always has Kīṭṭīfar, a direct borrowing from Potiphar. Kitfīr is quite arbitrarily called Ibn Rahaib. In the Kūrān xii. 30, 51, the Egyptian who buys Joseph is called al-ʿAzīz. This is not considered a personal name but a title of honour, for after his elevation we find Joseph likewise addressed as al-ʿAzīz (xii. 78, 88). Joseph succeeded Kitfīr as Treasurer of Egypt, according to some in Kitfīr’s lifetime after his dismissal from office, according to others only after his death, when Joseph inherited his office and his wife. Legend numbers Kitfīr, along with Jethro’s daughter who offered hospitality to Moses and Abi Bakr who magnanimously appointed ‘Omar his successor — as the three aflare, most chivalrous and noblest in their dealings among mankind (Ṭabārī, Ṭahlābī). Cf. also ʿAzīz and Yūsuf b. Yaʿkūb.

**Bibliography:** Ṭabārī, ed. de Goeje, i. 378, 381, 382, 391, 392; the commentaries on Sūrā xii.; Ṭahlābī, Kīṭṭās al-ʾAnbīyāʾ, Cairo 1325, p. 74, 75, 76, 80; al-Kūsāt, ed. Eisenberg, p. 161, 162, 164, 168. (B. HELLER)

**KIṬMĀN.** [See TAKIYĀ.]

**KIṬMĪR.** [See AŠAB AL-KAHF-]

**KIYĀFA** is an infinitive of the 1st stem (form of name of office or trade, Wright, i. 1140) of root k-w-f, meaning “trace, follow traces, follow”.

**KITABKHANA — KIYAFFA**
The root does not occur in the Kurâń except as a variant in xvii. 39 (Baidawi, ed. Fleischer, i. 539 sq.), but the cognate root ḫ-f-n, with the same meaning, occurs five times. Technically in old Arabia ściif (pl. ściifs) was used not only by one who followed and interpreted actual tracks on the ground but also of one who professionally established kinship between individuals by likeness, primarily likeness of the feet. This ability was ascribed peculiarly to the tribe Muljudi, who were called simply al-Kiṣa (Ibn Kutaiba, Ma‘arrif, ed. Wüstenfeld, p. 32 sq.); so muljudzius meant ściifs. Other synonyms are mujjudziss, lit. “shearer” (Lisan, xi. 202 sq. where cf. whole article for ściifs in general; Goldziher, Muh. Studien, i. 185) and kāṣir, lit. “conjecturer, guesser” (Goldziher, p. 184, note 9, who refers to Aqabhi, x. 38 sq.).

In a story given from Muhammad al-Anbârî by Freytag (Chrestomathia, p. 31 sq. “a person” of the Prophet tells by his firâsâ [q.v.], that he is a foster-child and foretells his future eminence. And the Prophet himself in tradition (Bu‘haq, Farâ’dî, b. 17; Muslim, Raf‘a‘i, trad. 36, bab: al-walad li l-ṛiḥâḍ) decides a case of kinship by resemblance (ghabābâ). In the same passages and other traditions giving prophets sanction to the practice and others as synonyms ściifs, muljudji and mujjudzius: it is plain from them that the ściifs paid special attention to the feet, as was natural in a race of trackers. From the fact that a poet in the Hamasa (ed. Freytag, p. 504) is named simply Ṭiṣṣa b. al-Kiṣâ if the profession was evidently one of distinction. From the beginning, also, it had in it a certainty: it was an innate power belonging to certain individuals or the peculiar inheritance of a tribe. It, therefore, attracted the special attention of Mu‘azzilites who felt driven to accept certain facts as to it but had, on their principles, to seek rationalistic and philosophical interpretations of them. Al-Mas‘ûdi in his Mu‘aṣir gives to it and some allied phenomena a whole chapter (ii., Paris ed., iii. 333—340) and refers to other books of his where he has treated the same subject more completely. Kazwini in his ‘Agâlah al-mu‘asirî (ed. Wüstenfeld, p. 218) treats it similarly to psychical power in those who profess it and places their “souls” (nafsîr) as, in the class of the nafs al-fâsîlka, “super-souls,” among which are those of the prophets, the wâli’s and kâhin’s: all these possess a certain instinct of insight. In canon law ściifs of necessity plays little part. The services of a ściifs are to be called in only when the paternity of the child of a female slave is in doubt as between a former and a present owner (Juyboll, Handbuch des Islam. Gesetze, p. 187 sq.); for further details see Sachau, Muh. Recht nach Schaf. Lehre, p. 89 sq.; Baiduri, Ḥusniya on the Sharh of Ibn Kásim on the text of Abu Shu‘îda, Cairo 1307, ii. 184 (in amkan kawwnu minhumma ‘urîsa ‘ala l-ṛiḥâs); Nawawi, Minhadî al-Qâlîn, ed. van den Berg, iii. 450 sq.

In present day folk-lore usage ṭiṣṣa has become chirocyany and physiognomy, called also ‘alîn al-simiyâ and ‘alîn al-nasirî (Boehrer, Dictionnaire français-arabe, vol. i. p. 154b; Doutte, Magie et Religion, p. 370 and references there). Very strangely the word has come to mean in modern Egyptian colloquial, “style, fashion,” sâkh ṭiṣṣa, “a stylish person” (Sprio, Vocabulary of the col- loquial Arabic of Egypt, p. 595, who gives no other meaning). This apparently connects with Turkish and Persian usage of ściifs in sense “ap- parel, form, gait, costume” (Redhouse, Turkish and English Lexicon, p. 1503b; Steingass, Persian-English Dictionary, p. 997a).

Bibliography: The principal treatments of this subject are in Robertson Smith, Kinship and marriage, ii. 169 sq.; Goldziher, Muh. Studien, i. 184 sq. Doutte, Magie et Religion, p. 370; Dozy, Suppl., ii. 4200; see further references in all these. (D. B. Macdonald)

Al-Kiṣâma, “the Arising” (of men at the Resurrection), and al-Sâ‘îna, “the Hour” (or Day of Judgement), come for theologians under the general term al-Mu‘âd, “the returning” i.e. the return to life after death; and they rank them among al-ramîyât, things on which traditional teaching is based, as the prophetic office, or which for their authority go back to the prophetic office, as this Return and such causes of eternal happiness and misery, connected with it, as faith and obedience, unbelief and disobedience (Mawāzik of al-İdî, Bai‘lî, 1266, p. 544 sq).

A schematic statement of the order of events in Muslim eschatology. I. The Signs which will announce the coming of the End, especially the appearance of the Antichrist, al-Daddjâl (see above, i. 886 sq.), who will lead almost all men astray, followed by the descent of icles (see above, ii. p. 524 sq.), or the Mahdi [q.v.], or ‘Isâ (both), who will kill al-Daddjâl. A period of faith will follow. II. The First Blast of the Trumpet; all living things will die. The Interval. The Second Blast of the Trumpet, bringing all living things to life again and uniting them at the Place of Gathering (al-mu‘asir), the long standing there (al-mu‘asir) in the presence of Allah and the Sweat (al-‘ârba‘). III. The Judgement begins. The questioning of each individual directly by Allah. The Books of Record. The Weighing of the deeds of those as to whom there might be doubt. Adjustment of enmities and requital of wrongs between man and man, and man and beast. IV. The Bridge over Hell into Paradise (al-Sirâf). The Intervention (see Hâfûzah). The Tank of Muhammad. V. The Fire (Hell and Purgatory; see Hâannah above, i. 998 sq.); the Garden (Pardise: see Wannah above, i. 1014 sq.); a Limbo (according to some theologians). — Ḥa‘ûl of al-Ghazâli, Cairo 1334, iv. 436—453; Ḥâfî, commentary on Ḥa‘ûl, x. 447—520.

For Muhammad, a revivalist preacher seeking to strike terror in his hearers, the doctrines of the Resurrection and of the Judgement were of the first importance, and the Kurâń, in consequence, is full of references to them. The word mu‘âd occurs once only (Kur. xxviii. 85) and evidently has not this application there: it may mean the place of Muhammad’s resurrection or Mecca to which he will return from exile (Baidawi in loc.). But the verb is used very frequently; in Kur. iv. 10, 35; xxi. 104; xxx 10, 26; lxxvii. 13, of Allah’s bringing men back at the resurrection, in contrast to his first production of them (ada‘a‘); in contrast to his andha in Kur. lxii. 16, 17; in contrast to his faqara in Kur. xxvii. 53. The same verb is used of the regained processes of creative power in the earth in Kur. xcvii. 65; xxix. 18 and of man being brought back to the earth at death and burial, Kur. xx. 57, al-Kiṣâma, only in the phrase yarìm al-kiṣâma, occurs 70 times, e.g. ii. 79, 107, 169, 208; iii. 48, 71, 155;
whelming terrors — passing into descriptions of the Fire and, in contrast, of the Garden. In the Kur'ān it is a Judgement of individuals and not of peoples or of religious bodies in masses; this, as Wellhausen pointed out, shows the Christian, as opposed to Jewish, theological influence upon Muhammad. Later traditions and still more the theologians were going to change all that with the according with the “agreement” (iddmā) of Islam. As examples of these multitudinous, longer or shorter descriptions, reference will suffice to Kur. vi. 22—31; xix. 67—74; xxii. 1—7; xxii. 101—end; xxxix. 69-end; li. ix.; lxv.; lxxvi.—lxix.; lix.—cx. Naturally the most the picturesque details are in the earlier and more poetical sūras. The descriptions of the Garden changed also with Muhammad’s changing circumstances and age; cf. Josef Horovitz, *Das Koranische Paradies*, Jerusalem, 1923.

In these descriptions there are certain references and allusions which (i) tradition has developed more precisely and elaborately, of which (ii) the systematic theologians have made chary use in their short eschatological statements but which (iii) the writers for religious edification have expanded in intolerable and contradictory detail. Thus (i) the sírāj is only once in the Kur’ān (xxvii. 23) sírāj al-dajālim — a mere allusion to “the road to Hell”. This has become in tradition “the bridge”, elaborately described, “over the back of hell” (Sahih of Muslim, i, 113, 116, Kitāb al-ʿimām; Sahih of Bukhārī, i, 128, 130, Kitāb al-tawḥīd). (2) The noun muḥāl does not occur in the Kur’ān, but four times (vi. 27, 30; xxxiv. 30; xxxvi. 24) there are allusions to man standing in the presence of Allah on the Day. This has become the awful scene al-Ḡazzālī develops so fully in his *Durra* (ed. Gautier, 1878, p. 50 sq.). (3) Kur. lxviii. 42, “on the day when a shank (sāk) shall be uncovered” means, according to the commentators (e.g. Baidawi, Fleischer’s ed. ii., p. 350, l. 10), a day of stress and trouble when skirts will be tucked up for flight. In the traditions (Sahih of Muslim, i, 115 foot — Kitāb al-ʿimām; Sahih of Bukhārī, i, 130 — Kitāb al-tawḥīd) the sāk is that of Allah and the uncovering of it is a sign between him and the true believers.

(4) On the resurrection trumpet there is much more in the Kur’ān. The Kurānic formula is muḥāl fi ʿl-fur (vi. 73; xviii. 99; x. 102; xxii. 103; xxvii. 89; xxxvi. 51; xxxix. 68; l. 19; lxii. 13; lxviii. 18), except in lxiv. 8; where it is muḥāl fi ʿl-nakār. In lxiv. 13 a single blast, muḥāl fi ʿl-wāhīd, is enough; but in xxxix. 68 there are two blasts; at the first all in heaven and earth, save whom Allah wills, swoon (ṣaḥka); at the second they are restored and stand up. This whole passage has evidently been of the first importance in the forming of the later picture of the Day. In tradition the first blast of the trumpet is reckoned among the Signs of the Day (Sahih of Muslim, vii. 101 sq.; xxvii. 29; Kitāb al-ṣiṣan wa-ṣirāj al-wādā). (5) The word for “lalances” when used in the singular in the Kurān expresses the general idea of justice (xiii. 16; lv. 6, 7, 8; lii. 22 and Baidawi on these passages) but the plural, muḥāl wa-mudawwān (vii. 7, 8; xxi. 48; xxxii. 18, 105; ci. 1, 6) is used only, in fixed phrases, of weighing men’s good and bad deeds in the eschatological Balances on the Day. (6) There is a personal
account between Allāh and every man (hiyāth and other terms; cf. C. C. Torrey, Commercial-theological terms in the Koran, Leyden 1892, p. 9 sq.) and there are books written by recording angels (isfāra, habībīn; lxxxi. 11—15; lxxxi. 10—12; lxxsii. 7, 18). Each man has a book of his own deeds or there is simply the Book (x. 62; xxxiv. 3; xvii. 14, 15; xvii. 47; lxix. 19, 20, 25—7; lxxxiv. 7—12); Allāh himself is a witness (shahāth, or he is watching in a lurking place, like a hunter waiting for game (lxxxi. 13, al-bi‘l-mirzād); or Ḏjahānan, personified, is such a mirzād (lxxviii. 21), a dubious phrase which gives the commentators much trouble. (7) Again, Ḏjahānan (occurs 77 times) is brought as though it were moveable (lxxxi. 24) and there is a description of it (xvii. 7, 8) as being braying and boiling and almost bursting with rage as though it were a wild animal. What this became in tradition is seen in the Ṣāliḥ of Muslim, vii. 149 sq.; Maqāṣid al-sunnah, Cairo 1318, ii. 154—156; Miḥkāt al-maṣājiḥīh, Dihli 1327, p. 428—430. Al-Ghazālī develops the idea still further, for pious edification, in his Durra, p. 41, 56 sq. (8) In Kur‘ān xlv. 9 there is a very obscure expression, “Then look for the day when the heaven shall bring plain smoke” (dakhān musākin). Baijāwī (Fleischer’s ed. ii., p. 246 sq.) gives as a possible interpretation a reference to smoke as one of the Signs of the Day; for the traditions on this see Ṣāliḥ of Muslim, vii. 130 sq., 179, 208. (9) For a supposed Kur‘ānic allusion to the descent (nasrīt) of Isā as one of the Signs of the Day see above Ḥāyā, ii. 525 and add to the references there Ṣāliḥ of Muslim, i. 93—95, 107 sq.; vii., p. 175—208. (10) Another of the Signs to which allusion is made in the Kur‘ān (xxvi. 84) is the Beast of the earth (dāḥbatan min al-ard); cf. Ṣāliḥ of Muslim, i. 96; vii. 179. Baijāwī (in loc.) identifies it with al-ghurūk, ‘the searcher out’, described in a tradition in the Ṣāliḥ of Muslim (viii. 203—206) as in attendance, according to Taimi‘ al-Dā‘ī, on the false Masih al-Dadjudjīl, apparently the Antichrist, in a certain island; see also, i. i, xvii. 357; Danīr’s Ḥāzir al-yawmiyān, Cairo 1313, i. 170. (11) On the Day of Judgement, who is not in the Kur‘ān at all, see traditions in Muslim, vii. 161, 194—208; on p. 189 thirty lying Dadjudjīl will come before the end; Bakhārī, i. 159 sq. See, also, Dadjudjīl, above i. 886; the name is evidently Aramaic, not Arabic. (12) The Tank (hawd) of Muḥammad also plays an obscure part in the picture of the Day, although it does not occur in the Kur‘ān. There is doubt especially as to the end of the Sīrat at which it should be placed; in later collections of traditions (Maqāṣid, ii. p. 145; Miḥkāt, 415) it is grouped with the Intercension and after the Reckoning and the Weighing. See, also, Bakhārī, i. 46. (13) In the story of Ḫūl ‘l-karmān in the Kur‘ān (viii. 82—98) he builds a great wall to keep back Yādjudjīl and Mādjudjīl. But that will hold them only until the Day; then it will be made dust (verse 98) and they will come out (Kur. xxi. 96). For this, among the Signs, in tradition see Ṣāliḥ of Bakhārī, i. 61; Ṣāliḥ of Muslim vii. 165 sq., and often.

There is thus very little in the Kur‘ān as to the Signs preceding the Last Day; but such picturesque and accidental references as there are have proved useful in the later development. The systematic theologians have been by far the most cautious in this. Nasāfī in his ʿAṣīt‘ī gives only five: the appearance of al-Da’djudjīl; the Beast of the earth; Yādjudjīl and Mādjudjīl; the descent of Isā; the rising of the sun in the west. Taftāzānī in his commentary on this passage (p. 145) gives ten: the Smoker; Da’djudjīl; the Beast; the rising of the sun in the west; Isā; Yādjudjīl and Mādjudjīl; three eclipses, in west, in east and in Arabia; a fire which will break out in al-Yaman and drive men to the Place of Gathering; cf. a similar list in the Ṣāliḥ of Muslim, vii. 179. But the traditionalists have luxuriated in tendentious details. A section of tradition is devoted to al-fītān wa ‘asārū or ‘ayyāt al-sā‘ā, “trials and signs of the Hour”; Ṣāliḥ of Muslim, vii. 165—210; Ṣāliḥ of Bukhārī, ix. 46—61; Miṣkāt, ii. 128—42; Miḥkāt, p. 392—410. To give any full analysis of these would be impossible here. Reference may be made for this and for details on the Resurrection and Judgement to Hughes’ Dictionary of Islam, p. 539—449. This is largely based on Sale’s Preliminary Discourse”, Section 4, p. 76—103 of ed. 1734, and he, in turn, was greatly indebted to the learning and research of Edward Pococke, in his Porta Mosis, ii. p. 235—313 of ed. Oxford 1654—55, who gives Arabic passages and other terms at length. These details were then taken up by the writers for religious edification and an immense literature was based upon them. Even among mystics in Islam religious conversion has normally been wrought by fear of the wrath of Allāh; in consequence their books are full of pictures of the horrors of death, the resurrection and the judgement. This is the whole bearing of the last Book of Al-Ghazālī’s Iḥyā‘ (iv. 361—469) on “Taking thought of death and that which comes after it” (Dhikr al-mawṣa wa-ma būdallū), until it ends in a few pages on the Beatific Vision in Paradise and the wideness of Allāh’s mercy, for luck! (ṣalih sunb al-tashrī‘). His smaller treatise, al-Durra al-Fāḥihah, on the same subject, goes still further in this direction.

Yet in this mass of tradition certain drifts of influence and development show themselves, theological and historical. Reference has already been made to the development of the two judgements, one a lesser on the death and burial of the individual and the greater on the Day itself. It is difficult to say whether this was in the mind of Muḥammad, but it was a natural development of the doctrine of the Punishment of the Grave which is so strongly represented in traditions. The doctrine, also, that the Fir‘ will itself be a temporary place of purgation for “certain rebellious ones of the believers” would naturally grow out of this. It, too, is represented in tradition and has become fixed in theology (Taftāzānī on Nasāfī, p. 114—19). On the whole question, see Immortality in Mohammedanism by the present writer in E. H. Skeat’s Religion and the Future Life, New York 1922, p. 311 sq. This leads naturally to the relation of faith and works and of sins, greater and lesser, and that involves a classification of different ranks even among the saved believers. On the whole question, see Imām, above ii. 474 sq. Some believers will enter Paradise without any punishment or even reckoning (hiyāth); there will be 70,000 of these (Muslim, i. 136—138). Then there are the shu‘ā‘ārā, whose spirits (arwāḥ) seem already to be in Paradise (Muslim, vi. 38)
and a man who is killed in defence of his property is a āḥādī (q.v.) and his slayer is in the Fire (Muslim, i. p. 87). But the theological question which seems to have weighed most heavily in the Muslim world when traditions were being formed was that of Intercession (ṣuḥfaʾ, q.v.).

The historical influences are equally plain in these traditions. Some may go back to Muhammad himself full of forebodings as to the future of his people; the times must be evil before they are better. Such are those which tell that the Hour will not come until no one in the world says "Allah" and "Muhammad" — i.e. there is no faith left (Muslim, i. 89—91). But others seem clearly connected with the later civil strife. The traditions prophecying the murder of ʿUṯmān run into prophecies of the Hour (Muslim, viii. 170 foot) and show the deep feeling of despair produced among the pious by the civil wars and the growing unbelief. Again, when the dream of the speedy conquest of Constantinople faded, the belief rose that that conquest would be one of the Signs of the End. As soon as the cry of Muslim triumph was heard in that city their armies would be recalled to face Antichrist, al-Dādijāl (Muslim, viii. 187 sq.). Then Īsā would descend. So some traditions see the whole world plunged in unbelief before the end, and others make the crowning conquest of Islam introduce the end.

The theologians have seen quite clearly that it was impossible to construct out of these materials a consistent narrative of what would take place on the Day. So they have abandoned the attempt and contented themselves with saying that such and such things — the ẓirat, the Weighing, the Tank, etc. — are Realities (ḥākīkāt) and leave generally untouched what kind of reality is meant. Philosophically, they knew very well, there are different kinds of reality (Nasāʾī and Taftāzānī, p. 110 sq. ʿĪḍā, p. 592). They thus abandon picturing the Day to such religious writers as have edification for their object and not fact. Apparently the distinction was quite clear in their minds, and it goes back to the fundamental principle in Islam of the economy of teaching ("Speak to the people according to their understanding" — a saying ascribed both to ʿAlī and to the Prophet) which was the ultimate source of the medieval doctrine of the two-fold truth. The situation may be illustrated by al-Ghazālī's method which was at least three-fold. In the last book of the Ḥiyāʾ and, still more, in the Durra his frank object is to strike terror; these are all Realities — very dreadful Realities! Yet his philosophical conscience troubles him and even in the Ḥiyāʾ (Book of ṣawāḥel, "Repentance", iv. 20 sq.) he teaches that words applied to concrete things in this world can be used of things in the world to come only by metaphor, as amthāl, and he defends this by ʿUṯrān xix. 42. But in his Ikhtīṣād (Cairo 1920, p. 96—98) he is a sober scholastic — the Mīṣān and the ẓirat are ḥākīkāt by revelation and the reason cannot deny them; in his Maḥṣūn (Cairo 1903, intended for theological specialists) he develops to a certain extent the philosophical bot-tomming of these ideas — the Intercession (p. 28), the Reckoning and the ẓirat (p. 36), the pleasures of Paradise (p. 38 sq.) which will be sensuous, imaginative, rational (kissīt, ḥāyālī, ʿabīdī). The feeling left in the mind is that there are still more distinctions, explanations and refinements behind the two Maḥṣūn's, and that feeling is strengthened by his Miṣḥīṣīt al-answāʾūr; see the translation of this by W. H. T. Gairdner in "Asiatic Society Monographs", vol. xiv. Further, al-Ghazālī developed the doctrine of a Limbo for those who, by reason of youth, mental affliction, historical and geographical situation and environment, had not been able to become Muslims and, therefore, had no works of obedience, in the technical sense, to their credit. There was nothing against them and punishing them in the Fire would be unjust: but there was nothing also for which they could be rewarded. He found a place for them, therefore, in the ʿUṯrān al-Aʿwāf (vii. 44—46) which he explained as a "Heights" whence those in the Limbo look down on both Heaven and Hell and their inhabitants. Such a conception was beyond doubt very far from Muhammad's mind, but as a theological fiction it was sufficient for al-Ghazālī's purpose. For the four-fold classification of man which thus resulted see his Ḥiyāʾ, iv. p. 20—28; Ḥiṣāf, viii., p. 548—570; for this particular class see his Faṣāʾī al-tafṣīla, ed. Cairo 1913, p. 75 sq. and Ḥiyāʾ, iv. 27 sq.; the Ḥiṣāf, viii., p. 564—568 gives different views on the subject and there is an attack on al-Ghazālī's position in Les Problèmes Théologiques de l'Essoussi by J. D. Luciani (Alger 1908), p. 106 sq. On the whole subject see Miguel Asín, La Escatología musulmana en la Divina Comedia, Madrid 1919, p. 99 sq. The treatment of eschatology by al-Īḍā is in his Mawākbīf is of the dryest scholasticism, in startling contrast to the picturesque ness of the materials he uses. Like al-Ghazālī he makes no use of the Signs; they were history, apparently, and not philosophical theology. He begins with the possibility of a Return to existence of a nomeny (naḏāʾūn) and fights that out with the different unbellying philosophical schools: the different elements that follow suggest to him only dogmas to be demonstrated, and even the doctrine of the Intercession of Muhammad interests him only by its connection with the Muťāzīlī heresies. For eschatological ideas as developed among the mystics see Louis Massignon, La Passion d'el-Hallaj, Paris 1922, ii. 664—698.

Bibliography has been given in the article.

(D. B. MacDONALD)
In some traditions (Nasir, Addāh al-Ku‘lī, b. 11) there is mention not only of the Kur'an and sunna, but also of the “usage of pious individuals” (al-Sāliḥūn) taking precedence of kiyas among the uṣīl. “The usage of pious individuals” has taken the place usually accorded to knobma [q.v.] which is the third “root”, kiyas occupying the last place.

Although it is admitted, kiyas is nevertheless surrounded by restrictions. Here are some examples. The opponents of kiyas quote Sūra iv. 62 “and if there are differences of opinion between you and your chiefs, try to settle them, relying on Allāh and his Messenger”. Allāh and his Messenger, according to them, means Kur'an and Sunna. The verse therefore passes over kiyas in silence. Ḑaldāwī replies to this objection “Settling the differences by referring them to the texts is done by tamkif (see below) and by deduction” i.e. by kiyas.

This verse has given rise to a full exposition of the limitations of kiyas on the part of the commentator Fadl al-Dīn al-Rāzī, who lays down the rule that Kur'an and Sunna have precedence absolutely over kiyas. Only when it is impossible to use these “roots”, the use of kiyas is permissible, cf. the tradition about Mu‘ādh (translated above) and the example of Iblis, who argued instead of obeying the commandment of Allāh (see above). The text of the Kur'an is established by tawitter, while kiyas is only maqfūn and following one’s zann (individual opinion) is what the kūffar do (cf. Sūra x. 67). If traditions require to be verified by the sacred text, kiyas does still more so. The Kur'an is the word of Allāh, while kiyas is the work of the feeble intelligence of man.

(A. J. Wensine)
Strait of the Dardanelles. *Kiz-tash* is the name given to Marcian’s column at Constantinople, because this ancient monument was credited with the power of distinguishing virgins from others (Galland, *Journal*, ed. Schœfer, ii. 125).

*Kizlar Ağa*, “the Aga of the maidens”, a title borne among the Ottomans by the chief black eunuch, the negro supervisor of the Imperial Harem. His official title was dar âsî-şerâdet al-şerifî ahâzî, “the Aga of the noble Gate of felicity.” He was entitled to be called deyân-ül-nümay-ül-ayvan ve “Highness”. In the Sultanate appeared at the head of the following officials of the *Müällim*, which were the rank of mey身边的 (marshal). ([Cl. Huart]

**Kizil Ahmadi** [See ISFANDYâR OGHUŁ].

**KIZIL ARSLÂN** [“Othman b. Ildegis, an Aţabeg of AĎarbâjadi d. His father, the Aţabeg Ildegis [q.v.], had been the real ruler in the whole Seldjuk empire. Kizil Arslan’s mother was the widow of Sultan Toghril I and mother of Sultan Arslan b. Toghril [q.v.]. When Ildegis died in 568 (1172), he was succeeded by his son Muhammed Pahlawan; in 570 (1174–1175) the latter besieged Maşgha while Kizil Arslan advanced on Tabriz and when the lord of these two towns, the Kâdi Südr al-Dîn, entered into negotiations and declared his willingness to give up Tabriz, Muhammed Pahlawan declared himself satisfied and gave the town over to his brother Kizil Arslan. In the beginning of 582 (1186), or according to another statement as early as 575 (1160), as Sultan Ahmad Pahlawan and Kizil Arslan took over the government. Muhammed Pahlawan had been on good terms with Sultan Toghril II who had long before succeeded his father Arslan. But Toghril was treated almost like a prisoner by Kizil Arslan. When he fled from Hamadhan to Semanî, Kizil Arslan pursued him and overtook him near Đâmaghân but had to retire after a desperate battle. While the Sultan returned to Hamadhan, Kizil Arslan appealed to the Caliph al-Nâşir who promised to help him and sent his vizier Djalal al-Dîn ‘Ubaid Allâh b. Yûnus against Toghril. ‘Ubaid Allâh was however defeated in the beginning of Rabi’ I, 584 (May 1188) and the Sultan threatened AĎarbâjadi. Kizil Arslan then again occupied Hamadhan and had Sindjâr b. Sulaiman Şah (or b. Malik Şah) proclaimed Sultan, while his nephew Kutlugh İnâdî b. Muhammed Pahlawan rebelled in İsfahân. Kutlugh was soon driven out by Toğrîl but when he was pursued and an encounter took place fortune did not favour Toğrîl and he had to return to Hamadhan which Kizil Arslan had in the meanwhile abandoned. The latter then suddenly appeared on the scene, captured Toğrîl and interned him in the fortress of Kahrân in AĎarbäadjînd, and then by arrangement with the Caliph set aside his protégé Sindjar and assumed the title of Sultan himself. But in the night before his coronation, or according to another authority, some time after it, he was murdered. This took place in Sha‘bân 587 (Aug.–Sept. 1191) or according to others in Shawwât (Oct.–Nov.) of the same year; but see Houtsma, *Some remarks on the history of the Sultuks, Acta orient., iii. 143: The murderer was never identified.*

(K. V. ZETTERSTÈEN)

**KIZIL-BÂŞH** (fr. “Red Head”); the name given by the Turks to the confederation of seven Turkoman tribes, Čstâqlu, Şâmli, Tekelî, Bâhârî, Dţâ ‘l-Kârî, Kasâtîr and Aşfârî, who placed the sheikhs of Arslabî on the throne of Persia and helped Shah Ismâ’îl to found the dynasty of the Şâlûwîd [q.v.]. The latter had given them as a head-dress the red turban worn by the disciples of his ancestors.

This name was taken by J. Morier for the title of one of his novels, *The Kuzelibash, a tale of Khurasan*, 3 vols., London 1828, the period of which is the reign of Nâdir-Shâh.

**The name of a religious sect found throughout Asia Minor and regarded as Shi‘i by the Muslims; it is closely connected with the Nusairis of Syria. Its adepts call themselves ‘Alawî, i.e. followers of ‘Ali. Some are Kurds; the others are for the most part Turks and only speak Turkish. Unlike the Muslims, they do not shave the head and let their beards grow freely; they do not observe the canonical prayers (jâ’il) or ablutions. They drink wine and do not observe Rama‘ân. They fast for the first twelve days of Muharram and lament the deaths of al-Hasan and al-Husain. ‘Ali is an incarnation of God who had already manifested himself in other incarnations, such as Jesus. God is one in three persons; below him are five archangels, intermediaries between the divinity and man, twelve ministers and forty saints. They have a reverence for the Virgin Mary and recite litanies in her honour. They celebrate as a service during the night. The priest who officiates sings prayers in honour of ‘Ali, Jesus, Moses and David, accompanying himself on musical instruments. He holds in his hand a willow wand which he steeps in water; this consecrated water is then distributed among the houses. During the ceremony those present publicly confess their sins; the priest imposes penances, such as fines in money or kind. The lights are then extinguished (hence the Turkish expression zarik-sundurun, “extinguisher of torches”, by which they are popularly known) and they abandon themselves to lamentations and weeping for their sins. The lights are again lit; the priest pronounces the absolution (which may be refused, at least for a certain time); he takes pieces of bread and a cup of wine or similar liquid and after consecrating it steeps the bread in the wine and distributes it among those present. Those whose neighbours cannot report favourably upon them are excluded from it. Among the Kurds a sheep is also sacrificed and its flesh is distributed at the same time as the bread and wine.

They have a hierarchy at the head of which are two patriarchs regarded as descendants of ‘Ali and invested with divine power; one of them is the Shaikh of Khubûrûn, who lives in a tekke built in the wilds. He is recognised as Šâfî Shaikh by the government. Below him are bishops and at the bottom of the hierarchy, priests (delev), intermediaries between God and man. The Kizil-bâşh observe several Christian festivals, Easter, which falls on the same Sunday as that of the
Armenians, preceded by a week's fast, and that of St. Sergius celebrated on February 9th. They do not permit divorce. Like the Muslims they have a religious veneration for certain trees; they revere the sun, moon and the sources of rivers. Their principal sanctuaries are the tekke of Khabyar, those of Sewidji, Pir Suljian-li Yalindjek and Hadjidji Bekatsh. Their religion seems to consist of survivals of pagan beliefs mixed with forms of Christianity current in the Circassian part of Islam. They number some six million (Kurds of Dersim, Malatya, Terjman, Etindjek, part of the wilayets of Siwás and Bitlis, Turks of the wilayets of Ma'meret al-Aziz, Siwás and Angora).

In Afghanistan, the name is given to immigrants of Turkoman stock who form with the Tadjik and Hindi the principal representatives of the bourgeois class; they came from Persia in the train of Nadir Shah who settled them in Kábul and several other towns as garrisons. They keep themselves aloof from the rest of the population; at Kábul the court and government officials are recruited from them; at Herât they are engaged in commerce and industry. They speak Persian, while using Turkish among themselves. Their number is put at 75,000.

**KIZIL-IRMÀK** (r. "Red River"), the ancient Halys ("Azuç"). Alys ("Azuç"), the largest river in Asia Minor. It rises in the mountains which separate the wilayet of Siwás from that of Erzerüm, waters the towns of Zarrá (4,530 feet high) and Siwás (4,160 feet high), then enters the province of Angora where it meets the mountain of Arjijsh and the Köjja Dágh range which force it to make an immense detour of over 160 miles. Its course is at first south-east, then it turns northwards, and finally it reaches the Black Sea below Hafra in the middle of marshes. It is nearly 600 miles long. Its waters of a dark yellow when they are in flood diminish enormously in the summer; its bed is wide and its banks high. Its principal tributaries on the right are the Köhân-süyu and the Delidje-Cati; those on the left are the Sérnamak-Cati which flows by Kársariye, the Dewrek-Cati from Tiosia, the Gók-Irmák which comes from the Iłháš-Dágh (the ancient Olgasus) and waters the town of Kashtshmi (q. v.). — According to Strabo (xii. 561), the river Halys ("Azuç") took its name from the mines of rocksalt, the produce of which was exported in the form of large blocks; these mines thirty miles to the north of Váshdén near the village of Sét-Kámish, are worked among the red sandstone, covered with clay and marl of a reddish colour; this soil washed down by the heavy rains gives the river a reddish colour, whence its name.

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotus (i. 72) makes it a frontier between Lydia and Media. It seems to have been known to the Arabs by its ancient name, if it is it is referred to by the name Ais in a verse of Abü l-Ihsan al-Màrri (S. de Saucy, *Christianthef ar*), iii., text, p. 45; trans. v. 50, it gives by mistake "Aou" an error reproduced by Defrémery, *Mémoires d'histoire orientale*, ii. p. 221.

**KIZIL-KUM** (r. "Red Sand"), a desert between the Sir-Dârâ and the Amú-Dârâ, cf. above, p. 741, *Kax-Kaxum*. The country is less uniform, especially in the central part, than the Karâ-Kum; the desert is crossed by several ranges of hills. The Killz-Kum becomes more and more inhospitable as one goes southwards. The region called Adam-Kârlshgan ("where man perishes") between the Amú-Dârâ and the cultivated region of Bukhârân consisting of sandhills (barûkhân) is considered especially uninhabiting and dangerous. In the summer there is absolutely no life in the desert, in the winter a few springs are visited by the Körliz (Kâzak). In the middle ages also, we are told, a campaign could be conducted from Djend against Khvarism i. e. through the Killz-Kum in winter only when the desert was covered with snow (Baijâli, ed. Morley, p. 858 sq.). As usual, the desert sands are encroaching on the cultivated lands as a result of the normal life of the scene and the resulting destruction of the scanty supply of wood. In the second half of the sixth century several villages on the lower course of the Zarafshân have become buried in sand.

**KIZIL-ÖZEN** (in Turkish Vzeri, "Red River"), the ancient Amardus, a river which flows through A dabábélijan and enters the Caspian Sea, forty miles east of Enzeli, after having received the Persian name of Sefid-Rûd, "White River", at its junction with the river Shâh-Rûd at Mendiuj. Its source lies in the province of Ardilân, and it begins by crossing Irak-adjacent to the north; its right bank tributary is the Zendjân, on the left it receives the Kara-gol at Mîyâné, then it runs along the southern slopes of Ellbur, describing a great arc 125 miles long and crosses this range through the defile of Rûdbâr and the narrow valley of Rustam-šâd, a kind of couloir through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs as Nahr al-Abâd "White River" (transl. of the Persian Sefid-Rûd); cf. Dimashkî, *Coxograpie*, transl. Mehrer, p. 145; at one time the Turks called it the Hûlân (Hadhrî Khalafla, Dizân-numal, p. 294).

**KÖC HİSÁR**, the name of several places in Asia Minor. The meaning — if it is not
simply a corruption of Ködža Hisâr — is “castle of the ram” and it may be compared with proper names like Köyan Hisâr, Toklu Hisâr, Keçî Hisâr.

1. Köc Hisâr in the sandjak of Kanghîr is a little town on the Deryk Cai, twenty-five miles north of the town of Kanghîr. It is on the high road from Constantinople to Boli, Amasia and Erzerum, and not far from Karadjâ Wiran and Tusi. According to Ewliya Çelebi, this Köc Hisâr was captured by the Ottomans in 708 (1308) and completely ruined, but this statement is not confirmed by any of the old Turkish chronicles. The country of Kaşahîn must have been a site for a town outside the dynasty of Isfendiyâr-Oghlî. In the xvith century there was a fort outside the town.

2. Köc Hisâr, a little town, the capital of a köç in the sandjak of Konya ninety-six miles north-east of Konya and 110 miles east of Kaşarîya on the eastern shore of the great salt lake called Tuz Gölü in the central plateau of Asia Minor. The town is surrounded by gardens and vineyards. It is an oasis, in the between Karadjâ Wiran; it lies on the infrequent road from Angora to Kapıçâ. A little is done in weaving kilims and saddle-jackets there; the köç is used to be called Eskişahî.

3. Köc Hisâr, a little town, capital of a köç on the right bank of the Köz İrmâk [q.v.]. 20 miles north-east of Sivas on the road from Sivas to Zara and Erzerûm. The ruins of an ancient encircling wall still exist and in the neighbourhood are many artificial coves, dating from a very remote epoch.

4. Köc Hisâr, a village ten miles south of Mardin, famous for a battle fought in 1515 between the Turkish General Hüsâni Muhammad Pasha and the Persians under Kara Khan [cf. sklit D]. The earliest Turkish historians do not mention the place in connection with the battle. Meñiçdijim Bashî, iii. 460, calls the scene of it Eski Köc Hisâr.

5. Köc Hisâr, a köç in the sandjak of the Ottoman empire.

Köc Hisâr belonged to Görka (Korynta) in Macedonia (Greece, cf. H. Gezer, Von. III. Berg and aus Makedonien, [Leipzig 1904], 201 sqq.) and was therefore probably of Albanian descent. Other statements, which as a rule make him a native of Gümîlîdija are wrong. He came when still young to Constantinople, was brought up in the Seraî and in the service of the Sulṭâns Ahmed I to Murad IV. He was in particular favour with the latter, whose trusted adviser he became. In this capacity he wrote for his sovereign the famous treatise, Rûstâ-i Köc Beg, in which with ruthless frankness he exposed the causes of the decline of the Ottoman empire. He finds the main reason for increasing decay in the neglect of and breaches of the old principles of the constitution. Köc Beg, the Montesquieu of the Ottomans, gave an excellent political and statistical exposition of the decline of Turkey, a power in his memoir, which clearly reveals all the disorders that had entered the body politic from Murâd III to Murâd IV. The document composed in 1640 (1630) did not receive special attention till a later period. It has been several times printed, first edition Stambul 1277 = 1860 (cf. J. A., 1863, ii. 234, Nö. 133), and without place (London), edited by Ahmed Weâf Pasha 1279, 6a. 32 pp. and Stambul, 1303, 8b. 124 pp. — W. F. A. Behrens published a German translation in Z.D.M.G., xxv., 1861, 272 sqq. (cf. also Z.D.M.G., xi. 111, and xvi. 271) and J. Thür a briefly Hungarian one in Torok történelemből, vol. ii., 1896, p. 406 sqq., Budapest, 1896.

The book entitled Canon de Sultan Suleiman II, représenté à Sultan Mourad IV pour son instruction, traduit du turc en français par M [i.e. Périer de la Croix], Paris 1725, 12°, is said to contain a French translation. A Russian translation with Turkish text was given by Vassili Dmitrievic Smirnov in Kotchubey Gümîlîdijînîq (i) i drugie emansipisjnsjexy XVII. veka, St. Petersburg 1873. Köc Beg according to the Siğiî-i Othmannî, iv. 63 presumably following Naîmâ, composed for Sultan Ibrâhîm (1640/1648) a further treatise, Rûstâle, probably of a similar nature. He was the teacher of the great Ottoman historian Naîmâ [q.v.] he died at the beginning of the reign of Sultan Mehmed IV (1648/1658) and is said to be buried in his native town. His brother Khurrem Beg was said to have fled to Russia and to have become a Christian there.

Kodja III, the name of a sandjak in the old territorial division of the Ottoman empire. This sandjak covered the north-west part of Bitânia, including the whole of the shore of the Gulf of Nicomedia. In the north it was bounded by the Black Sea, in the east by the Bosphorus and the Gulf of Nicomedia, in the south by the sandjak of Brusa and in the east by that of Boli; on this side the Sakaria forms the natural boundary but in the administrative division the eastern bank of this river was included in the sandjak. The name Kodja III is connected with Akgê Kodja, the famous gheis and companion-in-arms of Othman. In the last years of the latter's reign, Akgê Kodja and his companions such as Karâ Mursal had made gheis into this territory and thus paved the way for the conquest of Iznikmid and other towns by Orkhan after his accession. When the town of Iznikmid fell into the hands of the Turks (c. 730 = 1329: the date is uncertain cf. izmid), Akgê Kodja was already dead but his son of II was given as a sief to his comrades-in-arms who had to defend the territory from the Greeks. Sulaiman
Pasha, son of Orkhān, was given the sandjak of the newly acquired territory. The descendants of these feudal frontier-guards were still to be found at a later period in the country.

In the xviith century Ködja Ili, along with Bigha, formed part of the çaylêt of the Kapudan Pasha and the west bank of the Bosphorus was under the direct administration of Constantinople. In the centuries following, Ködja Ili was incorporated in the çaylêt of Khudawandidžär. After 1867 the old name was abandoned for that of the capital Izmid and in 1888 this territory became an independent mutteşarrijīk directly under the Minister of the Interior. A large area along the eastern shore of the Bosphorus was at this time included in the vilâyet of Constantinople. This mutteşarrijīk had five kazâs (Izmid, Kara Mursal, Ada Bazar, Kândere, Geiwe). Hâdijet Kâhula enumerates 19 of them.

( J. H. Kramers)

**KOH (v.), mountain:** cf. the following compounds.

**KÖH-I BĀBĀ, Köh-i Bubuk, Köh-i Mālik Sîyāh, Köh-i Safid, Köh-i Siyāh, Köh-i Taštân.**

The dominant mountain system of Afghanistan is the Hindu-Kašr, and the huge extension westwards which forms the western half of the west of Kâbul and of the double range dividing and drained by the Hari Râd River flowing due west towards and past Hâşā. The southern component of this double range is the Köh-i Safid; the northern chain is called successively from east to west the Paropamisus, the Köh-i Bubuk, and the Köh-i Sîyâh. The Safid Köh is also the name of the important range which divides the valley of Džalâlâbâd on the Kâbul River from the Kûrân Valley and the Afridi Tirâh. The altitude of its highest peak Sîkârâm is 13,600 feet.

Köh-i Taštân is the name given to the system of parallel ranges on the Persian side of the western border of Bâlûcîstân; they attain an extreme height of 13,500 feet and extend north-westwards into the Köh-i Mâlik Sîyâh, lying to the west of the Sîstân basin.

The culminating peaks of the Köh-i Bābā overlook the sources of the principal rivers of Afghânistân — the Hari Râd, Helmand and the Kâbul River — and nearly reach 17,000 feet (height of Shâh Fuladî: 16,870 feet). This range is a part of the continental divide of Asia, high, rugged, desolate, and almost pathless. Sir Thomas Holdich in The Gates of India describes it as a rolling, barren tableland, wrinkled and intersected by narrow mountain ranges whose peaks run to 13,000 and 14,000 feet in altitude. The winter is long and severe and the range is then impenetrable; the sparse Mongol population live a life of hard privation. The Hari Râd flows due west to Herât through a deep, narrow trench bounded north and south by the straight flat-backed ranges already named. These chains gradually decrease in elevation till they run out into the Persian plains towards Mashhad.

The central Afghan highlands are practically unexplored.

**Bibliography:** See S. V. Afghânistân.

( R. B. Whitehead)

**KÖH-I NÜR, a diamond, now weighing 106 1/16 carats, but originally much larger; the early history of it is obscure, and authorities are not agreed as to whether it may be identified with the diamond mentioned by Bâbur in his Memoirs; but about 1656 it was preserved by his son, Nâzûn [q. v.] to the Mughal emperor, Shâh Džâhân, and was seen in 1665 by Tavernier in the treasury of Awrangzêb; in 1739 it was carried off to Persia by Nâdîr Shâh, who gave it the name it now bears. Nâdîr Shâh's grandson, Shâh Rukh, gave it in 1751 to Aḥmad Shâh Durrânî, whose grandson, Shâh Shukrê, when in exile in Lâhôr in 1813, had to surrender it to Mâhrâdzâ Rândjî Singh. On his death-bed in 1839, Rândjî Singh is said to have expressed a wish that the diamond should be sent to the temple of Džâgganâth, in Orissa, but it remained in Lâhôr until the annexation of the Pindâb in 1849 by the East India Company, who presented it to Queen Victoria.

( T. W. Arnold)

**KÖHÂT, the central district of the North-West Frontier Province of British India, lying between Peshâwar and Bannî, with the river Indus as its eastern boundary. The district is a broken hilly tract and the area is 2,694 square miles. As a whole it lies at an elevation of about 2,000 feet; the rainfall is very capricious, the average annual fall at the town of Köhât, the administrative headquarters, being 18.6 inches. There are three tahıls, Köhât, Terf and Hangû. The tract is divided between the Bangash and Köhât branches of the Pâshân race, the Bangash occupying the Mirânzâi valley and the western portion of the district, while the Köhâts are found on the eastern side down to the Indus. The total population at the 1921 census was 214,123, and the language commonly spoken is Pashî. The only town is Köhât; the district contains the military outposts of Thal and Fort Lockhart. A large and increasing trade with Tirâh and Kâbul passes through by the Khushâlghâb–Köhât–Thal railway; imports and exports, apart from this through-traffic, are small, with the exception of salt which is the chief export. The thickness of the rock-salt at Bahâdur Kheyl exceeds one thousand feet, perhaps the greatest amount of exposed salt in the world.

( R. B. Whitehead)

**KOHRÜD, arabicised form of Köh-rûd, 'river of the mountain'; a village seventy-five miles from Isfâhân on the road from Kâshân [q. v.] in a valley in the midst of trees and orchards. The col which separates the two slopes of the mountain is here; Oliver St. John in 1871 from this applied the name to the chain of mountains which separates 'Irâk–Adjami from Fârs and stretches into Bâlûcîstân (chief peaks: Shîr-kûh**
south of Yazc c. 12,000 feet high and Hazar-küh south of Kirmän c. 13,500 feet high.

KÖCH, J. [See KÖY.]

KÖKMBRÜ, ABD SALİD MUZZAFFAR AL-DIN B. 'ALI B. BEGTEGİN, LÖRD OF IRBIL, the most celebrated of the Begtegins. Kökmbur was born in Muhammād 549 (April 1154) and was 14 when his father died. Although he was older than his brother Yüsuf, the Ataheg Madījādīl Al-Din Kaímaz succeeded in obtaining the succession of the latter to the throne under his guardian-ship, whereupon Kökmbūr left Irbil and went first to Māhid and then to Al-Masqil. Here he was welcomed by the Zangid Saïf Al-Din Ghāzī b. Mawdūd, who took him into his service. Later Saïf Al-Din, or according to another statement, his brother and successor 'Îzz Al-Din Mas'ūd granted him the town of Harrān as a fief. As a faithful follower of Ṣalāh Al-Din he received from him Edessa in 578 (1182/1183) and later also Sumāsāt. In 582 (1185) he was imprisoned by Ṣalāh Al-Din on an old charge but soon released again because the latter feared that the people of Mesopotamia would desert him, if he dealt too harshly with Kökmbūr. After Yüsuf’s death in 586 (Oct. 1190) Kökmbūr received Irbil and Shahrazur in exchange for his former possessions, which Ṣalāh Al-Din gave to his nephew Taṭā Al-Din 'Omar. As Kökmbūr left no family he willed his lands to the 'Abbasid Caliph Al-Muṣṭaṣṣir. He died in Ramadān 630 (June 1233). See also the articles BEGTEGINIS AND IRBIL.

KOKÇA. [See BADAKŞHAN, i. 552b.]

KOMIS, A PROVINCE IN PERSIA, the Komoum of the ancients (Polibius, Excerpta, x. 25) between Irāk-Adjam, Khōrāsān and Tabaristān; capital Dānagāh; other towns Bistām and Bīlār; the canton of Sennān is sometimes included in it. Through it passes the trade-route between Ra-al (and now Teherān) and Khōrāsān. Mukaddasī (p. 355) places it in the Dailam country. Industry flourished there; kirāz were made there, woollen blankets used both as cloaks and for beds (Dozy, Dict. des noms des vêtements, p. 383) which were exported abroad, cotton handkerchiefs with embroidered designs, small and large, single or double (savaddik, muhshikh), sometimes of the value of 2,000 dirhams; muslims for hanging down on the shoulders from turbans (fāṣerān) and fine woollen robes (Mukaddasī, p. 367). In the time of the Seleucids and Arsacids it formed one of the six divisions into which the ancient satrapy of Parthien was divided; it held the old capital of the Parthians, Heatampylē, identified with Dānagāh; it was the property of the family of Mihrān.

(CL. HUART)

KONAČ, A Turkish word (derived from Kon, "to settle, to establish oneself", reflexive from ko, "to place"), meant at first a hostelry (Meninski), a caravansarai and then by extension of meaning a relay, a stage, the distance at the end of which one stops to spend the night; later it acquired the sense of large house, hotel, palace; the term is commonly applied to the mansion of the governor of a province, or the place where the administrative offices are installed (in Eastern Arabic, sarāyā, from the Pers. saray). (CL. HUART)

KONG, the word Kong is a corruption of Kpon, the native name for a place in the north of the present French colony of the Ivory Coast, near the watershed between the basin of the Comoë and that of the Nzi, a tributary of the Bandama.

The town was founded at a comparatively early date by some Senufo of the tribe called Falafala, who still retain rights over the soil but except for this privilege are now of very little importance. These Senufo were and have remained pagans.

From the twelfth or thirteenth century onwards a number of Muslims who claim to be of Sarakollé origin, known by the name of Dyula, which they say is their real name, and speaking a dialect of the Mandingo language, settled in small groups in the region of Kong where they devoted themselves mainly to commerce. According to their traditions they came from Mâsina and had founded several settlements on their way, notably one where now stands the town of Boko-Dyulass. At first these Dyula had no political influence in the country. Favourably received by the native Senufo to whom they brought an element of prosperity by their experience of the world and commercial aptitude, they gradually acquired an undisputed influence.

Towards the end of the eighteenth century a chief of one of their factions called Seku Wataara seized by force the village of Kpon or Kong and made it the capital of a state which was not long in incorporating all the country between Bobo-Dyulass in the north and the outskirts of the dense forest in the south, but did not go beyond the Comoë in the east or the Bandama in the west. The different provinces of the kingdom were governed by Dyula chiefs the majority of whom resided at Kong beside the sovereign, while others lived among the Senufo tribes who had become their vassals.

The kingdom of Kong does not seem to have played any considerable military part beyond its territorial limits, the Dyula being in general little warlike in disposition. But its influence was great both at home and abroad, not only from the political point of view but also as regards the development of civilisation. The old village of the Falafala had been transformed by Seku Wataara and his successors into a regular town, which had about 15,000 inhabitants when it was visited in 1888 by the explorer Binger. It was at once an important commercial centre and a focus of Muslim culture, the influence of which was felt in the
neighbouring provinces, especially in the south in the districts of Gimini and Dyammala. Alongside the wretched huts of the Senufo the Dyula had built houses with pylons and terraces in the style called Sudanese, resembling those of Dyenné and Timbuktu, and five mosques with double pyramidal minarets dominated the eastern quarters of the town. The number of literates, able to read intelligently and write Arabic correctly was relatively high. A well supplied market attracted to the town people from outside it and weaving, dyeing, and basket-making were busy industries.

The fame of Kong was wide spread in the Nigerien Sudan. Mungo Park heard of it on his first voyage in Africa revealed its existence and name to Europe and at the same time, relying on inaccurate information, gave currency to the idea of an important chain of mountains called mountains of Kong, alleged to lie near this town. In reality, the range of which he had heard is over 200 miles to the south-west of Kong and forms the extremity of the eastern branch of the massif of Futa-Djallon.

The first European to reach Kong and bring back an accurate report on the region was the French explorer Binger. Coming from Ramako, he reached Kong on February 20, 1888 and stayed there till March 11. In December of the same year Treich-Laplène, resident of France aux Établissements de la Côte d’Or (now Colonic de Côte d’Ivoire) arrived in Kong, coming from the south via Bondouk and persuaded the king Karamoko-Ule Watara and his dignitaries to accept an agreement placing the State of Kong under a French protectorate. This treaty was signed on January 10, 1889 in the presence of M. Binger who had rejoined Treich-Laplène at Kong five days before. M. Binger at the head of a mission, which included three other Frenchmen, again visited Kong in 1892.

Two years later Captain Marchand went there and learned that the town was threatened by the conquering Samori. The latter, at war with the French, had informed the king and the notables of Kong that they had to submit to him. Karamoko-Ule had replied to this ultimatum with soft words and the despatch of a kind of tribute. Nevertheless he desired to remain faithful to the treaty concluded with France and he begged Captain Marchand to get the French government to send troops to protect his kingdom from Samori. This is how it came about that an expedition called the Kong column was concentrated at Great Bassam in August 1894 and sent under Lt. Col. Monteil from the Ivory Coast. Its advance was hampered by the hostility of the tribes of Baulé, a land south of Kong. Encountering Samori’s army in March 1895, with his effective much reduced, Lt.-Col. Monteil was obliged to retire without inflicting a decisive defeat on the enemy or being able to advance as far as Kong.

Once freed from the French offensive, Samori wished to punish Kong for having provoked it and decided on the gradual and systematic destruction of the town. The king, the notables and the greater part of the population fled to Bobo-Dioulasso, the remainder were massacred or reduced to slavery. The mosques were razed to the ground, houses pillaged and set on fire and in 1896 there were only the few ruins left of the once great and wealthy town. The kingdom of which it had been the capital, broken up and dismembered, was annexed by Samori who had made his capital at Dabakala in the province of Gimini, SS. E. of Kong.

In January 1898 a detachment of French troops coming from the north occupied the site of the town and built a station there. This was besieged a little later by bands of Samori’s soldiers and relieved at the end of February by Commandant Caudrelier. It was then that Samori left the district to take refuge on the Bandama and later fled to the south-west. He was taken prisoner soon afterwards on September 29, 1898 near the Liberian frontier by Captains Gouraud and Gaden.

Once peace was restored to the country, the French authorities endeavoured to bring back the people of Kong to their town and to make them rebuild their houses. Karamoko-Ule had died in the meanwhile. His successor agreed to return to Kong with several Dyula families and there gradually arose on the ruins of the ancient town, beside the French station, new houses some in the Sudanese style like the old ones, others of humber style, simple huts with thatched roofs. A market was built, a grove of the survivors of the old population of Kong preferred to remain at Bobo-Dioulasso or in its vicinity and although it is slowly growing, the new town of Kong had only 3,000 inhabitants in 1925. The ancient kingdom however has been gradually restored and is administered as before under the suzerainty of a prince of the Watar family through Dyula chiefs, called chiefs of districts. But it is under the authority of the French administrator; the suzerainty of the prince is only nominal and the native Senufo tribes actually enjoy an independence such as they never had under the old regime.

(Maurice Delafosse)

KONYA (the ancient Iconium), a town in Asia Minor on the railway from Bagdad, the capital of the province of the same name, in a barren plain. It is 5,000 feet above sea level; of its 44,000 inhabitants, 39,300 are Muslims, 1,500 Greeks, 3,000 Armenians, 50 Protestants, 150 Catholics. The streets are broad and unpaved. The houses are built of terre pisée, except public and special buildings, 44 mosques, 147 madrassas, 5 libraries, 42 medreses, 1 Greek church, the Armenian church, 68 schools, 7 caravanserais and 8 baths; the exports are wheat, barley, maize, cotton and Angora wool; saltpetre and tobacco (manufactures of the state). It was formerly the capital of the Seldjûks of Rûm of whom monuments still survive. It was girt with walls by "Ali" al-Dîn Kâî-Kâîbâ I and the stones of these walls have been used in the erection of modern buildings. Texier and von Moltke were still able to record that 168 towers of the walls were still standing. Ruins still exist of the palace of the Seldjûks and of the citadel (610 = 1213/1214). The mosque of "Ali" al-Dîn began by "izz al-Dîn Kâîbâ I in 616 (1219–1220) and finished in 617 (1220–1221) by an architect of Damascus, Muḥammad b.
Khawāt; in front of it is the tomb of Ghiyāth al-Dīn Kāi-Khusrāw I built by the architect Yūsuf b. ‘Abd al-Ghaffār and containing a minbar in black wood adorned with arabesques, the work of an artist from Khālīf, made in (550/1155). The college of Kāraṭāi is adorned with faience (649-1251/1252); the medrese called Injīl minaret, "with the slender minaret", has been recently destroyed by an earthquake; mausoleums of Shahīk Sadr al-Dīn (d. 673 = 1274), of Fakhr al-Dīn ‘Allī summoned Sāhib ‘Aqīč (d. in 684 = 1285) who was minister of Ghiyāth al-Dīn Kāi-Khusrāw III, and of Shams al-Dīn Taḥrīrī. We may also mention the Sūrābī medrese "college of glass" of 640 (1242/1243) and some monuments of the times of the Bābān dynasty. The tomb of Djalāl al-Dīn Rūmi [q.v.] and of all his successors, the grandmasters of the Mawlāwīya order, down to the present day is surmounted by a cupola in the form of a pyramid in eight tiers covered with tiles in blue enamel. A few remains of the Roman period are collected in the bezestān or "cloth market", and lions called Phrygian but probably Hitite. The Emperor Frederick Barbarossa spent a week there in the reign of Kīlādī Arslān II (May 18-26, 1190) a fortnight before he perished in the waters of the Calycadnus. It was the scene of a victory of Ibrāhīm Pāsha, son of Muhammad ‘Alī, over the Ottomans (December 21, 1832). A kind of apricots called kūmar al-dīn is grown there of which a tart called by the same name is made, as at Damascus; a kind of blue flower called ḏūch jīlāyī, "flower of the vineyard," is used to dye cloth blue. Lime water is obtained from the springs at Merām one hour's journey to the west (gardens and promenades at the foot of the mountains), which improves by being matured in jars.

Cuinet, Turkish d’Asie, i. 818; Cl. Huart, Konia, la ville des der维che tourneurs, Paris 1897, p. 132 sqq., 158, 169, 183 (drawings and photogravures); Fr. Sarre, Reise in Kleinasiens, Berlin 1856, p. 28 sqq. and Pl. xvi.--xx. (photographs). (Cl. Huart)

KOPAK, a Persian and Transoxiana coin. Kopakī dinars are mentioned in the Sharafnama (the life of Timur), and Bābur (Memoirs, G. M. S., p. 185) speaks of 300 tomān Kopak (see also P. de Courteille's transl. i. 420). P. de la Cive, as quoted by Quarteméri (N. E., xiv. 74, n.) says that dinārs cophies are gold ducats worth 7-10 French money. See also Tavernier, Hobson-Jobson, and Murray's English Dict., s. v. Copeck. Though the Transoxiana and Persian Kopak was a gold coin, the word may still be etymologically identical with the Russian Copeck, just as dinār and denarius degenerated from being gold and became silver coins.

(II. Beveridge)

KÖPRÜ (in Turkish "bridge"); East Turk: Köprü also called Bezir Köprü, "the vizier's bridge" (from the famous grandvizier Köprüli Muhammad Pashī, of Albanian origin; see below Köprüli), capital of a kaçah in the sandjak of Amasia in the province of Siwās on the river Astawolz, a tributary on the right of the Kızıl-İrmak; it has 8,600 inhabitants, mainly Muslims, 17 mosques, 2 libraries, one of which is a waqf founded by Köprüli-zade Faḍl-pasha, 6 medreses, numerous charitable buildings erected by Köprüli Muḥammad Pasha, 6 caravanserais, five baths, and three dervish monasteries. The houses are covered with red tiles and the chimney tops have a metal cap like the minarets of Turkish mosques. It contains the palace of al-Ḥāgī Muhammad Yūsuf-āgha and in the citadel, the mosque of the same; monasteries of the Kādiriya and Khalwetia dervishes; eleven caravanserais, two "maerets (poor kitchens)" and eight schools. The best baths are those of Ahmad Pasha. The Bezestān (central market) was built by Yūsuf-āgha. The ports of the town are Bafra and Sinope on the Black Sea; a road suitable for vehicular traffic connects it with Şamsin.

Köprü-su ky is the name of a river which rises in the Tawshān-Dagh and flows into the Kızıl İrmak [q.v.] near Vezir-Köprü. It is also the name borne by the ancient Eurymedon which flows into the Mediterranean sea in the Gulf of Adalia; at its mouth is the little town of Koprelişite. Bibliography: Ali Djawād, Dīghyāṣyā Lughātī, p. 687; Sāmī Bey, Kūmās al-‘Ālam, v. 3905; Ewliya Efendi, Traveys, transl. v. Hamner, ii. 217. (Cl. Huart)

KÖPRÜ HIŞAR, "fortress of the bridge", a village in the province of Kudâm-ândigâr in Asia Minor on the Çuruk-sî near Yeşi-Şehir. It was the site of a Byzantine castle taken by Sultan Əlîşems in 688 (1289) after the capture of Bilecik where he slew his uncle Dündar by shooting him with an arrow.

Bibliography: Sāmī Bey, Kūmās al-‘Ālam, v. 3906; J. de Hamner, Histoire empire ottoman, transl. Fr. de Hellert, i. 87—89; Cl. Huart, Konia, la ville des der维che tourneurs, Paris 1857, p. 18 (view of the bridge). (Cl. Huart)

KÖPRÜLÜ, a family of Ottoman viziers. This celebrated family which provided the Ottoman empire with its most prominent statesmen at the period of its commencement of decline, was probably of Albanian origin. In his Mémoires, contemporaneous relations très curieux de l'Empire Ottoman (Paris 1864), Sieur de la Croix says the founder of the family was the son of a Greek or Arab priest, a statement adopted by L. von Ranke. It is more probable that the ancestor of the family was an Albanian who migrated in the xvith century from his native district to the town of Köprü Merzifon in Anatolia. Köprü, now usually called Wezir Köprü, was at this time an important settlement, which had a long history (cf. Ḥadīdī Khālīf, Liqā‘āt-nāma, 625, 4 infra and 628, 9 where Korda kara [kara kade in J. von Hammer, G. O. R., vi. 3] is given as the old name and also Ewliya, Seyhhennâme, ii. 399), and only began to lose its importance at a later date (cf. M. Kinneir, Journey through Asia Minor, London 1818, p. 298). Near it lies Taşköprü which gave their name to the famous family of scholars, the Taşköprüzade. To distinguish it from the latter Köprü was later renamed Wezir Köprü in honour of the Köprüli family. Here Mehmed Köprüli, the grandson of this Albanian immigrant, was born, the first to make the family name famous and widely known. The number of important men who came from this family is not small. A certain Bahdži Hasan (of Ratgrad, d. 1094 [1683] at
Belgrade) composed a Türkîi-i Sulâleî Köprülu, a history of this family, the original manuscript of which is in the Köprülu Library in Stambul (No. 212). It contains details of the ancestry of the Köprülus. Among the most important members of the family are the following:

1. Köprülu Mehmed Paşa, grand vizier of Turkey, or better, administrator of the Empire, born it is said in 991 (1583), died November 1, 1661 at Adrianople. In his youth he was a humble scullion and then cook in the imperial palace; entering the service of the grand vizier Khosrow Paşa he became his page-bearer and then rose to be chief marshal in the service of the grand vizier Çiçek Paşa [g.v.], a native of Merzifun. He then rose steadily up the ladder of the higher offices of state. As a paşa of two tails (çavuş) he was appointed governor of Damascus, Jerusalem and Tripolis and in 1651 (1651) became vizier of the cupola. Soon afterwards however he was granted the unimportant sandjak of Kustendil and retired in chagrin to his native town. After a brief imprisonment at the hands of the rebel Wâdâr 'Ali Paşa against whom he had taken the field, he was liberated by the grand vizier 'Abdul Paşa and appointed by him governor of Tripolis. Before he entered upon the duties of the office he was deprived of it and retired again to Kopr. Then the grand vizier Mehmed Paşa, "with the crooked neck" (egi boyun) took him to Stambul where he was soon to become his most dangerous rival. By Dhu 'l-Hijja 3, 1066 (September 22, 1656) he had received the seal of the empire. He attacked religious zealots with great energy (cf. J. von Hammer, G. O. R., vi. 5 sq.), had the ringleaders in previous risings executed without mercy and purified public life. In reorganising the shattered finances of the State, he was incorruptible and inexorable and in doing this made many enemies. He renewed the courage and lowered national feeling of the Ottoman people and endeavoured to revive the ancient glory of the Ottoman arms by a war with the Venetians. He fought in the Dardanelles in 1667 (1657) with Admiral L. Mocenigo, a battle which ended in the loss of the Ottoman fleet and the capture of the Venetian flagship. Mehmed Paşa endeavoured to compensate for this by the conquest of Tenedos and Lemnos; and in the following year 1668 (1657) Transylvania was conquered. He next turned his attention to Persia where he occupied the town of Yanova, then suppressed threatening risings in Northern Syria and in Egypt, built the new fortresses on the Dardanelles (cf. the article Kâl-Ari in G. O. R., vi. 86 sq.). He succeeded in considerably enriching the state treasury. Before his death on 7th Rabî 1, 1072 (October 31, 1661) he recommended on his death-bed to the Sultan his 26 year old son 'Ahmad as his successor in the grandvizierate. He was interred behind the School of Tradition beside the burned pillar.

A brother-in-law of Mehmed Paşa was Kâlîl-î-zade Mustafa Paşa (died 1074 = 1665; cf. Sîgîli-i ʾethmâni, iv. 397), whose son the chief marshal Kâlîl-î-zade 'Ali Bey was executed in 1114 (1702) (cf. Rashid, Türkîk, i. 201, and J. von Hammer, G. O. R., vii. 49). From them was descended the literary historian Köprülûzade Mehemd Fuâd Bey, born 1306 = 1890 (cf. on the genealogy of 'Ali Emet in 'Olmûmî Türkîk we Ededîyât Mûmadezîsi of 30th vi. [p. 79 sqq.] and 31st viii., 1334 [1918] [p. 116 sqq.] and M. Hartmann, Dichter der neuen Türkîe, Berlin 1919, p. 91 sqq.).

Bibliography: the histories by Naʾmä, J. v. Hammer, Zinkeisen, and especially Sir Paul Rceant and Richard Knolles, also Andrea Valiero, Storia della guerra tra Candia, Venice 1675, 547 (where it is stated, as in G. Brusoni, Storia dell' ultima guerra tra Veneziani e Turchi, Venice 1675, i. 292, that Mehmed Köprülu was a renegato Perugino di casa Ferrisiti); the historical novel Storie dei Grandi Vizîrer Mahomet Cepoglu Paşa et Ahmet Cepoglu Paşa, celle des trois derniers Grandi Signori etc. etc., Paris 1676, is quite fictitious (where for the first time we have the oft repeated fable that Mehemd Köprülu was of French origin); M. Brosch, Geschichten aus dem Leben dreier Grosswesir, Gotha 1899; L. v. Ranke, Die Osmanen und die spanische Monarchie, Leipzig 1877, p. 74 sqq. (Brilliant summing up of the personality of Mehmed Paşa); Z. Hâli, Hâli, ʿAbd al-Wâli, p. 104 sqq.; Sîgîli ʾethmâni, iv. 173 sq.; 'Ahmad Râfi, Köprüluçele, Stambul 1331, 1 part, 143 p.

II. Köprüluçeli Fâqi ʿAhmad Paşa, son of the preceding, Ottoman grand vizier, born 1045 (1635) at Wezir Köprü, died 26th Şaban 1087 (October 30, 1676) near Adrianople. Mehemd is said to have been unable to read and write, therefore he wished his son to become a scholar. The young ʿAhmad, while still a child, was entrusted to the famous historian and later Şehîk al-Islâm ʿAkeb b. ʿAbd al-Azîz [q. v.], became his mulâzim and when only 16, held the office of a muqaddim in the mosque of Mehmed the Conqueror. For ten years he held this position before he decided to enter the civil service. Three years before his father's death he went as governor to Erzerum and in the following year to Damascus in the same capacity. From here he conducted a successful campaign against the Druzes (cf. J. von Hammer, G. O. R., vi. 93) but in consequence of his aged father's increasing dropsy he was recalled by the Sultan to the capital where he was given the rank of qâim maḥâm after an audience with the Sultan. On 7th Rabî 1, 1072 (October 30, 1661) he was given the imperial seal immediately his father died. He was then only 26. For fifteen years he filled the office of grand vizier with ability and strength and far surpassed his father in education and statesmanship. He undertook numerous campaigns during his tenure of office. His defeat against Hungary, where he took over from Jâhâd (Ujvár, September 29, 1663), beset several fortresses, razed Zerinva to the ground and finally suffered a severe reverse at St. Gotthard on the Raab on August 1, 1664 at the hands of Count Monteuccoli. At the end of May 1667 the Cretan war was begun which he conducted in person and ended with the occupation of Candia at the beginning of October 1669. Shortly before then he had placed two of his brothers-in-law in the two most important offices in the empire: Kaplan Mustafa Paşa was made Grand Admiral (Kârîdan Paşa, q. v.) while Kara Mustafa Paşa [q. v.] had been appointed Qâim maḥâm in the imperial camp (J. von Hammer, G. O. R., vii. 227). The
Kapudan Pasha Saiyud Mehmed Pasha is mentioned as a third brother-in-law (cf. J. von Hammer, G. O. R., vi. 533) whether rightly or not is uncertain.

In the summer of 1672 (1083) he turned his attention to Poland and took Kamieniec Podolsk after a several days' siege, celebrated by the poet Nabî, on 3rd Dhimmâda I, 1083 (August 27, 1672). On the other hand the grandvizier lost the next battle, that of Chotin (Polish: Chocim, Turk.: Chotin); the fortress was lost in November 1673 (Radjab 1084); Ahmet Pasha had to take to flight. While he was able to make up for the loss of the battle of St. Gotthard by a satisfactory peace of Vassâv (August 10, 1664), lie had to prepare for a new war the next year, which ended with the recapture of Chotin and the taking of Ladzyna. On the way to the imperial camp, Fâţil Ahmet Pasha died after eighteen days, illness on 22nd Shabân 1087 (October 30, 1670) at the farm-place of Kara Biber near the bridge of Erkene (between Burghas and Adrianople). The body was brought to Stambul and he was buried beside his father. His early death is said to have been caused by over-indulgence in spirits and to dropsy caused thereby (cf. Péris de la Croix, État général de l'Empire Ottoman, Paris 1695, ii. 81). As early as the siege of Candia he had been liable to epileptic fits, and already looked a tired old man, weary of life. He afterwards indulged in all kinds of vices, surrounded himself with women (he is said to have had 80 wives, including slaves) and liked to drink Polish brandy which the doctors had prescribed for him.

Ahmed Paşa certainly surpassed his father in intellect and intelligence and still more in his love for the arts and sciences, which he encouraged even when in the field. In Stambul he founded a comprehensive library (cf. Mouradgea d'Ohsson, Tableau, ii. 488) which is still in existence, (Catalogue, Dossier, 248 sqq., 4th ed., n.d.) as a monument to his fame. His seal-bearer Hasan wrote his life under the title Dəwâlıl al-Âlâm and his campaigns were several times celebrated in verse and prose (cf. F. Babinger, Die Geschichts- schreibung der Osmanen, Leipzig 1927, p. 211 sqq.). Contemporary European writers are unanimous in praising the sound judgment and keen penetrating intellect of this distinguished statesman.

(to be used with caution).

III. Köprülüâde Muṣṭâfa Paşa, son of I and brother of II. He was born in 1047 (1637), the second son of Mehmed Pasha. He was appointed vizier of the cupula in Dhimâda II, 1091 (July 1680) and became successively muṣṭâfizî (commandant of a fortress) of Bender, Silistria, Baba Dağlı, the Dardanelles, Chios, etc., then in Dhu 'l-Ḥijja 1098 (October 1687) he was appointed the grand vizier's deputy ('âlîmumâr) and ultimately received the seal of the empire on 24th Muharram 1100 (November 7, 1689) after once again being muṣṭâfizî of the Dardanelles and of Candia. He was by this time 52 and was reputed to be a strict observer of the laws of Islâm and an enemy of the Christians. His mind inclined more to learning than to military affairs. Queto gran vestro, says a contemporary Italian relatione, è un altro mufti asteno, nemico del vino, nemico dei Cristiani, zelante della sua fede, uomo scrupoloso, scarno, bruno e brutto, stimato per un santo e dottor della sua legge, politico ma non ha nessuna pratica di guerra (cf. J. v. Hammer, G. O. R., vi. 547) which gives a very clear idea of his character and qualities. His aim was to make the grand vizier as independent as possible, wherefore he reduced the number of viziers of the cupula and dismissed many of the officials whom he did not like. His wise measures to improve the finances of the State, such as publicly farming out the tobacco tax and regulating the currency, showed his clear insight into the needs of the kingdom. He had the superbious silver of the imperial palace melted down and gave his own to the mint, contenting himself with pewter. In the summer of 1690, he went with the army against Serbia, recaptured Belgrado (October 18, 1690), took Esseg (Hung. Eszék) and fell on September 19, 1691 before Sklâmken, near Belgrado. His body was not found. Like his brother he was called the virtuous, Fâţil. He was a distinguished statesman, who clearly recognised the needs of his day and therefore introduced various innovations, the correctness of which time proved.

IV. Köprülüâde Husâin Paşa, nephew of I, Ottoman grand vizier, usually called 'Amuqâzâde, i.e. paternal nephew. Husain Paşa was a son of iki'teri (i.e. little) Hasan Ağa, a brother of Köprüüt Mehmed Paşa and had the opportunity of being trained for public life among his cousins. He filled the offices of grand admiral (Kabudan Paşa) and of governor of Chios. Entrusted with the defence of Belgrado in the summer of 1108 (1696), he attracted the attention of the Sultan Muṣṭâfa II by his wise counsels and was promoted by him from the governorship of Belgrado on 1st Rabî' 11108 (Sept. 17, 1697) to the grandvizierate (cf. J. v. Hammer, G. O. R., vi. 641 sq.). He proved an advocate of a moderate and peaceful policy and his first important act was to conclude the peace of Carlowitz on Jan. 26, 1699 with Austria, Russia, Poland and Venice. This peace restored to Austria almost all she had lost to the Porte since 1526 and formed the basis of later agreements between Austria and Turkey. Husain Paşa was also the friend of learned men and poets to whom he often gave liberal and handsome gifts. Like his cousin, he tried to improve the treasury, the army and the fleet and notably to lighten the lot of the Christians by
reducing and remitting the poll-tax (cf. J. v. Hammer, *G. O. R.*, vii. 44). He founded a large number of buildings in Stamboul, Adrianople, Gradičca, and Lepanto, built schools, colleges, waterworks and wells of all kinds (cf. J. v. Hammer, *G. O. R.*, vii. 47 sqq.). The execution of his cousin by Köblerzade Ali Beg, because of a secret passion, it is said (cf. Rašid, *Ta’rikh*, l. 261; the story in Kantemir’s *Geschichte des osmanischen Reiches*, Hamburg 1745, p. 618 sqq., is quite absurd) affected him deeply. An incurable disease finally forced him to tender his resignation, which was accepted 12th Rabii’ II, 1114 (Sept. 5, 1702). He retired to his estate on the heights of Bučuk Tepe near Adrianople and died almost immediately afterwards at his country house near Silwiri on 29th Rabii’ II, 1114 (September 22, 1702). He was buried in a special tomb on the “Saddlers’ market” in Stamboul.

V. Köprüluçâde Nûmân Pashâ, son of III, Ottoman grand vizier. He began his career by filling several governorships (Erzerûn, Anatolia, Negroponte, Candia), became comman-
dant of the Dardanelles, then again governor of Candia, Negroponte, Bosnia and Belgrade. He married Aţîsha Sultan, daughter of Muştafa II (June 1710; cf. J. v. Hammer, *G. O. R.*, vii. 145), and immediately afterwards was appointed grand vizier. His period of office did not in any way confirm the hopes that had been placed upon him on all sides as saviour of the empire. He opposed a war with Russia to assist the king of Sweden, was disgraced and on Aug. 12, 1710 sent back to Negroponte as governor. He later became governor in succession of Candia, Bosnia and Belgrade, Cyprus, île-el, Mentesh [q. v.] and finally died after a busy life on 7th Rabî’ I, 1131 (Jan. 21, 1719) after a fever in Crete. His son was the nizâming-i buçhî and later several times governor (cf. J. v. Hammer, *G. O. R.*, vii. 115, 153, 185, 264), Hâfiţ Aḩmad Pashâ, the last Köprüluçâde mentioned in Turkish history as holding a public office. He died in 1183 (1769) as governor of Cairo. On him and on his descendants see Siddîli-i oṭhmânî, i. 262 sq.

(Franz Babinger)

**Köprülu (T.), a musical instrument, a kind of guitar with one string which the bards of Central Asia used to accompany their songs. The body of it was made out of a gourd.

**Kör Oğlu (T., “son of the blind man”), the hero of a popular romance in prose mingled with verse which there are Persian and Turkish recensions. He was, it is said, a Turkmen of the Tekke tribe named Rûşhân son of Mirzâ Šârîf who lived in the reign of Şâh ʿAbbâs II (1051–1077 = 1641–1666). He was born in the north of Khorâsân and lived there in the second half of the xviiith century of our era. In the valley of Salmâs (Aţharbâdîjan) are still shown the ruins of the castle of Çâmil-bel built by him. He used to plunder the caravans on the road from Turkey to Persia via Erzerûn and Khoi. He is the national hero of the nomad tribes of Persia of Turkoman origin. Poetical versions of the story of his exploits are sung at the festivals to the accompaniment of music. His horse Kîria shares his fame; the song lamenting his death is considered an elegy in existence. Nomadic singers call “aţkîb”, “lovers”, sometimes accompanied by jugglers and rope-dancers wander through the towns, villages and encampments of Transcaucasia and Aţharbâdîjan and recite this epic in sections called *majlis* or “seances”. They are known as *kör-oğlu-khêân* “reciters of Kör-oghlu”. The Turkish recension puts the scene
of Kor-oghli’s exploits in Asia Minor, locating them around Boli (the ancient Claudopolis in the province of Kastamuni).

His name is derived from the fact that the lord of the district (in the Fer-yan version, Sultan Murād, sovereign of a part of Turkestan and in the Turkish the Dece-beyi of Boli), furious at seeing that the head of his stable, the father of our hero, sent by him to pick the best out of the horses brought to him in tribute, had chosen a thin one, had his eyes gouged out. The area of the adventures of Kor-oghli in the Persian version is very extensive for it includes successively Khorasan, Adidasbādjan, Erivan, Naḵchivan, Anatolia, Kār, Syria, and Egypt. The Turkish version does not go beyond the district of Boli.

**Kūrā, an ancient decayed town,** situated at 26° 7’ N. and 80° 22’ E. on the old royal road from Agra to Allahabad (Hāhābād), now in the Pathūr District of the United Provinces of Northern India. Under the Sultan of Delhi it was the capital of a province and in Akbar’s time it was the head-quarters of a sarqar in the sūbah of Allahabad.

A copper coin of Akbar is known of Kūrā mint. The place was also a mint-town of the later Mughal emperors from the time of Raṣf al-Daraḏij dānj onwards.

**Korah.** [See Kārnān.]

**Koran,** the (*al-Kur’ān*), the sacred book of the Muḥammādans contains the collected revelations of Muḥammad in a form fixed by committal to writing.

1. Even among Muslims there is no unanimity regarding the pronunciation, derivation and meaning of the word. Some pronounce it *Kūrān* without hamza and say it at a point not nowhere, like *tawār* and *injīl* or they derived it from *korana*, to tie together. Others rightly began with *korān* with hamza and explained it either as an infinitive in the sense of a past participle or as an adjective from *kāra’s*, to collect. It is really very easy to see an infinitive in it as it occurs as such in Sūra lxxv. 17 (cf. Taraff, ed. de Goeje, s. v.).

The exact meaning must be sought in the usage of the Kurān itself where the verb *kāra’s* frequently occurs. In Sūra xvii. 95 it certainly stands for “to read”, but the most frequent meaning is rather “to recite, to discourse”, which does not necessarily presuppose a written text. Thus Allāh says, lxxv. 17: “Move not thy tongue too quickly for it behoves us to collect and recite it”. Similarly the word is used of Muḥammad who recites the revelations made to him, xvi. 100; xvii. 47; vili. 203; lxxiv. 21; cf. the 4th form in lxxvii. 6 or of the believers when they recite the revelations at prayer, lxxviii. 20. Cf. also, “If thou mentionest thy Lord, the unique, *al-kur’ānī* in reading aloud”, xvii. 49. We thus come to the meaning, *lecture, discourse what is uttered*, i.e. what Muḥammad heard from Allāh and repeated (“follow our recital”, lxxv. 18;

“We enable thee to repeat so that thou mayest not forget”, lxxvii. 6), and then later uttered before men. Schwally, Wellhausen, *Z.D.M.G.*, 67, 634; Horovitz, *Der Islam*, xiii. 67, on the other hand see in it a Syriac or Hebrew loanword *kara’ān, geyrana* (lectio, reading, or what is read) and they rightly insist that the *Kurān* is not genuine Arabic with the meaning “to read”. We should have to imagine that Allāh actually read to the Prophet out of the heavenly book, but even then the further use of the word is no easier explained. It is in any case quite absurd for E. Meyer to explain the Kurān as a book read by Muḥammad, somewhat after the fashion of Joseph Smith, for the heavenly book, the contents of which were communicated to him, was really a concealed book and he heard the voice of Allāh and read nothing (xvi. 1 notwithstanding). It was rather the case that the Kurān was first made intelligible to him by Allāh making it into an Arabic Kurān, i.e. translating it into Arabic.

The word is not found in the Kurān itself in the above sense of “collected revelations in written form” because they were only collected after the death of the Prophet. It is used either for the separate revelations which were made one by one to the Prophet (e.g. x. 16; xii. 3; lxxii. 1; cf. ii. 181, the Kurān sent down in Ramadān) or as a general term for the divine revelation which was sent down piece by piece (xvi. 107; xx. 1; lxxvi. 23; cf. xxv. 34; lxx. 21) which he received from Allāh (xxvii. 6) so that he could communicate it to men (xxviii. 85).

The term *al-Kitāb* (the scripture or the book) is used as an alternative of Kurān. They often appear to be synonymous. The “scripture” is also sent down (e.g. xl. 1; xlv. 1; in “a blessed night”, xliv. 1, i.e. like the Kurān of a single revelation). It is said in xvi. 1, “these are the miraculous tokens (*ayyārī*) of the scripture and of a perspicuous scripture”, and in xxvii. 1, “these are the miraculous tokens of the Kurān and of a perspicuous scripture”. On further consideration however there is a distinction between the two expressions. When we read xii. 1, “These are the miraculous tokens of the perspicuous scripture and we have sent them down as the Arabic Kurān”, cf. xx. 12, or “we have made the perspicuous scripture into an Arabic Kurān”, xliii. 1 s.v., or, when the Kurān is called (x. 38) an exposition of the scripture of the Lord of Heaven, it is evident that *al-Kitāb* is the more comprehensive term and that it is “Korān” in so far as its contents are revealed in a way intelligible to man. It was not the heavenly book itself that was sent down to Muḥammad, but portions of its contents in an Arabic form, and for this the word Kurān is used.

From its contents the Kurān is frequently called *Dīkhr*, a word of several meanings, which in this case means a admonition, warning, xxi. 43; xxviii. 87 etc. The *dīkhr* also is sent down, xv. 7; xxi. 51; xxviii. 7 and is called a noble scripture in xli. 41; cf. “This is an admonition and a perspicuous Kurān” xxvi. 69.

How the conceptions flowed into one another is seen in xii. 7, where the “people of a scripture” (*Akh-al-Kitāb*) are called on one occasion *Akh-al-Dīkhr*. Al-Ḥifka the wisdom, may be mentioned here as it is not only associated with the scripture in ii. 123, 146; iii. 158; lix. 2, but in ii. 311; iv. 113, there is a reference to its being
sent down, and in xiii. 34 to its recitation. On the loanword *kurān* see that article. A term peculiar to the *Korān*, the origin and original meaning of which is still obscure, is *Sūra*. It is used only for the separate revelations, while *Kurān* has sometimes a more comprehensive sense and is found in the Mecca as well as the Medina sections; for further details see the article *Sūra*.

 smaller sections of the *Kurān* were called *aṣya*, plural *ayāt*. It means properly, like the related Hebrew word *ʾāṯer*, *ʾaṯr*, *ʾastār*, *ʾaṯār*, etc., “mark, token, token of belief” (i, 249; ii, 35; xxvi, 197); and especially a token of Allāh’s existence and controlling power, xii, 105; xxi, 133, hence often “miracle” (ii, 105; xiii, 45 sqq.), and gives a very instructive glimpse into Muhammad’s ideas and consciousness. In Mecca the demand of his opponents that he should give proof of some miracle of his credibility as a messenger of Allāh caused him serious difficulties. The gift of performing miracles, possessed for example by Jesus, was denied him but the revelations offered him a very good substitute, of the divine origin of which he was firmly convinced (vi, 158; vii, 202; xx, 133; xxix, 49 sqq.).

 They were the only convincing miracles and thus received the name *ayāt*. They were sent down from heaven (n. 93; xxviii, 87) to the Prophet of the meccan community (xi, 25; xiv, 5) and proclaimed by him to men (i, 149; ii, 2; xxi, 1) as in former times by the Prophets (xxviii, 59): “Allāh proclaims his *ayāt*” (ii, 183); “the unbelievers dispute them” (xxiv, 46, etc.). The only noteworthy point is that Muhammad when he expresses himself more definitely does not use the word like *sūra* of the revelations but only of the smaller parts of which they consist; e.g. “a *Sūra* which we have sent down with perspicuous *ayāt*” (xxvii, 1), “a scripture which we have sent down so that they may reflect on its *ayāt*” (xxxviii, 28); “these are the *ayāt* of the wise scripture” (x, 1; xili, 1; xii, 1; xxvii, 1; xxi, 1); “these are the *ayāt* of the *Kurān* and of a perspicuous scripture” (xxvii, 1); cf. xxvi, 1); “in the scripture the *ayāt* of which are firmly linked together” (x, 1; xili, 2) and especially “in the scripture and unambiguous *ayāt* and others which have several meanings” (iii, 5); and “if we abrogate an *aṣya* or consign it to oblivion, we put a better or a similar one in its place” (ii, 100); “if we exchange one *aṣya* for another”, etc. (xvi, 103). Unfortunately one cannot see from such passages how large or small these component parts of the revelations were. Later scholars took them to be verses in the technical sense but this does not agree with xxx. 58 and other passages where the reference is clearly to divisions required by the sense without it being possible to define their length more exactly.

 2. From what has already been said we can see how Muhammad regarded the origin of his revelations. They came from heaven and were taken from a well-guarded tablet (lxxvi, 21), a concealed book only to be touched by the pure (lvi, 76), the “mother of the scripture” (the original scripture, xlii. 3; otherwise iii. 5). The book is called “an admonition on noble, lofty, pure leaves through the hands of noble scribes” (lxxvi, 11 sqq.; cf. iii, 2, where Muhammad swears by a scripture written on unrolled parchment, and lxii, 2: “by the word and what it writes”, xxvi, 4 sqq.; “with the reed-pen he taught men what they did not know”). The Prophet did not become acquainted with the whole of this book but only with isolated sections of it, which were given to him in Arabic dress: “Proclaim!” it is said in xviii. 26, “what is communicated to thee of Allāh’s scripture; no one may alter its words”, and in iv, 162; xii, 78, he says expressly that Allāh told him of some of the Prophets but not of all. Nevertheless, we can obtain from the revelations given by Muhammad an idea of the heavenly scripture, from which they are taken, for it is apparent that it contained a similar mixture of instruction dealing with the being of Allāh, the creation of the world and especially of man, good and evil spirits, the coming judgment, paradise and hell and the experiences of the older prophets, and in addition all sorts of regulations regarding the worship of Allāh, and the life of the community, including quite special laws (iv, 104, 126, 139; xiii. 6). The field of cosmology is touched on in the reference to the twelve months (ix, 36), the temptation of man by Satan in xxii. 4. But further perspectives are opened up when it is said that the heavenly book comprises all that has happened in the world and will happen (x, 65; xxvi. 69; xxvii, 77; xxxiv, 3; vi, 38; 59; xi, 8; cf. xx, 55 sq.; lv, 57; xxvii, 60, etc.); even if the Muslims had remained in their houses at the battle of Chud, those who were destined to die would have been attracted to the places where they were to fall (iii, 148); (cf. my essay in the Haupt-Festschrift). The *Kurān* contains only a few and very obscure hints regarding the process of communication of the revelations; it is wrapped in a secrecy which Muhammad either could not or would not illuminate. It is not from the *Kurān* but from reliable hadiths that we learn something about the half diseased ecstatic conditions, with which he was overcome (cf. the article *Muhammad*); the revelation lxviii. 1; lxvii, 1, at most might contain only a slight reference to them. The main thing was however, as already observed, not what he saw but what he heard, which is also emphasised in the descriptions of the visions (iii, 10; lxxxi, 9); that he had visions is evident from liii. 5 sqq.; lxxxi, 23 sqq. It was the voice of Allāh that with a few exceptions talked to him in the stereotyped “we” and stamped even what the Prophet had to say by a prefixed kal “say!” as a divine utterance. But he did not hear this divine voice directly — for this his conception of Allāh’s superiority was too great — but through the intermediary of the “spirit” or of an angel, according to the later passage ii, 91, Gabriel. “The trustworthy spirit brought the revelation down into the heart of Muhammad” (xxvi, 192 sq.); “the spirit of holiness brought it down from Muhammad’s Lord with truth” (xvi, 104); “Allāh sends the angel down with the spirit of (‘neia) his word to whom He will” (xxii, 1); “The Lord of the throne sends the spirit of his word to whom he will of his servants so that he may admonish” (xl, 15); “We have revealed to thee a spirit of our word” (xlii, 52). — All somewhat obscure expressions, which are not made any clearer by the fact that the spirit is in other passages (lx, 4; lxxviii, 38; xxvii, 4) associated with the angels, but which at least show that the Prophet had formed some idea for himself of the
How" of the revelation. It is also certain that one particular revelation must have had decisive importance for him, without doubt the one by which a prophetic mission was imposed upon him. Ramadān was later chosen as the month of the fast because the Qur'ān was sent down in it (ii. 181); "the perpicious scripture was sent down in a blessed night" (sliv. 2 syy.), namely in the "night of all-power" in which the angels and the spirit at their Lord's command descended on account of every matter (to be settled) (xxvii. 1 syy.) (Schaede proposes to read ranazzil— they bring down commands of all kinds)— apparently a late offshoot of the old Babylonian idea of a day on which the events of the year were settled. That Muhammad was able to distinguish the words heard by him from his own thoughts is evident from xx. 113; lxxy. 16 syy.; lxix. 44 syy.; x. 16 syy.; vii. 202, just as it is in general certain that he was firmly convinced of the reality and truth of his revelations (see MUHAMMAD). Like the earlier prophets (xx. 51) he had to fight with the whisperings of Satan (viii. 199; xxii. 99; xli. 30) and that sometimes endeavoured to mingle with the revelations seems to be indicated by xvi. 100. To protect himself from these he sought protection with Allāh, but a reliable tradition reports that at least once he allowed himself to be tempted by Satan to recognise the Meccan goddesses al-Lāt, al-Uzza and al-Manāt to some extent. But he afterwards discovered his error, whereupon the revelation is said to have received the form now found in lii. 19 syy.

It would certainly be wrong to identify those inspirations received under the mysterious conditions with what we now read in the Qur'ān. Even the oldest short Surahs which might have been heard by him in their present form very probably received their present form with rhymes etc., in a later recasting. At any rate this is evident in the later long sections, like the histories of the prophets or the reproductions of dialogues between Muhammad and his opponents, where of course his answers can only be based on inspirations. An exact distinction between the auditions of the Prophet and their later formulation is however an impossibility, although it may be assumed that the former consisted essentially of fundamental ideas and suggestions which the Prophet afterwards developed.

3. A special feature of the revelations which much occupied Muhammad himself and his opponents, was that they were communicated piecemeal, although they exist complete in the heavenly book (xvii. 107; lxxy. 23): "The unbelievers say, why was the Qur'ān not sent down to him as a whole? We wished to strengthen thy heart thereby and we arranged it in this way" (xxv. 34).

That the breaking up of the Qur'ān into small parts was in reality connected with the fact that the separate revelations were provoked in Mecca by the attacks of the opponents, in Medina by political and other conditions, was a fact Muhammad did not clearly realise and yet this circumstance had a decisive influence on the form and contents of the Qur'ān. Its striking incomplete ness is connected with this. Nowhere do we find an extensive treatment of the principles of belief or of law but the Prophet as a rule goes quickly from one subject to another according as conditions demand. In the Qur'ān we thus find for example only a few scattered indications regarding the great pilgrimage so that it would not be possible to reconstruct the whole ceremony from the Qur'ān without the help of hadīth. In such cases one must always consider the possibility that hadīth antedate all sorts of later customs; and that this actually happened we see from the instructive example of the settling of the times of daily prayers. According to tradition, the angel Gabriel taught them to the Prophets but the Qur'ān talks only of two obligatory periods of prayer, to which ii. 239 adds the afternoon prayer (cf. salāt); when there is mention of the five times of prayer in Muhammad's letter to 'Amr b. Ḥāzm (Ibn Hibān 962), this is probably an indication of a later recasting of the text (cf. thereon Ibn Sa'd, iv. i. 155). That Muhammad knew quite well that the full contents of the heavenly book had not been communicated to him is evident from the passages mentioned above, according to which Allāh had told him of some of the Prophets but not of others.

Of special significance for Muhammad's own conception of the revelations is the distinction which he makes between them. Thus it is said in iii. 5 of the Qur'ān: "In it are unambiguous āyāt which are the mother of the scripture (its firm foundation, otherwise in liii. 3) and others which are ambiguous; those in whose hearts there is a tendency to err adhere to the ambiguous because they seek vexation and (arbitrary) exposition; yet no one knows the exposition except Allāh; but those who are strengthened in knowledge say we believe in it, everything comes from our Lord". The obscure passages which to the pain of the Prophet produced criticism and quarrelling, are ascribed to divine inspiration equally with the clear passages. But there are cases where the divine revelation not only abrogated principles of the earlier religions of revelation but even regulations which Muhammad himself had proclaimed. How he reconciled this with the idea of an original scripture in heaven, the contents of which were revealed to him, is not easy to see, if he ever really reflected on the point at all; but in any case the idea itself that Allāh revoked and altered the announcements of His will caused him no difficulty. This is the doctrine, later thoroughly discussed by the theologians, of nasīb and masūbīb, the abrogating and abrogated.

There were special works on the subject, e.g. by Abu l-Kāsim Ḥibat Allāh b. Salāma (d. 410 = 1019) and 'Abd al-Kāhir b. Tahār (d. 420 = 1030). The terminology goes back to ii. 100 where it is said with reference to the alteration of the direction at prayer, "if we abrogate an āya or consign it to oblivion, we offer something better than it or something of equal value"; cf. also xvi. 103: "if we put one āya in the place of another—and Allāh surely knows best what He sends down—they say 'thou art simply romancing'; but this verse may also refer to unintentional variations in the repetition of earlier pronouncements.

If Muhammad did not have quite a clear conception of those points of view, he was all the more sensitive when the Meccans pointed out that his wisdom was communicated to him by mortal teachers, some of them foreigners (xvi. 105; xxv. 5 syy.; xlv. 13). His defence on this point is very weak and he really concedes the justice of the charge. What he learned in this way was probably
transformed into indubitable divine words when it re-echoed in his fits of obscured mentality.

4. Among the most far-reaching of Muhammad's conceptions is the idea that not only his mission but also the revelations of the earlier Prophets and the holy scriptures of the Jews and Christians were based on the original heavenly scripture so that they coincided in part with what he himself taught. The Kur'an was sent down in perspicuous Arabic language and it is in the scriptures of the ancients; is it not a sign that the learned men of the Jews knew it? (xxvi. 195 sq.) The Kur'an thus confirms what was earlier revealed (iii. 75; vi. 92; xxxv. 28; xlv. 11, etc.). The law is given to Moses, the Gospel to the apostles, and in addition there is the Psalter which David received (iv. 161; xvii. 57). They all came out of the heavenly book and therefore the Jews and Christians are called Ahl al-Kitâb, the people of the (original) scripture. From such statements alone it can be seen that Muhammad had no idea of the real contents of these books and that he can never have read them, so that it is labour lost to try to ascertain what is meant by the "leaves of Abraham", which are mentioned alongside the leaves of Moses (lii. 37 sqq.; lxxxxvii. 18 sq.), or the books which the Prophets brought according to xxxv. 23. The Kur'an expressly confirms this position of the Prophet by the umma, like fadaks from faa'; according to Wensinek, Acta Orientalia, ii. 191, rather ethnikos, cf. however, ii. 72, i.e. a layman, who could not read the holy scriptures of the earlier religions of a revelation (ii. 73; i. 19, 60). *Allâh has sent amongst the un instructed a messenger from their midst, who proclaims his aîr to them and teaches them the scripture and wisdom* (lxi. 2); *Thou didst not know what scripture or belief was* (xlii. 52; cf. xxix. 47). This idea of the essential identity of his teaching with the earlier books of revelation, is found all through the Meccan period and in Medina also he still adheres to it although with some modifications. He now regards the older religions in a more critical spirit and emphasises their differences from his own. The Jews only received a part of the "scripture" (ii. 222; iv. 47) and, what is more important, there are in their laws regulations which have only a limited validity like the observance of the Sabbath which is only binding on them (ii. 61; iv. 50, 153) or the forbidden foods which were intended as a punishment for the Jews (iv. 158; vi. 147; no doubt a medical interpolation; otherwise in v. 7). The main point however is that he defends himself against Jewish criticism by the assertion that in their scripture the Jews had forgotten (v. 16) or concealed (ii. 160), or actually corrupted all sorts of things. *They have perverted the words from their places* (iv. 48; v. 16, 45), and a similar charge is raised against the Christians because they worship Jesus as God and have introduced monasticism.

5. Although Muhammad owed not only his general religious and moral ideas but certainly also the idea of God's revelation through prophets sent by Him to contact with Jews and Christians, or probably more correctly with the numerous sectarian offshoots of these religions settled in Arabia — his series of prophets, strange to Judaism proper, in which the regular prophets of the scrip

tures are lacking, recall somewhat the Clementine writings for example — his teaching developed in the early period, not according to Biblical models but in the style of the pagan Arab soothsayers with their oracles, formulae for blessings and curses, etc. In the introductions to the oldest sûras, he swears by the most remarkable things, by the fig- and olive-tree and by Mount Sinai (xxv. 1), by the heavens and the signs of the Zodiac, by the dawn and by the ten nights, by the double and the single (lxxix. 1 sq.) etc. He also uses a form found with these soothsayers which gives the older parts of the Kur'an a distinctive character. While he rejects with indignation the assertion of his opponents that he is a poet (xxv. 51; lxxxxvii. 35; lii. 39; lxix. 41 cf. also the verdict of the poets xxxvi. 224 sqq.) and his discourses really have nothing in common with the productions of Arabic poetry of the time. highly developed as regards language and rhythm, he used after the fashion of the soothsayers, rhymed prose, sajdâf, which consists in two or more short sections of the utterance being linked together by a rhyme. In view of the constant suffix forms and endings and wealth of the vocabulary of Arabic, such sentences can be formed without much trouble especially as the finer rules of the rhymes of poetry do not apply to sajdâf. Muhammad also used the sajdâ form with great freedom, frequently repeated the same rhyming word and used "false" rhymes. In his later revelations he became still more negligent in their application (cf. the material collected by Völlers, Volksprache und Schriftsprache im alten Arabien, 1905, p. 15 sqq.; Noldeke-Schwy, Geschicht des Qurâns, i. 36 sqq.) so that Muslim scholars assert, not quite without justice, that the Kur'an is not composed in proper sajdâf. Nevertheless this form may be used with caution for critical excisions (e.g. lxxiv. 31—34; lxxv. 10 sq.) or emendations (e.g. lxxiv. 43, daâhim for saâbak). Rhymed prose was of importance for the style of the Kur'an as it enabled Muhammad to use peculiar (e.g. xxxvii. 130; xcv. 2) or rare words (e.g. lxxxiii. 18 sq.) or even had a definite influence on the contents (e.g. the nineteen angels lxxix. 30, the eight, lxix. 17, the dual form, lv. 40 sqq. etc.). Among other arts of Muhammad occasionally using the refrain (e.g. sûra lxxvi and especially lv.) without however definitely achieving a regular strophe formation. Among the rhetorical arts may also be mentioned the frequent similes, as Muhammad attributed a special value to them and reflects on Allâh's use of them (xiv. 30; xxiv. 35; xxix. 42; lix. 21; and notably ii. 24). The amthâl are as a rule simple comparisons which are not infrequently very effective and much to the point (e.g. xiii. 15, 18; xxiv. 39). In so far as they are taken from nature, it is made to appear in vii. 56; xiii. 18, as if Allâh had so formed the processes of nature as to express a moral lesson. In other cases the amthâl are taken from history, as warnings or inspirations (xiv. 47; xiii. 57; lxvi. 10 sq.); a remarkable simile is found in the "Licht-Verse" (xxxiv. 35) which is practically isolated in its strongly mystical colouring. On one occasion a simile is spun out into a regular parable (xviii. 31 sqq.), but it is rather spoiled by the confusion of the picture and the truth to be illustrated by it. That Muhammad at any rate later heard something of the parables in the
Gospels is shown by xviii. 29, from which however it can once more be seen that he possessed no real knowledge of the New Testament.

6. The language in which Muhammad delivered his revelations was, according to the most natural assumption, the Hijjazi dialect of the people of Mecca. The view put forward by Volkers that it was a purely popular speech, distinct from literary Arabic with its strict grammatical rules, so that the present text only came into existence as the result of a later revision, has been rightly refuted by R. Geyer and Noldeke, as there is no support for it either in the oldest traditions nor in the evidence of language, although the inadequate reproduction in an alphabet of consonants does not exclude the possibility that the pronunciation on the lips of the Prophet may have offered all sorts of shades of variation. It might rather be asked whether Muhammad may not have used the language in general use among poets; but this could only be settled if we had other specimens of language for comparison from the Mecca of the day. The style is quite different in the earlier and later parts of the Qur'an, although it bears everywhere undeniably the stamp of the same individual. The Muslim is the absolute perfection of the language of the Qur'an, an impregnable dogma, the acknowledgment of which is not however easy to a reader with some stylistic training and a certain amount of taste. In the earliest revelations one is carried away by the wild fancy and grotesque presentation, sometimes also by a warmer feeling, so that it would be pedantic to lay much weight on faults in language or logic. In the later sections also higher flights are not lacking, for example when the Prophet expresses his admiration for the wonders of creation and of life; but as a rule his imagination soon exhausted itself and gave place to a prosaicness in which the slips in reasoning and style, a comprehensive catalogue of which has been made by Noldeke, *Neue Beiträge zur semitischen Sprachwissenschaft,* p. 599, make quite a bad impression. The Prophet becomes fond of wearisome repetitions of long stories interspersed with religious and moral platitudes which have an unpleasing effect, for example, "the most beautiful tale, Sūra xii.) or close psychological explanations, or polemics which prove little to those who do not share his premisses. As an example, the naive argumentation iii. 39 may be quoted, in which he sees in the fact that he was not present, when the events narrated took place, a proof that it must have been communicated to him by revelation. We should however not forget that the really effective element in his preaching lay not in his speeches but in the unusually suggestive power of his personality and also that many weaknesses in his style may be explained by the fact that (like the Alexandrine translators of the Old Testament) he had first to create a language for ideas new and remote to his countrymen, a task for which he had apparently no special gift.

7. What was the exact state of the Qur'an at the death of Muhammad is a question that cannot be answered with absolute certainty. One thing only is certain and is openly recognised by tradition (al-Suyūṭī, *Iltān, i. 71) namely, that there was not in existence any collection of revelations in final form, because, so long as he was alive, new revelations were continually being added to the earlier ones. But, on the other hand, everything points to the fact that even then much of the later Qur'an must have already been written down. In the early period of his mission his discourses were probably preserved as a rule in the memories of his hearers, after he had repeatedly delivered them, and, as the last importance of his words probably only gradually dawned on them, we must probably consider the possibility that a good deal has been lost, of the earliest revelations in particular. Passages like lxxxvii. 6 sg.: "We will enable thee to discourse and thou shalt only forget what Allah wishes", or ii. 100: "If we make thee forget an āya" (the reading nan-sa'uhā is of course a dogmatic correction), clearly suggest that the discourses in question were not written down. But it cannot have been long till they felt obliged to secure the revelations from Allah by writing them down, and it is easy to understand that the material readiest to hand, like shoulder-blades, palm-leaves, stones, etc. were used, as we are told in the stories of the later collection of the Qur'an. What we are told of the knowledge of the art of writing in Mecca and Medina (al-Baladūrī, *ed. de Goeje,* p. 471, 473; cf. Goldziher, *Mukht. Sīrāt, i. 110), is not much, although the story is without interest that among the wives of the Prophet, Ḥafṣa and Umm Kūlzhum could write and ʿĀisha and Umm Salāma could read but not write. There can be however no doubt that in a commercial city of the importance of Mecca with its international connections not a few were able to write more or less well — according to al-ʿAzraḵī, *History and Description of Mecca,* ed. Wüstenfeld, p. 102, etc., documents and bills were prepared there before Islām — and there were certainly not lacking either there or later in Medina people who wrote down Muhammad's revelations. Whether the Prophet himself could read or write is therefore of minor importance, however eagerly this question has been discussed by Muslims, but only from dogmatic points of view and as a rule with an erroneous application of the term ūmūd already mentioned. From the Meccan passage xxix. 47, it cannot be concluded that he only recited, not wrote, but the expression is obscure and probably only refers to the reading of sacred texts. All the more important therefore is the passage xxv. 6, where his opponents say, "These are nothing but old fables which he writes down (or causes to be written down) and they are dictated to him morning and evening". But such remarks refer rather to the matter collected by the Prophet, than directly to his discourses themselves. But when Muhammad (xi. 16) challenges his opponents to produce ten sûras like his own, this undoubtedly presupposes that sûras were available for comparison in writing. This is still more clearly shown by the already mentioned formal abrogation of earlier utterances, which would not have been necessary if these had only been orally transmitted. In the story of Omar's conversion (Ibn Hist, *ed. Wüstenfeld,* p. 226 sq.) there is a reference to a page of writing, but not much stress can be laid on such details in tradition. When ruling in Medina, Muhammad made several of his followers prepare a number of documents, several of which were preserved with a note of the writer (cf. also Wākidī, abbrev. transl. by Wellhausen, p. 35, on the Nakhla letter), and it is obvious that the same was the case with
the later revelations especially with such as refer to legal regulations. The traditions (Balâdhûri, p. 472 sq.; al-Tabarî, ed. de Goeje, i. 1782) give the names of Meccans and Anãr who helped him as secretaries, including two in particular, Ubaî b. Ka'b and Zaid b. Thâbit. According to a curious story, ʻOthmân’s foster-brother, ʻAbd Allâh b. Abî Sa‘îr [q. v.] often acted as Kurã’în-writer to him and he had the honour of an enthusiastic exclamation of his on listening to the dictation of Sûra xxiiiiiiiiiiiiiii. adopted in it (Balâdhûri, p. 473 and the commentators). According to other stories (cf. Wâkidî, abrev. transl. by Wellhausen, p. 55), he boasted before the Kurâçî that he had often induced the Prophet to alter the wordings of the I. a. d. Saihûkah. Verheugen, Mittelalter und Seminars für orient. Sprachen zu Berlin, vol. xii. 2, 83) it is laid down among other things that no one may touch the Kurân except in a state of purification; but Caeti, Annales dell’ Isthûn, ii. 1, 319, note 1, is undoubtedly right in thinking that the regulations laid down in this document were in many cases formulated from a point of view of later date (cf. above, p. 1065b).

8. With the death of the Prophet the position was radically altered. The source of revelations ceased to flow, and the believers in cases of doubt had no one whom they might consult, as no one had inherited Muhammad’s prophetic gift. The discourses left by him thus acquired increased importance, for in them spoke the Prophet or rather God through him to his community, if they were able to interpret his words correctly. The task therefore naturally presented itself of collecting his valuable legacy in as complete and accurate a form as possible and preserving it from destruction. This obvious development is also confirmed by the traditions but unfortunately in a way which leaves much obscure. The most popular view (see Noldeke-Schwally, ii. 11 sq.) finds the stimulus to the first collection of revelations in the circumstance that many who knew the Kurân (kûrûţ), reciters; on the later meaning “pious ascetics”, see Goldscheider, Vorlesungen über den Islam, p. 189) had perished in the battle with the false prophet Musailima. This aroused in ʻOmar the fear that all knowledge of the revelations might be lost wherefore he, although with some difficulty, induced the caliph Abû Bakr to begin the collection of the scattered discourses. The work was entrusted to the already mentioned secretary of Muhammâd, Zaid b. Thâbit. He collected everything that was written on different, often primitive (cf. above), materials, and what people retained in their breasts (i. e. memories) and wrote it on separate leaves (ṣuhûf, pl. of ṣabîfah, written leaf), which he gave to Abû Bakr. After the latter’s death, this book passed into the possession of ʻOmar who bequeathed it to his daughter Ḥaʃâ, the widow of Muhammâd. In this story the first thing that strikes one is that there is no reference to the official transcripts made by order of the Prophet himself, although they would at any rate have reduced the danger threatened by the death of the kûrûţ. Caeti moreover (Annales dell’ Isthûn, ii. i., p. 713 infra) has called attention to the fact that those who fell in the battle with Musailima were, according to the lists, which had been handed down, mainly new converts, none of whom could be expected to have an extensive knowledge of the Kurân. If the whole story is thereby rendered uncertain, it becomes more important to note that there are other traditions, according to which it was ʻOmar himself who ordered and supervised the collection (Ishân, i. 73) and indeed we are even told (Ibn Sa‘îd, iii.l. 212, 4) that ʻOmar died before the task was completed. As it is easier to understand how such a pious work could have been antedated than that it could have been transferred from Abû Bakr to his successor, the second story is perhaps somewhat more probable, although the mechanical way in which ʻOmar is said to have tested the genuineness of the separate parts (if they were known to two authorities) does not sound very trustworthy. Zaid’s participation in the work remains uncertain, and the realistic feature that the Shuhûf came into the possession of Ḥaʃâ. But this very point raises other difficulties. If the Shuhûf was to be an authorised standard codex it is difficult to understand why it was given to a woman. G. Weil thinks that Ḥaʃâ was to take care of it but this could have been more safely done in other ways; and if it was to be a standard MS. from which copies could be made, it was quite inconvenient to leave it with Ḥaʃâ, as not every one had access to the widow of the Prophet. There is never any reference to any authorisation. The whole business was done in a spirit of great freedom, as we hear of several variant versions of the Kurân from the pre-ʻOthmânîc period. The only solution of the difficulty may be in the hypothesis suggested in the next section, that a distinction should be made between the simple material collection of the Shuhûf and a regular arrangement and editing by Zaid of the sûras contained in them. If this is so, the “leaves” would lose any real importance and it is not
difficult to believe that they might be given to 'Omar's daughter as a gift of honour.

9. The men to whom particular editions are ascribed were the already mentioned Ubayy b. Ka'b (Ibn Sa'd, ii/ii. 103; iii/ii. 59—62), 'Abd Allah b. Mas'ud (see Ibn Mas'ud), Abū Müsa 'Abd Allah al-As'īrī (see al-As'īrī) who became famous in the story of 'Ali, and Miqdād b. 'Amr (see Ibn Sa'd, iii/iii. 114—116). All these recensions gradually disappeared after the authorisation of 'Othmān's Kūrān; but several very valuable items of information regarding the first two are given in the Fihrist, ed. Flugel, p. 26 sq. and in al-İkhān, l. 80—82, which throw some light on the oldest phases of the history of the Kūrān. They had the same sūras as 'Othmān's Kūrān but in a somewhat different order and with the important difference that Ubayy had two additional sūras (prayers recalling Sūra i.) while in Ibn Mas'ud, Sūra cxiii. and cxiv. and probably also Sūra i. were not given. Besides these recensions there was a further one, on which 'Othmān's edition was later based, and which is associated with the Zaidī already mentioned. If, as Schwell does, we tried to identify Zaid's edition with the al-khūf, it would be difficult to understand the divergencies of the other recensions in view of the former's prestige. Besides, the name 'the leaves' suggests rather a loose collection of separate leaves, and not a definite arrangement of the portions. This is definitely expressed in another tradition, according to which Zaid collected the sūras with much difficulty in no particular order (Noldeke, Geschichte des Qurān, p. 195). These difficulties are not easily dispensed of by the assumption that Zaid after collecting the al-khūf, had set his own with a definite order of the Sūras, which added a fifth to the already mentioned four editions, one by which the others did not feel themselves bound. The Sūras in it were, as in Ibn Mas'ud and Ubayy, arranged on the principle of decreasing length; but it was only a general principle (taken from Jewish examples?) the details of which were left to the individual. Zaid's version later received authoritative importance, when it was used as the basis for 'Othmān's Kūrān. A further light might be thrown by a phenomenon which, although in itself exceedingly obscure, seems to permit some significant deductions. We refer to the mysterious letters, discussed more fully below, which are found at the beginning of about a quarter of the Sūras. In this connection Noldeke and following him H. Hirschfeld and more recently especially H. Bauer, Z. D. M. G., lxxv. 134 sq., have called attention to the fact that some of these letters are repeated before several several sūras and that these sūras form little consecutive series. Thus ḤM is found before xl. — xlv. (according to Bauer originally before xxxix. also; before xii. with following 'SK), 'LR before x. — xv. (before xiii., 'LMR), ṬSM before xxvi. — xxviii. (before xxvii. however without Ḥ), 'LM seems to be an exception, as it is found not only before xxix.—xxx. but also before ii.—iii.; but we can easily see that the reason is that the order in this case is upset by the principle of decreasing length, by which the sūras already mentioned are placed at the head of the collection while the others being shorter are placed later. This remarkable phenomenon can have only one explanation, namely that these groups formed little separate collections, which Zaid found already formed and would not break up. Bauer has also called attention to the interesting fact that Ibn Mas'ud did not feel himself bound by them but inserted the separate components approximately where they belonged from their length, with the exception however of the ḤM group which he left together, although in a different order. It seems therefore to have had a particular significance for him which is also indicated by the fact that he called this group Dihāj al-Kūrān (see Itkān, i. 71; cf. the article Dīhaj, in Lane, s.v.); Ubayy on the other hand paid no attention to the small series but arranged all the sūras according to their length, although in a very inexact fashion. We see then that there were links between the separate scattered sūras and the al-khūf, small collections probably of a purely private character. This gives us definite evidence that the collection in its present form cannot go back to the Prophet himself.

10. On the other hand, it is a very difficult question whether the sūras which Zaid found were given the form in which we know them by the Prophet himself or whether other hands intervened. That the oldest, quite short, revelations are original units is generally recognised. This is also true of several longer ones, especially xii. which forms a connected story or of Sūra iv. with its refrains. Noldeke moreover rightly utters a warning against assuming that whenever the thread of continuity appears to break, we have the work of a later hand, as abruptness and lack of coordination is really characteristic of Muhammad's style. There are also certainly small pieces of later periods which the Prophet himself may have inserted for some special edition in old pieces. In other cases, however, we have the impression that various accidents, which we can no longer know of, may have played their part in the shaping of the Sūras, among them the circumstance that several short discourses might have been written on the same piece of material, which would simply explain, for example, the transitions from xcvii. 5 to v. 6, or from lxxix. 10 to v. 11. The most difficult thing is undoubtedly to suppose that Muhammad himself composed the unusually long second Sūra in which we find in the middle of speeches of the second year A.H., without any explanation, pieces from the Meccan period (v. 19—37, 158—166) and also of the later Medina period. That the beginnings of the Sūras (with perhaps the exception of xlvii., lxxiii., xviii., which begin with innaj) regularly coincide with the actual beginnings of the revelations is proved by the introductory conjurations or formule like "These are the yād of the Book" or "This is the Book", or "See, a Sūra, which we have sent down, etc.". But the next question is whether such exordiums refer to the whole Sūra or only to what immediately follows, to which the rest may have been later joined; cf. e.g. the introduction xix. i, which only fits the story of Zakariyā' and Maria while, on the other hand, the formula v. 16 is adopted in v. 42, 52, 55 and 57. In brief we are here unfortunately usually confronted with questions which cannot be answered with certainty, however important the correct answer would be for an understanding of the Kūrān.

11. With the reign of 'Othmān we enter upon more solid ground. According to a statement of Ibn al-Athīr (ed. Torber, iii. 86) the four
recessions mentioned above found acceptance, each in a particular region: Ubaiy’s in Damascus, Miṣ-
dād’s in Hims, Ibn Masʿud’s in Kufa and al-
Aṣḥārī’s in Basra; support is given to this statement by the fact that the two last named held offices in the province mentioned. That the existence of several different versions would produce uncertainty is easily understood. We are told in a widely disseminated tradition that the general Ḥudhayfa thought that the quarrels among his followers about the correct form of the sacred book, while on a campaign in Armenia and Adhjar-
bīšājan, were dangerous and asked the Caliph Ṭūḥmān to try to abolish this unfortunate state of affairs, so that believers might not quarrel like Jews and Christians over their scriptures. The Caliph recognised the justice of the request and asked Ḥafṣa to let him have the ḥudūf for a time so that copies might be made of them (nashāḥa bi ʿi-masḥaḥ). Ḥafṣa agreed and the Caliph entrusted the task to a commission consisting of Zaid, already mentioned, Abd Allāh b. Zayd b. Asad b. al-ʿĀṣ (Ibn Saʿd, v. 3, 21a—24a), and Abd al-Raḥmān b. al-Ḥarīrī (ibid., v. 1 sq.). Other individuals are also named but the usual tradition appears the most reliable and in any case it may be considered practically certain that Zaid, on account of his previous services, shared in the work. From the attitude which ʿAbd Allāh and his father al-Zayd soon afterwards took towards the Caliph, one might perhaps suppose that the members were chosen, not so much by the Caliph in person, as by a wider circle. Besides it is not easy to see clearly what their work really was. If they had only to make copies of a standard text, reliable scribes would have sufficed so that the men named would at most exercise some sort of supervision over the work. According to the tradition, they were to retain the Kurān dialect in cases of doubt, but this probably only reflects a later notion of the dialect of the Kurān. Further they could not have made clear fine distinctions of pronunciation with the imperfect Arabic alphabet. At any rate the most important point is that the version of Ṭūḥmān was based on the ḥudūf or as just explained on Zaid’s edition of them, so that we can in this way gain some idea of the contents and form of this basic manuscript. We are next told that of the copies then made, one was kept in Mecca, while three were sent as standard texts to Kufa, Basra and Damascus, that is practically to the regions in which the four differing versions above mentioned were current. Mecca however is added and other authorities give a large number (cf. Noldeke-Schewally, ii. 112 sq.). The authorised edition was readily accepted everywhere; the people of Kufa alone are said to have refused to give up their Ibn Masʿud. Against the accuracy of the whole story, it might perhaps be urged that a knowledge of the Kurān and interest in its correct form must really have been much too slight among Muslim soldiers in this period of the great wars of conquest to give rise to dissensions in the army. But on the other hand, it may be recalled that in the fighting which soon afterwards broke out between ‘Ali and Muʿāwiyah, there is mention of Kurān-readers (kaṣṣāṣ), not only among ʿAli’s troopers but also among the Syrians (al-Dinawari, ed. Guirgass, p. 175, 204; cf. the article ʾṣiffin); the very fact that there were different versions of

the Kurān in Syria and in al-ʿIrāk must have given rise to comparisons and disputes. Whether the Caliph, as we are told in the different traditions, had the extant differing versions burned, torn up or obliterated, has been doubted by Schwally and is without reason, especially as such steps would have been quite inexpedient against the Kurān-reciters who carried the sacred texts in their memories. In any case the alleged destruction cannot have been completely carried out, for according to al-Muʿarrirī (in Lane, s. v.), Sulamīn al-ʿAṣmī could recite the whole of the Kurān (cf. khātim) according to both Ṭūḥmān’s and Ibn Masʿud’s versions and the author of the Fihrist even asserts that he had seen a two hundred year old copy of the Kurān according to Ibn Masʿud (cf. the obscure statements in Noldeke, Gesch. d. Qurān, 1st ed., p. 276 sq.). Even without any such drastic measures, the new version must have gradually driven out the variants because of its official authority and the general desire for uniformity. It was in this way that there came into being the authorised Kurān, which has remained generally authoritative to the present day. All vicissitudes that all vicissitudes has formed, with the Sunna, the solid foundation for Muslim life and thought. It differed from Ubaiy’s Kurān by the omission of the two sūras only found in his version, while it was a little larger than Ibn Masʿud’s Kurān, which omitted Sūra cxiii. and cxiv. and probably also Sūra i. (see Noldeke-Schewally, ii. 39 sqq.) While its order generally, with the already mentioned exceptions was based on the principle of decreasing length, the first sūra, the celebrated fašūḥa, stands outside of this arrangement, apparently because it was intended to serve as an introductory benediction and prayer. It is specially noteworthy because of its lack of any distinctively Muslim thought and the presence of Jewish and Christian terminology. Sūra cxiii. and cxiv. are not the shortest and are thus not in their proper place, but it is hardly necessary to lay much stress on this point. Although they are made into utterances of Allāh by the prefixed ʾal, these formulae for protection against evil powers (cf. xvi. 100; xii. 36) are very different in character from the rest of the Kurān. In these circumstances the omission of the three sūras in Ibn Masʿud becomes significant and the question arises whether they do not represent a secondary arrangement of the sūras about the origin of which nothing definite can be said, whether the work of the Prophet himself or others.

12. This leads to a further and very important question, whether all the revela-
tions in the authorised Kurān come from Muḥammad himself or whether foreign matter has been added or passages forged for propagandist pur-
poses. As a matter of fact, there has been no lack of such assertions, in the Muslim world and by modern scholars. The arguments brought for-
ward on this point, within Islam, are however of no real importance as they are based on purely dogmatic premises. For example, some of the puritanically-minded Khārijis are said to have rejected Sūra xii. as a love-story unworthy of the Kurān (al-Shahrastānī, Kitāb al-Milāl waṭ-Ṭahā, ed. Cureton, p. 95 sq). But it so undeniably bears the stamp of the Prophet’s style that the forger must have had an astonishing power of imitation: forgery is all the more improbable as
the Sūra was found in Ibn Ma'sūd and in Ubayy and must therefore have been very old. The fact, that some reject as false passages those in which Muḥammad curses his opponents is due to the more refined religious ideas of the Mu'tazila and perhaps to Christian influence. But in general it is the Shī'īs who have pronounced against the integrity of the 'Othmānī Kurān. This however was only a result of the fact that they missed very much in it pronouncements on the prominent position of 'Alī and his family and their claims to sovereignty and to the coming forth of the hidden Imām at the end of the world; and they roundly insisted that all this had been most maliciously suppressed by the godless ‘Othmān. In support of this assertion, they very cleverly point to the undeniable lack of coherence in several sūras, but the situation is not improved by filling the gaps with references to ‘Alī. But not only are odd verses said to have been suppressed but whole sūras, which glorified ‘Alī, only two of which have been published, the sūras al-Nūrān and al-Walīyā (see Noldeke-Schwally, ii. 102 sq.; Goldziher, Die Richtungen der islamischen Kuran- auslegung, p. 271). As there is no agreement among the Shī'īs themselves regarding the genuine form of the book of revelations, the attempts made by them to produce the complete text have regularly failed, and they have therefore retired to the safe position, that the authentic form is secretly transmitted by each imām to his successor, to be communicated with the true exposition to the believers ultimately on the coming forth of the hidden imām. Till then, faut de mieux, they use the 'Othmānī Kurān and make shift with an exegesis which enables new interpolations to be made unrestrictedly, and arbitrary alterations in the text, which however they refrain from in all passages used liturgically.

Several modern scholars have endeavoured in a different fashion to prove the occurrence of passages in the Kurān which are not genuine. Théodat de Sacy (Journ. des Savants, 1832, p. 535) suggested that ‘Omar’s doubt about the death of Muhammad would have been impossible if the verse quoted against it (iii. 135) by Abū Bakr were genuine, so that it must have originated with Abū Bakr. G. Weil agrees but, as a logical result, he rejects a series of verses of similar content (iii. 182; xxi. 35 sq.; xxix. 57; xxxix. 31 sq.). But it is just this increase in the number of passages attacked (which even yet is not sufficient, e.g. g. vi. 163 and notably xxxii. 53) which makes criticism unreliable and what is to be deleted in perfect keeping with what Muhammad says out of his purely human nature. The question is usually attacked from the wrong side: for the fault is not in the Kurān but in the tendentious tradition, which in reality is attacking the belief that crops up in a disappearance off and returneth between the worship of Allāh and of Muhammad. Weil’s doubt regarding xvii. 5 and xlvii. 14 is no better founded, nor are H. Hirschfeld’s objections to v. 73, 101; lx. 6 and all passages in which the name of Muhammad occurs. When Weil in particular asserted that ‘Othmān falsified the Kurān by all sorts of omissions, this is refuted, like the Shī'ī charges before mentioned, by the simple fact that nowhere in the oldest records is there any hint of such a thing although his opponents collected a long list of charges against him.

13. Another question is raised by the additional sūras in Ubayy’s recension, which, according to Ḥiṣām, i. 82, are also found in Abū Mūsā’s version and in the Kurān of Ibn ‘Abbās: do we really have in the authorised Kurān all the revelations in existence at the death of Muhammad? Although by the completion of the collection, the utterances that came from the heavenly book and Muhammad’s own words were rigidly limited there are references in the traditions to several utterances which really belonged to the Kurān but were not included for various reasons, including some that are said to have been in the Kurāns of Ubayy and Abū Mūsā cf. Noldeke-Schwally, i. 234—261; ii. 44 sq. and thereon al-Tabari, ed. de Goeje, i. 1627, 16, and the glossary under ‘Ṭ’. We need not reject this statement off-hand. It would really not be surprising if the difference between the two kinds of pronouncements was at first not rigid, especially in so far as they were only preserved by memory. But nowhere is the genuineness of the revelations said not to have been accepted conclusively proved; of some the falsity is much more probable and it must be further remembered that they would not contribute any real addition to the Kurān. The best known is the so-called “verse of the stoning” (ayat al-rafīḥ) according to which infidelity in women not virgins can be punished by stoning. As regards matter it might well belong to Sūra xxiv.; but it is in direct contradiction to its second verse and on the other hand it cannot be included among those abrogated, as, according to the traditions, ‘Omar punished this crime in this drastic fashion. It seems therefore to be a secondary verse intended to authorise the more severe punishment.

If a critical examination of the Kurān on these lines leads to a satisfactory result, it must not be taken to mean that the canonical Kurān gives an absolutely true and faultless reproduction of the utterances of the Prophet. On the contrary it undoubtedly contains not a few explanatory additions (cf. e.g. the probably secondary kābir, ii. 216) and harmless interpolations (cf. e. g. A. Fischer in the Noldeke-Festschrift, 1906, p. 33 sqq. whose arguments however are hardly cogent). Transferences of sentences may also have taken place, cf. the striking example quoted by Goldziher, xxiv. 60a, which breaks up the context. But this is something quite different from a deliberate and tendentious falsification of the revelations, against which protests would certainly have been raised at once.

14. The Sūras were originally separated from one another by the basmula (“in the name of God, the Merciful, the Compassionate”) placed at the beginning of each (see vol. i., p. 672). It is only lacking in Sūra ix., probably because Sūra viii. was originally joined to it. In the text itself, the formula is found in xcvii. 30 at the head of a letter from Solomon to the queen of Saba’, a proof that the Prophet regarded it as a regular form of introduction. In keeping with this, is the fact that it often occurs in his dispatches (Ibn Sa’d, ii. 23—37 passim) and according to Ibn Hishām, ed. Wüstefeld, i. 341, at the beginning of the ordinance of the community. But he also used the older formula: “in Thy name,”
read, mentioned has sought a safer basis for interpretation, starting from the fact that some sūras take their name from the introductory letters, e.g. xx., xxxvi., xxxviii., i., xli., and lxxvii., the two latter however with variants. Now as the names of the sūras are catchwords taken from the sūras concerned (see below), he supposes that these letters are something similar. But this conclusion is by no means certain and his ingenious attempts to find the passages concerned in the sūras are, as a rule, not very convincing and it should be remembered also that he cannot apply this explanation to the letters that occur before several sūras, but has to be content with seeking an internal or external relation between these sūras and the letters. The same may be said against Gossen's attempt in *Der Islam*, xiii. 191 sqq. H. Hirschfeld revived Noldeke's earlier explanation that the letters were originally marks put on by the owners of some of the manuscript copies made by Zaid to show they were their own property, except that he regards the group of letters not as single names (e.g. ṭḥ for ṭaḥa) but names of several owners (e.g. ṭḥ for ṭaḥa and abī ḥurayra). In comparison with earlier suggestions, this strikes one as very moderate and unfanciful. Nor is it refuted by Noldeke's argument that such abbreviations are not to be expected in the beginnings of written Arabic literature; for it is not at all improbable that the people of Mecca with their highly developed trade may have marked, e.g. in the annual trading-caravans the goods of individual citizens taking part in them in some such way, and that this custom was adopted in another branch of life, where it was no longer necessary, but perhaps because of the genuineness of a document or some such thing. It might also be possible that there was an imitation of the Jewish practice, cf. the article "Abbreviations" in the *Jewish Encyclopedia*. In any case this hypothesis would agree very well with the above discussed connection of the letters with small private collections of copies of the revelations. But even this view does not lead to any final result, as the expansion of the letters to names offers so many possibilities.

16. Among the secondary elements in the Kurān are the names of the Sūras. These are catchwords which refer either to the beginning of the sūras (e.g. lxxii.—cxix.) or to some subject dealt with in them (e.g. "The Cow" in i. 63 sqq.; "The House of 'Imrān" in iii. 30; "Hūd" in xi. 52 etc.). That they were generally known in the first half of the eighth century is certain, as some of them are mentioned by John of Damascus in *Patrol. Graecae*, xcvii. 769, 772; viz: "the Cow" (Sūra ii.), "the Women" (Sūra iv.), "the Table" (Sūra v.) and in addition a name no longer found, "the Camel", which might refer to vii. 71—75, xi. 67 sqq. or xxvi. 155 sqq. This however does not prove that they were already adopted in the manuscripts at this time; and that they do not all come from Muhammad himself, as John says, is evident from their varying (Sūra ix. for example is also called al-Tawbah: cf. Ikāb, i. 66 sqq. and the above notes on Sūra xii. and lviii.). Besides, they originally ran "the sūra in which the cow is mentioned" etc. and appeared in the manuscripts not as superbut as subscriptions (Nöldeke, *Geschichte des Qurān*, p. 320). The two non-canonical sūras of Ubayy had similar names, Sūrat al-Kāhil and Sūrat al-Kafād.
The sūras were divided into "verses," which were called "ayāt," following the linguistic practice of the Qurʾān already mentioned. The verses were generally arranged according to the rhymes, but as the divisions were originally not marked in the manuscripts, there is a difference of opinion about their divisions and numbering (see Ikšān, i. 83 sq.; Noldeke, Gesch. d. Qurʾāns, p. 300).

17. Although the ʿOthmānī ʿArabic prevailed over its rivals, it did not provide for the Muslim world a real textus receptus, and yet one would think that, if ever one were necessary, it would be for such a book as the Qurʾān, as ʿAllāh speaks in it everywhere. Even ʿOthmān himself, according to one story (al-Tabari, Tafsīr, iv. 24), did not adhere to the text authorised by him, but read Sūra iii. 100 with an addition not now found in it; and if this is correct, it is no wonder that others took still greater liberties. Various circumstances contributed to the continual variations in the form of the text. First there was the carelessness of the few trained copyists; even the copies of the Medina standard codex (al-Inām) sent to the provinces are said not always to have been identical with it, and lists are given of Medina, Damascas, Baṣra and Kīfa readings, to which a few from Mecca are added. These refer however only to minor points, which are of interest for the history of the language and orthography, but not for the matter. The cause of variation in the text was of greater importance, namely, the different readings which the Qurʾān retained in their memories and would not always abandon, even when they had a written Qurʾān before them. These are primarily readings which were found in the rival versions and had thus gained currency. Finally there was a third factor, the deficienci es of the Arabic script. It lacked not only signs for the short and to some extent for the long vowels, the pronunciation of which was left to the reader (which meant, for example, also the choice between active and passive) and for double consonants, but different consonantal sounds were expressed by one character, e.g. ʾ, ʾ, and ḏ, ḏ, ḏ, etc., and in the degenerate Arabic script, very different letters had come to assume the same form, so that for example ṣ and z, b, t and th and at the beginning or in the middle of a word n and y also were indistinguishable. In any case this seemed to be little affected by such however possibilities, e.g. ʾxxi. 0, where it was a matter of indifference whether one read ʾašāʿ or ʾal-išāʿ; but in other cases a different pronunciation was a matter of moment, e.g. v. 8, where the alteration of a case-ending modifies the rule about ablation before prayer. Such possibilities afforded a means by which perplexed spirits could get rid of various passages that offended them, e.g. xii. 10 where in place of the troublesome ʾašāʿ, ʾašāʿ or ʾašāʿ could be read. In this way there arose a perplexing confusion of readings and in place of the striving for uniformity that one would have expected, people became accustomed to unlimited liberty in these matters, so that they did not hesitate to substitute for particular words, their synonyms or insert short explanatory additions. This freedom was all the more unbridled in its development, as Umayr had established little feeling on such questions and preferred to take care that passions were not aroused by state interference in such matters.

18. Gradually however, the situation came to arouse misgivings. As by this time the state of affairs just described had developed to such an extent that the preparation of a canonical text was not to be thought of, and there was, besides, no authority who could enforce the adoption of one, the endeavour was made to eliminate the worst defects by more general principles. Not every variant was allowed, but only those which were based on recognised authorities, preferably such men as had received their reading from the successors of the companions of the Prophet. At the same time the overwhelming mass of small details led the art of reading the Qurʾān, hitherto transmitted orally, to be replaced by critical writings. The first book of this kind is said to have been written by a Jewish convert to Islam Ḥabīb b. Mūsā (d. c. 800 A.D.). Of later works dealing with variant readings, special mention may be made of that of Abu ʿUbayd al-Kāsim (d. 837 A.D.; Brockelmann, Gesch. d. arab. Litt., i. 166, 186) and of the celebrated Tābarī's al-Djami. The measures taken were however too indefinite to be really effective and the attempt was therefore made to limit the number of authorities, for example by emphasising the importance of ten recognised teachers. The number seven however was especially popular in this connection and support was found in it in an alleged saying of the Prophet regarding the seven ʾabrūf in which the Qurʾān is revealed and which all possess divine authority. Although "seven" in this tradition is probably only a round number meaning "several" and it was quite uncertain what the word ʾabrūf really meant, the number was taken literally and ʾabrūf was given the unauthorised meaning of variant readings. The complete historical inaccuracy of this assertion was sharply criticised by several scholars, but it found wide acceptance, especially after Abū Bakr b. Muḥājir (d. 936 A.D.) had chosen seven from among well known teachers and declared them authoritative Kurʾān-readers, and with each of them two men were associated as transmitters (ruʾūāt). The seven were Nāṣir, Ibn Kāṭīr [q.v.], Abū 'Amr al-ʿAlī, [q.v.], Ibn ʿAmīr, Abū Bakr ʿĀṣim, Ḥamza and the famous philologist al-Kisāʾī. The selection was quite an arbitrary one, but the method used elsewhere by Muslims, e.g. in the four madhābi, of declaring several rivals authoritative and equally trustworthy had decided practical advantages as it averted endless and passionate disputes. There was of course no lack of protest by prominent scholars who rightly objected to the unjustifiable exclusion of other equally authoritative teachers. In the 11th century A.D. however, the exclusive authority of the seven canonical teachers began to prevail and their readings were specially dealt with by several authors, among them Abū ʿAmr ʿOthmān al-Dānt (d. 1053 A.D.) whose Kitāb al-Tafsīr displaced Ibn Muḥājir's work, in Abū ʾIsām Kāsim al-Shābī's (d. 1194 A.D.) version. But a number of students with critical ability did not hesitate to take into consideration readings of other readers not included among the celebrated ten, especially those of Yaḥyā b. Ḥaḍramī. What degree of liberty in selecting readings was claimed by the able critics is seen from the rule laid down by Muḥammad al-Dāzār (d. 1420); cf. Brockelmann, ii. 201) who is followed by al-Suyūṭī (Ikšān, i. 94), "every reading which is in consonance
with the Arabic language — although only in some respect — and with the ‘Othmanic manuscripts of the Qurʾān’ — although only a possibility — and whose chain of tradition is faultless, is considered a correct reading and must not be rejected but belongs to the seven ʿāḥrūf, in which the Qurʾān is revealed, whether it comes from the seven or the ten or from other recognized Imāms; but if it does not fulfill one of these three conditions it is to be branded as weak, arbitrary or false, whether it comes from the seven or from any one who is older than they”. But this freedom was only exercised in learned works; in all public readings before the people the readings of the seven canonical readers were observed. At the present day only two methods of reading are in general use, that of Ḥafs, rāwī of ʿAṣim and in Africa, except Egypt, that of Nāf. This is the extent to which Muslim textual criticism has prevailed. A proper critical edition of the Qurʾān making use of all available material is a task which still awaits modern scholarship.

19. This work on the text was considerably facilitated by the introduction of different means of restricting the ambiguity of the old script. Diacritical points were introduced to distinguish letters of the same form, marks indicating the pronunciation of the vowels, and the feminine ending -at, the consonantal pronunciation of ʿalif, and the sign for the doubling of a consonant. As is usual in such cases, all recollection of the period of their introduction had been lost among the Arabs. It is certain that they are based on an imitation of the Syrian practice and recent finds of coins, inscriptions and particularly of papyri have thrown some light on the question. These show that at the beginning of the viiith century the diacritical points were in use, at any rate to some extent; but they were certainly older and had perhaps been already introduced in the pre-Muḥammadan period. The vocal signs were originally dots in varying positions and were only replaced after the middle of the viiith century by the signs now in use, modelled on the semivowels, ʿ, ʾ, w and y (for further details see i., p. 383; Nöldeke, Gesch. d. Quʾān, p. 305 sqq.). In some the use of these signs in the manuscripts of the Qurʾān aroused mufīwīg. According to the Ikān, ii. 202, the Medinas Raḥīm b. Anas (d. 795 A.H.), for example, only permitted their use in copies intended for students and did not permit them in the large manuscripts used in public worship. Others, on the other hand, permitted their use without hesitation, as the signs from their form could not be regarded as a component part of the sacred book. To make the distinction clear, the vowel signs were originally distinguished by another colour, while the diacritical points were written in black as parts of the letters. On the incorporation of the names of sūras into the Qurʾān, see above; on the different marks for separating the verses, especially for every 5 and 10 verses, see Nöldeke, Gesch. d. Quʾān, p. 324; see ibid. on the sūqīdā, the mark for the passages in the text where one should prostrate oneself.

20. In editing the Qurʾān, no attention at all was, as we have seen, paid to chronological order, a result of the composite character of many sūras, which also made an arrangement according to their contents impossible. Instead, the sūras were arranged, although only approximately, according to their length, which however only led to the inconvenient result that the very earliest sūras, being the shortest, were put at the end. As a chronologically arranged is of fundamental importance for the understanding of the text, the commentators were faced with a task, the necessity of which had already been recognized by the Muslims. The main thing was to establish whether the sūras arose in the Mecca or Medina period, or whether they were composed of pieces from both periods. This problem has on the whole been solved, although views differed on many points of detail (cf. Ikān, i. 15 sqq.). In practice this question can be satisfactorily answered in most cases, if a series of criteria are used, some of which may be outlined here. When Muḥammad disputes with his countrymen about the resurrection of the dead or the oneness of God, when he refutes the assertion that he is a magician, a poet or one possessed, when he fights against the custom of burying newly born girls alive, we know that we are in Mecca. The difficulties only begin, when we try to arrange the separate pieces of this group in their chronological order, for there is an entire lack of distinct references to definite events; and even if there were any, it would help very little as the chronological statements in the old traditions of Muḥammad’s life in the Meccan period are quite unreliable. A rare exception is formed by Sūra xxx. with the mention of the defeat of the Byzantines by the Persians, probably in the year 614 A.H. More uncertain, although not improbable is the connecting of Sūra liii. with the emigration of some of the Prophet’s followers to Abyssinia. There is also the further difficulty that Muḥammad, not unintentionally, delivered his orations in a kind of chiascuro and it is exceedingly rarely that personal names are mentioned (xci. 1; xxx. 37). The traditions however are everywhere able to tell us exactly who the anonymous individuals that appear in the Qurʾān were, but these identifications are certainly due to horror of a vacuum and are often definitely wrong. We have therefore to rely essentially on internal criteria. G. Weil laid the foundations for a classification of the Meccan Sūras by dividing them into three classes. He was followed by Nöldeke, who in turn is followed by H. Grimm, although with certain variations in the order which are not of great importance, and show that generally accepted results are not to be obtained in this field. The most certainly recognizable is the first group, a series of short addresses full of excited passion, glowing imagination and no little dramatic power. These are such distinct features that it is certainly a mistake when Lammens, Fatima, p. 64, wants to transfer Sūras xliii. and xcv. to the latest Medina period. Characteristic of the group are also the already mentioned conjunction formulae; and the peculiar phrase occurring thirteen times mā ʿāvrān’, “thou surely knowest not”; mā yudrīka, xlii. 16, lxxv. 3, also belongs here, in which case xxxii. 63 is perhaps a verse that has been separated from its context. Lastly Snouck Hurgronje, De Gids, 1886, ii. 259 sqq.: lii. 109 called attention to the very important point that Muḥammad did not from the very first proclaim strict monotheism as the principal thing but the approach of the Last Judgment, from which he was to save his countrymen. The assertion
that there is no god but Allāh appears sporadically from lxxiii. 9 onwards: and it must certainly have taken some time before there was a definite breach with the idolators (Sīra cix.) and before he met them with the declaration of the oneness of God (Sūra cxii.). It is not till the second group that everything centres round monotheism and for this reason the polemical passages lli. 25 sqq. and lii. 19 sqq. directed against the daughters of Allāh are probably a little later than the adjacent verses. Starting with the assumption that the Kurān gives a complete picture of Muhammad’s preaching, the Muslims have discussed the question which Sūra is the oldest, probably containing his call to be a Prophet (see above). The majority decided for Sūra xxvi. 1—5 (see Itlān, i. 29) and many modern critics have followed them in this. Properly understood, the passage really does fit this view very well; but it is not absolutely certain and, as already mentioned, we must deal with the possibility that it is just of the earliest revelations that much may have been lost before people began to learn them by heart or record them in writing.

Of the next two classes, the third is probably the easiest to define. It is the weakest part of the Kurān, in which Muhammad’s imagination apparently became exhausted, and he was content with tiresome repetitions of his earlier ideas and especially with the tales of the prophets. The form becomes discursive, and more prosaic, in which this group resembles the following ones. The passages belonging to it show clearly that Muhammad would have become intellectually bankrupt if the migration to Medina had not aroused him to a new effort. The transition to this group is formed by the second. The opening enthusiasm gives place to calm and the Prophet’s aim is to influence his hearers by proofs, which to tell the truth are often not very convincing, such as descriptions of phenomena of nature and in the life of man, in which occasionally we have a flash of the old poetic fire. Considerable space is occupied by the stories of the experiences of earlier prophets, which were intended to warn his enemies and to encourage himself, because he constructed them with great daring on the model of his own experiences. The introductory conjunction formulae become rarer and rarer and completely disappear in the third group. To the second group belongs the remarkable episode in which Muhammad is fond of using for Allāh the name al-Rahmān, unknown to the Meccans. In the Sūras of the first group it is found once only, in Sūra lv. 1, rarely in the third and nowhere in the Medina sections.

Instead of this simple grouping, which excellently characterises the Meccan sūras, H. Hirschfeld has proposed another, quite artificial, system, in which the sūras following cxvi. 1—5, are arranged under the following heads: declamatory, narrative, descriptive and legislative. The result is not so very different from Nöldeke’s, but the system is mechanical and often arbitrary in its application, e.g. when xciii. 9 sqq., where the change of rhyme alone proves nothing, is cut off and added to the legislative series.

21. In the revelations of the Medina period, the question is much easier to settle. Everywhere that we find Muhammad attacking the Jews or the mumnīfūn [q. v.], that he summons to the holy war (“on the path of Allāh”) or where he lays down criminal or civil legislation, we are in Medina, whether we are dealing with whole sūras or small sections or single verses, e.g. vi. 143 sqq.; xxix. 1—10; lxxiii. 31—34a. The references to events known to us from the Sīra in the Medina period, the battles in Muhammad’s wars, his discourses etc., afford us a particularly safe means of arranging the sūras chronologically. There are also all kinds of details in which an investigation of the pertinent passages reveals at least their relative order, e.g. his opinions on wine and his varying utterances on the attitude to other religions and on the holy war. Such details are very suitable for the subjects of special studies and are often yield very important results. Snouck Hurgronje has clearly revealed one point of fundamental importance in Het Meekmaansche Feest, p. 33 sqq.

In the Meccan sūras it is often said that no prophetic admonisher had been sent to the Arabs before Muhammad as to other peoples (xxxi. 2; xxxiv. 43; xxxvi. 5). Abraham occupies a prominent position among the prophets (xix. 42); he is however only a prophet like the others and has nothing to do with the Arabs. When he is called hānif [q. v.], this is in contrast to the polytheists, just as Muhammad himself is called a hānif; and where there is a reference to the millāt ʿAlīn (vi. 162; xvi. 124), it may that he stood of monotheism, cf. the words of Joseph in xii. 38. Abraham on the other hand gains quite another significance in Medina, after the definite breach with the Jews had been made. In direct contrast to the previous neglect of the Arabs, we are now told that Abraham lived in Mecca and founded the sanctuary of the Black Stone with his son Ishmael: ii. 119—123; iii. 89—91, a legend (?) invented by Arabian Jews? which had never been heard of in Mecca (xxxvii. 57; xxix. 67). When Abraham is now called a hānif, the word is used not only in contrast to the polytheists but also to the Jews and Christians: iii. 60; iv. 144; cf. ii. 167; and the millāt ʿAlīn is now the original pure religion, which Muhammad wishes to introduce (ii. 124, 129; iii. 89; iv. 124), for Thora and Gospel were only sent down after Abraham (iii. 58) and the Jews and Christians corrupted the original religion (see above). This certainly shows that passages like xiv. 39—40; xcv. 77, 77, could not have arisen in Mecca, but only later in Medina, which may perhaps also be true of vi. 162, and xvi. 124 above mentioned. Less certain is another criterion of criticism pointed out by the same Dutch scholar (De Gids, 1886, ii. 460). He sees in Muhammad’s polemics against the Christians a result of the breach with the Jews and therefore thinks that all passages in which they occur must be Medinese. In the great majority of cases this dating is certainly right, but there is at least one or such passage which can only be Meccan. In one of the frequent verbal duels between the Prophet and his polytheistic countrymen xliii. 57 sqq., the latter endeavour to involve him in the difficulty that Jesus, whom he himself takes as a model, is actually worshipped as God by the Christians; and Muhammed sharply repudiates this view for “Jesus was and only professed to be a man”. Muhammad was however in the Meccan period always convinced of the full agreement of his teaching with that of the Jews and Christians; but we must remember that,
as already mentioned, the main thing with him at first was not monotheism but the proclamation of the imminent judgment, an idea which he certainly adopted from the Christians; what they thought about Christ was quite subordinate to this and it is also possible that the very Christians with whom he was in contact at this time had heretical views with regard to ecclesiastical Christology. He would soon learn that there were differences on various questions among the "peoples of a scripture" (xxii. 55; xxvii. 48; xiii. 18) and a strict monotheism had become to him the central element in religion, he had at once to reject orthodox Christology as a degeneration of pure Christianity. Passages like xix. 35—41 may thus have already originated in Mecca.

Just as the first revelation received by Muhammad was sought among the Meccan sūras, so did the Muslims seek the last among the Medinese, especially as this question was of some importance for possible abrogations. But the Muslim statements vary rather much: cf. Isḥān, i. 33 sq. Sūra v. or ix. or cx. is given as the last sūra; ii. 278 resp. 281 or iv. 175 as the last verse, while others say v. 5 or ix. 29 sq. The last is connected with a tradition which says that Zaid in collecting the Kurān found these two verses last. Much more various is the view that v. 5 is the last, which is probably rightly connected with the farewell pilgrimage (cf. the emphasized "to-day"); as regards contents, it would be very suitable as a final verse, although the meaning is not that Muhammad's mission was completed but that Allah's cause had been victorious. The claims of the other verses suggested as the last verse are not capable of any further proof.

22. For the Muḥammadans, the Kurān is not the sacred book in the usual sense but something of much greater significance. It is, as already mentioned, the faithful reproduction of the original scriptures in heaven. This sounds rather strange, when we remember that this heavenly book, according to the passages above quoted, only became by Allah's grace an "Arabic" Kurān, intelligible to Muhammad and his people, as the scriptures of the Ahl al-Kīlah were closed to them; but this distinction gradually disappeared for the religious consciousness. After the conception of eternity and the uncreatedness of the word of God had become known to Muslim theologians through the polemics of Christian theologians (cf. C. H. Becker, Zeitscrbr. f. Assy., xxvi. 186 sqq.), it was applied to them by the copy in heaven and then finally by the strictly orthodox school to the Arabic copies of the Kurān and expressed, epigrammatically in the sentence, "What lies between the two covers, is the word of God". The Muḥtasīls and the more free-thinking theologians raised a protest, it is true, but after Al-Shābī himself, in the last version of his dogmatics, had championed the view that the written or recited Kurān is identical in being and reality with the uncreated and eternal word of God, the victory was won by the orthodox school.

KORDOFĀN is a province in the Anglo-Egyptian Sūdān which lies roughly between Latitudes N. 10° and 20° and Longitudes E. 32° and 27°. The word Kordofan or Kordofal, as it is often pronounced locally and written in old documents, does not occur, we think, in any Arabic historian or geographer of the middle ages. It is generally supposed to be derived from a small hill of the same name some ten miles S.E. of al-Khad (Lat. N. 13° 11', Long. E. 36° 14'), but the meaning of the words, the language from which it is drawn, and the territorial limits to which it was applied before the last century, are all uncertain. In the
Tabakat wa'd Da'ifulla (1805) the name occurs in the lives of three holy men of the seventeenth century: one of them, called al-Kordofani, came from Kurün which is south of Tegali and another from Zalaţa which is west of Naḩūd. Burckhardt, whose knowledge of it was mainly obtained from merchants in Şendi (1814), refers to Kordofan frequently as if it were a region comparable to Dāfir or Sennār. In the seventeenth and eighteenth centuries it seems, therefore, to have included a broad corridor running between the southern Nuba mountains and Dār Kabābīsh; to this day Arabs north of Lat. N. 14° 30′ speck of "going to Kordofan". After the Egyptian conquest in 1821, the name was applied to one of the greater administrative areas into which the Sūdān was divided and for the next sixty years it covered a region reaching from or near the White Nile westwards to Dāfir, and from Dongola province south to the line formed by the Bahr al-Ghazal and the Bahr al-'Arab. After the Khallifa's defeat in 1899 the province was reconstituted for a few years on the old lines but it has since been reduced by the formation, first, of the White Nile province and, later, of the Nuba Mountains province. As at present defined, Kordofan province covers an area of about 115,000 square miles with a population estimated in 1925 at less than half a million; the capital and the chief local centres are at Bāra and Sādiri (north), Umū Buḥba and Rabād (east) and Naḩūd, Abū Zabād, al-ʻAqāiyya and Mūglad (west). The capital of the Nuba Mountains province is at Talūdī.

In this vast area there is considerable variety of soil, rainfall, fauna, and flora, and the inhabitants are perhaps still more diverse, the region in these respects being typical of a series of African territories between the same parallels of latitude, though unlike some of these Kordofan has never formed the centre of an independent native state. The middle zone through which a railway passes to the Obi'ed, is and has long been the most important commercial road from Central and Western Africa. Before the Egyptian conquest the Dāfir slave-trade, a trade then chiefly in small children, passed through this zone, and during the Egyptian rule it was the centre from which slaves were recruited for the army from the Nuba mountains. Gum, ivory, ostrich feathers and a little gold have also been traded through this region for many centuries, but only the first of these commodities is still of importance: to-day large quantities of the finest gum are exported from Kordofan to the world markets, also cattle to Egypt from the Bakṣār tribes in the eastern district of the Sūdān (Bukba) to Arabia. The opening of the railway, the sinking of deep wells, and the clearing of motor roads have given a great impetus to the development of this country. North of this zone the rainfall is light, semi-desert conditions prevail over large areas, and the country is divided between various camel-owning tribes except for a few hills still occupied by small communities of sedentary Nuba and a few oases, like Bāra, where gardens can be cultivated. In the southern third, on the other hand, and particularly in the Nuba mountains, natural conditions are much more favorable to the production of crops like cotton and the breeding of cattle and horses: this part of the country has now been tranquil for some years and is steadily increasing in wealth as communications improve.

The population is formed of the most diverse elements. In the north and centre Arabic is universally spoken and Islam of the usual African type is the religion of the people: in the south, Arabic is now spreading along the trade-routes, but most of the people on the hills have kept their own languages and forms of religion. Most of the Arabic-speaking people whose conversion to Islam is not very recent, claim Arab pedigrees but it is impossible to say what amount of Arab blood is now flowing in any particular district here or elsewhere in the Sūdān. The Arabs filtered into the land in small bands and intermarried freely with the natives, Libyan, Nubian, Beja or what not, according to their own traditions which are confirmed by their customs and appearance. The Kabābīsh, for example, in the north of Kordofan, who are counted, probably with right, one of the most 'Arabian' of the tribes, infuse their women according to the Sūdān 'Pharaonic' rite and observe the marriage customs which are characteristic from Dongola to Sennār, and the tribe is a recent amalgam of heterogeneous elements, different sections speaking different dialects of Arabic. The Bakṣāra tribes, on the other hand, are, or until recently were, strongly opposed to infibulation and the more characteristic wedding customs of their Muslim neighbours, yet they can hardly be considered more Arab than the Kabābīsh. It is obvious that the term 'Arab' when used in the Sūdān as an ethnic term must be understood with a difference. This difference must be still further accentuated in the case of the more mixed communities in the centre of Kordofan and on the more advanced Nuba hills where Arabic is spoken and Islam practiced as it is understood on the Nile. When one turns from these to the naked Pagans on the hills, one enters a sphere which is quite as heterogeneous as the sphere one has left: the term Nuba which is applied by the natives here to any black pagans suggests a relationship which has no existence in fact. In a recent study Meinhof has enumerated 27 languages spoken on the Nuba hills and has traced them to three distinct African language groups which reach back to remote prehistoric days. It may be added that Meinhof's list is probably incomplete and that the inhabitants of different hills also differ profoundly from one another in physical type and in the acquired knowledge and dexterity observable in primitive crafts and pursuits.

Bibliography: MacMichael, The Tribes of Northern and Central Kordofan, 1912, and A History of the Arabs in the Sudan, 1922, contain bibliographies of the early literature and a great deal of new material bearing especially on the Arab period. Meinhof in Eine Studienfahrt nach Kordfam, Hamburg 1916, gives a useful résumé of recent work on the southern languages and, among other things, disposes of the view that the languages belonging to the Nubian group are of recent origin there by showing that the southern group must have broken away from the Nilotic group before the adoption of Christianity had brought enough Coptic loanwords into the language. Reference should be made also to the official publications of the Sudan Government, to papers by C. G. and
KORÇUD, eldest son of the Ottoman Sultan Bayazid II, was appointed to the governorship of the province of Teke in Asia Minor; incurring the enmity of the grand vizier Ali Paşa, who preferred his brother Ahmed Sultan to him, he decided to quit his father's territory after the grand vizier had seized certain estates in his province; obtaining sanction to set out on the pilgrimage to Mecca, he embarked in Muharram 915 (April 1509) with 87 persons in his train on five ships commanded by Raśś Akbash; after a voyage of five days, he landed at Alexandria and was accorded a magnificent reception in Cairo by the Mamlûk Sultan but the latter refused him passage through his territory for fear of displeasing the Ottoman Sultan; Korçûd thereupon resolved to come to terms with his father's vizier and was restored to his governorship. While he was on his way back to Cilicia his flotilla was attacked and defeated by the Knights of Rhodes; the prince was forced to land on the nearest coast. In passing through the province of Teke, he had his baggage plundered in the vicinity of Elmauû by brigands commanded by Karâ-biyil, called Shâh Kâli (cf. Der Istâm, xi. 88 sqq.). Suspecting intrigues on the part of his brothers, he went in disguise to Constantinople and stayed at the mosque of the Janissaries, but the latter took the side of Selim and distrusted Korçûd's incapacity. The forced abdication of Bâyazid made him abandon all hope of succeeding him (8th Safar 915 = April 25, 1512). After the massacre of the imperial princes, Korçûd was in terror of his life; Selim, setting out unexpectedly from Brussa under a pretext of going hunting, arrived five days later in front of Magnesia the capital of the province of Sârkhân [q.v.] of which his brother was governor. Korçûd fled from his palace by a back door accompanied by Pîyâle, whom alone he trusted. After hiding for twenty days in a cave, they took refuge in the province of Teke in disguise but were betrayed to the governor Kâsim Beg by the Turkomans, who were surprised at the handsome trappings of the horse lent by Pîyâle to one of them who was sent to procure them provisions. Korçûd, taken prisoner and separated from his companion, was strangled during the night by Kâpûdjîbasî Sinân's men by order of Selim (Nov. 1512).

Korçûd was a poet and musician. He assumed the poetic surname (makbîha') of Harîmi and composed melodies, one of which is still famous under the name Ghaziî Rûh "food of the spirit". He surrounded himself with men of letters and scholars and was the patron of musicians in whose company he delighted. At his court he had the poet Ghaţî of Brussa, called Deli Birâder "the next brother" on account of his whimsical gaiety, who later wrote a funeral elegy on his patron (von Hammer, Gesch. d. osm. Dichtkunst, ii. 201); this did not prevent him also mixing in legal circles and preparing a collection of fetwâs entitled Korçûdîya.

— His name means in Turkish "terrifying".

(Ch. HUART)

Köreüde, the legendary councillor of Oguz Khân and reputed author of the book of Dede Köreüde. Köreüde Dede is said to have been the sage adviser of the eponym of the tribe and first ruler of the group of peoples, to which the Anatolian Turks at first belonged, Oguz Khân, for whom he composed a book in the simplest antique style with wise sayings and admonitions, intermingled with all kinds of traditions and counsels. Whether Köreüde Dede was a historical personage or not can no longer be ascertained. A. Diwajew in the article discussed by W. Barthold in the M. S. O. S., i. (1898), Pt. 2, p. 154 and iv. (1901), Pt. 2, p. 183, has dealt with the tomb of the saint Körekst Ata (ata = dede, "father") in the Russian district of Kazanlûk not far from the mouth of the Sâr-Daryâ. There is perhaps some connection here. The book, usually called simply Kitâb-i Dede Köreüde, is regarded as a part of the epic of Oguz, the Ogûns-name and in its present form is believed to be barely older than the xvth century. It can be shown to have arisen in Eastern Anatolia. The Kitâb-i Dede Köreüde was published in 1332 in Stambul (172 p.) from a modern Dresden copy taken from an older Berlin MS. (cf. W. Pertsch, Kulat. d. Türk. HSS., No. 203, p. 227 sqq.). On the contents cf. W. Barthold in Zapiski voslochnogo otdel'linia imperat. russk. archeolog. obšestva, viii., 1893/1894, 203—218; xi., 1897/1898, 175—194; xii., 1899, 937—958; xv., 1902/1903, 139 sqq.; cf also 'Abd al-Kâdir in the Türkûyât Ma'âmiscă, i, Stambul 1925, 213 sqq.

Bibliography: cf. F. Babinger, Die Geschichtsschreiber der Osmanen, Leipzig 1927, p. 8 sq., where the older literature is collected; also K. A. Inostran'ev's article Köreüdî v istorii i legende in the Zapiski etc., x. 40—46 and Mehmîd Dâwât's article Köreüde Ata in Derg-yâh, No. 15, Stambul 1337.

(FRANZ BABINGER)

Köse Mîkhâl (T., "Michael the beardless"), an Ottoman general, a Greek renegade, was lord of Kharman-Kea, a fortified town situated at the foot of Mount Olympus in Myisia, to the east of Edrenos, when he was made prisoner by prince 'Ogîmân, the future Sultan, during a raid made by the Lord of In-Önd (698 = 1299). When 'Ogîmân had succeeded his father Er-Taghîal, he became the intimate friend of the sultan, who on his advice seized Lefke, Yeênidje, Ak-Hîşar, Geiwe, Tekfûr-Qâ, Modreni, Beldije (699 = 1300). Converted to Islam (706 = 1306) he was entrusted with the direction of the campaigns of Örkhân, was a member of the council of war which accompanied
the young prince, and negotiated the surrender of Brussa (726 = 1326).

His descendants called Mîkhâl-oghlu (sons of Michael) for a long time held from father to son, the command of the őşindj (scouts). One of his sons had taken the side of Prince Sulaiman, son of Bayazid I; later he left him to offer his services to Muḥammad.

Yahchâh-Beg, his second son, supported Muḥammad against Mûsâ and commanded his vanguard. Another Mîkhâl-oghlu, Muḥammad Beg, nephew of Yahchâh-Beg, was on the contrary among the party of Mûsâ in the quality of beyler-bey of Rumelia and, after the defeat of that prince, was imprisoned at Tokat. Lastly a descendant of the same name was sent to ravage Transylvania at the time of Sulaiman's expedition against the Hungarians in 927 (1521).

KÖSEM WÂLÎDE also called Mâhpêker, the wife of the Ottoman Sulînân Aḥmâd I [q.v.] and mother of the Sultan Murâd IV and İbrahim I. — Kösem (lit. "bell-wether", "courageous") or Mâhpêker was a Greek by birth. In 1637 she was about 45, so must have been born about 1592. Contemporary accounts describe her as a woman, still beautiful even at an advanced age, with fine features, vigorous looking, with an expression of benevolence and superior intelligence.

For nearly thirty years this statesmanlike princess exercised a great influence on the government of the country. While, even in the lifetime of her husband Aḥmâd I, she took an active part in public affairs and through her beauty and intelligence was able to share in the government, at a later period she had firm control of the reins of government, when her minor son Murâd IV ascended the throne. For five years she ruled as his guardian. On his death in 1649 (1640), when the weak and effeminate İbrahim I (1649—1648) came to the throne, she was active in warding off trouble at home, began a war with Crete which dragged on and increased popular feeling against the incapable Sulînân. Kösem Wâlîde strove in vain to prevent his deposition, although she had been thrust aside by him, as previously by Murâd IV. İbrahim was deposed on August 8, 1648 (18th Radjab 1058) and executed a few days later. Three years afterwards however, when the minor Mehemed IV had ascended the throne and a rivalry arose between the old Wâlîde Kösem and İbrahim’s widow, Tahkân Khaṭîdja, in the course of which Kösem was accused of trying to murder Mehemed IV in order to put his brother Sulaiman in his place, she met a miserable end in a mutiny of the Janissaries in the palace 16th Râmaʃê (September 2, 1651); she was strangled with a curtain-string. She was buried beside her husband. Kösem Wâlîde is still celebrated and honoured among the Turks on account of the numerous foundations which perpetuate her name. She was a noble, magnanimous, truly queenly woman of great intelligence and a good heart but of strong character. She devoted the annual income from five royal domains belonging to her entirely to building (1646) a house of rest called after her (Wâlîde Khaṭî, collapsed on the morning of March 21, 1926), a Friday mosque bearing her name in Scutari and a mosque begun by her but finished by the younger Wâlîde in Stambul (Wâlîde Dîmân-ı-i) and to the laying out of waterworks in Egypt, to the support of the poor in Mecca, to providing for debtors who had no means of payment, and to supporting widows and orphans (Na’îm, Ta’rîkh, ii. 298, 310; J. von Hammer, G. O. R., v. 547, where details are given to show her benevolent disposition).

Bibliography: The histories of J. von Hammer and Zinkeisen, where the Ottoman (especially Na’îm and Hâdîdî Khaṭîf) and European sources (Rasûls of the Venetian bâlît) are utilised; cf. also Aḥmâd Râfîk, Râdînîr Sülfâînî, 2 vols., Stambul 1332 and 1924.

KÖSÖR. [See KUSAIK].

K ÎŞH (Ottoman Turkish pronunciation of the Persian kishk; the Arabic derivative diwaṣâh, pre-supposes an unattested form *gishak, ǧişhā, "corner"), isolated pavilion in a park, kiosk. This name was given to the country houses of the caliphs (as opposed to their house in the town), such as the Diwâṣâh al-Khaṭîfîn of Sâmarra, the plan of which has been given by Ernst Herzfeld (Mitteilung über die Arbeiten der zweiten Kampaign von Samarra, Ist., 1914, v. 203). There were in Cairo a certain number of these pavilions, also called šafar (pl. šâjar), at the cemetery of Karafa (Makrizî, Alâ'îm, ii. 452); these two expressions are synonymous, as is shown by a passage in Ibn Batûta, iii. 212.

(CL. HuART)

KOSMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic 'arâ'id [q.v.]. The term corresponding in Eastern Turki to the Western Turkish köşmâ is köşük or köşük. In the oldest sources e.g. in the Nâşrîh Bukî (composed in 1609/1070) köşük still has the same meaning of "little, verse", e.g. in Radloff’s edition, St. Petersburg 1891, p. 1, l. 4 from below: bu külubî köşükblîn âinîkâl has composed this book, this poem”, ibid., p. 5, l. 4, bu türkîl köşükblâr tâwîttam saîna “I have polished (i.e. composed) these Turkish verses for thee”. In Mahmûd al-Kâshîgî also, Diwan Lûqât el-Turk (1073/1074), i. 314, köşük is equated to the Arabic shîr, râdîs and khaṭîd. The Persian musician and scholar Ābd al-Kâdir of Marâgha (xiv—xvth century, cf. E. G. Browne, A History of Persian Literature under Tartar Dominion, Cambridge 1920, index, s.v.), in his work entitled Maṣâṣîd al-Âlâm does not yet discriminate between köşûk and the quantitative quatrains tâwîk (see Raśîd Vekî, Erki Türk musâkâlma dîştir tehbeûter Milli tehbeûter móqâmûs, i. 461). On the other hand in a verse by Āli Shîr Nava’î (d. 1501; q.v.) quoted in Pavet de Courteille, Dictionnaire Turc-Oriental, p. 432 s.v. and in Radloff, Versuch eines Worterbuch der Türk-Dialekte, ii. col. 640 the tâwîk is definitely contrasted with the tâwûk.

Later we find poems and songs composed according to the rules of Turkish popular poetry expressly called köşmâ, köşük. The characteristic
features of this poetry are the following: 1. Strophic structure. The strophes are usually quatrains. The köşma poems contain at least two strophes. 2. Syllabic or accented syllable rhythm, i.e. the lines of the strophe have the same number of syllables and the value of the syllables as regards stress is either a matter of indifference or stronger and weaker syllables follow one another in definite order, which is repeated. In the latter case after a definite number of syllables, we always have necessity a caesura in the middle of the line. In the later köşma strophes the most popular lines are headendicasyllabic divided into 6-5 with one caesura or 4-4-3 (with two caesuras). 3. There is rhyme or assonance of at least two endings in the strophe. The rhyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two halves of the verse. The rhyming in the köşma strophe is usually abcb or aaba. 4. Alliteration of the initial syllables of the lines is not maintained among all Turkish people (cf. T. Kowalski, Études sur la forêt d’Algeriennes des Ménages de la Comm. Orient, de l’Acad. Polonaise, N° 5, Cracow 1922; in French with a Polish résumé, p. 157 sqq.).

In earlier times the köşma songs were usually sung by the hards (scans) to the accompaniment of a musical instrument, especially the köbus [q.v.] beloved of the Turks, at court festivities or in the camp of the army. The köşma poetry was always industriously cultivated among the people, in spite of the increasing popularity of the classical quantitative poetry. The popular forms like kaya bayğı, weyhid, ekti lr, türki, warsaglı, turkmání, were cultivated among the Adhahrídlíjan and some among the Ottoman Turks all belong to the köşma. The songs of popular mystics called stâkâ and mîsîr from the time of Yûnis Emre (xii-xiv. century) are composed according to the rules of the köşma (see Kopruluzade Mehdum Fu'âd, Türk edebiyyâtında iki metin, Constantinople 1918, p. 334—335). Köşma poetry is now, sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers ('âşık, also called sâs šârî or tawûjî). Many of them like 'âşık Omer, 'âşık Kerem, 'âşık Gharib, Derdûl, Dżwherif, attained great fame and the collections of their songs or life stories are among the most popular books among the Turks (cf. Kopruluzade Mehdum Fu'âd, Türk edebiyyâtında ‘âşık Târîhî Menteşe ve-Tekâšülu; Millî t Eve-sânî ve-Teârîhî, 1. 2; ‘âşık Džwherî Entislâyî ‘âid îki tawûjî in the periodical Yûnis Mejdîmâ, N° 54; G. Jacob, Türkische Volksliederliteratur, Berlin 1901, p. 17—18). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, Chansons des Janissaires turcs d’Alger, in Mélanges René Basset, Paris 1925, ii, p. 33—175.

The term köşma (but not the kind of poetry to which it was applied) seems to have fallen out of use and if the modern Adhahrídlíjan poet Dżwâd who died recently called his collection of songs köşma, this is probably simply to be explained by an archaizing popular movement in modern Turkish literature. The name has survived in the form köşen among the Altai Turks (Tatars). The Altai kösh (on them cf. W. Radloff, Uber die Formen der gebundenen Rede bei den altaiischen

Tatarren, Zeitschr. f. Völkerpsychologie und Sprachwissenschaft, iv., 1866, p. 85—114 and Kowalski, Études, etc., p. 140—151) are very important in so far as from their structure and name we can make a definite deduction regarding the original meaning of the words köşma, köshik, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From is seen that köşen from kösh- "to join together", kösh- "two and two" etc., refers to the parallelism in thought and syntactical structure, which originally formed the essential feature of Turkish popular poetry.

The köşma poetry was not without influence on literature. The modern Turkish poets for example took many of their forms from popular poetry.

KOSOWA (from the Yugo-Slav kosovo pole) — "plain of the blackbirds", from kos "blackbird" in Old Slav, Bulgar and Czech; the Turkish köş eva "plain of the kettle-drums", Sa’d-al-Din, 117 (a literary invention), the name of a plateau in Upper Macedonia (Old Serbia) of an average height of 1,500 to 2,000 feet, surrounded by high mountains which form the watershed; it sends some streams to the east to the Adriatic by the Drina, to the south to the Aegean Sea by the Vardar, to the north to the Danube by the Ibar, a tributary of the Morava. It was here that the Ottoman army under the command of Sultan Murad I Khâdâwendiëdar defeated the Serbs in a great battle, which resulted in the ruin of the Serbian empire and the conquest of the country in 791 (June 15, 1389). The kril of Serbia, Lazar, had appealed to his allies in Bosnia and Albania; the Sultan on his side had brought from Asia the forces of his two sons Bâyazid (from Kutahiya) and Ya’âkub (from Karasi) and those of the vassal princes of Şârîkânan, Menteşe, Ain and Hamid. At dawn a Serb, Miloh Obili, arrived in the Ottoman camp, professing to have desired and begged the honour of being admitted to the presence of the Sultan; after pronouncing himself, he suddenly jumped up and plunged his dagger in Murâd’s breast; he then fled, but was caught just as he was mounting his horse and cut to pieces by the Janissaries. The popular ballads of Christian origin, an echo of which is found in Coluccio Salutati’s letter of congratulation to King Wladko, speak of twelve brave young men, bound together by an oath, who fought their way right through to the Sultan’s tent and stabbed him twice with the dagger, one wound being on the neck and the other on the lower part of the body. The Turks attacked, furious with rage to avenge the death of their Sultan. The kril Lazar, abandoned by Wladko and the Bosnians, seized with panic, fell into the hands
of the Turks and was decapitated with the nobles who accompanied him by order of the dying Sultan. The monumental erected on the battlefield marks the places where Milosh twice escaped from the Janissaries and where he was killed (Sokolžade). A mausoleum was built on the spot where Murad died; the body of the Sultan was however taken away and buried at Brusa. — In Şehban 852 (October 17, 1448, Eve of St. Luke) a Hungarian army, commanded by John Hunyadi and including also Wallachians and German and Bohemian arquebusiers, met at Kosowa an Ottoman army commanded by Sultan Murât II: the battle at first indecisive, turned in favour of the latter as a result of the treachery of the Wallachians and the flight of Hunyadi; it ended on the 19th with the glorious but fruitless defence of the German and Czech auxiliaries behind a barricade formed of waggoons and artillery.

The name Kosowa was given to a wilayet formed after the Russo-Turkish war of 1877: it was bounded on the east by Bulgaria, in the west by Montenegro, Bosnia and the wilayet of Scutari in Albania, in the north by Serbia and in the south by the wilayets of Monastir and Salonika. It was divided into six sandžaks: Uskub (capital of the province), Priština, Prizren, Yeni-Bazr (Novi-Bazar), Tašhića (Plevle) and Ipek; at a later date the sandžak of Yeni-Bazr was changed into a kaza and a new sandžak made called Seula (Sittena) with Košub as a kaza (Sittena, 1325, p. 932). This territory was ceded to the Serbs by the Treaty of London (May 30, 1913); it is now part of the kingdom of the Serbs, Croats and Slovenes.

(II. Huart)

KOSTA b. LUKA, al-Ba’albakki. Our authorities for his life are Ya‘qüb al-Nadim (Fihrist, p. 295), Ibn Abi Uṣairīa (i. 244, who quotes a very large number of works, mainly medical), Ibn al-Kift (p. 292), Abu l-Faraj (text, p. 274; transl., p. 197). These give as their sources the same manuscripts as al-Hassān, Ibn al-Nadim al-Baghdādi, 'Ubaid Allâh b. Qifri and others not mentioned by name. There are also references in other passages of the Arabic biographical and bibliographical works mentioned above. For those which we have utilised below, see the indexes.

Kosta b. Luka belonged to Ba’albak (the Heliopolis of the Greeks) in Syria; he was of Greek descent and a Melkite i.e. an orthodox Christian. In this capacity for example he disputed with a Nestorian cleric regarding the duality of the natures in Christ (cf. G. Graf, Die christlich-arabische Literatur, in Strassburgs Theol. Studien, vol. iv, 1905, p. 38 sqq.). We know the years of birth and death of many Arab mathematicians but not of Kosta b. Luka. We have however the following chronological data for his life. For the Caliph Musta’in (856—866) he translated the work "On the lifting of heavy burdens" (Barulus) of Heron and the Sphaira of Theodosius; he wrote an introduction to geometry for Abu l-Ḥasan Ali b. Yaḥyā who belonged to al-Mutawakkil’s (847—861) court and died in 885—889. To Ismā’il b. Bulbul, Mu’tamid’s vizier (870—892) he dedicated his work on the use of the sphere with an axe. He was still alive in the reign of al-Muqtadir (908—932), for he was on terms of intimacy with the latter’s contemporary Aḥmad ibn ʿAbd Allâh ibn al-Mutaddib (The Table-Talk of a Mozaffarīd Judge, ed. D. S. Margoliouth, Oriental Travels Fund, 2nd ser., xxvii, xxviii, text, p. 131, transl., p. 144). Suter supposes that Kosta b. Luka died about 912; as he can hardly have begun to translate before he was 25 years old, it would result from the above data that he was born about 850 and lived to be 70 or 80.

Kosta b. Luka was regarded as a talented and very brilliant physician and a sound scholar in many branches of learning, such as philosophy, astronomy, geometry, arithmetic and music. It was impossible to find him lacking in any aspect of his knowledge. According to the Fihrist, it was the general opinion that Kosta b. Luka ranked higher than the celebrated physician and translator Ḥunain b. Isḥāq (d. 873). But, according to the same source, there were others who held the view that Hunaïn was the better. In any case both were brilliant scholars. Modern opinion ranks Kosta below Hunaïn. Kosta b. Luka could write Greek, Syriac and Arabic; he had a perfect knowledge of Greek and was an excellent translator, especially of medical works; this was natural as he was a physician. His Arabic style is famed as well as the way in which he arranged his works; his concise presentation is justly praised; its lack makes difficult the study of the works of others, notably those of Ibn al-Hajījam.

Kosta b. Luka left his native district in the Abbasid period and went to Asia Minor, the land of Rûm; here he acquired a number of Greek writings and returned with them to Syria. He was summoned to 'Irāk, probably by one of the Caliphs, to translate works there. At the same time he revised many existing translations; Kosta b. Luka thus rendered great services to the East in making accessible classical learning. The Muslims therefore say that the reason that many branches of philosophy are studied in the Muslim world is that Kosta b. Luka introduced them on his return from this journey. Towards the end of his life Sahnârîb, an Armenian prince took Kosta b. Luka to his land, where he lived till his death. The Armenian Patriarch Abu l-Γhaṭrif was a learned and distinguished man for whom Kosta b. Luka prepared many excellent works on the most different subjects. It is evidence of the great prestige enjoyed by Kosta that a copula was erected in his honour over his tomb, as was only done for princes and high religious officials.

Ibn al-Ṣālih celebrated Kosta’s merits in verse (Ibn Abi Uṣairīa, ii. 166).

Of his relations to his contemporaries,
we know that he wrote medical works for some of them or translated medical books, for example even for Christian officials. Among such were Abu 'l-Qāhir Ābān al-Bāriṭī, al-Bāriṭī al-Fatān, al-Hāsan Mūhammad b. Āḥmad, the secretary of the Chief Patriarch, Abū Mūhammad al-Hāsan b. Mūhammad, the chief Kāṭīb, Abū 'Alī b. Bānān b. Ḥārīth. It is probable that Kösta b. Lūkā also met the philosopher al-Kindī at the Caliph's court, as Ibn al-Kīfī specially mentions that the two had met. Of a certain Abū 'Īsā b. al-Mu'addājidīn (astronomer or astrologer), we unfortunately know nothing; Kösta b. Lūkā sent him a letter from Armenia on the subject of Mūhammad as a prophet (for his relations with other men see the sources).

The literary activity of Kösta b. Lūkā covered the most varied fields, as in the case of the Banū Mūsā, 'Īsbāb b. Ḥunain and Thābit b. Qurra; it does not seem however to have been quite so comprehensive as in the case of the two latter; but it should be remembered that we are extremely well informed about the latter. Lūkā b. Ḥunain, for example, himself provided a list of his translations from Greek (G. Bergsträsser, Ḥunain ibn Isḥāq über die syrischen und arabischen Galenübersetzungen, in Abb. zur Kunde des Morgenlandes, xvii, No. 2, and a record of Thābit's works was made by a relative.

A list of translations of Greek works was made by M. Steinschneider in Z. D. M. G., vol. 1, 1896; see the index of names under Kösta b. Lūkā as the order is that of the Greek authors. The titles of a series of very valuable medical treatises are given by Wustenfeld and Leclerc (op. cit.). Only a few of these seem to have survived, for example that on the treatment of the body in jaundice (K. fi Tādīr al-Aḥlān fi 'l-Sāfīr etc.), on phlegm (K. fi 'l-Balqām), insomnia (K. fi 'l-Sāhār). None of these writings has so far been utilised. He also dealt with problems of hygiene, for example, baths (K. al-Ḥammān) and the standards for foods (K. Kawnin al-Ṭālībiyya).

In addition to these and similar works on philosophy, science and mathematics, Kösta b. Lūkā also wrote on dyes and colours: K. fi Khālid (on the staining of ḥaqqī, a coarse linen, and its alteration); K. al-Falāh li Ṣawāq'id al-Khaṭīb wa-Tāzqā'īr min al-Rasūlī. Other works deal with fans and the causes of wind (K. fi 'l-Mirwağa wa-Aṣbāb al-Ribā), and on date wine and the drinking of it at feasts (K. fi 'l-Nabāl wa-Sawāhībi fi 'l-Walā'īm) and how to avert poisoning (K. fi Dā' al-Samā'i).

In the field of philosophy his principal work deals with the distinction between soul and spirit, pneuma (al-fāšik or al-fāsīḥ hāni al-nafṣ wa 'l-ruḥ). The genuineness of the work has been disputed. The difference between soul and pneuma lies 1) in their nature: the soul is corporeal, the pneuma incorporeal; 2) in their qualities: the soul occupies no space, the pneuma does; the former cannot be but latter can be enclosed by the body; 3) in the condition after death: the soul is immortal and the pneuma mortal; 4) the pneuma is the instrument of the soul for communicating the functions of life to the body and for sensual perception. It controls most processes of the body, such as breathing, the pulse, sensation and movement. The pneuma goes to the eye in the hollow nerves. In its finest form, it is active in the higher processes of the mind, imagination, memory and reason. It is of special interest to explain, as Kösta b. Lūkā endeavoured to do, the physiological processes; here he shows his medical knowledge.

Koṣṭā b. Lūkā dealt very fully with occult subjects; his most important work in this field, which survives in a Latin translation, is "On natural affinities" or more explicitly "Letters on incantations, conjurations and appendages for the neck (amulets)"; in which he assumes such things to be facts and discusses them more fully (cf. Thonndike, op. cit.); he interprets them however by autosuggestion and in the case of amulets thinks they have effect because they have an encouraging and strengthening influence on the spirit. It was probably through such studies that he came to deal with the subject of sand-figures in his K. fi 'Amal al-Ašār aš-ṣūrān al-Ḍawānīn wa-ta'wilası minaḥ al-Naṭājīn, "On the use of the instrument on which the ḍawānīn are marked and with which they are sustained".

In mathematics Koṣṭā b. Lūkā, like many others, dealt with the difficult and obscure passages in Greek works. His treatise on the proof of the wellknown rule of the two errors (Kīṭāb fi 'l-Burhān 'aṭla 'Amal Ḥisāb al-Khaṭā'īn), is pure algebra, that on numerical problems (Kīṭāb al-Masā'il al-adādiyya) on the al-Talāfī calculation (coincidence) are on the way to algebra, K. fi Ḥisāb al-Talāfī 'aṭla Diqat al-Djar wa-l-Mušābala. From a treatise by Ibn al-Haithām (Fi Masā'il al-Talāfī, "On the problem of coincidence; cf. on this method of calculation, E. Wiedemann in S. R. F. M. S., Erl., 1917; St. Petersburg, Rosen, Catalogue, S. 179") we see that it dealt with problems like the following: two men A and B came to the market and wished to buy an article. Neither has sufficient money: A says to B, give me 3rd of what you have then I can buy the article. No, says B to A, give me 2 of what you have then I can buy it. — From the title in Koṣṭā b. Lūkā it is evident that he solved the problem with equations, while Ibn al-Haithām took a more roundabout way. We know practically
nothing of any geometrical work by Köstâ b. Lûkâ. He wrote an introduction to geometry in the form of questions and answers (K. Mu'âkhal ilâ 'Imr al-Harâsâ 'ala al-Masâ'il wa l-Lûqâdâbî); he dealt with cones and spheres etc. To this part of his work probably belonged the treatise, on the part which cannot be divided (like the point) (K. fi 'l-Lûqâ 'âllâghî lâ jâhâzûsû). We know more however of his astronomical work. He wrote a treatise (Oxford, Uri, 879, No. 2). On the form (structure) of the spheres (K. Hâyât al-Afâkhû). It must have been composed at the same time as, or very little later than, the famous Astronomy of al-Farghânî (d. 861); from the scientific point of view it is on a much higher level than the latter and goes more into details; excellent diagrams make the subject clearer. It also deals with problems not in al-Farghânî, for example the measurement of the degrees between Tadmor and al-Râkâ and a method hitherto ascribed to al-Birûnî of measuring the circumference of the earth. Köstâ b. Lûkâ's work seems to me to have been used as a foundation by numerous later writers.

Köstâ b. Lûkâ devoted a good deal of attention to the construction of astronomical instruments; the first work to be mentioned in this connection is his K. fi 'l-Amal bi 'l-Kura dâ'â al-Kursî, on the use of the sphere with an axis (cf. Kûrâ). It survives in several manuscripts some complete, others incomplete, and has also been copied or utilised in other works. Another astronomical work is "On the use of the great astronomical cones", K. al-Amal bi 'l-Kura al-kabira al-nu'dûniyya. Whether working with other instruments e.g. on a ball-shaped astrolabe, K. fi 'Amal al-Afâkhûlâbî al-kursî, are by Köstâ b. Lûkâ need not be discussed here (cf. H. Seemann and Th. Mittelberger, Das kugelförmige Astrolab, Abhandl. zur Gesch. der Naturw., part viii., 1925, p. 46). In keeping with the spirit of his age Köstâ b. Lûkâ also wrote an introduction to astrology (K. al-Mu'âkhal fi 'lmu al-Nu'dûmî). The "Paradise of History", K. al-Fîrûdûs fi 'l-Tabiîbî, composed in Armenia perhaps was similar in nature. Of writings on physics may be mentioned those on the burning glass (al-Mawâya al-nuhrîkâ), and on the Kûrâ (cf. the book on weights and measures (al-Awsân wa l-Mâjîrî) which was certainly used by the Archbishop Elijâ for his book of the same name (cf. Th. Ibel, Über die Wage etc., Inaug. Diss. Erlangen 1906, p. 97). Of special importance is the translation of Hero's Bâguvûkûs (Kitâb fî Râf' al-Azîyâ al-thâ'lî), "On the raising of heavy bodies"; it has been edited with French translations by Carra de Vaux, J. A., ix., 1893, i. 386—472 and ii. 152—269, 420—514 and German by L. Nix and W. Schmidt in Heroëns Opern samtl., f.; further bibliographical references were given in these editions and also in C. Brockelmann, G. A. L., i. 204. Not the least important point about this work by Köstâ b. Lûkâ is the insight into Greek mechanics that it gives us.

Bibliography: For the Arabic sources see at the beginning of Wüstenfeld, Die Geschichte der arabischen Ära, No. 100; L. Leclercq, Histoire de la médecine arabes, i. 1970, p. 157; H. Suter, Das Mathematiker-Verzeichnis im Febist etc., Abb. zur Gesch. der mathem. Wissenschaften, vi. 1892, p. 43; do, Die Mathematiker etc., ibid., xi. 1900, p. 40 and appendix, xiv., 1902; C. Brockelmann, G. A. L., i. 204; L. Thornâdé, A History of Magic and Experimental Science, i. 1923, p. 652 sq. (E. Wiedemann)

Kôtel (from the Armenian kâhê, bank, "side"); Frânkel, Aram. Fremdwörter (p. 223) in Persian means a mountain pass, a neck between two peaks. This word, which does not appear in any Persian dictionary, is borrowed from Eastern Turkish, which took it from the Armenian; it is found in the Bahâr-nâma, ed. Ilinsky, p. 99, l. 23; p. 100, l. 1; p. 172, l. 18; p. 166, l. 22; cf. Radiol, Opîn., ii., col. 1277; Pavet de Courteille, Dict. türkoriental, p. 463. (C. Huart)

Kîy, the word used in western Turkish for village. It is the form in which Turkish has borrowed the Persian gîy (cf. Bittner, Der Einfluss des Arabischen und Persischen auf das Türkische, S. B. Ak. Wien, exil., No. 3, p. 103) or perhaps more correctly kîy (Vullers, Lexicon; Burhan-i Kâtî, p. 759) meaning originally path, street. In the geographical nomenclature of the Ottoman empire we find many place-names composed with kîy, like Boghâz Kîy, Ermeni Kîy, etc. It seems that these names are not found before the end of the Seljûk period. Kîy in the sense of an open village is opposed to kahâba meaning a small town. In eastern Turkish place-names we always find the word kund used for a village. Sometimes this last word seems to have replaced by kîy (cf. e.g. Ritter, Erdkunde, xi. 221 sqq.: Kâdi Kend, near al-Mawûlî, becomes Kâdi Kîy). (J. H. Kramers)

Koyun Baba, lit. "father of sheep", a Turkic saint. He is thought to have been a contemporary of Hâddîji Bektaş [q.v.] and is said to have received his name from the fact that he did not speak, but only bleated like a sheep five times a day at the periods for prayer. Sulân Bâyazîl II, called Wâli, built a splendid tomb and devotional monastery on the site of his alleged grave at ʽOthmândîk (near Amasia, in Anatolia) which was one of the finest and richest in the Ottoman empire. Ewliyâ Čelebi in his Travels (Seyahetnâme, ii. 180 sqq.) describes very fully the great Bektaşî monastery there, at which he was cured of a malady of the eye and was initiated into the order. Cf. J. von Hammer, G. O. R., i. 608, on Ewliya's pilgrimage to the tomb of Koyun Baba. Nothing is known regarding the life of this remarkable saint not even whether he really existed. That he is represented as a disciple and contemporary of Hâddîji Bektaş means nothing, as almost all early Ottoman saints are credited with having enjoyed this privilege. The sanctuary itself does not seem to have been examined; but see Maercker in Z. E. G., xxxiv., 1899, p. 376.

Bibliography: Hâddîji Khalîfâ, Dîkânâmâmî, p. 625 sq. (brief mention of the tomb); Ewliyâ, Seyahetnâmâ, ii. 180 sqq.; cf. also J. v. Hammer, G. O. R., i. 230 and 608 (extracts from Ewliyâ). (Franz Babinger)

Koyundîk, a little village, which was built on the great group of artificial mounds, that cover the ruins of the royal palaces of Nineveh, opposite the town of al-Mawûlî, to the east of the Tigris. The name of this village is not found in the middle ages nor in the Turkish authors of the xviiith century; it has been thought, however, that the name is connected with the dynasty of the Kara Koyunî, which reigned in this region.
in the xviith century (von Oppenheim). After being for the most part destroyed by Kurds in 1836, the village was moved to the alluvial plain between the mounds and the Tigris, after archaeological excavations had begun in 1845. The Arab authors of the middle ages, from Ibn Khordadhbih, know the site of Nineveh under the name of Ninawā (the vocalisation of Yākūt, iv. 780; nowadays it is also pronounced Nainawā) and connect the place with the story of the prophet Yūnūs b. Mattai. Al-Makdisi also calls it Nānawā (Niebuhr likewise speaks of Қa’l Naun’ia; perhaps the name was changed under the influence of the Arabic word meaning the fish of Yūnūs) and he mentions near it the mound of Tell al-Tawba, on the top of which was a mosque surrounded by houses of  {	extit{mudāwāra}}. This last place is the present village of Nabi Yūnūs, to the south of Koyunjik and also within the bounds of the ancient Nineveh. This village is separated from the ruins by the little stream of Khamṣār (the name is already found in al-Makdisi) and was called Ninia in the time of Niebuhr. Ibn DIJBAYR (ed. Wright—de Goeje, p. 236) says that the ancient walls and the gateways can still be distinctly seen and Ibn Batūṭa says the same thing in almost identical words. In the xiiith century Ninawā was inhabited by Christians (Abu ʻl-Faraj Barhebnaeus,  {	extit{Tāriikh makhṭūṣar al-Dunāl}}, ed.  {	extit{Saḥiḥ}}, p. 393). The mounds of Ninawā have always been an inexhaustible quarry for building materials for the inhabitants of al-Mada’in.

Excavations were begun in 1842 by the French consul Botta, already famous for his work at Khorsabād. A. H. (afterwards Sir Henry) Layard then took in hand the excavations, first from 1845 to 1847 and again from 1849 to 1851, employing Arab and Nestorian workmen. A great many of the objects discovered were taken to London. Since then excavation has definitely ceased, all the trenches have been filled up so that now the ruins present the same appearance as before the discoveries.

{	extbf{KRĪM}} (the Crimea), a peninsula on the northern shore of the Black Sea. The name (of uncertain origin) was at first given in the xiiith century to the town of Solghat or Solkhād, now called Starfy Krīm ("Old Krīm"), then the residence of the Mongol governor, in the interior of the country south-west of Kafa [q. v.] and north-east of Sudak. Towards the end of the xviith or beginning of the xviiith century, the old name was driven out by the new one as is shown by the words of al-Kalāshandāi (ma‘adīn Solghatī—wa-qād ghulahu  {	extit{al}-alīshī  {	extit{tābial}}}  {	extit{a}}) quoted by Tiesenhausen, Sbornik materialov, otvyashchih k istorii Zolotoi Ordii, St. Petersburg 1884, p. 401). The old name, the origin of which is likewise unknown (cf. the very artificial Turkish etymology in Muḥ. Rıḍa, al-Salih al-Sayyīr, ed. Kazem-Bey, Kazan 1822, p. 78) and which must be presumed to have been in existence before the Mongol period, cannot be found before the xiiith century. In Greek legends of saints and lists of bishops, we find the fortress of Fulla or Fullai mentioned, the residence of the Khazar governor of the eastern part of the peninsula along with Sugaia (Sudak); it is assumed that the position of this fortress corresponded to the site of Solghat.

There are only scanty references in the Arab geographers to the peninsula; Idrisi's statements (transl. Jaubert, ii. 400) about the harbours are, as the forms of the names show, probably taken from the reports of Italian sailors; apparently the trading relations of the Italian cities even then reduced to 28 nakhods (5.37 grammes = 83 grains) and in order to check the export of Persian silver to Russia and India it was again reduced to 26 nakhods (4.98 grammes = 77 grains) in 1857. The standard of fineness was normally .960, but both weight and fineness varied considerably at the different provincial mints with the probity of the provincial authorities. In 1877 (1294) the provincial mints were abolished and all the coins were henceforth struck at Teherān with modern European machinery under the supervision of an Austrian mintmaster, Bergrath von Pechan. Since this date the two-krān piece (do ḥazar dinār) has been the common silver coin; the one krān is not uncommon. Five krān pieces, half and quarter krāns have also been occasionally struck but are rarely seen in currency. The weight of the krān continued to be reduced (in 1327 = 1909, it was 4.54 grammes = 71 grains, just half its original weight) and the fineness has also suffered. On the coins the denomination is as a rule expressed in multiples of the dinār (1 krān = 1,000 dinārs) except that the quarter krān is called a ṭābiyah. On a few 2 krān pieces of Nāṣir al-Dīn Shāh, on those of Muḥammad ʻAlī Shāh (1324—1327 = 1907—1909) and of the first two years of Ahmad Shāh (1327—1345 = 1909—1926) however the name krān is found on the coins.
extended to the northern shore of the Black Sea. The first Muhhamadan campaign to the Crimea was undertaken shortly before the Mongol conquest by the Turks of Asia Minor under Sultan ʿAlī al-Dīn Kaikubād (616–634 = 1219–1236) (Recueil de textes relatifs à l'histoire des Seljoucides, ed. Houtsma, iii. 328 sqq.). In the reign of the Khān of the Golden Horde, Berke, about 1265, ʿizz al-Dīn Kāwūs, who had been driven out of Asia Minor and liberated from Byzantine imprisonment by Berke, was given the towns of Sołkhād and Sūrā (Sołdak) as a fief (Recueil, etc., iv. 298; cf. above, i. p. 708); in these towns he was followed by his son Ghiyāḥ al-Dīn Masʿūd (Recueil, iv. 335). Tartar coins were struck in Krīm, as the town is always called on the coins, from 686 (1287/1288).

In Arabic sources of the Mongol period the name is always written al-Krīm and is vocalised by Ibn Batṭūta (ed. Defrémery-Sanguinetti, ii. 359) as "Kīram". In the report of the first Egyptian embassy to the court of Berke (text in Tiesenhausen, Sbornik, etc., p. 54), Krīm is described as a "village" (karya) inhabited by different peoples (Kipchak, Russians and Alans); on the other hand Ibn Batṭūta calls it "a large and beautiful town". In 686 (1287/1288) an architect and 1000 men were sent to Egypt by the Khān to build a mosque in Krīm to bear the name of the Egyptian Sultan (Maḳṭriti, text in Tiesenhausen, Sbornik, p. 423); among the ruins of Old Krīm there have actually survived ruins of a mosque built in the Egyptian style. The mosque built by Khān Uzbeq in 714 (1314/1315) is in quite a different style of architecture.

Even the earliest rulers of the house of Gīrāy (cf. above, ii., p. 171 but better perhaps Gīrej) lived in the town of Krīm and struck coins there. During the civil troubles of the second half of the 12th (xvth) century under Mengli-Girei, the town is said to have been completely destroyed; but we find coins struck in Krīm as late as 923 (1517) in the reign of Muhammad Gīrej (O. Rotsowski, Die Münzen der Girej, Moscou 1905, p. 71). On the ruins of Old Krīm, which have been several times explored and described but have suffered severely from depredations, cf. especially P. Köppen, Krīmskiy Sbornik, St. Petersburg 1837, p. 340 sqq.; W. Smirnow, in Zap., i. 275 sqq. Excavations were begun there in 1925 under the auspices of the Association for Oriental Studies and continued in 1926.

Under Ottoman suzerainty (from 880/1475) the name of the former capital was extended to the whole peninsula and its population (Krīm Khali, Krīm Tartar, Krīm Khali, Krīm Tartar, 1827, ed. W. Radloff, Berlin, 4 ser., 1. Wörterbuch des Turk-Dialecites, ii. 745). The peninsula with its population of different stocks (this was the only place where remnants of the Goths had survived) and its monuments of ancient and early Christian culture became in this period almost completely influenced by Islām and Turkish culture. For the history of the Crimea in this period and the pertinent literature see the articles BACHE SARKI and GIREJ.

After the final incorporation of the Crimea in Russia (1783), the Muslim population was expressly guaranteed complete religious liberty. The text of this edict was later incorporated in the articles of the Russian code relating to religious liberty. A special office of Mufīs for the Crimea was created, completely independent of the Mufīs of the Volga area in Ufī, and as in Ufī a "spiritual authority" was appointed. On the other hand under the influence of Greek ideas then favoured by the government, Greek culture was encouraged at the expense of Turkish. The kingdom of the former Tatar Khāns was now called the "Tauric territory" (1784, abolished 1797), later (from 1802) "Tauric government".

The capital of the government was Aḵ Mečet, which had been burned by the Russians in 1736 and now received the name of Simferopol; other towns arose on other sites with Greek names, notably the naval base of Sebastopol. Old Krīm was now called Livadia and the name never became popular. Russian and Greek immigration and the migration of a large part of the Tatar population to Turkey has wrought a complete change in the character of the population. The Muslims (according to the census of 1913, M. I., 1913, p. 761 only 206,113) are now small in numbers compared with the Christians (less than one third of the total population).

After the revolution of 1917 the Muḥammadan population, as everywhere in Russia, endeavoured without particular success to constitute themselves into an independent community on a religious and not a national basis, acting independently of the government. The government itself, however, was not actually in control of the state. The territory north of the isthmus of Perekop was later separated from the former "Tauric government" and joined to the Ukraine republic. The peninsula now forms the "Autonomous Socialist Soviet Republic of Krīm".

Even before the Revolution, the educated "Krīm Tartars" disclaimed this name given them by the Turks; (the name of "Tatars" also occurs in native documents). They wished to be known simply as Turks and their language to be called Turkish (it is really very much influenced by the literary language of the Ottoman empire). At the present day the language of the literature, produced mainly in Simferopol, is called "Turkish", even officially, in contrast to the "Tatar" literary language of the Volga territory.

Velagin in Novyi Vestnik, v. 190 sqq.; vi. 205 sqq. — On the excavations in Old Krīm cf. ibid., xiii.—xiv. 271 sqq.; xv. 360 sqq. (W. BARTHOLD)

KROYA, a town and fortress in Al-bania, once the headquarters of Skanderbeg [q.v.]. Kroya (Turk. Aḵ-Ḫeşār) sometimes also called Aḵe-Ḫeşār or Aḵ Serāy has had a storied history. It is believed to be built on the site of the ancient Euriboea. Its history in the middle ages has still to be investigated. It is said to have been founded by the Neapolitan noble Carlo Thorip, whose ancestors held the land between Tirana and Durazzo about the middle of the xivth century. The remains of the ancient defences seem to be of Italian origin. Kroya only acquired renown when the Albanian patriot George Kastrioti,
The administrative district of the Kuban — before 1918 the province (oblast) of the Kuban Cossacks — also included the valleys, further north, of the Baisug, Cephau, Starlka and the left bank of the Yeya, all flowing towards the Sea of Azov or ending in lakes and marshes. This territory between the chain of the Caucasus and the sea stretched to the north as far as the province of the Don Cossacks and to the east as far as that of the Terek Cossacks. The area of this great province, which is divided into 7 arrondissements (Yeya, Temrui, Kawakzi, Ekaterinodar, Maikop [in Turkish: *much oil*], Laba, Batial-pashinsk), was estimated at about 32,000 sq. miles. Klaproth, Tabulae du Caucase, Paris 1827, p. 89, estimated the tribes of the Kuban at about 100,000 families. According to the Russian Encyclopaedia, the native population about 1861 was 200,000 men (7) but as a result of expatriations, decreases in population and the number of population which was begun by the Cossacks about 1861 had reached 1,500,000 by 1894. In 1916, official statistics put the whole population of the province at over 3,000,000. The number of "highlanders" and "Sinnis" included in this total had also increased and reached 139,000. The native elements indicated by these official terms which lack precision, included the remainder of the Cerkies and Abaz tribes (q. v.) (related to the Akhaks, q. v.) and Turks of Kara-Chai. The latter (about 15,000 in 1900) lived in the villages (*ontu*) of Khurt-Djurt, Uz-Kulan and Khoruzhuk, etc. in the upper waters of the Kuban and spoke a northern Turkish dialect (Noghai). They were at one time under the Cerkies princes of Kabarda and in 1822 submitted to the Russians.

After 1920, the territory of Kuban was re-organised on an ethnic basis: besides the Kabardab-Byal region (on the Terek) two autonomous (within the Soviet system) areas were created on the Kuban: 1. Kara-Chai-Cerkies, east of Urup with its capital Batial-pashinsk; it has about 150,000 inhabitants of whom 45% are Turks, 25% Cerkies and 30% Cossacks; 2. Adighe, a strip of territory along the Kuban, and Laba; its 100,000 Tuk-tamukai and it contains about 70,000 Cerkies.

The new divisions do not correspond to old administrative divisions.

The basin of the Kuban has been inhabited since the bronze age. The oldest tombs at Maikop go back to the second (according to Rostovtzeff, to the third) millennium B.C. The Scythian tombs of the fourth-fifteenth centuries B.C. are very numerous (Kelermes, Voronezksamia and Sarmatian tombs from the second century B.C. to the first A.D. The Greeks called the Kuban Hypanis, Vardanes, Antilites. In Byzantine authors we find Koubak, Koubak (Marquart, Osteurop. Streifzüge, p. 72), and of Christianity among the Adighe (Cerkies) according to local legends dates from the emperor Justinian (527-565); cf. Shora Nogmow, Istoria adigheiskago naroda, Tiflis 1861, p. 43.

The Arabs were not well acquainted with the district. According to a bold conjecture of Marquart (ibid.), p. 37, 161, 164, Kuban is read for Duba (Kubba), which according to Gardizi (quoting Djalhani, c. 301 = 914) formed the southern boundary of the Madjar (Madyara) and to the south of which (on the left bank) lived (Ibn Rusta, p. 139) the Twals, probably an Allan
tribe [q. v.] (cf. the southern Ossete tribe of Tsiai-ta and the name of the Alans: A.). On the other hand Mas'ñi (Miriñi al-Dhabab, ii., p. 45–46) says that the immediate neighbours of the Alans were the Kašak living between the Caucasus and the Black Sea. The Kašak (a parallel form is al-Kašakiya, Mas'ñi, Kit. al-Tanbih, p. 157) are the Cerkès, whom the Russian chronicles call Kasagî and with whom the Russian principalities of Tmutarakan (on the peninsula of Taman in the xi.—xiiith century) had continuous relations.

The later history of the territory of Kuban is at first the story of the struggle between the Russians and Ottomans and more particularly the Khans of the Crimea for the possession of the fertile plains south east of the Sea of Azov and later of the struggle of the Russians with the warlike tribes of the left bank of the Kuban.

In the xviith century, Moscow's interest in the northern Caucasus was stimulated by the marriage of Ivan the Terrible with the Kabardian princess, Maria Temriukova (in 1561). Soon afterwards Sultan Selim II. seized the Caspian ports from Astrakhan and Dewlet-girai of the Crimea invaded Kabarda. In 1589 the Cossacks appeared before Azov, a former Venetian and Genoese colony which the Ottomans had taken in 880 (1475). A long series of struggles began for the possession of Azov (cf. Aza) and the Cerkès principality of Kabarda (to the east of the Kuban on both sides of the middle course of the Terek). Down to the beginning of the xviiith century the Khans of the Crimea had the upper hand and by about 1717 the Cerkès had been converted to Islam (Nogmow). By the Russo-Turkish treaty of 1739 the two Kabardas were proclaimed independent to constitute a buffer state between the two powers. By article 21 of the treaty Kubuk-Kainardji [q. v.] (1774), Great and Little Kabarda were placed under the suzerainty of the Khan of the Crimea whose independence was recognised (art. 3). In 1782 the Turks occupied Taman but by the edict of April 8, 1783, Catherine II proclaimed the annexation by Russia of the Crimea, Taman and the “Täitâs of Kuban”. On Dec. 28, 1783, the Porte recognised the course of the Kuban as the frontier. Between 1787 and 1791, the movement in the western Caucasus led by the religious leader Shaikî Mansîr caused the Russians considerable trouble but the Russo-Turkish treaty of Yassi (a town which owes its name to the A = Alân; cf. Tomaschek, in Pauly-Wissowa 2, i. 1282–1284) confirmed the frontier of 1753. The treaty of 1787 (art. 4) moved it southwards to the roadstead of St. Nicolas (between Poți and Batum) but the territory within these bounds was only effectively occupied 32 years later after a stubborn and heroic resistance of the tribus of the Kuban.

The line of defences of the Caucasus had been planned under the Empress Anna (1730–1740). In 1777 the line started from Azov and went by Stavropol, Georgiaw to Ekaterinograd (on the Terek). In 1792 it began at Pugaz (north of Anapa) and following the Kuban for a while, left it to go to Georgiaw (1794) and then 1758 to Ekaterinograd (cf. the map in the Arkiyogr. komissiis, Titlis 1668, i). In 1834 General Wielamino established a military cordon on the left bank of the Kuban as far as Gelendzij (on the Black Sea). In 1838 Noworossiisk (Tsemes) was founded on the site of the old Turkish fortress of Sudjuk-Kafâ. After risings provoked by the operations of the allies in the Crimean War, General Yewokimow in 1861 carried out an enveloping manoeuvre with the object of making the highlanders descend into the plains and of driving the rebels towards the coast to force them to migrate to Turkey. According to native sources (H. Bamme, in the Revue Politique Internationale, Nov.–Dec. 1918), 75,000 (?) refugees left the Caucasus in 1863; Russian sources give the number of emigrants at 13,586 from 1870–1884. In 1864, the Russians reached the passes of the chain of the Western Caucasus.

KUBBA (now Kuba), a district in the eastern Caucasus between Bâki and Derbend [q. v.]. The district of Kubba with an area of 2,800 square miles is bounded on the north by a large river, the Samûr, which flows into the Caspian, on the west by the “district” of Samûr which belongs to Dîghistân [q. v.], on the south by the southern slopes of the Caucasian range (peaks: Shâh-Dagh, 3,951 feet high, Hâba Dagh 11,900) which separate Kubba from Shamâkha (cf. the article shîrwân), on the S. E. by the district of Bâki and on the east by the Caspian. The area between the mountains and the flat coast land is called Dîft (Vullers, i. 499: Dîft, and generationen principis dominium principis.”). The plain between the rivers Yalama and Belbela is called Muslim; Shâbarâm lies further south (cf. shîrwân). The other contours are Barmek (so-called after a member of the Barmecide family, who sought refuge here in the reign of Hârun
his plans with those of the king Irakli of Georgia, Fath 'Ali met the latter at Shamkūr (Shamkhor) but soon afterwards fell ill and died in 1203 (1789).

The political and military work of Fath 'Ali Khān crumbled away under his successors. His young son Shāhi Khān 'Ali Aghā (from 1791) had a very adventurous career. This young Khān relied on the support of the Khāsjār but Count Zabow took Derbend on May 4, 1796 and entrusted the government to his sister Peri-Djash Khānum. Taken prisoner by the Russians, Shāhi Khān 'Ali Aghā escaped. The struggle. On the accession of the emperor Paul, Russian policy suddenly changed and the Russian troops were withdrawn. Shāhi Khān 'Ali returned to Derbend. In 1801 he and the other Khāns sent a delegation to Alexander I, but by 1805 we again find Shāhi 'Ali rebelling against the Russians to whom he caused continual trouble till 1826 (1811). The Khānate of Kubba was occupied by the Russians in 1806 and by the treaty of 1813 Persia renounced her claim to the eastern Caucasus. From its incorporation in the Russian empire, Kubba formed a "gouvernement" of Shirvan (later of Kuban). Since that time Kubba has been part of the republic of Acharbadjān, an autonomous and then Soviet; this is not to be confused with the Persian province of the name [q.v.].

Bibliography: cf. the articles Dāḡhīstān, Derbend, Shēkki and Sīrān. See especially the work of the local historian 'Abdūs Kuli Aghā Bakr-Khānow (a descendant of the Khāns of Bakr, who were related to Fath 'Ali Khān), the Gūliştān-i Iram of which a Russian version by the author himself (1794–1846) was published at Bakr in 1926 (Travaux de la société scientifique de l’Azerbaïdjan, part 4). The principal documents are in the collection by Aṭṭā Kāvāzākī, Avi-geografiteskö Komissii, publ. by A. Bergé, Tiflis 1866 sqq., i.—xii., index under Derbend—Kubba.

(V. Minorsky)

KUBBAT AL-ŠAKHRÁ, the Dome of the Rock, Jerusalem, often erroneously designated the Mosque of Omar. In the first place, it is not a mosque but a shrine or oratory erected above the sacred rock (saḥra) and similar to the other domed edifices scattered over the hārān area; in the second place, it was not built by Omar but by the fifth Umayyad Caliph, 'Abd al-Malik b. Marwān. Jews, Christian and Muslim alike revere the sacred rock which they regard as the onphalēs of the world. It is even said to be 18 miles nearer heaven than any other spot. Muslims set it next to the Kāba in order of sanctity.

Although there is no specific mention of the saḥra in the O. T. it is referred to nevertheless in the Talmud and Targums. Here Melchizedek set up his altar; here Abraham sacrificed; here was the Bethel of Jacob; here was the threshing-floor of Arauna the Jebusite (II Sam., xxiv. 16 sqq.); here David worshipped; and here were the altars of Solomon, Zerubbabel and Herod. But Muhammadan tradition has greatly magnified all this legendary material. Angels visited the Rock 2,000 years before Adam was created, and Noah's ark rested here after the Deluge. It is said that it actually one of the rocks removed by Paul and that here on the Resurrection Day this Angel of Death, will blow the last trumpet. Preceding to this the Ka'ba will come from Makka as a bride unto the Saḥra. They assert that it rests on a
palm-tree beneath whose shade Asia, Pharaoh's wife, and Miriam, Moses' sister, will give the faithful a cooling draught from one of the rivers of the Garden. All the sweet waters on the earth are believed to originate somewhere beneath it. The Rock itself is, by others, reported to be miraculously hung between heaven and earth, but since this wonder was too remarkable for human eyes to behold, it has been purposely hidden by the surrounding building. Beneath the Rock is a cave (maghāra) the floor of which when stamped upon emits a hollow sound pointing to the presence of a cavern beneath, perhaps the well, the so-called 'Well of the Spirits' (bi'r ār-rūbēj) where the souls of the departed are believed to assemble twice weekly. This hollowness of walls and floor has no doubt given rise to the legend of its being suspended in mid-air. Tradition states that all the prophets of God up to the time of Muhammad have come to pray here at the Rock which is daily surrounded by a body-guard of 70,000 angels (Ali Bey, Travels, ii. 220). God is said to have ordered Moses to institute the sākhra as the ābā, and Muhammad intended doing likewise only he was told by God to take the Ka'ba at Makka as the ābā. The change took place in Radjāb A.H. 2.

When 'Umar conquered Jerusalem (he (guided by Ka'b al-Aḥbār, the converted Jew) found the sākhra scandalously covered with filth. This he ordered to be removed by the Nabateans, and after three showers of heavy rain had cleansed the Rock, he installed the prayers there (Le Strange, Palestine under the Muslims, p. 139 sq.). In the years 69—72 (688—691), 'Abd al-Malik b. Marwan built the Dome of the Rock. The political situation at the time was the immediate cause of this undertaking. The rival claimant to the Caliphate, 'Abd Allah b. al-Zubair, was favoured by the inhabitants of the Haramain (Makka and Madīna). Fearing lest his Palestinian subjects who visited the Ka'ba on pilgrimage should return infected with the spirit of revolt, 'Abd al-Malik determined on a plan to divert the Makkan pilgrims from the seditious area and lead them instead to Jerusalem. After sending out feelers in the shape of circulars stating his intentions, and after receiving warm support, he proceeded with his project, the embellishment of Jerusalem (de Vogüé, Le Temple de Jérusalem, p. 75). Then he declared to his people: "This Rock (sākhra) shall be unto you in the place of the Ka'ba" (Yā'qūbī, ii. p. 311). For the expenses of the building he is said to have set apart a sum equal to the revenue from Egypt for seven years, and as a treasure-house for this money he commanded to be built after his own design the edifice in the neighbourhood that is now known as the Kubbat al-Sitāla (Dome of the Chain). This building is said to have pleased him so much that he ordered the Dome of the Rock to be modelled after it. The Sākhra was surrounded by a latticed screen of ebony and curtains of brocade. At this time also a precious pearl, the horn of Abraham's ram, and the crown of Khosraw were suspended to the chain which hung in the centre of the Dome, but with the coming of the 'Abbāsid these were transferred to the Ka'ba (Palmer, Jerusalem, p. 86). In those days the building was so full of incense that a person who had been there was known at once by the odour which clung to him. Another reason why 'Abd al-Malik built the Kubbat al-Sākhra is given by al-Mu'addadī, who says that the Caliph "noting the greatness of the Dome of the Kūmanā [the Christian Church of the Anastasis (kīyâma corrupted to Ḥumāma ordure)] and its magnificence, was moved lest it should dazzle the minds of the Muslims, and hence erected, above the Rock, the Dome which now is seen there" (Le Strange, Pal. Explor. Fund's Q; 1887, viii., p. 103). For long, controversy has been waged regarding the true founder and builder of the Kubbat al-Sākhra. It seemed too wonderful an achievement for the Arabs. Ferguson argued that it was the work of Byzantine architects under Constantine and that it marked the site of the Holy Sepulchre. Conder was the chief opponent of this view. No doubt 'Abd al-Malik employed Greek architects in the construction, and there was abundance of Greek columns and capitals at hand among the ruins of the churches destroyed by the Persians, which could easily be incorporated into the structure. Ferguson's argument, besides being fallacious, is contrary to the evidence of Arab historians.

That the Kubbat al-Sākhra was erected by 'Abd al-Malik is indicated by the famous Kāfic inscription in yellow and blue tiles above the cornice round the base of the Dome: "Hath built this dome the servant of Allah, 'Abd al-Malik, commander of the Faithful, in the year two and seventy — Allah accept him". When the 'Abbāsid Caliph al-Ma'mūn repaired the place in 831 A.D. and built the octagonal wall, some of the tiles were removed and others containing this Caliph's name inserted in place of 'Abd al-Malik's. But the forgery is easily detected, the tiles are of a darker blue while the letters of the name are closer together (a chromo-lithographic facsimile is to be found in de Vogüé, ibid., pl. xxii.).

In the year 846 A.D. on the night of the great earthquake, the keepers of the Kubbat al-Sākhra testified that the Dome was cleft in twain so that they could see the stars and feel the rain on their faces. Then a still small voice said: "Put it back again"; and soon the dome resumed its former position. During another earthquake in 407 (1016), the dome fell down on the Sākhra (Ibn al-Aḥḍar, al-Kāmil, ix. 209). Six years later was restored by Ḥākim (see de Vogüé, ibid., pl. xxxvii.). There is a fragmentary inscription (pl. xxiii.) inside on the tile-work dated 418 A.H. (1027 A.D.) marking further repairs. The author of the Muhār al-Chirām ("The exciter of desire", i.e. to visit Jerusalem) says: "In the year 452 (1060) the Great Lantern (tannûr) that hung in the Dome of the Rock fell down and there were in this lantern five hundred lamps". This was taken as a bad augury (Le Strange, ibid., p. 130). In 1099 the Crusaders entered Jeru- salem and the building, endowed by Baldwin II, became the Templum Domini, the Church of the Knights Templars. It was redecorated inside and outside with Christian paintings and images of the saints. A marble altar was set up on the Sākhra, and a large golden cross on the summit of the dome. A large iron screen of French workmanship with four gates was erected between the pillars of the inner ring. The cave beneath was transformed into a Chapel. They believed it to be the Holy of Holies, and called it the Confessio (Janoes Phocas, P. P. T. S., p. 20). The building thus became the type of "Temple" Churches built...
in Europe. The dome was the symbol of the order and appeared on the Grand Master's seal. A polygonal type of building reminiscent of the Dome of the Rock appears in Raphael's *Marriage of the Virgin* as the Jewish Temple (de Vogüé, *ibid.*, p. 78, note).

In 1187 Saladin captured the Holy City. The Golden Cross on the dome was knocked down amidst the cheers of the Muslims and all impurities, such as the marble casing on the Rock, removed. In the cave below, prayers were made in his presence, led by the Kāfīl of Damascus. (For a contemporary account see Ibn al-Alhār, *ibid*.) The lengthy inscriptions copied down by John of Wurzburg must have been destroyed at this period since no trace of them now remains. Instead there can now be seen inside the Cupola the inscription set up by Saladin to record his restoration (text in de Vogüé, *ibid.*, p. 91 sq.). There have been other restorations since. In 1447 part of the roof was destroyed by fire, caused it is said by certain young noblemen hunting there for pigeons with a lighted candle. A complete renovation took place under Sulaimān the Magnificent (1520–1566). Until recent years little was done to remedy the ravages of time. *Ordnance Survey of Jerusalem*, 1865, p. 32. Nowadays the authorities are anxious to maintain the building in a condition worthy of its past splendour.

The building itself is of harmonious proportions and stands, along with some minor edifices, on an irregular platform, 10 feet in height, paved with limestone slabs. The Šakḫra is almost on a level with this pavement, the highest point being only five feet above it (or c. 2,440 feet above the Mediterranean). Six flights of steps leading up to the platform end in elegant columns or arcades called *marwaḥi*, or *balances*, because here on the Resurrection Morn all things will be duly weighed in the balances of justice. The building is in the shape of a regular octagon, with side 66 feet in length. The diameter within is 152 feet; that of the dome at its base being 66 feet. The dome, 99 feet high, is wooden, covered outside with lead, and inside with stucco, beautifully gilded and richly ornamented. The exterior of the building was formerly covered with marble but this has partly been displaced by the Қašẖāni porcelain tiles added by Sulaimān the Magnificent in 1561. Indeed during the xvth century, the whole edifice was restored and embellished so that the external incrustation of the walls, the beautiful stained glass windows, and numerous other decorative effects throughout are characteristically Turkish. Kurānic passages wonderfully inscribed in interwoven characters form a frieze round the building. There is a perfect harmony in the colour scheme. The fenestration is remarkably fine, especially in the case of one window near the Western Doorway.

In the interior four massive piers and twelve columns surround the Šakḫra in the centre. The dome rests on these. Another series of supports consists of an octagonal screen composed of eight piers and sixteen columns, two columns occurring between each pair of the six-sided piers. In this way the interior is divided into three concentric parts. The outer octagonal aisle is 13, the inner, 40 feet wide. The doors face the four cardinal points: North, Bah-i-Djanna (Gate of Paradise); South, Bah-i-Khila (South Gate); East, Bah-i-Nabi David (Gate of the Prophet David) or Bah-i-Sīhla (Gate of the Chain); West, Bah-i-Ǧāhr (West Gate). The teak (*jadi*) doors have very artistic old locks and are covered with bronze plates stamped with a Küfe inscription (dated 216 A.H.). The building consists of basement (16 feet high) with the aforementioned doors; a storey of plain masonry (20 feet high) with seven round arches on each side, 38 of which are pierced for windows, the rest being blind; and, lastly, the wonderfully proportioned dome above. The pavement is laid with marble mosaic fastened down by clamps run in with lead.

The Rock, about 36 feet long by 42 feet wide, is almost semi-circular in form, the curved sloping side lying to the East, and the higher straight side to the West. Geologically it forms a portion of one of the harder grey beds of the Jerusalem plateau, and has been left practically in its rough unshaven state throughout the ages. In visiting this sacred spot the devout pilgrim has to be careful to keep the Šakḫra on his right hand, so that he performs the circumambulation of the holy relic in the opposite direction from the circuit of the Ka’ba. Ibn ‘Abd Rabbihi (in his *Ibl al-Farid*, transl. in part by Le Strange in *Pal. Quart. Stat.*, 1887, p. 99) states: "Now when thou enterest the Šakḫra make thy prayer in the three corners thereof, and also pray on the slab which rivals the Rock itself in its glory for it lies over a gate of the gates of Paradise". This slab is a portion of the marble pavement near by the Bah-i-Djanna and is supposed by some to mark the place where the prophet Elias knelt in prayer. Others believe it covers the Tomb of Solomon (Kabir Sulaimān). All, however, assert that it was originally part of Paradise, and is generally termed the Flagstone of Paradise (Bahārat al-Djanna). A tradition has it that Muḥammad drove into this slab nineteen golden nails which are destined to drop out periodically. When all have fallen through, the end of the world has come. The Devil almost succeeded in removing them but the angel Gabriel intervened in the nick of time. Nowadays three nails remain in place, while one has sunk a little. It is with humble steps and slow, therefore, that the pious pilgrim treads this holy place lest by dislodging one of the nails he should hasten the day of judgment.

On a detached piece of a marble column on the S.W. of the Šakḫra, covered by a rude shrine which also contains hairs from the prophet's beard, is to be seen the *Kudam Muḥammad* (or Footprint) which he left behind him on the night of his ascension to heaven on his steed al-Barāḵ. During the Crusades when the Christians occupied the Kubbat al-Šakḫra this was known as the Footprint of Jesus. The round hole in the middle of the Rock was where the prophet's body pierced its way upwards. And near by is shown the very Saddle of al-Barāḵ in the shape of several marble fragments. There is also pointed out on the West side of the Rock the impression of the Handprint of Gabriel (Kan Sayidina Liğn-i II) where he held down the Rock when it was about to rise to Muhammad. Directly opposite are preserved the banners of Muhammad and 'Umar, and the buckler of Ḥanẓa. The cases containing these relics are dust-covered. Once a year this dust is carefully gathered and sold in minute quantities as a panacea of miraculous power. A slight depression in the pavement on the East side of the Rock is pointed
out as the Footprint of Idris. In the N. E. corner is the recess known as the Prophets' Kibla (Kibbat al-Anbiyā'). There are also several ancient Kur'an and a dwarf screen known as Ta'ākjīd Sa'īd 'Ahl (the imitation of the sword of 'Ahl). The entrance to the cave beneath is by means of the Bāb al-Magharah, at the S. E. corner of the Rock, the pilgrim humbly descending the eleven steps with the following prayer on his lips, known as the "Prayer of Solomon": "O God, pardon the sinners who come here, and relieve the injured". The average height of the cave is six feet, and on the roof may be seen the impressions of Muhammad's head. The floor is paved with marble and the sides are whitewashed. It is said to be able to hold 62 persons (Ibn al-Fāţih, B.G.A., v. 100). A projecting piece of rock known as the Tongue of the Rock (Liṣān al-Sakhra) is so-called because it greeted 'Omar on one occasion. There is also to be seen the slender column supposed to uphold the Rock. The guide points out on the right the Mihrāb Sulāmān (Solomon's prayer-niche); on the left, the Māṣjām al-Khalīl (Abraham); on the N. corner, the Māṣjām al-Khīḍr with the Mihrāb Dā'ūd opposite.

On the S.E. of the Sakhra a staircase leads upwards to the gallery of the dome whence the crescent on the summit may be reached. The eulogy pronounced on it by Muḥammad (F. F. T. S., iv., p. 46) still holds good at the present day. At dawn on the roof may be seen the sun first strikes the Cupola, and the Drum catches the rays; then is this edifice a marvellous sight to behold, and one such that in all Islam I have never seen its equal! Walker) KUBILAI (usually written Kūbīlāi but also "Kubilai"), Mōngol emperōr (1260–1294), brother and successor of Khān Mongke. He was probably born in 1214; when Cīngiz Khān returned in 1225 to Mongolia from his campaign in Western Asia, Kūbīlāi, who was then eleven years old, had just gained his first trophy of the chase; after the Mongol fashion, Cīngiz Khān himself smeared his thumb with flesh and fat (Rashīd al-Dīn, ed. Bersezin, Tratt. Vest. Oud. Arkh. Oth. d'Est., v. 141, text). In the reign of his brother he was governor of China from 1251 and devoted himself to the conquest of the Sung dynasty, which was only completed in his own reign (1279), whereby the whole of China, for the first time since the tenth century, was again united under one ruler. After a victory over his brother Arīgh-Baga who was proclaimed Emperor in Mongolia (cf. the article BEREKE), Kūbīlāi remained in China and transferred the capital of the Mongol empire to Peking (Khānbalīk, q.v.). In spite of great achievements at home (Imperial Canal, new code of criminal law, Academy) and abroad (great, although unsuccessful campaigns at sea against Japan and the island of Java, such as had never been undertaken in the history of China, before or after), his reign was for China a period of oppressive foreign rule. Kūbīlāi was, like most Mongol emperors, favourably disposed to Islam and the Muslims; only for a time (seven years, 1282–1289, of which the first four years are described as a period of severe persecutions) as a result of the events connected with the assassination of the minister Ahmad (see KHANBALIK) did the Muslims fall into disfavour with him. (Kūbīlāi in China under Mongke), 338 sqq. (Kūbīlāi's own reign); Hollow, History of the Mongols, i. p. 187 sqq., 216 sqq. On the persecutions of the Muḥammandans also Zafr., xxii. 160 sqq. (W. BARKHOLD) KUBU, a district with self-government under the suzerainty of the Dutch Government in the southern part of the delta of the Kapuas river; it is of administrative purposes it belongs to the Pontianak division of the residency of "Westerafdeling van Borneo". In the north it is separated from the kingdom of Pontianak by the Great Kapuas river, in the east it is bounded by the districts of Tayan and Simpang, in the south and west by the China Sea. The ruling family is of Arab
KUBU — KÜÇÜK KAINARDJE

descent, the founder of the kingdom was Siyid Aïrûs al-Aïrûs who settled not far from the mouth of the river Têrente with a few Arab, Buginese and Malay followers about 1750, soon after his brother-in-law, the Arab adventurer Şafîj Aâlî al-Râhîmân al-Kâdrî, had founded the sultanate of Pontianak. The capital and kingdom received its name from an entrenchment (Malay: kubu) thrown up as a defence against raids by pirates. He put himself under the protection of the Dutch East India Company who recognised him as ruler with the title tânu (lord). The land is of little importance; it consists for the most part of a swampy wooded plain which is only in parts drained (mainly in the Ambawang district in the north-west) and fitted only for primitive tillage and growing cocomanuts. The population is not numerous and is very scattered. It consists almost entirely of immigrants; besides Arab half-breeds and a number of Chinese they are mainly Buginese. There are very few Dayaks. The predominant religion is Islâm but its observances are for the most part neglected; only here and there one finds a mosque which is falling to pieces. The ruler, whose capital is quite an insignificant settlement, governs with three notable (see) members of his family, each of whom is allotted a certain territory as an appanage.

KUBÛR, pl. of the Arabic kbur, which, besides its usual meaning of "tomb", has also that of "box, sheath or needle case", although it is not given in any dictionary; cf. Aâlî Vásîn, Kûbûr al-Khârûzî, p. 17. In North Africa one finds kbury, pl. kbur, "holters" (Beaussier). This plural passed into Ottoman Turk, as a singular, and was borrowed later by Arabic dialects of Africa (kbur, pl. kburâh, "leather pistol-belt worn round waist" (Beaussier)). It has the same meaning of case, sheath, to which one can add that of quiver; it is commonly used (by an abbreviation of kalm-kburu "case for reeds") for a case for holding cut reeds, a pen-holder, vulg. Ar. dawâya (class. dawâd), Pers. kalm-dan (illustrated in Huart, Caligraphies, p. 16; Lane, Modern Egyptians, i. 288).

KUČAK (Mizra) Wînâ, surname of Mujammad Shâfi, Persian poet of the xinî centuries, born at Shirîz, a clever calligrapher and musician, died in 1262 (1846). Author of numerous poems (âtwaîn lithographed at Teherân 1275) the Bâsîn Wîjâ, the completion of theFarhâd n-Sîrîn of Wâshî (lithographed at Teherân 1263) and of a translation into Persian of the Awaîk al-Dhahab (golden collars) of Zâmakhshari. His sons, Wîkân, Maître Hâkîm (the physician), Abu 1-Kâsim Farhangî, Dâwâtî, Yâdînâ and Hîmmet had inherited the paternal talent.

(Ch. Huart)

KUČÁN, a town in Persia, in the northern part of the province of Khorasan [q. v.] on the upper course of the Atek [q. v.], perhaps the ancient Ashak or Arakka, in the older Arab geographers Khauhishân, later Khûdân, e.g. Mukkaddasî, B.G.A., iii. 319, 3 and Bahâkî, ed. Morley, p. 761; also Yâkît under Ustâwâ (i. 243, 20) according to Samîni (G.M.S., xx, p. 31); according to Yâkît, ii. 487, 21, the usual local pronunciation was Khâshân; Samîni, i. 219, here also has only the form Khauhishân (Suvânî and others have himself been there). The origin of the pronunciation Kuçân is stated by Rašîd al-Din (ed. Quatrempère, p. 183) for the Mongols. The ruins of the ancient Khauhishân (this name is still borne by a large village) lie 3 farasak west of the latest town, which was destroyed in the xinîh century by a series of earthquakes. Towards the end of the viiih (xiiith) century Ghâzân, afterwards Ilkhan, when governor of Khorasan built a Buddhist temple in Kuçân (C. d'Ossian, Histoire des Mongols, The Hague and Amsterdam, 1834/1835, iv. 148, quoting Rašîd al-Din). In the reign of Abramsî I (q. v.) a Kurd principality (tribe of Zafarânlî) was founded with a hereditary Ilkhanî at its head. Like most towns of Persia of some size, Kuçân also has the tomb of an Imâmâd, Ibrahim b. Ali, son of Ali b. Mûsâ, who is buried in Mechedh. On the hill now called Nâdir-Tepê near Kuçân, Nâdir Shâh was killed in 1160 (1747). In the reign of Nâdir Shâh (after his campaign of 1740 against Baghdad) a few leaves of a copy of the Kurân written by the Timurid Baisongor Ghiyâth al-Din [q. v.] preserved in Samarkand (according to others in Shahri Sarbi i.e. Kash) were brought to Kuçân. Shâh Nazîr al-Din in 1883 had two of the leaves brought to the Museum in Teheran. In the suppression of a rebellion of the Ilkhanî by 'Abbas Mirza [q. v.] the town suffered severely, and the great earthquakes of 1852, 1871, 1893 and 1895 were still more disastrous to it. When Curzon visited it in 1889, the population was under 12,000; but we are also told that 12,000 perished in the earthquake of 1893 and about 10,000 were left. The present Kuçân was only rebuilt after the last earthquake about 8 miles east of the ruined town.

KUCUK BIAIRAM. [See ID AL-FITR.]

KUCUK KAINARDJE (Tur. "a small hot spring"), a town in Bulgaria, 45 miles to the South of Silistria, was until the treaty of Berlin (July 13, 1878) a part of the Ottoman
Empire. It was in this town that a treaty of peace between 'Abd al-Ḥamid I, the Ottoman Sulṭān and Catherine II, the Empress of Russia, was signed on the 12 Dżumādā I, 1188 (July 21st, 1774). The Russian army having appeared before Shumila and the troops of the grand vizier Muḥammad-Dżamāl Pasha, having abandoned it in a body, the latter decided to send plenipotentiaries to Field-Marshal Romanzoff; he chose the reś-efendi Muhim and Khiya-beg Ḥaḍidż Rısami; Prince Tepnine, the Russian Ambassador, represented the Empress. After a discussion which lasted for seventeen hours, the plenipotentiaries came to an agreement on July 17; but the signature was postponed for five days in order to make it coincide with the date of the treaty signed by Peter the Great after his defeat on the Pruth (July 22, 1711); and the town of Kūčā Kainarije was chosen because it was the place where the General Weissmann had perished. The treaty consisted of twenty-eight articles which established the independence of the Tatars of the Crimea, of Bessarabia, and of Kūčān, while reserving religious supremacy to the Sulṭān (a phrase which gave rise to the idea of the Caliph-Pope, which became so widespread throughout European literature, see also KHAŁIFA). It restored to the Khān of the Crimea all the lands conquered by the Russian Army, except the two ports of Kerč and Veşni-kašâ; the restoration of the conquests of the Russians except the two Kâbraĵa, Azof and Kiļburun. It restored prisoners to liberty without ransom; and provided for the free navigation of the Black Sea and the Mediterranean. It established freedom for commerce, security for travellers and in particular for the pilgrims from Jerusalem (this article later allowed Russia to intervene in the affairs of the Holy Land). The Porte acknowledged the Empress of Russia's title of Ḵadījihâ and her right to build a church at Pera. The question of Poland, which had been the chief cause of the war, was not dealt with in the treaty. By two additional secret clauses (Merket, Recueil des traités, ii. 287) the Porte promised to pay as war indemnity the sum of 15,000 purses = 7,500,000 piastres, worth at this time four million roubles, within three years. Russia on her side undertook to order her fleet to evacuate the Archipelago as quickly as possible. This treaty contributed largely to strengthen Russian influence.

KUCÜK KHAN, a Tatar Khan of Siberia, in whose reign this country was conquered by the Russians. Abū ʿAbd Allāḥ Khān (ed. Desmouls, p. 177) is the only authority to give information regarding his origin and his genealogical relation to the other descendants of Čingiz Khān. According to this source, he reigned for forty years in "Turan," lost his eyesight towards the end of his life, was driven from his kingdom by the Russians in 1003 (1594/1595), took refuge with the Manghilt (Nogai) and died among them. References to Kucum are also found in the work of the Ottoman Turk Saifī, who had been written in 990 (1582) (Leyden MS., No. 917; transl. without a reference to the MS., by Ch. Schefer as an appendix to his translation of the history of Central Asia, Histoire de l'Asie Centrale, by 'Abd al-Karim Būḥārī, Paris 1876, p. 305 sqq.). Kucum's kingdom and its capital are there called "Tūrā"; the Russians had taken this town during Kucum's absence. Kucum afterwards returned and drove out the Russians after a long siege (1-2 years) but the latter carried off his son a prisoner to Moscow. These stories seem to show that Saifī's work was probably composed later than the year given in the title (Schefer, loc. cit., Preface, p. iv., even gives the year 990 A.H. as date of death of the author). The name "İsker" for the capital of Kucum (near the confluence of the Tobol and Irish) seems to be found only in Russian sources; it is only from the latter also that the principal events of his reign can be chronologically arranged. Kucum did not inherit his kingdom from his father but had expelled his predecessor Yadiqar; in 1563 Yadiqar is still mentioned as king of Siberia, while in 1569 we find Kucum. In 1581 Isker was conquered by Russian Cossacks under Yermak; the Cossacks owed their victory to the use of fire-arms, then still unknown in Siberia. Kucum's son Maḥmud-Kul (Muḥammad-Kul) was sent a prisoner to Moscow. He was not till Yermak fell in an unexpected attack (1584 or 1585) that Isker was vacated by the Russians; but by the year 1587 we find troops, who had just arrived, building the Russian town of Tobolsk near this town. Kucum did not suffer his last defeat at the hands of the Russians till August 20, 1598. He is said to have been slain by the Nogais, with whom he had taken refuge, out of revenge for his father's raids on them. The document used by Radloff (Ausz Sibirien, Leipzig 1893, p. 146 sqq.) dealing with an embassy from Kucum to Būḥārī and the order by 'Abd Allāh Khān [q.v.] his governor in Khvārizm to send teachers of religion to Siberia, cannot be genuine. Khvārizm was at this date an independent kingdom and not under the rule of the Khān of Būḥārī. The form "Kuzim" adopted by Radloff is also not to be found in any historical sources.

KUDĀ'A, a group of tribes. When Islām was first preached, the genealogical division of the Arab race into three main bodies, Moṭār Maʿadd, Rabīʿ and Yemīn, had just been completed. The poets refer to it as a well known principle. Agreement had not been reached regarding the fourth group, claiming descent from a common ancestor, called Kudā'a. This group comprised several important tribes, settled in the northern Ḥijāz and leading a nomadic life between Arabia, Ḥiraq, Syria and Egypt.

Without protest, the Kudā'a had allowed themselves to be classed with the Yemen group. Wellhausen (Das arabisch. Reich, p. 113) observes that this group was not old. This is quite correct but decides nothing. If Kudā'a had allowed it, it was because their interests coincided with those of the Yemenis. They might have perhaps stopped there if the matrimonial alliances of the Sufyānī caliphs with the Banū Kalb [q.v.]
had not upset the political equilibrium of the Arab tribes. Kalb formed the main nucleus of the Kūdāʾ and the old genealogical fiction was intended to secure it the unconditional support of the Yemeni tribes of Syria. At any cost the Kūdāʾ Yemeni tribes had to be kept up. The old faith of Kalb, which had for long lived alongside of the Moḍaris and contracted temporary alliances with them. This could be usefully exploited. Evidence of the importance attached to the discussion of these questions is the fact that they were raised in the presence of the Prophet.

Now nothing could be more unstable than the grouping of the Beduin tribes. To understand how down to the Omayyads and in spite of the institution of the dīwān, the ethnographical connections of the Kūdāʾ had remained floating, it is sufficient to read in the Naḥawī Ḍhariʾ on Ḍariʾa, Volume 104 (verses 23–24; cf. Dhibāʾ, Havamān, iv. 107 below). They were unable to produce charters or base their arguments on historical documents. Vague traditions and especially poetry were appealed to. Did not the poetry contain the “archives of Arabia”, dīwān al-ʿArab? In this connection the author of the Aḥkām (xvii. 77–78) speaks of verses fabricated by the Kūdāʾ, anxious to connect themselves with the Yemen group. Apocryphal poetry is the curse of the whole of pre-Muslim history. A vast and disastrous activity was displayed in this field. But it would be a great mistake to charge this exclusively to the genealogists of Kūdāʾ. In fact the Kūdāʾ seem the least desiring of suspicion, because under the Omayyads they were better able than some others to do without alliances. The supremacy assured to the Kalbīs in Syria freed them from the necessity of seeking allies among the Moḍaris, to say nothing of their antipathy to the Kaisīs with whom they were soon in open conflict. In their verses Ḍhariʾ and Ḍariʾa appeal to an old alliance between Tamīm and Kalb. The latter tribe had probably lost all recollection of it. But they could not be displeased to see their importance recognised by the best poets of Tamīm, the great Moḍarī tribe, whose friendship was also sought by Kais.

The Kūdāʾs were only represented in small numbers in Egypt. In 102 A.H. a Kalbī governor of Egypt reconstituted a distinct group with various Kūdāʾ clans, which he had found scattered among the Moḍarī and Yemeni tribes in his province. Besides Kalb and its numerous subdivisions, the following are the main tribes of the Kūdāʾ group: Sāliḥ (the predecessors of Ghusān in Syria), Taṣḥīkh, Ḍariʾ, Bāt, Ḍujairān, Kān (Banu Ḥaṭṭa or Bākkan), Baharʿ Mahraw, Khushān (to be retained in the text of al-Kindī, p. 72, 11). For these tribes the reader is referred to the separate articles on them. Their proximity to the Syrian frontier or their settlement in Syria had encouraged the spread of Christianity among them. We therefore find them at the Arab invasion at first taking the side of the Byzantines.

**KUḌAṆA** or ʿAbū ʿAṯār, ʿAbā al-Ḥakīm, an Arab author. Born a Christian, he adopted Islam under the Caliph al-Muktafi (289–295 = 902–906) and served in the central administration at Baghdad in which he obtained the office of Maqālīṣ al-Zimam in 297 under the vizier Abū ʿIshaʾi b. al-Farāhī. The date of his death is not known. Most writers (Ibn Taghibirdī, ed. Juyboll, ii. 323; Reinad, Géographie d’Abounfida, ix., lxxiv; de Goeje, B G. A., vi., 22; Dénoron, Mis. de l’Escarial, ii, x.) give 337 (958) but according to Yākūt, Islām al-Aribī, vi. 204, that date is due to Ibn al-Ṭawāfi who is not to be relied on for such matters. The only certain thing is that he was still alive in 320 as in that year he was present at a disputation between Abū Saʿīd al-Sirāfī and the logician Mattāī. One result of his official activities was the for us most important book, the Kīṭāb al-Kharaḥīd which he seems to have compiled soon after 316; only the second volume of it survives in the Kūprūlī library in Stambul; de Goeje published extracts from it in E. G. A., vi. The work first begins by discussing of the provincial division of the empire and the organisation of the postal services and gives the yield in taxation for each district. The author then gives a survey of the adjoining foreign countries and their inhabitants and next gives a very full account of the financial system, taxation and administrative law. A short history of the Arab conquests is simply copied from al-Balkhabī. He devoted his leisure to belles-lettres and produced a work on style and rhetoric, Kīṭāb ʿAbdālf al-Nāṣir al-muṣrīṣ bi-Kīṭāb al-Bayān, edited by his pupil Abū’l-Aḥdālī Muhammad b. Ajiyūb and a poetical Kīṭāb Naṣaʾ al-Shīr. Both works are preserved in the Escurial MS. 242 of Dénoron’s Catalogue; the latter is also in the Kūprūlī library i. 445; 2 (see Rescher, M. S. O. S., xiv., 17) and has been printed from it at Stambul in 1902.

(C. BROCKELMANN)

**KUDATU BİLLIK** [See VUSUF KHAŞŞ HAJÎBJ.]—AL-KUDS, the usual Arabic name for Jerusalem in later times. The older writers call it commonly Bait al-Maqdis (according to some: Muḥaddah, cf. Gildemeister, Z. D. M. G., xxxvi. 387 sq.; Fischer, ibid., lx. 404 sqq.) which really meant the Temple (of Solomon), a translation of the Hebrew Beth-hammikdāṣh (e.g. Ibn Ḥishām, ed. Wüstenfeld, p. 263, 2) but it became applied to the whole town. They also frequently use the name Ḫiṣṭa, from Aelia (see below). They likewise knew the old name Jerusalem, which they produce as Urshīlām (or um) (variants in Yākūt, ed. Wüstenfeld, i. 402). The name al-Balāṭ also occurs in Muḥaddah, a word of uncertain meaning derived from palatium, but which probably means “royal residence”. For other names of rarer occurrence see Gildemeister, op. cit.

When the Roman soldiers of Titus became masters of the whole city after a long and strenuous siege at the end of September 70 A. D., the splendid temple had already been burned down, according
to Sulpicius Severus by order of Titus, according to others against his desire (see Williamowitz, Kultur d. Götzennest, i, 170; Windisch, Thäl. Tijdsschr., 1914, p. 519 sqq.) and for the last few nights the city had looked like a sea of fire. The Roman soldiers, maddened by the stubborn defence, continued the destruction after the capture of the city and plundered without mercy. But it is certainly wrong to think of the conquered Jerusalem as being razed absolutely level with the ground. The eastern part of the city had suffered most, notably the area of the Temple, but a considerable piece of the city wall with a prominent tower was left at the south-east corner and on the western side Titus left the city wall and the three great towers of the palace of Herod intact, to serve as a shelter for the Roman camp. Many of the old houses must also have been still standing, or at least have been in such a condition that the Jews, who were gradually returning, could find some sort of shelter in them.

For the first half century after the fall of Jerusalem we are completely without information about the unfortunate city. Risings continually flamed up in the country round but nothing is said about the capital. At the beginning of the reign of Hadrian, it was ultimately restored but later (132—135 A.D.) another revolt broke out when the Emperor forbade circumcision and wanted to build a new city upon the ruins of Jerusalem. After the rising had been suppressed with difficulty, he carried out his plan and a purely pagan city arose which was called Colonia Aelia Capitolina. While on the north side it observed the boundary marked by the so-called third wall, it left out the southern half of the original city and in the south-west a part of the upper town; these remained the bounds for the whole period following except for a brief interruption under Nahan al-Din. The new city had the usual buildings, baths, theatre, sanctuaries etc. (see Chronicon Paschale and on it, Vincent and Abel, Jerusalem, ii, 6 sqq.) and was divided into 7 parts, each under an administrative official. The Emperor had a sanctuary built in honour of the Capitoline Jupiter as the principal god, for which the great masses of ruins there formed a rich quarry (cf. Eusebius, Dem. evangel., viii, 3). According to Dio Cassius, Isix. 12, Hieronymus, Comm. in Esaiam, xi, 8, etc., this temple was built exactly on the site of the old Jewish temple, which Vincent and Abel, op. cit., ii, 15 sqq., doubted, but without sufficient reason. That the "rock" which had formed the old altar for burnt offerings, remained practically untouched is evident from its later history, but unfortunately we do not know if it was actually used in connection with the worship in the new sanctuary. With the help of a few coin-types we can form some idea of the appearance of the temple of Jupiter, and we also know that two statues of Hadrian (probably one of the Emperor and one of Antoninus) were erected near it. If this temple of Jupiter raises questions which are difficult to answer, this is still more true of the temple of Aphrodite built in Jerusalem on the site of which was later built the Constantinian Church of the Holy Sepulchre (on presumed remains of this temple, see Schmalz, Mutter Ecclesiarum, p. 351). According to Eusebius, wicked men, inspired by demons (pagan deities) had done everything they could to conceal and to pollute this place by covering τὸ δείπνον ἀντιπ στερίφων with earth brought for the purpose and building a temple of Aphrodite with a pagan cult. Whether this was the real reason for the building of the temple of Aphrodite is very doubtful. For even if we grant the possibility that a recollection of the place of the Crucifixion and of the tomb of Christ had been preserved among the earliest Christians, it is unlikely that Hadrian to whom the building may, with most probability, be credited paid so much heed to the Christians that he would deliberately insult them so deeply (cf. P. Mickle, Die Konstantinkirchen im heiligen Lande, 1923, 116 sq.; Dalmann, Palastinayahrbuch, ii, 102 sqq.). At most it could have only been the nuisance the temple of Aphrodite was a nuisance. On the other hand we may ascribe to Hadrian's rebuilding of the city the broad pillared way which runs through Jerusalem from north to south on the mosaic map of Madaba of the viiE century (see Guthe, Z. D. P. V., xxviii, 130 sq.; Gisler, Das Heilige Land, 1912, p. 214 sqq.), of the pillars of which a series of remains have been unearthed (cf. Vincent and Abel, op. cit., ii, 22). It debouched on the north into an open square with a single pillar standing alone, after which the North Gate in the middle of the "gate of the Pillar" (Bāḥ al-Amūd or Bāḥ Amūd al-Ghirāb), Jews were forbidden under pain of death to enter the new city. This prohibition remained in force under Antoninus Pius, but they were again allowed to practise circumcision. As the Christians were not affected by the prohibition, their numbers must have increased in the centuries following Hadrian's reign. Their place of worship in this period was the Church of Sion on the southern peak of the next hill, which was therefore regarded as the mother of the other churches in the Holy Land. It was at first a small building, which was not replaced by a large basilica until a later date. In the same period pilgrimages to Palestine, especially to Jerusalem, began to become more numerous (cf. Windisch, Z. D. P. V., xliv, 145 sqq.). The faithful came thither from all countries, and especially when the earlier obstacles and dangers had been diminished by the conversion to Christianity of Constantine I, numerous bodies of pilgrims followed the example of the queen-mother, Helena, who visited Palestine in 320. The appearance of Jerusalem about this time (c. 350) is described to us in the work of the monk Simeon of Bordeaux, the exact character of which cannot however be readily defined. We learn that the two Hadrian statues were still standing and perhaps also the Temple of Jupiter, although the words are not clear (et in aede ipsa ubi templum fuit quem Salomon aedificavit). If this was the case, the temple had very soon afterwards been taken down when the Emperor began to build his church. The lapsus permixtus over which the Jews were allowed to weep and pour oil on one day of the year, is probably the stone in which the altar for burnt offerings had stood, which therefore must have been lying exposed in those days. If it did not take place earlier, the complete desolation of the site of the temple must have begun at this time, when the Christians, remembering Christ's words (Matt. xxiv. 2), rejected any thought of rebuilding the temple; Eucharius (Itinerar Hierosol. Latina, i, 52) expressly mentions it. But this was not true, at least about 348, of the outer enclosures of the site which Cyril (Patr. Grac.,
xxxiii. 889) mentions as still in existence, and at a still later date there is a reference to the outer wall at the S.E. corner with a high tower. The name given it, "Tower of David," which is found about 350 in Ephippius, is based on an erroneous transference of David's citadel to this site and invalidates this period in general with the many pilgrims asking about sites mentioned in the Bible, proved very productive of local traditions with no authority or even quite false.

In his great buildings the Emperor Constantine was only concerned with Christian associations. Besides the basilica on the Mount of Olives mentioned by the pilgrim of Bordeaux, his main work was the building (completed in 335) of the large and splendid church on the spot where Christ had been crucified and which was therefore consecrated to the victorious Cross. Proof that it was the true site was according to Eusebius the πατρίκια θανάτου at the lightning emanating from the Holy Sepulchre when they began to dig out the soil.

It was the Emperor's intention to build a great sanctuary for the whole of Christendom, which was to surpass all others in the splendour and costliness of its materials. Eusebius gives a very rhetorical picture of this building and therefore one that is not easy to visualise. The sepulchre, discovered by a miracle, was adorned by the Emperor with beautiful pillars and rich decoration. East of it lay an open paved square, which was enclosed on three sides by pillared halls. On the east side was a great basilica through the eastern exits of which one entered the outer gateway and reached the street of the market through them. The basilica had a sloping roof. Eusebius also speaks of a hemisphere, which some take to be a cupola on the roof, others an apsis. Eusebius does not mention a building over the Holy Sepulchre (Mickley, op. cit., p. 38 sq. however finds a reference to it in the hemisphairion just mentioned, which he supposes is mentioned in the wrong place in the city and weep to the stone on the site of the Temple. Further scope was given to the idea that Constantine who first built over it the so-called anastasis, the rotunda form of which, later maintained, is first mentioned by Cyril in 350. In the account of the building there is no mention of the principal relic, the remains of the Holy Cross; but they were in existence barely 15 years later; they were perhaps old pieces of wood found in excavating for a cistern. They were later preserved at the S.E. corner of the basilica in a silver case. Constantine's reign brought some relief to the Jews as they were permitted, as already observed, to enter the city and weep to the stone on the site of the Temple. Further scope was given to the idea that Constantine who not only completely abolished the old prohibition but gave them permission to rebuild the Temple, which however they were prevented from doing by flames bursting forth, according to Ammianus. After the Emperor's death Constantine's regulations were again enforced.

The more peaceful period that now began gave the Christians leisure to devote themselves to their own theological and hierarchical disputes, which had for the Jerusalem Christians the satisfactory result that they were freed from the suzerainty of Caesarea, as, at the Council of Chalcedon (451—455), the bishopric of Jerusalem was recognised as an independent patriarchate, comprising Palestine, Prima, Secunda and Tertia. The Emperor's family devoted continual attention to the embellishment of the town. Thus the Empress Eudocia in 460, built a church of St. Stephen and a church at the pool of Siloah. A still more dazzling epoch came with the reign of Justinian who was fond of building. He had churches and hospitals built in the country round, including a nosokomium in the capital (cf. Cyril in Z. D. F. V., xxxvi. 305). He also bestowed a splendid church of Theotokos on the city of which Procopius gives a florid but by no means lucid description (De Aedificiis Justiniani, v. 6). According to him the church was supported by pillars and had a roof of cedar trunks. From a statement by Theophanes it seems to have been in the shape of a cross. One very important statement in the description of Procopius is that the ground was not large enough for the intended building, so that the Emperor had great substructures made on south and east until the ground reached the level of the adjoining rocks. This is in favour of the assumption often made that this church was the predecessor of the mosque of Aksa, the oldest parts of which undoubtedly belonged to a church.

The part of the site of the Temple which lay in ruins and which would not be built upon for the reasons already mentioned must therefore have stretched so far south that the remaining area was too small for so large a church (cf. R. Hartmann, Z. D. P. V., xxxii., 185 sqq.). Others like H. Dressaire, Echos de l'Orient, 1912, p. 146 sqq., 234 sqq.; K. Schmalz, op. cit., p. 385, look for the site of Justinian's church in the Jewish quarter southwest of the Temple area.

A sudden end was put to this idyllic state of affairs by the devastating invasion of the Persians in 614 A.D. When they were before Jerusalem, the Patriarch Zacharias, who, like Jeremiah of old, saw in the attack a punishment for the immorality prevailing in the city, advised surrender but the people would not listen to him, although the Byzantine troops in Palestine were leaving the city to meet their fate. With the help of their siege machinery, the Persians entered the town and bathed the city in the blood of old men, women and children. The churches were destroyed and the crucifixes trodden under foot. The Jews, who had as a rule been on good terms with the Persians, are said to have used the occasion to avenge themselves on the Christians. The Patriarch was sent into banishment with other dignitaries and the palladium, the Holy Cross, to the horror of Christianity was carried off by the victors (cf. K. Schmalz, op. cit., p. 69; P. Peeters, La Piste de la Jerusalem par les Perses, Messes de l'Univ. de Bourgtheroulde, 1914; A. Jaffé, Jerusalem, in Vincent and Abel, Jerusalem, ii. 242). The change only came when Heraclius began his marvellous campaign of conquest which led him far into Persian territory. Kawadh II, Shereq, who ascended the throne on the assassination of his father in 628, sought peace and withdrew all the Persian troops from Byzantine territory. After his brief reign, complete confusion reigned in Persia so that the war could not be continued. The Holy Cross was sent back in its case which the Persians by God's providence had never opened and restored to its former place on September 14, 629; in the meantime while a month passed showing great energy and succeeded in restoring the destroyed church, including the Church of the Holy
Sepulchre built by Constantine, which was restored to its former size and decorated as far as the modest means allowed. The remains of the Cross did not however stay in Jerusalem, but were sent in 633 by Heraclius to Constantinople, when he was doubtful of being able to defend Syria. Nevertheless a piece seems to have remained in Jerusalem, as the continuation of the festival of the elevation of the Cross shows (Vincen and Abel, op. cit., i. 227).

But scarcely had the Christians in the Holy Land begun to breathe a little more freely again after this severe visitation, than events occurred which were to prove the greatest and most fatal consequences. The politico-religious community formed by Muhammad, little heeded outside of Arabia up to the time of his death, became a few years later with startling suddenness a danger threatening the neighbouring countries. Although Jerusalem lay outside the regular orbit of the Prophet's interests, he mentioned it several times in the Koran, a natural result of his indebtedness to Jews and Christians. As he had no idea of the actual appearance of the town, the cursory mention of the mihrab (Sura, ii. 32 sq.; xix. 12) is of no importance, but Jerusalem became of real significance for him in the period which he had preserved in his letter to the Jews, when he returned at prayer in the direction of the holy city. The tradition is certainly right which says that the earlier hajja mentioned in Sura ii. 136, 138, which he exchanged for the sanctuary at Mecca after the breach with the Jews, was Jerusalem, whether he already used this direction in the Meccan period or only introduced it after his migration to Medina in order to win over the Jews there (cf. the article MUHAMMAD). In the former case which is more probably right, Jerusalem must from the very beginning have been of very considerable significance to him as a religious centre. According to the usual explanation, moreover Sura xvii. 1 with the expression masjid al-aqsa indicates Jerusalem as the goal of the Prophet's nocturnal journey, not however the later mosque of the name but the site of the old Temple of Solomon. The correctness of this interpretation is however not certain for there is a certain amount of support for Horowitz's (Ist, ix. 159; following Schrieke, ibid., vi. 1 sqq.) suggestion that Muhammad was rather thinking of a place in heaven in this phrase (see MUHAMMAD). But the traditional view, which must have arisen very early, gained the greatest importance for Jerusalem, for on it is based the classing of the sanctuary at Jerusalem among the three most holy places of prayer in the world; indeed it is sometimes even given the preference over the other two.

The Muslim armies that crossed the frontiers of Arabia after the death of Muhammad entered Palestine as well as the lands of the Euphrates. With the defeat of the Imperial troops at Adinadain (q.v. and add to the Bibl. Masudi, Muruj al-Dhabab, v. 225) in July 634, after which the Byzantine general Aretion had to take shelter in Jerusalem, Byzantine rule in Palestine began to totter and its fate was settled on the Yarmuk in August 636; the fortified towns then surrendered one after the other to the victorious Arabs. Two different accounts of the taking of Jerusalem have been handed down. According to the most usual version, the Arab general Abi 'Ubida in 17 (638)

asked the Caliph 'Umar to come to his headquarters at Djbayh [q.v.] as the people of Jerusalem would only capitulate on condition that 'Umar himself concluded the treaty with them. According to the other story, which de Goeje, Memoire sur la conquête de la Syrie, 1864, p. 110 sqq., rightly prefers, the Caliph came to Djbayh of his own accord to arrange the affairs of the conquered regions and from there (according to Baladhuri, ed. de Goeje, p. 139) he sent Khalid b. Thabit to Jerusalem to besiege the town and the terms made by the latter for the surrender were then approved by 'Umar. These terms, which are preserved in the Various sources (e.g. the year 678-679; 2402-2404 sq.: cf. Baladhuri, p. 139; Ya'qubi., ed. Houtsma, ii. 167; cf. de Goeje, op. cit., p. 122 sqq.) were quite mild. The Christian inhabitants were granted security for their lives, property, churches and crucifixes, while the Jews were not to live among them; the churches were not to be used as dwellings, and not to be torn down or reduced in size, and the Christians retained their religious liberty; in return they were to pay the jizya and assist in warding off the Byzantine troops and raiders. The statements on the date of the taking of Jerusalem also vary; Tabbri for example gives 678 (see p. 93). The further details of 'Umar's conduct at the capture of Jerusalem are given by various Christian and Muslim authors. Theophanes (ed. de Boor, i. 339) who wrote towards the end of the viii century, records under the year 627 that the Caliph on the conclusion of the treaty, so favourable to the Christians, entered the holy city wearing a gold breastplate — according to this author a sign of his devilish hypocrisy — and demanded to be led to the site of the Temple which he then made a place of pagan worship. Writing in the tenth century, the Egyptian Christian Euthychius (Analet, ed. Pococke, ii. 285 sqq. and in Vincent and Abel, Jerusalem, ii. 243) tells somewhat more fully how 'Umar refused to perform his gislaz in the basilica of the Church of the Resurrection and instead said his prayers on the steps at the entrance in order, as he explained, to prevent the Muslims from using the authority of his example to turn the church into a mosque and that he gave the Patriarch Sophronius a document confirming this. At his request, Sophronius then pointed out the "Rock" covered with debris on the site of the Temple as a suitable site for his masjid. The Caliph at once began to clear off the rubble and as the Muslims followed his example the rock soon came into sight. At the same time he gave instructions that the masjid should be so planned that the worshippers had the rock behind and not in front of them. It is apparent that the story is intended to confirm the alienable right of the Christians to their churches by the authority of the great Caliph. There is therefore no such tendency in the Muslim historians — the earliest is al-Mugharrab in the tenth century with whom Shihab al-Din al-Makdisi, Shams al-Din al-Suyuti and Muqaddim al-Din (see below) are in substantial agreement — who on the contrary show the Christians in a less favourable light. According to them the Patriarchs, who appeared here more correctly in the service of the Patriarch, at first tried to deceive 'Umar when he demanded to be taken to David's masjid, by showing him the Church of the Holy Sepulchre and the Church of Sion
But the Caliph saw through the deception, as the Prophet had described to him the place as he had seen it on his normal journey; he was ultimately taken to the site of the Temple, which he recognised as the right place, but it had first of all to be cleared of debris. In another story, recorded as early as Tabari, i. 2408, Ka'bah b. al-Ahmar [q. v.] a Jewish convert to Islam plays a part which gives the story a point directed against the Jews. When 'Umar entered the Temple area he summoned Ka'bah to obtain his opinion regarding the choice of the place for the masjid; but when the latter proposed that the place of prayer should be placed behind the Rock (north of it) the Caliph declared that he saw in the proposal a concealed attempt to plan the masjid for the benefit of the Jews, so that the kibla would actually strike the site of the old Temple. If we examine these traditions more closely, we see that they all agree that 'Umar had a Muslim place of worship erected on the deserted Temple area. That we are on firm historical ground here is corroborated by Bishop Arculfus about 670 (Itinerar Hieraecumitana, ed. P. Geyer, 1898, p. 226 sq.; cf. Arculf, transl. by Mckley, 1917, 19 sq.) who describes this masjid as a very simple building (Saracen quatrangularum erationis domum quam subrectis tabulis et magnis praebuit) super quondam ruinarum religiosi viti fabricati suo aere 12 frequentant?, but it could however hold 3000 men. In reality this was a very practical settlement of the situation that had arisen from the conquest of Jerusalem; the Caliph acquired a site long held sacred, without coming into conflict with the privileges granted to the Christians, as they would not build a church on the site of the Temple for reasons already stated. It is further clear that what Euthychius tells us about 'Umar's praying on the steps of the basilica of the Sepulchre is an unhistorical invention intended to avert any encroachments by the Muslims. But this bias of the story only becomes evident from a further story of Euthychius, according to which the Muslims "of our day" (i.e. the first half of the tenth century) overrode 'Umar's regulations, when they took possession of the half of the forecourt on the steps to the Constantinian Basilica and built a masjid there, which they called the Masjid 'Umar, because 'Umar had prayed there. Schmalz (op. cit., p. 361) thinks a few remains of columns from this mosque can still be seen.

Under the Umayyads the political conditions contributed in a peculiar way to increase the prestige of Jerusalem. Their interest in Muslim foundations was considerable, and that it was not difficult for them to abandon the holy cities in Arabia when the prescribed visits to them met with difficulty for any reason, and Jerusalem in particular, the holiness of which the Prophet, according to the usual exposition of Sura xvii. 1, had recognised, formed a welcome substitute, all the more so as it was much easier to reach from Damascus than Mecca or Medina. Evidence of the esteem in which Jerusalem was held, was early shown by the Sawis who had himself proclaimed Caliph here. A Syriac source published by Noiicke, Z.D.M.G., xxix., 90, records that in July 971, Seleuc. (660 A.D. = Safar-Rabi' 4 A.H. 40) many Arabs assembled in Jerusalem to make him king and that he ascended to Golgotha and prayed there and next went through Gethsemane to the Tomb of Mary, where he again prayed. Arabic sources (Tabari, ii. 4; Mas'udi, v. 14; Ibn al-Muqri, iii. 385) say that homage was paid to the Rock in Jerusalem in the year 40, and this must have happened only after 'Ali's assassination on 17th Ramadán, which is less probable than the Syriac story. Abd al-Malik (65-68 = 685-705) took a further step in this direction. When the anti-caliph Ibn Zubair had become master of Mecca, 'Abd al-Malik feared, not without reason, that the Syrians who made the pilgrimage thither, might be persuaded or forced to join him. He therefore forbade them to go there and when the people appealed to the definite command of the Prophet, he ordered them to go on pilgrimage to the holy Rock in Jerusalem and referred them to a tradition recorded by the famous traditionalist al-Zuhri, according to which Muhammad clasped Mecca, Medina and Jerusalem as places of pilgrimage of equal value, nay, from what is apparently the original form of the hadith, the last town was to be placed above the other sanctuaries (cf. Yaqūbī, ii. 167; Baladīrī, p. 143; Yākūt, ed. Wüstenfeld, ii. 818; Ibn al-Athīr, ed. Tornberg, ii. 390; Goldziher, Muhammedanische Studien, ii. 35 sq.). To express this esteem for the town in fitting and splendid form, the Caliph had a cupola built on the Rock upon which the Prophet had placed his foot on his journey to heaven. The Kūbat al-Šaḫrā' [q. v.] around which the 'qasr was to be performed. That (Muṣṭaddas, R.G.A., iii. 159) the Caliph in building it intended to surpass the beautiful cupola of the Church of the Sepulchre is probably quite in keeping with his general aims. Others make Wālid I the builder of the Kūbat al-Šaḫrā', but this is at once contradicted by an inscription that survives, in which however the name of 'Abd al-Malik has been altered to that of the 'Abbāsīd Caliph al-Ma'mūn but in such a way that not only does the difference in colour betray the alteration but the date 72 (691) has fortunately remained intact. According to later writers (Ibn Taghribirdi, Ulaimi, etc.), 'Abd al-Malik also built the Ašrā Mosque, which was given its name from Sura xvii. 1: but if the mosque was built out of the Church of Justinian (see above) this can only mean that the Caliph in converting the church into a mosque committed a direct breach of the promise made by 'Umar. In any case the Christians in Jerusalem retained their churches, such as the Church of Sion, the Church of Gethsemane (corrupted by the Arabs to "al-Djismâniya") and notably the Church of the Resurrection, the name of which al-Kiyāma (i.e. resurrection, the Arabs turned in ridiculing into al-Kūba). On the south side of this church, there stood in the time of Arculfus a square church of the Virgin which later disappeared. The last Umayyad Caliph Marwān II razed the walls of Jerusalem to the ground in 128 (746) after a rising in Palestine and two years later it was visited by an earthquake recorded by al-Musharraf and later writers, which was followed by another soon after the 'Abbāsīd had seized the empire. The Caliph al-MAshūr had the damage repaired, perhaps on his visits to Jerusalem (Tabari, iii. 129, 372) in 140 (758) or 154 (771). But afterwards another earthquake so damaged the building that it had once again to be restored in the reign of al-Mahdi, perhaps when he visited the city and prayed there in 163 (780) (Tabari, iii. 500) (cf.
Muḥammad, *op. cit.*, 168). On this occasion the Caliph had the building made broader and shorter perhaps in order to emphasize the mosque from strongly. Of work on the Dome of the Rock there is no mention in the sources. But something was done a little later under the Caliph al-Maʿmūn (198–215 = 813–833) is evident from the falsified inscription already mentioned and from another of the year 216 (831) put up by the Caliph’s brother who was then governor of Egypt and Syria (Ṭabarī, iii. 1100).

The gradual dissolution of the ʿAbbasid empire Palestine also became involved in political troubles and the land once again became a bone of contention between powers in Egypt and in Western Asia. In 265 (878) it was taken by the Tulunids and in 292 (905) by the Fāṭimids. In this period the hitherto quite tolerable relations between Muslims and Christians became worse. How the Muslims, contrary to the treaty with ʿUmar, in 936 cut off half the outer court of the Church of the Holy Sepulchre by building a masjid already been mentioned. Yahyā of Antioch (Vincent and Abel, ii. 243) tells of a very serious outbreak of fanaticism in 355 (966). The Muslims, who were joined by the Jews, set fire to the doors of the Basilica and the Church of the Resurrection, so that the dome of the latter fell in, entered the Church and looted all the treasures and destroyed the Church for the occasion. The Patriarch, who had hidden himself was dragged out, put to death and his corpse burned. The destroyed churches were restored under his successor, but not long after they were finished an even more terrible blow struck them when that strange character the Fāṭimid Caliph al-Ḥākim in ʿSafar of the year 400 (October 1009, see Vincent and Abel, Jérusalem, ii. 249; on the other hand according to Ibn al-ʿĀthir, ix. 147 in 398 = 1008) ordered this sanctuary to which the eyes of all Christendom turned, to be destroyed. The order was carried out as thoroughly as the solidity of the building permitted, but afterwards the Patriarch Nicetas in a letter dated in 1010 to the Caliph stated that he allowed the Christians to worship on the ruins of the Church. Clermont-Ganneau has with great acuteness connected with these events a Kūfic inscription found in 1897 on a large block beside the central gate of the old east wall of the basilica, forbidden those under protection (al-ʿaṣmam, i.e. Christians and Jews) to enter the masjid (the mosque of ʿUmar above mentioned) (Recueil d’Archéologie Orientale, iv. 283 sqq.; cf. M. D. P. V., 1897, 70 sqq.). Ḥākim’s successor, al-Ẓāhir, was forced to conclude a peace with the Byzantine Emperor Romanus III by which he permitted the latter to rebuild the Church of the Resurrection at his own expense. Another new earthquake in 1034 destroyed the sore tried church, which was now left in ruins on account of the poverty of the Christians, until it was restored in 1048 by the liberality of the Emperor Constantine Monomachos. But it was only the Church of the Resurrection, that was rebuilt while Constantine’s Basilica never rose again. Only the Chapel of St. Helena, the site of the finding of the Cross was preserved. Another earthquake in 407 (1016) severely damaged the Dome of the Rock (Ibn al-ʿĀthir, ix. 295) and the Caliph al-Ẓāhir had to have the dome of the then built, but not built as an inscription testifies (see ʿAli al-Herwī, *Archives de l’Orient Latīn*, i. 602).

The Seljūk put an end for a time to Fāṭimid rule in Palestine, and their leader Tughrīl Beg was recognised as ʿUthmān in Baghīdā in 447 (1055). Jerusalem also felt the effects of this when the Turkish general Atsiz on his campaign against Fāṭimīn in 463 (1070) conquered the city as well as Ramla and the adjoining country, which, as the Seljūk confiscations posed as protectors of the Caliphate, resulted in the ʿAbbasid Caliph being again after a long interval mentioned in the *kufa* in the mosque there. When Jerusalem soon afterwards rose in rebellion, Atsiz in 469 (1076/1077) had to besiege it again and after its capture, there was a wholesale massacre from which only those escaped who took refuge in the Aṣṣā Mosque (Ibn al-ʿĀthir, x. 46, 64, 68 sqq.). The Seljūk Sultan Tutush in Damascus had Atsiz put to death and in 484 (1091) Jerusalem was given to Sukmān, the son of a Turkoman officer. In 489 (1096) the Fāṭimid Sultan al-Mustaʿīn again succeeded in taking the city and in holding it successfully next year against Kīdāwān, son of Tutush. The triumph of the Fāṭimids was however of short duration only, for a couple of years later the Crusaders arrived and made their victorious entry into the Holy City on July 15, 1099.

For the tenth and eleventh centuries, the period of the events outlined above, we have valuable material available in a series of Arabic descriptions of Jerusalem and its holy places. Even as early as the end of the ninth century we have the brief account by the geographer and historian Yaʿ ṭūbī, who however deals mainly with questions of administration and population only (*R. G. A.*, vii., 328 sqq.). The next is Ibn al-Ḥāfīz who wrote in 1290 (903). After relating the legends and hādīths associated with Jerusalem he gives a good description of the Haram with its gates and sanctuaries, notably the Mosque of the Rock and al-Aṣṣā. His measurements are of interest because some of them agree very well with present day measurements (*R. G. A.*, v. 94 sqq.). Soon after Ibn al-Ḥāfīz, Ibn ʿAbd al-Rabbīh (*p. 328*) in *al-Maʿṣūmah* (*C. L. F.,* i. 274 sqq.) gives a description of the Dome of the Rock, which in many ways recalls that of his predecessor but the figures show considerable divergence. He likewise mentions different sanctuaries in Jerusalem and gates of the Haram. The information in al-Iṣṭāqīrī’s version of an older work now lost (c. 340 = 951/952) is very concise; the same applies to Ibn Hawāʾil’s version of the same book (367 = 977/978). There are references to the al-Aṣṣā Mosque, unsurpassed in size, to the Sakhra with the Rock and the cave below, and to David’s Miḥrāb (*R. G. A.*, i. 57, ii. 112). All these writers are thrown into the shadow by the great geographer al-Muḥammad, or al-Maqdīsī, who was born in Jerusalem (375 = 986/986). He begins with a list of the great attractions of Jerusalem and the advantages of living there but also mentions the disadvantages. He then describes the Aṣṣā Mosque rebuilt after the earthquakes, the new parts of which stood out clearly from the older parts. There were 15 doors on the north side (a remarkably large figure, which does not agree with the other statements), the central one being a great iron door; there were 11 doors on the east side. Along the north side ran a court with marble pillars, built by the Tahirīd ʿAbdallāh (d. 230 = 844). Later the centre of the building from north to south was a pyramidal roof with the beautiful
of the Rock. It was an octagonal building with a high dome, which was intended to serve as a church or mosque. The interior was divided into three concentric halls, and the outer wall was covered with wooden panels. The main hall, which was dedicated to the Prophet Muhammad, was surrounded by a wooden screen. The south side of the dome was the most significant part of the building, as it was the site of the Muslim pulpit. The Rock was also an important landmark in the city, as it was the site of the first mosque built in Jerusalem, the Omayyad Mosque (715-724). During the Crusader period, the Rock became a symbol of Christian pilgrimage and was associated with the Legend of the Three Trees. The Rock was later converted into a church by the Crusaders, and its name was changed to Church of the Holy Sepulchre. In the 17th century, the Turkish sultan Mahmud II converted the church into a mosque, and it remained a mosque until the 19th century. Today, the Rock is a UNESCO World Heritage Site and is an important religious and cultural landmark in Jerusalem.
the Rock, and the Aḵṣā Mosque, Gethsemane, the Church of Sion and several churches in the vicinity of the town. As he does not appear to have been there himself, his statements are probably based on information supplied by men sent by Roger. A little later in 1173 ʿAli al-Herewi (from Herāt) visited Palestine; his description (not yet printed) was translated by Schefer (Archives de l'Orient, 1886, i. p. 587—609). He describes the Dome of the Rock with its four pillars, 12 columns and 16 windows, the iron work round the rock, the cave of the Spirits, the Aḵṣā and its portico with 16 marble columns and 8 pillars, gives their measurements, mentions the stables of Solomon, and the candle of Jesus, the Tower of David, with the Mekhāb mentioned in the Kurān, Siloḥ and the Church of the Holy Sepulchre. There are also numerous descriptions by pilgrims, only a few of which can be mentioned here. In 1102 and 1103 i.e. shortly after the conquest of Jerusalem, the Saxon Saxewulf was there and left a short account of his visit (Recueil de voyages et des mémoires, publié par la Société de Géographie, 1839, iv. p. 830—846) in which he describes the Church of the Holy Sepulchre, Maria Latina, the site of the Temple, the Church of St. Anne, Gethsemane, and the Mount of Olives. The Russian Abbot Daniel's journal of the year 1106 is also of value (transl. by Leskien in Z. D. P. V., vii. 23 sqq.). He gives brief but vivid descriptions of the country and the buildings and had an eye for all sorts of details which are rarely mentioned elsewhere. He describes in order the Church of the Holy Sepulchre, the Tower of David, the Dome of the Rock (the holy of holies), the house of Solomon (al-Aḵṣā), Gethsemane, the Mount of Olives and the situation and natural features of the city. The next important authorities are John of Würzburg (Descripiones terrae sanctae ex sac. viii., ix. ii. et iviv., ed. Toformerly, Theodorici Libellus de locis sanctis, ed. Tobler, 1865). On the Jewish side there is Benjamin of Tudela (1165), who does not however deal with the Christian sanctuaries.

The period of the Crusades is one of the least inspiring periods in the history of Christianity. Its pitiable collapse is in striking contrast to the splendid enthusiasm with which it was opened, but even this was overcast by the deep shadow of the inhuman bloodshed at the taking of Jerusalem. The Crusaders owned advantages they won in the first period less to their own ability than to the political weakness of the caliphate at that time and the newly founded kingdom of Jerusalem soon broke up in confusion in which selfish individual interests were openly displayed and Christians occasionally fought with their fellow-Christians and freely concluded alliances with their Muslim opponents. Therefore when powerful personalities appeared on the side of the enemy in Iṯmād al-Dīn Zangī and his son Nūr al-Dīn and still more when the highly gifted Aḥyūb al-Salādīn (Ṣalāḥ al-Dīn) became master of Egypt in 1169 and began to conquer Syria after the death of Nūr al-Dīn, the fate of the Christians in Palestine was sealed. The battle of the Christians in Palestine was sealed. For them disastrous battle of Ḥattīn (q.v.) resulted in Salādīn's advance on Jerusalem. When he appeared before the town, the inhabitants who had appointed Bāilān of Nābulus commander-in-chief declined the favourable conditions offered them and decided to fight to the last. Salādīn however moved his camp to the weaker north side of the city and when his siege artillery began to demolish pieces of the wall, the defenders lost courage and endeavoured to reopen negotiations with Salādīn. After Salādīn had several times refused to see the envoys, Bāilān informed him that the inhabitants, if their surrender was not accepted, were resolved to put all non-combatants in the city to death along with the Muslim prisoners, to burn all that might be looted and to destroy the sanctuaries on the site of the Temple. This made such an impression on Salādīn and his emirs that the terms were accepted (1187). The inhabitants were allowed to leave the city on paying a poll-tax and Salādīn's attitude was so lenient that not only was the amount of the ransom reduced but many people were allowed to depart, although they could not pay the necessary money. He also ordered armed soldiers to accompany the columns of emigrants to protect them from attack, while at the same time in some parts of the country Christians were preventing their co-religionists from passing through (cf. Ibn al-ʿAṯīr, xi. 361—366; Röhrich, Geschichte des Kurfürstlichen Jerusalem, p. 451 sqq.). It was mainly the Latin Christians who left Jerusalem while the Greek Christians, the so-called Syrians, were allowed to stay in the city without becoming slaves. It is quite evident from several sources that even after the retaking of Jerusalem by the Muslims, a considerable number of Christians remained there and in Palestine generally (cf. Rotermund, Z. D. P. V., xxxv. 24 sqq.). But Jerusalem lost its Christian character and Salādīn actively removed the traces of the period of Christian occupation. The golden cross on the Dome of the Rock was thrown to the ground amid the applause of the Muslims and laments of the Christians and replaced by a crescent. The wall round the Rock with the altar was removed. Salādīn, as an inscription shows, had the cupola regilt (de Vogué, Le Temple de Jerusalem, p. 91 sqq.) but otherwise the building was allowed to remain as it was. The restoration of the Aḵṣā Mosque cost great labour, as it had not only to be cleared of all trace of Christian worship but the architectural alterations of the Christians had also to be removed. An inscription mentions that ʿAbd Allāh and his son Mīrābīrīs restored by Salādīn's orders (de Vogué, p. 101). The armoury of the Knights Templar in the southwestern part of the Aḵṣā was transformed and given the name “Mosque of the Women". Salādīn had a very elaborate and beautiful minbar ordered by Nūr al-Dīn for the Aḵṣā, which was in Ḥalāb, brought to the place for which it was intended. The cross over the Church of the Holy Sepulchre was removed and the bells broken as in the other churches. He spared the Church of the Holy Sepulchre itself but forbade the pilgrims to visit it; this prohibition was however removed in 1192. The great hostel of the Knights of St. John was presented as a waqf to the Mosque of ʿUmar and the church there turned into a hospital under the name "al-Ḥurairāt". The convent of the Church of St. Anne, which the nuns had to leave, was turned into a large handsomely endowed school, the name of which, al-Salāḥiyā, recalled its founder (the church however had already been used as a school before the conquest by the Franks; Tobler, Topographie von Jerusalem, i. 429). The dwelling of the Patriarch northwest
of the Church of the Holy Sepulchre was turned into a hostel for pilgrims (θήβας). The walls round Jerusalem which had suffered during the sieges, were renovated under the personal supervision of Saladin — a deep ditch was dug in front of them — and the towers between the Gate of the Pillar (see above) and the Gate of the Mihrab on the west side were rebuilt (Mujadir al-Din, p. 338). On this occasion a part of the west hill hitherto outside the walls was incorporated in the city (cf. Rotermund, op. cit., p. 21).

After the death of Saladin (389 = 1193) his brother usurped his son’s inheritance and seized the power in his own hands and then divided it among his own sons, of whom al-Mu’azzam received Damascus and Palestine. This anti-Christian ruler, fearing that the Christian kings might establish themselves in Jerusalem, ordered it to be destroyed in 1219, and this was done so thoroughly that only the Holy Sepulchre, the Tower of David and the Mosque on the Haram were spared. He further showed his reverence for the sanctuaries on the Haram by building a new wooden tower for the Aksa and restoring the arcades on the south side of the Dome of the Rock. From him also probably dates the porch on the north side of the Aksa (see de Vogüé, op. cit., p. 103, and thereon Hartmann, Z. D. P. V., xxxii. 204). He also built a school for the Hanaifs beside this mosque. After his death the Emperor Frederick II, then excommunicated, achieved by his statesmanship, what the arms of the Crusaders had failed to do, by concluding a treaty with al-Mu’azzam’s brother, al-Kamil, in 626 (1229) whereby Jerusalem — except the Muslim sacred places on the Haram — and a narrow corridor to the sea were ceded to him for ten years. The Emperor crowned himself there in the Church of the Holy Sepulchre, without the assistance of any of the priesthood. In this way the Latinos again came into possession of the city for a brief period. When the period had expired, a son of al-Mu’azzam who ruled in Kerak and, like his father, hated the Christians fell upon the holy city, destroyed the citadel and forced the inhabitants to capitulate. The Christians were relieved by the disputes which broke out between the Ayyubids in Damascus and those in Egypt; they realised the value of their support and the rival princes began to make great promises to win it. The Christians preferred to support Sâlih Isam’îd of Damascus and in this way they came once more into undisturbed possession of the holy city (1244). The Egyptian Ayyubid al-Sâlih Nadjam al-Din however summoned the Khâwarizmians to his assistance and they at once carried fire and sword through Syria, slew a large number of fugitives from Jerusalem, plundered and murdered in the city, desecrated the Church of the Holy Sepulchre, where the tombs of the kings were ruined, and other churches. He had now full freedom of action and, when his allied enemies were defeated at Gaza, he seized Jerusalem and henceforth the town remained in Muslim hands. This was the real end of the Crusades, the permanent political result of which was a burning hatred between Christians and Muslims which has only rarely flamed up before. Not long afterwards, the Ayyubids were superseded by the Ma’mûlî Sultans in Egypt, under whom Syria and Palestine formed one province, after Küçuz had won great fame in 1260 by defeating the advancing Mongols in the battle of ‘Ain Djalût (q.v.).

In the Mamlûk period, Jerusalem fell into the background after being for a time the centre of interest in the east. What we know of its history in this period we owe mainly to the compiler Mujdir al-Din ‘Ulama, who, as an appendix to the earlier history of the town, tells us what various Mamlûk Sultans had done for it. The frequently necessary repairs of the sanctuaries there gave these princes an opportunity of displaying their pious interest and the mosaics on the outer wall of the Dome of the Rock, which had suffered from the wind and rain, in particular needed frequent repairs, which need not be detailed here. We are told of several Sultans that they lightened the taxes which the town had to pay and that other Sultans gave splendid copies of the Koran to the mosques. The great Sultân Baibars I (q.v.) had the Aksa restored and in 662 (1263) built a Khân northwest of the town which was intended for the relief of the poor. Al-Ma’ânîr Kala‘în (678–689) restored the roof of the southwestern parts of the Aksa beside the Mosque of the Women. Al-Ma’ânîr Lâdjin (696–698) restored the mihrab of David on the south wall of the Aksa. Al-Nâṣîr Muhammad in his third reign (709–741 = 1309–1340) paved the back part of the Aksa with marble slabs, had two windows pierced right and left of the Mihrab, restored the arcades on the north side of the raised part of the Haram, and the Gate of the Cotton-Merchants, gilt the domes of the two sanctuaries on the Haram in such brilliant fashion that in Mujdir al-Din’s time, 180 years later, they still looked like new (an inscription in the Dome of the Rock mentions this gilding and a renovation of the outer roof; de Vogüé, op. cit., p. 91); the aqueduct which brought the water from the Sultan’s Pool to the town was also repaired in the same reign. In 851 (1447/1448) lightening set the roof of the Dome of the Rock on fire and a portion of it was consumed whereupon Sultan Djalâm (842–857) had it repaired. This ruler was hostile to the Christians and ordered all the new buildings in the Sion monasteries and in the Holy Sepulchre to be destroyed. He took away from the monks the so-called Tomb of David and the site where, according to Church tradition, the Apostles were filled with the Holy Ghost and took away a balustrade from the Church of the Holy Sepulchre and carried it to the Aksa Mosque. The able Sultan al-Ashraf Kâtîb-Hey (873–901 = 1468–1495) who took a great deal of interest in the sacred places of his kingdom, built, as an inscription tells us, the well between the raised part of the Haram and its west wall and rebuilt the school which bears his name at the Gate of the Chain in the Aksa and extended it (Mujdir al-Din, p. 387). In his reign also several aqueducts which led water into the town were restored (ibid., p. 621, 655, 661 sq.).

Of the geographical works of the Ayyubid and Mamlûk period, Yakû‘î’s great dictionary the Mü‘jam al-Bulhân (ed. Wustenfeld, 1866–1873) is in the first rank with its great use of older sources. In the main article on Jerusalem (iv. 590 sq.) he gives a description of the town, its history, its climate, its wealth in fruit and the Haram sanctuaries, and details the famous men who have lived there. To the sixteenth century belong
the geographical works of al-Dimashqī (Cormography, ed. Mehran, 1866) and Abu ‘l-Fidā’ī (ed. Reinard and de Slane, 1840) and Ibn Battūta’s Travels (ed. Defrémeury and Sanguineti, 1869–1879).

To the xyth century belongs Khālid al-Zahrī’s (d. 872 = 1468) work, which exists in two synopses, on Palestine and Syria (K. Hartmann, Die geographischen Nachrichten über Palastina und Syrien in Khālid al-Zahrī’s Zubdat Kafṣ al-Munatā, 1907). In the section on Jerusalem he deals with the geographical passages and traditions relating to Jerusalem, the Dome of the Rock, the four rites used there, the pious foundations, bazaars, schools, lights and baths with white, green, blue and yellow, the rock from which Christ spoke to the brothers, the marble slabs used instead, while at the top a dark blue band with an inscription in white ran round the octagon. Perforated sheets of gyppum, filled with panes of variegated glass, were put in the windows. The Sulṭān also had the city-walls renovated and gave them the form they still have to-day. At some places they rest not upon the rock but on the débris of earlier walls. On this occasion a part of the west hill was again cut off from the unwalled town. In Sulaimān’s reign in 1545 the dome of the bell-less bell-tower on the Church of the Holy Sepulchre fell down in an earthquake. In 1555 the little building in the rotunda over the tomb was removed and replaced by a new one regular in shape. The whole Church was now divided among the different denominations, who jealously watched one another. These feuds and the hostile attitude of the Muslims for long delayed the very necessary restoration of the dome of the Anastasis and the bell-tower, until finally in 1719 the work was taken in hand. In rebuilding, by order of the Turkish government, the existing forms were retained and the attempted alterations at the Anastasis had to be removed. In 1808 a fire broke out in the Armenian chapel, which destroyed most of the western part of the church. The Greeks succeeded in asserting their claim to do the restoration and they entrusted the work to an architect from Mytilene, named Kononos Kalaf, who, by the unfortunate way in which he performed his task, has acquired a kind of heroïque renom. The Sulṭān who had given authority to the Greeks by a firman was Mahmūd II (1808–1839); he also, according to an inscription, renewed the gilding of the Dome of the Rock and had its outside restored. This is the not very edifying end of the story of the Church of the Holy Sepulchre. But for the unfortunate rivalry among the different denominations, it would possibly have been decided much earlier to remove the ugly new buildings and the plaster covering the old walls, so that the Church of the Crusaders could be restored by using the old materials.

In the xixth century Palestine was again disturbed from the state of vegetation in which it had lapsed. Napoleon invaded the country and fought the Turks on the old battle-ground of the plain of Vire’el, but his plan of taking Jerusalem was abandoned. Next Muhammad ‘Ali seized the country and Jerusalem surrendered to him in 1831. The European Powers put a stop to the furtherance of his adopted son Ibrahim Pasha and when the discontent with Egyptian rule in the land continued to increase, France withdrew her protection from Muhammad ‘Ali and with the support of England and Austria, Sulṭān ‘Abd al-Majīd once
more came into possession of Palestine and Jerusalem in 1840 and the Turks held it till the World War, which deprived them of the country and opened up a new epoch in the history of Jerusalem. Palestine is now governed under an English mandate and Jerusalem is the capital of the central district, Jerusalem–Jaffa.

In the course of the sixteenth century, a new life began to invigorate Jerusalem, which altered more and more the medial character of the city. Ibrahim Pasha's government introduced progress in various directions, which however threatened to be checked when the city passed to the Turks again but was gradually revived when increasing security began to attract Europeans thither. The number of visitors increased very much and many strangers settled in the city. It was a great step forward when European consulates were instituted, who afforded foreigners legal protection. It was significant of the altered conditions that the prohibition to non-Muslims to enter the site of the Temple was abolished after the Crimean War and that bells, forbidden since the time of Saladin, were restored to the churches. Postal and telegraph services and other modern institutions, the most recent of which was the railway from Jaffa, were introduced and hostels on modern lines were erected. A new era in building began in this period, partly in the city itself, where ruined houses were restored or replaced by new ones, and partly in the vicinity. Schools, pilgrim hostels, hospitals including one for lepers, an orphanage etc. were built. Several churches were built or old ones restored, including the Church of St. Anne presented by the Sultan in 1816 to Napoleon III and the Church of the Redeemer on the Muristan, which was given in 1856 to the King of Prussia. The number of Jews who migrated there, which nearly doubled between 1881 and 1891 (Z. D. P. V., xvi. 196) has greatly increased since the World War. Ibrahim Pasha allowed them to build synagogues, which they have continued to do and several synagogues with high cupolas were built having Talmudic schools attached to them. The Jews have now built a building for a medical faculty, as the beginning of a university. The excavations undertaken in Jerusalem in recent years throw light mainly on the earliest history of the city and were therefore not dealt with here; we need only mention the excavations conducted by the Russian Palestine Society as they are of importance for Constantinian buildings. The most striking feature about Jerusalem and one that makes quite a painful impression on the visitor is the conflict of different creeds and denominations, for all of which it is a holy city. Not only Christians, Muslims and Jews are more or less at enmity with one another, but the various Christian denominations are also rivals and each is striving to extend its influence at the expense of the others. Now, down to the Crusaders, the Greek Orthodox Church formed the main body of Christians and after the expulsion of the Latins, came into their own again has already been mentioned. They were the subjects of successive Muslim rulers, but had their own self-government and elected their own Patriarch, whose supremacy over the Orthodox Church however passed to the Patriarch in Constantinople after the Turkish conquest. The fact that they restored the Church of the Holy Sepulchre burned down in 1808, gave them a considerable advantage but cost so much that they found themselves in a difficult position. They were rescued by the Russians, but the result was the Russian Church and government gained an increasing influence, which was still further extended by the building of hospices and splendid churches. The Roman Catholic Latinus whom the Crusaders brought into the land were expelled after Saladin's conquest, the Latin Patriarchate abolished in 1291 and his palace fell into the hands of the Muslims. In 1305 Robert of Sicily bought for the Roman Church the Church of the Holy Sepulchre and the coenaculum but the Dome of the Rock remained in possession of the Greeks. Only the Franciscans were able to remain there, even after they were expelled from the Sion monastery in 1551 and in spite of the most oppressive conditions, they have been untiring and beneficial in their activities. France under Louis XIV endeavoured to exercise a protectorate over the Holy Land but this disappeared under Napoleon who had no interest in it. In 1848 the Roman patriarchate was revived and since that date Roman Catholic influence in Jerusalem has considerably increased. To strengthen the Protestant element, the Anglo-German bishopric of St. James was instituted in 1841 at the suggestion of Friedrich Wilhelm IV of Prussia but it never had any vitality and was abolished in 1887.

KUDSI, the real name of Ḥaddījī Muḥammad Khan. He adopted this name (meaning holy) because he was a native of Mashhad. He came to India in the 5th year of Shīb Ithnān (1611-1612). There is a notice of him, with some extracts, in vol. 1, p. 351, of the Dabāṣhānā. He is highly praised by the author of the Amlā-i Sāleḥ, who gives the complete which Kudi composed for the Peracow-throne (see also Kāshānī), i. part ii, p. 83. He wrote a poetical Shāhī-Sha‘bānāmeh, and a poem in praise of Kashmir. He died at Lahore in 1650-1656. Kriu (3. 635) is mistaken in saying that he died in Kashmīr (Kashmiri). He wrote ode’s and quatrains, as well as Mā‘anāt, for a festival in praise of Shīb Ithnān, which he was weighed against rapaces.

AL-KUFR, a once celebrated city south of the ruins of Babylon, on the western arm of the Euphrates (cf. al-Fakrār), which later disappears in the swamps west of Wāṣīṭ. After the battle of al-Kūtisayy [q.v.] the Arabs by command of ʿOmar built a strongly defended camp on this site in order to control more easily the people of the newly conquered province, while the old capital Česiphon was ruthlessly destroyed, and the capital of the Lakhmīd dynasty, Hira, only a few Arab miles south of Kūfr gradually lost its former importance. For military reasons this settlement which was called al-Kufa and the somewhat older Basra were placed on the west side of the river, so that communication between the capital Medina and the army headquarters should not be affected by any natural obstacles. While Basra was built quite near an already existing village, al-Khurāba, which later became a suburb of Basra, Kūfr was an entirely new settlement founded by Sād b. Abī Wākāṣṣ according to some in 7 (638) to others not till 18 or even 19. According to the Persian tradition, however, there had been on the same site a town built by the mythical king Hūṣang of the Pishdād dynasty, which fell in time completely into ruins and Sād b. Abī Wākāṣṣ had to rebuild it: not much importance need be attached to this story. The usual meaning of the Arabic word Kūfa is “a round sandhill”. The name therefore would indicate that the oldest part of the town was built on an eminence of this kind; other explanations however are given, cf. Yāqūt, iv. 322. According to the Arab geographers Kūfā occupied an extensive area in the wide plain on the bank of the Euphrates; its position was considered more healthy than that of Basra, and the principal products of the country round were dates, sugar-cane and cotton. The importance of Kūfa grew with the eastward advance of the Arabs; the general in supreme command there was also the political representative of the Caliph and governed the province. The two sister towns of Kūfah and Basrah had usually separate governments; but sometimes they were combined; on this, see the article AL-KUF. With the great importance which Kūfah gradually attained for the ruling Arabs as well as the subject Persians, the number of inhabitants grew very rapidly. In addition to the families of Arab soldiers, merchants, artisans and other workers mainly of Persian origin settled in vast numbers. The original camp consisted simply of tents and a few other public buildings, but in course of time it grew into a permanent settlement of clay huts. Finally (according to the usual statements) in the governorship of Zipāy b. Abīh, i.e. after about 50 (670), a regular town with brick houses was built. The people of Kūfah, who were

AL-KUDSĪ, whose full name was ABU ʿL-ḤASAN (var. al-Husayn) Ahmad b. Muḥammad b. Ahmad b. Dā‘far b. ʿAbd Allāh b. Abī Ḥaqqādī b. Kudsi, a Ḥanafi lawyer, born in 362 (972), died at Baghdad on the 5th Rajab 428 (April 24, 1037). He studied law under Muḥammad b. Yāḥyā al-
Dājdīnī and hadīth under Muḥammad b. Abī Suwaid al-Mu‘addib, Ṭibād Allāh b. Muḥammad al-Dawāshī. Amongst his pupils may be noted the celebrated traditionalist and historian al-Khāṣibī [q.v.] al-Fāḥēdī, Al-Kudsi had to hold several public disputations in defence of the Ḥanafi school against his contemporary the Sha`fi`i lawyer Ḥamīd al-Isfā:kī. The two following of his works have been preserved:

1. al-Mukhtār, a manual of law of great compassions, composed, it appears, for his son Muḥammad and containing 12,500 questions: a) the chapter on marriage has been translated by G. Helmsdorfer, Frankfurt 1832; b) the chapter on the Holy War (al-Siyar) has been edited with a translation and notes in Latin by Rosenmuller (in Analecta Arabica), Leipzig 1825-1826. The Mukhtār was published at Delhi in 1847, at Constantinople in 1291, 1309, at Kazan in 1880.

The Encyclopedia of Islam, II.
partly members of different Arab tribes, particularly South Arabian Beduins and partly all kinds of Persian elements, cannot be denied military ability. At the same time the Kūfans were distinguished by brilliant intellectual gifts and their considerable achievements in the field of Muslim learning. Among their most striking characteristics however was a remarkable fickleness and lack of reliability, which in the long run proved highly disastrous in political life, and was responsible in a high degree for the civil wars which interfered so much with the prosperous development of the Caliphate. Even ‘Omar to whom the town owed its existence had occasion to complain of the insubordination of the Kūfans, who were never satisfied but had always some objection or other to the governor, appointed by the Caliph. When he was induced to yield to their wishes, their demands became more and more intolerable, and during the last six years of his reign, he had to change the governor in Kūfa no less than three times. When the opposition to ‘Uthmān long prepared in secret finally broke out in 34 (655), the Kūfans were the first to proclaim their fidelity to ‘Ali. After the battle of the Camel in 36 (656), where ‘Ali was victorious over his enemies, he went to Kūfa, and now it looked as if this town would become the seat of the Caliphate. But when ‘Ali encountered Mu‘āwiya in the plain of Siffin, the Irāqis were outwitted by the Šyārīs; victory slipped from the Prophet’s son-in-law, when just within his grasp, and after he had declared himself satisfied with the arbitration, the Khāridjīs abandoned him. After the assassination of ‘Ali in the year 40 (661), the Kūfans had to acknowledge Mu‘āwiya as commander of the faithful. The stalwart governors of the new caliph, first Ziyād b. Abihi and next his son ‘Ubayd Allāh, who received in 55 (674/675) the governorship of Baṣra, which after the death of Mu‘āwiya was combined with that of Kūfa, were able in a masterly fashion to keep the turbulent people of Kūfa in check, and when Hūsain b. ‘Ali [q.v.] decided to accept the appeal of his many followers in al-Irāq and set out from Mecca for Kūfa, ‘Ubayd Allāh’s energetic measures easily suppressed the rebellious tendencies of the Kūfans. In Muḥarram 61 (October 680) Hūsain fell at Kābāl. After the death of the second Umayyad Caliph, Yazid I, civil war broke out once more. As ‘Ali’s younger son, Mu‘ammad b. al-Ḥanafīya, was not inclined to put himself at the head of the Shi‘ī party in Kūfa, the Kūfans paid homage to ‘Abd Allāh b. al-Zubair, who had already been proclaimed Caliph throughout the Ḥijāz, and for years disputed the supremacy with the Umayyad Marwān and his son ‘Abd al-Malik. In 66 (685) the unscrupulous adventurer al-Mukhtar b. Abi ‘Ubayd [q.v.] succeeded in taking Kūfa and a regular reign of terror began, which lasted about a year and a half. All who did not openly profess the doctrine of the Shi‘a, which was general among the Persians especially, were ruthlessly persecuted until the Arab population appealed for help to Muṣ‘ab b. al-Zubair who had been appointed Governor of Baṣra by his brother, the anti-Caliph ‘Abd Allāh b. al-Zubair. In a battle at Ḥarūtā near Kūfa (67 = 687) al-Mukhtar was defeated and slain and Muṣ‘ab took a bloody revenge on the rebels. From this time the Persian elements in the population were more and more suppressed and in the end the old hereditary points of conflict between the different Arab tribes played a much greater part in the political history of Irāq than the national differences between Arabs and Persians. After Muṣ‘ab had fallen, fighting the Umayyids (72 = 691), Kūfa had to submit and ‘Abd al-Malik was able to enter the town unopposed. From 75 (694) till 95 (714) the administration of the whole of the Irāq was in the hands of the energetic ‘Abd al-Malik b. Yūsuf [q.v.] who in order to break all resistance founded a new capital in Wāṣit, from which he could easily control both Kūfa and Baṣra. During the long governorship of Khalid b. ‘Abd Allāh al-Ḵāṣṣ (105−120 = 724−738) peace and quiet generally prevailed in al-Irāq. In 172 (745) however the Khāridjīs seized Kūfa and it took the troops of the Caliph Marwān II two years to drive them out. Soon afterwards the ‘Abbāsidis appeared in the field. The Umayyad governor of Khorasan, Naṣr b. Sajjār, was defeated and in 173 (749) the long prepared rising in Kūfa broke out. The ‘Abbāsidis had no difficulty in occupying the town; Kūfa was made the capital and remained so for nearly two decades although the ‘Abbāsid rulers usually lived, not in Kūfa itself, but sometimes in Ḥāṣhimiyah, farther north on the Euphrates and sometimes in Baṣra. After the foundation of the new capital Bāṣrā al-Bāṣrī and the ‘Abbāsid Caliph al-Mansūr, Kūfa gradually sank in importance, but it retained for a considerable time a large garrison, and the renown for learning, which the inhabitants had won by the first half of the second century A.H. remained down to the fifth century. In spite of the altered political conditions, ‘Alid sympathies and the old fondness for all sorts of new movements and rebellious tendencies remained undiminished. In 199 (815) a descendant of ‘Ali named Mu‘ammad b. Ibrāhīm, also called Ibn Ṭabṭāba, appeared in Kūfa and tried to assert his claim to the caliphate. The governor was expelled and the pretender won numerous adherents. Although he died in the same year, the dangerous rising was only put down by great effort. In the reign of al-Musta‘īn [q.v.] Kūfa was again disturbed by the ‘Alid. In 250 (864/865) the ‘Alid Vāby b. ‘Omar raised a rebellion against the government with all sorts of rabble. The governor had to flee and the rebellion rapidly spread; order was however soon restored. After some time, another ‘Alid set up in the always turbulent city but his rule was of only short duration. In 256 (870) ‘Abi b. Zaid, likewise a descendant of ‘Ali proclaimed himself there and drove the governor out. He then routed the commander of the government troops, al-Shāb b. Miktāl, who had been sent to suppress him; but on the advance of a new army he had to vacate Kūfa. When western Irāq and Syria were devastated by the Karmātians, Kūfa did not escape; in 293 (906) they entered the city and in 312 (924/925) it was conquered and sacked by the famous Karmātian leader, Aṣḥāb Tāhir. It was similarly sacked in 317 (932/33) and 330 (947). The increasing collapse of the caliphate in the fourth century contributed to the decline of Kūfa, although the Būyids, who seized the capital Bāṣrā in 334 (945) and thus gained political supremacy, as Shi‘is took a special interest in Kūfa or rather its suburb Naqja‘f, because the latter was believed to contain the holy tombs. But in time the power of the Būyids also weakened; in 375 (985/986)
Karmatians once more occupied Kufa, and eleven years later it was granted as a fief by Ihâhâ al-Dawla (q.v.) with other places to the 'Ukhûlûd b. al-Muayyâd. It then passed to the Banî Mazyaq; but when the latter in 495 (1107/1102) built a new capital, Hilla, which rapidly grew, to the north of it, the former capital gradually lost any importance. When Ibn Djibaur visited it about 90 years later, the old walls had been taken down and Kufa showed other signs of decay. From the Mongol period onwards it rapidly fell into oblivion. When Ibn Taghûna visited the town, it was for the most part deserted, mainly as a result of the raids of the neighbouring Beduins of the tribe of Khâfûdja. From his description it appears however, that the mosque was still fairly well preserved. Of the old government buildings (kâfû al-mârâ) which Sa'd b. Abî Waqâ היש had built, only the foundations were left. Its decline at this time is corroborated by the Nûshat al-Kûliû of Hamd Allah Mustâwofi Kâzîmî written in 740 (1339/1340). Later we only find Na'dîf in its vicinity mentioned, which retained a certain importance as a Shî'ite place of pilgrimage and is now usually called Maqâshid Ailî, "the tomb of Allî". Niebuhr gives the following description of the country round Kufa: "The land around is all desert and the town has no longer any inhabitants. The most noteworthy object here is the great mosque in which 'Allî was mortally wounded; but even of this little is left but the four walls".

On the services of Kufan scholars to Arabic philology, see the article ARABIA, Litterature. There was also considerable activity in Kufa, as in Bâṣra, in other fields of Muslim learning during its palmyest days. Especially after the battle on the Harra in 63 (665) many of the old companions of the Prophet, who were regarded as authorities on Muslim tradition, emigrated to al-Iraq and settled in the most important towns. Only two of these traditionists need be mentioned here: the celebrated 'Abd Allâh b. Ma'sûd, who was one of the earliest converts and was sent to Kufa as a guide and teacher, and the no less distinguished 'Amîr b. Sharâhîl al-Shâbî (d. circa 104 = 722).

KUFYA (in the dialects of Syria, kefîye, Cuche, Dict., p. 577; Burckhardt, Notes on the Bedouins, p. 27; G. Fesquet, Voyage en Orient, p. 185), an Arabic word borrowed from the Romance languages (ital. cuffa, Span. cofra, Port. cofa, French coiffé, coiffe, the name of a silk handkerchief, which the Bedouins of the Syrian desert, as far as the region of Mecca, wear as a head-dress; it is kept on the head by a cord of camel-hair dyed black and fastened at intervals with cords of bright colours called agâl (class. 'ıqâl). This handkerchief is square-shaped, yellow or yellow and green in colour and is placed on the head in such a way that one corner hangs behind, while two others fall down in front of the shoulders; the square is first of all folded in two to form a triangle, what is called a gore in dressmaking. The corners on the shoulders may be brought over the face to shelter it against the rays of the sun, against the cold wind, against the rain, or to conceal one's features when one does not want to be recognised. The wool of the ends hanging down much below the edge of the material are twisted into cords like a long fringe (J. B. Fraser, Travels in Koordistan, i. 228). The head-dress used also to be worn by the Mamlûk Sûltâns of Egypt.

CL. Huart)

KUFRA. [See KAFIR.]

KUFRA, a group of oases in the Eastern Sahara, halfway between Cyrenaica and Wadai. It was for long only known from the account by Rohîf, who succeeded in reaching it in 1879. Since then it has been visited by two other Europeans, Marshal des Logis-Lapierre (1918) and Mrs. Rosita Forbes (1920-1921). The group of oases to which the name Kufrä is given extends from S. E. to N. E. for a length of about 120 miles between 24° and 26° N. Lat., and 31° and 34° E. Long. The most southerly is about 850 miles S.E. of Tripoli and 600 miles S. of Benghâila. They number five, separated from one another by serir or stretches of banks of gravel; Taiserbo in the N.E., Bûseima in the centre, Erbêhna (the Ribiana of Mrs. Forbes) in the S.E. and Sirhen, N.E. of Bûseima and to the S.E. of Kufra properly so-called, the Kebabo of Rohîf, the largest of all. The total area of the group according to Rohîf is about 7,000 square miles of which Kufrä has 3,400 and Taiserbo 2,500.

Kufra lies in the bottom of a depression, the height above sea-level of which varies from 800 feet at Taiserbo to 1,400 at Kebbo. The soil consists mainly of marl and sand covered with dust in the north, which perhaps are connected with those of the Libyan desert. One chain of dustes extends from the north of Taiserbo, another surrounds Bûseima. In the central and southern parts, the depression is crossed by calcareous ranges lying upon Numidian sandstone. The hills Djebel Erbêhna, Dj. Bûseima, Dj. Sirhen, Dj. Neri (north of Kebabo) assume a tabular form like that of the gur of the South Algerian Sahara. There are neither springs nor streams in Kufrä, but everywhere at a depth of 3 to 10 feet an abundant water-bearing stratum can be tapped. At various parts the waters form on the surface of the ground brackish lagoons or even permanent
lakes, of which the most remarkable are that of Erbehna and especially that of Bâseima, which measures about 6 miles in length. They may be regarded as relics of a former period in which the lacustrine character of the oases was much more marked than to-day.

These subterranean waters make up for the scarcity of rain and are sufficient to nourish an abundant and varied vegetation. In the dry beds grew the kûd (cornula ca monacanthâ), and the dîs which provide excellent camel food; among the lakes and marshy hollows fields of cereals, wheat, dûra (sorghum vulgäre), vegetables, orchards of olive, fig, orange and citron trees form a verdant girdle but usually a very narrow one. The breadth of this zone does not exceed 1,000 yards at Bâseima. Date palms constitute the principal wealth of the oases. According to Rohîfs there are 4 millions of them, many of them however growing wild. There are none however in the oasis of Sirhen. As to the fauna, it is represented by gazelles, many varieties of birds (crows, falcons, and cranes) and reptiles like lizards and non-vomous snakes.

The population of Kufra does not exceed 5,000. Almost all belong to the tribe of Zâwîya, Arabicised Berbers who supplanted the Tûbûh, the former owners of the oases. The majority of them are semi-nomadic and only have temporary camping-places. There are only settled groups at Kufra where the village of Djöf has 250 inhabitants and where some 500 individuals live about the Sanûsî zâwîya of al-İstât. The geographical situation of Kufra gives it a certain commercial importance. It is a stage on the caravan route leading from Cyrene to Wadai, a route used since the beginning of the xîth century, the period when Sulîn Sabîn made it known to enable travellers to escape the brigandage of the people of Tibesti. According to Muhammad al-Hâshînî there was a market at Djöf where business was entirely done by barter. But as in all the markets of the Sahara, the principal traffic was in slaves, a trade which gradually tends to disappear.

We know very little of the history of Kufra. According to Rohîfs it was a settlement of the Garamantes and there are still to be seen there buildings similar to those noticed in Fezzân by Duveyrier, which seem to date back to a remote antiquity. In the historical period, the land was occupied by the Tûbûh, who have left numerous traces of their occupation, cemeteries, houses, fortified villages on the tops of hills. Their Sulîn lived at Djârangeidi, in the oasis of Taiserbo. The people were pagans, whence perhaps the name Kufra (kufara, pl. from kûr, infidel) given to the region where they were settled. They were dismissed about 1750 by the Zâwîya and the Hässûna, tributary from Tripolitania. The Tûbûh had almost completely disappeared by the beginning of the xîth century, and are now represented by Kufra by only 300—400 individuals. Towards the middle of the same century the Senûsîyâ appeared, who founded a settlement at Taiserbo, then built the Zâwîya of Al-İstât in the oasis of Kebabo, near the village of Djöf. They bought up the best land and the richest gardens. At the time of Rohîfs’ journey they already held a quarter of the palm-trees of the oasis and had begun to plant new groves. Already very important in those days, the Zâwîya of Al-İstât is now the residence of the grand master of the brotherhood. In 1895 Sidi al-Maḥdi, son and successor of Sidi Muhammed al-Senûsî, the founder of the order, left Djârangeidi [q.v.] and came to settle in Kufra.

(Indeed. G. Yekor)

Kûhîstân (Persian) or Kûhîstân is the arabicised form of the Persian name Kûhîstân meaning a mountainous country (derived from kûh, “mountain”) with the suffix -îstân and corresponds to the Arabic designation al-Dîjîbâl. As the Iranian plateau is very mountainous, we find many more or less extensive areas in it to which the name Kûhîstân has been given, as Yâkût has already remarked (iv. 204). Many of these names have disappeared in course of time. Thus Kazwîn (ed. Rüttenfeld, p. 228) says that the term Kûhîstân is used for Media, which other geographers always call al-Dijâfâl. In the Shâb-nâmâ of Firdawsi we even find Kûhîstân used as the old name of Mâ wâr Îl-Nahr (ed. Vullers, p. 531), but this is probably a case of an erroneous identification made by Firdawsi himself (cf. also Vullers, Lexicon, s. v. Kûh).

The principal districts that are or have been called Kûhîstân are as follows:

1. Kûhîstân-i Khûrâsân. This is the mountainous and partially arable region which stretches south of Nishapûr as far as Sistan in the south-east. It is surrounded on all sides by the great salt desert of the Central Iranian plateau and consists of scattered groups of oases; one feature of its geographical unity is the fact that its whole belongs to one of the great centres of civilization that surround it. These are the north Nishapûr, in the north-east Herât, in the south-east Sistan, in the south-west Kirmân with Yazd, and in the west Media. Although Kûhîstân has always been connected with these by caravan routes and is therefore not absolutely cut off, its isolated position, combined with the relatively low productivity of the soil, has caused it to be little known and neglected and its inhabitants have usually been ruled by a number of independent lords. If it has been reckoned a district of Khurâsân, this is only because Nishapûr and Herât are relatively the nearest places to it. Kûhîstân has therefore never been a very clean cut geographical term; a modern traveller like Curzon, although he describes the different districts, does not even mention its name.

The orography of Kûhîstân is still little known. The mountain chains which in the north run more east to west, assume the direction N.W.—S.E. as one moves southwards. These chains, which have passes rising to over 3,000 feet, enclose cultivated areas of which the principal are, beginning in the north: Turshiz and Turbat-i Hai- dâri [q. v.] now called Turbat-i Shaikh Ishâk and to the east Djâm; next comes the district of Djinâbâd (formerly Yunâbîd) and more to the east, that of Kûhâf with the old town of Zawzan;
then comes Tūn, with the district of Tabas on the west of it, which latter extends so far to the west that in the middle ages it was not included in Kūhīstān; next come to the south of these, Kān and Bīrjand, to the south of which there are no more oases of any importance until we reach Sistān by the Neh route. The rivers of the region are of little importance; irrigation is done by canals and khārōsī; Māklistī (p. 322, reading of the Constantine MS.) says, that the only running streams known in Kūhīstān is near Tabas; the latter is also the only town which he includes with the neighbouring district of Kuri, in the dīwīrī or warm regions.

It is probable that various places in Kūhīstān have a history going back to pre-Muhammadan times, but so far we have no information on this period. To realize this, it is sufficient to glance at the second map given by Herzfeld in his article Khorasan in Der Islam, vol. ix. The journey of this writer in 1925 confirmed his first impression. Moses of Chorene does not mention this region in his Geography. In the period of the early Arab conquests we find Kūhīstān under the rule of the Epiphalites. Historians say that it was first conquered in the caliphate of ‘Omar by ‘Abdallāh b. Badal al-Khuza‘ī; the latter setting out for Kirmān took al-Tabasain— it is by this dual (for Tabas and Kurīn, according to al-Baladhuri) that the Arabs always refer to the district of Tabas—in later times the “two gates of Khuraśān” (Tabar, i. 2704); a deputation of the inhabitants is said to have concluded a treaty with ‘Omar (Baladhuri, p. 403). In 31 (653) when Ibn ‘Amir undertook the conquest of Khuraśān, his advance guard under al-Afnāf passed through Kūhīstān and defeated the Epiphalites there (Tabārī, i. 2885, and Baladhuri, p. 403, who give other traditions also). In the years following, Kūhīstān was the centre of a great national revolt under a chief called Ārīn (a village in Kūhīstān still bears this name), a rising which was put down by Ibn Khāzīm (Tabarī, i. 2905; Marquart, Eränzahr, p. 135). In 51 (671) it was again necessary to reconquer it; this was done by al-Kabīr b. Ṣiyād from “the Turks” or rather Epiphalites (Tabarī, ii. 156). Henceforth Kūhīstān formed from the administrative point of view a part of Khuraśān and more particularly of the provinces which the Arab geographers still call by the old name of Aharshār with its capital Nushāpūr (cf. particularly al-Va‘ūlīb, Kitāb al-Buldān, B. G. A., vii. 278, who gives a rather limited definition to Kūhīstān, for he mentions al-Tabasain, Djam and Zawzan separately). These remote countries became in the early centuries of Islam the principal refuge of Zoroastrians driven from their homes by the new religion (cf. particularly Inostrantsiev’s work quoted in the Bibliography). In the ninth century the province was under the rule of the Tāhirids (Ibn Khordakhbībib, p. 35) and later of the Šaffārīds. The Arab geographers of the ninth and tenth centuries know it very well. In this period Kān was the capital and the commercial centre of Kūhīstān, especially for through trade between Kirmān and Khuraśān. The province was further noted for a very fine linen woven there, which Abū Nuwās mentions under the name ʿAqīya (cf. al-Dājiyī, Kitāb Bayān, Cairo 1332, i., p. 79); this industry flourished at Tūn in particular. Prayer-carpets also were made there. In the year 552, Nesīr-i Khusraw passed through Kūhīstān, going from Isfahān. He went by Tabas, Tūn, Kān and Sarakhs and describes them as large flourishing towns. In the time of the Sādji, Kūhīstān, the old asylum of the Zoroastrians, became a refuge for the Ismā‘īlī heretics, who for this reason were often called “al-matāhiba al-šāhiya”. They built here strongholds on the model of the famous citadel of Alamu; there are still many ruins of these castles which have not yet been examined (Herzfeld, Reiseberichte, p. 273). The Khwārzmshāhs had on several occasions to send military expeditions to punish the matāhiba (cf. e. g. Djumayn, Turāfiqī Dījkān Guzār, ii. 47, 49). The coming of the Mongols who exterminated the Ismā‘īls at the same time brought about the ruin of Kūhīstān. The region lost all importance and the geographers—like Abu ‘l-Fida’—only quote their predecessors of several centuries before. It is improbable that this is the district ref-reed to by Marco Polo under the name of Tunocain, which Le Strange (p. 352) proposes to identify as Tūn-u Kān. During the following centuries the region must have very often been in a state of anarchy (cf. Idrisi, trans. Jaubert, i. 430) when power was in the hands of chiefs of Arab origin. The ʿAfṣawīds exercised some authority there but after them, power lay in the hands of the amirs of Tabas and of Kān. At this time Kūhīstān inclined towards Afghānīstān rather than Persia, until the Kāḏjārs succeeded in bringing it under their sway towards the middle of the sixteenth century. The chiefs of the ruling families kept their positions as governors for the Šītī and received pompous titles from the Persian court. About 1900 the amirs of Kān no longer lived in this town but in Bīrjand; they claim descent from the Arab tribe of Khuzaima. Some members of this family have also ruled Sistān. The rulers of Tabas also govern the district of Dūnābād (capital Dūnain).

The settled population of Kūhīstān is of a very ancient stock: their houses are also of a very archaic type. Their dialect seems to offer few peculiarities. Ivanov distinguishes in Kūhīstān the dialect group of Tūrĝūzja and Dūnābād and that of Kān, Tūn and Bīrjand; many villages around Kān and Bīrjand are inhabited exclusively by Kāḡīs. In some places we also find descendants of the Ismā‘īls, who recognise the authority of the Agha Kān. There are also small colonies of Bahā’īs, while the Sunni Afghān element is relatively strong. The nomads are for the most part Arab Sunnis, still speaking Arabic; they live along the main routes; a few Turkish tribes are found only in the north, as far as Turbat-i Haidari. Finally in the south there are Bālūcīs, who move in summer towards Sistān.

The towns are very small. Kān, the old capital, had in 1900 about 4,000 inhabitants (Sykes). The land around this town is more fertile than that of Bīrjand. The commercial relations with the Gulf of Persia are greater than with Meshhed (export of silk, opium, saffron and hides). For the other towns like Tabas, Tabas Sunnīkhāne Turbat-i Haidari, Turṣiz and Zawzan, cf. the special articles.

Bibliography: All the Arab authors in the B. G. A.; Nesīr-i Khusraw, Safar-nāma, ed. Schefler, p. 95; Ibn Batūtā, ed. Defrémery and Sanguinetti, ii. 79; Abu ‘l-Fida’, Tašjam.

2. The Arab geographers appear to have known two towns of the name Kūhīstān in the province of Kirmān. One of them was called Kūhīstān al-‘Akhchāmīm and was in the district of Djarākh, between this town and the Djarākh al-Kuf (Maḥdis), p. 52, 461, 467; Vākī, iv. 206; Le Strange, p. 318. The other Kūhīstān was situated on the road from Sirdān to Bām, 6 farsaks from the former town (Ibn Khurdābīb, p. 66; Kudāmā, p. 196; Maḥdis, p. 473; Le Strange, p. 311).

3. Kūhīstān of Kābul in Afghanistan is a district N. E. of the town of Kābul and includes the districts of Pandžābīr, Nidjar, Tagān, etc. The population is composed of an element called Tagājs, who speak Persian and Pashtō and other elements called Kūhīstānī who speak Paγhal (a Dārīc dialect) and Fārāviz (Iranian) (cf. Imperial Gazetteer of India, xiv., Oxford 1908, p. 241). 4. The northern part of the native state of Swāt in the north-west of India is also called Kūhīstān. It is the mountainous region around the upper course of the river Swāt; it stretches eastwards as far as the Indus and westwards as far as Pasangkīr so that a distinction is sometimes made between Kūhīstān of Swāt and Kūhīstān of Pandžābīr. The people of the valleys (estimated to number 20,000) have suffered since the 14th century from Afghan invasions. Under the rule of the Afghāns they became very zealous Sunni Muslims; the religious chiefs (aγghāns) have an enormous influence in the country. Another consequence of the Afghan invasions has been the expansion of Pashtō all over the country. This language has gained ground at the expense of the old local dialects. The latter — to which the general name of Kūhīstānī is given — are very numerous and belong to the Dārīc group which according to recent research (Morgenstierne) seems to belong to the Indian group of languages. The principal dialects are: Gāgw (Swāt Kūh.), Tōrmwālī (Swāt and Pandžākīr Kūh.) and Mājwāy (Indus Kūh.).

5. Lastly Kūhīstān is the name of a barren and mountainous region in the eastern part of the district of Karachī. The population is nomadic and consists of Sindis and Balochis. The population in 1901 was estimated at 12,877 (The Imperial Gazetteer of India, Oxford 1908, vol. xvi., p. 353).

(J. H. Kramer)

Al-kūhl is, in the first place, a name for a mineral, stibnite (antimony sulphide) and secondly for galena (lead sulphide), for both of which the name iθimid is also used. The word iθimid comes from the Greek ἰθιμίδης and according to J. Ruska the words antimony and bismuth are derived from iθimid. In Persian al-kūhl is called surma from the place it comes from. Arabic synonyms are al-miθīs al-muθarraq (burned copper) al-isfahānī, kūhl dījān, kūhl sīzāman, kūhl aswad, etc.

Although the Mafṣūth al-Ulūm (ed. van Vloten, p. 262) says of kūhl that it is a substance of lead (surma) and the Pētōlogi of Aristotle says that iθimid contains lead, according to E. Seidel (Mechitar, p. 185, No. 215) the iθimid corresponding to it is almost always antimonite. Confusions naturally occur. According to M. Meyerhof al-kūhl is a pure antimony.

In the Mafṣūth al-Kūhl (ed. Lo Strange, G.M.S., xxiii./iii., p. 197) Ḥamd Allāh Mustawfi for example gives places where it is found, at Isfahān, on Damūwend and in Spain. The latter is said to be particularly rich in the second quarter of the month. Stibnite is still found in Persia and in Spain. In Persia there are mountains called Kūh-i Surma and al-Ḳawwānī mentions a Ḍījabal al-Kūhl near Baṣṭa (text, p. 171).

It is to be noted that stibnite can be crushed to a much finer powder than galena; the former is much less hard than the latter. From its principal use al-kūhl comes to mean also the cosmetic made from it and then cosmetic in general. As it has to be crushed to a very fine powder, it means a fine powder in general.

As a cosmetic for the eyes, al-kūhl, after being ground up with other materials, is used to dye black the eye brows and eyelashes, or the edges of the lids, especially by women. It probably came to the Arabs from the ancient Egyptians. Stibnite has been several times found in their cosmetics (X. Fisher, Archiv für Pharmakologie, cxxx., 1892, p. 9). But the Egyptian cosmetics are usually of pulverised galena, with other materials added. According to M. Meyerhof (Der Basar der Drogen etc. in Kairo; Archiv für Wirtschaftsforschung im Orient, 1918, part 3/4, p. 210) sulphur antimony and sulphur of lead (kūhl) are sold to this day in Cairo as in ancient times as a cosmetic for the eye. The best still comes from Persia (al-isfahānī). That brought by the pilgrims is very popular (al-iθimid and al-iθimid). Surma is used as a cosmetic in Teherān also. The imitation cosmetic contains galena (kūhl al-iθimid) with isinglass (ansarān). In place of galena, graphite, smoke-black, especially that from the cheaper kind of frankincense, from burned almond shells etc. is used.

Besides the already mentioned black substances, some of other colours were used as cosmetics (kūhl). In his pharmacological principles al-Muwafak mentions a very black and one not quite so black, a black violet and even a pinkish and one quite white and also a yellow. The adjective kūhlī is therefore used not only for black, but
also for all dark colours, e.g. dark blue, purple, the dark red of the carthanne.

As a cosmetic, al-kahf is applied by means of a small probe (nih or mirwand), the point of which is sometimes moistened with rose-water. The cosmetic is kept in a box (mukhadh). From a picture in Lane, this resembles an old-tin glass. Al-mukhala however is also a sundial or a truncated pyramid (cf. E. W. Lane, Manners and Customs of the Modern Egyptians, p. 29 sqq. and 405; E. Wiedemann and J. Wurschmidt, "Über eine arabische gekelformige Sonnenuhr, Archiv, f. Gesch. der Naturwiss. und Technik, 1916, xii., p. 359.

Al-kahf is very much used as a unguent for the eyes. Ibn al-Baitâr and others give particulars on this subject.

Numerous imitations of kahf are given by al-Djawbari in his work: Kitâb al-Mukhâr fî Kâfî al-Asârî in the section: "Revelation of the secrets of ophthalmists"; al-kahf is in this connection not used as a cosmetic but as an unguent for the eyes. Women painted with kahf are particularly praised by the poets, or such as do not find it necessary to resort to it. E. von Lippmann quote passages from al-Mutanabbi, Hàfîz and Firdawsî.

The name alcohol for anything ground down into the finest and softest powder was transferred quite arbitrarily by Paracelus in the sense of quintessence to the spirit of wine as the noblest component of wine, a name which gradually came into general use for it.

The Muslims were not able to obtain our alcohol by distillation before about the xiith century, as they were not able to condense the vapours escaping from solutions of alcohol for lack of suitable apparatus. Alcohol was probably first obtained in the xiith century in Western Europe. (On this cf. the researches of E. von Lippmann, printed in his Beiträge zur Geschichte der Naturwissenschaften und der Technik, Berlin 1912, p. 56—127.)

We have for a later date (second half of the xvith century) from the time of the Mughal Emperor Akbar a description of the preparation of arak (cf. the Ains-Akbari by Abu I-Faad Lalli, transl. H. Blochmann and J. Jarrett, 1895, l. 69 and E. Wiedemann, Beiträge zur Geschichte der Zucker in Der deutsche Zuckerindustrie, 1921, p. 302; see also E. von Lippmann, op. cit., p. 124.)

From al-kahf is derived al-kahhal, ophthalmist, on this see — in addition to a number of articles on separate points by M. Meyerhoff — the full and comprehensive treatment of the subject by J. Hirschberg in Geschichte der Augenheilkunde, Bk. ii., Gesch. d. Augenheilkunde im Mittelalter, forming part of Graeven Saemisch, Handbuch der allgemeinen Augenheilkunde, vol. xiii., Leipzig 1908. — The following is J. Hirschberg's summing up:

Very different estimates have been placed on the value of the work of the Arab ophthalmists. Want of knowledge of their works has led to their being undervalued in many quarters. But as early as 1490 A. Benedetti (Professor in Padua) said: "The most brilliant ophthalmists at the present time are in Asia, Syria and Media; in other lands, including Italy, they are exceedingly few in number." The greatest authority on the history of ophthalmic medicine, J. Hirschberg, then goes on to say that the name of the Arabs will never disappear from the records of the study of ophthalmic medicine and surgery (op. cit., p. 243).

Bibliography: All our knowledge of the history of antimony, stibnite and kahf and their uses as cosmetics is excellently summed up by E. O. von Lippmann, in Entstehung und Ausbreitung der Alchemie, etc., Berlin 1919, p. 629, and notices of their use in Muslim lands are very thoroughly utilised; Dozy, Supplement, ii. 446; Vallera, Lexicon Persico-latinum, ii. 286/287 has a detailed article; Bildt, Den Ge- brauch und die Zusammenstellung der orientalischen Augenmittel (al-kahf), Z. D. M. G., 1851, v., p. 236—242; F. Seidel, Der Medici- thar aus Her, ärztliches Werk über drei Arten der Fieber, Leipzig 1908, p. 215; E. Wiedemann, Beiträge, xxv.: "Über Charlatane bei den Mus- limen nach al-Gâbourî (Entkühlung der Geheimnisse der Augenärzte), S.B.P.M.S. Erlg., 1911, xiiii., p. 210; do., Beiträge, xl.: "Über Verfalschungen von Drogen, etc., S. B. P. M. S. Erlg., 1914, xl., p. 176 and 180; Das Steinbuch des Aristoteles, ed. and transl. by J. Ruska, Heidelberg 1912, p. 119, 175. — References to al- kahf are found in the different codifications e.g. that of al-Kâzimi, the works on pharmacology, e. g. those of Ibn al-Baitâr and al-Mu- wañâî, in the books on ophthalmics, etc. (E. Wiedemann)

KULU HISAR, a town in Asia Minor, in the province of Siwâs in the sandjak of Šaršî Shamâr, the capital of the kaza or the right bank of the Ilgî, on a rocky hill, height 3,900 feet; inhabitants 1,599, of whom 995 are Muslims, 604 Greeks and 300 Armenians. The capital of the kaza has been moved to the village of Mishâr. Near it is Köse-dagh, a mountain covered with vast forests.

Bibliography: 'Ali-Djawâr, Dîgînâiyyâ Lughât, p. 644; Sâmi-bey, Khâmus-î-Îlamîn, v. 3787; V. Quinet, Turquie d'Asie, i. 237, 793 (Kollat-Hissar). (Cl. Hoart)

KUKA, capital of Bornû, situated in the 55° N. Lat. and 30° East Long. (Greenwich). The town was founded in 1814, by the SHAÎKH Muhammad al-Kanomi, 9 miles east of Lake Chad in a sandy plain doted with boobah's (adansonia digitata) called kuka in Kanuri, whence the name Kaukaua or Kikoa, "town of the kuka's", given it by the natives. It was visited by Denham and Clapperton (1822—1823). Sacked in 1846 by the Wadians, it was rebuilt almost immediately. It had already recovered its prosperity by the time of Barth and Vogel's journey. Rohfis (1868), Nachigal (1871) and Monteil (1892) also made stays of some duration there. During all this period, Kuka was one of the most flourishing towns in the Südän. It was again destroyed in 1894 by Rabah, who transferred the capital of Bornû to Dikoa.

Kuka really consisted of two towns: an eastern and a western. The latter contained nearly two thirds of the population and was inhabited by Arab traders. It was traversed for its full length by a broad avenue called Dendal which spread in the market place which lay between the two towns. The most common type of dwelling was an enclosure divided into several courts in which stood huts of earth covered with straw or cubicle earthern buildings. The eastern town was the residence of the Sulîân and the chief officials. The population was estimated by the travellers mentioned above at 50,000—60,000. An almost equal number were encamped in the immediate vicinity.
Kūka in those days was a very important commercial centre where the products of the Südän (cloth-stuffs, hides, salt, patron, ostrich-feathers, kola nuts) were exchanged for European products brought from Tripolitania. There was also a considerable trade in camels, horses and slaves. Unlike the custom in the other markets of the Südän, coined money was rather plentiful here and business was done with a standard coinage (Maria Theresa dollars). The principal merchants were Arabs, agents of houses in Tripoli and Murzak. Kūka in conclusion, had a reputation as a literary centre; although education was confined to reading and writing and the knowledge of a few sūras of the Qur’ān, there were not less than 2,000—3,000 students.

Since the destruction of Rabah’s empire and the occupation of Bornū by the English, the town of Kūka has been rebuilt but has not regained its former prosperity, chiefly in consequence of the moving of the capital of the British and the native administration to Maiduguri, a healthier site.

(K. G. V.)

Kūla, a town in Asia Minor in the province of Aidin in the sandjak of Sarukhān, 130 miles east of Maghniitas (Magnesia), capital of a kāza; it is 2,200 feet above sea-level, has 6,100 inhabitants, of whom 5,653 are Muslims and 345 Greek Orthodox; it has 38 schools, four of which are secondary, 30 mosques, 2 Orthodox Churches, 3 baths and 2 caravanserais. It manufactures Smyrna carpets. The town is built of black lava except the mosques, the walls of which are white; it lies at the head of a valley running southwards out of the volcano of Kara-Su. Its citadel is in ruins and it retains numerous marble remains from antiquity.

AL-KULATÁ. [See al-Golâ.]

Kulaib, the chief of the Banū Taghlīb of the pre-Muhammadan period, whose murder by his brother-in-law Djasās b. Murra al-Shābāb was the cause of a long and bloody war between the two sister-tribes Taghlīb and Bakr [q. v.], which was known as "the war of Basās" [q. v.]. His genealogy was: Kulaib b. Rabī'a b. al-Hārīf b. Murra b. Zuhair b. Djasām (Wüstenfeld, Geneal. Tabellen, c. 22). Kulaib’s real name is said to have been Wâlî and the name of Kulaib ("little dog") to have given to him because of his habit of taking a small dog with him and making it bark by beating it in all the places which he wished to reserve as his own private property; the people who heard the barking of the dog refrain from using the place. This story, the point of which, however, eludes us, is evidently a later invention: the name Kulaib is frequently met with in Arab nomenclature and does not look like a surname.

Kulaib is represented as having all the characteristic traits of the tyrant, of which the independent and critical spirit of the Beduins has always had a profound horror; he is said to have been proclaimed "king" (on the use of this title cf. Lammens, Le Berceau de l'Islam, Rome 1914, p. 210) after the brilliant victory won at Kharāz over the united Yemeni tribes and to have ruled not only over the Banū Taghlīb but also over the Banū Shābān; the most important section of the Banū Bakr. After a short time he is said to have abused his power and to have usurped the rights of hunting and of pasturage at the expense of his subjects (the usurpation of the hīnā is the regular grievance of the Beduins against "tyrants"; the same reproach was made against the caliph 'Uthmān). Indeed it was because the she-camel Sarāb, belonging to a Ta'immī woman al-Basūsī or to one of her clients of the tribe of Banū Dājam, trespassed upon the private property of Kulaib, that the latter put her to death (or killed its young one and injured the mother) and this act of violence was the cause of his murder by Djasās, whose mother was the sister of al-Basūsī.

The details of the story are given in our sources with some variations, most of which are found as early as the work of Abū Ḫabid who, as is well known, the source of almost all our information on the afīyūn al-ʿArab (q. v., i. 230). Certain features, especially in the K. Al-ʿAgānī, have been borrowed from Ibn al-Kalbī, and the account of al-Mufaddal al-Dabbi has also been preserved. It is evident that we are no longer able to ascertain if the history of Kulaib (and in general that of the war against the Banū Taghlīb and the Banū Bakr) contains a nucleus of historical truth along with a mass of features undoubtedly legendary. This is a problem which can only be solved in connection with the general question of the historical value of the whole of the traditions of the pre-Islamic period. Considered by itself the episode of Kulaib has nothing improbable about it. We might be tempted to recognise in it a fairly clear memory of an attempt to form a political organisation among the Banū Taghlīb and the Banū Bakr of a kind superior to the ordinary Beduin tribes; the attempt, similar to that which gave the royal crown to the chiefs of the tribe of the Banū Kinda, must have been suggested by the example of the kingdom of the Lakhmids of al-Ḥira, not far from which the Banū Taghlīb and the Banū Bakr have their homes. The story of the tyranny and the death of Kulaib must have taken form at a very remote period; this is evident from the verses of "Abbas b. Mirkas and of al-Nabigha b. Djasās (both contemporary with Kulaib) given in our sources; in that of al-Nabigha in particular, the history of the killing of the camel is already told in detail. An allusion to the power of Kulaib is found as early as the maṣālaḥa of the Taghlīb ʿAmr b. Kullūm (? 65). We have, moreover, contemporary documentary evidence of the accounts relating to the fate of Kulaib in the numerous allusions contained in the elegies on his death, which were attributed to his brother Muhāhil (one of the earliest Arab poets; cf. Ibn Kūtaba, Shīr, ed. De Goeje, p. 164—166; Muḥ. Ibn Sallām, Tabākāt al-Shīrāz, ed. Hell, 13 lines 11—16 etc.), but naturally their authenticity is more than doubtful.
The story of the murder of Kulaib is developed in a quite arbitrary fashion in the romance cycle of the Ilanu Hitel (cf. Mittwoch, Poesia Arabum Pagorum, Berlin 1899, p. 11).

(G. LEVI DELLA VIDA)

KULBARGA. [See GULBARGA.]

KULDAQ, a town in the upper Ilī [q. v.] valley. A Muhammadan kingdom is first mentioned in this region in the viith (xiiith) century: its founder, who is said to have previously been a brigand and horse-thief, is called ʿOẓūr in Diwainā (G. M. S., xvi., p. 57) and Būr in Djamāl Īrāshī (in Barthold, Turkistan, i. 156 sq.). According to the latter, he assumed the title of Toghrul ʿKhān as ruler. The capital of the kingdom was Almāghī, first mentioned in this connection and later a great and wealthy commercial city. We owe our information about its site mainly to the Chinese (in Brechtneider, Mod. Researches, Index); it lay south of Lake Sairam and the Talla pass, north of the Ilī, probably northwest of the modern Kuldā.

Like the other rulers of these regions, the king of Almāghī had dealings with Cingiz Khān. He was surprised and killed while hunting by Kūltūk, the governor of the kingdom of the Īrāshī Khātarīs [q. v.]; but Kūltūk could not take the town of Almāghī. ʿOẓūr's son and successor Suḡnāk (or Suḥnāk) Ṭegin married a granddaughter of Cingiz Khān (a daughter of Djūtā). On his death (651 = 1253/1254, cf. Diwainā, p. 58; 648 = 1250/1251 in Djamāl Īrāshī) he was succeeded by his son whose name (Danishmand-Ṭegin) like the names of the other rulers of this line are given only by Djamāl Īrāshī (Barthold, Turkistan, i. 140 sq.). Almāghī in his time (beginning of the viith = xivth century) was still ruled by this dynasty. How long this line continued to reign is not known. The silver and copper coins struck at Almāghī in the viith (xiiith) century apparently belonged to them.

As a great commercial city on the main route through Central Asia to China, Almāghī is frequently mentioned by European travellers and missionaries.

Like the towns on the Īlī [q. v.], the Talas and elsewhere, Almāghī was completely ruined by the constant civil wars and other fighting in the viith (xiiith) century (cf. Bubur, ed. Beveridge, p. 1; Mirzā Muḥammad Ḥaidar, Tūrīkkī Rāshīdī, transl. E. D. Ross, p. 364). Muḥammad Ḥaidar mentions the ruins of the town with the tomb of Tūrīkkī Timūr Khān (d. 764 = 1362/1363; cf. Buḥrat); these ruins lie between the Khorgos, the boundary river between Russia and China and the village of Mażār and have been completely described by N. Pantusov (Kafunmanskī Sbornik, Moscow 1910, p. 161 sqq.). Inscriptions from graves of Nestorian Christians have also been found there.

The town now called by the natives Kuldā or Ghulda (Radloff, Aus Sibirien, ii. 336 gives the meaning "Elk"; cf. also Kuldā Bāshī, name of a mountain between the Īlī and the Ilī, Masalskyi, Turkest. Kr., p. 42) was founded in 1762, after the conquest of the Kalmuck empire by the Chinese, under the name Ning-yüan-čōng; whether, as Radloff (Aus Sibirien, ii. 321) says, a town of Kuldā had already been in existence for an considerable time, is doubtful. Somewhat later than this "Tatar" Kuldā, in 1764, the town of Hoi-yüan-čōng was founded, also called "Chinese Kuldā", "New Kuldā" or "Great Kuldā", the headquarters of the Chinese commander-in-chief (tanständ). The Chinese government transferred 6,000 families from Kashgaria into this region which had been almost completely desolated in the war with the Kalmucks; these immigrants came to be called "Taranči" (agriculturists). In 1851 a treaty of commerce was concluded in Kuldā between Russia and China, whereby Kuldā was opened to Russian trade. In 1862 Radloff visited both Old and New Kuldā and gave a very full description of them in his Aus Sibirien, ii. 395 sqq., 336 sqq.; the population of Old Kuldā had been said to have been "at least 80,000" but this must be exaggerated.

This prosperity was almost completely destroyed by the Muhammadan rebellion of 1863–1866. New Kuldā was taken after hard fighting in 1865 and completely destroyed; so far as we know, this town is still in ruins. After some fighting among the insurgents, the rule ultimately passed to a Sultān of the Taranči; he is usually called Sultān ʿAlī ʿKhān or Abu ʿAbū-ʿAlīt (in Russian accounts frequently corrupted to "Abil-Oglaya"). In 1871 the sultānate was occupied by the Russians and the Sultān deported to Woryenšy where he received a pension of 5,000 rubles a year till his death. Kuldā was administered by Russia for ten years and was only restored to China by the St. Petersburger treaty of 1881. The population of Kuldā (i.e. the older town "Old Kuldā") in 1872 was only 7,693 of whom 4,098 were Muslims. The Chinese removed the administrative offices to Sudun (about 25 miles N.W. of Kuldā), but Kuldā still remains the most important town in the Ilī territory; it also contained a Russian consulate. At the beginning of the xixth century Kuldā is said to have had about 30,000 inhabitants (N. Bogoyavlenskiy, Zapadny sudenny Kerry, St. Petersburg 1906, p. 108 sqq.).

KUL-OGHĽI in Turkish "son of a slave". The Janissaries being the slaves (serv) of the Sultan, the children whom they had by native women, especially in the Barbary States, were given this name. They occupied a special position among the population. While slaves born of the Christian women-slaves were regarded as Turks, and enjoyed the same rights as their fathers (service in the ranks of the Janissaries, and admittance to all the offices of state), those who were born of alliances between Janissaries and women of the country (Moors) were classed with the relatives of their mothers. They could not be enrolled in the Janissaries and could only claim admission to a limited number of offices. They became mixed with the native population, but being related to the Turks they had not to suffer the same vexations as other classes of society. They were in general fine men with white skins and well marked muscular development; they were of a sluggish temperament and a peaceful character.

Bibliography: P. Rozet, Alger (Collection de l'Univers Pittoresque), p. 13. (Cl. Huary)

KULTHUM b. IYAD AL-KHAJAH, a native of the tribe of Kas was chosen by the Caliph Hisham to avenge the disastrous defeat inflicted by the Sufi Berbers on the Arabs on the "Day of the Nobles" (Ghazawat al-Ashraj) in the beginning of 123 A.H. He set out at the head of 30,000 men, to whom were added the garrisons of Al-Iffiyya and the Maghrib, and joined Habib b. Abū Ubbaid who was trying to stop the advance of the Khāridjīs near Tlemcen. The tactless attitude of the Syrians and particularly the arrogance of Badr, nephew of Kulthūm and his successor-designate, dissatisfied those who had come to assist. The Berber leader Khalīd b. Hamīd (or Hamaid) retired before the Arabs to Wādī Sebīt in the centre of the Maghrib, and a battle was fought at Nabīlūr (var. Naftūr, Baqīlūr). The wise advice of Habib was not heeded. The Arab cavalry concealed by Badr succeeded after great efforts in piercing the Berber lines but the latter reformed behind them and overwhelmed the Caliph's troops. Habib and the other leaders were killed. Kulthum fought with the greatest bravery reciting verses of the Qur'an to encourage the others, but finally fell. One third of the army was killed and a third taken prisoners (Dhū l-Hiddjār 123 = Oct.—Nov. 741). Badr's cavalry's only hope was to take refuge in Ceuta, whence after much suffering they were able to cross to Spain.

AL-KULZUM, a seaport on the Red Sea (Arab. Baḥr al-Kulzum, q.v.), Baḥr al-Hind or Baḥr al-Habash). The name is a corruption of the Greek Κόλυμα (as in Arabic almost always without the article, i.e. τῷ κόλυμα, the "siloce" at the mouth of the canal, which led from the Nile to the Red Sea). This canal begun by Pharaoh Necho finished by Darius of Persia, was later restored by Ptolemy II Philadelphos and by Trajan. After the latter it was called under the Roman Empire and even down to the eighth century occasionally θερασίων θαλασσίως or ιεράς ταύρουs (Ptol. iv. 5, 24; ed. Müller, p. 713; Bell, Αποθετοντος Θερασίων, Ν. Ε. G. W., 1904, p. 354 sq.). In the Muslim period, when the making of the canal was wrongly ascribed to Hadrian, labour was repeatedly spent on it (J. Maspero and G. Wiet, Mœurs arabes, i., p. 84, under Khalīd al-Khārī). 'Umar b. al-Khaṭṭāb in 23 (643/644) for example had it repaired to facilitate the transport of corn for Mecca from Fustāt to the Red Sea (Yābuq, Muqāma, ed. Wustenfeld, ii., p. 466; John of Nikiu, ed. Zoschen, p. 577); it was called after him al-Muqāma an-Nabīlī (al-Mukaddasi, ed. de Goeje, p. 198; Yābuq, op. cit., p. 465; Ibn Duḥmān, ed. Volkers, iv, p. 128). According to Abū Sāliḥ (in Evvets, Churches and Monasteries, p. 88) its mouth was at al-Kulzum, according to Mas’ūdī (Muqāma al-Dhakāh, iv., p. 97) and others (more accurately) at Dhūnub al-Timsīh, 1 mil from the town, where the Meccan pilgrims from Egypt crossed the canal by a large bridge. The Caliph al-Mansūr in 775 had it partly filled in, fearing an attack from his uncle Muhammad b. 'Abbādalāh, who had rebelled against him in Medina, so that in Abū Sāliḥ's time it ended at al-Sadir at the entrance to the Wādī Ṭūmālt. New but fruitless attempts to make it navigable again were made by the Caliph al-Rashīd (Muqāma, ed. op. cit., p. 98 sq.). He is however said to have abandoned the attempt out of fear of the Greeks. Henceforth the bulk of its water flowed into the Birkat al-Djābb (al-Idrisī, p. 164) till it was completely filled in in 1899 for sanitary reasons.

The town of al-Kulzum owed its importance mainly to this canal; for according to the descriptions of the Arab geographers, it was a desolate and miserable site without water and vegetation; neither trees nor fruits could flourish there. In antiquity and in the early Muslim period its only importance was as a point of departure for shipping on the Red Sea, the commonest name among the Arabs for which was derived from it. The caravans of al-Fustāt after they had passed the canal continued from here to the Red Sea. Next to the Jewish merchants called al-Rādābītāhī. Ibn Khurṣīdāhsī (ed. de Goeje, p. 153) says that they came from the lands of the Franks to al-Farama; thence they carried their wares 35 farsakhs on camels to al-Kulzum, where they were loaded on ships which took their course to India and China. According to the same geographer, al-Kulzum with al-Ṭūr and Aila formed a district of Egypt (op. cit., p. 81).

The country round al-Kulzum was inhabited at an early date by Arabs. They are already mentioned in the Acta of the hermit Sisoes (Copitc: apa Dīdīq) and John Kolobos who lived there. In the History of the latter, Kulzum (sic)
appears for the first time in the Arabic Synaxarium as the name of the ancient Klyisma.

When under the last Abbasid governor in Egypt, Anbara b. Ishâq, the Bu'djâ rebelled in Nubia, invaded al-Ša'di' and laid waste many towns, al-Mutawakkil sent against them an army under Muhammad b. Abdallah al-Šummi which went from Kûs straight through the desert to the emerald mines, while seven ships with stores sailed from al-Kulzum to Sanga near Aidâb and provided the victorious army from there with the necessary supplies.

In the autumn of 971 the Karmathian leader Ḥasan b. Ahmad on his campaign against the Fātimid Djawhar took the town of al-Kulzum, al-Fārāmâ, and Tiniss; after his defeat before Cairo (Dec. 24, 971) he retired under cover of night via al-Kulzum to Arabia.

Reynald de Châtillon (in Maqrizi, Arâbî) at the beginning of his naval expedition against the holy cities in the winter of 1182/1183 sent two ships from Ḍe Ṭur, which were to watch the citadel of al-Kulzum and prevent the garrison from procuring water (Maqrizi, Soltân, transl. Blotchet in R.O.Z., 1900/1901, vii., p. 550 sqq.; Ibn al-Athir on the year 578 in Recueil des hist. or. des crois., i. 658). But soon afterwards the Ḥadiqâ Ḥusân al-Din Lulu built a fleet by order of Shaḥ al-Din's brother, al-Malik al-Âdî, in al-Kulzum which sailed for Aidâb and put a sudden end to the desperate enterprise (G. Schumacher, Renseau de Châtillon, 1898, p. 259 sq.; Moriz, Arabien, Hanover 1923, p. 119 sq.). When al-Dimashki (ed. Mehrin, p. 213) includes al-Kulzum among the lands under al-Karak (cf. R. Hartmann in Ist., 1911, ii., p. 141), this is perhaps a memory of these events of a century before.

In the time of Idrisi, Yâkût and Dimashki, al-Kulzum was already a deserted town. Maqrizi found among old documents in the palace of Cairo accounts of the expenditure on the civil and military administration of the town and district and concluded from them that it must once have been most flourishing. According to Idrisi the Beduins had occupied and plundered it. The only water-supply he knew of in the vicinity was the well at al-Suwâr which yielded only a scanty supply of brackish water. Al-Mu'âkaddâsi (tenth century) already mentions al-Suwâr as a town which gradually took the place of al-Kulzum, a mile from it (cf. Maspero-Wiet, op. cit., p. 107 sq.).

The view occasionally expressed in later Arab geographers and astronomers (Nâṣir al-Din al-Tûsî, Ulugh-Bey) that al-Kulzum once consisted of two towns, which goes back to a statement of al-Idrisi taken from Ibn al-Wardi (Gildemeister in Z.D.P.V., vii., p. 119 note) and the hypothesis, based on it, of two towns of al-Kulzum in different places, were already shown to be untenable by Quäremère; but it has recently been repeated of the ancient Klyisma, as Naville found an inscription near Herenopolis (or Hero, in Tall al-Maskhûta) according to which the distance was ab Ero in Klyisma Marratu 10°. (Naville, The Start-City of Python and the Route of 10°. to Calais, London 1885), while it is elsewhere correctly put at 68 Roman miles (Müller on Prolemy, Geogr., i. 2, p. 685 sq.). In this connection, Dillmann has rightly pointed out that it is very doubtful whether the milestone has not been moved from its original position, as all other references leave not the slightest doubt as to the location of Klyisma.

The name al-Kulzum still survives for the mound of ruins, Kûn al-Kulzum north of Suef; perhaps also in the name of the well of Khizmîl (or Khizmî) near Suef (Lüttmann in Z. D.M.G., lxx., p. 511, suppl. to p. 14, note 2; Moris art. Klyisma in Paulus-Wissowa, Realezykld., xi., p. 881).

al-Kâma, al-Kúma and al-Kawma, one of the seven kinds of poetry created by the moderns. Invented by the poet Allâh, who, when under the 'Abbasids, it was at first used as a call to announce during Ramadan the last night of the month, at which it is still permitted to eat or drink. The singers said to their colleagues at the end of each night: kâma âlnasâhîr kâma 'arisâ! to tak thy meal before the dawn of day, arise! Later, verses were made in this style for venders of flowers, wine, etc. It does not seem to be true that Abû Nu'ât invented the kâma. It is more probable that the form was already in existence before the reign of the Caliph al-Nâṣir.

According to the prosodists, this kind of poem which is always in the vernacular, should have as metre in each hemistich mustaf'sân fa'llân; but, according to the specimen given by al-Ishâhî (al-Mutâṣâri, Bulâk 1202, ii., 175), al-kâma is a poem composed of strophes of two verses rhyming in the first, second and fourth hemistich; the metre is mustaf'sân fa'llân or fa'llân or fa'llân and rarely fa'llûtan. Mustaf'sân may be mustaf'sân = mofa'sân and rarely mustaf'sân = mofa'sân.

(Moh. Ben Chenen)
KUMAIT b. Zaid, an Arab poet of the tribe of Asad, born in Kufa about 60 and died in 126. Of his compositions, the most famous next to the Mughahhaba (see below) are the Ḥāshīmiyyāt so called because they sing the praises of the Banū Ḥāshim, the family of the Prophet. But not the whole of the Banū Ḥāshim are considered worthy of the honour and praise of the poet; besides Muḥammad we find only ʿAli and his descendants. Verses i. 79 and ii. 105 sq. in which ʿAbbas and his sons are commemorated were perhaps only added in the ʿAbbasid period. The Ḥāshīmiyyāt consist of four long and two short qaṣidas; a fragment, the larger part of which is a typical qaṣida opening and four quite short songs, three of which have only two verses each. These poems are not all of the same period; the oldest seems to be II which should be dated about 96—99 A.H.; III is not much later; I cannot be earlier than 105, IV than 118, IX—XI are composed not earlier than 122, and VI is perhaps as late as 125/126. In his qaṣidas Kumat follows the model of the old poets. Although as a townsman, he is remote from the life of the desert, he describes the camel which carries him to the city, the wild bull and the baṣṭ bird, and he devotes many panegyrics to the ʿAlids in the traditional style for Beduin sayyids. He borrowed much from the Kurʿan as well as from the old poets, and a Kufan philologist of the second century a. d., Ibn Kunāṣa, composed a Kitāb Sarīfāt al-Kumait min al-Kurʿan (see Fihrist, p. 70). The Ḥāshīmiyyāt, the poetical value of which was not highly esteemed by Arab critics, were much thought of in Shiʿa circles; for modern scholarship, their importance lies mainly in the fact that they reflect ideas current in the moderate wing of the Shiʿa at the end of the first and beginning of the second century A.H. While Kumat regards the first caliphs as usurpers (vi. 10), he declines to curse them, like the fanatical Shiʿis; if they did wrong in withholding Fadak from the daughter of the Prophet, they will be forgiven on the day of judgment. ʿAli is the wag of the Prophet, who handed over to him the wilāya at the pool of al-Khumm (vi. 6; the verse seems to be oldest evidence of this Shiʿa belief); guidance is to the ʿAlids alone and they will again consolidate the foundations of Islam. The poet however cannot summon himself to assist by deed the ʿAlids, whose praises he sings so enthusiastically, and in X and XI he reproaches himself for not obeying the call of Zaid. But he is not afraid to make fierce attacks on the reigning dynasty; he reproaches the Umayyads with having no right to the leadership of the community and with abusing the position of ends. When however these attacks came to the ears of the Caliph Hishām — a longish poem directed against the ʿAbd Shams is also preserved in Djamhara, p. 187 sqq. — Kumat tried to atone for his indiscretion by panegyrics on the Umayyads. Such opportunism is not uncommon among poets and Kumat himself calls his conduct taṣīya (iv. 86; the expression according to Goldziher, Z. D., M. G., lx. 219, is here used for the first time in the Shiʿi sense) and such forced tributes to the Umayyads do not affect his real feelings for the Banū Ḥāshim. — The Mughahhaba, Kumat’s poem directed against the Yemen tribes is notable for its length — the expression ‘longer than a poem by Kumat‘ became later proverbial. It is said to have had 300 verses, of which about a third survive from different parts of the poem. There is no trace of a hostile attitude to the Yemenis in the Ḥāshīmiyyāt, although the poet lays stress on the fact that the Prophet like himself belonged to the Khālid group. Between 97 and 101 Kumat had even composed a panegyric on the Muḥallabis, the champions of South Arabian influence and the revulsion only came later, probably not till 118 after the composition of the fourth poem of the Ḥāshīmiyyāt. Kumat is said to have been induced to attack the South Asians by a lampoon by a Kalbi poet on the ʿAlids and it is said to have been Khalid b. ʿAbdallāh-al-Ҡsri, governor of al-ʿrak, who was dependent on the support of the South Arabian tribes, who brought Kumat’s anti-Umayyad verses to the Caliph’s notice, to have him rendered innocuous. It is certain at any rate that Kumat continued to lampoon Khalid even after his death; he brought his own destruction on himself by this. Yemeni troops, who heard him reciting his lampoons on Khalid, wounded him so seriously that he died in consequence.

KUMĀN. [See KIPĀR.]

KUMBARĀJID. [KUMBARĀJID.]

KUMIS, a Turkish word meaning “a drink of soured mare’s milk”, which has passed into this form into Russian and western European languages; it is explained in Radloff’s Versuch einer Worterbuch der Türkischen Türk-Dialekte, vol. ii., St. Petersburg 1899, p. 853 under kumis. The word is found as early as the Kudatuk-bilik where it is mentioned in the first place among the products of cattle-breeding (kumis, milk, hair, fat, curds and cheese [W. Radloff, Das Kudatuk-Bilik, Pl. ii., St. Petersburg 1910, p. 379]). Wherever the Turkish horsemen went they carried kumis with them. According to Kutubi, ’Uṯun al-Tawārīkh (cf. Brockelmann, G.A.L., ii. 48), MS. in Constantinople, Koprulû 1121, f. 69a, Baibars I just before his death 676 (1277) drank kumis (al-kumis) for several days in the “variegated castle” (al-Kṣar al-ʿAbid) in Damascus. In the earlier cartas of ʿAbd al-Azīz princes in the xiii. (xivth) century, fully described by Mahbūbī M. Wali, Baḥr al-ʿArār fī Manākhib iʿAkhbār (Granddris d. iran. Phil., ii. 362, Ind. Off., No. 575, Text publ. by W. Barthold in Zap. Geogr. Ostk., po otdel. etnografii, vol. xxxiv., 1909, p. 205 sqq.) “the drinking of kumis” (ibshāmidan-i kumis) is treated as an important affair; it is described minutely, how the kumis has to be poured from skins (ṣabā) into cups (ayatā), how the cups are to be taken, who is to take the first, who the other cups etc. In every place where the nomadic people have passed to a settled life, the customs associated with the taking of kumis have gradually fallen into disuse. (W. BARTHOLOD)
KÜMIYA. In the Middle Ages, one of the most important tribes of the Maghrib; they were at one time called Sa’fara and were descended through Fāzin from Mādghīs al-Abtar. Tradition says that the brothers of Kūmiya, the eponymous ancestor of the tribe, were Lēmāya and Matghara from whom were descended numerous families, some of whom still exist at the present day. The most important representatives of the Kūmiya, who live in the N.W. of Algeria between Tlemcën and Areschāl (Raschān) are the B. ʿAbd, from whom was descended the first Caliph of the Almohad dynasty, ʿAbd al-Muʾmin [q.v.], born at Taḍjera between Humain and Nedroma; the Nedroma who gave their name to an important town; the Ṣaghāra, now represented by the Matīla; the B. IIūl, of whom a section the Masīa still exist. The Kūmiya showed themselves devoted to ʿAbd al-Muʾmin, who was one of them. They formed the second dūnūd in the Almohad army; but they exhausted themselves in supplying the dynasty with soldiers for the wars in Spain and North Africa. Subjected to kharāj [q.v.] by the Zenīta, some of them joined another group, the Uḫaṣa and formed the powerful confederation of Trārā in the N.E. of Algeria.

Bibliography: R. Basset, Nidromeh et les Trarata, Paris 1901, and the writers there quoted. (RÉNE BASSET)

KUMU, a town in Persia in ʿIrāq ʿAdjamī near a stream, not however sufficient for local needs, which comes from Djurbdīshān (Gulpāīgān). It was conquered by Abū Mūsā al-Asḥārī in 23 (644); it rebelled in the caliphate of al-Maʾmūn and refused to pay taxes, under the leadership of Yāḥyā b. ʿImrān. Against it the Caliph sent ʿAli b. Ḥishām al-Marrawi who demolished the wall surrounding it and levied a war indemnity of 7,000,000 dirhams. The treaty was broken in the caliphate of Muʿtaʾz (252–255 = 860–868) who sent a force against it, an army under Mūsā b. Boghā, governor of ʿIrāq ʿAdjamī; most of the inhabitants were massacred and the chief notables carried off as hostages.

In the time of al-ʾIṣṭakhri (B. G. A., i. 230) one stage distant was a little town inhabited by Mazdaeans (Karyat al-Madjūs). The family of the Persian poet Niẓāmī, born at Gandja, originally came from Tafrisb, near Kumū.

KUNDUZ, the name of a river, town and district in Northern Afghanistan. The district is bounded on the east by Badakhshān, on the west by Tashkurgān, on the north by the Oxus, and on the south by the Hindū Kush, and is inhabited chiefly by ʿOzbs, who overran it from the north in the sixteenth century. The river rises in the Hindū Kush, flows northward and is one of only two rivers in northern Afghanistan which reach the Oxus. The town is the trade centre of a considerable district which produces the best horses in Afghanistan.

KUNFDA, a seaport on the Red Sea, 45 miles from Hāt. The town is in the form of a large rectangle enclosed by a wall, strengthened at several points by towers and pierced by three gates. Practically the only stone buildings are at the harbour, where is the bazaar with its one-storied warehouses in an irregular line, and the chief mosque and smaller mosques with low minarets. On a little island about a quarter of a mile away is a small castle which used to be the residence of the representative of the Sharif of Mecca. The town is now estimated to have a population of 10,000, but S. Langer in 1882 put it at only 2,000.

The harbour, which is enclosed by a number of sandy islets and is only accessible to Arab vessels of medium size, has great disadvantages, notably that the boats cannot land there. Trade and commerce are moderate: Kunfuda exports the myrrh collected in ‘Asir and also hides and honey; the harbour used to be frequented by slave-dealers who brought their Abyssinian slaves for sale here, but England’s sharp control has made slave smuggling practically impossible. Trade with the
Kūnūt, a religious technical term, with many meanings, regarding the fundamental signification of which there is no unanimity among the lexicographers. "Refraining from speaking", "the prayer during the žalāt", "humility and recognition that one's relation to Allāh is that of a creature to his creator", "standing" — these are the usual dictionary definitions which are also found in the commentaries on different verses of the Kūrān where kūnūt or derivatives from the root gūn occur. There is hardly one of these for which the context provides a rigid definition of the meaning (cf. Sūra ii, 110, 239; iii, 15, 38; iv, 38; vi, 121; xxx, 25; xxi, 31, 35; xxxix, 12; lxxv, 5, 12).

The Ḥaddith gives more definite contexts. The best žalāt is a long kūnūt (e.g. Muslim, Žalāt al-Musajirīn, trad. 164, 165, Ḍābī Aṣṣal Žalāt Tanal al-Kūnūt; Tirmidhī, Žalāt, bāb 168). Here in the unanimous opinion of all the commentators (see Nawawi on the passage) kūnūt means "standing". In the well known Ḥadīth: "alike to the fighter on the path of Allāh is he who fasts, who stands, who kūnūt bi āyāt Allāh" (Muslim, "Iṣnād, trad. 30), gāmūt, and the Žalāt on the earth, the "recite standing" (cf. Abū Dāūd, Šahr kūnūt, bāb 9: "And he who recites 100 verses of the Kūrān standing, is enrolled among the kūnūtān"). Kūnūt, however, usually seems to be connected in meaning with dāʿā, e.g. in the oft quoted tradition which tells how Muḥammad in the žalāt al-ṣūbḥ appealed to Allāh for a month against the tribe of Rīl and Ḍakhwān, as they had slain the kūrāt at Bīr Maʿīna (Witr, bāb 7); in this case the meaning is certain from the explanation yāmāʿa ala (Bukhārī, Witr, bāb 7; Dīmādh, bāb 184). In the parallel tradition, Bukhārī, Maqāṣīd, bāb 28, trad. 3, there is added "and till then we were wont to perform the kūnūt". Some sources (see Goldziher, loc. cit., p. 323) add that this was in the month of Ramāḍān.

The rite also appears in parallel traditions in a more precise form; it is said that the kūnūt took place in the žalāt al-faḍīr (Bukhārī, Dāʾwāt, bāb 59) after the ruḥūk (Bukhārī, Witr, bāb 7). It is still more precisely defined in a Ḥadīth in al-Nasāʾī, Tābiʿī, bāb 32: "... that he heard how the Prophet when he raised his head after the first ruḥā at the žalāt al-ṣūbḥ, said: "O Allāh, curse this and that man (i.e. some of the munāshāṭūn); thereupon Allāh revealed: "It does not concern thee whether he turns to them with favour or punishes them" (Sūra, iii. 123). The following is another example of kūnūt: "When the messenger of Allāh lifted his head after the second ruḥā at the žalāt al-ṣūbḥ, he said: "O Allāh, save Walīd b. Abī Walīd and Saʿīma b. Ḥiyām and ʿAyyāsh b. Abī Rabīʿ and the weak ones in Mecca. O Allāh, tread heavily on Muṣṭafā and send them years of famine, like the years of Joseph" (al-Nasāʾī, Tābiʿī, bāb 28). According to another tradition, which also goes back to Abū Ḥūrāra (Bukhārī, Aṯān, bāb 126) the kūnūt consisted of prayers and blessings for the Muslims and curses upon the unbelievers.

We are also told that the kūnūt was regularly performed at the morning and evening žalāt (ṣūbḥ and maghrib). Tirmidhī, Žalāt, bāb 177; al-Nasāʾī, Tābiʿī, bāb 30). Tirmidhī gives the following note on this tradition: "The learned differ in their views about the kūnūt at the žalāt al-faḍīr. Some of the scholars of the Žahāba and later generations

(Adolf Grohmann)
advocate this ḫunūt, such as Mālik and al-Ṣaḥḥārī'. Aḥmad (b. Ḥanbal) and ʿIṣḥāq say: "There is no ḫunūt uttered at the ṣalāt al-fajr except in a calamity, which affects the Muslims as a body." In such a case the Imām has to pray for the Muslim armies. Zakāt and ṭahrī are also mentioned as ṣalāt into which the ḫunūt was inserted (Bukhārī, Abbott, bāb 126; Nasāʾī, Taftāṣī, bāb 29).

There is further a difference of opinion as to where in the ṣalāt, the ḫunūt should be inserted. ʿAṣim is said to have asked Anas b. Malik about the ḫunūt. Anas replied: "The ḫunūt took place . . ." I asked: "Before or after the ruḥā?" He replied: "Before the ruḥā." I said: "But I have been told on your authority: after the ruḥā." Anas replied: "Then they lied. The apostle of Allāh only uttered the ḫunūt prayer after the ruḥā for a month. I think, after he, etc. etc." (here follows the story of Bīr Maʿūna, see above, Bukhārī, Witr, bāb 7). It is even said that the ḫunūt is a bidʿa. Abū Mālik al-ʿAṣhdāt records a tradition on the authority of his father, that the latter had performed the ṣalāt under the direction of Muḥammad, Abū Bakr, Umār, ʿUṯmān and ʿAli and that none of these uttered the ḫunūt prayer. He adds "it is therefore also a bidʿa, my son" (al-Nasāʾī, Taftāṣī, bāb 33).

Nevertheless it continued to be known as the name of the prayer (dawā) at the ṣalāt. In the books of tradition a formula is given for the ḫunūt al-witr (it occurs often and in different forms, though it is not always called ḫunūt but is given names like dawā etc.): "O Allāh, lead me amongst those whom Thou guidest, and pardon me amongst those whom Thou pardonest, and care for me amongst those for whom Thou carest and bless me with what Thou distribuest, and protect me from the evil that Thou has decided upon; for Thou decidest and none decides about Thee. Disgrace will never come upon him for whom Thou carest. Thou art blessed and exalted, O Our Lord!" (Tirmīzī, Witr, bāb 29). The same formula is found as an element in the ṣalāt in Nawawi, Mīnāqāt, ed. van den Berg, i. 83, 455 sq.; Lane, Lexicon, s. v. k-n, who gives another.

(A. J. Wensinck)

KUNYA (A.), properly meaning a metonymical appellation, is however also the technical term for the naming of a man (or also of a woman) after his eldest son, i.e. Abū . . . , a name which is omitted from very few Arab personal names (cf. also ʿAqāb) and in many cases is even the only one known to us. The origin of the custom lies in the value placed by Semitic peoples upon children, especially sons; which again points to the importance placed on the paucititious performance of funerary rites, a duty that was incumbent on the eldest son in particular. There is negative evidence of the connection between the kunya and funeral rites in the fact that slaves as a rule had no kunya and that they, when not adopted into the family, were buried without ceremonies.

In Arabic literature the kunya, if not absolutely a title of honour, is at least regularly thought more highly of than the simple name. According to the Lisan, s. v. the champion who challenged to single combat between the hostile armies called himself by his kunya. When a warrior is appealed to for help by his clan, he is called by his kunya (Kāt b. al-Khaṭīr, ed. Kowalski, Leipzig 1914, fragment, iv., l. 38). ʿAṣḥāb said on one occasion to Muḥammad: "All thy wives have a kunya but I alone have none". Thereupon he replied: "Assume the kunya Umm 'Abd Allāh!" (Aḥmad b. Ḥanbal, i. 151). From this tradition, otherwise unknown — that childless people could have a kunya. In other cases it did not express paternity but some other characteristic. Abū Hurairā [q. v.] "he of the kiten" is said to have received this kunya from his kindness to cats. History does not record why the first Caliph was called "Father of the Camel-foal". The Abū of the kunya often indicates a physical peculiarity e.g. Abū Shāmā "he with the birthmark". In other cases the kunya is given in malicious or good natured irony e.g. Abū Djahl [q. v.], Abū Labah [q. v.]. Finally we may note the many geographical names in the form of a kunya e.g. Abū Simbel [q. v.], Abū Kubais [q. v.], Abū Ḥabbā [q. v.], Abū Arsh [q. v.].

In the Oriental dictionaries of all kinds, the kunyas are usually classed together in one group. There are also dictionaries which deal exclusively with kunyas.

(A. J. Wensinck)

KUR, Russian Kura, in the Arab geographers Kur, the largest river in the Caucasus, over 600 miles in length, according to Ḥamd Allāh Kazwīnī (Nusḥat al-ʿUḫūd, G.M.S., xxiiifl., p. 218) 240 faraḵ. Iṣṭakhrī (B. G. A., i. 189) describes the Kur as navigable and full of fish; even at the present day very little would require to be done to make the river accessible to modern steamers from Mingecair (a little below the mouth of the Alazan) to the Caspian Sea. The Araxes, regarded as a separate river in ancient times, always appears in Muslim sources as a tributary of the Kur. According to Ḥamd Allāh Kazwīnī (op. cit.), the Kur in those days in addition to its mouth in the Caspian Sea also sent a branch out which flowed into the Sea (kuḥaira) of Shāmḵūr. This statement (only found here) must be due to a misunderstanding. In Ḥamd Allāh Kazwīnī there is no reference to any such sea. He only mentions the town of Shāmḵūr (Russ. Shamkhor), two faraḵ from Ganūja on the road to Tiflis (op. cit., p. 181 sq.), which in his day as now was in ruins. The navigation of the Kur has only once played a part in political history, at the destruction of the town of Bardja on the Russians in the year 332 (943/944). In addition to the references to this event given under the article BARDJA see D. S. Margoliouth, The Russian Seizure of Bardja in 943 A. D. (Bull. of the School of Oriental Studies, 1918, p. 82 sqq.); A. Yakubovski, Ibn Miskawayh o pokhode Rusov v Berdav v 332 g. = 943/44 g. (Viz. Vremennik, 1923—1926, vol. xxiv., p. 63 sqq).

AL-KURA, the sphere. The Arabs studied the properties of the sphere, following Euclid, Archimedes and Theodosius. They also dealt with certain principles of the spherical trigonometry, which form the foundations for astronomical theory, the principle of the transversal (ṣahāl al-batluʾ), the principle of the four magnitudes (al-ṣahāl al-muṣāhāt) and the principle of the shadow, i.e. of the shadow of a sphere, al-ṣahāl al-qillāt. Following Media, and Ptolemy. (On the translations cf. M. Stein- schneider in Z. D. M. G., 1896, p. 161 sqq.; the mathematical principles are discussed by H. Burger and K. Kohl, Axel Börsbo Thälits Werke über den Transversalen in Abhandl. zur Gesch. der Naturwissenschaft und Medizin, 1924, part 7, p. 1—91; references are given there to the earlier literature also).

2. Al-Kura ḍhāt al-kurṣī (the globe with the axe) is used in two senses:

a) The globe of the heavens (instead of al-kura) we also find ḍhāt al-kurṣī in this sense, the egg, e.g. in Maḥṣūṣ al-Uṣūm, p. 235, in al-Battānī, Šūrāh al-anwarīn, C. A. Held, 1913, i, p. 58; cf. E. Wiedemann, Beitr. III., S. B. P. M., Erlg., 1905, xxvii., p. 239 sqq.). The constellations are painted on a globe. It is placed in a ring which stands on 3 or 4 legs. Such globes have been prepared and described perhaps as early as by Hipparchus, at any rate by Ptolemy. Ptolemy’s description is given in the Arabic translations of the Almagest and in separate treaties. One such globe, erroneously ascribed to Ptolemy, was seen in Cairo in 435 (1043/1044) by Ibn al-Sanbādī (cf. Ibn al-Kūfī, p. 440). — The globes were made of wood covered with paper or with different metals. Hollow globes could also be made of metal, which were then fastened to wooden spheres. ‘Alam ad-Dīn Kaysar al-Ta‘āsīf used a girt wooden globe (Abū ‘l-Fīdhā, Annalen, ed. Reiske, iv. 479, H. Suter, N. 358). The making of such globes and the errors that occur in them have been fully discussed by al-Brūnī (Beiträge zur Gesch. der Mathematik, etc. in Abhandl. zur Gesch. der Naturwissenschaft und Medizin, part 4, 1922, p. 79—93; cf. also H. Schnell, ibid., in a later part).

The astronomical instrument prepared by al-Idrīsī for King Roger was apparently an armillary sphere.

b) Al-Kura ḍhāt al-kurṣī is also an arrangement by which one follows the movements of the heavens. The horizontal ring is directed to the horizon, it is notched at right angles in two opposite points, a meridian ring is placed in the notches and allowed to go to its lowest position in a groove. The globe itself turns round an axis which is placed in round holes at two opposite points on the meridian ring. Divisions are marked on the horizon and on the meridian ring. By turning the meridian ring in its grooves the axis of the globe can be inclined at will to the horizon and the instrument can thus be used for all latitudes. A quadrant with divisions which can be placed on the globe enables many kinds of measurements to be taken. With this globe, the magnitudes of importance in astronomy, al-ṣahāl, al-maṣāfāt, the props of the earth etc., can be obtained.

The oldest Arabic work on the subject is by Köṣāb b. Lūkā [v. IV] and exists in Arabic in several editions, e.g. that of al-Marrākūshī; it may go back to classical originals, as is probable in view of the author’s relations to the Greeks. It was also translated into Latin, and into Spanish by Alfonso of Castile (Libros del Saber, vol. i.).

If the globe is left out and a series of other rings its added to the horizon and meridian rings, which correspond to circles in the heavens, we get the armillary sphere (alam ḍhāt al-batluʾ), the instrument with the rings, with which the ancients, the Arabs and notably Alfonso of Castile occupied themselves for a long time following Media, and Ptolemy.

3. Al-Kura al-muḥarrīkā, the burning-glass (lit. the strongly burning globe). Even the ancients knew the property possessed by rock-crystal and glass globes of concentrating the sunlight by focusing them on one point and setting alight an inflammable material there. But we find no indications that any scholar of antiquity studied the theory of this phenomenon. Ibn al-Haitham and Kamāl al-Dīn al-Fārisī investigated this theory very brilliantly. Ibn al-Haitham starts from the values given in a table of Ptolemy’s and collected by himself also, of the angle of incidence, angle of divergence and angle of refraction of a ray of light falling on a smooth surface of glass, and investigates the path of the rays when they strike the surface of the globe at different distances from the axis drawn between the sun and the centre of the ball. It is proved that after refraction they all meet on the opposite surface of the globe in a little section from which they emerge with their direction altered. They cut the axis at different distances from the ball: the majority however meet at a point distant less than half the radius of the ball, this is the burning point. If drawings are placed in the cone of rays formed by the rays coming from it, for example a red circular surface with a black ring upon it and looked at it through the front of the ball remarkable figures are seen; these were also studied very fully by Ibn al-Haitham and Kamāl al-Dīn; they were able even then to reach the same results as Schellbach at a later date.

(E. Wiedemann)

KURA (A.), "lot, drawing lots" is regarded by the lexicographers as a synonym of šuḥma, just as most verbal stems of the root š-ר-א are equated to those from s-h-m. The reason for this is that lots were cast in pre-Muhammadan times with arrows (šuḥma). Muhammad, it is true, forbade drawing lots with arrows as a means of prophesying and as a game of chance (Sūrah ii. 216; v. 92) but this prohibition is in turn much limited by two other passages in the Qur’an in which drawing lots is described as at least permitted (Sūrah iii.
Einleitung in das Studium der Arab. Sprache, Bonn 1864, p. 154 sqq.). But, from the fact that arrows were not used and especially because the well-known legal term kurz is used for permitted decision by lots was transferred to this really illegal form of casting lots, it looked as if with the alteration in the name of this kind of fortune-telling the thing itself had been altered, especially as quotations from the Kur'an and the citing of names of the prophets were used to give it an appearance of sanction.

The kurz is still one of the most usual methods of consulting the fates, especially in the Arabic speaking parts of the world of Islam. Along with the still more common augury by pricking (fa'd) and by drawing on sand (rami) it is to be regarded as an augury from dice, inasmuch as in the kurz the starting-point is almost always numbers or letters, which are obtained either directly by throwing dice or in a similar way. According to the way in which this number is obtained or the course from this number to the oracle, finally uttered in the form of verses, three different literary forms of the kurz are distinguished: 1) kurz al-ja’dariya (this should be read for jauhariya in Ahlwardt, iii. 565) which is traced to Djarfar al-Sadiq, has most clearly retained the character of an augury from dice, inasmuch as in it a definite poetical interpretation corresponds to each of the possible combination of three letters of the dice. It is to this variety of kurz that the definition of "science of drawing lots" given by Badjad Khalifa seems to refer (ed. Fligel, iv., p. 513, No. 9413). 2) The kurz al-Adhab is the simplest form, as in it the answer is given according to which of the names of the Prophets the finger falls upon. The most detailed and complicated, but for this very reason the most popular form, which is traced to Caliph Ma’mün is 3) kurz al-ma’muniya, which begins with a number of questions out of the daily life of men written in separate circles out of which the one concerned has to be chosen. But before the oracle delivered in verse is learned from the mouth of a king, one has to run through a series of figures which include constellations and birds of fate and end in towns (hence also called kurz al-muluk or kurz al-tayar). This kind of kurz offers the greatest scope for the imagination and experienced the greatest development and variations; it is just in this account however that it has almost completely lost any character of fortune-telling but looks more like a harmless and entertaining game.

This also explains why the word kurz in popular usage ultimately came to be used by an erroneous generalisation for all kinds of oracles (e.g. kurz al-Ram in Persch, Gotha, No. 73, 4, and kurz al-Ilahadi al-Fal wa l-Danir or kurz fi l’Im al-Ram in the Cairo Catalogue, v., p. 350 sq.). Although the last kind of kurz in particular seems to be comparatively modern — the oldest manuscript only dates from the xth century A.H. — the idea that there is old material in it, dating back to Hellenistic times, is not to be dismissed offhand. The reference in the Fihrist (C. 1, p. 374, 15-18) to Greek authors and the fragments of Greek books of fate that have survived from the period of the Diadochi, which contain almost word for word the same answers as the Arabic books now in use make such a supposition very probable.

Although the importance of the Arabic kurz is
for similar literature in the west has been exaggerated, it is certain that the Arabs had a not inconsiderable influence on the Hebrew books of fate and either through these or directly on mediaeval European books of fate.

KURABIYYA, the name of a group of the Kaysāniyya [q.v.]. This reading of the name is probably to be assumed in al-ʿAshārī's Maḥālikāt al-Islāmiyyin (without diacritical points in the MS. mentioned below) and is also found in 'Abd al-ʿAlāʾ al-Dhili; the author of the Mafārith al-ʿUṯūm has Kūriyya as 'Abd al-ʿAlāʾ al-Baghdādī, Abū ʿl-ʿAlāʾ and al-Ṭabarī in favour of the former reading is also the form al-Kūriyya (transl. Kūriyya) given by Muḥāshār b. Tāhir al-Makdisī, which may be due to a corruption of the text. This group is said to be called according to a certain otherwise unknown Abū Kuraib (in al-ʿAshārī without diacritical points; in 'Abd al-ʿAlāʾ al-Dhilī, in the printed text as well as in the Leyden MS., Or. 335, f. 96a; Ibn Kuraib; al-Ḥawāzim, al-Baghdādī, Abū ʿl-ʿAlāʾ and al-Makārizī; Abū Kuraib; Muḥāshār b. Tāhir al-Makārizī: Ibn K-r-a-b) al-Ṭabarī. It was probably he who spread the Messianic views regarding Muḥāshār b. al-Ḥanafiyya [q.v.], which are characteristic of the Kurabiyya. The forerunners of Abū (Ibn) Kuraib is therefore to be placed in the period after the death of Ibn al-Ḥanafiyya (probably in 81 = 700).

According to al-ʿAshārī, the Kurabiyya believed that their imām, Muḥāshār b. al-Ḥanafiyya, was still alive and was living in the mountains of Raḍwa [q.v.] west of Medina, with a lion on his right hand and a leopard on his left, guarding him, while his food came to him morning and evening, until the time for him to appear again. In their view the reason why the imām was kept hidden in this way was that Allāh had a special plan for him. No one knew him in Raḍwa in similar terms; according to him, there was a spring of water and another of honey beside the imām, which provided his daily food. Al-Shahrastānī and al-Manṣūr bi-llāh 'Abd Allāh b. ʿUmr (al-Nadr al-ʿAswānī, B. M. MS. Or. 3976, f. 8v infra) also mention this, without referring explicitly to the Kurabiyya. The last-named author also mentions the idea that the imām holds intercourse with the angels in Raḍwa (as does Ibn ʿHzam) and that in his concealment he is considered "the eye of Allāh watching over his creatures'.

Most of these traits go back to older Messianic ideas. They are nearly all found in verses by Kuthayyir [s.v.] and al-Sayyid al-Ḥimyarī (cf. al-ʿAṣhārī2, vii., 41, 5 sqq.; viii., 36, 5 sqq.) from whom others in Futuristic sects seem to have taken their information.

Al-ʿAṣhārī mentions Kuthayyir as a champion of the views of the Kurabiyya and quotes the same verses by him as al-Baghdādī (p. 28 sq.) and al-Shahrastānī (cf. also al-ʿAṣhārī2, viii., 31, 8 sqq.).

(C. VAN ARENDONK)

KURAIISH.

1. Before the Hijira. About the time of the Hijira all the clans of this tribe, which then held pride of place in Mecca, thought they could claim a common ancestor. Was he called Fīhr or Kuraiish or perhaps al-Nadr, sur- named Kuraiish? They did not take the trouble to examine closely the problem of the name. Did the names given to the supposed ancestors refer to a historical personage? Were they not "names without substance" like those which the Meccans according to Kurān lii. 23 gave to their divinities? The only authority, the nasab, the Meccan genea-
logists, could give was that they had found them in the old onomatopoeic of Tihama and in poems of doubtful authenticity. Yıküt (Müzid, ed. Wüstenfeld, iv. 79)summing up the statements of his predecessors, thinks the explanation which derives the name of the celebrated Meccan tribe from the word kuraish “shark” kārid i.e. worthless. He further adds that the poetic fragment cited in support of this etymology is maṣūl, apocryphal, and I think it can be recognised as a Beduin satire directed against the rapacity and aggressive spirit of Mahammad’s fellow-tribesmen.

In any case, there is nothing of which we know the first after the beginnings of the imperial tribe of Kuraish. The tribe was leading a nomadic life in the desolate country round Mecca, have always been looked upon as the most disinherited of western Arabia. In the confused mass of starving Beduins of the southern Hijāz, the Kuraish formed in their early days one of the poorest branches of those who claimed to belong to the main stem of the Khāna. Numerically inconsiderable, lost among the Khānī tribes, the primitive clan of the Kuraish led a precarious existence “in the depths of wild ravines and among the bare mountains encircling the sacred territory” (Balaḥuhr, Anṣab al-ʿAlaḥrāf), made up of shepherds and robbers, by turns the auxiliaries and the scourge of Meccan commerce. They hired to the Meccans their camels and lent their services as guides and caravan-leaders; in a word they played the part assumed by the Ba’bûn Ḥudhali [q.v.] in the time of Abū Suṣyān and again at the present day. No more scrupulous than the latter, they never hesitated about stripping pilgrims and isolated convoys. They steadily prepared and watched for an opportunity of driving out of Mecca the Banū Khuzayma who ruled there and of seizing their treasure which they coveted.

A condottiere called ʿUsayy q.v. gave them a place in history and laid the foundations of their political career. He was of foreign origin and came from the steppes of the north, on the Syrian frontier. A fiction connects him with the genealogical tree of the Fihr-Kuraish through Ghūlub-Luʿayya-Kaʿb and Killa. This adventurer reunited the scattered groups of the tribe and succeeded by a coup de main in installing them in the heart of Mecca. The Kuraish gave only a confused explanation of how, led by ʿUsayy, the Kuraish were not long in securing political supremacy over the Khuzayma, a predominance which they soon strengthened still further by gaining possession of the sanctuary of the Kaʿba. If we may base a conclusion on such slender foundations as the traditional genealogical lists, and calculate from the number of generations mentioned in them, this revolution must have taken place in the last quarter of the fifth century A.D., a hundred years before the birth of the Prophet. At the latter date then, barely a century separated the Kuraish, now Meccans, from the period when their ancestors had led a nomadic life.

Some ten clans were considered as Kuraish in those days: Owmaiya, Nawfāl, Zahra, Makhramah, ʿAsad, Dujmahl, Sahm, Ḥāshim, Taim and ʿAdiy. The three last named owe their fame mainly to Islam, even Ḥāshim although like Owmaiya it was related to ʿUsayy, the noble who brought them to Mecca. This noble descent did not bring great fortune to the Ḥāshim. The Owmaiys and Makhramah gained predominance over the other families through their wealth and influence. The ten clans began by occupying the centre of the town, the bottom of the valley al-Batḥā, into which issued the water of Zamzam, the hollow in which stood the little house of the Kaʿba. This gained them the name of ʿAbdāl, Bīṭāl” or “Kuraish al-Batḥā”. They kept it even after the impoverished clans like the Ḥāshim, had had to abandon this central position which was considered the quarter of the Kuraish aristocracy.

The “Kuraish al-ʿAzwāhir” were held in much less esteem. The Jūṣīḥ or suburbs of the town and the ṣifū ravines of the hills which surrounded the town were left to the Beduins, to foreign camp-followers and to slaves. It seems that the “Kuraish of the suburbs” were mixed with these foreign elements. As regards bravery, they were creditably distinguished from their fellow-tribesmen of the Batḥā. They provided the Meccan republic with its bravest soldiers and never failed to make the most of it. The main occupation of every one in the centre as well as in the suburbs was trade. “They were merchants”: this phrase re-appears with monotonous regularity in the notices of the more illustrious Kuraish.

The Sirā and Idaṣṣih preserve the memory of several confederations (ḥilf) or secondary groupings formed among the principal clans of the Kuraish. They have been discussed in the article HILF. The ḥilf al-ʿaṣīṭil seem to be associated with a historical event of which the Meccan chroniclers have exaggerated the importance. This pact must date from the last years of the sixth century, since the Prophet in his youth was present at its conclusion and never failed in consequence to recall it, “the most glorious which history records” (Ibn Saʿd, Tahāfūṣ, ed. Sachau, i. 82).

Outside of Tihama, the Kuraish seem to have had trading colonies at Tabālī, Dujraṣ, Nadīrān, stages on the road to the ports of the Indian Ocean. Much the most important of these was Taʿāf [q.v.] in the mountains of Sarāt. It was a country resort for the rich bankers of the Kuraish, who acquired country houses and farms there.

If we examine orthodox tradition, the Beduins before the Hijāz are represented as never missing an opportunity of recognising the political and religious superiority of the Kuraish. The latter was practically guaranteed to them by the possession of the Kaʿba, a kind of national sanctuary and centre of an annual pilgrimage for the western half of the Peninsula. The Christian Arabs themselves do not seem to have entirely escaped this religious influence. The prerogative of ḥilīm was not disputed to the Kuraish. They owe it to the fact that they were able, in spite of their small numbers and their barren territory, to exercise a kind of spiritual supremacy among the jealous Beduins. It is again the ḥilīm, as we shall see, which explains their glorious destinies on the vast theatre on which the sudden expansion of Islam was soon to place them. Ḥilīm meant the equilibrium of the intellectual faculties, all intent on the business of life to the neglect of scientific speculation. Nothing is more common than the mention of this ruling quality in the notices of the notables of the Kuraish. This prerogative, which in the opinion of Arabs, denotes men born to govern, has even been said to have been proclaimed by the Prophet. “A Kuraish”, he said
"is worth two men of any other tribe". And according to al-Zuhri [q.v.], himself a Kuraishi, this saying referred to their acuteness "the rare quality of their intelligence". In them the Beduins admired the diplomatic ability, the style of speaking, the ready rejoinders always à propos, the precision of their eloquence. They were able to condense into a few telling sentences, when the Beduin as a rule would lapse into his usual prolixity. The purity of their dialect was less generally granted. It was Islam and in particular the influence of the Kur'ân which gained the Meccan dialect its triumph over its rivals in Naj'd, although the latter had been refined and perfected by several generations of poets.

Although they did not love them, the nomads felt for the Kuraishi that respect which is inspired in the inferior for the prestige of a superior organisation, capital and the possession of great wealth. In Mecca alone were the Beduins familiar with the idea — rudimentary, it is true, — of a form of government and political solidarity concepts foreign to their individualist mentality, and it impressed them by its novelty. But in the inferiority in inferiority which impressed them more than they would have been tempted to acknowledge the Beduins declined to acknowledge poetic talent, which they claimed as a monopoly of the nomads. They placed the Kuraishi rhymers far behind those of Tâ'if and particularly of Medina, not to speak of the poets of Naj'd and not without justice. We know no poet of Mecca before the Hîdjrâ whose name is worthy of record. The Kuraishi had for the first time in the person of ʿOmar b. Abī Rab'a [q.v.] a poet worthy of a place in the Arab Pantheon already quite crowded.

The Beduins also did not like the exclusiveness of the Kuraishi and the control they exercised over their everyday life. Acting as guides, and convoyos to Meccan caravans, and in debt to the financiers of Mecca, they alleged they were exploited by the "sharks" of the Kuraishi. It is the eternal complaint that divides capital and labour everywhere. Their grievances united them in the contempt they professed to feel for this corporation of merchants, "cowardly and avaricious". Their poets boast of having pierced the wineskins, then broken the skulls of these greedy haggler, "eaters of pollenta" (zâhîna), the favourite dish of the Meccans. They boasted of being able to humble the pride of the Kuraishi, proud in the shadow of their sanctuary, trembling with fear outside the sacred territory. The Meccan custom of relying on the bravery of the "Ahâbîsh" and other Beduin mercenaries, of sending negroes to fight for them was not calculated to raise them in the esteem of the nomads, and a quarter of a century after the death of the Prophet, we still find the Arabs refusing to allow the Kuraishi the virtue of bravery.

We may put to the credit of Muslim tradition the story of the general supremacy of the Kuraishi being accepted without demur by the Arabs before the Hîdjrâ. This legend was put about to make the seizure of the caliphate by the Kuraishi appear less shocking. Considering the individuality and mentality of the Beduin, it may have been rather a question of moral supremacy. Did it extend much beyond the frontiers of the Hîdjrâ and the districts bounding on Naj'd? We do not think so.

The great Kais confederacies — like the Hawâsin and the Ghatafàn — possessing pastureage on both sides of the common frontier could not escape this supremacy. Since the decline of the Ḥimyar principalities, Mecca had become the largest and most powerful city of western Arabia. The spectacle of this power solidly based on a close alliance of economic and religious interests could not fail to impress the Beduins, who were intelligent observers and very susceptible to the prestige and influence of the capital.

The activities of the ancient Kuraishi consisted as we have seen of commercial and financial speculations within and beyond Arabia. In the article MECCA we describe the trade-routes that ran to it, and the agreements concluded by its people with their neighbours in Arabia and foreign countries; next we examine the form of government, the part played by capital and lastly the organisation of the great caravans on which the prosperity of the Kuraishi metropolis depended. The reader may be here referred to this article.

II. Aft the Hîdjrâ. With the preaching of ʿMuḥammad the story of the Kuraishi becomes practically that of Islam. The two histories become one. The Sîra does not discriminate between them. On the other hand, after the death of the Prophet, the destinies of the Kuraishi develop independently of those of Mecca. After having bitterly opposed the new religion, the Kuraishi notables gained control of it as being in their best interests. The first eight years of the Hîdjrâ were filled with fighting with the Prophet, who had taken refuge in Medina. In the year 8 (al-fâṭî), the surrender of Mecca without a blow being struck put an end to the institutions by which the tribe had hitherto been governed and brought about its break up and dispersal throughout the Arab world. To the casual observer, nothing seemed to have changed. In reality Mecca had lost its autonomy; it was now politically dependent on Medina and governed by an agent of the Prophet. The Kuraishi were under no delusions. The exodus began; the principal families gave the signal for it and came to settle in Medina, which had become the capital of Islam, because ʿMuḥammad was there.

The death of the Prophet raised the problem of his successor, the question of the caliphate. Two illustrious Kuraishi, Abû Bakr and ʿOmar seem to have foreseen this eventuality and to have been prepared for it. Upon whom was the political guidance of Islam to fall? ʿMuḥammad had left no stipulations on the subject. But his constant partiality for his fellow-citizens, who had fled from Mecca, had aroused the protests of the Ansâr, which are preserved in the poems of Hassân b. Ṭâbit [q.v.]. There seems no reason to doubt that if death had not suddenly taken him, if he had thought it prudent to express his opinion, it would have been to the "emigrants" of the Kuraishi in preference to the Ansâr that he would have entrusted the destinies of Islam. Throughout his career as a prophet, he never ceased to proclaim himself a true Kuraishi. In spite of the Hîdjrâ, in spite of the resounding rupture and the eight years of war with Mecca, he never for a moment thought of linking his cause with the fortunes of Medina. If this idea had arisen in his very susceptible mind, he would not have been long in rejecting it, when he considered the political incapacity of the Ansâr and their lack of preparation. As if he wished to suggest
to them the superiority of the Kūraish, the Prophet made the Medinites turn in prayer towards Mecca, now the sacred city of Islam and made its conquest a task for the zealous converts.

That the Kūraish had the exclusive right to this succession must have been the attitude adopted by Abū Bakr and ‘Omear before the Anšārs assembled in the ṣafīyya of the Banū Sā’īda. What we can gather from the arguments put in the mouth of Abū Bakr is that, speaking in the name of the Kūraish refugees, he insisted upon their priority in adopting Islam, the superiority of their noble blood, their prestige with the Arabs and their relationship to the Prophet. From these premises, the speaker thought he could deduce that his fellow tribesmen had a monopoly of the supreme power. He concluded by proposing a division to the Anšār: “let us have the duties of an amir and you those of vizier”. But after having appealed to the Kūran (ix. 101) where the supremacy of the Kūraish is said to be implied, why was an explicit decision of the Prophet not put forward? One word would have sufficed instead of all this rhetoric. For a childlike people like the Anšār, accustomed for ten years to anticipate the slightest wish of Muḥammad, his will would have finished the debate. If Abū Bakr did not pronounce this word, if none of his acolytes appealed to it, we must believe there was no such decision.

The Sunna took this into account when it tried to collect all the pronouncements possible ascribed to Muḥammad and all recorded by the Sahīh. Let us quote the most characteristic of these hadiths: “The Kūraish are the heads of this government”. “The Imāms are Kūraish”. “Power will remain with the Kūraish so long as two Muslims exist”. “The kingship (muḥirī) — and still more explicitly — the caliphate remains in the Kūraish”. In the last sentence we have the classical formula as approved by the Shari‘a and accepted by all orthodox tradition. The latter however had not dared appeal to the Kūran. This book simply makes no reference to the Kūraish monopoly. In reply to the verses quoted in their favour by the Meccans, the Anšār readily quoted the attitude of others, proclaiming the worthiness and faithfulness of their Kūraish rivals.

It cannot however be denied that the Prophet had a preference for the Kūraish nor that he had a low opinion of the fitness of the Anšārs for governing. But he was too wise to give voice to such sentiments. He knew too well the causes of dissension that were already at work in the young community to do anything to make matters worse. In the course of his wars with the Meccans, he had let drop remarks like the following: “In good as in evil, the Kūraish are always in the first rank”. It is by recording exactly such utterances, and giving them a political significance, which they did not really have, that tradition has formulated hadith unambiguously reserving the caliphate for the Kūraish. If they had the slightest knowledge of it, the Anšār would not have been able to dispute the Kūraish monopoly nor to propose to Abū Bakr to recognise it on condition that the supreme dignity was held alternately by a Meccan and a Medinite.

This seems also to be the conclusion to be deduced from the attitude of the Khāridjīs. If in the first century of the Hijra, we want to find strict and logical believers, placing Islam above caste prejudices and ambitions, we have to look for them in the ranks of these dissenters. Their implacable logic never ceased to protest against the privileges claimed by the Kūraish and to give more weight to their protests, they gave themselves caliphs chosen from different Arab tribes.

Although they did not hold the same views as the Khāridjīs, the ‘Alīdīs and Shī‘īs came inevitably to the same conclusion. This is how in the first century A.H. their most authorised interpreter, Kūnimāt [q.v.], argued the claims of the ‘Alīdīs; if contrary to the Shī‘ī theory, the supreme dignity in Islam is no longer the exclusive privilege of the family of the Prophet, it ought to become the common patrimony of all the Arab tribes, not only of Muṣṭar but also of Rabī‘a and Yemen and above all of the Anšār. These extreme legitimists therefore were ignorant of the alleged veto laid by Muḥammad on non-Kūraish.

The creation and monopoly of the Kūraish, the caliphate — while greatly benefiting the Kūraish individually — only served to precipitate the break up and dispersal of the tribe, a phenomenon, the beginnings of which we have already seen just after the fāh (8 A.H.). Their cohesion and the prosperity of the capital Medina depended entirely on commerce. Now in a quite unexpected fashion, at least for the Beduins, the conquests of Islam upset all the economic conditions of Western Arabia. The direct route from India via Mesopotamia was opened up again by the union under one rule of the valley and mouth of the Euphrates, and international trade avoided the difficult detour by the Arabian desert. Nothing could be less like the Mecca of Abū Sufyān than that of the Caliph ‘Omear. The continental blockade established by the Prophet after the battle of Badr, was slackened; then his death suddenly stopped business going to Mecca. One after another the neighbouring fairs, e. g. that of ʿOkāq were suppressed — at least there is no further mention of them after the fāh of Mecca. Deserted by commerce, the barren valley of Mecca, strangled as in a vice between two ranges of bare hills, could not maintain its former inhabitants, all brokers, caravanners and traders for generations past. Gradually shops and offices closed and their owners came to Medina, now the capital of the caliphate, to rejoin their fellow-citizens who had made new positions for themselves there.

The old Kūraish had foreseen this decline. They had talked of it to Muḥammad when their ardent fellow-townsman had urged them to adopt Islam. These shrewd conservatives were reluctant to upset the religious and social institutions to which they attributed the prosperity of their town. Allāh will not fail to provide”, the Prophet replied; “He will furnish them ample compensation; he will enrich them of His abundance when He thinks the time has come” (Kūran ix. 28; xxviii. 57). Among the less prominent Kūraish families a small number were ready to await the promised compensation on the spot. Apart from the period of the annual pilgrimage, the town did not begin really to revive until the day when under the Omayyads the Kūraish officials, enriched by the exploitation of the provinces, came to enjoy their retirement in Mecca, spent their wealth there and as a result attracted the poets and musicians whose presence was to turn the sacred city into a city of pleasure.
But the attraction exercised by the new capital in Medina was not at first very great. After the election of Abū Bakr, the old members of the Dār al-Nadwa or grand council of the Kuraish flocked thither, all the merchant princes of Mecca. They understood the necessity of becoming reconciled to the old friends of the Prophet, now the arbiters of power, while waiting the time when they could supplant those novices in the art of ruling. The reiterated appeals of the Kuraish to emigrate in the direction of Allāh and his Prophet, had for long fallen on deaf ears. It required the revolution, the economic crisis produced by the triumph of Islam and the prospect, depressing to business men of "eating their capital" by letting it lie unproductive in their strong boxes. This prospect led them to discover the economic advantages and the spiritual merits of the "Hijja", the migration of the Muslims. But these "emigrants" of the eleventh hour were not destined to find a suitable milieu for their business enterprise among the Anṣār. The Omayyad and Makhzūmi financiers did not succeed in setting up their offices once more in the oasis of Yathrib. The future had something better in store for them.

This was the period of the conquests which by opening up the eastern provinces to them was to introduce them to a stage of new and manifold activities. Henceforth they were to command armies, to govern provinces and for several centuries, to rule the whole Arab empire. One marvels at the number of remarkable men who sprang from this city of shop-keepers and tried their skill in careers hitherto unknown to them, such as governors and generals. What is no less surprising than the novelty of these roles is the aptitude and decision of character with which they filled them — and this prevents us from regarding the Kuraish founders of the caliphate as mere novices. The fact is that for them, commerce on a large scale as it had been practised in Mecca before the Hijja had been for them a long preparation for a political career.

When therefore Muḥammad thought of entrusting the destinies of Islām to them, his patriotism had not exaggerated the capacity of his fellow-citizens. He had the ability to foresee that the prestige of Mecca, the influence which it had exerted in the centuries before Islām, had gone to give the Meccans intellectual predominance. In the period of paganism, the Kuraish had completed their education. It was to fit them to govern the Arabs, at a time when the latter were dominating the world. They ceased to be Meccans but they remained Kuraish." (Wellhausen, Reste arabischen Heidentums, 2, p. 94).

This brings us to say that after the creation of the caliphate, the history of the tribe of Kuraish is separate from that of the town of Mecca. It develops at first in Medina, — which by the first century A.H. had become as Kuraish as Mecca, — then beyond Arabia, in Syria, Damascus, Bagdad and in the conquered provinces. The history of the Kuraish dīnāpora becomes merged in that of the Kuraish dīnāpora or descendants of Muḥammad. From these princely lines, those descended from 'Ali and Fāṭima, after the overthrow of the 'Ali caliphate in the 1st Rāy, alone returned to Arabia, to settle, not in Mecca but in Medina. They found there several Ḥāshimī families, among others the descendants of Dīfār b. Muḥammad. The Ḥasanids bore the stock from which descended the dynasty of Grand Shāfs of Mecca. The Ḥasanids held for some time the amirate of Medina. Another 'Alīid dynasty, that of the Zaidīs, descended from Zaid, grandson of Ḥusayn b. 'Ali, is still ruling in Yemen. All these 'Alīid families soon multiplied enormously within and beyond Arabia. They produced the innumerable shāfs and sayids who filled the Muslim world. In Arabia some returned to the nomadic life and there we have the spectacle of Ḥasanid shāfs leading bands of brigands, and infesting the main routes.

In the xiii-th century A. D. the Spanish traveller Ibn Djuibair (Ribâd, ed. Wright, p. 73—74) testifies to the great number of Ḥasanids, Ḥusaynids and Dīfārárids scattered over the Hijāz, as well to the depths of poverty into which many of them had sunk. Even before this time, if we may believe a text quoted by Snouck Hurgronje (Mekka, i. 42) we would have to admit that as a result of the continual revolts of the 'Alīids and the rigorous measures they provoked against them, the Kuraish element in the population of the interior had been practically exterminated. Yet they discovered everywhere in Syria the presence of Arab tribes notes in Southern Lebanon, towards Saida, a Kuraish group, but does not mention whether it was important or not. The geographer Hamdāni mentions others in Najjd, at Tabāla and at other parts of the Yemen. Those of Hamdāni were renowned for their bravery (Djassarīt al-'Arab, ed. H. D. Muller, p. 119, 122, 165, 194, 258). Among the tribes settled in the east of Mecca, Barckhardt (Voyages en Arabie, transl. Eyries, ii. 307) mentions Kuraish. According to him: "of this famous tribe there are only left: 300 men capable of bearing arms. In spite of their great name and ancient fame, they are little thought of by the other Beduins. They camp in the neighbourhood of Mount 'Arafat." At the present day, apart from the Sharifs, as regards true Kuraish we find only the Shabi at Mecca, the guardians from time immemorial of the keys of the Ka'ba, at least if we do not accept their problematical descent from the anti-caliph 'Abdallāh b. Zabair (q. v.).

Bibliography: This is given in the article MECCA.

KURAIŠH. B. BADRĀN, 'ALAM AL-TAMM, ABU l-MASĪH, an 'Ukālid or descendant of the Prophet. After the death of Badrān in 425 (1033/1034) Kuraish was recognised as lord of Nāṣibin. In the struggle between his two uncles, Kārwāsh (q. v.) and Abū Kāmil, he took the former’s part. After the death of Abū Kāmil in 443 (1052) al-Mawṣil and Nāṣibin were united under the rule of Kuraish. Soon afterwards 444 (1052/1053) he became involved in a war with his brother al-Muṣallād and another 'Ukālid, Kāmil. The war did not last long and the situation remained unchanged. In 446 (1054/1055) Kārwāsh recaptured the town of al-Anbār, which really belonged to the 'Ukālis but had been seized in Kuraish’s time by al-Bassārī (q. v.), governor of the province of Bagdad, and had the khāla read there in the name of the Saldjük Toghrilbeg. In Dhu l-Hijja of the same year however al-Bassārī advanced on al-Anbār and laid siege to the town, which very soon surrendered to him. When Toghrilbeg entered Bagdad 447 (1055) al-Bassārī left the capital, but when he
reappeared at the head of a large army and declared for the Fatimid caliph al-Must`an, Toghrilbeg sent his son-in-law Kutalmush against him. The powerful Amur Dubais b. 'Abd b. Mazyaq had joined al-Kaṭarqī into which Kuraish who had long been devoted to the Awar had joined the latter. At the end of Shawwal 448 (beg. January 1057) al-Baṣrī and Dubais inflicted a severe defeat on the troops of Toghrilbeg near Sindiār; Kutalmush escaped but Kuraish was wounded and had to surrender. Toghrilbeg himself then took the field and seized the town of Takrit which belonged to the 'Ukāids. After his brother Yaqūt had joined him at the beginning of 449 (1057), al-Mawsil also was occupied whereupon the Sultan himself set out for Nasībin and sent his general Ḥazārasp with another army against Dubais and Kuraish. They were defeated and had to sue for peace. While Dubais returned to his own territory, Kuraish joined al-Baṣrī who had settled in al-Raḥilā. In 450 (1058) the two later regained Mawsil, but again abandoned it on the approach of Toghrilbeg from Baghdaḍ. The Sultan, who did not find them in Mawsil set out after them and followed them to Nasībin; when however he had to turn his attention to his brother Ibrahīm whom he suspected of rebellious intentions, al-Baṣrī and Kuraish advanced against him. The followers of the Sultan tried in vain to defend the capital; in Dhu `l-Ka`da of the same year (Dec. 1058) al-Baṣrī entered Baghdaḍ and the caliph al-Kā'im had to take refuge with Kuraish, who brought him to safety. Al-Baṣrī could only hold out for a year, when Toghrilbeg put an end to his rule. Kuraish died in 453 (1061) as lord of Nasībin and al-Mawsil at the age of 51.

(K. V. Zetterstén)

**KURAIZA, BANI, one of the three Jewish tribes of Yathrib,** related to the Banū `l-Nadr. The two tribes together bore the name of Banū Darī, and were said to have settled in Yathrib much later than the other Jews. In what proportion their original Palestinian stock had intermixed with the Arabs, it is not possible to say, but al-Yaqtīnī's statement that both tribes were only hebraized Dhu`lham (Kuṭa`da), is incredible.

The Banū Kuraiza consisted of three branches: Banū Kā'ba and Banū Amir; they resided outside the city on the southern side, along the Wadi Malāk, with the sister-tribe of Hadal, having the Aws Allāh on the N.W., the Banū `Abd al-Ashḥal on the N.E. and the Harrā on the E. Landowners and cultivators, the Kuraiza had brought agriculture to a high degree of development, and lived prosperously on the products of the soil and their commerce. At the time of Muḥammad's arrival in Madina, they had 750 warriors, and possessed large stores of arms and armour.

Allied, like the Naḍīr, to the Banū Aws, they had fought on their side in the battle of Bu'āth [9.v.], which took place on their territory a few years before the Hijra.

In Muḥammad's communal constitution they, like the other Jewish tribes, are not mentioned by name, but appear only as allies of different sections of the Aws (art. 25, 30, 31 and 47).

Their attitude towards the Prophet was hostile from the first, like that of the other Jews (see above, article KAIKĀZ), and ap. Ibn Hishām, p. 352, a list of Muḥammad's Kuraizā enemies), but no definite break took place until the siege of Madina (Dhu `l-Ka`da, 5 A.H.), when the Kuraiza, who in the beginning had contributed spades and baskets to the digging of the trench, drew their support. According to tradition Ghuaybī b. Akhtāb, sent by Abū Sufyān, had succeeded in gaining the support of their chief, Ka'b b. Asad, despite a written treaty of alliance with Muḥammad. The Prophet sent Sa'd b. Mu`āwīya, Sa'd b. Ubāda and two others to ascertain their attitude; they returned after a stormy interview, confirming the Kuraiza's defection.

The latter seem to have planned an attack on Madina, together with the Kuraiza and Qaṭaṭāfān; it was not executed through lack of mutual confidence, and their only exploit was an unsuccessful night-expedition of eleven men. Having failed to reach an agreement with the Kuraiza, who refused to give them hostages in exchange for military support, the Kuraiza finally abandoned the campaign, thus hastening its end.

- This traditional version is open to many doubts: the existence of a particular treaty with Muḥammad does not seem plausible, as his relations with the Kuraiza were already defined by the communal constitution, it was probably intended to justify the action taken against them. Their support of the Kuraiza appears to have been of a purely negative character, on the other hand it is easy to see how the important position they occupied on the side of the town not defended by the trench practically put Madina at their mercy. One of the fortresses incorporated in the line of defence, Rādīdī, belonged to Jews (tribe unknown), and formed a dangerously weak point in the Muslims' position. All these circumstances caused much anxiety and hatred of the Jews during the siege, suggesting immediate action against them: on the very day of the Kuraiza's departure Muḥammad was ordered by Gabriel not to lay down arms until he had punished the Kuraiza; the siege of their fortresses began the same evening (23rd Dhu `l-Ka`da), and lasted 15 or 25 days, with an active exchange of arrows, stones and strong language, but no casualties.

Having at last decided to surrender, the Kuraiza asked for the same conditions as obtained by the Banū `l-Nadr, but were told they must yield without condition, giving up all they possessed. They turned to their ally and protector Abū Lubābā b. 'Abd al-Mundhir, hoping through his intercession to emigrate, but he gave them to understand that the situation was desperate, and that inevitable surrender would be followed by destruction. His repentance for having revealed to them the lot, seems to show that Muḥammad did not intend the Kuraiza to suspect how they would be treated; the Prophet's conduct on this occasion is far from clear and certainly not blameless.

Having surrendered without attempting any resistance, the Kuraiza were separated from their women and children, and put under custody. The Aws interceded on their behalf, and obtained that
their fate should be decided by their own chief, Sa'd b. Mu'âdh; the latter, however, not daring to cross what he knew to be the Prophet's wishes, decreed that all males who had reached puberty should be slain, and the women and children sold as slaves. On the morrow, in the market-place, from 600 to 900 men were beheaded, the execution lasting all day. It is worthy of note that only four chose to save their lives by conversion.

The women and children were sold at auction, mostly in Madina, the remaining in Syria and Najd, and the price divided in the usual way of spoils. Their land was partitioned into five portions: one went to Muhammad, and the various families, divided into four groups, drew lots for the rest. Among the captives Muhammad chose for himself Rafaela bint Zaid al-Nadariya.

The exceptional cruelty shown to the Kuraia, as compared with the other Jewish tribes, is due to the fact that they had remained alone and defenceless, and to their warring, feebly, and altogether unwarlike behaviour. This last circumstance makes it all the less probable that they ever took an active part in the hostilities against Madina.

Several passages in the Kūrān are referred to the Kuraia; see especially viii. 60 and xxiii. 26—27.

For references to Bukhārī, Muslim, Ibn Hanbal, Abu Dāūd, etc., see Wensinck, *A Handbook of Early Muhammadan Tradition*, Leiden 1927, under Kuraia.

(V. VACCA)

**KURAMA.** According to Radloff (Versuch eines Worterbuches der Turk-Dialekte, St. Petersburg 1890, vol. ii., p. 924) "a Turkish tribe in Turkistan"); the same authority gives the Kirgiz (i.e. Kazak) word kurama (from kura, "to sew together pieces of cloth") with the meaning a "blanket made of pieces of cloth sewn together". In another passage (Aus Sibirien, Leipzig 1893, i. 225) Radloff himself says that the Kurama are "a mixed people of Usbeqs and Kirgiz" and their name comes from the fact, asserted by the Kirgiz, that "they are made up of patches from many tribes" (kura to "patch together"). According to Radloff, the Kurama are "a settled tribe" between Tashkent and Khodjand, to be more accurate, on the river Angren (a corruption of Ahengerin) south of Tashkent. In Russian sources we find it stated as early as 1875 that the Kurama first arose in the xvii century; the same view has been put forward by Aristov (Zametki ob etnografickom sostave' turyshskikh plemen, etc., St. Petersburg 1897, p. 112) and more recently by I. Zarubin (Spisek narodnosti Turkestanskogo Kraia, St. Petersburg 1925, p. 12). But as early as 1045 (1635—1636) in the description of the wars between the Kazak and Ozbegs on the Angren we find the "leaders of the Kurama" (tardaruni Kurnâma) mentioned (Mahmûd b. Wali, Bahr al-Aurar, Ind. Off. 575, f. 1195). Under the rule of the Khâns of Khokand in the viiith century the word Kurama is used not only as an ethnographic but also as a geographical term and the name of an administrative division. The road from Khokand to Tashkent over the Kendir-Dawar pass was called the Kurama road (Kūk-ī Kūrama, e.g. Tūrikī Shāhīrūkhī, ed. Pantusow, Kazan 1885, p. 238). The Kurama were ruled by a Beg who lived in the fortress of Kercuci (in the written language Kürti; on Russian maps also Kelyäuîi). This use of the word Kurama was retained for some time under Russian rule. In the division of the territory (oblast) of Sir-Darya into districts (ueld), what later (after 1886) became known as the "district of Tashkent" was called the "district of Kurama" (Kūraminskii ueld). The centre of government of the district was intended to be the little town of Toi-Tube founded in the reign of Madi Kūhân (1822—1842; cf. KHOQAND) here are the ruins of a mediaeval fortress examined in 1885 by Professor Veselovskiy; but the district headman (uezdny naal'nik) actually lived at Kūyluk on the Čirik. Under Russian as under Khokand rule the district of Kurama was of considerable economic importance as a centre of rice-growing. Russian ethnographers put the Kurama in a class by themselves as descendants of nomads (Kirgis, i.e. Kazak) who have become agriculturalists (Sarts, q.v.). In spite of the adoption of the Sart mode of life, the Kurama never quite lost their particular characteristics inherited from their nomadic ancestors.

To this day this can be noticed among them; unlike the Sarts, the Kurama live, like the Kazak, in yurts; their wives as with the Kazak are unveiled. In other respects however the Kurama have advanced further from their nomadic ancestors than they had at the beginning of Russian rule. At that time Radloff and other students could still distinguish among them the division into families. According to Radloff there were five of these: Djalair, Telau (this name is still borne by a village inhabited by the Kurama), Tama, Djagaltai, and Tarakli. This division is now quite lost; where traces of it still exist, marriages between members of one family are no longer — as among the Kazak — considered illegal. The fact that the Kurama are a mixed people can still be recognised; besides the mixture of different stocks among them there has been, according to Zarubin (op. cit.) a mixture of different social ranks. The Kurama themselves do not use this name although they do with the addition of another ethnic (Kirgiz-Kurama, Sart-Kurama). The number of the Kurama in the district of Tashkent (formerly Kurama) was in 1917: 52,335; in 1920: 49,697 (but in recent years there has of course been a decline in numbers of the population in Turkistan generally on account of the great famine). There are further some 9,330 Kurama in the district of Khodjand. The word with the meaning of "mixed people" is also found in the area where Turkman languages are spoken, but these Kurama have no connection with those on the Angren.

**Bibliography:** (in addition to works mentioned above): Kostenko, Turkestanskiy Krai,

KURĀN (also GURĀN), SHAHS AL-DIN AḤMAD B. ISMĀʿĪL, Molla, a celebrated Ottoman jurist and author. Molla Kurānī belonged to Shehzādī [q.v.] in Kudistān. He studied in Cairo, where he met Molla Vekān (i.e. Mīhmed b. Er-magħān b. Khāli, cf. Taškūpruz-Ẓaḏḏī, i. 99 sqq.; Saʿd al-Dīn, i. 438 sqq.) who brought him to Asia Minor and introduced him to Sulṭān Murād II. He was appointed professor at the Kapūículo and later at the Bāyazīd mosque of Brussa and then entrusted with the education of prince Mīhmed, afterwards Sulṭān, who was then governor in Maḥnis (cf. von Hammer, G.O.R., ii, 244 sqq.). When Mīhmed came to the throne, Molla Kurānī declined the vizierate offered him, but took the office of kāḏer-ʿasḵer (855 = 1451). When deprived of this office, he went as kāḏer and administrator of the pious foundations to Brussa, but came into conflict with the Sulṭān, whom he always met boldly, was dismissed and returned to Egypt. Sulṭān Kāhīb received him with honour and distinction. Mīhmed II recalled him in 1467 (i. 497) and in 1485 (i. 480) made him Shaḵkh al-ʿĀlā in Istanbul. Here he died in 1488 (1493) after a long illness. Sulṭān Bāyazīd II paid his debts amounting to 180,000 ʿaḏi [q.v.] out of the treasury. Molla Kurānī, who is described as a tall man with a long beard, was buried at Yūkseḵ Ṭaḏḏī in Galata in the court of a mosque founded by him (cf. Hāfiz Ḥusain, Ḥadīqat al-Dawwīn, i. 207; J. v. Hammer, G. O. R., ix, 89, No. 445). A quarter of Istanbul bears his name but it is usually pronounced Gūrānī. Molla Kurānī wrote a number of poems and important works of exegesis, of which the most important are Ẓāḥiyyat al-Amāni fi Tašṣir sabḥ al-Makhtūm and Ṭaḥa al-Muṣṭaq al-ʿĀṯār. Taḥa Rūḥ al-Makhtūm on Baḵšī’s work on Ḥadīṣ and other works on Kurānic studies. Molla Kurānī was a Šafīʿ but became a Ḥanafī at the request of Murād II.

Bibliography: Taškūpruz-Ẓaḏḏī, Shaḵkī Ṭal Nāmāniya, ii. 102—111; Saʿd al-Dīn, Taṣṭi al-Tavārīḵ, ii. 441–449 (with numerous anecdotes); Brūṣaftī, Ṭal Mīhmed Ṭāhirī, ʿOthmānī Muʿāʾīlī, i. 3; Ḥanīfa Sānūsī, Istanbul 1334, p. 334 sqq.; J. v. Hammer, G. O. R., i. 532, ii. 244, 589; Brockelmann, G.A.L., ii. 228 sqq. (with list of some of his works, more fully in Mīhmed Ṭāhirī, op. cit.); Rūḥ, Taḥa al-Maḡāḵā, Istanbul n. d., p. 20 sqq. (Franz Bucinger).

KURBĀN, sacrifice. The word goes back to the Hebrew kurbōn, perhaps through the intermediary of the Assyrians (cf. Mingana, Syriac Influence on the Kurān in Bulletin of the John Rylands Library, vol. xi, No. 1, p. 85; S. Frankel, De vocabulis in coram peregrinis p. 20). The language of the Kurān, as is well known, shows a preference for religious technical terms ending in -ān and some of them are not always used with their original significations. This is true of kurbān, which occurs three times in the Kurān. In Surā iii. 179 and v. 30 it obviously means sacrifice. In Surā xlii. 27, however we read: *Did those help them, whom they had taken for kurbān as gods to the exclusion of Allāh!* Here the word must be more or less synonymous with "gods". Probably it has a meaning which is connected with the Arabic _itrāb (see below); the commentators take the same view and the word is explained as "mediators" (cf. the article SHAKA). The word hardly seems to occur in classical hādīth. The ʿĀzīs mentions two traditions which are striking enough: "The characteristic of the community (i.e. the Muslims) lies in the fact that their kurbān is their blood", i.e. instead of sacrifice they have offered the blood of their martyrs. And the other: "The ʿalāt is the sacrifice of every pious man". We may suppose there are apologetic tendencies in both traditions.

The term also came to be applied in Muslim ritual to the killing of an animal on the 10th Dhu 'l-Hijja, and the whole celebration on this and the following six days is called 'I'd al-Kurbān (cf. 'I'd al-ʿAshīr, in Turkish speaking countries Kurban-Baʿram (cf. Bahrām). In ʿĀṣīr-Arabic the word means the eucharist. — In conclusion it should be pointed out that there seems to be a genuine Arabic word kurbān, plural kurbanī, which means the courtiers and counsellors in immediate attendance on a king; the word probably comes directly from kurbān to be near (see above). (A. J. Wensinck)

KURBUKA, ABD SĀDQ KĀWĀM AL-DAWĀLI, lord of al-Mawsil. In the war waged by Tutush b. Alp Arslan, Barkiyārīk’s uncle [q.v.], against the two rebellious governors Aḵ Soḵqar and Būzān which ended with the capture and execution of these two, the amīr Kurbūka who had been sent to their help by Barkiyārīk was also taken prisoner. After Tutush had been taken in Safar 488 (February 1095) (cf. Barkiyārīk), Kurbūka was released by his son Riqāwān, and with his brother Aṯūntash collected a band of adventurers and occupied Harrān. Muḥammad b. Muslim b. Kurāšī lord of Našibin then applied to him for help against his brother ʿAlī who had been appointed governor of al-Mawsil by Tutush; Kurbūka made an alliance with Muḥammad but had him murdered after he had seized Nišābin and set out against al-Mawsil, which ʿAlī had to surrender after a long siege (Dhu ʿl-Кaḍa 489 = Oct. Nov. 1096). After the capture of al-Mawsil he disposed of his troublesome brother Aṯūntash and occupied al-Raḥla. In 491 (1098) Barkiyārīk sent him with a large army to retake Aṯūntash [q.v.] which had just been conquered by the Christians. Edessa, which had also just been taken from the Muslims, was besieged by Kurbūka on the way but he had to give up the siege and soon afterwards appeared before Aṯūntash. When the Christians made a bold sortie against the besiegers, he inflicted a disastrous defeat on them in spite of their superior numbers; Kurbūka’s own conduct is said to have contributed towards the disaster, as his arrogance irritated his commanders so that they only awaited a favourable opportunity to abandon him. In the battle between Barkiyārīk and his brother Muḥammad in Dhu 493 (May–June 1100) which ended in the defeat of the former, Kurbūka commanded Barkiyārīk’s left wing. In the following year he was sent to Aṯūntashī, where he conquered the greater part of the country but when he was besieging the town of Khwājī, he fell ill and could not continue the campaign. He died in Dhu ʿl-Кaḍa
495 (Aug.—Sept. 1102) after appointing Sončordja his successor. 

B) Thus (for the Eastern Turkish:ṣr, "guard, defence", and suffix -li forming nouns indicating trades) he who bears arms, the sword, chief huntsman (Pavet de Courteille, Dict. Turk. Or., p. 425), armouër; sword-cutter; troop of cavalry; captain of the watch; leader of a patrol; gendarmerie; governor of a fortress or of a town (Sulaimān Efendi, Lughat-i Ḏhāḥīrāt, p. 232); sentry, sentinel, guard, inspector (Vambéry, Caghataische Sprachstudien, p. 316).

Under the Şafavids, this word, borrowed by Persians, was applied to the bodyguard employed to protect the king's person, who accompanied him to war. After the battle of Căldără, those who were taken prisoners were led before Selim I and massacred (J. von Hammer, Hist. de l'empire ottoman, iv. 200).

(CL. HUART) 

KURDISTAN, "land of the Kurds". The name can be regarded from two points of view: historical and ethnographical. 

I. From the historical point of view the term Kurdistān seems to have been invented by the Saldjiaks as a name for the province including the lands between Aḏharbājān and Luristān (Senna, Dainawar, Hamadān, Kirmānsjāh etc.) as well as a name joining a joining areas to the west of Zagros (Shahrizār, Khuran = Košt-sanjak). The capital of the province of Kurdistān was first Bahār (N. E. of Hamadān) and later Sulţānābād of Čamāştāl (near Bāsūtān). Its 16 cantons are enumerated by Hamd Allāh Mustawfi, Nuzhāt al-Kulūb (ed. Le Strange, p. 168). 

This author also refers to western Kurdistān as Wilūfīyāt-i Arman and Dijzara (Arbil and Amidiya forming part of the latter). In the Mongol period, we have in general little information about the mountainous region containing Hakkarī, Bohtān and Armenian Anti-Taurus. It is possible that in the west the term Kurdistān was at first applied to the region of Darsim, for according to the Sahrāf-nāma, i. 163, in official documents (parvānadāt wa-akhlām) as well as among the Kurds themselves, the term wilūfīyāt Kurdistān was applied particularly to the sief of Camishgazak. But by the time of Timūr, the Zafar-nāma, i. 686, speaks of the Amir of Bīldis as the most important man in all bilād-i Kurdistān. In the history of Selim I (Selim-nāma, MS. of the Bibl. Nat. Pers. 285, fol. 109, v.) its author Hakim Idris says that after returning from Tabriz, Selim ordered him to go through the whole country "starting from the beginning of the land of the Kurds (bilād-ā Ākrād), i.e. from Urmia and Uşhā to Amīl and Malālyā"

in order "to win over the princes and rulers of the country of Kurdistān (tuʿlīf-i muṭlaḵ wa-hukkām-i muqált-i Kurdistān) and to ratify treaties and the protection granted them" ("wāḥād wa-mīnān-i ʿisān"). Thus the name of the became generalised and applied to the rest of the Kurdish Kurds, in Turkey as well as Persia, cf. the map in the Sahrāf-nāma, and the Travels of Evišā-Čelbi, iv. 74—75: "Kurdistān diyaṭ. Gradually the affairs of Kurdistān were dealt with by the pashas of Diyarbekr, Van, Bagdād, Erzerum etc. (cf. Sāmi Bey, Kāmān al-Aṭān, v. 3540). Towards the middle of the sixteenth century the administrative term "wilīyat of Kurdistān" is applied to the lands of Diyarbekr, Muğl and Darsim; but as a general rule, official nomenclature was based on the names of capitals and towns. A list of geographical terms (I have been unable to consult Mokrīnī Khalīl Bey's article on the scope of the term "Kurdistān" in Yeni-Türk, 1925, N. 21). 

II. What has been in geographical applications of the term Kurdistān, it is evident that it has nothing to do with the actual dissemination of Kurdish people (cf. the article Kurds). The word Kurdistān in its common acceptance means simply the regions inhabited by Kurds, cf. the Persian expression Kurdistān-i Khorāsān referring to the Kurd colonies in Khorāsān. Now the country continuously occupied by Kurds is a strip of territory running from S.E. to N.W. Its length is about 600 miles (Luristān-Malāyţa) and its breadth averaging 120 to 150 miles is greatest (250 miles) on the line Mawsil-Arar (cf. Dījhān-nāma, p. 445—449). 

Before 1914, the Kurds were divided among Turkey, Persia and Russia. As a result of the treaty of March 16, 1921 concluded between Moscow and Angora, the majority of the Transcaucasian Kurds are now in Turkish territory. On the other hand by the final settlement of the Mawsil problem, Turkey lost the Kurds of this wilāyat who are now in Irāq. In consequence the position at the present day is as follows: 

A. In Persia where the position is best known, the Kurds occupy the provinces of Kirmānsjāh [q. v.] and Senna [q. v.] as well as the southern part of Aḏharbājān (cf. SAWIJ BUŁAK) and the canton of Biedān. The Kurds also occupy the mountainous region of the districts of Urmia (especially the cantons of: Uşhā, Mergewer, Dastā, Tergewer, Biadāt), Salmaḳ [q. v.] (the cantons: Somāt [q. v.], Čahriḵ, Kīb (the cantons: Koštār, Aland) and Māmū (where the Kurds live on the slopes of Ararat). We find colonies of Kurds in Khorāsān (the khānats of Kučān, Budjārd and Daragaz) in Kirmān, Fārs, northern Luristān, Puqht-i Kāh, Warāmīn (near Teherān; cf. Brugsch, Reise, ii. 496), Kazvin, Mandji (cf. Rabino, R.M.M., xxvii., p. 259) etc. The number of Persian Kurds may be put at not more than 500,000. 

B. As regards TURKEY, it is at present (1927) impossible to evaluate fully the repercussions of the war on the geographical distribution of various peoples, such as the flight of the Kurds before Russian troops, the deportation of the Armenians, the expatriation to the ʿIrāk of the Nestorians of Dījlāmger, the punitive expeditions of the Turks into Darsim (1921) and to Kharpū and Diyarbekr (1925). The map given by Sir Mark Sykes
settled there in the wilayet of Aleppo (especially at Kilis) before the war numbered 125,000 according to the Russian Consul Zimmermann (cf. also CuiNet, ii. 124; Hartmann, Das Livia Halab, Berlin 1894, p. 83, 92, 95, 96, 98, 99, 100 and 105). According to the "K. M. M.," i., p. 317 there are 20,000 Kurds in Syria under the French mandate (to the north of the A'Alawis and at Bellān). There is also a Kurd quarter in Damascus. On the Kurds of Sindjar, where the administrative position is not quite clear, see the articles of Nazerīdī.

F. The Kurds had also advanced far to the west. In Balādistan (q.v.; i., p. 636) there is an important Kurd tribe settled among the Bahāris (and speaking Baharī). Recent researches (Tedesco) have ascertained a certain affinity between Kurdish and Balārī. As regards Afghanistan, the Shahrāf-nāma, i. 327, noted the move to Gharzāstān of a part of the Cigānti tribe. Morgenstierne, Report on a Linguistic Mission to Afghanistan, Oslo 1926, p. 5 thinks it possible there are people speaking Kurdish west of Herāt.

Bibliography: Cf. the articles ARMENIA, BOHTYAN, ŞÊXWÊD-JULAK, ŞÊXWÊ, ŞÊXWÊ, SHÊKH, SÎWÔ, SÎWÔ and SULAMAINYA. There is an excellent bibliography of Kurdistan to 1856, in Lerch, Ifzedewaniya, St. Petersburg 1856, i., p. 5-19 (it is not included in the German translation).

The only general description of all the lands inhabited by the Kurds is in the monumental work of Ritter, Erdkunde, 1835, viii., p. 392-400 (Kurds of Khorasan), 1840, ix., p. 612-762, 1006-1048 (Persian Kurdistan), 1843, x., p. 690-734, 769, 1008 (the sources of the Tigris and Euphrates), 1844, xi., p. 128-146 (Western Kurds), 709, 749, 1007, 1026 etc.

C. The Kurds of al-"Irák (in the former wilayet of Mawsil) according to the census of 1925-1924 number 494,007; they occupy the whole of the liwā' of Sulaimaniya (189,900), form a considerable majority in the liwā' of Arbil (170,650 out of 191,780) and a majority in Kirkuk. The ethnographic position and the migrations of the tribes are summed up in maps No. 6 and 8 prepared by the Commission of Enquiry of the League of Nations (c. 400, m. 157, 1925, viii.).

D. In the Russian Transcaucasia the Kurds of Erivan and of Karç in 1910 numbered 125,000 including 25,000 Yazidis. Of the Kurds (speaking Kurdish) only a small number are incorporated in the Soviet Republic of Armenia. On the other hand the old Russian censuses did not reckon separately the Kurds of the cantons of Zangazur, Djawanshir, Djibar-d and Aresh in the government of Elizawetpol (= Gaudja). These Kurds of Gaudja (cf. the evidence of Arab authors on the presence of Kurds in Arta) now form a separate canton (tyaql) in the Soviet Republic of Adharbajjān; but it seems that their language is the ordinary Turkish of Adharbajjān (cf. Cursin, Azerbaidjanskiye Kuri'd in izv. Kawk. Istor.-Arkeol. Instituta, Tiflis 1925, iii.).

E. As regards Northern Syria, the Kurds long
KURDS, an Iranian people of Nearer Asia, living in Persia, Transcaucasia, Turkey and al-Irāq (cf. KURDISTAN). Before 1914 the number of Kurds living in compact bodies or isolated colonies (Khordis, Asn Minor, Cilicia, southern Syria) was estimated at two to three millions.

Although many travellers have passed through Kurdistan and there are a large number of important works dealing with the Kurds from the linguistic, historical, ethnological and political point of view, we still lack a general study devoted to this people. Its preparation is rendered difficult by the fragmentary and sporadic character of our information and by the diversity of the methods employed by the writers on the subject.

A. Origins.

The classification of the Kurds among the Iranian nations is based mainly on linguistic and historical data and does not prejudice the fact there is a complexity of ethnic elements incorporated in them. The type of the latter varies visibly from place to place. It is probable that the expansion of the Kur element took place from the Caucasus (Western Persia) to west (Central Kurdistan) but there is nothing to have preserved the existence in Central Kurdistan, before the coming of the Kurds, of a nationality of different origin but bearing a similar name (Kurd) which later amalgamated with the Iranian Kurds.

On two Persian inscriptions dating from about 2,000 B.C., Thureau Dangin (Revue d’Assyriologie, v. 99; vi. 67) found a country Kar-da-ka mentioned (in which word the editor tells me privately the initial is k and not ḷ and the function of the element ka is uncertain). This country was beside the “people of Su” (cf. Z. A., xxxv, 230, note 3) which Driver locates south of Lake Van; there is an old fortress Sūs in the region of Bādis (Sharaf-nāmā, i. 146). A thousand years later Tiglath Pileser waged war on the people called Kur-ki-e in the mountains of Aza, which Driver (ibid., p. 400) identifies with the modern Hāzū (Husun). The reading Kur-ti-e is not certain however.

Herodotus in the fifth century mentions no name like this, but, according to him (iii. 93), the thirteenth name of the Achaemenid empire included next to the Armenians a Pādrūk which Noldeke (Gramm. d. neusyrän. Spr., Leipzig 1888, viii.) and Kiepert (Alt. Geogr., § 81) have connected with the name of Bokhātān (= Bohātān).

The retreat of the Ten Thousand described by Xenophon (401–400 B.C.) made famous the name of Carduks (Kāpūsya) whose country lay to the east of the Kentrites (Bohātān). From this time onwards we continually find the name on the left bank of the Tigreis near Merv (ibid. [q.v.]). In classical authors the country became Cerdicus (on the numerous forms of this name probably produced by the difficulty of reproducing the Semitic ḷ, cf. Driver, op. cit.). In Aramaic the district was called Beth-Kardā and the present town of Dżarizat Ibn ‘Omar, Gazarkt of Kardā. The Armenians had the name Kordudh, the Arabs (Baladūh, p. 176; Tabari, iii., p. 610), Bādkūr (Kardāi). According to Yākīt (iv. 56) who relies on the authority of Ibn al-Athīr, the canton of Bādkūr formed part of Dżarizat Ibn ‘Omar, contained two hundred villages (al-Thamānī, Dīrūt, Fīrūt-šāhr) and was situated on the left bank
of the Tigris opposite Erbil on the right bank (cf. the full analysis of the texts in M. Hartmann, *Kurdistan*, p. 33–35). Later, the name which was only applied to the district *di*-appears from Muslim terminology and is replaced by Džazar Ibn Omar, Bohūn etc. to the Armenians and Arabs as the territory of Kürd in the strict sense had a very limited application. We do not know the exact frontiers of the province of Corduene; its three towns, Sereč, Sanaka and Pinaka (= Finik) lay on the Tigris, but the statement of Strabo (iv. 12, 3) is remarkable, according to which the term *Kúrḍ* was sometimes applied to the mountains between the modern Djuflan and Mābūs.

Now, who were the K̲ar̲š̲er̲ez̲̲es̲ whose name undoubtedly survived in the later names (the termination -ez is the Armenian plural in -ezh, which is perhaps explained by the fact that the Greeks learned this name from an Armenian) according to Xenophon (iv. 3, 4) the Kardochoi recognised neither the authority of King Artaxerxes nor that of Armenia. When in the first century n. c., Corduene was conquered by Tigranes II he had its king Zarbiuzn executed in 115 A.D. the king of Corduene was called Manišas. According to Hubschmann, *Die altarm. Ortsnamen*, p. 239 and *Armen. Gramm.* 1897, iiii, p. 518–520, the province of Corduene was only superficially arménised.

There is nothing truly surprising in finding at the time of Xenophon an Iranian tribe settled to the north of the Tigris, but we have nothing but the evidence of the name from which to judge the etymology of the Kardochi. The name has Semitic analogies (Acad. Assyr. karduū, "strong", "hero", kardū "to be strong"); on the other hand there is a certain consonantal resemblance with the name of a people Kahlid, better known under the Assyrian form *Uraša Uraštū*, in Hebrew Ararat, among the Greeks Καλαδός, Καλάδος and sometimes Χαλαζία. This people appeared in Armenia towards the end of the 1st century B.C. and afterwards established a powerful kingdom in the region of Lake Van which lasted until the beginning of the sixth century. Lehmann-Haupt, *Mater. z. alter. Gesch. Armeniens*, Gottingen 1907, p. 123, sees in them Kahlid immigrants from the west; E. Mayer, *Gesch. des Altertums*, iiii, 1913, § 474 sees their original home on the central Araxes. As a result of the arrival of the Armenians, towards the 7th century, the Kahlid were dispersed and driven towards the mountains (Cyrządch, iii. 1–3). But their name survived in the toponymy of the region north of Lake Van (the Byzantine theme Xαλάδια near Trebizond the town of Kḥlāt = Akyazı, etc.; cf. Belekov and Lehmann, Z. A., 1894, 98; 1895, 84; de Goeje, *ibid.*, xii, p. 100; Struck, *ibid.* xiv, p. 112). Parallels for the name Kahlid have been sought on the other side of the Caucasus: the Georgians are called Khart-ul-Khart-ul-kal (in Svanian k’khv’rd) in Mingrelian, khor-kh’; cf. Adontz, *Armenia v epokhu juzdiniy*, St. Petersburg 1908, p. 398.

Whether we identify the Kürd with the Semites or an indigenous people, it is certain that the land of the ancient Kardouchoi is at the present day one of the principle centres of the Kurds. It has therefore been concluded that the Kardouchoi were identical with the Kurds and this view was still considered axiomatic at the beginning of the 19th century; cf. *Grundrisse d. Iran. Phil.*, ii, 464.

Going a step further the Kürds were directly connected with the Kādā; in his commentary on Constantine Porphyrogenitus, *Cronicae*, B. 13 (713, 11) said "Chalid et Kordi vel Curti Gordyaei idem". A similar opinion is expressed in the title of Lerc’s work (1856), *Recherche sur les Kurdes Iranien et sur leurs Ancêtres, les Chaldéens Septentrionaux*.

A new turn was given to the problem by the re-searches of M. Hartmann, Noldeke and Weissbach, who showed the philological necessity of distinguishing between the stems *Kur* and *Kādē.* These scholars at the same time proposed to recognise the Kürds in the *Kīrēn,* Cyrtii mentioned by classical writers in Media, Persia and Persia (Strabo, xi. 5, 4 and xv. 3, 1). This hypothesis is confirmed by the presence in Fars of numerous Kūrdish tribes in the 8th century (cf. *Kīrānān-i Arabkašk-i Pābak,* translated by Noldeke, Gottingen 1879, p. 37, 43 and the testimony of Arab writers).

The justifiable distinction between the names Kūrd and Kādē does not, however, decide the important question, how the Cyrtii (= Iranian Kürds) came to colonise lands west of the Zagros, the country of the ancient Kārdē and the mountains of the Anti-Taurus as far as northern Syria. The problem still requires careful research. In the first place the Median and Persian conquests must have brought about irremovable displacements of the Iranian peoples. We have an example in the migrations of a part of the Asagartiya whose original home was in Sisītān. In the Assyrian period we find these Saragantes in Media (Zikbitu or Zakritu, cf. Streck, Z. A., 146) and in the time of Darius (Bahistūn inscription 2, 90) their capital was already in the Assyrian plain at Arbela, where Darius had their chief Čirantarākha executed, whose portrait on the rock of Bistūn suggests a Kürdish type (L. W. King, *The Sculptures of Beziata*, London 1907). Between 220 and 171 B.C. we find Cyrtii mercenaries taking part in the wars between Rome, the Seleucids and the kings of Persia (*Lucy*, xii, 58, 15; xxvii, 40, 9; Polybius, v, 52, 7; cf. Weissbach, *Strata-Pauly-Wissowa*, s. v. Cyrtii, and A. J. Reinach, *Les Monnaies de Persiennes, Revue Archéologique*, 1909, p. 115–119). A very interesting state of things is seen from the Armenian Geography of the 16th century, in the case of the province of Kōrēkkh (according to Adontz, *Armenia*, p. 418: Korčk in *Korčč-akhe* where korčč means Kūrd as *arapči* means "inhabitant of Atropaten*.

In the time of Faustus Byzantius (17th century) Kōrēkkh was only a canton near Salmas [q.v.]. As a province, Kōrēkkh stretched from Džižān to Džazar Ibn Omar and included the following cantons of Kōrēkkh, the Kōrēkkh, the Džitak, the Aštān, the Ažār, the Mošul, Otofakkān, Orsirāk (Orsirakh), Karanak (Sarapokh), Čahuk and Little Abak (Hartmann, Bokhtan, p. 93; Hübschmann, *Die altarm. Ortsnamen*, p. 255–259).

We see the changes that were gradually brought about. Of the three districts, Kordukch, Kordik and Tomirikh, which Faustus mentions in place of the ancient Corduene, Kordukh had become a mere canton of Korēkkh and Tomirikh disappeared altogether to the advantage of Kōrēkkh (Kōrēkkh) of which simply upper, middle and lower cantons were distinguished.

Hübschmann (*t.* p. 385) confines himself to the
distinguishing between the Kurdish (Kordhi) or the
Kurdish but in general the linguistic distinction
established by M. Hartmann and Noldeke does
not preclude the existence of hybrid and corrupt
forms (M. Hartmann, l. c., 92: "es gingen wohl
schon früh die Namen durcheinander"). Noldeke
even distinguishes a third group of names: Aramaic
Kartăwĕyi (Arabic Kartawiyā), meaning the true
Kurds; cf. Hoffmann, "Auszüge", etc., p. 207,
note 1639.

We thus find that about the period of the Arab
conquest a single ethnic term Kurd (plur. Ahrūt)
was beginning to be applied to an amalgam
son of Iranian or Turkic tribes. The latter, some
names were autochthonous (the Kardi; the Tmorokhi/
Tamarūyā in the district of which Alkī was the
capital; the Xobārīz [= al-Khuwaihiyya]
in the canton of Khojī of Sāsūn, the Ṭarījūyā
[= al-Ṭarījān] in the bend of the Euphrates); some
were Semites (cf. the popular genealogies of the
Kurd tribes) and some probably Armenian (it is
said that the Mamakān tribe is of Manikonian
origin).

In the twentieth century the existence of an
Iranian non-Kurdish element among the Kurds
had been definitely established (the Gūrānīsīn group).
It is based on the political domination of newcomers
that had been established (at Sulaimāniyya [q.v.], at
Sāwīj-Buškā [q.v.], at Kūtār where we find
remnants of the Kūresīlī [?] in subject to the
Shekākh). Systematic investigation may discover
traces of ancient peoples overlaid by a Kurdish
element giving an appearance of unity.

Genealogies and popular Etymologies.
The Muslim sources and Kurdish traditions do not help us
to solve the problem of the origin of the Kūrs. 
Mas'ūdī already (Murdūj, ed. Barbe
de Meynard, iii. 251) speaks of their descent
from those Persians who escaped from the tyrant
Dāhāḵān. This legend is best known from the
version of the Shāh-nāma (Macan, i. 27–28;
Mahāl, i. 71; Vallers, i. 36, verses 29–38). In 1812
Morier (Second Journey, p. 357) mentions
the celebration at Dāmān (on 31st August) of a
festival commemorating the delivery of Persia
from the tyranny of Dāhāḵān, known as the 'Aid-i
Kurdi, "the Kurdish festival". On the other hand
the Kurds sought Arab genealogies for themselves.
Some (Murdūj, iii. 253) claimed as their ancestor
Rahba b. Nīzār b. Mā'add, others Mūdar b. Nīzār,
both eponyms of the districts of Dīyār-Rahba
(MoSul) and Dīyār-Mūdar (Kaḥḍa). They said the
Kūrs had separated from the Arab stock as a
result of feuds with the Qassāndēs and, having
retired to the mountains, intermingled with strangers
and forgot their mother tongue. Of more interest is
a series of ancestors among whom we find
Kurd b. Mard (cf. ʾal-Maddī the neighbours of the
Kūrs) b. ʾayyās b. ʾiḥarb b. Ḥawāzīn (Mas'ūdī,
ibid., and al-Tantūkh, p. 88–91: Kurd b. Isfandā
ābī b. Manšūshār; Ibn Hawkāl, p. 185–187:
Kurd b. Mard b. Ṭamīr. All these genealogies
may contain a few grains of historical fact (iran-
isation of Semites, intermingling of the tribes of
Zagros and of Fars). Nor is there any lack of popular etymologies.

The attempt has been made (Murdūj, iii. 251) to
connect the name with the Arabic root karradā;
the Kurds would thus be the children of young
slaves and the demon Djasad ("driven out" by
Solomon). Very frequently (cf. Driver, J. R. A. S.,
1923, p. 403) the name Kurdi is connected with
the Persian word gurad (herd) although this root
really had a 7 in Pahlavi and goes back to the
root far "to protect" (Horn, Neuer. Etymol.,
p. 200).

In later times the names of tribes were often
explained by those of their eponyms. The Shāh-
nāma, i. 158, makes all the Kūrs (the Badjwāni
and Bokhit tribes) come from Badjān and Bokhit;
the former of these names may be connected with
that of Bawār, a tributary of the Tigris (An-
dezas in Harran) who were also Bawār, calls the
Perezīyōr of Herodoto, or the "dragon-
king" (Kurd) Ḥafīn-Bokhit killed by Artaḵshir
Pāpakān; cf. Noldeke, Ṭabarā, p. 11. According
to another legend, especially popular in the north
and west, the Kūrs were at one time divided
into two branches, Mīnān and Zīltān, the former
coming from Arabia and the latter from the east;
the Zīltān were regarded as an inferior race (cf.
M. Sykes, Jour. R. Anthrop. Inst., 1908, xxxiii.,
p. 470).

B. History.

We have detailed notices of the Kūrs from the
time of the Arab conquest onwards. During the
five first centuries of the Hijra the Kūrs
frequently played a considerable part in events
and often took the initiative in them. Several
Kūrd dynasties arose at this time. Waves of Turk
and Mongol invaders seem to have submerged
the Kūrs from the vii th to the viii th century A. D.
But the period of the wars between the Ottoman
and the Safawī Shāhs produced a state of
affairs in Kurdistān favourable for the growth of
a feudal system, of which a faithful picture is
given in the Shāh-nāma (1003 = 1596). The
Turco-Persian frontier became gradually stabilised
and the Persians fell back behind the wall of
the Zagros and its northern extension. Then Turkey
began the work of strengthening the authority
of the central power within her eastern provinces.
Towards the end of the viii th century the last
Kūrd principalities disappeared in Turkish ter-
ritory (Hakkārī, Bīlis, Sulaimāniyya) and in Persia
(Ardalān). But the great tribes still exist and their
cares assure the preservations of the Kūrdish
element with its social and ethnic peculiarities.
Persia hardly ever interferes in the domestic affairs
of her Kūrdish tribes while Turkey tries to use
the Kūrs as a political support for the central
authority. Sometimes the Kūrs are overwhelmed
with favours and sometimes they have to resist
the attempts to abolish the remnants of their ancient
autonomy. Several risings of the Kūrs took place
in the vii th century and towards the beginning of
the viii th century a Kurd movement added one
more to the nationalist agitators within the Turkish empire. The revolution of 1908 drew the Kurds into politics; newspapers, magazines and Kurd societies began to multiply. During the war of 1914-1918 the idea of an autonomous Kurdistan was first mooted by the Pachas, but the plan has only been partially realised and only so far as the part of the old vilayet of Mawzil attached to the new state of Iraq is concerned.

The Kurds after the Arab conquest

We shall find it useful to begin by collecting the information given by Arab authors regarding the distribution of the Kurd tribes.

The term Kurdistan being first known before the time of the Seldjuks, information regarding the Kurds is usually to be found in the Arab authors under such headings as Zawzarn, Khilis, Aramiya, Adharabijan, Djib, Fars, etc. (cf. Driver, Dispersion of the Kurds in Ancient Times, J.R.A.S., Oct., 1926, p. 563-572).

Mas'udi (about 332 = 951) and Isakhtari (340 = 951) are the first to give systematic information about the Kurds. In the Mur odd al-Dhahab (ii, 253) Mas'udi enumerates the following groups: at Dainawar and Hamadhan: Shudjan; at Kangwar: Madjurdan; in Adharabijan (so the text should be emended): Hasibh十几at and Sarit (probably Shabik = Khurji [q. v.]; cf. the story of Daisam below); in Djib: Shidaddan, Lazha (Lurri); Madjurdan, Mazdanakhan, Baxis, Khali (Djalali), Djarvik, Djik, Mubakhan; in Syria: Dababila, etc.; at Mawzil and Djidi the Christian Kurds: al-Ya'kubiy ("Jacobites") and the Djurkan (Djurkhan). To this list the Tunki of the same author (p. 85-91) only adds Bazdikdan (cf. Isakhtari, p. 115), Naushwara, Buxik and Kikan: at the present day found near Marash) but he gives a list of the places where there were Kurds: the rumaun (rumun) of Fars, Kirman, Sidjistan, Khorasan (Isakhtari, p. 282: a Kurd village in the canton of Asadabad), Isfahan (a section of the Bazandidan tribe and a flourishing town described as Djuk, Ya'kif, p. 275; Isakhtari, p. 125), Djib, notably Mах Kufa, Mах Baza, Mah Sabardjan (Masabadan) and the two Ighir (i.e. Karadji Ibn Dafal and Berdji), Hamadhan, Shiraz, with its dependencies Darabad and Sanghan (Zinikan), Adharabijan, Armania (about whom on the Arab texts the Kurds lived in houses built of clay and of stone; Mu'addassi, p. 277), Arran (one of the gates of Barda was called Bahl al-Alkind and Ibn Mislawi says that at the invasion of the Rus in 332 [1042] the local governor had Kurds under his command), Balaik, Bahl al-Alwab (Darband), Dizjara, Syria and al-Tughur (i.e. the line of fortresses along the Cilician frontier).

Isakhtari, p. 98 particularly mentions 5 rumun in Fars, this term being applied to districts over which the Kurds were distributed (in spite of de Goeye, B.G.A., iv, p. 250, it is preferable to keep the reading ram-ramun [from Persian ram, "flock", "crowd"] for it is improbable that zanun could have given a plural rumun). Each ramun had its town, its Kurd chief in charge of the khurji and responsible for public safety. These ramun were: 1) Djib, 2) Ramiidan, bordered by Isfahan and Khuzistan; 2) Lawadijan, between Shenz and the Persian Gulf; 3) Divan, in the Kura of Sibur; 4) Nikriyan in the direction of Kirmans; 5) Shahriyar, along side of Isfahan also called Bazandidan after the principal tribe, a part of which had been transferred to the province of Isfahan. As a supplement to the list of rumun, Isakhtari, p. 114, gives a list of 33 nomad tribes (bun, plur. akhva) of Fars, based on the records of the Djawalin and reproduced by Ibn Iqwal, p. 185-187 and Mu'addassi, p. 446: Kirmans, Ramans, Madalith, Muhammad b. Bashar, Bajli (Mu'addassi: Taibati), Bandmadhari, Muhammad b. Isakh, Sahali, Ishak, Adharban, Shahraki, Shahmadan, Zabali, Shahrawi, Bundadaki, Khurawi, Zandji, Safar, Shaharyar, Mihraki, Mu'abari, Iskhan, Shahani, Farati, Salami, Siri, Atsidokht, Barzakdokht, Murtali, Shihab, Kadjti, Djallali, in all 500,000 families living in ten thousand.

The Fars-nama (c. 500 = 1107) says, p. 168, that the Kurds of the old large ramu of DJuky, Dhwian, Lawadijan, Kariyan and Bazandidan, who formed the most brilliant element in the old army of Fars, all perished in the wars at the time of the introduction of Islam, with the exception of a single Akal, who became a Muslim and left descendants. Other Kurds were transferred from Isfahan to Fars by Ajud al-Dawla. It is difficult to admit that 500,000 (+) families of Kurds were exterminated, but we must recognise the possibility of regroupings among the tribes of Fars and of their denationalisation. The old ramu of DJuky (Khub-Guli) is now a new enervated tribe; thus, we do not know how long they have been there. For the rest Isakhtari's list mentions a tribe al-Lurriya (variant: Lazha) among the Kurds of Fars. On the other hand the Fars-nama distinguishes from the Kurds the Shabankara (q. v.) clans, who had become very powerful in Fars at the time of the last Buysids. The Masalik al-Abyar of al-'umari speaks of the Shabankara under a separate heading and the Sharaf-nama does not mention them among the Kurd dynasties. One of their clans however (Ramani) bears the name of one of the "Kurd" tribes of Iskhtari. Everything then suggests that the Kurds of Fars differed considerably from the tribes of Kurdistan (cf. Iskhtari).

The term al-Zawzan which corresponds broadly to central Kurdistan (nadan in Kurdish "summer pasturages") is not well defined. According to Ibn Hawkal, p. 250, the king of Zawzan was called al-Dairami (Darinak, Armenian king of Waspurak). Mu'addassi, p. 137 regards Zawzan as a nahiya of Djarizat Ibn 'Omar. Later this region which had a mixed Kurd and Christian population extended in area. According to Ibn al-Athir (in Yatkit, ii, 257) al-Zawzan began at two days' journey from Mawil and stretched to the borders of Khilis; on the Adharabijan side it extended to Salmas. Many strong places belonged to the Bashi-nawi and Bokhti Kurds; the former held Barja, Bashir (and Fanak); to the latter belonged: Djurjkhal (Gurgil) residence of their malik Atik (Sharaf-nama, i, 117: Nash Attil); Allias, Baz al-ahmar. To the lords of Mawil (the Zangl) belonged: Atik (El), Arwak, Bakauka (Bekoki in Barwar), Barkho, Kingwar (?, Nirwa (east of Akr) and Khashab. The text of Yakut is not very certain; in any case the reference here may be to Kurd strongholds gradually annexed by the Hamidans and the Zangl (see below).

The Kurds under the Caliphs and Buyids. Mas'udi (Mur Odd, ii, 249) has preserved traditions from the pre-Muhammadan period of feuds between the Arab princes of Qussan [q.v.]
and the Kurds. The Muslim Arabs came into contact with the Kurds after the occupation of Taqrit and Hulwân in 16 (637). Sa‘d b. Abi Wakkâ, marched on Mawsil where the districts with a Kurdish population were occupied (al-Mardj Bâ–Nuhadhâr, Bâ‘-Adhir, Hibûn, Dâsn etc.); cf. Ibn al-Ashtîr, al-Kâmîl, ed. Tobenberg, ii. 408. The conquest of the region was completed by ‘Iyâd b. Ghanam and ‘Utba (Badî‘uri, Futûh al-Badî‘i, ed. de Goeje, p. 331). The Banû of al-Zawwân in 19 (640) obtained confirmation of his authority on payment of Zarghûf (Futûh, p. 176). In Susiana in 18 (639) the Arabs fought against the Kurds, who had taken up the cause of the Persians, Persian governor of A’hwân (Kâmîl, ii. 425). In Fârs likewise the Kurds supported the Persians in 23 (642) at the defence of Fâsûn and Darâbîjârî (ibid., iii. 32). ‘Omar had sent several expeditions against the Kurds of A’hwân (Futûh, p. 382, 389; Kâmîl, iii. 37). On the other hand in the reign of ‘Omar the Kurds invaded the region of the central Karkhâ (Şimara, Mâsbâdbâdîn) the language of which was still Persian in the time of Ya’qûbî (B. G. A., vii. 236). The Arabs had reached Shahbûrûz before Isàm (Ibn al-Fâqîh, p. 130), but the final occupation of Shahbûrûz, Dârâbîjârî and Samînîn in 22 (643) was only achieved after bloody fighting (Futûh, p. 334; Kâmîl, ii. 29). In the south Abû Mâsûl, governor of Basrâ, had to put down risings of the Kurds at Bûrûkî and Balasalâm in 25 (645), but the Kurds, forcibly converted to Isàm, apostatised in masse (Kâmîl, ii. 66, 76). Under the caliph ‘All, the Kurds, along with the Persians and Christians, took part in the rebellion of al-Khârîrî near A’hwân and in Fârs, but the chief was defeated at Râm-Hurmuz (ibid., iii. 309). ‘Abd al-Muktâhir, who had seized Armenia and Adharbâjdâjn in the reign of the Omâyâyîd caliph ‘Abd al-Malik, appointed in 66 (685) a governor at Hulwân whose task was to fight the Kurds (Kâmîl, iv. 187) but the death of al-Muktâhir prevented the plan from being carried out. Under the same caliph the rebel ‘Abd al-Rahmân made an alliance in 83 (702) with the Kurds of Sâbîr in Fârs (ibid., iv. 352). In 90 (708) the Kurds ravaged Fârs and were punished by al-‘Âshâdijârî. In 129 (746) the Kurds of Sâbîr resisted the ally of the Khârdijî, Sulâmîn, who had rebelled against the caliph Marwân II and had besieged Sâbîr (ibid., iv. 387, 341; v. 283). The caliph Marwân himself was the son of a Kurdish slave-girl (Tabânî, iii. 51) whose blue eyes and fair complexion he had inherited (Sir W. Muir, The Caliphate, London 1801, p. 429).

Under the `Abbâsîd Caliph Mansûr the invasion of Armenia by the Khazâr, 147 (764) resulted in numerous risings. A few years later the Kurds (inittûhr al-Abrâdî) are again mentioned in connection with the rising at Mawsil and its repercussions in Hamadân (Kâmîl, vi. 448; vi. 9). ‘Abd ’Askâfir, son of Mansûr, was the son of a Kurdish slave-girl (Tabânî, iii. 442). In the reign of al-Mu’tasîm, a Kurdish rebellion is mentioned under 225 (839); it broke out in the district of Mawsil, led by ‘Abd ’Askâf b. Fathardjîs, a scion of a noble Kurd family. Defeated at Bâbâghîsh, ‘Abd ’Askâf took refuge in the mountains of Dûsnîn where he defeated the troops of the Caliph. A new army commanded by the Turk Aîtâkî put an end to the rebellion (Kâmîl, vi. 360–361). A Kurdish rising broke out in 231 (845) in the regions of Isfâhân, Dâsnîn and Fârs; it was speedily suppressed by the Turk general Waṣîf. The Kurds of Mawsil in 252 (866) joined the Khârdijî Musâwîr who had seized Mawsil. In 262 (875) they played a considerable part in the Zandjî slave-revolt (cf. Noldeke, Sketches from Eastern History, London, p. 146–175: A Servile War in the East) led by an ‘Alî Khârdîjî (?) ‘Abî Muhammâd called al-Khâbîth and in the rising of Ya’qûbî al-Saffar, founder of the Safârî dynasty [q. v.]. At A’hwân, Ya’qûbî appointed a Kurd lieutenant Muhammâd b. ‘Usâdallâh b. Hâsrârî, who, cherishing ambitious plans, engaged in secret negotiations with al-Khâbîth. With reinforcements sent by the latter, Muhammâd marched on Sîs but was defeated by Ahmad b. Lâilîbây, the latter, also a Kurd and commander of the Kurd levies, had been sent by the Caliph to put down Ya’qûbî’s rising (Ibn Khâlîkîn, Waṣay’a, ed. de Slane, iv. 304–308). When Ahmad had departed, Muhammâd, after securing from al-Khâbîth further reinforcements consisting partly of Kurds, seized Shuṣtar where, according to the arrangement he had to have had the Khârîb read in the name of al-Khâbîth, but instead he did it in the name of the Caliph al-Mu’tamîd and his adversary Ya’qûbî al-Saffar. His Zandjî allies deserted Muhammâd and Shuṣtar was recaptured by Ibn Lâilîbây. Muhammâd retired to Râm-Hurmuz but he was dislodged from it by al-Khâbîth’s generals. As a result of difficulties with the Dârnân Kurds, Muhammâd again sought the help of al-Khâbîth. The latter sent him troops which Muhammâd sent into battle but suddenly left them in the lurch and attacked them. To avoid a breach with al-Khâbîth Muhammâd agreed to proclaim him Caliph. The death of Ya’qûbî (265 = 879) and of al-Khâbîth (270 = 883) put an end to these exploits (Kâmîl, vii. 264). About 281 (894) the Kurds were among the partisans of the Arab ‘Âbdânîân b. Hâmîdân (cf. Hâmdânîs) when he established himself in Mawsil. The Kurd rebellion raised in 284 (897) by Abû Lâilî did not last long (ibid., vii. 325, 337). In 293 (906) the Hadîbhânî Kurds led by their chief Muhammâd b. Bîlâl laid waste the region of Niniveh. ‘Abdallâh b. Hâmîdân, the new governor of Mawsil, pursued them but suffered a reverse at Ma’ûbâ. With reinforcements sent by the Caliph he resumed next year the pursuit of 5,000 Hadîbhânî families. The Kurds began negotiations to gain time and retired to Adharbâjdâjn. ‘Abdallâh returned to Mawsil and with new troops set out once more against the Hadîbhânî who had entrenched themselves at Dîbal al-Salâq (probably Lâhîbîân, cf. Sâvîq-Bûlâk). The Hadîbhânî were forced to surrender and their pacification was followed by that of the Hûmâdî tribe and of the people of Dîbal Dûsnîn (ibid., vii. 371). In the reign of the Caliph al-Muktâdir, the Kurds plundered the environs of Mawsil but were punished by the Hûmâdîn government; the Dîbalî tribe put up a particularly stubborn resistance (ibid., vii. 118). Under the year 337 (943) Ibn Miskaḵwâl, Fâqîhîr al-Umân, G.M.S., vi. 105 speaks of the expedition of the Hûmâdîn Husain against Adharbâjdâjn; on this occasion he had as an ally Dîbâr b. Shâkbîyâ chief of the Hadîbhânî who were settled at Salmûn.

About this time Daisâm b. Ibrâhim appeared on the scene and his adventurous life is closely
associated with the Kurds. He himself was the son of an Arab by a Kurd woman. His followers were Kurds with the exception of a small body of Dailams. Daisam was a Khaṭānī. He seized Aḍharbāḏjān after Yūsufs b. Abū l-Šādīj and in 327 (938) used his Kurds to drive out Lashkārī b. Mardī, one of the lieutenants of the Ziyārīd Washmīg. But the Musafīrīd Marzūbān, a noted Shīʿī, succeeded in taking Aḍharbāḏjān from Daisam and the latter took refuge with his friend Ḥaḍīb b. al-Dairānī (the Armenian king of Waspurakan Khaṭīb-Gaghiṅ, son of Deranīk). Then the people of Tabriz appealed to Daisam but again he suffered a reverse and with the consent of the Musafīrīds fell back to Tabrīz. In 357, Marzūbān was made prisoner by the Būyids Rukn al-Dawla who sent a representative to Aḍharbāḏjān. Marzūbān’s brother Wahšūdān then thought of Daisam to whom his Kurds had remained faithful and sent him against Rukn al-Dawla’s representative. Daisam was defeated but held out in Aرادābīl and Barḏāhā. When Marzūbān returned from his captivity, Daisam had to take refuge first in Armenia and then in Baghdad where the Būyids Muʿizz al-Dawla treated him generously. As his friends were urging him to return to Aḍharbāḏjān, he went to the Ḥamdānīds of Mawsīl and Syria to ask for assistance. In the absence of Marzūbān, Daisam returned to Salmās in 344 in which he had the Khaṭba read in the name of Saif al-Dawla of Syria. Once more driven out by Marzūbān, Daisam sought refuge with his Armenian friends. Ibn al-Dairānī (Deranīk b. Khaṭīb) had to hand him over to Marzūbān much against his will. Daisam was blinded and died in prison in 345 (Taḏjīrī, ed. Ahmadzādeh, i. 345 ii. 148—151; Kāmil, viii. 289, 361, 375—377).

During Marzūbān’s captivity in Rayy, several independent governors set up in the northwest of Persia. One of them (about 340/951) was Muḥammad Shaddād b. Kāṭūrī the Rawābī tribe out of which later sprang the great dynasty of the Ayyūbids. The principal sieges of the Shaddādīds were Dabīl and Gandja. The Shahādādīds were allies of the Byzantines and of the Saljuqs. In 465 (1072) Abū Sulwār bought Anī for his young son Manūcī. From this time onwards the dynasty was divided into two branches: that of Gandja and that of Anī. In 1124, Anī was taken by the Georgians but between 520 (1126) and 557 (1161) and again from 1165 to 1174; Anī was again held by the Shaddādīds. The Shahādādīds were enlightened princes and left a number of remarkable buildings. Cf. the articles ARAKAN, DWIN, Gandja, Shaddād; the Armenian bibliography in Lynch, Armenia, i. 363—367; cf. also Barthold in the appendix to his Russian translation of Muḥamm. Dynasties, by Lane-Poole, St. Petersburg 1899, p. 294; Barthold, Pers. nadvīn in . . . melīti Manīlec, Aniyskaya Seriya, No. 5; N. Marr, Elze ovo “izleč” Zapiski, 1911, xx, p. 120; E. D. Ross, On Three Mughmammadan Dynasties, Asia Major, ii/ii, 1925, p. 215.

In 349 (960) a pretender appeared in Aḍharbāḏjān. He was called Isḥāk b. ʿIsā and was supported by Faḍḥ, chief of the Kaṭtānī (Turd) Kurds, while his adversary the Musafīrīd Dastān b. Marzūbān relied on Ḥaḍhānī support. Isḥāk was soon disposed of (Taḏjīrī, ii. 179). The Kurds and the Dailams also played a considerable part in the quarrels between Dastān and his brother Nāṣir al-Dawla and between ʿĪbrahim b. Marzūbān and his cousin Ismāʿīl b. Wahṣūdān (Taḏjīrī, ii. 219, 229; Kāmil, viii. 420—423).

About 348 (959) the second Kurdish dynasty arose in al-Dījāl (Lane-Poole, Mūhamm. Dynasties, No. 57) founded by Ḥasan waḥīd (Ḥasanīya) b. Ḥasan (q.v.; cf. also the Shāfaʿī-nāyī, i. 20—23), chief of the Barzīkīn (Barzīnī) tribe who had assisted the Būyid Rukn al-Dawla on his expedition to Kharāsān. Rukn al-Dawla showed great tolerance to the Kurds and when someone complained to him of their excesses he used to say: “Even the Kurds must live” (Taḏjīrī, ii. 281). Ibn al-ʿAthīr (viii. 519) praises the noble character of Ḥasan waḥīd, his prudent policy and the purity of his morals. When Ḥasan waḥīd died in 369 (979) in his capital Sarmāḏāī (south of Busīṭīn), ʿAṣūf al-Dawla overran his possessions (Ḥamādān, Dānawar, Niḥāwān) to bring it under his authority, but in the end he granted investiture to Bādr b. Ḥasan waḥīd (360—405 = 979—1014) (q.v.). who remained loyal to ʿAṣūf al-Dawla and even fought against his own brothers who had taken the side of the rebel Fakhr al-Dawla. The Caliph gave Bādr the title of Nāṣir al-Dīn waḥīd al-Dawla. The historians give an extremely favourable verdict on Bādr; he had his tribe educated, distributed taxation fairly and protected the peasants (Taḏjīrī, [Abū Shudjaʿ], p. 287—299, 327; Ibn Muḥassin, p. 429, 449—454; Uthī, Kitāb-y Yamni, transl. Reynolds, p. 424). Bādr’s successor Tāhirī (Tāhir?) only reigned a year and in 406 (1015) was driven out by the Būyid Ǧāḥīs al-Dawla. Ḥasan waḥīd’s uncle Waṇdād, chief of the ʿAṣīḥīya section, died in 349 (960), his brother Abū l-ʾĀḥānām in 350 (961) and a little later his son Abū ʾUmmī Daisam, the last of this collateral branch was dispossessed of his castles (Kaṭān or Kaṭān [Keslan?] near Bābā Yādīgār on the Zohāb, Ḥaṭmīn-Bāzī, etc.).

ʿAṣūf al-Dawla had to deal with the Kurds on several occasions, but he was much more severe with them than his father Rukn al-Dawla. In 368 (978), the Kurd Ibn Bādīyā with the help of the Ḥamdānīd Abū Taghlīb became an independent ruler at Ardamašt (Kawāshīr near Djabal-Djīdī, Yāḵtū, i. 199) but soon allowed himself to be seduced by the promises of ʿAṣūf al-Dawla (Taḏjīrī, ii. 392). In 369 (979) the latter sent an expedition against the Kurds of Ǧawharī who wished to separate from the Banī Ṣhabīn Beduins whom he had business and matrimonial ties with them. The town of Shahrīzūr was occupied and the Arabs went back to the desert (Taḏjīrī, ii, 398; Kāmil, viii. 516).

Another expedition was sent in 370 (980) against the Hakkārī Kurds who were besieged and surrendered, relying on a promise that their lives would be spared. But the leader of the expedition crucified them along the side of the road for five farsakhs between Maʿallāhāyā and Mawsīl (Kāmil, viii. 521).

Even in the lifetime of ʿAṣūf al-Dawla, the Humaidī chief, Abū ʿAbdALLĀH Ḥusain b. Daṣāhanī (or Abū Shudjaʿ Bāḍ b. Daṣṭāk) known as Bāḍ b. Ḥusain is said to have ascended considerable notoriety. At first a shepherd, he gradually rose to be lord of Ardishīk, Amedī and Māvārānhanī. A rising in Nāṣīrīn brought him into conflict with Ǧāḥīs al-Dawla. Bāḍ defeated the latter’s forces at Bā-Bīlāyā (on the Kābūr al-Husainīya in the canton of Kawāshīr = Ardamašt) seized Mawsīl and was planning a march on Baghdad to end Būyid rule.

THE ENCYCLOPEDIA OF ISLAM, II
when he was defeated by Şamsan al-Dawla. He fell back on Maişafirink and, by an arrangement with the captain of the army sent against him, secured possession of Diyarbakr and the western part of Tur ʿAbidin (374 = 984). Badh did not relinquish his designs on Mawsil and in 379 (990) having collected a large number of Bashlawi Kurds, encamped under the walls of this town and engaged in negotiations with its inhabitants. But the Hamdâf princes who had just regained possession of their hereditary fee, secured the help of the Banu ʿUkail Arabs and attacked the invader. An accident put Badh hors de combat and he was slain. His body was crucified, but the people of Mawsil obtained his burial with unusual rites because he had fought against the unbelievers (Kanîlit, ix. 25, 27, 38, 49; Tugîrîb [Abû Shudja'], p. 83–84, 176–178; Abû ʿl-Faraḍî, Mukhtar al-Dawal, ed. Pococke, 321–323).

In 380–390, Šamsan al-Dawla made an attempt to improve his position and with this object, made an alliance with Fülâd b. Mundhir, who was supported by the Kurd cavalry mobilised at Shîrâz. After the failure of the enterprise he sought refuge with the Kurds but the latter betrayed him and he took refuge with Fakhr al-Dawla, who was notorious for his hatred of the Kurds (Tugîrîb [Abû Shudja'], p. 184; on Ibn Fâlak, see H. R. I., x., c. vii.).

The Kurdish dynasty of the Marwâniids (Lanepoole, No. 47) is closely connected with Badh. After the defeat at Mawsil, Abû ʿAli b. Marwân b. Dustâk, the son of Badh's sister and his ally, withdrew to Hîn-Kalâb [q. v.] where Badh's Dai-lanî wife lived. He married her and took one of the strongholds that had belonged to Badh. He twice took prisoner Abû ʿAbdallâh al-Hamdanî who had defeated Badh, but treated him generously. Ibn Marwân established himself in Diyarbakr and by his conciliatory attitude won the sympathy of the inhabitants. The Marwânîids reigned from 380 (990) to 489 (1006). Their power extended not only over Diyarbakr (Amir, Arzanî, Maişafirink, Hân-Kalâb) but also to Khîšâ, Mûrafgerd, Arûjsh and the canton to the northeast of Lake Vân. On the west they held Urfa for a time. Abû ʿAli Hasan in 381 (991) invaded Syria and took it from the Byzantine Emperor Basîr II. He was killed in 387 (997) by the people of Diyarbakr who had rebelled. His brother Âbû Mansûr Mumahhid al-Dawla who after the death of Badh had seized Maişafirink reigned there till 402 (1011) (Abû ʿl-Fardi, Annales Mestemec, ed. Reiske, ii. 569). His brother Abû Naṣr Ahmad (Ibn Khallîkan, i. 157–158) succeeded him and remained there till 453 (1061). In 422 (1031) Al-Faraj, the Byzantines re-established their power in 422 (1031) (Abû ʿl-Farajî, p. 342). He earned the reputation of being a just and enlightened ruler, and able, though given to pleasure. In 442 (1050) Abû Naṣr had to pay homage to the Sâlûk Tughrî. His son and successor Abû ʿl-Kâsim Naṣr, called Niğâm al-Dawla (453–472), shared the power with his brother Saʿîd (d. in 457). He added to his possessions Harrân, Suwaštê etc. His successor was Mansûr b. Saʿîd, who nominally reigned from 472 to 489 but by 478 (1085) the Salchuk general Pakhr al-Dawla b. Djijîhar had taken almost the whole of his lands, which were placed under the authority of the Atabeg of Mawsil (Abû ʿl-Fidâ, iii. 77–79, 87, 121, 125, 249). On the Marwânîids cf. the special study by Amadeus, F.A.A.S., 1903, p. 123–154.

On the eve of the Turkish invasion we find frequent reference to exploits and expeditions of the Kurds. In the reign of al-Kâdir (381–422) the historians record the exploit of the Kurd Ahmad b. al-Dbâjî who killed the Emperor Basîr II's general and thus stopped the Byzantine advance (Tugîrîb, [Abû Shudja'], p. 247). Between 366 and 388 the Kurds took part in the struggle between the Byzids and the Ziyârîs for the possession of Dughmân (Uthâ, p. 298–302; Ibn Isfanîyâr, G. M. S., p. 226–228). A few years later we find Malikzâdî of Shurîr Ùzâr in the campaign of 366 (1077).

The Kurds took part in the civil wars of the Byzids, in the struggle of the Banu ʿUkail for the possession of Mawsil, etc. In 411 (1020) they fought against the Turkish troops who mutinied in Hamdân. In 415–420 we find them fighting in Fars and Khuzistan against the last Byzid, Abû Kâlidjâr (Kanîlit, ix. 100, 134, 226, 232, 239, 247, 249, 254, 265; Tugîrîb, [Ibn Muḥassin], p. 348, 376, 381). Thus the Kurdish element was exhausting itself in continual fighting when the Turkish hordes arrived who were destined to modify radically the ethnic aspect of the Near East.

The Turkish Conquest. When in 429 (1029), the Gbuz precursors of the Saldâjks reached Râйj, Tâsh Fassâh, the Turkish general of the Ghaznavids went to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds being captured by the Gbuz sent a message to his men to cease fighting. This caused a tumult and Tâsh was killed (Kanîlit, ix. 268). In the same year the Gbuz reached Marâgha and executed many Hadîbbânîs. The Kurds made an alliance with the ruler of Adharbaîjan (Wâhsûdân II) and the Gbuz had to retreat. Another body of Gbuz after a raid into Armenia returned to Urmiya and the lands of Abû ʿl-Hâjîd Hadîb/cloud; the Kurds attacked the Gbuz but suffered a defeat. In 432 (1041) the Musafîr�d Wahsûdân II b. Mâmil massacred a large number of Gbuz at Tabriz; the Gbuz of Urmiya went into hakkârî, a dependency of Mawsil, and ravaged the country, but while they were involved in the mountains the Kurds attacked them, killed 1,500 men and took many prisoners and much booty (Kanîlit, 270–272).

On the approach of Tughrilbeg's troops, the Gbuz took fright and pushed onwards. Kurîsh guides led them through al-Ẓawzan to Dijîshra. One section of the Gbuz under Mansûr c. Buottu marched on Dijîsh while the other under Buîkî marched on Diyarbakr and going on pillaged the districts of Kûrdî, Bâzâdî, Hussainiya (Yâkût, ii. 270: a town between Mawsil and Dijîshra) and Fesbûr. The Marwânîd Sulaimân b. Naṣr al-Dawla, ruler of Dijîshra, persuaded the Gbuz to wait till the spring before traversing his lands to join the other Gbuz who had settled in Syria. Then by a ruse he seized Mansûr and with the help of the Bashlawi Kurds of Fûnîk, pursued the Gbuz. But the latter did not cease their depredations; they ravaged the districts of Diyarbakr and seized Mawsil (Kanîlit, ix. 100, 134, 226, 232, 239, 247, 249, 254, 265; Tugîrîb, [Ibn Muḥassin], p. 348, 376, 381). Thus the Kurdish element was exhausting itself in continual fighting when the Turkish hordes arrived who were destined to modify radically the ethnic aspect of the Near East.

The Turkish Conquest. When in 429 (1029), the Gbuz precursors of the Saldâjks reached Râйj, Tâsh Fassâh, the Turkish general of the Ghaznavids went to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds being captured by the Gbuz sent a message to his men to cease fighting. This caused a tumult and Tâsh was killed (Kanîlit, ix. 268). In the same year the Gbuz reached Marâgha and executed many Hadîbbânîs. The Kurds made an alliance with the ruler of Adharbaîjan (Wâhsûdân II) and the Gbuz had to retreat. Another body of Gbuz after a raid into Armenia returned to Urmiya and the lands of Abû ʿl-Hâjîd Hadîb/cloud; the Kurds attacked the Gbuz but suffered a defeat. In 432 (1041) the Musafîr�d Wahsûdân II b. Mâmil massacred a large number of Gbuz at Tabriz; the Gbuz of Urmiya went into hakkârî, a dependency of Mawsil, and ravaged the country, but while they were involved in the mountains the Kurds attacked them, killed 1,500 men and took many prisoners and much booty (Kanîlit, 270–272).

On the approach of Tughrilbeg's troops, the Gbuz took fright and pushed onwards. Kurîsh guides led them through al-Ẓawzan to Dijîshra. One section of the Gbuz under Mansûr c. Buottu marched on Dijîsh while the other under Buîkî marched on Diyarbakr and going on pillaged the districts of Kûrdî, Bâzâdî, Hussainiya (Yâkût, ii. 270: a town between Mawsil and Dijîshra) and Fesbûr.
to a new family the Banu 'Annaz (cf. Sachau, Ein Verzeichnis Muham. Dynastien, p. 191). Sharaf-
nama, i. 22: 'Aiyār' which is often called Abu 'l-Shawk. Previously in 340 (951), during a Turkish
rising in Hamadan, the Bayyū Ma‘ız al-Dawla had had recourse to the services of Ibn Abu
'l-Shawk, chief of Hulwan (Tağārib, i. 2). The real founder of the dynasty seems to have been
Abū 'l-Fāth Muhammad b. 'Annaz (Kāmil, i. 158) who ruled 380-401. His son Abu 'l-Shawk
slew the last of the Ḡasanawīs, Zahir (Tahir) in 406. The possessions of the Banū 'Annaz included
Ṣahrūzir, Kirmānšāh (occupied in 431: Kāmil, i. 300, 316), Bilawār, Šāmgān, Daḵūša, Khufti-
dākhān. In 437, Ṭaghrīl sent his brother Ibrahim Yanāl to pacify Djaʿbāl. Ibrahim drove the Bayyū
Garāšp out of Hamadan and he sought refuge with the Djaʿbāl Kurs. At Kirmānšāh there
was a garrison of Abū 'l-Shawk composed of Dailamis and Shāḥjānān Kurs. Kirmānšāh was
occupied and Abū Shawk died in 438 (1046) at Sirwān. Ibrahim took Šamīra (Šamīra? Saimara?)
and subjugated the Djaʿbān. Saʿādī, son of Abu Abū 'l-Shawk submitted to the Šaljūqs. The dynasty
lasted till 520 (1116) (Mūnedjīdīm-bashi, quoted by Sachau, loc. cit.).

The defeat of the Emperor Romanus IV at Ṭe-
laşged (463 = 1071) delivered all Armenia into the
hands of Abū Abūl. Under the Great Šaljūqs
there arose in Fars the turbulent dynasty of the
Šahānkāra (q.v.), but it is very doubtful if this
dynasty, the fortunes of which can be traced from
421 to 756, was strictly Kurdish (cf. above). On
the other hand the small Kūr dynasties were rut-
lessly wiped out in favour of Turks. In 493
(1100) the Šaljūqs disappeared in the region of
Khašt where the Turk Šukmān Kūthi founded
the dynasty of the Šūh Arman which lasted a
century until the coming of the Ayyūbids. Under
the date 495 (1101) Ibn al-Ŷahhār (i. 238) mentions
the killing of two thousand Kurs of Surkhbāb b.
Badr, a scion of the Banū 'Amānā by the Turk-
mons of Šalghūr Karabūlī. Other Turkomans later
took all the lands of Surkhbāb except Šahrūzir,
Daḵūša and Khuftidākhān. In spite of this crushing
blows the Kurds are often mentioned in the xiith
and xiiith centuries. In his struggle with Kaured of
Kirmān, Malik Šah employed Kurdish and Arab
forces, whom he later rewarded with fiefs at
Kirmān (Kāmil, i. 53) there were already colonies of Kurds (cf. Maṣūfī, Tanbih, p. 88;
Ibn Khallīkān, i. 516). Raids of Kurds took place at
Dudjail, Mārdīn etc. in 496, 498, 503. In
Muḥammad b. Malik Šah's campaign against
Syria 504 (1110) there took part the lord of
Maḥrūgha, Aḥmad b. Wahsūdān, a Kurd of the tribe
of Rawādī (cf. Kāmil, i. 391) and the "Šah of
Armenia" Šukmān. The campaign was a fiasco
and the Kurs left to lay siege to the Turk Šuk-
mān (Recueil des Hist. des Croisades, Docum. Orientaux, iii. 542, 599).

During this period we often find the Kurds
mentioned in Syria, where they came into contact
with the Franks (cf. Deroenbourg, Ouâma b. Muńṣīb). Under Šanḍar the province of Kūr-
distān was formed of the western part of Djaʿbāl.
Salīmānīn, the nephew of Šanḍar, became its
ruwer with Bahār (N. E. of Hamadan) as its
capital. The province was in a flourishing state.
In the reign of Šanḍar also the Kurs took part
in the troubles of 513. In 516 a punitive expedition
passed through the Khaštār, Šūzān and Bāšgaw districts (Kāmil, x. 374, 377, 426), but shortly
afterwards the Kurs seized the stronghold of the
Christian patriarch at Ṭūr 'Abīdīn (Assemi, Bibl. Or., ii. 221).

The Atabak of Māwṣīl. The Atbahāk, the immediate neighbours of Central Kurdistān,
played an important part there. 'Imād al-Dīn al-
Zangi several times invaded Kūṛ territoriy. In
528 (1134), he took Šanž (on the left bank of
the Ḡokhān) and to punish the Ūmāidī who had
supported the Caliph Mustaṣṣulād when he was
besieging Māwṣīl, seized their fortresses, all
'Ākr, Šūh etc. (Shams al-Dīn in Recueil, iii.
666-667; Ibn al-Ŷahhār, al-Šaṭḥiyya, ibid., ii. 87).
Abū Šaḥīd, lord of Arbīl, Šaḡīb etc. submitted
to Zangi (he must have been a Hakkār?; at this
period this tribe lived south of the territory
which now bears its name; cf. Hoffmann, Ausserg.,
p. 203). After the death of Abū 'l-Ŷahhār, Zangi
intervened in the quarrels among his successors,
seized Šaḡīb and dismantled its defences; the
fort of Djaʿbāl received the name of Šāmīya
(= Šāmīya, in honour of 'Imād al-Dīn). In 534
(1139) Zangi took Šahrūzir from Kiḏjāk b. Arslān
Tāsh the Turkomān. In 537 (1142) he sent a new
expedition against the Hakkār and took the
fortress of al-Šaḥbān (= Šaḡīb) which he rebuilt.
In 538 Irūn and Khiẓīn were taken (Shams al-
Dīn in Recueil, iii. 685). 'Arī, lord of al-Ŷašībīya
(cf. Sharaf-nama, i. 284, Šaḏīb-bulak?), Šaraḥ
and Aḵḵa (Elk?) joined Zangi of his own accord.
The last expedition of Zangi was against the
Bāšgawī of Panak (Finnik) but the siege of this
town was raised on the death of Zangi 541
(1146) (Ibn al-Ŷahhār, al-Ŷaṭḥiyya in Recueil,
iii. 114, 129, 158). Karāḏja Tiḏjān Mašīrād (?)
of Khaštār, who was sent in 547 by the Atabak
of Māwṣīl against the Atabak of Āḏarbaḏān,
seems to have been a Turk foreign to the tribe.

Later after the death of Šalāḥ al-Dīn (583)
the Šangīds consolidated their position in Central
Kurdistān. In 607 (1211) 'Imād al-Dīn, a younger
son of Arslān Šāh Zangi, received as a fief the
strongholds of Hūmāidān (‘Aḵḵ and Šūh).
In 615 (1218) the same prince seized Šāmīya and "the
remainder of the fortresses of the Hakkār and
Zawān" which were ceded to him by Muẓaffar
al-Dīn Kūkbař of Arbīl (Abu l-Ŷaḏafī, p. 433,
438). It must have been these events that caused
the Hakkār to be driven back towards the lands
at the sources of the Great Žāb.

The Īrūḫjīds, Atbahāk of Diyarbakr several
times came into conflict with the Kurs (Abu
l-Ŷīdīs, iii. 583; Ţūmā, i. 321). The 'Abbāsid
Caliph, freeing themselves from the tutelage of
their protectors negotiated with the Kurs (cf. the
case of Ḥaḏī Ūmāidī in 528 and Kāmil, xi. 7,
188) and sought to weaken the Turks. In 581
(1185) under the Caliph al-Nāṣir, a minor incident
resulted in a war between the Kurs and the
Turkomans (Kāmil, i. 342) which extended over
a vast area (Syria, Diyarbakr, Diţaţa, Māwṣīl,
Šahrūzir, Ḡaštār and Āḏarbaḏān). Two years
later the rivals stopped fighting in order to join
against the Christians of Armenia, Assya, Meso-
opotamia, Syria and Cappadocia. The Turk
feuds soon broke out between the Kurs and Turko-
mans. After many fierce battles the Kurs fought
their way back into Cilicia. The Turks practically
exterminated the Kurs of Cilicia and Syria.
the Kurds on leaving their old homes had entrusted their goods to their Christian neighbours and as the Christians concealed some Kurds, the Turks finally fell upon the Christians at Thel-muzen (?) and Arabthil (= Arabgir?) (Michael the Syrian, in Recueil, Doc. Armén., p. 395). The Aïyûbîds. The Kurdish origins of this remarkable dynasty are well established (Sharaf-nâma, i. 55—82). The Armenian historian Hayton (Hethum) says on this point: "Fosteva vero Sarraceni in Armenia numerosissimis Egiptio et Persia, unde et usque Cordis vulgariter diecebratur, regni Egipti dominii occupaverunt," Recueil, Doc. Armén., ii. 225, 343.

The grandfather of Saîl al-Dîn Shâhîd b. Narwân was a Rawâdî Kurd (Râwâdî, Rawanda, a clan of the Hadîbîn) of Dvin [q. v.].

The important fact is that it was from Dvin that the Shâhadî dynasty had come, the memories of which must have been still alive in the time of Shâhîd Aïyûb [q. v.] and Shirkût [q. v.], son of Shâhîd, born in the old village of the Ağdânakân. Saîl al-Dîn [q. v.] was born at Takrit but Kurd traditions were certainly familiar to him through his father and uncle. The persistence of Iranian names in Aïyûbid family is significant. Nevertheless the scene of the main activities of the dynasty was Egypt and Syria. The families of the old Sâlîqân Atabak, even when they became vassals of the Aïyûbîds continued to rule in Diyarbakr (Urtuks), Mawsil (Zangids) and Arbil (the Begtjetgoïds, at first deputies of the Zangids). By the treaty of 585 (1187), with 'Izz al-Dîn Zânî, Saîl al-Dîn annexed only Aleppo and Shahrîzûr (Ibn al-Athîr, al-Atabakîya, Recueil, ii. 334; Kâmîl, xi. 340; Baha' al-Dîn, Recueil, iii. 85). Later (in 585, Saîl al-Dîn gave Shahrîzûr to his Mamlûk Kheïchqoî (?) a relative of Yaçîb b. Kifîlût. The only independent way by which the Aïyûbids penetrated into Kürdistân was that of Kifîlût. This district was at first conquered by Taîq al-Dîn in 587 (1191) (Kâmîl, xii. 49) but it was only after the death of Saîl al-Dîn that his nephew Awhâd Aïyûb installed himself there in 604 (1207).

Later Kifîlût passed to his brother Ashraf, who assumed the title "Shâh Arman", and finally to the third brother Muzaffar who ruled there till 642 (1244). The peace of this fief was several times broken by invasions of Georgians, of the Kâbirmîzshâh and of the Mongols. The Georgian troops who were operating round Kifîlût at this time were commanded by the Armenian princes Zakare and Iwane whose genealogies make them descendants of the Kheî Bahirrâhan, i. e. of the Kurd tribe of Bîşpirâlan; cf. Marr in Zât, 1911, xx., p. 120.

The Aïyûbîd forces were composed mainly of Turks but the Kurdish element was by no means negligible. In 583 (1187), Saîl al-Dîn addressed an appeal for a holy war to the Kurds on the upper Tigris. The Dîjîzârî forces were disbanded in 584 (1188) but the Diyarbakr detachments and particular tribes are often mentioned. These Kurds were sometimes on bad terms with the Turkomans (Baha al-Dîn, Recueil, iii. 86, 315, 381).

Kurds were numerous in the civil and military service of the Aïyûbîds but were often they acted against the dynasty's interests. When Shirkût died, there were Kurds who opposed the appointment of Saîl al-Dîn as his successor (Ibn Klâlîkân, iv. 494).

An important part was played by the family of Abu 'l-HâIdjâ (Hadîhîmâ) hereditary chief of Arbil (?). He directed the defence of Akkâ against the Crusaders and was appointed isfâhâûîr of the army and governor of Jerusalem. In 1196 he was transferred to Baghûd: he conducted an expedition against Hamadân and died at Dağlûka. His nephew Kûthû al-Dîn built the Kûthûâyî madrasa in Câinî. Another Kurd, of the tribe of Hakkân, Saîl al-Dîn b. 'Abd al-Mâshûûû, succeeded Abu 'l-HâIdjâ at Akkâ. His descendants had exciting careers; his son 'Abdâm ended his days in the prison of Harrân; his grandson, the Khân Imaûd al-Dîn plotted against al-Kâmîl, and had to go into exile.

Khârîzîm Shâh Djalâl al-Dîn. In 614 (1217) the Kurds of Zagros inflicted a defeat on the troops of the Khârîzîmshâh sent from Hamadân to Baghûd. Djalâl al-Dîn's operation against Kifîlût (623—626) disorganised the life of the country and the Kurds were decimated by famine (Kâmîl, xii. 207, 308). Defeated and pursued by the Mongols, Djalâl al-Dîn took refuge among the Kurds of Diyarbakr and in 628 (1231) was killed, probably by one of them (Djwâinîn, ed. Muhammâd Karwînî, Tâhirî, Kâmîl, iii. 325; d'Ohsson, Historie des Mongols, ii. 625, note 4 (1237) against the remnants of the Khârîzîm hordes traversed and plundered the region of Khârûpû (Abû 'l-Faraûd, o. c., p. 477). After the death of Djalâl al-Dîn, the Mongols laid waste the region of Diyarbakr and Kifîlût. Another horde had descended from Marâ-da on Arbil; this latter region was three times invaded. In 645 (1245), Shahrîzûr was laid waste and in 650 (1252) Diyarbakr.

The Mongol Ilkâhân. The Kurds are rarely mentioned under the Ilkâhân. As these rulers — at first pagans and later Muslims — were on good terms with the Christians and the latter had sufficient causes of complaint against their Muslim neighbours, the Kurds so recently involved in the wars of the Aïyûbîds had to remain confined to their mountains and to hope for success for the enemies of the Mongols.

The province of "Kûrdstân" formed in the time of the Sâlîqân, the capital of which was Bahâr (near Hamadân) was conquered by Malik b. Tûdân, father of the celebrated Amir Çobân. Leaving Hamadân in 615, Hûlûfû marched on Baghûd. At Kirmânshâh the Mongols began to murder and plunder (Rashîd al-Dîn, ed. Quatremère, p. 225, 255, 267). Before the capture of Baghûd, Hûlûfû sent troops to take Arbil. The governor of this stronghold, Tâdj al-Dîn Shâlîka (cf. Rashîd al-Dîn, ed. Blocket p. 261), submitted to the Mongols but the Kurd garrison refused to follow his example. Arbil was taken with the help of the Atabak of Mawsil, Badr al-Dîn Lu'lî (d'Ohsson, ii. 256). The taking of Baghûd resulted in the depopulation of Shahrîzûr [q. v.] and its Kurd inhabitants, according to Shîhâb al-Dîn al-Umarî, left for Syria and Egypt (cf. d'Ohsson, op. cit., iii. 309, 330, 337). An echo of these events is found in the appearance in Algeria of two Kurd tribes: Lawûn and Babin (Ibn Klâlîkân, Hist. des Berbères, transl. de Slaane, ii. 461 and iii. 417).

Returning to Adharbâdîjân, Hûlûfû set out for Syria in 657. In the Hakkâri country, the Mongols put all the Kurds they found to the sword (Rashîd al-Dîn, ed. Quatremère, p. 328).

Dîjîzârî, Diyarbakr, May法sîkîn (held by the Aïyûbîd Kâmîl) and Mardin were taken in succession.
After the death of the Atábak Badr al-Din Lu'lu' who had remained faithful to Hulagu, his son Sâlih went over to the side of Baibars, Sultan of Egypt and received confirmation of his investiture from him. The Kurds around Mawsil at once fell upon the Christians. The garrison of Mawsil consisting of Kurds, Turkomans and Shiites, courageously resisted the Mongols.

In Syria also the Kurds threw in their lot with the Mamlûks. In his letter to the Khân Berkâi, Baibars boasts of the number of his troops, who were Turks, Kurds and Arabs (d’Ohsson, iii. 385). In the time of Ahaba, the Armenian Hayton tells how after an invasion by Egyptian troops (before 677/1278) the Kurds took 5,000 houses of Kurds (Gordins) living in Northern Syria (Recueil, Dec. Arme., iii. 179). But after the defeat of the Mongols in 680 (1281), a body of Muslim troops, made up of Turkomans and Kurds, laid waste Cilicia. The rare cases in which Kurds are found allied to the Mongols were generally in distant Fârs. Under Ûljâjîtâ there were Kurds in the troops that invaded Gîlân in 706. A little later a Kurd, Mûsâ, who had proclaimed himself the maddî of the Shi'is was executed by Ûljâjîtâ. In 712, Badr al-Din, the Kurd lord of Ra'ba resisted the Mongols.

The Kurd provinces were governed by the Mongol Amir. The fighting in Arbil never ceased. The Kayacî, Christian highlanders, forming part of the Mongol army and stationed in Arbil, brought a charge against their chief Zain al-Din Bâlû and came into conflict with the Kurds whom the Arabs supported. Incidents began in 1297 but the situation came to a height in 1310. With great difficulty the Mongols drove the Christians out of the citadel. The Mongols had summoned the Kurds to help them in the siege but their amirs who were friendly with the Christians, wanted to use the Kurds to prevent the massacre of the Christians by the Arabs. The massacre took place but the Kurds had no share in it (Histoire de Mar Jâbâlahâ III, transl. Chabot, Paris 1895, p. 152–177). The country between Marâgha and Arbil was a kind of high road for the Mongol armies; at this time the country south of Lake Curna was still for the most part occupied by Turks and Mongols (cf. Sâwûd-Bulaq).

The capital of the province of “Kurdistan” and Ûljâjîtâ was moved from Bahâr to Sultanâbâd (of Çamçâmîl). The extent to which the province had suffered may be judged from the statement of the Nasihat al-Aabdî (p. 107) according to which its revenues were reduced to one tenth of what they were under the Sâlîsîs.

When the Ilâksân had disappeared, two families of Mongol chiefs of the tribes of Sudûz [q. v.] and Djalîîr [q. v.] became rivals for power. By virtue of the division of the fiefs between “the two Hasans” (in 738/1338), (Persian) Kurdîstân and Kûzhdîstân returned to the children of the amirs Akrandzî or Akrârî (?). In 784–785 the Djalîîr Bayazid carved a fez for himself out of Persian Kurdîstân and Îrâk ‘Adhamî (Lane-Poole, op. cit., No. 86 and d’Ohsson, iv. 747).

Table of the Kurd tribes in the time of the Mamlûk Sultanâs. The Mongol conquest had completely eclipsed the political part played by the Kurd tribes but in Egypt where the Mamlûk Sultanâs were cherishing secret plans against the Ilâksân, much interest was taken in the fate of this Muslim element. The Maâlik al-Ashrî of Shîhâb al-Dîn al-Umrâ (d. 749/1348) shows how exactly the chancelleries of the Mamlûk Sultanât were informed about Kurd affairs. According to al-Umrâ there were Kurds near al-Irâk and al-Dîyâr al-‘Ârab and in Syria and Yemen. The mountain country (al-Djîblî) inhabited by the Kurds began near Hamadân and ended in Cilicia (bîlîd al-Takfûr); to the west of the Tigris the Kurds of al-Djazîrât and Mârdin were at the mercy of all their neighbours. At Mârdin however a certain Ibrahim al-‘Arîs Bâlû (?), had shortly before proclaimed himself independent and had attained considerable power. The author then gives a list of twenty tribes living between Hamadân and the part of al-Djazîrât that lies between Mawsil and Karwar (cf. Kûwîr in the Sharaf-nâmâ).

1. The Gûrânî, who were warriors and agriculturists (qund wa-ra’îya).
2. The Gîlânî (cf. the mountain called Gâlâla among the Sohrân; Sharaf-nâmâ, i. 286 and Rich, Narrative, i. 123: Ghele-lâ). A portion of this tribe migrated to Syria. Their prince Sharaf al-Dîn was governor of Arbil under the Mongols but was killed by a Mongol.
3. The Zangâlî (= Zangânaî). 4. The Kûsâ and the Mâbir (?) of Shahrizûr (q. v.) migrated to Syria and Egypt.
5. The Sâbûlî (Sutûni?), lived in Shahrizûr and Ushnî. Near them lived the Kûrtâtî (cf. Hoffmann, Auszüge, p. 207).
6. The Hasânîn (Khuşnîwî?), several thousand in number divided into three branches, one of which living at Karkar alongside of the Kârtâwî (?), levied tolls on the pass Darband-i Karabolî (the defile of the Little Zâb; cf. Hoffmann, op. cit., p. 263).
7. Near Kûrnî (? Kûrkûk) and Dâjkû lived a tribe of 700 men.
8. A tribe living “between two mountains” (bîn al-djâbalîn) on the territory of Arbil in winter sought the good graces of the Mongols and in summer assisted the invasions of Egyptian troops.
9. The Mâzdânjân (=) to the number of 500 lived near Arbil and Mâzdânjân, Nûrâ and Bêkhum (these two latter cantons are situated on the Great Zâb east of ‘Arîr). The chiefs of Mâzdânjân also ruled the related tribe of the Hamadânîs (of which there were 1,000 men). The chief of the Mâzdânjân called Kâk had received the title Mûhârîr al-Dîn from the ‘Abbâsîs. The Mongols divided his lands into two and Kâk remained nâîb of Arbil. He was dispossessed for a time under Arghân but according to the Şîh al-Ashrawî, his sons and his grandsons retained their fief (‘Arîr and Şîsh).
10. Near Tell-Haftûn was the land of the numerous Sohrî tribe (Sohrân).
11. Their neighbours were the Zarrârî (“children of gold”). They also possessed Malazgîrd (Îfbûlî Barûgîd) and Rustûk (the southern part of Shammadân).
12. The Djuâmîr, of Omaiya origin, numbered 3,000 men.
13. The Kurds of the district of Markawan (read Margarû) were allies of their Djuâmîrîs and Zarrârîs neighbours.
14. Near Djuâmerî was the canton of Gâwîr.
15. Near Djuâmerî beside ‘Arîr and ‘Amâdiya was the canton of Zîbûrî inhabited by 500 men.
16. The Hakkâris lived at 'Amâdiya and numbered 4,000 men.
17. Near the Hakkâris beside Mardin were the Djabal al-'Amrani and the cave of Khaib Dâwûd where lived the Bestikli (??).
18. Near Dülâmêr towards Mawsil lived the Bokhtli, rivals of the Hûmûdî.
19. The Dâsîni had been very numerous but their chief Badr al-Din came down to more accessible country and there were no more than 1,000 Dâsîni in the province of Mawsil. 500 Dâsîni lived at 'Agr.
20. The Dumbulli (?) inhabited the high mountains.

To this information given by the Mustik the Şâlî al-Asâhî basing on al-Tâkhîf adds a list of 25 Kurd chiefs with whom the chancellories of Cairo were in correspondence.

Timûr and the Turkoman dynasties. After the Mongols, the rival Turkoman dynasties extended their power over Kurdistan. This period, of which little is yet accurately known, was of considerable importance for the Kurds. The Kârakoynulu dynasties penetrated into the heart of Kurdistan, involved the Kurd tribes in political and religious quarrels (cf. the extreme Şhârî of the Kârakoynulu) and provoked considerable movements of the population: it was at this period that the Mûkri Kurds seized the country south of the Lake of Urmia (cf. Sâwûl-Sulak). In contrast to this, the conquest by Timûr which temporarily swept aside the Kârakoynulu had only a transitory character.

Many incidents in the history of Hîn Kâifa and Dzira between 796—807 (1393—1401) are recorded in the Syriac Chronicle (written at Hântum) publ. by Behnusch, *Serüm setula XV in Mesoopotamia gestarnu über*, Breslau 1838.

Timûr had to deal with the Kurds in his campaigns of 796 and 803. After overrunning Baghdad and Dijârbakr Timûr attacked Dzira which was destroyed. The dependencies of Dijârbakr were likewise conquered. Timûr next crossed the mountains separating Dijârbakr from Mûsh and gave a favourable reception to Şaraf al-Dîn of Bidîl “renowned for his kindness and justness throughout all Kurdistan”. In 803 Timûr returned from Baghdad to Adhârîbîdjan and on the way was attacked by the Kurds.

After the death of Timûr, Kârâ-Yûsuf Kârakoynulu returned to Kurdistan and sought refuge at first with Şams al-Dîn of Bidîl. He gave him his daughter and with his assistance re-established his power. In 820 Kârâ Yûsuf by a nizâhî confirmed the princes of Bidîl in their possessions. When in 824 (1421), Shâhrehk, son of Timûr arrived in Armenia, homage was done to him by Şams al-Dîn of Bidîl, Malik Mûhammad Hakkâri, Malik Khalîl of Hîn Kâifa, the amirs of Khiçan etc. The Kurds of Khoi also remained loyal to Shâhrehk’s governor (Mattâs al-Sa’dîn, *N. E.*, xiv., p. 153).

The Aş-Köyunlu (the Bayandur dynasty) whose principal centre was in Dijârbakr, conducted a systematic policy of exterminating the great Kurd families (Şaraf-nîma, i 164: itstîsîhî khanawâdah-yi Kurdistân) and in general persecuted tribes who had compromised themselves by their attachment to the Kârakoynulu like the great tribe of Câmishgezek. Uzun Hasan’s generals Şufi Khalîl and ‘Arab-Shâh conquered Hakkâri, which was later taken for a brief period by the Dumbulli tribe from Bûhûn. In 875 (1470) (cf. Behnusch, *op. cit.*, p. 14) Dzira passed entirely into the power of the Aş-Köyunlu who appointed their own governor Calabî Beg, whose merits are recognised even by the Şaraf-nîma, i. 123. The Aş-Köyunlu general Sulaimân b. Bûzân drove out of Bûhûn the Îbrâhîmî Khân who was later put to death by Ya’ûtî b. Uzun Hasan.

The Şafa’î Shîhîs and the Ottoman Sultânîs. Şhâh Ismâîl had invaded Armenia at the beginning of his war with the Aş-Köyunlu. After the battle of Şarûr 907 (1502) he won all the country between Baghdad and Marâsh. Ismâîl’s policy with regard to the Kurds did not differ from that of the Aş-Köyunlu. Like the latter the Shâh relied on the Turkoman tribes but being a zealous extreme Shî’î (cf. Kiat Kait) he was still more predisposed against the Sunni Kurds. When eleven Kurd chiefs presented themselves at Khoi to pay homage, Ismâîl imprisoned most of them and appointed in their stead governors chosen from the Khiçîl-bash tribes.

Henceforth, for about three centuries Kurdistan became the arena for the struggle between the Ottoman Sultânîs and the Shâhs of Persia. The defeat at Çarivan 914 (1514) was a terrible blow to the prestige of the new Persian dynasty. In spite of the temporary successes of the successors of Shâh Ismâîl, their conquests never attained the importance of his early victories and Persian territory west of the Zagros melted away. Ismâîl’s attempt to thrust Persian governors upon the Kurds was a marked contrast to the Ottoman policy instituted by the able Hâkim Idris, himself a Kurd, which aimed at giving Kurdistan a feudal organisation securing the predominance of the Kurd nobility.

The battle of Çaldärîn deeply affected Kurdistan. Malik Khalîl (Şaraf-nîma, i. 155) the dispossessed prince of Hîn Kâifa had regained possession of Shîrûd and was trying to regain his hereditary fee. Mûhammad Beg of Şasân was fighting against the Persians. Aşmad Beg of Maiyâfîrîk, Kîsîm Beg of Agîl, Qamshîd Beg of Pûlû, had declared in favour of the Ottomans. The governor of Dzira had succeeded in repulsing the Persians of Mawsil. Sa’dî Beg Sohrân had taken Arbûl and Kûrûkû. Some twenty other chiefs were wavering in their loyalty to the Persians. A personal visit by Idris to all these chiefs won 25 of them over to the Sultân.

When Selim had left Tabriz, Ismâîl sent reinforcements to Dijârbakr and Hîn Kâifa. Idris summoned to his flag the Kurd levies and defeated Kurd Beg, a former Persian Governor of Kurdistan. The Kurds of Dijârbakr resisted the Persian attack until help arrived from Bîlykîl Mûhammad Pûshâ, Bîlykîl and Idris met at Hîn Kâifa and defeated the Persians. Then reinforced by 5,000 Kurds (from ‘Amâdiya?) the Turks relieved Dijârbakr and took Mûrdân, except the citadel which remained in Persian hands. The Persian commander then executed a successful diversion from Baghdad and Kirkûk and the people of Mûrdân drove out the Kurds and invited the Persians to re-occupy the town. The two armies met on the Nasîban-Urfa road. The Persians were defeated and Bîlykîl forced Sulaimân Khâtân who was still at Mûrdân to surrender. The occupation of Nasîban, Dûra,
Maiýtärıkün, Diýäríbêk and Sinđär followed and Idris completed the administrative organisation of the sandjak. In the province of Diýäríbêk eleven sandjak were put under Turkish officials, eight under Kurds (Akbîd beylükê). The walls confirmed the investitures of the new begs but the latter were always chosen from the same family. Five hereditary Shêrrifat (Kurd-beshîkatê) retained their dynasties with the transmission of power direct from father to son (cf. Tischendorf, Das Lehnswesen in d. moslem. Staaten, Leipzig 1872, ch. ii. and iv., quoting 'Ain-i 'Ali Mu‘âdhünînâdie who wrote at the beginning of the xiiîb [xviiîb] century). A similar system was later applied throughout Kurdistan from Malâtía to Bayazid and Shahrizur (cf. below the Şaraf-nâma), and the very interesting remarks of Ewliya Çelebi [iv. 176–180 and 271–316]; on the 37 sandjakcs joined to Wân by the law of Sulaimân I and the order of march of the local army). Only the province of Kırımshâh remained to the Persians. Idris was liberally rewarded and the firmans of investiture were sent him with the spaces left blank for his fill in the names of the recipients (von Hammer, C. O. K. 2, i. 749).

In 1356 (1530) Şêh Tahmûş recovered Baghêdäd from Dîlêr-Fâkûr, a Kurd of the tribe of Mûsûl (Movullû). A long series of wars began again. Sultân Sulaimân led an army against Persia in 1533, 1534, 1535, 1548, 1553 and 1554. In this last year the Baghêdäd troops conquered the Kurds of Bellûks and Shahrizur while the Persians were occupied in Georgia (von Hammer, op. cit., ii. 236).

By the peace of 999 (1500) 'Abbâs I had to cede to the Turks the western provinces including Ağıdarbâdjan, Shahrizur and Luristan (ibid., ii. 559) but in 1010 (1601) fighting was resumed and by the peace of 1021 (1612) Persia regained possession of the lost provinces, except Shahrizur (ibid., ii. 745). Şêh 'Abbâs transported 15,000 Kurds to the frontier of Kûrdsân to serve as a bulwark against the Turkomans.

Towards the end of the reign of Şêh 'Abbâs, Turkish efforts were concentrated on Baghêdäd. During Hâfiz Pâshä's first campaign (1623) his army included the Kurdistân troops. The Kurds fought bravely. The Persians having defeated the attackers, sent punitive columns to Mûrdân. After the death of Şêh 'Abbâs, the grand vizier Khûraw Pâshä advanced on Baghêdäd in 1039 (1629).

Sayid Kháân of 'Amidîya, Mirj Begr Şêmân and the mixed Kurdo-Arab tribe of Bàjdilân took the side of Khûraw Pâshä while Ahmad Kháân Ardalan threatened the Turkish flank. Khûraw Pâshä advanced, as far as Sennä [q. v.] and Hamûpin. On their way back the Turks defeated at Çamçamal and Dartang a Persian force. Baghêdäd still held out however and when Khûraw Pâshä had retired Ahmad Kháân Ardalan re-occupied Shahrizur (von Hammer, op. cit., iii. 17, 23, 49, 86, 93). Not till 1048 (1638) did Mûrâd IV finally take Baghêdäd and in the next year the treaty was signed with Persia grosso modo which fixed the Turco-Persian frontier down to the xiiîh century (Tuîrîkî-kê Naînê, i. 686). Persia was now completely behind the Zagros chain.

The great struggle between the Safawids and Ottomans made the Kurds conscious of their political importance. The Şaraf-nâma has preserved for us an accurate picture of the feudal life of the Kurds and principalities at the height of its development about 1005 (1596).

Şaraf-nâma. This book by the chief of Bidlis, Şaraf al-Dîn (cf. Bîdîsî) finished in 1005 (1596) occupies an exceptional place among the sources for Kurbîsh history. The history of the Kurds in the strict sense (vol. i. in Vêlimînob Zêriof's edition) is divided into four parts (pâhîfa): the first three of these deals with those Kurd dynasties which have actually enjoyed the privilege of royalty (salçanat); the second with those whose members sometimes have had coins struck and the khûstî recited in their name; the third enumerates the families of hereditary governors (çukkâm) and the fourth is devoted to a detailed history of the chiefs of Bidlis. Part i. gives five dynasties, the Marwânîs [q. v.] of Diýäríbêk and Dîzîra, the Hâsan-wâhidîs [q. v.] of Dînawar and Shahrizur; the Fâčlâyids of the Great Lûr; the princes of little Lûr [cf. Lûsî] and the Aîyûbîds [q. v.].

As the distinction between the second and third class of princes is rather subtle and the order in which Şaraf al-Dîn enumerates the dynasties is quite arbitrary it is better to arrange these dynasties according to the geographical position of the fiefs, taking Dîzîrat ibn 'Omar as the centre. This list will be followed by that of the Kurd tribes in Persia. The fiefs of the second class (including Bidlis) will be marked with an asterisk (*).

Şaraf al-Dîn distinguishes as far as possible between the tribes and the families of their chiefs and it is necessary always to bear in mind the bases of feudal organisation in Kurbîsân. Chiefs of varied origin rule the Kurbîsh, Kurbîcised and Christian tribes, with the help of warlike Kurd tribes (çagîrat), which are sometimes settled, sometimes nomad or rather semi-nomad.

Group A. Between Dîzîra and Darûsim. 1. The chiefs of Dîzîra* claimed Omaiyad origin but gave as their ancestor Kháûtî b. Wallî. In such confused genealogies we have a combination of memories of the Kurd alliances of the Omaiyads with the local cult of the descendants of the famous general Kháûtî b. Wallî [q. v.] whose tombs are shown near Sîrûd (Hartmann, Bohtên, p. 19, 124). These chiefs were at first Yazidis and only later became converted to be orthodox Sunnis. After the death of Sulaimân b. Kháûtî his three sons divided his possessions: Dîzîra fell to Mir 'Âbd al-Âzîz, Gurgil to Mir Hâdîdî Beg and Finik to Mir Abdâl. These three branches each kept their own fiefs in later times.

The Şaraf-nâma refers to the possessions of this family as vilâyêtê Bokhî (i. 320) and enumerates in detail but without system the 14 nâhiya forming this important fief: Gurgil, Arwaqûh, Pirûz, Bâdân and Tânê (Kalûq) occupied by the tribe Kûsî; Finik; Tûr, Hâtâm (Hethum) and Şâkî inhabited by Christians; Nîsh Atilî; Arasmâh the tribe of the (Kêspî) is the chief among those of Bokhî; Kêwaror Kêmîz (?); Dair-dîh which belongs to Tânê.

In spite of the careful study by M. Hartmann, Bohtên, Mitt. d. Vordeuts. Gesell., 1896, 2 and 1897, i. p. 1—165, the localisation of some of these places is not quite certain.

The fief of Dîzîrat ibn 'Omar lay between the right bank of the Bohtên and the Tigris. It did not include the sources of the Bohtên. Towards the east, the neighbours of the Bokhî were the
Sindijān (cf. under 'Amādiya) settled on the Khābūr. 2. The ancestors of the rulers of Khirtān, Isbāyā erd (Sparhet, Ispert; in Ewlyāv Celebi: Isbā'ird) and Murks (Mukus) were three brothers who came from Balīdjān (Kynis) in the time of the Saldūqs (Sharaf-nūma, i. 217). The tribe of the principal fief was Namārān; this fief lay along the right bank tributaries of the Boštān and stretched as far east as Morsāt. 3. Šhirwān (on the right bank of the Boštān below Khāzān and north-east of Si'ird). The ancestors of the “Shirawi” chiefs were in the services of the Ayūbdids and came to Šhirwān at the same time as the “Malikūn” to Īṣān-Kaftā. The Shirawi played even the rôle of vikings by the Malikīn (ep. cir., i. 155). The capital of Shirwān was Kufrā. The other dependencies were Āwil, Shabīstān (also called Garnī = Kīrkī?) and Īrān. 4. Bīdlīs. * The Rūzāgi (Rūzagi) tribe is said to have taken its name from the fact that 24 clans, assembled one day (rāzā) in the village of Tān in the canton of Kūhīt (now the kāhā of Mūdēk west of Bīdlīs), formed a confederation which later became divided into two sections: Bībsāsī and Kāwāsīs. Sharaf al-Dīn (i. 361) enumerates the 24 (read 25) clans of the Rūzāgi, of which five were old settlers and the others newcomers: Bībsāsī (10 clans) and Kāwāsīs (10 clans). The Rūzāgi took Bīdlīs and Haiş (Ṣaṣīn) from the Georgian king Tavit (David the Couroupalate, p. 984—1001). Later they brought from Akhūsh two brothers of Sāsānian origin. One became chief at Bīdlīs and the other at Ṣaṣīn. 18 chiefs of the line of Diyā al-Dīn had ruled at Bīdlīs before 1056 (1651). The only interruptions took place under the Saldūqs (1044—570), under the Ak-Ḵoyūnlu (871—900), under Šāh Ismā'īl (913—920) and between 941 and 956. In this last year Sultān Sulaimān wanted to exchange the hereditary fief of Amir Šams al-Dīn for that of Malāṭiyā. Šams al-Dīn had to leave Bīdlīs but fearing new intrigues went to the court of Šāh Tahmāsp, who treated him with generosity. Šams al-Dīn died in Persia in 965. His son Šaraf al-Dīn, born in exile in 940, was carefully educated at the court (the Šāh even had him taught painting). He ruled several Persian provinces in succession, and was appointed chief of all the Persian Kurds. After the accession to the throne of Ismā'īl II, Šaraf al-Dīn fell under suspicion and was sent to Nakchūwān. From there he succeeded in reaching Wān and received from Murād I investiture for Bīdlīs, to which Mūshā was added in 991. For the year 1065 (1655) Ewlyāv Čelebi (iv. 81—121) gives us a detailed description of Bīdlīs. The last prince of Bīdlīs, Šaraf Beg was dispossessed by the Turks in 1849 (Lynch, Armenia, ii. 149). 5. The rulers of Šaṣīn (Haiš) were called Ḥezān from their ancestor Ḥezā al-Dīn, brother of Diyā al-Dīn of Bīdlīs. The ‘asḥars of Šaṣīn were at first Širwāli, Bābūsī, Šūshinī and Ṭāmūkī. The Rūzāgi (cf. Bīdlīs) arrived afterwards; later after the annexation of Arzan the clans of that district: Khiādī, Dair Mughānī, Ṭūsānī, who had at first belonged to Ḫiṣn Kaftā, came to join those of Šaṣīn. 6. The Suwāidī chiefs claimed a Barmaic origin. Their ancestors were adopted by the Suwāid tribe. The hereditary fief of the Suwāid was Gandj (this should be read for Kibb in Vélimarinozneri, i. 260). 7. The ‘Azāqué tribe which Sharaf al-Dīn places among the tribes of Persia (i. 328) is said to have been of Suwāid origin. According to the Sharaf-nūma, i. 328, it had no definite religion and showed signs of heresy (raṣā ‘in-wiḥīnd). The tribe was divided into two branches, Khiādī-Beglu and Šekhrūbān, and one of the descendants of Bīdlīs, Khālid received as fiefs Kynis, Malāzergerd and the canton of Ujkān (? or Mūshā. They grew so proud that they thought of proclaiming their independence. After the battle of Caldıra in the Suwāid dispossessed the ‘Azāqué from many of their fiefs (ibid., i. 257). In the time of Šāh Tahmāsp, Kliďd Beg appointed chief of the ‘Azāqué received Zagam (near Tīfīs). Later Pāzātkī were transferred to Alashkert where the tribe increased. 8. The Mirdāsī chiefs (Mirdāsī in the Selim-nūma) claimed to be descended from the ‘Abbasīds. Their ancestor was a religious man who came from Hakkār to Īṣān and whose disciples the Mirdāsī became. The tribe themselves said that they were of Arab origin, being Banū Kilāb from around Aleppo who migrated about 420 as a result of troubles with the Fatimids (cf. Lane-Poole, The Muhām. Dynasties, No. 45: the Mirdāsī of Aleppo). The main one of the three branches, the Bulduṇān, lived at Īṣān; it maintained good relations with the Ak-Ḵoyūnlu but under Šāh Ismā’īl, Īṣān was occupied by the Persians. Of the two other branches of the Mirdāsī, one ruled at Pālū, at Bāγhīn (below Kīghtī and at Kharpū and the other first at Bārdangī and later at Dārmīlk (south of Arghana-aʿnān). 9. The rules of the Čamīšghezkez claimed to be of Abbaṣid descent, but their names rather show a Turkish origin (Saldūqs). Their ‘asḥar was called Mulkishī (Malik-Šaḥī). There were about 1,000 hearts of Mulkishī in the Persian service (in Persia). The lands of the Mulkishī were so numerous that the name Kūrdistān had become synonymous with Čamīšghezkez (Sharaf-nūma, i. 163). They kept them in the Mongol period, under Timur and Kara Yūsuf but the Ak-Ḵoyūlun did all they could to weaken the tribes faithful to the Kara-Ḵoyūnlu and sent the Turkish tribe to Kharbandu against Čamīšghezkez. Šāhīk Hasan drove out the Kharbandlu and submitted to Šāh Ismā’īl. The latter put a Persian governor in his place. Selim I restored the hereditary amīr Pī Ḥusain. Group B. Between ‘Azārir and Killūs. 10. Ḥasan-keīf* (cf. ‘Hesn-Kaftā). The local chiefs (malikān) claimed to be of Aiyūbid descent, which seems very probable. Their ancestor was alleged to have received the fief of Ḫiṣn-Kaftā from the ruler of Mārdūn. The first chief mentioned by the Sharaf-nūma, is Malik Sulaimān who died in 736 (1335). The Ak-Ḵoyūlun seized Ḫiṣn-Kaftā but Malik Khālid who had taken refuge in Hamā, later regained possession of his fief. At a later date the Ottomans dispossessed the sons of Malik Khālid. Among the dependencies of Ḫiṣn Kaftā, the Sharaf-nūma mentions Siʿrīd, Bishḩī, Tūr (which sometimes figures among the possessions of Dżazira, cf. ibid., p. 117, 127, 157) and Arzan. 11. Sulaimān, rulers of Marwānid origin (Omai- yad), established themselves at first at Khābūr.
the canton of Ghazālī (between the Kulp and the Bağmän–su before they join) and gradually captured many strongholds and territory as far as the Tigris. They ruled a powerful confederation of tribes, the majority of which were nomads and in summer moved to the Ala-Tagh (Niphates). The chief of these tribes was Ibrāhīm, but the more enterprising was Bashābūn, 1,000 families of which migrated to Bayzad under their chief Şāhāsawār. A number of the tribes refused Yazidi doctrines. The Sulaimān lived on bad terms with their neighbours of Sā-ūin. They were divided into two branches, that of Kulp and Bağmän and that of the Fijāršāfīrīn. 12. Zira (the modern pronunciation attested by Adādī Scher, J. A., 1910, p. 119–130); according to Sharaf al-Din, Zira, is a contraction of the Arabic Aṣra. The ancestor of the family who was an Arab holy man from Syria of ‘Alīd origina arrived in Mārūn in the time of Ortoq (d. 516 = 1122; Abu ‘l-Faraj, Majkṣaṭ, p. 379). The family formed connections by marriage with the Ortoqids and later with the Ak-Koyunlu. There were four branches of Zira, the principal branches were those of Tardjīl (the head of the Bağmän–su) and Atākīl. The other branches were that of Darzān (an old Christian convent Deiz Darz) and that of Kuriq (between Diyarbakır and Fijāršāfīrīn) the latter descendants of the marriage of a Zira chief and a gipsy woman (dakhtar-i kūsīfū). 13. Kīlis. The ruling dynasty believed it was related to those of Hakkār and Amādiya. Their ancestor Mand (Mantasha) had rendered services to the Ayyūbidids who gave him the canton of Kuśārī (near Antioc). He united under his rule the Yazidis of Kuśārī and those living between Hammā and Marāsh as well as the Kurds of Dijam and Kīlis. Under the Mamluk Sultāns and under Selim I disputes broke out between the Yazidis (Shaikh Izz al-Din) and the family of Mand, which ended in favour of the latter, but the hereditary rights of this North Syrian sect do not seem to have been on a very solid basis. Group C. Between Dijzīr and Khoi. 14. Hakkārī (cf. Hakkārī and Shamāndīn). Sharaf al-Din does not seem to know the old quarters of the tribe around Amādiya from which the Zangid Atābegs had driven them northwards. The emirs claimed to be of ‘Abbasid descent. The first Amir mentioned in the Šahr-e Nāma is Izz al-Din Shīr (probably simply an arabisation of the name Yezdīn–Shīr) who held out against Timūr in 789 (1387) in the fortress of Vān. Under the Ak-Koyunlu the tribe of Dumbuli (of Dijzīr) took possession of Hakkārī but the Christians of Dij (Aṣuri = Nestorians) went to Egypt to bring back the scion of the ancient family Asad al-Din Zarrīn Cang (“Golden arm”). The restored dynasty received the name of Shamsī (M. Garzoni, Grammatica della lingua kurda, Rome 1787, p. 4; Sattora). In the time of Ismā’īl I, the Shamsī chief lived in the castle of Bāt (in Shamāndīn); a member of the family ruled at Mosul (south-west of Vān) but the possession of the niatia of Kawāfīg west of Mosul was disputed to the Hakkārī by the Rūsa. Hakkārī ruled extended to Albā in the north. The last representative of the Hakkārī house, Nūr-Allāh Bega, was dispossessed by the Ottomans after the rebellion of Badr Khan Beg of Bokhtar and in 1845 Halime Khānīf surrendered Bash-Kāra to the Turks. The tribe of Pinyānīsh (ibid. i. 97, 100) which still exists is mentioned as living near the Hakkārī. 15. The Māmūdī fīf lies north of Hakkārī on the rivers which feed the lakes of Vān and Arvār. The rulers (Marwānīsh of ‘Abbasīf of Hakkārī) who originally professed the Yazidi faith (Šahr-e Nāma, i. 307), settled there in the Kāra-Koyunlu period and soon came into conflict with the Hakkārī and Dumbuli. 16. The Dumbuli are a tribe of Bokhtar (Šahr-e Nāma, i. 118, 310: Dumbuli Bokht) which for long remained Yazidi. The Dumbuli later came into Aḥharbādja where they received as a fīf Sulaimānābād (Sogmanābād) north-west of Khoi (now: Zūrāwā). Under the Ak-Koyunlu the Dumbuli had seized the castle of Bāt (in Shamāndīn) and a part of Hakkārī (ibid., i. p. 193). To their qājav of Sulaimānābād Shīh Tahmās p added Khoi. Under Sultān Sulaimān the Dumbuli received Kojuš [q.v.] and Bārgīr, later they annexed Abagha, Sulaimān-Sarai (the modern Sarai) and Cədīrūn. Zaín ‘Alī’s Shīhīnī in his Būtaqān-Shīyāb (beginning of the 15th century) says that all the Dumbuli are Shīhīs (cf. the allusion in the Šahr-e Nāma, i. 312) and speak Turkish (!). 17. Brādūst. The ruling family was of Gūrīn or Hasanwaihī descent [q.v.]. Its lands lay west of Urmiā. One branch ruled at Sōmāi [q.v.]; another at Tergewe and at Kāl’a Dāwūd. The remnants of the brādūst tribe now live south of Shamāndīn on the Rūsbārī Brādūst (a tributary of the Great Zāb, the sources of which lie west of Ushūr). 18. Ustūn. The chapter which is wanting in the manuscripts must certainly refer to the first dynasty of Shamāndīn, whose headquarters were Sūnū in the niatia of Harkī (cf. Shamāndīn). 19. The history of the Zaṛrā (cf. the Zar-zari of Shīhāb al-Din al-Umari) announced in the preface to the Šahr-e Nāma is lacking in the text. 20. Zaṛr. The paragraph is lacking in the manuscripts and we know nothing of the tribe. Group D. South of Hakkārī. 21. Amādiya [q.v.]. We have seen that the town of Amādiya was built on the site of an ancient castle under ‘Imād al-Din Zangī (541–541). The local dynasty of Bahdānīn mentioned in the Šahr-e Nāma seems to have settled in the country after the end of the Zangīds (9th–11th century). The chiefs of Amādiya were known for their fervour in religious studies. The Šahr-e Nāma gives their names for the Timūrid period. Later (under Ismā’īl I) the Bahdānīn annexed the Zēbāb district inhabited by the Sultāns and Sīlāmānī which had at one time formed a separate fīf (wittāyet-i Sīlāmānī). In this way the fīf of Bahdānīn incorporated the greater part of the mountainous country north of Mawsīl (Mount Gara, etc.). 22. Tašāni (Dāsini). The chapter dealing with this important Yazidi tribe is lacking in the manuscripts but in the text we find a reference which shows that the Amir of Amādiya took Dohūk from the sandjaḵ-i Tašāni (i. 109) and that in 944 (1534) Sultān Sefīn I gave the sandjaḵ of Arbil and the whole wilāyat of Suhra to Hūsān Beg Dāsini, a Yazidi chieftain who provoked a bloody war with the Suhra (i. 274–277). The latter ended by regaining their patrimony.
and Ḥusain Beg was executed at Constantinople.

On the region called Uşūn, cf. Hoffmann, Anu-

23. Sōhrān (“the red ones”), descendants of Kalûs, an Arab shepherd of Bagḫdād who had fled to the village of Ḥūdāyān in the nājīya of Āvān (in the Sōhrān territory). His son was proclaimed Amir of Balakān (east of Rawānduz) and seized the castle of Āvān. The capital of Sōhrān, which was embellished by their buildings (Rich, Narrative, i. 157) was Harrār (on a tributary of the Great Zāb below Rawānduz). The Sōhrān were still a powerful tribe about 1005 A. H. but later succumbed to attacks of neighbours and the Bībān (Narrative, i. 157) benefited by their decline.

24. Bābān. This name is really applied to several successive dynasties. Their principal seat lay south of the Little Zāb and has as its capital Shārī-Bāzīr but in 1199 (1784) the Bābān built a new capital Sulaimānīya (q. v. for details).

25. Mūktir, who now occupy the region south of Lake Urmiya (for details see Sāwūl Balak) had broken off from the tribe of Bābān.

26. Bānān. The Ikhtūyār al-Dīn chiefs bore this name because they had adopted Islam of their own free will (izhāyār) (for details see Sāwūl Balak).

27. Ardalan: see the articles, Ardalan, Shah-
razur, Senna, Sisar.

28. Gāl-Bāgh (Sharaf-nāma, ii, suppl. 36–45, the addition is dated 1092). Their chief ‘Abbās Aghā of the Turkish tribe of Uṣṭādjalu received a “spring of water” in Martān (cf. Senna) from Bige-beg Ardalan (900–942). ‘Abbās Aghā later settled at Bīlāwar, a former seat of the Kalhur. His followers were recruited from different tribes. Shāh Ṭahmāsp confirmed him in his rule over Bīlāwar and the “Twelve Oīmāk”.

Later the Porte gave ‘All-Khan Gāl-Bāghī the sandjak consisting of Kirind, Shākhīn, Čakārān (?), Khorkhora, Zend, etc., while Yār Allāh received the timar of Erekle (?), Rangraza and Sahbānān (?).

29. Kalhur (Kalhur). The chiefs claimed to be descended from Gūdarz, son of Gīw, in the Persian epic. The ‘aẓīrat of the Kalhur is called Gūrān (i. 317) but some manuscripts talk of “Kalhur and Gūrān” (Sharaf-nāma, ii, suppl. 6).

There were three branches of the Kalhur, those of Palang (cf. Senna), Darang (cf. Zohra) and Māhdašt (cf. Kirdāshah).

The possessions of the chiefs of Daran and Dargān (now Rūdāb in the district of Zohbā) according to Sharaf al-Dīn, i. 319, corresponded to the older Hulwān [q. v.]. About 1005 the power of Kuḥbād Beg stretched from Dainawar and Bīlāwar to Baghdād. Māhdašt and Bīlāwar (south of the Murwārī pass) formed the territory (eγaγ) of the third branch of the Kalhurs. The Māhdašt branch was nomadic. All this perhaps explains the scantiness of the information given by Rāshīd al-Dīn. The Gūrān now keep their old patrimony but the Kalhur tribe occupies the region south of the great Baghdād-Kirmānshāh road.

Group E. The Persian Kurds.

The plan of the section (jirka) of the Sharaf-
nāma devoted to the Ahrār-i Īrān is not very clear. The author was writing at a time when the Perso-Turkish frontier was not settled.

The principal tribes of Persia were three in number: Siyāh Maṃṣūr, Čigani and Zangana. Their eponyms were three brothers who came from Luristān or “Gūrān and Ardalan”. Besides those tribes and the lesser ones mentioned by Sharaf al-Dīn there were 24 tribes (yīrmī i dor) of Karabagh (in Trans-
caucasia), about 30,000 men under one ruler, and the Gil tribe in Khūrāsan without counting tribes of minor importance.

The tribe of Siyāh Maṃṣūr. In the time of Shāh Ṭahmāsp its chief had become Amīr al-ulmār of all the Kurds in Persia (over 24 tribes).

A part of the Čigani emigrated to Ghārsīstān. The tribe of Zangana (Zengene) distinguished itself in al-Irāk and Khūrāsan.

From 1650 to 1730, “Great Kurdistān”, as it has been described by Sharaf al-Dīn, and in so far as it consisted of a series of autonomous Kurd chiefships had been already reduced in size by the introduction of Turkish rule in the sandjaks of Dīvārbakr and Vān. Not only did the treaty of 1604 (1639) put an end to Persian expansion westwards but Turkey during the reign of the Safawī epiphanies succeeded in re-occupying the western provinces of Persia as well as Trans-
caucasia (von Hammer, G. O. R., iv. 235). Practically all the Kurds in this way were reunited under Ottoman rule. Having no longer cause to fear the Persians, the Turks systematically undertook the task of centralisation.

As early as the reign of Murād IV, we find Malik Aḥmad Pāsha, appointed governor-general of Dīvārbakr in 1638, making an expedition against the Yazidi of Sīmlār. Later (1605 to 1655) the same Pāsha after his transfer to Vān subdued all the Kurds in this region.

In 1666 a Kurd, the son of a shāhīk, declared himself Mahdī but was captured by the rulers of Mawār and Ḥamāḍiya. The affair ended harmlessly by Sulṭān Muhammad IV taking the title of sīd-dānt Mahdī into his personal service (v. Hammer, iii. 589).

In the reign of the feeble Shāh Ḥusain, the Kurds of al-Irāk, in 1719 besieged Hamādān and carried their depredations up to the capital itself. In 1722 by order of Shāh Ṭahmāsp II an attempt to retake Iṣfahān, which had been occupied by the Afghāns, was made by the Kurd chief Fandun (Peridūn?) but it was confined to an attack on the Armenian quarter. The Afghāns drove off Fandun who went back to his lands and submitted to the Turks (Hanway, A Historical Account of the British Trade, 1753, vol. iii). Fortune deserted the Sāfawīs. Even ‘Abbās Kuli Khan Ardalan submitted to Ḥasan Pāsha (J. v. Hammer, iv. 211; cf. however, R. M. M., xlix., p. 87). His example was followed by the chiefs of Djawānūr, Darān, Dājaft, Harūn and finally by the sīpālātār ‘Ali Mardan Bakhitiyar [Faiľi] (v. Hammer, iv. 227).

The Afghāns. During the bloody and transitory period of Afghan rule in Iṣfahān, Afghār defeated the Turks (battle of Andijān in 1726) who had in their ranks 20,000 Kurds under Bebek Sulaimān Bābān. The Turks attributed their defeat to the conduct of the Kurds, upon whom Afghār had lavished promises; indeed shortly before some of the Kurds had gone over to the Afghāns. In spite of his initial success, in the next year 1140 (1727) Afghār had to repurchase his sovereign rights by ceding to the Turks the whole of western Persia including the Kurd and Lur cantons.

Nādir Shāh. Towards the end of the reign
of Sulṭān Ahmad III affairs began to change. By the
the western provinces and soon Nādir invaded
Ottoman territory and advanced up to the gates of
Baghdād. The Turks tried in vain to check his
advance with Kurdish troops until in 1733
Topāl ʿOṯmān Pāshā appeared on the scene with
Kurd reinforcements and he was also joined by
Mawṣūl. Nādir was defeated. In 1734, he operated with success in
the Caucasus and took Tiḥiş which had a
garrison of 6,000 Kurds. By the peace of 1736,
the old frontiers of 1649 (1639) were
restored. In 1743, Nādir again invaded Turkish territory
but in spite of Kurd and Arab help was driven back to Senna where he was finally defeated
(Ibid. iv., 317, 398—599).
Nādir was not popular with the Kurds although
there is an epic poem in the Gūrānī dialect on his
struggle with Topāl ʿOṯmān Pāshā. Among the
Ardālān, Nādir replaced Subhān Werdī Khān
by his brother who provoked a popular rising
(R. M. M., xlix., p. 88). In 1727 during a revolt of
the Turkmans the Kurds of Khorāsān (Camiš-
ghezuk and Ḫuṭrūl) refused their help to Nādir
who punished them and transported them to
Mashhad. Nādir was assassinated in 1747, while
on his way to punish once more the Kurd
rebels of Khorāsān (Jones, Histoire de Nādir,
London 1770, p. 118—120). The Kurds (Dumbulī
etc.) played their part in the anarchy which followed the
death of Nādir but the Porte refrained from
intervention.

The Zand dynasty. After the death of
Nādir Shāh, Karim Khān Zand (q.v.), one of the
best rulers Persia has ever had, ruled the greater
part of the country. The Zand were a Kurdish
tribe of secondary importance (Sharaf-nāma, i. 323)
living between Hamadān and Mālaḵī (in the
formerly called Ighār). Under Nādir they had been
transported to Khorāsān but after his death they
went back to their old homes (Taʾrīḵ-e Zandiyā,
ed. Beer, p. x, xviii.). With the death of Luṭf
ʿAlī Khān in 1209 (1794) the dynasty came to an
end. The Zand tribe was certainly too weak
to be a serious support to the dynasty but Karim
Khān, like his predecessors, had brought several
Kurd tribes from Kurdūstān to Shirāz (Aḥmadawand,
R. M. M., xxxviii.; Kūrmā, who lived in a partic-
ular quarter in Shirāz, O. M. M., Ṣaḥīb Tājūndar e. D. P. Fars, Berlin 1900, xix.).
The ʿAḡā Shāh ʿAbdallāh Kāḏūr in the death of Aḥḡ Muhammad
Shāh Kāḏūr (1211 = 1797) ʿAbdī Khān Shākṣār
seized the crown jewels and for some time tried to
gain the throne (The Dynasty of the Kajars, transl.
by Harford Jones Brygdes, London 1833,
P. 29, 27—32, 37, 50, 78, 106; R. G. Watson,
A History of Persia, London 1866, p. 107, 115,
125). In 1221 (1805) the Persians had intervened
on behalf of ʿAbd al-Raḥmān Pāshā of Sulaimāniya
[q.v.] (cf. Rich, Narrative, i., 384; Watson, op. cit., p. 155 and the Mukri Kurd song in the
collection made by O. M. M., xvi.). In 1236
(1821) as a result of troubles caused by the Kurd
tribes of Ḥafīdrūnlu and Ṣipkān the Persians
invaded Turkish territory as far as Bīlād and Mūḏūd;
at the same time they advanced as far as Ṣerābān
Baghdād by the Kirmānšāh road. The peace of 1238 (1823)
signed at Erzerûm restored the frontier of 1209
but the Persians refused to evacuate the district of Zohāb people by force. The
fate of Sulaimāniya remained in suspense.
The Russo-Turkish Wars. In 1804—1805, the Russians came into contact with the Kurds and this new influence soon made itself felt. The Russo-Turkish wars of 1828—1829, 1833—1835, 1877—1878, each had far reaching effects in Kurdistan (the question has been specially studied by Averianov, Kur'di v. voinakh Rossii, Tiflis 1900). As early as 1829 the Russians had raised a Kurd regiment. As a result of the expatriation of Christians, the Kurds after the war began to spread considerably farther north and west. During the Crimean campaign, the Russians raised two Kurd regiments. On the other hand when the Turkish troops had left for the north, a considerable rising was stirred up in Bohotan by the popular Yezd-i-Shir, nephew and a former rival of Baddr Khan.

The war of 1877—1878 was at once followed by a rising among the Hakkari Kurds of Baladin and Bohotan directed by the sons of Baddr Khan and later by the rebellion under Shaikhi "Ubaidallah of the Naskhanbodi order. The Kurd invaders in 1880 ravaged the Persian districts of Urmiya, Savid-Bulak, Miyando-Ab and Maraga and threatened to seize Bane and threatened the town itself. The chief victims were Shysis. Russians who attached some troops to protect the Araxes frontier. Persians mobilized considerable forces including the Mikid [q.v.] cavalry, Turkey, which had already finished the war with Russia, endeavored to avoid complications. Finally the Shaikhi returned to Shandizn and whence he was sent to Constantinople. He soon escaped from the capital and via the Caucasus returned to Shandizn but he was again captured and in 1883 died in Mecca.

The Hamidiya troops. The weakening of Turkey after 1878, art. 61 of the treaty of Berlin securing for the Armenians reforms and security against the Kurds and Circassians, the stubborn re-action of the Ottoman government against reforms, and from 1885 the development of the Armenian revolutionary movement with branches in Russia, Switzerland and London brought complications into the hitherto quite peaceable relations of Kurds and Armenians in as much as the latter had hitherto submitted to the authority of the Kurd feudal chiefs. About 1891 Shaikhi Pasha, later appointed to bring into operation the reforms in Anatolia, conceived the idea of creating irregular Kurd regiments, like those of Russian Cossacks. The object of the reform was to train the Kurds and attach them to the Ottoman government. The attempt was not considered satisfactory for later the Hamidiya levies were transformed into regulars (Aqofig swawri). The creation of the Hamidiya in any case by the part given to the Kurds and the ambitions aroused, made a considerable stir. There was even bloodshed between the tribes.

Armeno-Kurd relations. At the same time relations between the Armenians and the Kurds (these "brothers of land and water" according to a phrase recorded by the European consuls) were changing for the worse. The summer of 1894 was marked by bloody encounters at Sashun which ended by the devastation of five villages and the whole of the canton of Talor (Dalvoroh) inhabited by Armenians. The events at Sashun were the first of a long series of Armenian demonstrations and their sanguinary suppression in which the Kurds took an active part. In 1895 an attempt of a rising had been made among the Hakkari Kurds but was speedily suppressed; it was not directed against the Christians. From the beginning of the xixth century to the world war the relations between Armenians and Kurds seem to have been fairly peaceful. On the question in general see Abowian, Kur'di in the Kouzak newspaper, Tiflis 1848, Nos. 47, 48, 49, 50 (where the "father of Armenian literature" gives a very sympathetic picture of the Kurd character); Creagh, Armeniis, Koords and Turks, London 1880; A. S. Zelenov, Zapiska k karte raspravedelnya avrama, nasledenija, Zapiski Kavkaz. Obs. Ges. Obsh. Tiflis 1860, xviii.; Vambéry, Armenien u. Kurdistan, Deutsche Rundschau, 1890, xxxvi., p. 216—231; Rorphach, Armenien u. Kurdistan, Verhand, d. Gesell. f. Erdkunde, Berlin 1900, p. 128—133; Contenson, Chrétiens et Musulmans, Paris 1901; Lynch, Armenia, passim; Mayewski, Opisanie Wanzako i Biliis. vilayetov, Tiflis 1904 (the authoritative work); N. Marr, Yeşile o sino "celebri", Zap., 1910, xx.; Zarzecki (consul of France at Wán), La question kurdo-arménienne, La Revue de Paris, N°. of April 15, 1914 and the diplomatic correspondence, publ. in the "Livres jaunes", the "Blue books" and the Russian Orange book of 1914.

The xxth century. At the beginning of the xxth century a new figure appeared on the Kurd horizon outside of the usual centres of Kurd movements: Ibrahim Pasha b. Mahmud b. Timawi b. Ayyub, chief of the tribe Milli (Milian) in the canton of Shariveron (between Diyarbakr and Aleppo). Ibrahim Pasha had made himself an almost independent position. When the constitution of 1908 was proclaimed he openly rebelled and retired to the mountains of 'Abd al-Azize where he was killed (M. Wiedemann, Ibrahim Pashas Glück und Ende, Asien, 1909, viii. 34—57, 52—54 and M. Sykes, The Caliph's Last Heritage, p. 317—327).

A considerable agitation was aroused among the Kurds when the question of the Turco-Persian frontier was re-opened. After the check to the Russians in the Far East (Russia-Japanese War), Turkey in 1905 occupied the disputed cantons of Urmiya and Savid-Bulak inhabited by Kurds. The latter were drawn into the very complicated political game. Turkish occupation only ceased at the beginning of the Balkan War (in October 1912) but only to make room for Russian troops sent into the districts of Khio and Urmiya. Seions of noble Kurd families travelled in Russia. On November 17, 1913 a protocol of delimitation was signed at Constantinople and just before the World War, a four Power Commission (Turkey, Persia, England and Russia) succeeded in settling the frontier of the disputed regions by re-establishing generally the status quo of the beginning of the xixth century (cf. Minorsky, Turetsko-persidsk. razgranitieniya, Izvestia Russ. Geogr. Obsh., Petrograd 1916, iii., p. 351—392).

The War of 1914—1918. In the course of the war from 1914—1918 the Kurds were between two fires. On the activities of Ismail Agha Simko cf. the article shāhāk. — On the interallied plans (March 1916) regarding Kurdistan, cf. the documents in Rasdel Asiahati Turisti, Moscow 1924, p. 185—187, 225.

After 1917—1918 the situation was radically changed. Kurd committees were formed every-
where (cf. Driver, Report on Kurdistan, Mount Carmel, Palestine 1919; this publication is in the British Museum). Sharif Pasha assumed the role of Kurd representative in Paris and on March 22, 1919 and March 1, 1920 presented to the Peace Conference two memoirs on Kurd claims with a map of "Kurdistan intégral" (cf. L'Art France,- 1919, No. 175, p. 192—193). At the same time, on December 20, 1919, an arrangement was reached between Sharif Pasha and the Armenian representatives and the two parties made conjointly declarations to the conference (cf. the text of the agreement in the newspaper Peyam-i Şahāt, Constantinople, Feb. 24, 1920; cf. also Le Temps, Paris, March 10, 1920). The Treaty of Sèvres of August 10, 1920 having created Armenia (Art. 85—93) of the four wilāyets (of Trebizond, Erzerum, Van and Bīlis), provided in articles 62—64 for "a local autonomy for the land where the Kurd element predominates, lying east of the Euphrates, to the south of the frontier of Armenia and to the north of the frontier of Turkey with Syria and Mesopotamia". If the Kurd population within the limits mentioned shows to the Council of the League of Nations that a majority of the population of these regions desires to be independent of Turkey and if the Council then thinks that this population is fit for independence, Turkey agrees to conform to the recommendation and in this case the allied Powers will raise no objection to the voluntary adhesion to this "independent Kurd state" of the Kurds living in the wilāyet of Mawṣil. As a result of later events the Kurd question reduced itself to the fate of the Kurds in the wilāyet of Mawṣil. The Turkish representatives held that "the Kurds differed in nothing from the Turks and that although speaking different languages, these two peoples formed a single bloc as regards race, faith and customs" (Conference at Lausanne, speech of Ismet Paasha at the meeting of Jan. 23, 1923). By the decision of the Council of the League of Nations on December 16, 1925 the wilāyet of Mawṣil was allotted to "Irañ but with a stipulation reserving to the Kurds the film of their desires, notably that "officials of Kurd race should be appointed for the government of their country, for the administration of justice and for teaching in the schools and that the Kurd language should be the official language of all these services". During the long negotiations concerning Mawṣil serious troubles broke out in the region of Khar- pūt and Diyārbakr as a result of the insurrection of Shaikh Sa'id Nakh ṣabandī. Shaikh Sa'id was captured on April 16, 1925 and executed at Diyārbakr. Since the settlement of the Mawṣil question, the Angora government has enforced a policy the tendency of which is to eliminate from Kurdistān feudal and tribal influences; cf. Gentzien, L'insurrection kurde, La Revue de Paris, Oct. 15, 1925.

Bibilography: The writer has to thank Mr. C. R. Driver, who with the greatest disinterestedness put at his disposal a large quantity of historical material on the Kurds. A history of the Kurds, the preliminaries of which have been outlined above would necessitate a great deal of preparatory work and research in Arabic, Persian, Armenian, Aramaic, and Georgian sources. A systematic ransacking of sources like the Selim-nāma of Ḥakim Idris and his son Abu l-Fadl and the Tarīḵ-i Ālam-arā-yi Abūzī would yield a rich reward. The basis of our knowledge of Kurd history is certainly the Shaerāf-nāma (down to 1005 = 1595). The text was published (mainly from a manuscript collated by the editor himself) by Veliaminof-Lēzinof, Scherēf-namē, vol. i. (history of the Kurds), St. Petersburg 1860; vol. ii. (variants of volume i. and general history of Turkey and Persia from the beginning of the Ottoman dynasty to 1005 = 1595), St. Petersburg 1862. The French translation by F. Charmoy: Scherēf-namē or Fastes de la nation Kurde in 2 volumes and 4 parts, St. Petersburg 1868—1875, includes commentaries (including a translation of the relevant chapters in the Dīwān-nāma of Ḥaddīj Khalīfa) but is now in many respects out of date and lacks an index. Cf. also the works of H. Barb, Über die Kurden- Chronik von Scherēf; Geschichte der Skizze d. 32. verschiedenen kurdischen Fürstengeschlechter; Geschichte v. 5. Kurden-Dynastien; Gesch. v. weiteren Kurden-Dynastien; Geschichte d. kurdischen Fürstenkreuzes in Bīlis, which appeared respectively in the Sitzungsbs. A. W. Wien, x. 1853, p. 258—276; xxii., 1857, p. 5—28; xxvii., 1858, p. 5—9; xi., 1859, p. 159—179. The lost history of Kurdistān by Muḥammad Efendi Şahrażūrī (d. 1737 = 1662 at Medina, cf. Taḏī al-Arūs, s. v. Kurd) has not yet come to light again (1927). For the histories of the house of Ardalūn cf. Sena where should be added the history (to 1254 = 1834) of Khusraw b. Muḥammad b. Muḥiẓūr, cf. Blenet, Catalogue des manuscrits persiens de la Bibli. Nationale, i., p. 305, No. 498. On the Rūṣalat Ansāb al-Abrād, belonging to the Asiatic Museum of Petrograd cf. Romaskewi, in the Melanges Asiatique, new ser., Petrograd 1918, p. 392. The newspaper Zārī Kurmanjī (of Rawandūz) has published in Kurdistān a short history Khunāy-yi Baḵūristān (1926) and announces this publication of the Tarīḵ-i Kurdam of Zain al-Abīdīn Beg. General information on Kurd history will be found in G. Campanile, Storia della regione di Kurdistān e delle sette di religione ivi esistenti, Naples 1818; Quartemère, Notice sur le Marālik al-Abār, N. E., xii., 1838; Rich, Narrative (cf. Sulaimānīya); Charmoy in the preface to his translation of the Sharaf-nāma; Lerch, Isedowamnaya ob iranskikh Kurdakh, St. Petersburg 1856, i., p. 20—33; Hoffmann, Auszue aus syrisch. Akten, 1880; Tomasech, Sazun, Sitzb. A. W. W., p. 133—134, 1895; Bittner, Der Kurdistangau usch- nijel, Sitzb. A. W. W., p. 133, 1895; Rawlinson and Wilson in the Encyclop. Britannica, 1911, xv. 949—951; Addai Seber, Episodet de l'histoire du Kurdistān, J. A., 1910, xx., p. 119—140: the events of the 1202, 1508, 1510—1512 (Džaihra), 1523, 1689, 1712 (O' Amadiya), 1820—1836 (Rawandūz); Soane, To Mesopotamia.... in disguise, London 1912, Chap. xvi.; Minorsky, Kurd, St. Petersburg 1915; Driver, Studies in Kurdish History, Bull. School of Orient Studies, London 1922, ii.3, p. 491—513. — In November 1926, Mr. Cl. Huart made several communications to the Institut des Inscriptions on the history of the Kurds but the death of the author has delayed their publication.
C. Anthropology, Sociology and Ethnography.

It is sufficient to compare the photographs of the Mill (“Arab type”), Girdu (“Mukri type”), Kočkiri (“Biblical Jew type”), Shämän (“Nestorian” and “Hakkan” types) Kurds, that figure in Mark Sykes, The Caliph’s Last Heritage, on p. 321, 343, 372, 425—429 or the types of northern Kurds given by Lynch, Armenia, ii., fig. 19 (“Turkoman” type) and fig. 114 (original and very marked type) to be able to say at once that any idea of finding a general formula for the “Kurd type” is quite illusory.

All these characterisations with their contradictions evidently refer only to individuals that the authors had seen but no one has ever examined all the Kurd tribes. Scientific measurements have been rarely taken; cf. Duhamel, a. l., tables 7—8; Khanikoff, a. l., p. 138, and the Russian works of Dr. Elsiseyew, Anthropol. ezhegodnia, Izv. Geogr. Obshch., xxii., and Po štehu Sultana, St. Petersburg 1806, iii. 319, 332, of Dr. Danilow, A. A. Ivanowski (Vestid, in Russki Antr. Journal, 1900, No. 3 with Russ. bibliography) and Dr. Pankowskow (cf. C. H., Einige Notizen über die Karden und Karapachen nach Panjwache, Ausland, 36, 1879).

Three things are characteristic of the mode of life of the Kurds: the historical tendency of the Kurds to group themselves on territorial fiefs around strongholds occupied by their chiefs, who are often of origin foreign to the local tribes; the existence of a warrior caste which supports the chief and conserves the ethnic agglomeration formed; the presence among the Kurds of shepherds (nomads and semi-nomads) as well as of agriculturists (settled or semi-settled).

 Completely nomad tribes living in tents the whole year round and spending the winter in the form of a single tribe. The pouring rain and the vicissitudes of the seasons make the nomad Arab far more available (cf. the list given by Sir Mark Sykes). The majority of the Kurds are semi-nomadic or settled. The former, following the climatic conditions of the country, live in villages during 5 to 8 months of the year and in summer after the harvest go to the mountains where they occupy strictly defined areas. Even the stages of migration of tribes like the Džaf (cf. SENNA) are rigorously fixed. More often the Kurds of this class confine themselves to ascending the heights adjoining their villages (called Saran in the region of Sâwâj-Bulăk).

The settled Kurds seem very often to represent the older population who were conquered by the ‘aghârat soldiers or accepted this domination to secure protection against their neighbours (cf. the article SÂWÂJ-BULÁK). Strabo, xvi. 3, 1 noted the presence of agriculturists among the Cyritti of Fars. At one time the nomad tribes of Mūsh found shelter in winter in the Armenian villages of the plains but gradually (since 1842) exclusively Kurd villages arose beside the Armenian villages; cf. Correspondence respecting the condition of population in Asia Minor and Syria, Blue Books, Turkey 1879, No. 10; 1880, No. 4 and 23; 1881, No. 6 [Trotter’s reports were translated into Russian in Izv. Kauk. Otd. Geogr. Obshch., Tiflis 1882, vii., appendix]; Lynch, Armenia, 1901, ii. 423; Mayewski, Iran, Tiflis 1909, iii. 264; Willemsen, Turkey, XVII (lists of Armenian and Kurdish villages). The general tendency of the Kurds is towards a settled existence. In northern Mesopotamia the Kurds have shown themselves fairly skilful agriculturists and for this reason have an advantage over the Beduin Arab element; cf. the Handbôk (No. 57)”Turkey in Asia” publ. by the Foreign Office, p. 104: “Northern Mesopotamia seems destined to become Kurdish land”.

The statements of an ethnographic character (costume, occupation, games, etc.) differ from tribe to tribe in Kurdistan and a premature generalisation might prove misleading. Only the Kurds of Erivan (living far from the great Kurd centres) have been the subject of a complete monograph by Egiyarov (a professor of law speaking Kurdish from his infancy), Kratkii ethnogr. ocherk Kurdov Erivana, gubernii, Zap. Kauk. Otd. Geogr. Obshch., Tiflis 1894, xvi/2; cf. also Khachaturian, Kurdî v Persii, Izv. Kauk. Otd. Geogr. Obshch., XVII/1, 1904; de Morgan, Miss. scientifiques, Ethnogr. geogr., ii.; Nikitine, Quelques observations sur les
The Kurds themselves believe that their ancestors were mədzik̲ (Zoroastrians), cf. M. Sykes, The Caliph's Last Heritage, p. 425, and perhaps the name Bahdānī ("Anāyāla") may be a relic of Mazdaean terminology (ibidin "orthodox, layman"). Arabo-Christian sources however rather suggest that the Kurds first professed some kind of paganism. In the third century Mār Māri of Urfa (d. 226) made converts to Christianity at Shāhgert (Shāhgert between Daktīs and Arbil, cf. Hoffmann, Auszüge, p. 270) of the king and the people who "worshipped trees and sacrificed to the idol of copper" (Raabe, Mār Māri, p. 26). Ḫis̲y̲abh built a convent near Ṣhamānīn (near Dṣārāt Ibn ʿOmar) at the "spot where the Kurds had sacrificed to devils". The Kurds whom Mār Sābīs (d. 485) converted to Christianity were worshippers of the sun, cf. Hoffmann, Auszüge, p. 73.

Statements regarding the attempts at evangelizing the Kurds are very scanty but it is a fact that Maʿṣūdi, Ṣurāqī, iii. 254, mentions among the Kurds al-Yaṣaʿibīya and al-Dīrājīn Christians living near Mawṣil and Djbāl al-Djūdī (cf. Marco Polo, Ch. xxiv.). After their conversion to Islam, the Kurds frequently supported the Khāridjī movement (the rising of the Zanjī slaves in the region of Baṣra, that of Daisam in Aḏharbāḏjan; cf. Maʿṣūdi, ibīd., v., p. 231; the Kurds scattered throughout Aḏharbāḏjan are known as sharāt = Khāridji). There were also Kurds who denied the authority of the Caliphs ʿOthmān and ʿAlī (Maʿṣūdi, ibīd., iii. 233). According to the Sharaf-nāma, i. 14, all the Muslim Kurds followed the Shāhī Sunna (Ewliyā Čelebi, iv. 75, says the same). It is however certain that there were Shīʿīs among the Kurds under Persian rule. In the reign of Uṯmān there was even a Kurd mahāḏ. The ʿUlāmā (cf. the living among the Shāh-sewān Turks became Shīʿīs; cf. also the evidence of the Sharaf-nāma, i. 316 on the Dumbul following Shīʿa doctrine (the meaning of the term šuṣaši which the same author, i. 117 applies to four tribes in contrast to the three Yazidi tribes is not very clear).

On the other hand the testimony of the Sharaf-nāma, i. 14, is very convincing on the spread among the Kurds of Yazidi doctrines (the Dasaeni, Ḵāhīdī, Basiyān tribes and parts of the Bokhātī, Mahmūdī and Dumbul, not to speak of the Sirdār which the Sharaf-nāma does not mention); cf. YAZIDIS.

Of the Pāzūkī tribe, the Sharaf-nāma remarks (i. 328) that it has no definite religion; from its close connection with the Safāwis, one might suppose that it held extreme Shīʿa views.

At the present day the great majority of the Kurds are still Shīʿī Sunnis. Even in Senna only the former ruling family of the Wāli Ardašīn was Shīʿī. The Shīʿī tribes of the provinces of Kirmānštān are for the most part extremist; cf. Minorsky, Notes sur les Ahi-le ḡāʾek, R. M. M., 1920, xi., p. 59; for the district of Mawṣil see the article SARKĀL and Shābān. As a general rule extremist views, more or less Shīʿī, find adherents rather among the Iranian tribes of Kurdistan who are not true Kurds (Gürān, Zārā). On the other hand the Kurds are much under the influence of Shāhīks of the various Sunni orders (especially the Naḵšbandī and Ḵāṭarīs whose head-quarters are at Awrāmān, Salīmānīya, Mūri, Shāhmān, Khurūp, etc.). Their influence was apparent in the risings of Bād Kūn (cf. Layard, Discoveries, London 1853, p. 375); Ubaidallāh (1850), Shāhīk Saʿd (1926) etc.; cf. SHĀHMĀN and the articles by Nikītīne therein mentioned.

Bibliography: In addition to the works quoted, cf. N. Marr, Yehāke a slove "telēb", Ţaz, 1910, xx (the author studies the cultural part played by the Kurdish nation in the history of Nearer Asia and thinks he can find among the Kurds [Yazīdia]?] survivals of pagan beliefs; cf. ĖLĪRĪ); S. School of Oriental Stud., 1922, i., p. 197—215; Nikītīne, Les Kurds et le Christianisme, E. R. H. R., 1922.

E. The Kurdish Language.

Kurdish, like Persian, is a western Iranian language but its descent is different from that of Persian. The history of the separation of western Iranian into a northern and a southern branch has been traced by Andreas, Salemann, O. Mann (Die Tajik Mundarten d. Provinz Fars, Berlin 1909, p. i—xxvi); Meillet, M.S.L., 1911—1912, xvii.; Lentz, Die nordvaimischen Elemente in d. neupers. Literatursprache bei Ferdosi, Z. fur Indologie und Iranistik, 1926, iv. But P. Tedesco, in
his Dialektologie d. westiranischen Turfantexte, Le Monde Oriental, 1921, xv., fasc. 1—3, has shown that "western" Irânian (distinguished from Eastern Irânian: Soğhdian, Saka) shows a considerable interpenetration of its northern and southern branches and this result has been corroborated by the work of W. Lenz quoted above.

In spite of this confusion and the co-existence of heterodox elements in the modern languages of Kurdish as a whole shows a character clearly distinct from that of Persian. This fact would be more obvious if our Kurdish documents were not of much later date than the period in which the Persian literary language established its supremacy. The main characteristics of Kurdish compared with Persian are as follows:

a. Its specific pronunciation, the frequency of the Semitic  and even in Irânian words like āsp (horse), havot (seven); the velar  (a little different from the Slav and Turkish t), the rolled r distinguished from the weak r; the bilabial w; two consonants tolerated at the beginning (e.g. bera, delet), and the sonant n and r acquiring a vocalic character (almost  and ).

b. The fundamental difference in the phonetic treatment of the same Irânian material is illustrated by the following examples:

<table>
<thead>
<tr>
<th>Persian</th>
<th>Kurdish</th>
</tr>
</thead>
<tbody>
<tr>
<td>dil</td>
<td>sîr</td>
</tr>
<tr>
<td>ādhar (ātash)</td>
<td>āhir and āgir</td>
</tr>
<tr>
<td>māhi</td>
<td>māsi</td>
</tr>
<tr>
<td>namāz</td>
<td>nuwēl</td>
</tr>
</tbody>
</table>

c. Morphological differences: the survival of the oblique case; determinative suffix ("definite article") in åkā; different personal inflections: 3 pers. pron. poss. -i-sam, plur. of the present: 1st person in in, 2nd and 3rd in; a form of išfāt (especially in the plural) in t(-d) (cf. the Ossetic plural in a), e.g. yār-i te "thy friend," yārīd te, "thy friends;" the old passive in -ya (cf. Salemann, Zum mittelpers. Passiv, St. Petersburg 1900; Meillet, Grammaire du vieux persé, p. 102) and a passive in rī.

d. Syntactical differences: survival of the passive construction of transitive verbs in the pretetite, particularly complicated in verbs compounded with prepositions (kuštist-an li hrišin "they have cut us off from the mountains" literally: "the mountains [by them] from we have—been cut").

e. Lexicographical differences: Not only, like the majority of the dialects of the north-west, does the Kurdish oppose kar-, kap- (and væ-) respectively to the kun-, uft- (and gē) of the south-west but it has hāt for āmad, ūmī for āward, bîst for qhind, nīrd for fersîn etc. The many borrowings from literary Arabic form an element connecting Kurdish with Persian but Kurdish also borrows from spoken Arabic, Ottoman Turkish, Aramaic and Armenian. In addition, Kurdish and Armenian may have borrowed from the same indigenous sources not yet identified.

While then the Irânian dialects of the north-west and south-west are not separated by an abyss, for all practical purposes Kurdish has its own well-marked type, which differentiates it not only from Modern Persian but from the other dialects of the north-west (Samâni, "central" dialects, etc.).

Kurdish itself moreover includes very different dialects. The majority of the Kurdish dialects are included under the term Kûrmândji. According to the Sharaf-nâmê, the Kurdish nation consists of four sections: Kûrmândji, Lûr, Kalûhr, and Gûrân. Of these tribes the Lûrs [q.v.] as far as their physical appearance and their language are concerned gravitate towards the south-west group (O. Mann, Die Mundarten der Lûr-Stämme, Berlin 1910) and form a unity apart. The Gûrâns (cf. zohān) like their relatives the Awrâms (cf. senna), Zâzâ [q.v.] etc. speak dialects of the north-west differing considerably from Kurdish (cf. "three in Gûrâni: yerî, in Zâzâ: kirîye agreeing with the Samâni āhîrâ, while Kurdish has hî), the Zâzâ, according to Andreas (recorded by Christiansen) are related to the old Dalanites and this hypothesis is corroborated by traditions still alive among the Awrâms (E. Soane, In Disguise to... Kurdistan, p. 377).

According to the Sharaf-nâmê the Kalûhrs occupied the region between Senna, Kûrmândshâh and Zohâb. The term Kalûhr seems therefore to correspond in the Sharaf-nâmê, p. 13, to the Kurd group "non-Kûrmândji" of the districts of Senna and Kûrmândshâh. These dialects have been studied by O. Mann but this part of his collections has not yet been published. According to the prospectus of his Kurdisch-persische Forschungen (the publication of which has been taken up by K. Hadank) one volume is to include the southern dialects of the province of Kûrmândshâh; Kûrmândshâh, Kalûhr, Lûhr, Pahrawandû, Nînaklû and Kûlûyâ, the latter in the district of Sunûk [q.v.]; another volume will be devoted to the dialects of the province of Kûrdistan [cf. senna] and to those of Kûrin [q.v.] an'â' Gârûs (otherwise Bidjâr, east of Senna). The people who speak these dialects usually call them Kurdî or by the name of the tribe concerned. On the borders of Luristân (in Lâstân) the southern Kurdish dialects are known as Lakî (cf. O. Mann, Kurze Skizze der Lûrdialleute S. B. A. W., 1904, xxxix.; Cîrikov, Putewoi journal, St. Petersburg 1875, p. 227). There are Lak at Salmâs [q.v.] and in the Province of Fârs (but the Kurdish dialect of Kûlûn-Abdûl, described by O. Mann, Die Tâjîk Mundarten, p. 135 is not Lakî). The southern Kurdish dialects of western Persia have lost the important features of Kurdish (e.g. the passive formation of the preterite in transitive verbs). The existence of these non-Kûrmândji dialects may prove to be of some importance in settling the problem of the Kûrdî—Kpîrîu.

We do not know the origin of the name Kûrmândji. Is it a compound of Kurd with the name of another tribe of Media? In the Kûrmândji area properly so-called two groups of dialects are distinguished: the eastern group (or rather south-east) and the western. Their exact boundaries are not yet defined. Eastern Kûrmândji is spoken in the Mûkri region [cf. sâwî-dûlak] and in the region of the tributaries of the Tigris: The Little Zâb, Aďâm [q.v.] and the Diyâlas [q.v.]. It is a very pure dialect and rich from the morphological point of view. The western branch includes the Kûrmândji dialects with their local peculiarities (Diyârbakr, Mûrdân, Bûkhârû, Bahdûnû, Hakkûrû, Ürmia, Erivan, Erzerûm and the Kurd colonies in Asia Minor and Khorsâd). The Kûrds of Northern Syria seem to use various dialects full of borrowings from Turkish (cf. Le Coq's collection).
Ewliya Celebi, iv. 75, enumerates 15 Kurdish dialects (liāmān).

Garzoni, Grammatica, distinguishes the dialect of 'Amādiyā from those of Bdeīla, Dijāmerg, Bokhātān and Sulaimāniyā. Cf. also the scheme of classification in Soane, Grammar of the Kūrmānji.

Bibliography: A list of all studies of Kurdish from 1783 to date is given in Lerc: Isledovanija, iii., p. i.—xxi. and in the Grundriss d. iran. Philol., i/2, 253—254. The only scientific Kurdish grammars are: Justi, Kūrmānji Grammatik, St. Petersburg 1880, and Socin, Die Sprache der Kūrmānji in Iran. Philol., i/2, 249—286; these two are mainly connected with Western Kurmānji. In Eastern Kurmānji the fundamental work is: O. Mann, Die Mundarten der Mukri-Kurden, Berlin 1909, i., p. xxxii.—cvi.: Grammatik Skizze; cf. also Soane, Notes on the Phonology of Southern Kurmānji, J.R.A.S., 1922, p. 199—226. The only Kurdish dictionary in existence is that of A. Jaba-F. Justi, Dictionnaire kurde-français, St. Petersburg 1879; it sums up all that had been published before this date (the supplement by H. Schindler appeared in Z.D.M.G., xxviii/i) but it is not sufficient for practical purposes. On the manuscript of a voluminous Kurdish dictionary compiled by E. B. Soane and belonging to the School of Oriental Studies, cf. E. D. Ros in the Times, Feb. 19, 1926.

The following is a list of the specimens of Kurdish dialects that are so far available:

III. Northern and Western Kūrmānji:

Folklore, Literature, Newspapers.

The collections of Kurdish stories made by Jaba, Leroche, Prym-Socin, von Le Coq, O. Mann, Makas and Nikitine give a fair idea of the Kurds as story-tellers. The themes are often taken from folklore common to the Near East (fables, fairy-tales, stories of fools; cf. Mirza M. Djewad al-Kazi, Ein Kurdisches Märchen, Globus, 96, p. 187); more numerous and more interesting are the stories of the loves of popular heroes, of the wars of the clans etc. Prym-Socin and Makas have given detailed commentaries on the subject matter of stories of this category. O. Mann illustrated the ballad of the siege of Džendimkā'Fa in 1017 (1608) from the evidence of the official history of Abābās I. Many popular subjects are treated both in prose and verse. Some cycles with their variants form regular epics like the Mem-un Zin, the story of a pair of lovers at the court of the emir of Bohan, of which we have Ahmad-khān's version and very numerous popular variants: Lerch, Mislanges Aristiquestes, iii. 60—225; Prym-Socin, No. xxxi.; Mann, No. ii.; Makas, No. i. Cf. also: Chalat Rain, Kurdische Sagen, Zeitsch. d. Vereins f. Volkerkunde, 15, 1905, p. 322—330; 16, 1906, p. 35—46 and 402—414; 17, 1907, p. 76—80. (Recueil de notices, p. 7—8) furnished him with a list of 9 Kurdistan poets but the data must be taken with some caution. These poets are:

Ali of Ḥarīf (in Šamīdīnā) who lived 400—471 (1009—1078), which almost makes him contemporary with Firdawsi (?). He is the author of a Kurdish ḍīwānā.

Shaikh Ahmad Maḷā-i Dīzīrī, a native of Dījazār where his tomb is still to be seen. He is said to have flourished between 540 and 556 (1145—1160) in the time of a chief Ḥīmad al-Dīn. But the ḍīwān of Maḷā-i Dīzīrī publ. in photograph by M. Hartmann, Das Kurdische Dinwān des Schīch Ahmad, Berlin 1904, mentions the name (fol. 221) of the Persian poet Dīzīrī, who died in 898 (1492) so that he cannot be earlier than the end of the xvth century. An ode dedicated to Kūhā-i Kūhān, who is the Shāh of Kurdistān (f. 171) who rules at Tabriz and who is greater than the Shāh of Kūhān (f. 177) may refer to some Ağ-Koyunlu [q. v.] ruler.

Fakhr Teirān (707—777 = 1302—1375), born and buried at Mukus, was really called Muhammed and used the tahrulūs of Mīm Ḥaʿī. He wrote the Hikāyāta Shaikh Sima (Sarān), "Stories of Barṣīsā", the Kāwī ṣarp-i raż ("The words of the black courser of the Prophet") and other poems.

Maḷā-iBatē (Mullā Ahmād), born and buried in the village of Baykān in Hakkān (820—900 = 1417—1494), is the author of a Dīwān and a Mawlid. The latter has been published in photo-type by H. von Le Coq (Kurd. Texte, i. 49—95). Ahmad Khānī of Hakkān flourished between 1000 and 1063 (1591—1652) and was buried at Bāyazid near the mosque bearing his name. He wrote the poem Mem-un Zin, analysed by Jaba-Lerche, Mislanges Aristiquestes, iii. 242—255 and publ. in 1538 (1920) at Constantinople by the publishers of the Ţi newspaper. His rhymed Arabic Kurdish glossary Šawār ("Firstlings") has been published by Yusuf Dīya al-Dīn, who gives it the date of 1094 (al-Hadiya al-Hāmidīya, p. 250—297), and in facsimile by Le Coq, i. 49—47. Ahmad Khānī also wrote many poems in Kurdish, Arabic and Turkish.

Ismāʿīl of Bāyazid, an imitator of Ahmad Khānī (1065—1121 = 1654—1709), is the author of a Kurmanji—Arabic—Persian glossary Gūlawr and many ghazals and poems. Shariʿī Khān, born and buried in Djiyāmūr (1101—1161 = 1698—1748), belonged to the family of the Amirs of Hakkān. He is the author of a large number of verses in Kurmanji and in Persian. Murād Khān of Bāyazid (1150—1190 = 1737—1784) wrote lyric poems.

In the Kurdish newspaper (cf. below) we find biographical information about and specimens of the poetry of the following poets: Shāh Pārtu of Hakkārī whose diwānās finished in 1221 (1866); Nātī who is very popular in the region of Eastern Kurmanji, flourished towards the middle of the xvi century; a selection of his poems appeared at Constantinople in the anthology entitled Šamīdī (by Amin Faḥīṭ); Hādījī Kādīr Kāʾī, very conscious of his Kurdish nationality (sixteenth century); Abulʿūlāṣ Ṣahba ʿAl-Dīnāw ("Adāb"); in the collection of Shāhīn Khān during television, a poet from Şirvān; Shaikh Rāba (Kāʾī) of the tribe of Talbānī (the Sirvān), d. about 1910; Tāhir Beg Dījāf, son of ʿOṯmān Pāša of Alabā, d. about 1920. The contemporary poets are: Ali Kāmil of Sulaimāniyā, "Abū al-Kādir Zawāhī of Baghdād, Ahmad Beg Fattāḥ Şahbūkīr of Sulaimāniyā, Muṣṭafā Beg Dījāf (a satirical poet), Ahmad Beg Dījāf, son of ʿĀdīla Kīhāṁ Kūrkū ("Athir"). Other poets, whose names are found in the newspapers are: Shaikh Nūrī Bāṭāʾ al-ʿĀlī, "Abū Siğār Siğār, Mullā Ṭohijī Mūkri (Wafāʾī), Kāka Mīnī (= Amin) Mūkri, Kāk Muṣṭafā Trānt (= Murshid-ī Kāmil), "Abd al-Khālīk, ʿĀlīm, etc.

Jaba's authority (Recueil, p. 12) gives several authors of textbooks in Kurdish (All of Tārīmakh [after 1000 = 1591] wrote an Arabic grammar in Kurdish and Mālī Yusūn of Hakkārī wrote three grammatical works on tarjīf, parfūf and tarīkhī. To the same category belongs the "canonical Muslim prayer" written down about 1783 and published by C. Huart in J. A., 1895, No. 1, p. 86—109, as well as the works already mentioned by Ahmad Khānī etc. But as a rule Kurdistān authors writing on general subjects prefer Arabic, Persian or Turkish.

Among those who wrote in Arabic were the celebrated jurists and theologians: Ṣāḥib Hakkārī, d. 585 (1189); Ṭaḳī al-Dīn Shahrāzārī, d. at
Damascus in 643 (1245) (Ibn Khalil,ina, Wafayt, ii. 188, 430); Abdullâh- al-Kurdi of Sinjâr (Ibn Baṭṭûša, i. 142). On the Ayyubid prince Abu I-Fida', historian and geographer, see the article on him. Ibn al-Athir, ix. 49, quotes the Arabic ode of Ḥusain Bashnawi, a poet at the court of the Marwânids and mentions (xi. 7–8) the existence among the Kurds of men versed in local traditions. The Sharaf-šâma (i. 341–342) mentions among the natives of Bidlis Mawldân 'Abd al- Raḥmân, Mawldân Muhammad Barâkâ', and Sadiq Shâh Shirvanî, Ama'mar Yûsuf (cf. Naṣa'îj-šâma, ed. Nasiru- Lees, p. 479) and speaks of the 'ulama' and fudâla' of 'Amâdîa. On the Kurd theologians of the modern period see the review Rêza-kurd, No. 2, p. 23.

Many historical works have been written by Kurds in Persian (cf. above). The Divân of the Kurd poetess Mâh Sharaf-khânâm, d. 1264 (1847) (cf. Sena), was published with a biographical notice at Têherân in 1926.

Among writers in Turkish of Kurdish origin was reckoned the very celebrated poet Fuâdî [q.v.] of Bagdâd, d. 968 (1556). But Koprulu- Bej, Mehmed Fuâdî, Fuâdî, Hûdu, Khoş-Tezambâd, Stamboul, 1914, p. 14, says that Fuâdî was a Turk of the Bayât tribe. The Bayât are certainly Turks, but it may be noted that Khurshid Evendi, Sîyâhat-nâmâ-i Hûdu, Russ. transl., p. 193–194 mentions the Bayât clans (fîrka) of Kifîr and Tuz-Khurmatî among the Kurds. Modern Turkish literature has quite a number of writers of Kurd origin (cf. J. Deny on the origin of the sociologist Dîyâ Gîk Alp, R. M. M., 1925, ixi, p. 3).

The publications of the Christian missionaries form a special category in Kurdish literature. The Gospel has been translated into several dialects: the Kirmânsîhvi version was published in London in 1900. The Gospel according to St. Mark in Mûkri was published at Philippopolis in 1909. M. Fossom has published a Protestant catechism in Mûkri and in his grammar has given a rhymed translation of "Onward, Christian Soldiers" adapted to local conditions. Several of these publications are printed in the Armenian alphabet (Justi, Kurd. Gramm., p. xxix.) and seem to be intended for the Armenians (of Diyarbakr) whose usual language is Kurdish. In April 1914 the Protestant missionaries of Urmiya published the first number of the magazine Kurdistân (in Mûkri).

The first Kurd newspaper that we know of is Kurdistân published successively in Cairo, London and Folkstone, by 'Abd al-Raḥmân Beg, son of Baḥr Khân Beg of Bohûtn. The Preussische Staats- bibliothek has Nos. 1–31, 1355–1320 (1892–1902); cf. W. Z. K. M., xli, p. 112 and Makas, Kurd. Stud., p. 10. After the Young Turk revolution, the Kurdish students (tullab) who had formed an association called Ḥuwî (Unity) founded the monthly review Rêza Kurd (The Kurd Day) of which the first two Nos. embellished with portraits of Šâlah al-Dîn and Karâm Khân Zand appeared in Stamboul on June 6 and July 6, 1329 (1912) under the editorship of 'Abd al-Karîm of Sulaimanîya; later this review got the name Hatwî Kurd (The Kurd Sun). The magazine Kurdistân published by the missionaries of Urmiya has already been mentioned above. The renewal of Kurd activity after the war of 1914–1918 was marked by the production of several newspapers in Constantinople, Egypt and Kurdistân (Diyarbakr, etc.). The earliest was

the weekly Zîn ("Life") founded in 1919, which, though published in Turkish and in Constantinople, was dedicated to the propagation of the idea "Kurdistân for the Kurds." No. 32 appeared on 1st Dju'mâdî I, 1338 = Jan. 23, 1920. As to Kurdish newspapers, in default of a complete list we may mention Kurdistân, a bi-monthly published in Cairo by Âsmâ' Asîrî (i.e. of the tribe of Baḥr Khân); No. 2 is dated 1357 Dhu-l-Hijâja, 1335; No. 11, 15th Rabî' I, 1336. The first newspaper published in Sulaimanîya was Pîkhabûsîn ("Progress"), later replaced by Bâng-i Kurdistân, which was edited, before the English evacuation, by Hâdîjî Mustafâ Pasha (13 Nos., between Aug. 2 and Oct. 1922); Rûbi Kurdistân, organ of the "king of Kurdistân" (Mahmûd I = Shâh Mahmûd), pub. at Sulaimanîya by Muhammad Nârî, No. 1 dated 15th x. 1922 and No. 15 xii. 1923. Bâng-i îbârî, pub. by Shâh Mahmûd after his flight (Nos. 1–8, iii.; Nos. 3–12, iv., 1923); cf. Edmonds A Kurdistân, Journal, Cent. Asia Soc., 1925, i, pp. 83–90; Ziyânsât ("Resurrection") official (zûkâmâyî) weekly of Sulaimanîya (No. 1–10, viii., 1924); Dîyâ-îî Kurdistân ("The Gift of the East"), a weekly, e. a. in three languages published at Baghâbî by Siyâh-Teamâ-za-de and Rashîd Shawâk, No. 1–11, March 1925; Zûrî Kurdistânî, a weekly review publ. at Rawandûz by Siyadî Suṣûn Mûkri and 'Abd al-Raḥmân Gîw, founded 16th Dhu-l-Ka'da, 1344.

Kûrkûb, a t o w n in Khûzistân, on the road from Wâṣit to Sûs (Susia). The statements regarding distances given by the Arab geographers are now collected and arranged in P. Schwarz, Iran im Mittelalter nach den arab. Geographen, 1921, iv., p. 396 sq.; also p. 431. The town was noted for its carpets; there was also a fire, of the Sultan there. A material called sânûdîr was made there, cf. de Goeje's glossary in B.C.A., iv., s.v. Al-îshâkhri says that the sânûdîr of Fas (q.v.) is better than that of Kurûb; the latter was a mixture of silk and cotton while in the former wool was used.

Bibliography: G. Le Strange, The Lands of the Eastern Caliphate, p. 241, 246; Schwarz, loc. cit., ii. 98, where all the important quotations from the Arab geographers are given.

(M. Plessner)

Kûrra b. Shârik b. Marhîb b. Hâzim b. Aḥârît al-ʿAṣir b. Kaḥîr, gōve r o f E y g p y, belonged to the tribe of Kaḥîr b. Châlîn and was therefore a north Arabian. His native town was Kinnissîn in Syria. We do not know whether he had already held a high office before his appointment as governor of Egypt, but it is exceedingly probable, especially as the Umayyads were particularly careful only to appoint to this important office men of proved ability. As conditions then were, only a tried man in whom the caliphs had entire confidence could be considered for the governorship rendered vacant by the departure of Prince Abd Allâh b. Abd al-Malîk. Kurra entered al-Fusâtân on the 3rd or 13th Rabî' I, 90 (Jan. 20 or 30, 799) and assumed complete control of the country, including its financial administration. He remained in office till his death on 23rd Rabî' I, 96 (Dec. 6, 714). Later biased historians have given us a very erroneous picture of the man. He is put alongside of the notorious al-Hâdîjî b. Yûsuf, which meant that he was of the lowest moral character and is described as
a brutal tyrant and heretic. The historian loves to dwell on the story that he did not hesitate to have a drinking bout with music in the newly built mosque of 'Amr. We get a very different picture of the unassuming important figure from contemporary documents, yielded by the finds of papyri in the last fifty years. They reveal him as a conscientious and faithful official, strict towards his subordinates, lenient towards the people, the ruthless exploitation and oppression of whom by the minor officials he did his best to check. He devoted all his energies to a just and wise rule, always keeping the future of the land in view. That there were occasional hardships is easily understood, they never became a system with him, as with other amirs of the land. The serious economic damage which the famine of 86/87 (705/706) inflicted on the land with its terrible increase in prices, which was not made good even in 88, forced Kurra to devote his whole energy to increasing agricultural production in Egypt. A measure as effective as it was far-sighted was the recultivation of fallow lands, and great public works, of which the name 'Istāb Dār Kurra for the Birkaṭ al-Hashāb still reminds us, which Kurra restored to cultivation in its entirety. He is said to have planted fields of sugar-cane. In these circumstances quite a different light is thrown on the fact that Kurra found himself forced to depart from a very old tradition in the distribution of tax and to make newly converted Copts pay the diqa, from which they had hitherto been exempt, by making them share in the cumulative quota of their community. Kurra's name is also connected with the rebuilding of the mosque of 'Amr in al-Fustāt (old Cairo). In the year 1 Maslama b. Muqlah had carried out the first and 'Abd al-'Azīz b. Marwān the second extension of this notable building and Kurra was ordered by the Caliph al-Walid I to remove the whole mosque and erect a new one on its site. The work under the direction of Yāhiya b. ʿAḥṣa took from Shabban 92 till Ramadān 93 to complete.

KURSI, an Arabic loan-word from the Aramaic kurshayy (Syriac form; Hebrew: kisiت; Nöelke, Mandäische Grammatik, p. 128; S. Fraenkel, De vocabulis pergrinus, p. 25), throne. It is only found twice in the Kur'ān (ii. 256; xxxviii. 33); its occurrence in the first of these has given the verse the name of the Throne Verse (ayāt al-kursī); the reference is to the throne of God, which is large enough to embrace the heavens and the earth. In the second passage the reference is to the throne of Solomon. The use of two different words, 'arsh and kursi, for the throne of God, very early troubled the exegesists; some have seen in the second the stool placed in front of a throne on which a sovereign rests his feet; cf. the sculptures of Persepolis (Abū Mūsā, Asbāt, according to Soddī etc., in Ţabarī, Taṣfīr, iii. 7) while others took it to be only a synonym of 'arsh (al-Ḥasan al-Baṣrī, ibid.), and one school interpreted it allegorically, saying that the kursi of God is simply his knowledge (Šaʿīd b. Dūjbair according to Ibn Ṭabība, ibid.). The use of this word in the second passage for "a throne on which one sits" shows clearly that it is a synonym of 'arsh.

The idea of an erection square in shape (which is also the origin of the word 'arsh) is retained in the different meanings assumed by the word. The four sides of the rectangle intended to enclose the letters forming a word or a number of phrases is so called. In Persian, these four sides are called Khufiqti kursi and the rectangle itself, kursi-kendi (Huwart, Calligraphic, p. 352). The Persians use it to describe a frame on which a carpet of wool or felt is stretched and under which a brazier is placed; the legs are slung under the carpet to warm them in winter time (the tandīr of the Turks; Polat, Persien, i, 65; Frasier, ii. 188). The Arabs apply the name to the four sides of a mecca, a kind of portable or moveable staircase on 4 wheels (now 6) which had nine steps and was placed against the wall of the Kaʿba so that its upper end was level with the threshold (Ibn Dūjbair, Rīṭā, p. 91; Ibn Bāṭṭa, i. 309; Dozy, Supplément, i. 455); a lectern on which the Kurān is placed (Makkjari, i. 404); the stand for an astrolabe; the carriage of a ballista; a seat with a back for 3 or 4 persons; a table on which a plate is placed (Lane, Modern Egyptians, i. 195); a stand on which a turban is laid at night (kursi al-imāmā; Dozy, Viements, p. 343, No. 1; Lane, Modern Egyptians, i, 50, 221); a holder into which is put the lower end of a pointed instrument (Y. A., 1850, p. 251); the card for pulling a tounbār (Description de l'Égypte, xiii, 251).

The Moors give the name to lockets, silver boxes, square or triangular, which they wear in necklaces, on account of their shape (Dozy and Engelmann, Glossaire des mots espagnols, s. v.; Beussier, p. 584). It is also the support for the pan and percussion apparatus in a flint lock; the bezel of a ring, conning bench (naut.) (Beussier, l. c.); a chair of a particular shape on which a woman sits when about to give birth to a child (kursi al-walīdā) (Lane, ii. 275). Figuratively it is the capital of an empire, royal residence, see of a patriarch or a bishop (Dozy, Suppl., i. 456; Cuche, Dict. ar-français, s. v.). (CL. Huwart)

Kūs, a town in Upper Egypt on the east bank of the Nile. The form Kūs (Kū in al-Fargḥānī and Ibn Rusta) comes from the Coptic Kēs (or Kēs Bēbīr) which Coptic etymology later connected with the Coptic verb meaning "to bury." In the Roman period the town was
Kusair, in spite of the sage warnings of Abu l-Muhādjir. Therefore when after his epic cavalry campaign in the west, the Arab general, on his return to Kairawān made the mistake of dividing his army, Kusaila, who accompanied him as a living trophy, came to an arrangement with the Greeks and Berbers who were following the Muslim march. The latter were surprised near Tahdīda (63 = 682–683) and almost all fell including Abu l-Muhādjir died fighting. Kusaila entered Kairawān as a conqueror whence he governed Irfikyia for five years, Arabs as well as Greeks and Berbers. When the Caliph Abūl-Malik was suddenly relieved of the difficulties, caused by the civil wars in the east, he sent an army to Zubair b. Ka‘īs, at Barka, with which the latter fought Kusaila at Mena, west of Kairawān. He defeated and slew him and regained the lost territory (69 = 688/689).

KUSAILA OR KUSAIR, A SEAPORT ON THE AFRICAN COAST OF THE RED SEA. There is no reason to doubt that all the references of Oriental and European writers to Kusair on the Red Sea are to the same place; the contradictions between different authors are simply due to inaccuracies as, in the first place there is not sufficient ground for supposing that there were two places called Kusair and secondly Kusair is unanimously described as the harbour of Kūs. If we were to have two places called Kusair, they would have to be so far apart that one of them could not be described as the port of Kūs; but the place marked on our modern maps as Kusair fulfils the condition of having been the port of Kūs perfectly so far as its position is concerned. The references therefore must be to this place which lies a little north of Lat. 26. Vakit is unreliable because he makes Kusair lie near ‘Aidhāb and then puts the distance from Kūs at 5 and from ‘Aidhāb at 8 days’ journey. Even in Egypt where they are used to great distances, two places 8 days’ journey apart would not be described as near one another. A glance at the map shows that if it is five days from Kusair to Kūs, it cannot be 8 from Kusair to ‘Aidhāb. The distance could not be covered in 18 days if the first statement is correct. As a matter of fact from ‘Aidhāb to Kūs is according to al-Maqrīzī 17, according to al-Idwās 20 days’ journey so that it cannot be only 8 to Kusair.
Even if we put 'Aidhāh farther north, as C. H. Becker (cf. 'Aidhāh) and S. Lane-Poole have rightly done, the contradiction between these figures is not disposed of.

The significance of the harbours on the Red Sea for European trade with India and China and for the pilgrims to Mecca has often been described. At the same time the relative importance of the different harbours varied considerably in the course of centuries (cf. Baḥr al-Kulzūm). While Kuṣair flourished particularly in the 'Abbasid period, 'Aidhāh later became the principal port and still later al-Tīr. After Selim I had conquered Egypt, he tried again to revive Kuṣair and built a fortress there. The further history of the town to 1876 with a very full description of its condition in the seventies was given by C. A. Knunzius, who was Egyptian military officer there. He calls particular attention to the disastrous effect on its Suez Canal. While in the fifties the traffic at Kuṣair along with that of Suez was “steadily increasing” (van Neimans), the port is now only important for traffic to and from Egypt; through traffic through the Red Sea has no longer any inducement to touch Kuṣair; the decline of the town is most clearly seen from the figures given by Sami Bey at the end of the century in the Kānaṣ al-ʾAṭīma.

(M. Pleßner)

Kuṣair ’Amra. See ’Amrah. Kuṣaiy, an ancestor of Muḥammad in the fifth generation and restorer of the pre-Islamic worship of the Ka’ba in Mecca. His genealogy is unanimously given in all sources as Kuṣair b. Kiāb b. Murra b. Kaḥb b. Luʿayi b. Fihr-Kuṣair (cf. Wustenfeld, Geneal. Tabellen, O.-T.), and his life and exploits are recorded by our sources in three recensions which only differ from each other in trifling details; these go back to Muḥammad al-Kalbī (d. 146), Ibn Ḳīḥād (d. 150) and ’Abd al-Malik b. ’Abd al-ʿAzīz b. Djarāḏī al-Makki (d. 150). Kuṣair is represented, like the usual legendary type of hero who founds a city, as having passed his childhood and youth far from his native land and in obscurity: a younger son of Kiāb b. Murra, a descendant of the Kuṣair whose supremacy in Mecca had been replaced by that of the Banū Kuṣair, he loses his father soon after his birth and is taken by his mother Ẓufīma bint Saʿd b. Sayal who had married again, her second husband being a member of the tribe of Banū ʿUdār, to his tribe in the north of the Arabian Peninsula (in the neighbourhood of Sargh according to al-Kalbī in Ibn Saʿd, i., 36, 25, a place on the Syrian frontier of the Ḥīdāz, near Tabūk [Yākūt, Muḥjam, ed. Wustenfeld, iii., 77]), or right into Syrian territory near Yarmūk [al-Bakri, p. 773]; here his original name of Zaid was changed to Kuṣair from the root ʿṣ-r-y, “to draw away”. Having learned his true origin from his mother, he returned to Mecca where as a result of his marriage with Ḥubbā, the daughter of the Kuṣair chief Ḥulail b. Ḥubshiyā, who controlled all the arrangements for the worship of the Ka’ba and the pilgrimages, he soon acquired an important position in the city. On the death of his father-in-law, Kuṣair managed to succeed him in his offices, either after a long struggle with the Kuṣairā, or as a less reliable tradition has it by means of a tricky bargain like that of Jacob and Esau, which he made with (ʿAbī) Gūbāsh, son of Ḥulail or only some more distant relative of his (cf. Ibn Durād, al-Iṣbāḥānī, 277, line 7 with 282, line 2; the two complete genealogies are given in the source used by Ibn Durād, the Dār al-ʾĀnāb al-Inbālī of Ibn al-Kalbī). The detailed narrative of the events which brought Kuṣair to fame is given in the article Kuṣair [q.v.].

Becoming master of Mecca and guardian of the Ka’ba, Kuṣair rebuilt the latter and organised its worship; he united the clans of the Kūraʾish, who were previously scattered, into a solid body which assured them the mastery of the town for the future; indeed it is even said that it was on this account that the name Kuṣair (from tabarruṣa, to combine) replaced the old name Banu ‘l-Nadr; Kuṣair is said to have been called Muḥjam mī, the “re-uniter”. On his death the sacred oils that had become his perquisites, were distributed by his four sons ʿAbd al-Dāʾir, ʿAbd Manāf, ʿAbd al-ʿUzza, ʿAbd Kuṣair, the second of whom through his son Ḥāshim was a direct ancestor of the Prophet. The house which Kuṣair had built himself quite close to the Ka’ba was henceforth the centre of the civil and religious functions of the Kūraʾish under the name Dar al-Nadwa [q.v.]; the interesting description of the working of the Dar al-Nadwa goes back to Muḥammad b. Džubair b. Muʾīm, d. circa 100 (cf. Sprenger, Leben und Lehre d. Mohammed, iii., note cli). To Kuṣair is also attributed the discovery and digging of the well of al-ʿAǧāl (Kut b. al-Makki, Chron. Stadt Mekka, ed. Wustenfeld, iii., p. 107 infra; Balāḏūrin, Fustāḥ, ed. de Goeje, p. 48; Yākūt, Muḥjam, iii., 19—20; Bakri, p. 646, cf. 766).

From what has been said above it is evident that the Kūraʾish regarded Kuṣair as their true founder and the founder of the Ka’ba. The antiquity of this tradition is attested by a verse of al-ʿAṣhā (Bakrī, p. 489) and by several of Ḥassān b. Ṭabīḥī. Later historiography has tried to harmonise this old native tradition with the genealogical system which later became established and according to which Kuṣair = Fihr b. ʿAbd al-Nadr (Wustenfeld, Geneal. Tabellen, N.) as well
as with the tradition quite different in origin and character of the Abrahamic cult of the Ka’ba (Q.v., i., p. 587?) and its vicissitudes under the Qur’ān [3.v.] and the Khuṣţā. Kuṣayj is therefore to Mecca “what Theseus was for Athens and Romulus for Rome” (Caëntani). In the present state of our knowledge it is impossible to say whether he should be regarded as a historical personage transformed into a hero or the mythological transfiguration of a hero. His name is found, although by no means commonly, in the Arab onomasticon: a Nahīk b. Kuṣayj al-Salāfī, a contemporary of Muḥammad, is mentioned by Ibn al-Athīr, Usd., v. 14—15; Ibn Ḥadājr, al-Īsāba, ed. Cairo, vi. 257; another contemporary of Muḥammad, whom Ibn al-Athīr, Usd., v. 205 calls Ḫāṣl (i?) and Ibn Ḥadājr, al-Īsāba, v. 212, 241 Fudайл or Ḫāṣl b. Zālim al-Sūbīsī, according to the Qūṣayjāt al-Ansâriyāt (f. 58 r.) of the latter as Kuṣayj. Lastly the same work (MS. British Museum, f. 162 v) mentions a tribe Kuṣayj b. Mālik b. Thālāba b. Bahrāb b. Sulaim. The fact that this name is to be recognised in the Ḫūṣṭa of the Nabataean inscriptions and probably also in the Kουρας of a parchment from Dura on the Euphrates (cf. Cumont, Les feuilles de Doura-Europos, Paris 1926, p. 320) does not justify us in concluding that it is of northern origin, since as we have seen, it is found among different tribes. The tradition which makes Kuṣayj pass his childhood in Syria is in favour of the hypothesis which makes the worship of the Ka’ba introduced, or at least renewed, as a result of influences from the north; perhaps in some statements of tradition (e.g. al-Kalbī quoted by Ibn Sa‘d, v. 39, 1—11) we have an echo of an actual fact, namely that on the occasion of Hubal, the idol of the Kharijites (cf. Ibn al-Kalbī, K. al-Anṣārīyāt, 1929), there was super-imposed that of al-Uṣā and Maḥfūz Maṣ‘ūd, for which we have definite evidence in Northern Arabia in particular.

In any case the figure of Kuṣayj soon became legendary; his story, as we have seen, has the characteristic features of the legends of eponymous heroes; his alleged sons are only symbols of the part played by Kuṣayj in the religion of Mecca. It is not quite true that he was the object of regular divine worship (the name ‘Abd al-Kuṣayj borne by one of his sons does not necessarily imply the divine character of the father); he was undoubtedly venerated according to the ancestor worship, which certainly existed in pre-Muḥammadan Arabia, although we know very little about it. The eponymous hero of the people of the Tādhīl Ṭuḥāf is analogous in character to Kuṣayj. The latter’s memory remained particularly associated with the Dār al-Nadwa, which Lammens, developing a suggestion by M. Hartmann, has shown was not the “senate of Kuṣayj”; as tradition has it, but rather a place for the celebration of rites, essentially social and religious in their origins. Its proximity to the Ka’ba, with which it is however never confounded, suggests that it was one of these private dwellings built beside Semitic temples, which, without being identified with the temple itself, came in time to acquire a religious character and certain religious functions. We have an example of this type of house in the “house of Lysi’s” in the precincts of the temple of the Palmyran deities at Dura (Cumont, Les feuilles de Doura, p. 36—37).

Whatever the origins may be, it is certain that at the beginning of the sixth century A.D. the control of the Ka’ba and of the Ḫūṣṭa was in the hands of a clan claiming descent from Kuṣayj and that the Kuṣayj were agreed that he was the founder of their tribal unity. It is to be noted on the other hand that even if this clan included among its members some of the recognised chiefs of the Kuṣayj, among others the Banū ‘Umaiyā, it was far from having complete political and financial control in its hands; the Banū Makhzūm for example, one of the most powerful families in Mecca, were not descended from Kuṣayj. It seems probable then that the Meccan republic was constituted on the initiative and under the direction of the Banū Kuṣayj, but that the latter were forced to admit into their social organism other clans having the same rights and privileges as themselves, although the prestige of noble blood and supremacy in religious matters always remained the exclusive prerogative of the Banū Kuṣayj; it is a process which presents striking analogies with that which may, we think, be noted in the formation of national unity among the Israelites, as a result of the fusion of the tribes of Judah and Levi with the Ephraimite tribes.

Kūṣārī, or Kuṣārā, is the name of a town in 27° 48’ N. and 66° 27’ E. and of the district in which it is situated, a long, narrow valley, important by reason of its central position at the point of convergence of roads from Ka‘b on the north, Karāni and Bela on the south, Ka‘b on the east, and Makrān and Khārān on the west. Yāḵūt describes it as a small town in a fertile district, which he calls Tūrān, producing grapes, pomegranates, and other fruits, but not dates. It is a city of India, or rather, he says, of Sind, situated at a distance of eighty farsakhs from Būst. It was conquered by the ‘Abbas shortly after their conquest of Makrān, and Ibn Ḫawkāl says it was governed by an ‘Arab residing at Ka‘bān, who admitted the name of the ‘Abbasid Khalifa into the public prayers, but Yāḵūt quotes a travel writer who describes the district as the abode of the Khawāridj, and its capital as the seat of their Khalifa. In A.D. 977—978 it was taken by Subuktigin, and its ruler was captured, but was restored on condition of his agreeing to pay tribute and causing the Khāṣb to be erected in Subuktigin’s name. At a later date he was again attacked by Subuktigin,
owing to his failure to remit tribute. Küsdär is now the principal town of the Jhalawán division of the Kalat State in Baluchistan.

**Biography:** Ibn Hawkal, B.G. A.D. 11,

**KÜSHAIR, an Arab tribe forming part of the great group of the Banû ‘Amir b. Sa‘aâ[a] [q.v.] whose fortunes we find them almost continuously sharing in the period before as well as after Islam. They had particularly close associations with the tribes of ‘Uqlâl and Dîja‘a [q.v.] whose genealogical table makes them brothers. Their genealogy is Küshair b. Ka‘b b. Rabia’ b. ‘Amir b. Sa‘a‘a. Tradition makes the mother of Küshair Rabia’ bint Küshuf b. Mâlik of the tribe of the Banû Sulaim [q.v.]. During the pre-Muslim period, the Banû Küshair settled in al-Yamâma were involved in all the wars of the ‘Amir b. Sa‘a‘a especially in those against the Tāsim, the Shâbân, whose chief Hâdhîb b. Zurâra was made prisoner by Mâlik b. Salama al-Khârî b. Küshair, called Dhu ‘l-Ruqaiya, at the battle of Djâbala, and against the kings of al-Hira (cf. Nâḥî‘, ed. Bevan, p. 70, 404–405). After Muhammad’s successes in Central Arabia, the Küshair joined with the other tribes of the ‘Amir in sending him envoys and coming to an arrangement with him; it is to this time that tradition dates their conversion to Islam (cf. the texts in Caetani, Annales dell’ Islam, i./i., 297 [9 a. ii., § 78]). Later they took part without particularly distinguishing themselves in the wars of conquest in Syria and the Iraq, and settled particularly in the eastern parts of the Arab empire. In the Omayyad period, they were very numerous and powerful in Khurásân, of which several Küshairs were governors (among others Zurâra b. ‘Uqla whose family possessed a very highly esteemed breed of horses). This Küshair colony had as its founders and common ancestor Hâda’ b. Ma‘‘awiyâ b. Küshair, a half-mythical personage who is said to have lived to a fabulous age and to have had a thousand descendants (Ibn Hačâr, Iddâ, Cairo 1325, ii. 56, No. 1890; Abû Hâtim al-Sîdjastâni, K. al-Mu‘ammânin, in Goldziher, Abhandlungen zur arab. Phil., ii. 97). On the other hand we find in Mubarrad, ed. Wright, p. 273, a similar longevity attributed to Dhu ‘l-Ruqaiya, the Küshair chief mentioned above, and indeed almost all the Küshairs of note settled in Khurásân, recorded by history, belonged to the clan of Salama al-Khârî to which Dhu ‘l-Ruqaiya belonged, and which seems to have been the aristocracy of the tribe.

The Küshair did not number many poets of note among them; the best known is Ya‘zîd Ibn al-Tâhîra who lived between the end of the Omayyad period and the beginning of the ‘Abbâsid period.

The genealogical sources and in particular Ibn al-Kalbî also mention other ethnic groups bearing the name Banû Küshair, two of which belonged to the southern tribes of the Aslâm and the Aws (Anṣâr).

**KÜSHAIRI, Abu l-‘Ḳâṣim ‘Abd al-Karim b. Ha⽰zn b. ‘Abd al-Mali̇k b. Tā‘îb b. Muhammad, born in 376 (986), died in 465 (1074), was in dogmatic theology the pupil of the Ashâ‘îrî Abû Bakr b. Fârik and in mysticism a follower of al-Sulami and ‘Abû ‘Ali al-Dâkîkî, whose daughter Fâtima (d. 480 = 1087) he married. He was persecuted by some of the Ashâ‘îrîs, by Hanbali jurists and the Sâlîkî officials from 440 (1048) to 455 (1063). His best known works are the two manifestoes, the Risâla ila lijam‘at al-sûfiyya bi-Bulûdân al-Islâm, written in 438 (1046) to adapt Sûfiism to the charge of heterodoxy laid against his atomist metaphysics (publ. in Subki, Taβâkât, first ed. Cairo, n. d., ii. 276–385). We also have from Küshairi’s pen a mystical commentary on the Kur‘ân entitled Lâ‘îf il-li‘l-hârat and a manual of mystic paths, Ţarîk al-Sulâk, the esotericism of which is deliberately obscure. The Risâla, a classical manual of Muslim mysticism was criticised from the Imamî point of view by Ibn al-Darî (Taβârî, lith. Teherân 1312, p. 495–409) and published with the Sharî‘at an-Ensârî at Cairo in 1290 in 4 volumes.—This is the only useful edition; the little editions in one volume (1318 A.H., etc.) are swarming with typographical mistakes.

**KUSKUSU (Kouscouss), a dish prepared with semolina. Throughout northwest Africa (Tripolitania, Sahara, Tunisia, Algeria, and Morocco) it is the basis of the food of the people. It is sometimes called fâ‘am i.e. food par excellence. The Beduins of Eastern Algeria also call it n’ouâma, which has the same meaning; those of Western Algeria, ma‘âda; those of the South and of the Sahara, ‘aţiz also with the same sense. In Tunisia, the name fâ‘am has even become applied to feasts at which this dish is particularly used, feasts known elsewhere as sarâ (Eastern Algeria), ma‘âda (Western Algeria) and musîm (Morocco). In the Judaism of Africa kuskusu is called ful. Kuskusu may be prepared at any time. Some however prepare it in the nights of Monday and Friday, which according to the sunna are peculiarly auspicious nights. The ceremony of preparation, which has been given a kind of religious character, at which certain rites have to be performed, always begins with an invocation or pious formula. The woman preparing it must not hear or see anything which might be a bad omen. Those near her avoid speaking of anything except saints or agricultural prosperity, the wealth of the produce of the land or of the family in which she is.

To make kuskusu, the woman sits on the ground, puts in front of her a wooden dish called ṣâŷnâ or ṣâ‘d‘a according to the district. Beside her is the bag of semolina and a vessel of slightly salted water. Some add to the salted water two or three drops of water of Nūn (the rain that falls at the beginning of May, which is kept in a flask) which
has peculiar virtues. She then takes a handful of semolina, puts it in the djafna, sprinkles salt water over it with the hollow of her hand and rolls it under her fingers in the dish to right and left until little pellets are formed like lead drops. She goes on in this way, handful by handful. From time to time she stirs the djafna to separate the little pellets from the large and rolls the latter to make them smaller.

In the meanwhile she is boiling on a brazier, in the kedra (a kind of earthenware saucepan) water and meat, if the kususu is to be prepared with meat, or vegetables (chick peas, beans, carrots, etc.) if it is to be made with vegetables, water alone if it is to be with sugar. Finally the required quantity of semolina for the kususu having been prepared, the woman shits it up for some time in a bag or bottle of leather. In this the little pellets run together as they dry up and form a kind of rough ground paste. The cook then turns out this paste into a special sieve and taking up her pestle crushes it through the sieve. The round grains that pass through the holes of the sieve are the real grains of kususu; the grains too large to go through are used to make barhaktes (cf. below) or semolina cakes called melaffle.

In the meanwhile the kedra has been boiling on the brazier. The cook then takes the keskas, a kind of earthenware pot shaped like a funnel without a neck and pierced with little holes in the bottom. The keskas is placed on the kedra, the edges of which are wrapped in cloth to prevent the steam escaping between the two vessels. The keskas is filled with grains of kususu. The steam in order to escape has to pass through the holes in the bottom of the keskas and through the grains of kususu which it cooks. From time to time the cook puts her finger in the middle of it to see if it is done to a nicety. When it is she pours the grains into the djafna, rolls them again with her hand to prevent them forming a paste or clotting, then stirs them again in the keskas. This time as soon as the kususu begins to give off steam, she puts it finally in the djafna.

Now if the cook wishes to make masfuf or sweet kususu she powders it with sugar and puts here and there little pieces of butter which melt and impregnate the little pellets of semolina under the influence of the heat. The water is thrown from the kedra. If the kususu is to be made with meat or vegetables the woman adds water to the kedra so that the bouillon or sauce may go farther and a little salt. The bouillon is used to sprinkle on dishes before they are served. Whatever is the number of courses to a meal, the kususu is always served last. According to the manner of its preparation the kususu has different names, which vary also in the different linguistic areas. To those already mentioned may be added: 1. masfuf, very fine ground with sugar, 2. maawar, very fine ground with meat, 3. barbik (Tunis, Constantine), fine ground, eaten cold with butter or fat of any kind, sprinkled with butter milk, in the west called sikh, 4. mahammas, kususu with very large grains, 5. barbik or barbikesh or maawad of large grains swollen by steam and cooked in bouillon or milk — called sikh in Southern Algeria, 6. barbikesh, made with barley semolina, in place of wheat semolina — in the west called breful.

KUSS IBN SĀDYA of the tribe of Yād, a half legendary figure, called "the sage, the arbiter (ḥakam) of the Arabs". His eloquence is proverbial. He seems to have been a Christian, but not Bishop of Nadjarān as has been said. There was a proverbial expression: "eloquent as the bishop of Nadjarān." This must have facilitated the confusion, of which there is no trace in the oldest references. The Sira and Ḥadīth take an interest in Kuss because his personality, surrounded with a halo of asceticism, increased by one the lamentably small group of the ḫanīf. He is also said to have predicted the imminent coming of the Prophet. The latter is said to have heard him preach at the fair of "Ukā. If Kuss really was a historical individual, he must have lived at a much earlier period than the generation contemporary with Muḥammad; it is impossible to think that he could have become a legendary figure if he lived about the time of the Ḥijrā. At this time the tribe of Yād had ceased to exist as a separate group.

Bibliography: Ibn al-Athīr, Cst al-Ghāba, iv. 204; Aghāni, xiv. 414-42; Dājjāl, al-Bayān wa l-Tawbīn, i. 137; Ali b. Burhān al-Dīn, al-Sīra al-halabiya, i. 210—212, 216—218. In Shu'ārāʾ al-maṣrīn, ed. Cheikho, pp. 211—212, are given the poems attributed to Kuss and a critical examination of the legend in Sayūtī, al-Luḥān al-maṣrīn bi Ḥādīth al-mawṣūla, i. 95—100; A. Sprenger, Das Leben und die Lehre des Muḥammad, i. 102—106. (H. Lammens)

KUSUF, KUSUF, eclipse of the sun or of the moon. As regards linguistic usage, it may be noted that al-kusuf is used alike for the eclipse of the moon (kusuf al-ḥamar) and for that of the sun (kusuf al-ḥams), e.g. in al-Farghānī, Kostā b. Liqā, al-Battānī, al-Bīrūnī; but they are often distinguished as al-kusuf, eclipse of the moon, and al-kusuf of the sun; e.g. by al-Karwīnī (on the linguistic usage, it should be noted that according to the Masūfī al-ʿIlam, ed. van Vloten, the verb form should not be used, although this is very often done; e.g. by al-Karwīnī and others).

The eclipse of the sun and of the moon have from the earliest times attracted the liveliest attention. Ptolemy, following Hipparchus, studied the theory of eclipses, and following him the Arabs and Syrians, etc. We shall deal first with the eclipse of the moon. It must be premised that the apparent path of the moon — we must adhere to the geocentric view — cuts the ecliptic in two opposite points, which however in course of time come to move on to the ecliptic. These points are called al-ijawasāh (Versian) (dawn, not-shape, or less correctly ḥaf, globe-shape); they are also called al-limān, "dragon" (see below). All the planets have of course such ijawasāh; without an addition the word always refers to the moon. Their positions are given in the Ephemeresis. The massive ball into which according to Ibn al-Haitham the moon is inserted, and which carries it along as it moves, is called falak al-ijawasāh.
The eclipse of the moon is caused, as was early recognised, by a dark body coming between the sun and the moon. It is at one time thought that this was a dragon, which, when placed at two opposite points on the globe of the heavens and had the same motion as the nodes of the moon, eclipses occur when we cannot see the moon, because the head or tail of the dragon comes between us and the moon. From this idea comes the name for the crescent and waning nodes, i.e. the points where the moon passes through the ecliptic, “head, al-ra’s” and “tail, al-dhanāb,” which were retained long after the “dragon” had disappeared. The sign Ω for the length of the node is a distorted dragon. The astronomers credited this dragon with certain influences on the horoscope. But Sevère Schuck (c. 650) (J. Neu, Notes Astronomique Syrienne, J. A. [Ser. 10], 1910, xvi., p. 15) long ago denied this, as there was no dragon and the calculations in question referred to the movements of the nodes. But we still find in al-Birūnī’s Taṣfīm etc. the assertion that head and tail have separate natures. The head is hot, auspicious, and indicates increase (of property etc.). The tail is cold, brings misfortune, and indicates diminution of wealth etc. Eclipses of the sun or of the moon are really caused by the earth coming between the sun and moon or the moon coming between the earth and the sun. Instead of saying we often have the word “node” ʾaṣd and ʿuṣdai used, also in combination with ra’s and ḍhanāb.

The shadow of the earth arising in the first instance, because the sun is considerably larger than the earth, consists of a cone-shaped convergent shadow (the shadow) on one side and a divergent shadow (penumbra) on the other side. Only in the shadow is there absolute darkness. As the diameter of the shadow at the place of the moon’s path is considerably greater than that of the moon at the same point, under certain conditions, the moon may remain some time in the shadow and therefore be perfectly eclipsed for the period. Ibn al-Haitham in his example, investigated these conditions very fully (E. Wiedemann, Beitr., xiii., „Über eine Schrift von Ibn al-Haitham, „Über die Bescbonheit der Schatten”, S. B. P. M. S., Erlg., 1907, xxxix., p. 226).

If earth, sun and moon were very small bodies, mere points, eclipses would only take place when the sun and moon were exactly in the nodes. But as they are large, eclipses also occur when these bodies have passed beyond the nodes, i.e. have experienced an alteration in latitude and longitude. A total eclipse occurs when the breadth is smaller than the difference between the diameter of the shadow and that of the moon, a partial eclipse when the latter is not smaller than the sum of the diameters; if it is however equal to the latter, there is only a contact but no eclipse.

Taking into consideration the shadow alone, the maḵṣūf (cone) or ʿamāhar (pine-apple) — its cross-section is called dāʾira al-ġil — we have the following: the entrance into the shadow is called ʿadād al-kuṣūf, beginning of the eclipse; the phase from the beginning of the eclipse, to the beginning of totality, is called suḵūf (falling, the ḫaṭṭaṣf of Ptolemy), the middle of the path covered in shadow is called ṣaṣṣ (middle). The phase which corresponds to complete emergence is called ṭaḏuʿu ṣaʿiṣ (the completion of disappearance); al-maḵṣūf (stop, stay) means the phase in which the moon is eclipsed in a partial eclipse there is no such stop. A ḫaṭṭaṣf al-kuṣād ʿaṭā al-maḵṣūf, a total eclipse without a stop is said to occur when the moon’s path is such that the darkened moon touches the cone of the shadow at only one point; then a total eclipse exists at this point only. For the case of total eclipse, the place where it begins is called aw-wal al-maḵṣūf and where the moon begins to emerge from the shadow, ʾabīr al-maḵṣūf.

A diminution of light but no complete extinction also occurs when the moon moves through the half-shadow. In his classical work on the shadows Ibn al-Haitham (see above) discussed the theory of this question and checked it by observation. In very rare cases, however, the whole of the eclipsed moon does not appear quite black but shows different colours, especially a dark red; this was observed by various early astronomers and minutely described by Ibn al-Haitham (his statements agree with modern observation, e.g. J. Müller, Lehrbuch der kosmischen Physik, § 9, p. 196). Al-Birūnī further studied these colours (al-charsetn al-Maṣūdī, maḵāṣix, bāb vii., faṣīl iii.); he also examines critically earlier views and particularly Indian ideas on the astrological significance of the colours (cf. F. Wiedemann, „Über die verschieden bei der Mondhintergrund ausfärben Farben nach Birunī”, in Edels „fahrbuch für Photographie, etc., 1914.”)

This light on the completely eclipsed moon is explained by the fact that the sun’s rays are diverted in passing through the earth’s atmosphere and thus enter the shadow and illuminate the moon. According to the amount of moisture in the atmosphere, these diverted rays are more or less coloured. For the possibility of a solar eclipse, the conditions are the same as for a lunar one.

Solar Eclipse: As the angle at which the moon appears to us is smaller, although only slightly, than that at which the sun appears, the moon can be seen in a form or other even at a so-called total eclipse of the sun, even if the centres of sun and moon and earth all lie on a straight line, a narrow rim of light still remains. Bright formations, the corona and the protuberances radiate from this. They are described by al-Birūnī in al-charsetn al-Maṣūdī, maḵāṣix, bāb, xi. (cf. F. Wiedemann, „Erscheinungen bei der Dämmung und Sonnenphanomene”, in Arch. f. Gesch. d. Med., xv, 1923, p. 43). The local times at which the same lunar or solar eclipse appears at different places is obtained from the difference of their geographical longitudes. The calculations are made difficult by the fact that these isler, considerable parallax. This partly explains the great differences between the calculated and true values.

It would take us too far to go into the details of the theoretical considerations, for example when each eclipse begins, how long it lasts, its periodicity, etc. In the works of al-Farghānī, Kostā b. Liḡša, al-Kaẓwīnī, al-Djaghmīnī, al-Khīrākī, and particularly in that of Abu l-Farāǧī, Le Livre de l’ascension de l’esprit, ed. F. Nau, Paris 1849, also in the Kitāb Taṣfīm etc. of al-Birūnī we find more or less full general descriptions while the works on astronomical theory like the Zīdī (table) of al-Khīrīzminī, of al-Battūnī, the_charset al-Maṣūdī
KUTAI. [See KITÁ.]

KUTÁHIYA (the ancient Cotaenum), a town in Asia Minor, the capital of a sandjak in the province of Kudadwendigir, on the river Pursak, which enters the Sašriya, near it. It is 3,000 feet above sea-level, has 22,266 inhabitants, of whom 4,000 are Greek Orthodox and 3,000 Armenians; it contains 24 mosques, 21 madrasas, 2 libraries, 16 dervish monasteries, 4 churches, 9 caravanserais, 11 baths, 12 potteries. It is a station on the Bagdad railway. In the sixteenth century it was the capital of the Germanyakh; the mosques of this period are in ruins; other notable buildings are the Medjidi Medrese (704 = 1304), the Kursh-en-Djami (777 = 1375–1376), another mosque (783 = 1381), the mosque of Yakûb Celebi (837 = 1433–1434); the great mosque, Ulû-Djami, the building of which is attributed to the Germanyakh, but is not earlier than Bayazid I. It has an old citadel in ruins built on a height. The marble lion and the Byzantine sarcophagus mentioned by Texier no longer exist. There are promenades called Ak-su, Sultan-bâghi, Kebgir, Sultan Bayazid Bagheesi; there are hot springs in the neighbourhood. It was once an important centre for the manufacture of glazed pottery with floral decorations (the so-called Khodian pottery); an attempt has been made to revive this industry but the recent products are not so good as the old ones.

The town formed the dowry of the daughter of the Germanyakh who married Bayazid I; it was taken by Timur after the battle of Ancyra (1402). The conqueror left his son Shâhrûkh there as governor, while he advanced on Ephesus (H. A. Gibbons, The foundation of the Ottoman empire, Oxford 1916, p. 156, 258).

KUTAI, an independent district (sultanate) in Eastern Borneo, belonging to the

of al-Birûni, the Zîdî of Naṣîr al-Dîn al-Ṭûsî etc. give information about mathematical considerations and the particular observations to be made (on the above scholars, cf. H. Suter, Die Mathematiker und Astronomen der Araber in Abhandl. zur Gesch. der math. Wissensch., Heft x., 1900).

To obtain a standard for measuring the amount of the eclipse, the diameter of the sun or of the moon, was divided into twelve equal parts, called "fingers" (isba or isba al-kitâb) and the number of these that were eclipsed was calculated. In the West one spoke of "digits". In the same way the surface is imagined to be divided into 12 equal parts and it is calculated how many of these are eclipsed. The latter may be calculated from the former which refer only to length. Al-Battâni, for example, gives tables in connection with this. The dioptr of Hipparchus was used to measure the magnitude of a lunar eclipse. Two rods are fixed at right angles to a rod. The one with a small round hole is fixed and the other with a larger round hole can be moved towards the other. The second hole is so placed that at an appropriate distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second hole. The amount a of the shifting of its edge from one side of the hole, which bounds the dark side of the moon, to the edge of its bright part, is measured, and the magnitude b of the shifting over the whole surface of the moon and their relation expressed as a : b. The amount a in fingers of the eclipse is $g = \frac{a}{b}$.

(E. Wiedemann)
administrative division of Samarinda in the residency of "Zuiden- en Oosterafdeeling van Borneo". It comprises mainly the valley of the very important and for a great part navigable river Mahakam as far as Muara Mujub. The road from Makasar marks the eastern frontier. The Dutch assistant resident lives in Samarinda on the Mahakam; the capital of the Sultan, Tenggarung, is a little farther up the river. The country is prosperous; the land is rich in arable and petroleum and under normal conditions there is a busy trade in most products and dried and salt fish. The opinion has been expressed that in the name of the sultanate the name Yava-koti (Sanskrit koti = end, point), known from Indian geographical works, survives. It is certain that even before the fifth century A.D. Hindus had founded a colony here directly from India and not through Java. The inscriptions, written in pure Sanskrit, found in Kutai on four stone dedicatory pillars prove the existence of a flourishing Hindu kingdom here under a king Mulavarman, and very probably other antiquities, notably the Brahmanistic images of deities found in a cave on Mount Kompong have also to be traced to this kingdom. Any later Hindu civilisation that existed in Borneo came through Java; in the twelfth century, Kutai formed a vassal of the Javanese empire of Madjapahit. A native tradition of the origin of the kingdom and the genealogy of the royal house of Kutai is known to us from a Malay manuscript in the possession of the Sultan in Tenggarung (there is another copy in Berlin); according to this "salasila", the first part of which, largely mythical, has been published with a Dutch translation, Islâm was introduced here about 1600 in the reign of Radja Makoe of Celebes.

The population is of a very mixed character. The Dayaks, the original inhabitants of the country, are for the most part still pagan. Along the Mahakam there are practically no settlements of them left; they are being more and more driven into the interior by other peoples who are settling there. The chiefs of the tribe of Tundjung Dayak are said to be related to the royal house of Kutai; according to the salasila already mentioned, the Tundjung prince Këra married a sister of the reigning chief Radja Patéri about 1450. There are still a few nomadic tribes away in the interior. The other peoples, Kutainese, Buginese, Bajau and Badjau all profess Islâm, although in many customs and even in court ceremonies at Tenggarung old animistic conceptions are still very prevalent. The Kutainese who form the principal element in the population are probably descendants of early immigrant Malays of various stocks; they are found all over the country. As to the origin of the Buginese settlements we again have a native tradition preserved in a work entitled Salasila Bugis; this immigration had probably begun by 1686 mainly from Wado and it is still going on. The Buginese lived at first exclusively in Samarinda; they formed a well defined section of the population, who were practically independent of the Sultan of Kutai, and were ruled by a chief of their own (pua adu), who was elected by the elders of the different groups of families. This Buginese republic in Kutai no longer exists and at the present day the Buginese stand in the same relation to the Sultan as all other inhabitants; they have settled in the whole country and are mainly engaged in trade. The numbers of the Bandjarese immigrants from the south of Borneo are also increasing; their main industry is the collection of forest products. The Badjau come from the Sulu Islands; they used to be pirates but now they have permanent settlements at the mouth of the Mahakam where they live by fishing. The heterogeneous composition of the population is reflected in the language, a not yet sufficiently investigated variety of Malay; one feature is the large number of Javanese words that occur in it. The first contact of the Dutch with Kutai took place in 1693, when the Dutch East India Company made their first treaty with the chief. By treaties of the years 1825 and 1844, the Sultan recognised Dutch suzerainty. The Sultan governs with the help of four notables. The Dayaks are under their own chiefs, whose rank is hereditary with the approval of the Sultan.

(W. H. RAESSER)

KUTAIBA b. MUSLIM, Abu Hafs al-AS-SULH, an Arab general. Kutai was born in 49 (669/670). In the war against 'Abd al-Rahman b. Mahammad b. al-AS-SULH [q. v.], al-Hajjaj b. Caliph recognized his ability and when the caliph 'Abd al-Malik in 85 (704) had to fill the vacant governorship of Khorasan, he gave the post to Kutai on the condition that the governors of Khorasan were subordinate. After his arrival in Merv, Kutai was able to make full use of his military gifts and by a series of successful expeditions against the neighbouring Turkish tribes, he extended the frontiers of the Arab caliphate to such an extent that he must be reckoned one of the greatest conquerors of the Umayyad period. In 86 (705) he undertook his campaign against Tokhristan, where the lord of Akrūr and Shūmān bought peace. According to some historians, Kutai first attacked Saghāmīn, the king of which surrendered at once, and next Tokhiristan from which he returned to Merv. In the following year he turned his attention to Buḥārā. After he had succeeded in concluding a peace with Nēzak, king of Bāghghis, against whom the previous governor of Khorasan b. Nīqād b. al-Muhammad had conducted a campaign, he crossed the Oxus and advanced on Bānikand. The people of the town however sought help from the adjoining states: the latter barred the routes and for two months Kutai was completely surrounded. He finally succeeded in defeating the enemy and the town had to surrender. But, as soon as he had gone, the people rebelled and killed the governor appointed by him, whereupon Kutai returned and stormed the town. After he had put down all resistance he returned to Merv. In 88 (706/707) a campaign against Buḥārā was undertaken, in which he took the towns of Nūmushakhan and Rāmīthāna. Fighting was renewed next year but seems to have been indecisive. In any case Kutai returned in 90 (708/709) and defeated the people of Buḥārā after a stubborn resistance and the king of Soğhidana had to sue for peace. Nēzak then rebelled, imprisoned his suzerain, the king of Tokhiristan and called upon several neighbouring rulers to join him against Kutai. As winter was approaching, the latter however could do nothing, but he sent his brother, 'Abd al-Rahman to occupy Balīk. In 91 (710) he took the field again and after bringing the rebels to terms, advanced on Nēzak. The latter fought his way to Farghānā and entrenched himself in the citadel of al-Kurz. After a two months’ siege, Kutai captured him through treachery and had him put to death, although he had definitely promised him a pardon. In the same year he conquered Shūmān, which had rebelled against him, along with Kiss and Nasāf, and installed a king loyal to him in Buḥārā [q. v.]. In 92 (710/711) Kutai is said to have undertaken an expedition against Soğdistan, but the ruler there sought peace, and he returned without a blow being struck. Next year he helped the king of Khwarizm against his rebellious brother. He then advanced on Sā-}

marjand, defeated the forces from al-Shāh and Farghānā, which had hurried to the help of the Soğhidanas and seized the town, which was occupied by his troops in spite of the terms of peace. In 94 (712/713) he sent an army against al-Shāh and advanced victoriously as far as Khō)djand and Kāshān in Farghānā. In the summer of 95 (714) he had advanced as far as al-Shāh or Kuşmīshān, when the news of the death of al-Hadījādī reached him. He therefore returned to Merv but in 96 (715) he began a new campaign of conquest against Farghānā. Here he heard of the death of the Caliph al-Walid and as Kutai feared the vengeance of his brother Sulaimān [q. v.] because he had supported the plan of extinguishing the latter from the succession, he declined to pay homage to the new caliph. This however incited his troops to mutiny and in Dhu 'l-Hijja 96 (Aug.-Sept. 715) or, according to another statement not till the beginning of 97, Kutai was killed by the mutinous soldiers (cf. FARGHANĀ).

(K. V. ZETTERSTEDT)

AL-KUṬĪ, the poet 'Umar b. Shuyā`ā b. `Amr of the clan of Taim b. Usāma of the Taghibī, a contemporary and fellow-tribesman of the poet al-Achkālī and like the latter played a part in the feuds which raged in the second half of the first century A.H. between the tribes of Taghibī and the Kais 'Ailān. His own experiences in battle and the glorification of the exploits of his tribe in war form the main themes of his poems. In contrast to al-Achkālī however he does justice to his opponents, while veiling particular hatred on the Yamānis. His panegyrics are mainly devoted to the Umayyads, e. g. one to Walīd I. The date of his death is not known; according to Ḥādījī Khalīfā, iii. 5619, he died in 101 A.H. According to several sources he was a convert from Christianity to Islam, but in his poems he shows himself a thorough Beduin, always ready for a fight, anxious about his property in camels, not averse to wine drinking, and looking down upon the townsman with the haughty pride of the nomad.

The name al-Kuṭī is also borne by two otherwise little known or quoted poets, one of the tribe of Kalb and the other of the tribe of Dābirā', but in practically all references al-Kuṭī without further names means the Taghibī first mentioned.

Bibliography: Kitāb al-Aghārī, xx. 118 sqq.; Hamāsa, ed. Freytag, p. 170; much quoted in lexicographical and Aṣāb works; his Dīwān with the commentary of an unknown writer was edited by J. Barth, Leyden 1803, mainly from the Berlin MS., Fm 589 A and Arwārī, Katal, vi. 548.

AL-KUṬĪ, the pole (Latin alceor), in addition to the usual meanings has also the following: In a circle the poles lie on the perpendicular erected in its centre thus the poles of the
meridian are the north and south point of the horizon. In places on the equator they lie on it. The poles of the equator (kuṭb mu'ākūlī al-nahār) are the north and south poles of the earth (al-kuṭb al-ghāmālī and al-kuṭb al-ghānāmī also kuṭb al-‘alam); they are also called poles of the first movement. They are transferred to the globe of heaven. The pole of the ring of the four constellations is the pole of the meridian and the poles of the ecliptic (kuṭb fašak al-burūjī). The north pole is also called kuṭb al-dhijaddiy (Pole Star) or kuṭb banāt al-naḥār (Great Bear) and the south pole kuṭb al-suhail. For the north pole we also find the term kuṭb al-dhīq (pole of the place). (On these last names cf. G. Ferrand, Contributions à l’Histoire de la boussole, Publ. de l’Inst. des Hautes Etudes Marocaines, Mélanges, R. Bassett, i. 1923, p. 1—10). The poles of revolving spheres are always the point in which the line around which the sphere revolves intersects the globe of the heavens.

Technically al-kuṭb means the axis, i.e. if two opposite parts of a ring have been attached to them inwards which rotate in corresponding directions as in the case of the rings of the armillary sphere inserted in one another. For axes in the usual sense the word al-nithwar is generally used, but al-kuṭb is also found. Thus for example the round rod placed through the cylindrical hole of an astrolabe holding the spider on the north side and the alidade on the back is called al-kuṭb or al-nithwar. The axis is prevented by a pin from slipping out of the instrument. The latter is called from its shape al-faras i.e. horse. The pin which connects the separate parts of the paralelactic lineal, is called al-kuṭb by al-Battānī who says that he uses a kuṭb like that on the astrolabe. The hole or pin in the centre of the astronomical quadrant is also called al-kuṭb, to which is fastened the measuring thread.

In theological and mystical language (cf. the article TASHAWWFUF) al-kuṭb is the name for the holiest of saints, who however is unknown to the world. The founders of the dervish orders are also called Kuṭb (for the literature, cf. Duzey, Supplement, s. v.). Kuṭb was the name given by Tipū Sultan of Mysore (1783—1799) to his smallest copper coin = 1/16 paisa. (E. Wiedemann)

KUṬB AL-DĪN. [See MAWŪD B. ZENGĪ.]

KUṬB AL-DĪN MUḤAMMAD KHĀRĪZM-Shāh, founder of a dynasty in Khwārizm [q.v.]. His father Anūṣṭagin (or Nūṣṭagin) Gharā was in charge of the silver and crockery (ṭabikhānah) at the court of the Sājdāḵs; the expenses of this branch of the court household were defrayed out of the tribute from Khwārizm just as the expenses of administration of the clothing-depot (dżaṁaḵẖāna) were defrayed by the tribute from Khorāsān; Anūṣṭagin therefore, without actually governing Khwārizm, held the title of a military governor (shāhānche) of this country. He had his son educated in Merw. After the assassination of the Khwārizm-Shāh Iκīnči b. Koččar in 490 (1007) or 491 (1008) Kuṭb al-Dīn was appointed governor of Khwārizm with the title Khwārizm-Shāh and ruled till his death in 521 (1127) or 522 (1128). He was succeeded by his son Asīr [q.v.]. As Khwārizm-Shāh Kuṭb al-Dīn was a faithful vassal of Sultan Sa‘d b. Sāqāt [q.v.]. Every two years he went himself to the court of the Sultān and in the interval he was represented there by his son. He is reputed to have been a patron of learned men. The medical textbook Dhokhara-i Khwārizm-Shāhī by Dūrjānī [q.v.1] is dedicated to him (cf. Rieu, Catal. Pers. MSS., p. 466). [The statement in Brockelman, G. A. L., i. 487, also given above under Dūrjānī, is from, from the Catalogue of the Veini Dīmā that this work is extent in two Arabic MSS. (N. 915 and 916) is probably due to a mistake by the author of the Turkish Catalogue, especially as the title is also given there in the above Persian form, impossible in Arabic].

Bibliography: Dūrjānī in G. M. S., XVii/1, p. 2 sq.; W. Barthold, Turkistan, ii. 346. (W. Barthold)

KUṬB AL-DĪN AL-NAHRAWĀNĪ. [See AL-NAHRAWĀNĪ.]

KUṬB AL-DĪN AL-SHĪRĀZĪ MAHMŪD B. MAṢŪD B. MUSLIH, was born in 634 (1236) in Shirāz and died in Tabriz on 17th Ramaḍān 710 (1311). Like many Muslim medical men, Kuṭb al-Dīn belonged to a family of distinguished physicians; at the same time however he was not only a prominent medical man, at least as regards his writings, but he distinguished himself in astronomy, philosophy, and the treatment of religious problems. This versatility induced Abu ’l-Fidā’ to give him the name al-mas’afamīnī "experienced in many fields". He received his medical training with his father Diyā al-Dīn Mas’ūd al-Kāzīrūnī, i. e. of Kāzīrūn (a town west of Shirāz), in the hospital of Shirāz. He lost his father at the age of 14 and then became a pupil of his uncles Kamāl al-Dīn Khār al-Kāzīrūnī and Sharaf al-Dīn al-Zakī al-Rūshānī (Suyūṭī has: Rūshgawī) and Shams al-Dīn al-Kutūbī; he then went to Naṣīr al-Dīn al-Fūsī, studied with him and surpassed everyone. It was probably Naṣīr al-Dīn also who stimulated him to study astronomy. While still quite young he conceived the idea of editing the Kulliyāt, the first theoretical part of the Kānūn of Ibn Sinā. He next sought instruction with the physicians in Shirāz and then studied deeply the works of earlier scholars. He then travelled in Khūrāsān, the two Trāk, Persia, Asia Minor, and Syria. Everywhere, as he tells us in the introduction to the commentary on the Kulliyāt, he sought the acquaintance of scholars. It was probably after these journeys that he became associated with the Tatar rulers of Persia, the Il-Khāns; in what year and under which ruler this happened, we do not know. In any case in 681 (1282—1283) he was Kāčī of Siwās and of Malatya (in Asia Minor) under Ahmad (Nikurad, 680—683 = 1281—1284). There he was still engaged on the Kulliyāt; he must have played a part in politics, as Ahmad sent him with his uncle Kamāl al-Dīn to Egypt to the Mamlik Sultan al-Mansūr Saïf al-Dīn Kalīn (678—689 = 1279—1290). He was sent to report the former's conversion to Islām, no doubt the result of Kuṭb al-Dīn’s influence and to conclude a peace between Muslims and Tatars. The latter part of his mission was a failure. In Egypt also he collected material for the Kulliyāt. He dedicated the work, probably finished shortly after his return from Egypt, to Muḥammad Sa‘d al-Dīn, Ahmad Khan’s vizier, and called it al-Tawfīq al-Sa‘diyā, "the present to Sa‘d", or Nasihat al-Sa‘diyā = Rawdat al-Atīkhā, "the delight of the wise and garden of the physicians". In his later years Kuṭb al-Dīn retired to Tabriz. Towards the end of his life he ardently studied Ḥadiṯ and made critical notes on the subject,

One work is entitled Ṣārḥ al-Tadkhirāt al-Maṣ̄īṣiyya. As an appendix to the Niḥāya, Kuṭb al-Dīn wrote the Fi Ḥārakāt al-Dabrādja wa l-Nīsha bān al-mustāwi wa l-munḥāfi, "On the motion of rolling and the connection between the straight and the crooked". Other works are al-Takūfira fī l-Ḥa'ātā and a work with a very peculiar title: Kitāb fā'alāt fī tālum fī l-Ḥa'ā, "Work on astronomy; I have composed it but blame it not!"

Besides the works by Kuṭb al-Dīn already mentioned there are also recorded a treatise on diseases of the eye and a commentary on the Urdqāsā of Ibn Sīnā; also commentaries on the work, mainly grammatical of al-Sakkākī and on a work of Ibn al-Ḥājīj.

After his death Zain al-Dīn Ibn al-Wardi wrote verses on Kuṭb al-Dīn, in which he expresses surprise that the mill (rahān) of knowledge still turns after it has lost its axis (kuṭb). Bibliography: Abu l-Fida', Anāma musālimi, ed. J. J. Reiske, 1794; v., p. 63; 243; Tākī al-Dīn Ibn Sīnā, Šāhīd al-Shāhīda (Cod. Goth. 1763). The larger work by al-Sukkī on the Shāhī's according to Prof. Dr. Schnade hardly contains any more; F. Wüstefeld, Geschichte der arabischen Ärzte und Naturforscher, 1840, p. 247; H. Suter, Die arabischen Mathematiker und Astronomen, Nr. 387 and the supplement; L. Leclerc, Histoire de la médecine arabe (contains the substance of the autobiography at the beginning of the Kuṭbīyāt), 1876, ii., p. 129—130; G.A.L., ii. 211 sq.; According to Brockelmann also contain biographical information. Habīb Wādīmī, Ḥādīs al-Ad agricultural, p. 67, 112 (Lit. Bombay 1857) and Suyūtī, Buḫṣuṣī al-Walā, p. 386.

E. Wiedemann

Kuṭb al-Dīn Mubārak, the fifth and last king of the Khalījī dynasty of Dīlī, was the third son of "Alā" al-Dīn Muḥammad. When his father died, on Jan. 2, 1316, the minister Malik Nābib raised to the throne Mubārak's youngest brother, Shīhāb al-Dīn Umar, a child of six, blinded his two elder brothers, Khādir Khān and Shāhī Khān, and would have blinded Mubārak, had he not persuaded the soldiers sent to perform the task not to put Malik Nābib to death. He assumed the regency, but on April 1, 1316, blinded his infant brother and ascended the throne as Kuṭb al-Dīn Mubārak Shāh. He began his reign by releasing all prisoners, by rescinding all the harsher edicts of his father, including the compulsory tariff, and by restoring confiscated lands. He was addicted to the grossest immorality and appointed his vile favourite, a scavenger who had been named Hasan on his nominal conversion to Islam, and was entitled Khusrūw Khān, minister of the kingdom. Mubārak sent an officer to restore the royal authority in Gudjarāt, and marched to Dacca, where he slew the rebellious Harpāl, restored order throughout the Dakkan and the Peninsula, and built the
great mosque. During his absence a conspiracy was formed, with the object of putting him to death and raising to the throne a son of his brother, Khıdır Khan, but he discovered the plot, executed the conspirators, and on his return to the capital put all his relatives, including his blind brothers, to death, and married Khıdır Khan's widow, the beautiful Deval Devi of Gujdarat.

His court was a scene of the most disgusting debauchery and buffoonery, and he arrogated to himself the style of Caliph and the pontifical title of al-Wathiq bi 'l-lāh.

Rebellions broke out in Gujdarat and Devagir, but were suppressed, and Khüsaw Khan, absent on an expedition to Madura, met with a signal defeat in the latter city, but abandoned the design as hopeless and, returning to the capital, succeeded in persuading the king that he had been falsely accused.

Mubarak's assassination permitted Khüsaw Khan to surround himself with a large body of troops and to acquire supreme power in the state, and on the night of April 14, 1320, the favourite caused his master to be assassinated in his palace, seized the throne, and married Deval Devi.

The usurper, who assumed the title of Nâṣir al-Din Khüsaw Shah, was defeated and slain on Sept. 5, 1320, by the warden of the north-western frontier, Ghiyath al-Din, entitled Ghâzâ Malik, who, on the following day, ascended the throne as Ghiyath al-Din Tughrûk Shah.

**Kûtb Mînâr,** a lofty tower of red sandstone, said by Fergusson (ii. 266) and Diez (p. 165) to be one of the most beautiful buildings of its kind in the world, is situated about 11 miles from the modern city of Dîhl [q. v.], in the ruins of the first city of that name, — about 160 feet from the great mosque which was erected by Kûtb al-Din Aibeg [v. 1939. l. 209] in 1208, just after the capture of the city from the Hindu king, Prithârîdâ. Like the Mînâr at Ghazâna [q. v.] and the Mînâr at Koel (no longer in existence), it is an isolated structure, from which the maqâdîkhî gave the call to prayer, and is 238 feet in height; it is not attached to the mosque, but stands in the S. E. corner of the southern outer court, which was added in 1225 to Aibeg's mosque by Iltutmish [q. v.]; it is not straight, but tapering, and is divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement story appears to have been built while Aibeg still recognised the overlordship of Mu'izz al-Din (i.e. before 1205); the second, third and fourth stories were built by Iltutmish, but during the reign of Firûz Shâh [q. v.] the building was struck by lightning and this king in 1368 it had repaired and added a fifth story. The two uppermost stories, both of which in their present form are probably the work of Firûz Shâh, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the tower is entirely of red sandstone, and is not round but made up of flutings, which in the base-
ment story are alternately round and angular, in the second rounded only, and in the third angular only. The line of each fluteing is carried up unbroken through each story. The inscriptions are partly historical in character and partly made up of quotations from the Qur'an; they have been reproduced and translated in Epigraphia Indo-Moesonica, 1911-12.

The tower derives its name from the saint Khwâjâ Kûtb al-Din Bakhtyâr Kâkî, who was held in high honour by Iltutmish; he died at Dîhl in 1235 and his tomb is not far from the Mînâr.

**Kütbshâhî, one of the five independent Muslim dynasties of the Dâkân, which arose on the ruins of the Bahmanî Kingdom, named, like the others, from the title (Kûtb al-Mulq) borne under the Bahmanî kings by its founder, Sulţân Kûli, a Karâkûyunlû Turk of Sa'dâbâd, near Hamdân, who, entering the service of Muhammad III, was entitled by his son, Mahmûd, Khâwâs Khan. When, in 1490, the provincial governors of Ahrâm-nagor, Bîdîpûr, and Barâr proclaimed their independence of Bîdar, Sulţân Kûli was still at Mahmûd's court. After the death of Kûtb al-Mulq the Dâkân, before Dîmâkhandi in 1493, Sulţân Kûli received his title, captured the fortress from the rebels, and in 1495 was rewarded with the government of Tellingâna. He maintained a semblance of loyalty to Bîdar until 1512, when he declared himself independent in Golkonda, but never assumed the royal title, though historians usually style him Sulţân Kûli Kûtb Shâh. He was assassinated in 1543 at the instance of his son Dîmâshid, who succeeded him. The names of the Kings of his house, with the dates of their succession, are as follows:

Each was distinguished by the title Kûtb Shâh, which, however, was never accorded to them by the Mughul emperors, who invariably addressed them as Kûtb al-Mulq. All were Shî'îs, and their religion, the grievances of Mîr Dîmâla, and the licence accorded to Hindus were Awrangzâb's pretexts, if any were needed, for the destruction of the independent state of Golkonda, effected by the capture of the fortress and the imprisonment of Abu 'l-Hasan Kûtb Shâh in 1687.
KUTB MINAR — DETAIL.
Kūthā is a very old town in the Ḫūlā; on one of the canals joining the Ephraim and Tigrius. The town as well as the canal are often mentioned in cuneiform inscriptions (cf. the references in Mes.-met. Dig. nomen und Assyria, 1920–1925, Ind. Rev. v. Kusa or Kutḫa and the map by Schumacher in the 1st volume). The town is said to be identical with the place mentioned in Kings iii. xxxi. 24, from which came a part of the people whom the king of Assyria settled in Samarra in place of the deported Israelites. The course of the canal, at least for its western part, coincides with that of the modern Habil Ḫūlā; on the most recent maps (e.g. Karte von Mesopotamien [temporal edition for official use only published by the Map Dept. of the German General Staff, Dec. 1917. 1:400,000, Sheet 51]) the Habil Ḫūlā ends in the Shatt al-Ḫalīl; the Arab geographers make no reference to this but make this canal flow direct into the Tigius (cf. G. Le Strange, The Lands of the Eastern Caliphate, Map xx). In other respects also the Arab geographers regarding the geographers of the canals vary considerably; and when Streck, Die alte Landschaft Babylonien, i. 28, in his description of the canal relies solely on Ibn Serapion, it must be pointed out that al-Iṣṭakhri for example (B. G. A., ii. p. 85) makes such confused statements about the canal as that one is forced to assume that in the period of the Caliphs the canals were not unchanging, but the canals and their courses in three centuries had a history which is reflected in the contradictory statements of the geographers and has to be reconstructed. But little progress can be made in this direction without archaeological research. The Arab geographers distinguish two places called Kūthā in al-Ḫūrā, Kūthā Rabbā and Kūthā al-Ṭarīq but only give further information about the former. The distances from other places are collected in Streck, op. cit., p. 11. The geographers also mention the bridge of boats over the canal at Kūthā and the Ḫūlāhah legends, which are associated with the town; al-Muqaddasī (B. G. A., iii. 1, p. 121) actually calls the town Madīnat Ḫūlāhah and to this day the ruins of the town are located in the Tell Ḫūlāhah which lies approximately on the site of the ancient Kūthā; and the name of the town comes from that of his maternal great-grandfather. When his mother (her name is very variously given: Yaḵtā writes Bûnā bint Karnaba b. Kūthā; the Talmud, Baḥaʾ hata, 91a, בַּתֶּל הַתַּחַשׁ; for other names see Eisenberg, art. Ḫūlāh, and Das Leben der Propheten nach d. ar. Legenden, II. Das Leben Abrahams [Hebr., 1912], p. 99 note) was about to give him birth, she had to take refuge from Nimrod in a cave outside the town. Later Nimrod threw her into a fiery furnace; therefore in the time of the Arab geographers, many heaps of ashes were still pointed out which came from this fire.

Kūthā is also the name of the ṭaṣquš around the town in the district of Ardahār Hābūn and is in turn divided into 10 ruṣṭās. According to al-Maʿṣūdī (Ṭawāqī, B. G. A., vii., p. 79), Ur Kaḥāl (the Biblical Ur Kasdim) from which Abraham migrated is a place min bilād Kūthā. The nisba from Kūthā is Kūṯā or Kūṯānī. Besides Kūthā in Mesopotamia Yaḵtā and al-Bakrī also mention a place of pilgrimage of this name in Mecca.

(M. Plessner)

**Kuthayyir B. 'Abd al-Raḥmān Aḥū Sākhī al-Khuzā'ī** also called Ibn Abī Ḫumāf after his maternal grandfather, one of the great poets of the Umayyad period. From his beloved 'Azza whose praises he sang he was called Kuthayyir 'Azaż.

He lived as a rule in Medina but also in the Ḫulāh. A member of the Khuzā'ī family he was fond of connecting himself with al-Salt b. al-Nadr b. Khinān, a group which, according to al-Yaḵūbī (i. 268, 8–11), had joined the Khuzā'ī. He was on this account despised by some. His unpleasing, dwarflike figure also readily provoked ridicule. His stupidity and foolishness are also said to have pleased people caused to ridicule him. He held extreme Shīʿa views and under the influence of his friend the poet Khidif followed the doctrines of the return (rādīʿa, q. v.) and transmigration (tanawwul, q. v.); but his utterances on these matters seem hardly to have been taken seriously by his contemporaries. He professed loyalty to the son of the 'Alids as the little prophet'. The Imām (Māhid) was for him Muhammad b. al-Hanāfiya [q. v.] and he was one of those Kāsānīs who expected his return from concealment in the mountains of Rādwa [q. v.] (see KĀSĀNĪYA, KHASARĪYA, KURAIHĪYA).

But his opinions did not prevent him addressing panegyrics to the Mawānids. The Caliph ʿAbd al-Malik thought highly of his poetry and several times rewarded the poet richly. He devoted an elegy to the Caliph on his death. After a long period of waiting he was admitted with other poets to 'Umar ibn al-ʿAṣim and was able to strike the right note with him also. 'Umar however is said to have distrusted those 'Alids who showed sympathy with Kuthayyir. The Muhallabids were also patrons of the poet.

There are contradictory anecdotes about Kuthayyir's relationship to 'Azaż, whom he mentions in many verses. Critics asserted that, in contrast
to Djamil's [q.v.] emotions, his love was not a real passion but a simulated one.

Kuthayir was the rāzīya of Djamil, whom he regarded as the greatest of poets and took as his model. The rāzīya of Kuthayir was Sādīb b. Dhakwān (e.g. al-Azhānī, xi. 18, 3; xiv. 155, 5; ibid., x. 50 infra: al-Sādib b. al-Hūkaim al-Salūsī).

Kuthayir died in the reign of Yazid II in 105 (723), as is often mentioned, on the same day as the theologian Ikrima (cf. however Ibn Ḥaḍjar, Tahāhib al-Tahāhib, Hidāyāt al-Badru al-Tanbūhī, 1327—1371, vii. 271).

Some scholars of the ijiith (viiiith) century regarded Kuthayir as the greatest poet of Islam. Ibn al-Salām al-Dhahabī says that the people of the Hijāz regarded him as the greatest of poets while he was less esteemed in al-Ṭirāq. According to some his talent was best displayed in the panegyric (maṭbaḥ), according to others in the part of the poem dedicated to his beloved (nasĪth) although Djamil surpassed him in this. Many of Kuthayir's poems were set to music and sung.

Al-Zubair b. Bakkār and Iṣāḥāk b. ʿIbādīn al-Mawjūli collected information about Kuthayir (Abūbār Kuthayir, Ibn al-Nadīm, al-Fihrist, p. 111, 10, 142, 20). There was also a Kāb Kuthayirr wa-l-Aṣira in circulation (e.g. ibid., p. 306, 17). MSS. of the Dīwān of Kuthayir, two parts of which al-Kālī had read in Ibn Durād (Ibn Khāyir, Fihrist, etc., i. [B. A.-I., ii.], p. 306, 4) and which is also mentioned by Ḥādżījī al-Sulīfī (ed. Flügel, iii. 307, No. 3650), do not seem now to be known. The MS. in the Bibliothèque Nationale, Paris 181, i. p. 273 does not contain the Dīwān, but only one Kitāb (see P. Schwarse, Exzerential-Studien zur arab. Literatur- und Sprachkunde, Stuttgart 1922, i, p. 1—17). A few Kitāb's exist in MS. in Berlin (Ahlwardt, Verzeichn., No. 7524, 2; 8255, 41; 8471, 6).

(C. van Arendonk)
power and she went to Tabriz, where she died in 681. Her daughter Bibi Khâtîmân, who had married the amir ʿAbd al-Ḥamîd, remained her remains to Kîrmân. Marco Polo went through Kîrmân (about 1272) in the reign of KÎtûgh Turkân.

Ujûl al-Dîn Abû Muʿâzûfâr Suyurghâtîmî (681–693) received his investiture from the Ilkhan Ahmad b. Šâh. He could not agree with his sister Pâdshâh-Khâtûn. She had been brought up among her brothers under the name of Ḥasan Šîh (cf. Mîkhânând) to enable her to escape compulsory marriage with a Mongol prince. She became however the wife first of ʿAbâkâ and after his death of his son Kai-Khâtût. The latter on coming to the throne in 690 gave Kîrmân to Pâdshâh-Khâtûn. The princess who was a poetess of talent was of a vindictive and passionate nature. At first Suyurghâtîmî governed the province in the name of the Pâdshâh but she later threw him into prison. He was freed by his wife Khâtâwân-zâde Kardûlîn, daughter of Mangû Timûr b. Ḥâlîgîn and the Salghûrîd (q. v.), Princess Abûshî, ruler of Fârs, and by his daughter Šâh-al-ʿAlam. Kai-Khâtût however had had his ears cut off, had him strangled. His death was followed by the execution of his vizier who was captured by stratagem. In 694 Bâdî, husband of ʿAlam Khâtîmân, became king. Pâdshâh was handed over to the vengeance of the wife and daughter of Suyurghâtîmî. In the reign of Pâdshâh Marco Polo (ed. Yule-Cordier, p. 23, 91) passed through Kîrmân on his return journey (c. 1293).

In 695 Muʿâzûfâr al-Dîn Abû l-Hâsîrî Muḥâmmad Šâh Sûltân b. Ḥadîjîdîn succeeded his aunt by command of Ḥâzân Khân but his brothers slew his vizier and rebelled in Kîrmân. The troops of Fârs and ʿIrâk besieged Kîrmân for 18 months. Muʿâzûfâr al-Dîn came from Tabriz, forced the town to surrender and executed the ringleaders. His methods must have been summary, for his new vizier left him in terror. Muʿâzûfâr al-Dîn, who loved wine, died in 703 as a result of his excesses.

His nephew Sûltân Kûtb al-Dîn II Šâh Dîjâhân b. Suyurghâtîmî succeeded him and ruled for two years and a half (to 706 = 1306). As he was very cruel and did not pay his dues regularly to the Mongol treasury, Uljûlîzâdî deposed him and appointed a simple governor to Kîrmân, Nâshr al-Dîn Muḥâmmad b. Burhân. Kûtb al-Dîn II retired to ʿIrâk to Kardûzân, wife of his father. His daughter Kûtûgh Khâtûn (sülün-lát al-sâtîfû) in 729 (1328/1329) married the wife of Muḥâbrîz al-Dîn Muḥâmmad, the real founder of the Muṣârarid dynasty, who later took possession of Kîrmân (in 741).

Before the earthquake of 1896 there still existed in Kîrmân Uzbek-yisâb (remains of the Madrasa of Turkânâbâd) bearing the date 640 (1242) (i.e. contemporary with Rukn al-Dîn). This “green mausoleum” was the family tomb for the dynasty (cf. P. M. Sykes, Ten Thousand Miles in Persia, London 1902, p. 60–62, 104, 264). Turkân Khâtûn founded the little towns of Sar-āṣîyâb and Čâţrûd to which she brought a water supply. Suyurghâtîmî built the madrasa of Darb-ī Nav, where he was buried.

(V. MINORSKY)

Kuçr, means in Arab geometry 1) the diameter of a circle or of any section of a cone and the diameter of a circle inscribed in the diagonal of a parallelogram or of any quadrilateral; 3) in trigonometry, the hypotenuse of the so-called umbra triangle; as such it is either the secant or the cosecant of an angle, according as the side opposite it is the tangent or cotangent of this angle; in the first case it is called kûtr al-qâzî al-aqwaî (hypotenuse of the first umbra), in the second case kûtr al-qâzî al-dînî (hypotenuse of the second umbra).

(H. SÜTER)

KUTRUB, surname of the famous grammarian and lexicographer Abû Ḫâfî Muḥâmmad b. (Amad) al-Mustânî, born at Baṣrâ and died in the caliphate of al-Mâmîn in 206 (821/822).

He studied grammar with Ṣibâwî (q. v.) and Muṭâzîlî doctrine with the celebrated al-Nâṣîrî (q. v.). He was tutor to the children of Abû Dâlî al-Kâsîm b. ʿĪsâ, who was vizier under al-Mâmîn and al-Muṭâṣîm and was thus allowed to preach in the mosque, where he taught his heterodox views and read the commentary on the Qurʾān which he had composed according to Muṭâzîlî teaching. As regards language, his authority is rather disputed; nevertheless, as Ibn Khâlikân observes, he was the first to compose a work on Arabic words of the same form, which change their meaning according as they are pronounced with one or other of the three vowels. Out of some twenty works attributed to him, we only know the following: 1. Kit. al-Muṭârzîlî, a collection in prose of thirty words which may be read in three different ways and change their meaning with each vocalisation, e.g. kalîm “discourse”, kîlîm “wounds”, kûlîm “rocky”, each group is followed by a philological commentary and examples taken from the Qurʾān and very often from pre-Islamic poets (Paris Bibl. Nat., Nos. 825, iv.; Leyden, Cat. Cod. Arabici, i. No. 43; Berlin, No. 701–703; two copies belonging to the writer). The Muṭârzîlî was verified by several scholars, among them Abû al-Wâhîb b. al-Ḥasan al-Muhâlîbî al-Bahnâsi, whose poem has been published several times in Cairo and edited and translated with a Latin commentary by Ed. Vilmât (Carmen

(Moh. Ben Chemel)

AL-KUTUB, Ṣāliḥ (or Fārīk) al-Dīn Muḥammad b. Ṣāliḥ al-Ḥalabi, Arab historian and biographer. The only known sketch of his life is in the Kitāb al-Durar al-kāmina fi 'Ayn al-Mil al-ḫalīma of Ibn Ḥadār al-Asḥāfī (q.v.), but used by Brockelmann in G.A.L., ii. 48. According to this, Kutubi studied in Halab, Aleppo, and Damascus, and made a considerable fortune as a bookseller; he died in Ramadan 764 (June-July 1363), but the best known and the only one printed of his works, a continuation of Ibn Ḥalabīn's Wafṣyāt with the title Fa'awīl al-Wafṣyāt (Būlāk 1283, 1299), contains a biography which gives the year of his death as 773, which caused the editor of the Būlāk edition to write a note on this doubtful point. The contradiction had already been satisfactorily explained in Wustenfeld, Die Geschichtsschreiber der Araber und ihre Werke (repr. from A. G. W. Göt., 1882, xxviii. sq., p. 178): in the biography the date should read 753.

Further works of his are: 1. Rawḍat al-Adhāb al-Ḥalabi, al-Adhab, a collection of glosses (Ḥaddīṣi khalīfah, No. 5624); 2. Liyāla al-Waḍūrīlī (cf. Brockelmann, loc. cit.), the whole comprises 6 volumes according to Ḥaddīṣ al-Khalīfah, No. 8487.

(M. Plessner)

KUṬŪZ al-Malik al-Muẓaffar Ṣaḥib al-Dīn al-Muṭṭizzī (so called after Sulṭān al-Malik al-Muẓīr Aibak), the third Bahri Sulṭān (cf. Bahrī) ascended the throne of Egypt towards the end of 657 (1259). He is said to have been a nephew of the Khwārizmshāh Djalāl al-Dīn Khwārizmshāh and to have been originally called Maḥmūd b. Maṃūd; he was captured in war with the Tatars, sold in Damascus and purchased and brought to Cairo by Sulṭān Muẓīr al-Dīn Aibak. In 650 (1252) Sulṭān Aibak appointed him his deputy (Nāṭib al-Sulṭūna). When the Sulṭān was murdered in 655 (1257) by his wife Ṣadāqat al-Durr (q.v.), the Mamluks placed his son ʿAlī on the throne; Kuṭūz remained deputy and administrator of the kingdom and guardian of the young prince. These first Mamluk attempts were continually threatened by the danger of attack from the Ayyūbids Sulṭāns of Syria who regarded themselves as the legitimate successors of their relatives in Cairo. The Ayyūbids Sulṭān of Karak, al-Malik al-Muhūth, tried to invade Egypt with the help of the Mamluks of the late Egyptian Sulṭān Nadīm al-Dīn Ayyūb. Kuṭūz collected his forces and met the enemy at Shihiyya near Cairo. Although some of his amirs went over to the representative of the old dynasty, he completely routed the king of Karak and forced him to retreat. Meanwhile, the great danger was threatening from the east, the advance of the Tatars under Hūlagū (q.v.). In this difficult situation the ambitious Kuṭūz thought he had better assume the reins of government of iṣṭiṣār which he already held de facto. He deposed the boy sulṭān and seized the throne without meeting with serious resistance. During his short reign he won great renown by breaking the power of the Tatars in Syria and saving Egypt from being laid desolate. Hūlagū had conquered Syria, installed his governors everywhere and demanded the submission of Egypt through his envoys in an arrogant letter which is preserved by the historians. Kuṭūz determined to resist to the last, executed the envoys to make negotiations impossible. For the fear of the Tatars was so great that the amirs only reluctantly obeyed him and were inclined to negotiate, although the example of the devastation of Syria was sufficient warning to them. In Shaʿbān 658 (1260) Kuṭūz led his troops to Shihiyya and revived their failing courage. Baibars (q.v.) afterwards Sulṭān commanded the vanguard and met the Tatar outposts at Gaza. The main army marched on Aīn Djālī (Goliath's Well), where they met the Tatars, commanded by Ketboghā, governor of Damascus. At the first onslaught the Egyptian left wing was driven back. In this critical moment the Sulṭān himself took command; inspired by the splendid example of his bravery, the Egyptian forces rallied for a tremendous attack and put the Tatars to flight. The defeat was decisive. Ketboghā and other Tatar princes fell in the battle; defeated in further fighting as they retreated, the Tatars were forced to leave Syria. The whole country was occupied by the Egyptians and the separate principalities given back to their owners as fiefs. Aleppo alone, the ruler of which remained in Hūlagū's camp, was given to Malik al-Saʿūd, son of Bādur al-Dīn Iłlu' of Mōsul one of the few princes who had preferred leaving his country to acknowledging the suzerainty of Hūlagū. But this gift proved the ruin of Kuṭūz. His friends, the Baibars, had hoped to get Aleppo for himself and now disappointed, planned vengeance. On the homeward journey through Syria, while hunting, he murdered Kuṭūz with the help of a few fellow-conspirators. He was then elected Sulṭān. In spite of his bravery Sulṭān Kuṭūz was not popular. The needs of his army led to great expenditure and he had to raise the money by harsh taxation and levies. Therefore, according to Makrizi, there was neither indignation nor mourning at his assassination. Ibn Taghibirdī tells a different story. He says that the corpse of Kuṭūz lay unburied for three days and then was interred in Kuṣār by his Mamluks. The tomb was visited like a place of pilgrimage and his assassination deeply lamented. Sulṭān Baibars therefore had the body dug up and buried secretly in another place, which was not made known. Thus he became gradually forgotten. B. Bibliography: Well, Geschichte der Chalifen, ii. 8 sq.; Quatremère, Sultans Mamlouks, ii. 86 sqq.; Ibn Taghibirdī, al-Manṣūr al-Ǧāfī, MS. Ar. Vienna, Mīxt. 3294, ii. vol. fol. 1832 and b. (M. Söbernheim)

AL-KUWAIT, a seaport on the Arabian coast of the Persian Gulf, capital of the
In 12 (633) there was a battle here between the Arabs under Ḥālīl b. al-Walīd and the Persians under Hurmuz, in which the latter were defeated. In the xvith century the Portuguese established themselves on the coast here and the remains of a castle built by them can still be seen, but they never mention the name al-Kuwait. Whether the name of the place — al-Kuweit means "the little castle" — owes its origin to this building seems doubtful. It is in any case interesting that the Persians call the place al-Krūn, as Nebihr tells us. Al-Kuweit was therefore presumably settled at the beginning of the xvith century, whether by members of a central Arabian tribe or by Umm Ḳṣrān of Khūr ʿAbd Allāh is not certain. The former version, which has much in its favour, is found in the records of the Bombay government and the plans of the Turkish general Midhāt Pāsha.

In any case the town grew very rapidly. In the beginning of the sixties of the xviith century, according to Nebihr, it had 800 ships and 10,000 inhabitants, who were mainly engaged in pearl-fishery and fishing. It grew rapidly and became prosperous, especially as after the conquest of al-Baṣra by the Turkish Pasha in 1775 Nebihr, Tāpūr, Baghdād, Aleppo, Smyrna and Constanținople no longer went by Bāṣra but by al-Kuweit. In 1793 the English transferred their factory from al-Baṣra to al-Kuweit and the at first very modest port at once attained considerable importance for England’s position and policy in the Persian Gulf. As early as 1805 Great Britain was to take the Shaikh or al-Kuweit under her protection to defend him from aggression by the Wahhābī, but the plan came to nothing. In 1821 the British resident in al-Baṣra moved to Fālakāh which belonged to al-Kuweit. Even then we find al-Kuweit adopting a hostile attitude to the Porte and it seems to have been fairly independent. In 1829 the lord of al-Kuweit had to recognise the suzerainty of Turkey and to pay tribute, a circumstance which later led to a closer association with the vilayet of Baghdād. The mutual confidence and good relations between the Porte and the Shaikh of al-Kuweit found expression in the latter’s flying the Turkish flag and undertaking the defence of the harbour of al-Baṣra in return for a subsidy (1843) and in 1853 placing himself directly under the protection of Turkey and in 1863 and 1865 al-Kuweit undertook the defence of the mouth of the Shatt al-ʿArab. In 1869/1870 the able and energetic Midhāt Pāsha succeeded in getting the then lord of al-Kuweit, ʿAbd Allāh b. Sabbāḥ, to join him with Nebihr, the chief of the Māntābāk, in his expedition against al-Haṣa in which the young Mūḥārak b. Sabbāḥ took part as leader of the land forces. The result of this joint enterprise was the conquest of the territory of al-Haṣa which became a Turkish administrative area under the name Nadjīl but soon the position of the Porte changed when al-Kuweit was drawn into the new developments of central Arabian politics.

ʿAbd al-Raḥmān b. Saʿūd, the ruler of al-Riyād, defeated by Muḥammad b. Rashīd, had taken refuge in 1891 in al-Hūfūl, where he placed himself under Turkish protection and later went to Baghdād and Constantinople. He returned laden with gifts to al-Baṣra but had soon to recognize that his hope that the Turks would restore him to his throne would not be realized. He therefore decided to settle at the court of Mūḥārak b. Sabbāḥ.
lord of al-Kuwait. His enemy Muḥammad b. Ṣabhāḥ, whose kingdom in 1892 comprised over two-thirds of Arabia, but nowhere touched the coast and had therefore no harbour, had hitherto been dependent on the favour of the lord of the various coast-towns, and of the Turkish officials in al-Ḥasā', Mesopotamia and Syria. Most of his arms came from al-Kuwait and from the little Turkish harbour of al-ʿAṭīr (al-ʿUṣayr) in the district of al-Ḥasā'. But since ʿAbd al-Raḥmān b. Ṣaʿīd had been in Constantinople, and had settled in al-Kuwait, great difficulties were put in Muhammad's way in both harbours so that he decided he must possess a harbour of his own. As he did not wish to irritate the Turks, on whose goodwill he was dependent for trade with Mesopotamia, he decided to attack al-Kuwait, which suited his purpose better from its geographical position and the fact that from the end of the sixteenth century it had been the terminus and starting-point for the trading-caravans of al-Riyyūd. In addition the Shaikh of al-Kuwait had recently shown himself insubordinate to the Porte on several occasions, so that it was hardly to be expected that Turkey would interfere seriously on his behalf. In 1895 war broke out between Muhammad b. Ṣaʿīd and ʿAbd al-ʿAṭīr b. Ṣaʿīd which was to prove fatal to the dynasty of the former and make the Shaikh of al-Kuwait king of all al-Riyyūd. In 1895 Muhammad b. Ṣaʿīd was poisoned, but the war with al-Kuwait did not cease but continued under his successor ʿAbd al-ʿAṭīr, especially as the banished prince of al-Riyyūd, ʿAbd al-Raḥmān b. Ṣaʿīd, was working against him in al-Kuwait. ʿAbd al-ʿAṭīr found support for his campaign against al-Kuwait in the Turkish government, which would have liked to depose the untrustworthy Shaikh Muḥārāk b. Ṣaʿīdūḥ, who although appointed Turkish Kāʿīmātām in 1897, paid no attention to his superior officer, the governor of al-Brasā, but under pressure of circumstances asked England to assume a protectorate over his territory, from which he also hoped to gain material advantages. His request was refused at the time. But when in connection with the proposed Baghdad railway the proposal was made to link up a branch-line to the Persian Gulf from Zūburān, that via al-Brahīl, Kerkēlā, Nadifān and Zūburān to a head of operations at Jīlānīshār and Turkey an agreement was made on land on the Persian Gulf, England, who, in view of her interests in India, was attentively watching the development of the Baghdad railway project, took measures to meet eventualities. Lord Curzon, the Viceroy of India, who pursued with all his influence and energy the policy of allowing no other power than England to gain influence on the Persian Gulf, gave the English resident in Būshīr, Colonel Meade, authority to contract a treaty with the Shaikh of al-Kuwait, the contents of which were at first secret, but it contained the important clause that the lord of al-Kuwait bound himself not to let or otherwise cede any part of his territory to other governments or subjects of other governments than England, and to receive no representatives of foreign powers without being authorised to do so; for this concession he received a subsidy and was assured of the good offices of the British government, which soon found in consideration increased imports of arms and munitions from England and France. The treaty was concluded on Jan. 23, 1899. When at the beginning of 1900
confirmed. Turkey was permitted to have a representative at the court of the Shaikh. At the same time the question of the continuation of the Bagdad railway was discussed and it was agreed that the Bagdad Railway Company should take over the stretch from Bagdad to al-Basra, but that the branch line to al-Kuwait should be built by an English company. The outbreak of the World War prevented the ratification of this treaty as well as that of another on the Bagdad railway, Mesopotamia and other questions. On the outbreak of war England declared al-Kuwait an independent kingdom under British protection. The points in dispute with 'Abd al-Aziz b. Sa'ud, who as lord of Central Arabia had no less interest in al-Kuwait than the Shammar prince 'Abd al-'Aziz b. Rashid whom he had conquered, were settled in a treaty concluded between Mubarak and Ibn Sa'ud on Dec. 26, 1915. Ibn Sa'ud withdrew any claim to al-Kuwait and the surrounding country for a breadth of 70 miles and this region was recognised as belonging to the amir of al-Kuwait. Mubarak b. Sabha died on Jan. 3, 1916 and left three sons, Djibir, Salim and Nasir who began to fight about the succession. Nasir gained the support of the settled people of al-Kuwait, Salim of the nomad tribes and with their help fought his brothers and their followers. Djibir was however regarded as the real successor of his father. After his death at the end of 1916, Salim was recognised as his successor, although his brother Nasir had the support of England. In the Great War, Salim was a Turkophile and showed this by facilitating the caravan traffic of the prince of Shammar who was an ally of the Turks. In September, 1917, a caravan of 3,000 camels succeeded in getting through from al-Kuwait to Haidil in spite of the English blockade. Salim died on Feb. 2, 1921. He was succeeded by Djibir's son Ahmad, who had represented al-Kuwait on Oct. 31, 1919 when the Arab kings were received at the English court.
